lecture; "exhibiting," says M. Prévost, "a freshness of ideas, and facility of expression, which bore no marks either of fatigue or apprehension. Some threatening symptoms had been experienced during the year past, but, with a force of character peculiar to him, he had sought to conceal them from all, even from himself." All attempts at resuscitation proved unavailing, and he died a few minutes after his removal from the carriage.

De Blainville's writings are to be found in the 'Dictionnaire d'Histoire Naturelle,' the 'Bulletin,' above-mentioned, the 'Annales' and 'Mémoires du Muséum,' the 'Annales des Sciences Naturelles,' the 'Révue Zoologique,' and other scientific periodicals. Of separate works may be mentioned his 'Dissertation sur la place que la famille des Ornithorhynques et des Echidnés doit occuper dans la série naturelle,' 4to, Paris, 1812; 'Sur les Ichthyolites,' &c., 8vo, Paris, 1818; 'Malacozoaires et Poissons de la Faune française,' 8vo, Paris, 1820-30; 'Principes d'Anatomie comparée,' 2 vols. 8vo, Paris, 1822-23; 'Mémoire sur les Belemnites,' 4to, Paris, 1827; 'Cours de Physiologie générale et comparée,' 3 vols. 8vo, Paris, 1833; 'Manuel d'Actinologie et de Zoophytologie,' 8vo, Paris, 1834.

The fact that De Blainville's writings number nearly 200 in the whole, will best give a notion of his activity and devotion to science; they comprise researches in all branches of zoology. His 'Ostéographie' and 'Manuel de Malacologie,' are elaborate treatises which alone would employ the labour of a life. The former includes extinct as well as living animals, and is of rare importance to palæontologists.

De Blainville had a public funeral in Père-la-Chaise. Prévost, Chevreul, and Milne-Edwards each pronounced a discourse over his grave. A passage from the former presents a concise view of what he accomplished. "It was the great object of his life," says M. Prévost, "to establish in all his works, especially in his 'Osteology,' the doctrine that the whole series of organic beings was intimately related, the links of one great chain, ascending from the most simple of organisms to that which occupies the highest place; in other words from the sponge to man. But while he endeavoured to refer all groups and every variety of animal form to one and the same plan, he never embraced the plausible hypothesis that each higher grade had been improved in the course of ages out of a lower one by transmutation; on the contrary, he saw in the whole animal creation, one single operation, one great harmonious and divine idea, the various changes being neither due to chance nor to the influence of external circumstances, but being all the result of one and the same original conception."

(*Proceedings of the Royal Society; Ann. des Sci.; Agassiz, Bibl.; Silliman, Journal; Geol. Soc. Journal; L'Institut de France.*)

BLAIR, HUGH, D.D., a divine of the Church of Scotland, was born in Edinburgh, April 7, 1718. He was educated at the University of Edinburgh, where he was known as a diligent student; he took his degree of A.M. in 1739. In 1741 he was licensed to preach, and was soon after appointed to the living of Colesie in Fifeshire. In 1743 he was appointed second minister of the Canongate church, Edinburgh; in 1754 he was presented to the ministry of Lady Yester's church, Edinburgh; in 1757 the University of St. Andrews conferred upon him the degree of D.D.; and in 1758 he was removed from Lady Yester's to be one of the ministers of the High church, which is what is called a collegiate charge, or one in which the duties are divided between two clergymen. He was indebted to his merits alone for this success.

An 'Essay on the Beautiful,' which he wrote while a student, was regarded as highly creditable to his taste and abilities. His advancement having lightened his professional labours, he was enabled to bestow more time on literary pursuits; and accordingly having prepared some lectures on 'Composition,' he read them to classes in the university, with the permission of that learned body. In 1762 the king erected and endowed a professorship of rhetoric and belles lettres in the University of Edinburgh, and appointed Dr. Blair, in consequence of his approved qualifications, regius professor, with a salary of 70*l*. The 'Lectures' were first published in 1783, when he resigned the professorship. On the controverted question of the genuineness of Ossian's poems, he published, in 1763, a 'Dissertation,' in which he supported their claims to originality. He was intimately acquainted with Macpherson, and his opinions seem to have been in some degree influenced by his partiality for the man, whom he thought incapable of imposition. But the opinion he arrived at may be taken as a standard of Blair's critical ability.

The career of Dr. Blair as a divine was marked both by its success and usefulness. By the time he had attained his fortieth year he was called upon to discharge one of the most important ministries in the church, and for the long space of forty-two years he was considered one of its greatest ornaments. Notwithstanding his popularity as a preacher, he had nearly reached his sixtieth year before he could be induced to publish a volume of his sermons. When however it appeared, it was received with an extraordinary degree of favour, although Mr. Strahan, the publisher to whom Dr. Blair had sent the manuscript, discouraged its publication; but the opinion of Dr. Johnson having been requested, he wrote to Mr. Strahan, stating that he had perused the sermon which had been forwarded to him "with more than approbation." The sale was so rapid and extensive, that the original sum paid for the copyright (100*l*.) was voluntarily doubled by

the publisher; and 300*l.* were offered for the next volume. It is stated that Dr. Blair was paid at the rate of 600*l.* for each of the subsequent volumes. The fifth volume, which was published after Blair's death, consists of discourses written at different times; but it was carefully prepared for the press a little before his death in the eighty-second year of his age. In 1780 a pension of 200*l.* a year was conferred on him by the king, which he enjoyed till his death.

Dr. Blair did not possess a strong constitution, and towards the latter part of his life he was unable to fulfil his duties in the pulpit; but his intellect was unimpaired to the last, and his large congregation had still the benefit of his services as their friend and adviser. His counsel was sought not only by those around him, but it was frequently solicited from distant places, in which the benevolence of his disposition had been made known by his published discourses.

Dr. Blair's literary reputation rests upon his 'Sermons' and his 'Lectures on Rhetoric and Belles Lettres,' both of which enjoyed a long period of popularity. The sermons appeared at a time when the elegant and polished style, which is their chief characteristic, was less common than at present; and to this merit, such as it is, they chiefly owed their success. They are still read by many people with pleasure, on account of their clear and easy style, and the vein of sensible though not very profound observation which runs through them; but they have no claim to be ranked among the best and most solid specimens of sermon-writing which our language contains. The 'Lectures' have not been less popular than the 'Sermons,' and were long considered as a text-book for the student. They are however, like the 'Sermons,' exceedingly feeble productions, and show neither depth of thought nor intimate acquaintance with the best writers, ancient and modern; nor do they develop and illustrate, as a general rule, any sound practical principles.

(Finlayson, *Life of Dr. Blair*, prefixed to his *Sermons*.)

BLAIR, JOHN, a relative of Hugh Blair, and well known as the author of a valuable set of chronological tables, went to London for the purpose of improving his fortune, and was at first engaged as teacher in a school. In 1754 he published 'The Chronology and History of the World, from the Creation to the year 1753, in fifty-six Tables, by the Rev. John Blair, LL.D.' This work was dedicated to the Lord Chancellor Hardwicke. In the following year he was elected F.R.S., and in 1761 F.A.S. A second edition of his 'Chronology' appeared in 1768, to which were added maps of ancient and modern geography. In September 1757 he was appointed chaplain to the Princess Dowager of Wales, and mathematical tutor to the Duke of York; and in 1761 to a prebendal stall at Westminster. Six days afterwards the vicarage of Hinckley, Leicestershire, having become vacant, he was presented to it by the dean and chapter of Westminster; and he obtained a dispensation to hold with it the rectory of Burton Coggles, Lincolnshire. In 1763 he attended his pupil, the Duke of York, on a continental tour, during which they visited France, Italy, Spain, and Portugal, and returned home after about a year's absence. He received several other pieces of church preferment besides those above mentioned. His death took place June 24, 1782. A course of his 'Lectures on the Canons of the Old Testament,' and a small volume entitled 'The History of Geography,' were published after his death.

BLAIR, ROBERT, author of a poem entitled 'The Grave,' was born in the year 1699. Few particulars are known respecting him. His father was one of the ministers of Edinburgh, and chaplain to the king; and after securing to his son the advantages of a liberal education at the university, he sent him to the continent for his further improvement. On the 5th of January 1731 he was ordained minister of Athelstaneford, where he spent the remainder of his life. He had by his marriage a daughter and five sons, one of whom became solicitor-general for Scotland. He appears to have been in easy circumstances, was fond of gardening, and had a taste for botany; and these pursuits, together with a correspondence which he maintained on scientific subjects, engaged much of the time which was not required for the performance of his ministerial duties. In the pulpit he is said to have been serious and earnest. Watts and Doddridge honoured him with their esteem: he submitted his poem to them, and in a letter to the latter states that it was written before his ordination. Watts signified his approbation of this production, and offered it to two booksellers, who however both declined undertaking the publication. Blair seems to have anticipated the reception which it would meet, and attributed it to the serious nature of the subject. He had however endeavoured to conciliate public favour, for he says in his letter to Doddridge:—"In order to make it more generally liked, I was obliged sometimes to go cross to my own inclination, to make it go down with a licentious age which cares for none of these things." It found a publisher a few years before its author's death, and attained a considerable amount of popularity. 'The Grave' is written in a striking and vigorous manner, and has always been most popular among persons of an uncultivated taste, possessing some strength of mind, and a serious disposition. With the exception of a short piece written in memory of Mr. Law, one of the professors of the University of Edinburgh, 'The Grave' is the only production of Blair's which we possess. The author died of a fever, February 4, 1746, in the forty-seventh year of his age. Home, the author of 'Douglas,' succeeded him in his living.

BLAKE, ROBERT, one of the most intrepid and successful admirals that have adorned the British navy, was born about the end of August,

1598, at Bridgewater in Somersetshire, where his father exercised the business of a merchant. He was educated at the Bridgewater grammar-school until he was sixteen years of age, when he was removed to Oxford, where he became successively a member of St. Alban's Hall and Wadham College. Blake was of a studious turn, yet fond of field-sports and violent exercises; and his first biographer reports a piece of scandal against him, that he was given now and then to stealing swans, a species of game, so to call it, then much esteemed, and protected by severe laws. ('Lives, English and Foreign,' 1704.) We may infer that he had a fair share of scholastic learning, from his having stood, though unsuccessfully, both for a studentship at Christ-church and a fellowship at Merton College. He returned to Bridgewater when he was about twenty-seven years old, and lived quietly on his paternal estate till 1640, with the character of a blunt bold man, of ready humour, and fearless in the expression of his opinions, which, both on matters of politics and religion, were opposed to the views of the court. These qualities gained for him the confidence of the Presbyterian party in Bridgewater, which returned him for that borough to the short parliament of April 1640. The speedy dissolution of that assembly (May 5) gave him little opportunity of trying his powers as a debater.

On the breaking out of the civil war he raised a troop in Somersetshire, which took part in almost every action of importance which occurred in the western counties. In 1643 he held the command of a fort at Bristol when that city was besieged by the royalists. Having maintained his post, and killed some of the king's soldiers after the governor had agreed to surrender, Prince Rupert was with difficulty induced to spare his life, which, it was alleged, was forfeited by this violation of the laws of war. In 1644, holding an independent command as colonel, he rapidly concentrated as many troops as he could collect, and surprised Taunton, a place of great importance, as being the only parliamentary fortress in the west of England. He was appointed governor of Taunton, and in that capacity gave eminent proof of skill, courage, and constancy, in maintaining the town during two successive sieges in 1645.

In February 1649 Colonel Blake, in conjunction with two officers of the same rank, Deane and Popham, was appointed to command the fleet, under the title of General of the Sea, the military and naval services not then being kept separate and distinct as in later times. For this new office Blake soon showed signal capacity. On the renewal of war after the king's death he was ordered to the Irish Sea in pursuit of Prince Rupert, whom he blockaded in the harbour of Kinsale for several months. At length, being pressed by want of provisions and threatened from the land, the prince made a desperate effort to break through the parliamentary squadron, and succeeded, but with the loss of three ships. He fled to the river Tagus, pursued by Blake, who blockaded him there for several months. Being denied permission to attack his enemy, and the king of Portugal favouring Rupert in various ways, Blake captured and sent home several richly-laden Portuguese vessels on their way from Brazil. He finally attacked and destroyed the royalist fleet, with the exception of two ships, commanded by the princes Rupert and Maurice, in the harbour of Malaga, January, 1651. The King of Portugal protested against these proceedings as breaches of international law; but Blake's conduct, after being judicially investigated by the authorities at home, was deliberately approved—some compensation however being allowed to the merchants who had suffered—and his services were recompensed by the thanks of parliament, together with the office of Warden of the Cinque Ports; and in March of the same year, Blake, Deane, and Popham were constituted admirals and generals of the fleet for the year ensuing. In that capacity Blake took the Scilly Islands, Guernsey, and Jersey, from the royalists, for which he was again thanked by parliament; and in the same year he was elected a member of the Council of State.

In March 1652, Blake was appointed sole admiral for nine months, in expectation of the Dutch war, which did in fact break out in the following May, in consequence of Van Tromp, the Dutch admiral, standing over to the English coast and insulting the English flag. Blake, who was then lying in Rye Bay, immediately sailed to the eastward, and fell in with the Dutch fleet in the Straits of Dover. A sharp action ensued, May 19, which was maintained till night, to the advantage of the English, who took one Dutch man-of-war and sunk another. The Dutch retreated under cover of the darkness, leaving the honour of victory to the English. The States did not approve, or at least disavowed the conduct of their admiral, for they left no means untried to satisfy the English government; and when they found the demands of the latter so high as to preclude accommodation, they dismissed Van Tromp, and placed De Ruyter and Cornelius de Witt in command of their fleet. Meanwhile Blake took ample revenge for their aggression. He made a number of rich prizes among the Dutch homeward-bound merchantmen, which were pursuing their course without suspicion of danger; and when he had effectually cleared the Channel he sailed to the northward, dispersed the fleet engaged in the herring fishery, and captured a hundred of the herring busses, together with a squadron of twelve ships of war sent out to protect them. On the 12th of August he returned to the Downs, and September 28th the hostile fleets again came to an engagement, in which the Dutch rear-admiral was taken, and three other Dutch ships were destroyed. Night put an end to the action, and though for two

days the English maintained the pursuit, the lightness and uncertainty of the wind prevented them from again closing with the enemy, who escaped into Goree. After this battle, the drafting off detachments on different services reduced the English fleet in the Channel to forty sail. With this force Blake lay in the Downs, when Van Tromp again stood over to the English coast with eighty men-of-war. Blake's spirit was too high for him to decline the battle, even against these odds—an act of imprudence for which he suffered severely. An action was fought off the Goodwin Sands, November 29. Two of his ships were taken and four destroyed; the rest were so much shattered that they were glad to run for shelter into the Thames. The Dutch remained masters of the narrow seas; and Van Tromp, in an idle bravado, sailed through the Channel with a broom at his mast-head, to intimate that he had swept it clear of English ships. However, neither the nation nor the admiral were of a temper to submit to this insult, and great diligence having been used in refitting and recruiting the fleet, Blake put to sea again in February 1653 with eighty ships. On the 13th he fell in with Van Tromp, with nearly equal force, escorting a large convoy of merchantmen up the Channel. A running battle ensued, which was continued during three consecutive days. On the 20th the Dutch ships, which, to suit the nature of their coast, were built with a smaller draught of water than the English, obtained shelter in the shallow waters of Calais. In this long and obstinate fight the English lost one man-of-war—the Dutch, eleven men-of-war and thirty merchantmen; but the number killed is said to have amounted to 1500 on each side. Blake himself was severely wounded in the thigh.

Another great battle took place on the 3rd and 4th of June, between Van Tromp and Generals Deane and Monk. On the first day the Dutch had the advantage; on the second Blake arrived with a reinforcement of eighteen sail, which turned the scale in favour of the English. Bad health then obliged him to quit the sea, so that he was not present at the great victory of July 29 (the last which took place during this war), in which Van Tromp was killed; but out of respect for his services, the parliament in presenting gold chains to the admirals who commanded in that battle gave one to him also. When Cromwell dissolved the long parliament and assumed the office of Protector, Blake, though in his principles a staunch republican, did not refuse to acknowledge the new government. Probably he expected to find the administration more energetic; and he is reported to have said to his officers, "It is not our business to mind state affairs, but to keep foreigners from fooling us." He sat in the first two parliaments summoned by the protector, who always treated him with great respect. Nor was Cromwell's acknowledged sagacity in the choice of men at fault when he sent Blake at the head of a strong fleet into the Mediterranean, in November 1654, to uphold the honour of the English flag, and to demand reparation for slights and injuries done to the nation during that stormy period of civil war, when internal discord had made others daring against English vessels. Such a mission could not have been placed in better hands. Dutch, French, and Spanish concurred in rendering unusual honours to his flag. The Duke of Tuscany and the Knights of Malta made compensation for injuries done to English commerce; and the piratical states of Algiers and Tripoli were terrified into submission, and promised to abstain from further depredations. The Day of Tunis alone resisted, but was speedily forced to conclude peace on satisfactory terms. These transactions occurred in the spring of 1655.

On the breaking out of war between Spain and England in 1656, Blake took his station to blockade the Bay of Cadiz. At this time his constitution was greatly impaired, inasmuch that in the expectation of speedy death he sent home a request that some person proper to be his successor might be joined in commission with him. General Montague was accordingly sent out with a strong squadron; but in the following spring that officer returned home in charge of some valuable prizes laden with bullion, and Blake was again left alone in the Mediterranean, when he heard that a Spanish plate-fleet had put into the island of Teneriffe. He immediately sailed thither, and arrived in the road of Santa Cruz April 20th. The bay was strongly fortified, with a formidable castle at the entrance and a chain of smaller forts at intervals round it. There was also a considerable naval force, strongly posted, the smaller vessels being placed under the guns of the forts, and the galleons strongly moored with their broadsides to the sea; inasmuch that the Spanish governor, a man of courage and ability, felt perfectly at ease as to the security of his charge. The master of a Dutch ship which was lying in the harbour was less satisfied, and went to the governor to request leave to quit the harbour, for "I am sure," he said, "that Blake will presently be among you." The governor made a confident reply: "Begone if you will, and let Blake come if he dare." Daring was the last thing wanted; nor did the admiral hesitate, as a wise man might well have done, at the real difficulties of the enterprise in which he was about to engage. The wind blowing into the bay, he sent in Captain Stayner with a squadron to attack the shipping—placed others in such a manner as to take off, and as far as possible to silence the fire of the castle and the forts—and himself following, assisted Stayner in capturing the galleons, which, though inferior in number, were superior in size and force to the English ships. This was completed by two o'clock in the afternoon. Hopeless of being able to carry the prizes out of the bay against an adverse wind and a still active enemy, Blake gave orders to

burn them. It is probable that he himself might have found some difficulty in beating out of the bay under the fire of the castle, which was still lively, but that on a sudden the wind, which had blown strong into the bay, veered round to the south-west and favoured his retiring, as it had favoured his daring approach. In this action Blake lost one ship behind, and the killed and wounded did not exceed 200 men; while the slaughter on board the Spanish ships and on shore is spoken of as incredible.

For this service the thanks of parliament were voted to the officers and seamen engaged, with a diamond ring to the admiral worth 500*l*. Blake returned to his old station off Cadiz; but the increase of his disorders, which were dropsy and scurvy, made him wish to return to England—a wish however he did not live to accomplish. He died as he was entering Plymouth Sound, August 17, 1657. His body being transported to London, was buried with great pomp in Westminster Abbey, at the public expense. After the Restoration it was disinterred, and, with the bones of others who had taken part with the Commonwealth, was removed to St. Margaret's churchyard.

Blake was of a blunt and singularly fearless temper, straightforward, upright, and honest in an unusual degree. He seems never to have sought his own advancement by any underhand means, and his pecuniary integrity was unimpeached. He left his paternal estate unimpaired, but notwithstanding the great sums which passed through his hands, it is said that he did not leave 500*l*. behind him of his own acquiring. His temper was liberal, and his behaviour to his sailors most kind. "He was," says Clarendon, "the first man that in naval matters declined the old track, and made it manifest that the science might be attained in less time than was imagined, and despised those rules which had long been in practice to keep his ship and men out of danger, which had been held in former times a point of great ability and circumspection, as if the principal art requisite in the captain of a ship had been to be sure to come safe home again. He was the first man who brought the ships to contain castles on shore, which had been thought ever very formidable, and were discovered by him to make a noise only, and to fright those who could be rarely hurt by them."

(Clarendon; Heath; Whitelock; Ludlow; and other contemporary authorities; *Lives, English and Foreign; Life*, by Dr. Johnson; *Gallery of Portraits*, vol. v.; Dixon, *Robert Blake, Admiral and General at Sea*.)

BLAKE, WILLIAM, was the son of a London hosier, and was born in London in 1757. At the age of fourteen his father was induced by his son's passion for drawing to apprentice him to an engraver of the name of Basire. He was a diligent and enthusiastic student; the day he devoted to the graver, and the night to poetry, for the graphic art absorbed but one-half of him, and he was utterly indifferent to the goods of this life: he used to say—"My business is not to gather gold, but to make glorious shapes, expressing god-like sentiments." When he was twenty-six years of age he married Catherine Bouter, who survived him, and was a most devoted and attached wife, and fully appreciated the peculiarities of his mind. With his wife always by his side Blake produced a series of designs and poems, which are quite unique in the peculiar spirit of their conception, but notwithstanding their peculiarity, are replete with beauties of the highest order. The spirit of universal benevolence and a just appreciation of the greatness of life, animate and inanimate, breathed in his poems, and cannot easily be surpassed; but the mere versification is often very inharmonious. When Blake was thirty years of age, Flaxman and another gentleman published a collection of his poems, and presented the printed sheets to the poet, under the hope that he might derive some profit from the sale of them.

The first of his own publications were the 'Songs of Innocence and of Experience, showing the Two Contrary States of the Human Soul,' which appeared with about sixty-five etched illustrations in 1789. Several of these poems are remarkable for their true pathos. These etchings and poems are executed in a very peculiar and original manner; the designs are drawn and the poems written upon the copper, with a secret composition (discovered to him by the spirit of his brother Robert, as he says); and when the uncovered parts of the plate were eaten away by aquafortis, the rest remained as if in stereotype. His wife worked off the plates in the press, and Blake tinted the impressions, designs, and letter-press, with a variety of pleasing colours.

His next work was 'The Gates of Paradise,' in sixteen small designs, of a very mystical character. This was followed by a series, dated Lambeth, 1794, of twenty-seven very strange but powerful designs, under the title of 'Urizen,' in which he seems to have attempted to represent hell and its mysteries. After the completion of this work, Blake was employed by Mr. Edwards, a bookseller, to illustrate Young's 'Night Thoughts,' which he filled with marginal designs, so much to the satisfaction of Flaxman in many parts, that he introduced Blake to Hayley the poet, who wished him to make some illustrations to the 'Life of Cowper,' and persuaded him to remove, in 1800, to Felpham in Sussex. Flaxman was a constant friend to Blake, and the latter in his correspondence with him usually addressed him—"Dear Sculptor of Eternity," and in the first letter he wrote to him from Felpham he called him 'Sublime Archangel.'

At this time Blake's mind was confirmed in that extraordinary state

which many suppose to have been a species of chronic insanity. He was so exclusively occupied with his own ideas, that he at last persuaded himself that his imaginings were spiritual realities. He thought that he conversed with the spirits of the long departed great—of Homer, Moses, Pindar, Virgil, Dante, Milton, and many others: some of these spirits sat to him for their portraits. He remained at Felpham three years, and then returned to London. The first work after his return was his 'Jerusalem,' comprising 100 designs, of figures of men, spirits, gods, and angels; and for which, tinted, he charged twenty-five guineas. His next work was a series of 12 designs to Blair's 'Grave,' for Cromek the engraver, who paid him twenty guineas for the twelve; the engraving of them was intrusted to Schiavonetti. These were followed by his 'Canterbury Pilgrimage,' a picture in water-colours or distemper, exhibited in his brother's house in 1809, with some other of his paintings in the same manner, of which he printed a 'Descriptive Catalogue,' containing many critical heresies, some sense, and much that is wild and absurd. Charles Lamb speaks of the 'Canterbury Pilgrims' in a letter to a friend as a work with "wonderful power and spirit, but hard and dry, yet with grace." In the same letter he says, "I have heard of his poems, but never seen them. There is one to a tiger, which I have heard recited, beginning—

'Tiger, tiger, burning bright,
Through the deserts of the night!—

which is glorious. But, alas! I have not the book, and the man is flown, whither I know not—to Hades or a madhouse—but I must look on him as one of the most extraordinary persons of the age."

In the 'Descriptive Catalogue' of his exhibition he makes some excellent remarks upon the character of Chaucer's writings; and some excessively severe remarks upon the 'Canterbury Pilgrimage' of Stothard. He seems to have injured himself very much in the opinion of the world by the extremities he went to in this catalogue; he was comparatively neglected after its publication, and the demand for his works very much declined. He became extremely poor, but he still continued to produce new works, as 'Twenty-one Illustrations to the Book of Job,' which are among his best productions; two works of prophecies, one on America, in eighteen plates, the other on Europe, in seventeen; and a long series of illustrations to Dante, of which however he engraved only seven. His last performance was a likeness of his faithful wife, who, through his eccentricities reduced to the extreme of poverty, was never even inclined to complain. Blake himself never regretted his poverty: he considered himself a martyr in the cause of poetic art, and he pitied his fortunate contemporaries for their inordinate love of gain. He died on the 12th of August 1828.

A very elegant edition of the 'Songs of Innocence,' &c., was published in London (by the late Mr. W. Pickering) in 1839, exactly half a century after their first appearance, with a Preface containing some excellent remarks upon Blake's character. There is a good portrait of Blake by T. Phillips, R.A., of which there is a print prefixed to the notice of Blake in 'The Lives of the most Eminent British Painters,' &c., by Allan Cunningham.

*BLANC, LOUIS, a political and historical writer, was born October 28, 1813. His father had been Inspector-general of Finances under Joseph Bonaparte, at Madrid. His mother was a native of Corsica, and he lived with her in that island till he had attained the age of seven years. He was then sent to the Lycœum at Rodez, in the French department of Aveyron, where he pursued his studies till the year 1830. The French revolution of that year deprived his father of the means of supporting his family; but Louis Blanc, by the assistance of an uncle and by giving lessons in mathematics, was enabled to complete his education. In 1832 he removed to Arras, in the department of Pas de Calais, as tutor to the children of M. Hallet, a maker of machines. While in this situation several articles written by him on political and literary subjects were inserted in the journal called 'Le Progrès du Pas de Calais.'

In 1834 Louis Blanc removed to Paris, where he obtained an engagement as a sub-editor of the periodical entitled 'Bon Sens.' In January 1837 he was appointed editor, but in 1838 he resigned his situation in consequence of a dispute with the proprietors of the journal on the subject of railroads, Louis Blanc being decidedly of opinion that they ought to be undertaken and managed by the government, whilst the proprietors maintained that they ought to be left to private enterprise and industry. The other writers employed on the 'Bon Sens' retired with Louis Blanc, who in 1839 established the periodical called 'La Revue du Progrès,' the main object of which was to form and support a combination of certain sections of the democratic associations then existing. In 1840 he published his treatise on the 'Organisation of Labour' ('Organisation du Travail'), in which he laid down his doctrines of political and social reform, the essential principle of those doctrines being that men, instead of labouring for themselves, should labour for the community, each individual contributing according to his capabilities, and receiving his recompense according to his requirements, under the administration of a central government. These doctrines were widely spread some years ago among the working classes in this country as well as in France, but have now nearly died out, at least in the United Kingdom. Louis Blanc does not, we believe, in the least degree sympathise with those socialists who advocate principles of spoliation. Not

long afterwards he published his 'Histoire des Dix Ans' (1830-1840). He was active in the French revolution of 1848, and was elected a member of the provisional government which was formed after the expulsion of the king Louis-Philippe. He has the merit of having induced his colleagues, during their short period of political power, to pass the decree which abolished the punishment of death for political offences. An accusation was soon afterwards got up against him with respect to his conduct on the 15th of May 1848, and so powerful was the party opposed to him that his friends advised him to leave the country. He made his escape to London, where he has since continued to reside, chiefly employed in writing his 'Histoire de la Révolution Française,' a well-written and valuable addition to the historical library of the first French revolution. The seventh volume of this history was published at the latter end of the year 1855, and brings down the narrative to the termination of the trial of Louis XIV.

(*Nowelle Biographie Universelle.*)

BLANCHARD, FRANÇOIS, was born at Andelys, in the department of Eure, France, in 1738. Although illiterate, and little acquainted with the physical sciences, he displayed very early a strong mechanical genius. His first experiment, when only sixteen years old, was the construction of a machine, moving mechanically, with which he traversed a space of seven leagues, and on which he subsequently made some improvements. At nineteen he invented a hydraulic machine; and next a flying vessel, which was capable of raising itself twenty feet from the ground. These ingenious toys, for they were little better, served to introduce him to the court of Versailles. When the brothers Montgolfier invented their balloon in 1783, a fresh direction was given to the genius of Blanchard. He immediately constructed a balloon with wings and a rudder, thinking to be able to steer it, and ascended for the first time on March 2, 1784. The wings and rudder were found to be useless; but he had also invented a parachute, which, on his first ascent, was merely taken up in order to break the fall in case of accident. On January 7, 1785, M. Blanchard and Dr. Jeffries undertook to cross the channel in a balloon. They started from Dover, and landed in the forest of Guennes, but they had been obliged to disencumber themselves of everything of weight in order to avoid falling into the sea. For this exploit he received a gift of 12,000 francs from the king of France, and a pension of 1200 livres. From this time he continued making repeated ascents in various countries; in one of which, landing near Kufstein in Tyrol, he was thrown into prison as a propagator of revolutionary doctrines. He afterwards figured at New York, and styled himself, aéronaut of both hemispheres, citizen of the principal towns of both worlds (the old and new), member of foreign academies, and pensioner of the French empire. While making his sixty-sixth ascent at the Hague in 1808, he was struck with apoplexy; from this he never entirely recovered, and he died at Paris, March 7, 1809. His wife was less fortunate: she had participated in his labours, and continued them. In 1819 while ascending from the Tivoli gardens at Paris, the balloon burst, she fell, and was found dead in the car. (*Nowelle Biographie Universelle; Conversations-Lexikon.*)

BLANCHARD, JACQUES, whom D'Argenville dignifies with the title of the French Titian, was born at Paris in 1600. He was first instructed by his maternal uncle Jerome Balleri, and afterwards by Horace le Blanc, at Lyon. He visited Italy, and arrived in Rome, in 1624, and having studied there two years, he went to Venice, where he remained also two years. He found the works of the Venetian masters more suited to his taste, and models of imitation better adapted to his abilities, than the more severe compositions of the Romans. After spending some time at Turin and Lyon, Blanchard returned to Paris an accomplished painter, and by a series of easel pictures, which followed in rapid succession, he acquired a name as a colourist without a rival in France. He had however a short career; he died of consumption, aged only thirty-eight, in 1638. He left a son, Gabriel, who became a distinguished painter. Blanchard's principal works at Paris are a gallery in the Hôtel de Bouillon, containing thirteen pictures from ancient mythology, painted in oil upon the wall; the 'Descent of the Holy Ghost' in the church of Notre Dame; 'A Nativity,' and several holy families. The majority of his works are of small dimensions: they are chiefly of religious subjects. He painted also many portraits. There are about seventy engravings after the works of Blanchard, by himself and by other engravers. (*D'Argenville, Abrégé de la Vie des plus fameux Peintres.*)

BLANCHARD, LAMAN, was born at Great Yarmouth, Norfolk, May 15, 1803. His father having removed to London, Laman was educated at St. Olave's school, Southwark. He commenced the business of life as reader in a printing office. From boyhood he had exhibited a great fondness for poetry, and considerable aptitude in verse making; and his first venture in authorship was a small volume of poetry entitled 'The Lyric Offering,' published in 1828. Before this however, in 1827, he had received the appointment of secretary to the Zoological Society. This office he held till 1831, when he resigned it to become acting editor of the 'New Monthly Magazine.' From this time till his death his talents were wholly devoted to writing for the periodical press, to which he was one of the most varied and prolific contributors. His contributions consisted of poems, essays, tales, sketches, and brief pointed paragraphs;—whatever in fact was

most required for the magazine or journal with which he was at the time connected: and all of them displayed a lively and genial fancy and a ready wit. Mr. Blanchard edited the 'True Sun' newspaper during the whole of its career; the 'Constitutional'; and for a while the 'Court Journal,' and the 'Courier.' For some time previous to his death he had assisted in conducting the 'Examiner.' His death occurred under very painful circumstances. His wife, to whom he was much attached, became very ill about a year before his decease, and her illness ended in insanity. She rallied for awhile, but relapsed and died. Under the prolonged anxiety attending her long illness and its fatal termination, his own health and spirits gave way. He was attacked by nervous paroxysms, and during or after one of these, put an end to his life, February 15, 1845. His death excited much sympathy, especially among his literary brethren by whom he was greatly esteemed. His 'Essays and Sketches' have been collected and published, with a memoir by Sir E. Bulwer Lytton.

BLAND, THE REV. ROBERT, B.A., was born in 1779 in London, where his father, Dr. Robert Bland, was an eminent physician. On leaving Pembroke College, Cambridge, he became an assistant master at Harrow, where he had previously been a pupil. After several other changes, including a short residence at Amsterdam as clergyman of the English Church, he married in 1813, and became a curate in Essex. In 1816 he entered on the curacy of Kenilworth, which he retained during the remainder of his life. He died at Leamington, on the 12th of March 1825. Mr. Bland enjoyed an excellent reputation, not only for his knowledge and taste in the learned languages, and in French and Italian, but also for his skill as a classical teacher. His character is described as amiable and exemplary. He published two volumes of original poems, 'Edwy and Elgiva,' 8vo, 1808; and 'The Four Slaves of Cythera,' a poetical romance, 8vo, 1809. He was also the author of 'Elements of Latin Hexameters and Pentameters,' a work which has gone through several editions. He contributed to periodical publications, and was one of the translators of the Memoirs of Grimm and Diderot, 2 vols. 8vo, 1813. His translations from the minor Greek poets, by which he is best known, first appeared in a volume entitled 'Translations, chiefly from the Greek Anthology, with Tales and Miscellaneous Poems,' 8vo, 1806 (chiefly by Mr. Bland and the late Mr. Merivale); again, in the form of 'A Collection of the most beautiful Poems of the Minor Poets of Greece, with Notes and Illustrations,' 8vo, 1813; and lastly, in an improved edition with new contributions, which was published in 1833 by Mr. Merivale.

BLANE, SIR GILBERT, an eminent physician, was the fourth son of Gilbert Blane of Blanefield, in the county of Ayr, in Scotland. He was born at Blanefield on the 29th of August 1749. Being intended for the church, he was sent to the University of Edinburgh; but during his attendance there he was led to devote himself to the study of medicine. In the prosecution of this branch of science he acquired the notice not only of his fellow-students, but also of Dr. Robertson, the principal of the university, of Dr. Blair, and Dr. Cullen.

After obtaining his degree of Doctor of Medicine he was recommended by Dr. Cullen to Dr. William Hunter, at that time the most eminent teacher of anatomy in London. Through his instrumentality Dr. Blane was appointed private physician to Lord Holderness. This appointment introduced him to the notice of many distinguished individuals, and among others, to Lord Rodney, who nominated him his private physician, in which capacity he accompanied Lord Rodney, when in 1780 he assumed the command of the squadron on the West Indian station. In the course of the first engagement every officer being either killed, wounded, or employed, Dr. Blane was intrusted by the admiral with the duty of conveying his orders to the officers at the guns, and in one of these dangerous missions he was slightly wounded. As a reward for his services on this occasion, and on the recommendation of Lord Rodney, he was instituted at once, without going through the subordinate grades, to the high office of physician to the fleet. In the execution of his duties he was unremitting, and exerted himself most beneficially in preserving the health and efficiency, as well as in promoting the comfort of the seamen, on that sickly station. He was present during six engagements under his friend and patron Lord Rodney, and of the battle of the 12th of April 1782 he gave so animated an account in a letter to Lord Stair, that his narrative was published. He remained on the West India station till 1783. Soon after his return to England he embodied the results of his experience, and also many of the conclusions drawn from the returns of the surgeons of the ships, in a volume, which he published in 1783, entitled 'Observations on the Diseases of Seamen,' 8vo, London. This work has several times been reprinted, with enlargements and improvements. For his services on the West India station a pension was granted him by the crown, the amount of which was subsequently doubled, on the recommendation of the Lords of the Admiralty.

In the course of his residence in the West Indies he frequently met the Duke of Clarence, afterwards William IV., who was then serving as a midshipman in Lord Rodney's fleet. Dr. Blane obtained the favourable regard of his Royal Highness, and upon determining to settle in London as a physician, he was by the influence of the Duke of Clarence appointed physician extraordinary to the Prince of Wales. In 1785 he was elected physician to St. Thomas's Hospital. About this time he was appointed one of the commissioners of sick and wounded sailors; and in 1795 was placed at the head of the Navy

Medical Board. During the time that Earl Spencer was first lord of the admiralty, Dr. Blane, seconded by that nobleman, was enabled to effect the introduction into every ship of the use of lemon-juice, as a preventive and cure for scurvy, a measure which has had the beneficial effect of almost completely eradicating scurvy at sea. Dr. Blane zealously directed his attention to improve the condition both of the men engaged in the service, and of the medical officers whose duty it was to superintend their health. He caused regular returns or journals of the state of health and disease to be kept by every surgeon in the service, and forwarded periodically to the Navy Board. From a careful examination of these returns, he drew up several dissertations which were read before the Medico-Chirurgical Society, in whose transactions they were subsequently published.

In 1786 he was elected a fellow of the Royal Society, who appointed him to deliver the Croonian Lecture in 1788. He selected for his subject 'Muscular Motion,' his treatment of which evinced the extent and variety of his knowledge as well as the originality of his mind. It was printed in 1791, 4to, and reprinted in his 'Select Dissertations,' London, 1822, of which a second edition appeared in two volumes, 1834. An essay on the 'Nardus,' or spikenard of the ancients, was published in the 'Transactions of the Royal Society,' vol. 80, in the year 1790. During the scarcity in 1799 and 1800, he published a pamphlet on the scarcity and high price of provisions.

Having attained great eminence as a physician, and his private practice becoming very extensive, he resigned his office of physician to St. Thomas's Hospital. He recorded some of his observations made during the twenty years that he held that situation, in a dissertation on the 'Comparative Prevalence and Mortality' of different diseases in London, which was published in the 'Transactions of the Medico-Chirurgical Society,' and reprinted in his 'Select Dissertations.' The last public service on which Dr. Blane was employed was on a professional mission to inquire and report on the cause of the sickness of the army in Walcheren in 1809; and to Northfleet, to report on the expediency of establishing a dockyard and naval arsenal at that place in 1810. The title of baronet was conferred upon him in 1812, and in the same year he was appointed physician in ordinary to the Prince Regent.

In 1819 he published 'Elements of Medical Logic,' which in a few years went through several editions. Of all his writings, this is calculated to be the most permanently useful. His observations on the diseases of seamen however must always be worthy the attentive perusal of all who are designed for that branch of the public service. In 1821 he suffered severely from an attack of *prurigo senilis*, from the harassing irritation of which he could only obtain relief by the use of opium; and as the disease never completely left him, he acquired a habit of consuming a quantity of that potent drug, equal to what any of the opium-eaters of the East can take. In 1826 he was elected a member of the Institute of France. In 1830, on the accession of King William IV., he was nominated first physician to his Majesty. His last appearance before the public was as the author of a pamphlet, entitled 'Warning to the British Public against the alarming approach of the Indian Cholera,' 1831. His later years were spent in retirement from professional labours, and in the revision of his 'Select Dissertations,' the second edition of which he lived to see published. He died on the 26th of June 1834, in the eighty-fifth year of his age.

BLESSINGTON, MARGUERITE, COUNTESS OF, was born at Knockbrit, near Clonmel, Tipperary county, Ireland, on the 1st of September, 1789, and was the third daughter of Mr. Edmund Power, who was of respectable family, but broken fortune and reckless habits. She was married in her fifteenth year to a Captain Farmer, but the marriage was a very unhappy one, and Mrs. Farmer after a time quitted his house. He was killed by falling from a window in the King's Bench prison while in a state of intoxication, and within four months his widow was married to the Earl of Blessington, February 1818. After exhausting every means of enjoyment in England and Ireland, the earl and countess started in September 1822 on a continental tour, which, partly owing to the earl's property having become considerably encumbered, was prolonged till his death. At Paris they were joined by the Count Alfred d'Orsay, who in 1827 married a daughter of Lord Blessington by his first wife. It was an unhappy marriage, and a separation eventually took place; but Count d'Orsay continued after the death of Lord Blessington to reside with Lady Blessington during the remainder of her life. Lord Blessington died at Paris in May 1829. Lady Blessington on her return to London made her house the centre of a brilliant circle of persons of social and intellectual eminence. She quickly became one of the celebrities of London; and for nearly twenty years the *salons* first of Seamore-place and afterwards of Gore House, disputed the palm with those of Holland House as the resort of the learned, the witty, and the famous of the day. But Lady Blessington aspired to be something more than merely their hostess. She had in 1822 published a couple of volumes of 'Sketches,' and in 1832 she fairly entered upon her career of authorship by contributing to the 'New Monthly Magazine' a 'Journal of Conversations with Lord Byron.' She had become acquainted with Lord Byron when residing on the continent, and as she repeated his remarks with little reserve, the 'Journal' excited considerable interest, and was soon republished in a separate form. From this time Lady Blessington continued to write for the press with little intermission.

She wrote a great many novels, of which 'The Repealers' was the first in point of time; and the 'Victim of Society,' the 'Two Friends,' and the 'Belle of a Season,' were the most popular. When portraying the habits of fashionable society she was on familiar ground, and could write with effect; when she treated of subjects of more general interest she lost her power. The majority of her novels and tales are of little literary worth, and none perhaps are likely to have a very long vitality. One of her most pleasant books, after the 'Conversations with Lord Byron,' is her 'Idler in Italy,' published in two volumes in 1839. The 'Idler in France' and 'Desultory Thoughts and Reflections,' are of inferior value. Lady Blessington also contributed slight tales, sketches, and verses to the magazines and annuals; and for several years she edited 'Heath's Book of Beauty' and the 'Keepsake'; she also for a few years edited another annual called the 'Gems of Beauty.' She likewise for a time contributed to the 'Daily News' and 'Sunday Times' newspapers.

To this literary industry Lady Blessington was incited by pecuniary necessity, brought about by her splendid style of living. But both her jointure and her literary earnings proved insufficient to meet her expenditure; and when the famine in Ireland cut off in a great measure the returns of the Blessington property, it became necessary in 1849 to dispose of the costly fittings and furniture of Gore House. Count D'Orsay had gone to Paris in the hope, as was understood, of obtaining a post under Louis Napoleon, with whom he had been on terms of much intimacy. Lady Blessington followed him in April 1849, and died at Paris almost suddenly on the 4th of June, 1849. Count D'Orsay died at Paris August 4, 1852.

(Madden, *the Literary Life and Correspondence of the Countess of Blessington*.)

BLIGH, WILLIAM, born in 1753, the commander of the ship 'Bounty' at the time when she was piratically seized in the South Seas. The description given by Captain Cook of the bread-fruit and edible fruits of various descriptions in the South Sea Islands induced a number of the West India merchants to take measures for introducing them into the West India colonies. On the advantages likely to result from such a design being strongly represented to George III., orders were given to prepare a vessel for the purpose. The arrangements were superintended by Sir Joseph Banks, who named the vessel the 'Bounty.' Bligh, then a lieutenant, who had already sailed with Cook in those quarters, was appointed to the command, and sailed from Spithead for Otaheite on the 23rd December 1787. On the 26th of October following they reached their destination, and remained at the island until April 4th, 1789. The number of bread-fruit plants taken on board was 1015, besides a number of other plants. The whole were under the care of competent persons who had been selected by Sir Joseph Banks. Laden with these valuable plants the vessel proceeded on her voyage to Jamaica. On the morning of the 28th of April the captain was seized in his cabin, while asleep, by Mr. Christian, who was the officer of the watch, and three other individuals; his hands were tied behind him, and he was threatened with instant death if he gave the least alarm. The mutineers then put him into the ship's launch, with eighteen of the crew, and cast them adrift. They had been allowed to collect twine, canvass, lines, nails, cordage, a twenty-eight gallon cask of water, 150 lbs. of bread, with a small quantity of rum and wine. They had also a quadrant and a compass, but no map, ephemeris, or sextant. They were left to struggle with cold and hunger in an open boat deeply laden, and some thousands of miles from any hospitable shore. They were near the island of Tofoa at the time of leaving the ship, in 19° S. lat., 184° E. long.; and they landed, in order, if possible, to increase their stock of provisions, but a sudden attack by the natives compelled them to embark without obtaining more than a trifling quantity of bread-fruit, plantains, and cocoa-nuts. They caught on their voyage a few sea-birds, and spent a few days among the coral islands off the coast of New Holland, which enabled them to get a comparatively comfortable meal or two of oysters, clams, and dog-fish, relieved them from the fatigue of being constantly in the same position in the boat, and enabled them to enjoy good rest at night. On the 14th of June they arrived at Timor. They had reached this island in forty-one days after leaving Tofoa, having in that time run by the log a distance of 3618 nautical miles with scarcely anything to support life, without shelter from the weather, and without the loss of a single man. To the prudence, firmness, and seamanlike qualities of Bligh their safety may be chiefly ascribed. Lieutenant Bligh proceeded as soon as possible to England, where he landed March 14th, 1790. Of the companions of his perilous voyage five died; and one, who was left behind, was never heard of afterwards. The adventures of the mutineers in the 'Bounty,' after Bligh and his companions had been cast adrift, are narrated under ADAMS, JOHN.

The relation of the treatment which Lieutenant Bligh had experienced, and of the hardships which he had encountered, highly excited the public sympathy. He was again sent out to the South Seas, and was completely successful in conveying to the West Indies a supply of the bread-fruit plant. He was also promoted to the rank of commander, and the 'Pandora' frigate, Captain Edwards, was sent out to Otaheite, for the purpose of apprehending the mutineers. The 'Pandora' reached that island March 23rd, 1791, where fourteen of the mutineers were found, apprehended, and kept on board in irons. On the 8th of May 1791, the 'Pandora' left Otaheite, and, after an

ineffectual search of several months, with a view to discover the place of Christian's retreat and the fate of the 'Bounty,' she was wrecked on the 29th of August on the coral rocks near New Holland, when four of the mutineers and thirty-one of the ship's company lost their lives. The survivors, consisting of eighty-one of the crew and officers of the 'Pandora,' and ten of the mutineers of the 'Bounty,' proceeded in four open boats to Timor, which they reached in sixteen days. Captain Edwards, of the 'Pandora,' finally reached Spithead with his prisoners on the 19th of June 1792. On the 12th of September following a court-martial was assembled at Portsmouth, under the presidency of Lord Hood, for the trial of the ten surviving mutineers, and on the 18th they delivered their verdict. Four of them were acquitted, and six were found guilty and sentenced to death, of whom two were recommended to mercy. On the 24th of October the king's warrant was received at Portsmouth, ordering the execution of three out of the four men who were condemned without recommendation, and granting a respite to the fourth, who subsequently received his majesty's pardon; the other two received a full pardon, and one of them, a young midshipman named Heywood, afterwards honourably distinguished himself in the service.

It was much disputed at the time whether the mutiny of the 'Bounty' was occasioned by the harsh conduct of Bligh, or whether the mutineers were seduced from their duty by the prospects of a life of ease and pleasure in the delightful islands of the South Seas. During their stay at Otaheite they had been exposed to temptations which must have had some influence on their future conduct. On the other hand, it is certain that Bligh's conduct was often coarse and arbitrary, and that both officers and men felt indignant at his treatment of them. There is the best reason for believing that the mutiny was not the result of a maturely-formed conspiracy, but that "the plot was conceived and carried into execution between the hours of four and eight A.M. of the 29th of April." (Marshall, 'Naval Biography,' article 'Heywood.') The two or three preceding days, Bligh, in the united capacities of commander and purser, had acted in a manner more than usually arbitrary.

In 1806 Bligh was appointed governor of New South Wales, where his acts appear to have been extremely tyrannical, and his use of the powers vested in him most impolitic and even illegal. (Wentworth, 'Statistical, Historical, and Political Description of New South Wales,' p. 200.) His conduct became at length so unbearable, that on the 26th of January 1808 he was arrested by order of the other civil and military officers of the colony, and his government was thus summarily terminated. The excesses with which he is charged are of so shameful and atrocious a character as almost to indicate insanity, and ought to be taken into account in forming our estimate of his conduct on board the 'Bounty.' (See Wentworth's second edition, p. 203, and the note.) Bligh died in December 1817. Nothing was heard of the 'Bounty' until 1809, when an American vessel touched at the island which Christian had selected as a retreat. [ADAMS, JOHN.]

The mutiny of the 'Bounty' has partly been made the subject of one of Lord Byron's poems, entitled the 'Island,' which contains many passages of great beauty. The account of Bligh's voyage to the South Seas was published in 4to, pp. 264, London, 1792, and contains charts, engravings, and a portrait of Bligh. A popular account, entitled 'The Eventful History of the Mutiny and Piratical Seizure of H.M.S. Bounty: its Cause and Consequences,' forms one of the volumes of the 'Family Library.'

(*Narrative of the Mutiny on board H.M.S. Bounty*, by Lieutenant W. Bligh; *Minutes of the Proceedings on the Court-Martial*, with an Appendix, by Edward Christian, brother of Fletcher Christian.)

BLIZARD, SIR WILLIAM, was born in 1748 at Barnes Elms, in Surrey, where his father was an auctioneer. His early education was neglected, but he was apprenticed to a surgeon and apothecary at Mortlake. During his apprenticeship he devoted himself to self-improvement, and paid much attention to botany. On leaving Mortlake, he became assistant to a surgeon in London, and attended during that time hospital practice at the London Hospital, and the lectures of William and John Hunter and Mr. Pott. His assiduity recommended him to his teachers, and he was soon elected surgeon to the Magdalen Hospital. On the decease of Mr. Thompson in 1780, he was elected surgeon to the London Hospital. About this time he connected himself with Dr. Maclaurin as a teacher of anatomy, and they lectured together, first at a small place in Thames-street, afterwards in Mark-lane, and in 1785 at the London Hospital. Imperfect as such an institution was for teaching medicine, it was the first that was established in London in connection with any of the large hospitals.

In 1787 Mr. Blizard was appointed professor of anatomy to the old Corporation of Surgeons, and in the year following was unanimously re-elected. He was afterwards appointed an examiner. He was also elected a Fellow of the Royal Society in 1787. He took an active interest in procuring for the old Corporation of Surgeons the new charter, under which the new institution was called the Royal College of Surgeons of London. By a charter granted in 1844, it is now called the Royal College of Surgeons of England. On the granting of the first charter, Mr. Blizard was appointed, in conjunction with Sir Everard Home, a professor of anatomy. He was president of the college twice during his life, and delivered the Hunterian Oration three

times. On the occasion of the great collection of John Hunter being presented to the College by the government, Mr. Blizard presented also his collection of about 900 preserved specimens in anatomy and pathology. In 1796 he published a work entitled 'Suggestions for the Improvement of Hospitals and other Charitable Institutions,' in which he pointed out the evils that existed at that time in the various institutions intended for the relief of disease; and its publication was followed by a beneficial improvement in many of the metropolitan hospitals.

In 1803 Mr. Blizard was appointed to present an address to the king from the College of Surgeons, when he received the honour of knighthood. In 1819 he founded the Hunterian Society. He also was the founder of the Samaritan Society, which was instituted with the view of examining the circumstances of cases in hospitals that have a claim upon benevolence, of obtaining a fund from which relief might be afforded, and providing a body of men who might properly execute and perpetuate the good design. He was one of the first fellows of the Horticultural Society. He was one of the founders, and for many years vice-president of the London Institution.

Besides being Surgeon to the London Hospital and a member of the Council of the College of Surgeons, he held the offices of Consulting Surgeon to the Deaf and Dumb Asylum, the Marine Society, the Clergy Orphan Asylum, and the London Orphan Asylum. But with all his activity and industry, with the exception of an attack of fever, caught by working night and day in his dissecting-room, his health never failed him to the last. In 1827 he was in his eighty-fifth year, but strong enough to make his first visit to Edinburgh. His eyesight latterly failed him, and when this was discovered to be owing to cataract, he insisted, in spite of the entreaties of his friends, on having the operation of extraction performed. This was done by Mr. Lawrence in 1834, after which he regained the use of his eyes. He was however now in his ninety-third year, and during the following year his strength and health visibly failed him, although he attended a meeting of the court of examiners at the college the Friday before his death. He died on the 25th of August 1835.

Sir William was most punctilious on points of etiquette, and retained the fashions of the last century to the day of his death. At one time it was customary for physicians and surgeons to attend at coffee-houses to be consulted. Sir William Blizard is said to have been the last medical man in the metropolis who pursued this practice. He regularly frequented, for this purpose, Batson's coffee-house, Cornhill.

In early life Sir William was in politics a great reformer, and contributed to many of the periodicals of the day, under the signature of Curtius. As he grew older however, and his position in society improved, he became less democratic, was an admirer of Mr. Pitt, and a member of the Pitt Club. Subsequently, in his position of a member of the Council of the College of Surgeons, he was an opponent of all change in that body.

As a surgeon Sir William Blizard never took the highest position in his day, but he was a good anatomist. His contributions to medical literature are few, and, considering the vast opportunities he must have had of witnessing all forms of disease in one of the largest hospitals in London, not so important or valuable as might have been anticipated. Among his principal papers are—'Observations on the Uses of Electricity in Deafness,' 1790; 'Lecture to the Scholars of the Maritime School at Chelsea, on the Situation of the Large Blood-Vessels of the Extremities, explaining the Use of the Tourniquet,' 12mo, written with the view of affording some knowledge of what could be done in cases of emergency from wounds of various kinds; 'Hunterian Oration,' 1815, 1823, 1828; 'An Address to the Chairman and Members of the House Committee of the London Hospital, on the subject of Cholera,' 1831. He also wrote 'Desultory Reflections on Police, with an Essay on the Means of Preventing Crimes and Amending Criminals,' 1785, and some papers in the 'Philosophical Transactions.'

(Cooke, *A Brief Memoir of Sir William Blizard, Knt.*)

BLOCH, MARCUS ELIESER, was born in 1723, at Ansbach in Bavaria, of extremely poor Jewish parents. Having made up by intense industry the deficiencies of his early education, and acquired a wide extent of knowledge, especially in the department of natural history and anatomy, to which he had particularly devoted himself, he took the degree of M.D. at Frankfurt-on-the-Oder, and returned to Berlin to exercise his art as a physician. In this city he was highly prized not only for his knowledge but for the excellence of his private character, and here he died on August 6, 1799. On his settling at Berlin as a medical practitioner he began to publish. His first work was 'Medical Observations, with a Treatise on the Mineral Waters of Pyrmont,' 1774; and he followed this by other valuable medical treatises. But his great work, and that on which his fame principally rests, was on the natural history of fish, published in two series, 'Oekonomische Naturgeschichte der Fische Deutschlands' ('Natural History of the Fish of Germany, with reference to their Management'), in 3 vols., 1762-64; and 'Naturgeschichte Ausländischer Fische' ('Natural History of Foreign Fish'), in 12 vols., 1785-95. The two works contain 432 coloured plates, of which the excellence is even now acknowledged, and the work itself is regarded as the foundation of the science of ichthyology. Bloch left uncompleted a 'Systema Ichthyologiae Iconibus ex illustratum,' which was published by Schneider in

1801. The valuable collection which Bloch had formed was purchased by the government, and now forms a part of the collections of the Berlin Zoological Museum. (*Conversations-Lexikon.*)

BLOEMART, ABRAHAM, an historical painter, was born at Gorcum in 1567. Bloemart appears not to have travelled beyond Paris, and he derived little advantage from his visit to that city. He principally resided in Utrecht. His works have remained almost entirely in his native country, and are chiefly at Amsterdam. There are pictures of his in some of the churches at Brussels and Mechlin. Bloemart possessed originality and feeling, but was a complete mannerist, making nature subservient to his own peculiar style. In some of his historical pictures the figures are as large as life, which shows that he had the ambition of doing something great; but the costume is still Dutch, no matter what the subject may be. He acquired however considerable skill in the practice of his art. Besides historical pictures he executed some landscapes, which have been admired, and he was not a stranger to the etching needle. He died in 1647 according to some accounts, but others say 1657. There are engravings of his works very spiritedly executed by Bolswert.

Cornelius, his eldest son, obtained some celebrity as an engraver, and introduced certain improvements in the practice of his art, giving a softer edge to his shadows than his predecessors. His other sons practised painting and engraving, but without much success.

BLOMFIELD, FRANCIS, was born at Fresfield in Norfolk, July 23rd, 1705. He received the elements of education at Diss and Thetford, and in 1724 was sent to Gonville and Caius College, Cambridge. He took his degree of B.A. in 1727, and in the same year was ordained deacon of the church of St. Giles's-in-the-Fields, London. In 1728 he was made a licensed preacher by Dr. Tanner, then Chaucerellor of Norwich. In 1729 he was instituted rector of Hargham in Norfolk, and in September of the same year he was instituted rector of Fresfield on the presentation of his father, Henry Blomefield, Gent.; soon after which he relinquished Hargham. Blomefield's death occurred from small-pox, January 15, 1751. His great work, which in its completed form constitutes one of the best county histories we possess, was published under the modest title of 'An Essay towards the Topographical History of the County of Norfolk.' It was printed in his own house at Fresfield, and the publication began in numbers in 1739. It was to a great extent owing to his being his own printer and publisher that the slow progress of the work was owing; but its issue was greatly retarded by a fire having, when the first volume was completed, destroyed not only all the parts printed, but also the printing apparatus. It was left unfinished at his death, when he had carried it to nearly the end of the third (folio) volume; and the completion was ultimately undertaken by the Rev. C. Parkin, rector of Oxburgh, who had rendered some assistance to Blomefield in the previous portion, and had himself formed considerable collections. This gentleman finished the third volume, and added two more, which are considered inferior to those by Blomefield. The second volume was published in 1743; the third, completed by Parkin, not till 1769; the fifth and final volume appeared in 1775. Blomefield was greatly assisted in his work by the collections which had been formed by Peter le Neve, norroy king-at-arms, who spent above forty years in amassing at great expense and trouble the most extensive collection of facts for the history of Norfolk that had been formed for any county in the kingdom. Blomefield's own last-printed work was the 'Collectanea Cantabrigiensia,' a collection relating to Cambridge university, town, and county.

* BLOMFIELD, CHARLES JAMES, Bishop of London, was born in 1786 at Bury St. Edmunds, Suffolk, where his father was a schoolmaster. Having been first well-grounded in classics he proceeded to Trinity College, Cambridge, and both there and in the university examinations he attained great distinction. He graduated in 1808 as third wrangler, and was senior medalist the same year; subsequently he was elected fellow of Trinity College. The first published specimen of his philological and critical abilities was an edition of the 'Prometheus' of Æschylus, which appeared in 1810; this was followed by the 'Seven against Thebes,' 1812; the 'Persians;' the 'Choephoræ;' and the 'Agamemnon.' A valuable edition of Callimachus was published under his supervision in 1824. It is on these works that the fame of Bishop Blomfield as a classical scholar chiefly rests. But they are far from exhibiting the extent of his labours in the academic field. In 1812 he edited in conjunction with Kennel the 'Museum Cantabrigiensis;' and in conjunction with Monk the 'Posthumous Tracts' of Porson, a work which he followed, two years later, by editing alone the 'Adversaria Porsoni.' But besides these he is known to have written numerous critical papers on Greek literature, some of them of a rather trenchant character, in the quarterly reviews and classical journals; and he compiled in 1823 a Greek grammar for schools.

His first preferment in the church was in 1810 to the living of Warrington; and in the same year he received that of Dunton in Essex. In 1819 he became chaplain to Howley bishop of London, and very soon after he received the valuable rectory of St. Botolph, Bishopsgate, in the city of London, and was made Archdeacon of Colchester. From this time his career of active clerical influence may be dated. In 1824 he was raised to the episcopal bench as Bishop of

Chester; and in 1828 on his friend and patron Bishop Howley being translated to the see of Canterbury, Bishop Blomfield was chosen to succeed him as Bishop of London. His lordship has ever since taken perhaps the most active and influential, if not always the most prominent part, in the government of the established church, and a leading position in the discussion of all ecclesiastical or semi-ecclesiastical subjects in the House of Lords. His conduct in the many important matters connected with the doctrines and ceremonial observances and innovations which have vexed or interested the Church of England during the many years he has held his present important post, has been much canvassed: into its merits however we of course refrain from entering. But besides his watchful supervision of the general interests of the Church, Bishop Blomfield has been a careful overseer of the clergy of his diocese, and prompt to support any proposition which has appeared likely to improve the condition of the labouring classes in the metropolis. Nor in the briefest notice of Bishop Blomfield ought the amazing success of his efforts for increasing the number of churches to pass unmentioned. While Bishop of Chester he zealously set on foot efforts to erect new churches in places insufficiently supplied; but it is in his London diocese that success has most abundantly crowned his labours. During the time that he has held the see there have been built in his diocese a number of churches beyond all comparison greater than in the presidency of any other bishop since the Reformation; yet one of his most recent public acts has been to make an earnest appeal, seconded by a large subscription, to the affluent and liberal to endeavour by a vigorous effort to raise funds sufficient if possible to construct as many additional churches as the Census Report of the Registrar-General shows are still needed to meet the wants of the vast and rapidly increasing population of the metropolis.

The theological writings of Bishop Blomfield consist of 'Lectures on the Acts of the Apostles,' and of numerous Sermons and Charges.

BLOND, or BLON, JACQUES CHRISTOPHE LE, a miniature painter, born at Frankfurt in 1670, known as the inventor of printing in colours. He appears to have been studying in Rome as early as 1696, and he probably lived there many years. Before 1711 he was practising as a miniature painter with great success in Amsterdam, but he executed miniatures of so small a size that he injured his eyes, and he was forced to give up that style. He then for awhile practised oil-painting; but he appears to have soon afterwards turned his attention to printing in colours. He anticipated great results from his discovery, and removed to Paris as a larger field of operation, but not finding the encouragement he expected, he came to London. Here he found ready subscribers to his novel plan of picture painting. Those however whom his representations had persuaded to venture money in the scheme were very much disappointed in the results. His prints were flat and dirty, and gave but very faint copies of their originals; they were however efforts of great merit and great novelty, and with more perseverance than Le Blond possessed much good might have resulted. Le Blond however, disheartened by the coldness with which his prints were received, and a consequent bankruptcy, neglected the discovery, and turned his attention to a new scheme—the weaving in tapestry of the cartoons of Raphael.

His plan of printing was too simple to produce satisfactory results. He used only three primary colours, and passed the prints three times through the press, printing with one colour each time; the secondary and tertiary colours were obtained by printing one colour over one or both of the other two primary colours; and the impression was repeated for those parts where great depth was necessary: they were first engraved in mezzo-tinto. He published an account of his plan in 1722, in French and English, in 4to, entitled 'Il Colorito, or the Harmony of Colouring in Painting, reduced to Mechanical Practice, under easy Precepts and infallible Rules,' with five examples, and a dedication to Sir Robert Walpole. A second edition was published in Paris, in 1756, after the death of Le Blond, by one of his pupils, under the title 'L'Art d'Imprimer les Tableaux.' Le Blond executed altogether in this style thirty-three plates, many after the great masters, and all very large; some of the portraits, which are a considerable proportion, are as large as life: they are extremely scarce.

Le Blond found also much assistance towards the commencement of his undertaking regarding the cartoons of Raphael, but it was so inadequate to the full accomplishment of the tapestries, that after he had spent all that was advanced, he saw the hopelessness of persisting; and in about 1737 he went off to Paris, leaving his friends the partly-prepared apparatus as the indemnity for their outlay. In Paris he again had recourse to his printing in colours, for which he took out a patent in 1740, but he produced only two plates; the enterprise failed, and he himself is said to have died in an hospital in 1741.

(Heineken, *Idée Générale d'une Collection d'Estampes, and Dictionnaire des Artistes, &c.*; Hüsgen, *Artistisches Magazin*; Huber, *Manuel des Amateurs, &c.*; Strutt, *Dictionary of Engravers*; Fiorillo, *Geschichte der Zeichnenden Künste, &c.*)

BLONDEL, or BLONDIAUX, a French minstrel of the 12th century, and the friend of Richard I. of England, whom he accompanied to Palestine. The story of his discovery of Richard—who on his return from Palestine had been made a prisoner by Leopold, duke of Austria, and confined in the castle of Löwenstein—by singing under the castle walls an air which they had formerly composed together,

and to which Richard responded, is given by Fauchet, on the authority of some old French chronicle, and has furnished the subject of a well-known opera by Gretry. The truth of the story however is doubted.

BLOOD, THOMAS, generally called Colonel Blood, was a native of Ireland, and an adventurer of no ordinary character. He is said to have been born about 1628. For some time he served in Ireland as a lieutenant in the parliamentary forces. After the king's restoration, the Act of Settlement in Ireland, by affecting Blood's fortune, made him discontented beyond the common feeling of the republican party, and finding a design on foot for a general insurrection, which was to be begun by surprising the Castle of Dublin, and seizing the person of the Duke of Ormond, the then lord-lieutenant, he joined it, and ultimately became its leader. The conspiracy however which had been long suspected, was discovered upon the eve of its execution. Colonel Blood fled, but one Lackie, a minister (his brother-in-law), with various others, were apprehended, convicted, and executed. Blood secured his retreat to Holland, where he is stated to have been received into intimacy by some considerable persons in the republic. From Holland he came to England, and joined the Fifth Monarchy men, whose plans giving no promise of success he withdrew to Scotland, where he took part with the covenanters, and was present in the action of Pentland Hills, November 27th, 1666. After that defeat he again went to England, where he lived for a time in disguise, meditating revenge against the Duke of Ormond; whom he actually seized on the night of December 6th, 1670, in his coach in St. James's-street, with the intent, as was believed, of carrying him to Tyburn to hang him. The duke's servants after a severe struggle rescued their master. Blood's connection with this enterprise was not suspected; nor, though a reward of 1000*l.* was offered by proclamation to discover the perpetrators of the crime, could any of the gang be apprehended.

The miscarriage of this design put him upon one still more strange and hazardous to repair his broken fortunes. He proposed to the same desperate persons who had assisted him in the former attempt, to join him in seizing the regalia of England; he was to contrive the means, and they were to devote themselves to the service. His scheme was so well laid, and executed with so bold a spirit, that on the 9th of May 1671 he so far carried his point as to get a part of the regalia (the crown and orb) into his possession. Blood, who had assumed the disguise of a clergyman, concealed the crown beneath his cloak, but was pursued and taken. One of his companions, Parret, had the orb. Blood and Parret, with another of the party, were now committed to the Tower-jail, where, strange to say, at the instigation of the Duke of Buckingham, then the favourite and first minister, the king himself visited him; finally pardoned him, took him into favour at court, and gave him a pension. For several years applications were constantly made to the throne through the mediation of Colonel Blood; and the indulgence shown to him became a public scandal. When the ministry styled the 'Cabal' fell to pieces, Colonel Blood's consequence at court declined. He then became an enemy to his former patron, the Duke of Buckingham, for a conspiracy to fix a scandalous imputation upon whom he was convicted in the court of King's Bench, and committed to prison; but finding bail, was allowed to retire to his house in the Bowling Alley in Westminster, where he died August 24th 1680.

(*Remarks on Some Eminent Passages in the Life of the Fam'd Mr. Blood*, fol., London, 1680; Sir Gilbert Talbot, *Narrative of Blud's Attempt on the Crown in the Tower*, Harl. M.S., No. 6859; *The Narrative of Colonel Thomas Blood, Concerning the Design Reported to be laid Against the Life and Honour of George, Duke of Buckingham*, folio, London, 1680.)

BLOOMFIELD, ROBERT, an English pastoral poet, was the youngest of six children of George Bloomfield, a tailor at Honington, a village near Bury St. Edmunds in Suffolk, where Robert was born, December 3rd, 1766. Having in early infancy lost his father, his mother obtained a scanty subsistence for her family by keeping a little school, in which he himself was taught to read. At the age of eleven he was hired in the neighbourhood as a farmer's boy; but being found too feeble for agricultural labour, he was placed with a relative in London to become a shoemaker. With no assistance or stimulus beyond the reading of a newspaper, and a few borrowed books of poetry, of which his favourite was Thomson's 'Seasons,' he composed his very pleasing rural poem 'The Farmer's Boy' in a poor garret, No. 14, Bell Alley, Coleman-street, whilst at work with six or seven others, who paid each a shilling a week for their lodging. The manuscript, after being offered to, and refused by, several London publishers, was printed under the patronage of Capel Loft, Esq., in 1800; and the admiration it produced was so general that, within three years after its publication, more than 26,000 copies were sold. An edition was published in the following year at Leipzig. At Paris a translation, entitled 'Le Valet du Fermier,' was made by Etienne Allard; one was made into Italian; and in London appeared, in 1805, 'Agricolæ Puer, poema Roberti Bloomfield celeberrimum, in versus Latinos redditum' auctore Gulielmo Clubbe, LL.B.: a very clever effort in imitation of the 'Georgics.'

The fame of Bloomfield was increased by the subsequent publication of 'Rural Tales, Ballads, and Songs,' 'Good Tidings, or News from the Farm,' 'Wild Flowers,' and 'Banks of the Wye.' He was kindly noticed by the Duke of Grafton, by whom he was appointed to a situation in the Seal office; but suffering from constitutional ill-health, he

returned to his trade of ladies' shoemaker, to which, being an amateur in music, he added the employment of making Æolian harps. The Duke of Grafton allowed him a pension of a shilling a day, but the maintenance of his family, and of some other of his relatives, involved him in difficulties; and, being habitually in bad health, he retired to Shefford in Bedfordshire, where, after much bodily and mental suffering he died, August 19th, 1823, at the age of 57 years. He left a widow and four children, and debts to the amount of 200*l.*, which sum was raised by subscription among his benevolent friends and admirers.

The works of Bloomfield have been published in a collected form; and his 'Farmer's Boy' has been frequently reprinted. The author's amiable disposition and benevolence pervade the whole of his compositions. There is an artless simplicity, a virtuous rectitude of sentiment, an exquisite sensibility to the beautiful, which cannot fail to gratify every one who respects moral excellence, and can enjoy simple descriptive poetry illustrative of English country life.

BLOW, JOHN, Mus. Doc., was born at North Collingham, Nottinghamshire, in 1648, and educated in the Chapel-Royal, where he very early distinguished himself by his industry and enterprise, for it appears, from Clifford's 'Collection,' that while one of the 'children' of that royal establishment, he composed several anthems, which had the honour to be performed before the king. His advancement was rapid: he was successively appointed to the offices of Gentleman of the Chapel-Royal and Master of the Children; one of the King's Private Musicians; Composer to the King; Almoner and Master of the Choristers of St. Paul's Cathedral; and Organist of Westminster Abbey. He died in 1708, and was interred in the north aisle of Westminster Abbey, where a monument is erected to his memory, on which is engraved his famous 'Gloria Patri,' a canon, together with a long inscription, wherein it is stated, and to his honour, that he was "master to the famous Mr. H. Purcell." The compositions of Dr. Blow are numerous, but more the offspring of study and patient labour than of genius. Two of his anthems however prove that he was sometimes inspired by the muse presiding over his art; and a few of the many secular compositions in his 'Amphion Anglicus'—a volume of songs, &c.—were deservedly popular.

BLÜCHER, LEBRECHT VON, Prince of Wahlstadt, field-marshal of Prussia, was born December 16th, 1742, at Rostock, a town near the shore of the Baltic, in the duchy of Mecklenburg-Schwerin. His father was a captain of cavalry in the service of Hesse-Cassel. At an early age he manifested a strong predilection for the military profession; and in opposition to the advice of his relatives, entered in his fourteenth year a regiment of Swedish hussars as ensign. In a campaign against the Prussians, at the commencement of the Seven Years' War, in which the Swedes were allied with Russia and Austria against Frederic the Great, he was taken prisoner in Pomerania by the same regiment of Prussian hussars in which he afterwards became so distinguished. The colonel of the regiment, Von Belling, being favourably impressed with his frank and gallant character, persuaded him to join the Prussian army, and contrived to give in exchange for him another Swedish officer. In the service of Frederic he rose from a lieutenant to senior captain, when his pride being ruffled by the promotion of a person of higher birth than himself to the vacant post of major, and finding no use in remonstrance, he caused a request for permission to resign to be delivered to his royal master. That singular personage, to whom in stoical endurance of hardships and energy of character he was so remarkably similar, gave him in a very blunt manner the permission he requested. He then retired to the duchy of Silesia, became a farmer, and by persevering assiduity acquired possession of a considerable estate. He remained thus employed for fifteen years, until the accession in 1786 of Frederic William II., by whom he was courteously recalled, and again introduced in the rank of major to his old regiment of black hussars, which he commanded with honourable distinction in several campaigns against the French.

In 1789 he obtained the Order of Merit; and subsequently in 1793-94, as colonel and major-general, at the battles of Orchies, Luxembourg, Frankenstein, Oppenheim, Kirchweiller, and Edesheim in the palatinate, he acquired reputation as a soldier by his vigilance, promptitude, and astonishing energy. In the name of the king of Prussia he took possession in 1802 of Erfurt and Mühlhausen. In the same year, after the victory gained by the French at Jena, having, with a remnant of 10,000 or 12,000 Prussians, become separated from the rest, he succeeded without disorder in forcing his retreat westward as far as Lubeck, and, though harassed by the forces of the marshals Soult, Marat, and Bernadotte, he resisted to the last, and finally accepted a capitulation only on condition that the cause of surrender should in writing be stated to be "want of ammunition and provisions." Having been exchanged for General Victor, he was sent into Pomerania to assist the Swedes. He was afterwards employed in the war department at Königsberg and Berlin; and when in 1813 his country rose in opposition to France, he was appointed to take the command of a numerous army of Prussians and Russians combined. The order of St. George was bestowed upon him by the emperor Alexander in acknowledgment of his conduct at the battle of Lützen; at those also of Bautzen and Haynau he was no less conspicuous. In the battle fought August 26th, 1813, on the banks of a small river near Liegnitz in Silesia, called the Katzbach, Blücher first held undivided command; and with 60,000 men, the greater number of whom

were but raw militia, defeated the French marshals Macdonald, Ney, Lauriston, and Sebastiani, and inflicted on them a terrible loss. Marching with amazing rapidity to the Elbe, he crossed that river by means of pontoons, and pushed on to the important battle of Leipsig, to the victorious results of which his services greatly contributed. With his Russo-Prussian troops he now formed the left wing of the great army of the allies in their pursuit of Napoleon I. retreating towards France. Having passed over the Rhine at Kaub and Coblenz, he took possession of Nancy in January 1814. At Brienne he received a fierce attack from Napoleon: but, though repulsed with great loss, returned to the combat, as usual, on the following day, and succeeded in getting some advantage. The rash and reckless rapidity of his movements at this time having obliged him to make a retreat, and exposed his army to disasters which prudence might have avoided, an alarm began to arise in England about the final result of the contest; when, after various battles lost and won on the way to Paris, he finally entered that metropolis March 31, 1814; and, but for the intervention of the other commanders, it would by him have been made a scene of revengeful retribution. Among his less extravagant demands, he firmly insisted upon the restitution of every picture and work of art which had been plundered from Prussia to adorn the Louvre. As field-marshal and prince of Wahlstadt he accompanied the allied sovereigns to England, where his personal appearance excited great curiosity. All the most illustrious military orders of Europe having been conferred upon him, the king of Prussia created for him a new one, with the badge of a cross of iron, in compliment to his invincible courage. The Prince Regent of England gave him his portrait; and the University of Oxford, not to be deficient in proof of admiration, bestowed upon the veteran warrior the academical degree of LL.D. In possession of these honours he retired to his Silesian estate, residing there until the return of Napoleon from Elba in 1815, when he again returned to the great theatre of war, and assumed the command of the Prussian army in Belgium. His characteristic over-confidence and precipitancy occasioned his defeat at the battle of Ligny, June 16th. It was at the close of this desperate engagement, in which the fighting continued until ten at night, that his horse was shot dead, and fell upon him, so that he lay in that position unable to move, whilst several regiments of French cuirassiers passed over him in charging his troops. A report of his death was soon in circulation; and Napoleon, who commonly named him 'le vieux diable' (the old devil), made the most of it in cheering the hopes of his soldiers in the struggle at Waterloo on the 18th. But late in the evening of that memorable day, before victory was quite assured, Prince Blücher, who on the night of his accident had, owing to the darkness, escaped unhurt, appeared suddenly emerging from the forest of Frichefont at the head of a great portion of his Prussian army. At first Napoleon took it for the French division of Marshal Grouchy arriving from Wavre; that illusion however was quickly dispelled, and a general attack, ordered by the Duke of Wellington, completed the victory. Blücher, although his troops had been marching all day, immediately gave orders to pursue the flying enemy. The moon being bright, a fierce and hot pursuit by sixteen regiments of Prussians was kept up the whole night, until the roads were choked with the dying and the dead. Having arrived with his army at Paris, and assisted in the reinstatement of the Bourbon dynasty, he remained there several months, very frequently attending the tables for rouge-et-noir. When the Prussians returned to Germany, Blücher, on the anniversary of the battle of Katzbach, paid a visit to Rostock, his native place, where the inhabitants united to raise a public monument to his fame. His health now beginning to decline, he finally retired to his château of Kriblowitz in Silesia, where the king of Prussia visited and took leave of him in his latest moments. "I know I shall die," said the old general; "I am not sorry for it; because I can be no longer of any use." Having requested that he might be buried without any parade, in a neighbouring field by the roadside, under three linden trees, he died on the 12th of September 1819, aged seventy-seven. The whole Prussian army went into mourning for eight days. He had been in the service of Prussia during forty-five years, and at the battle of Waterloo was seventy-three years of age. In the year 1826 his statue in bronze, twelve feet in height, modelled by the sculptor Rauch, was erected in Berlin. The merit of Blücher lay nearly altogether in his fearless courage and his personal advantages: as a prudent, scientific general he has no claims at all to distinction. With a piercing eye, a loud and sonorous voice, a bold outline of figure, accoutred and armed as a cosack, and a masterly style of manœuvring his horse, his presence, as he rode in front of his men, never failed to inspire them with hope of success in following a captain so daring and full of energy. The astonishing celerity of his movements got him the appellation of Marshal Forwards, by which he was generally known in Germany and Russia; but equally well known was the fact, that to the able plans of General Gneisenau, one of his officers, he owed almost all his success.

BLUMENBACH, JOHANN FRIEDRICH, was born at Gotha on the 11th of May 1752. He studied medicine successively in the universities of Jena and Göttingen, and took his degree at the latter place in 1775. He chose for the subject of his inaugural dissertation the varieties of the human race. It was published at Göttingen with the title 'De Generis Humani Varietate Nativa,' 4to, 1775; and several new editions appeared during the next twenty years. This essay

appears to have laid the foundation of many of his important investigations on this subject in after life, and led to the formation of his very extensive collection of the skulls of all nations.

In 1776, the year after taking his degree, Blumenbach was appointed extraordinary professor of medicine in the university of Göttingen, and in 1778 he was made ordinary professor. At the same time he also received the appointment of superintendent of the library and museum of natural history in the university. From this time his contributions to the sciences connected with medicine, especially anatomy and physiology, became regular. In physiology he pursued the path of Haller, and directed his attention more especially to the structure and functions of the lower animals, as a means of determining the true laws of human physiology. In 1781 he published a work on embryology, entitled 'Ueber den Bildungstrieb und das Zeugungs-geschäft,' 8vo, Göttingen. In this work he threw much light on the obscure subject of generation, and opened up a path for future inquirers. New editions of this work appeared in Germany in 1789 and 1791. In 1786 appeared his work on the human bones, with the title 'Geschichte und Beschreibung der Knochen des Menschlichen Körpers,' 8vo, Göttingen. He also published, in Latin, in the same year, an introduction to medical literature. In 1787 appeared his 'Institutiones Physiologicae,' 8vo, Göttingen. This work was written in Latin, and was one of the first attempts that had been made to give a condensed account of the functions of the human body without entering into the minute anatomical structure of the body. It quickly became the text-book of schools where physiology was taught. Several new editions of the original work were published, and it was translated into German, Dutch, English, and French. A second English translation, by Dr. Elliotson, was published in London in 1817; and of this translation so many subsequent editions appeared, and the notes by the translator became at length so numerous, and the progress of physiology required so much of the original to be modified, that the translator at length published the work with the title 'Human Physiology, &c., with which is incorporated much of the elementary part of the Institutiones Physiologicae of J. F. Blumenbach, by John Elliotson, M.D.'

Blumenbach, in all his contributions to physiology, had frequent recourse to the lower animals for the purpose of illustrating and developing the functions of those of the higher; and in 1805 he was induced to publish a manual of comparative anatomy. This work appeared at Göttingen, with the title 'Handbuch der vergleichende Anatomie.' It was translated into English in 1809, by Mr. William Lawrence; and again in 1827 by Mr. Couison. Although this work is meagre compared with those which have appeared both in this country and on the continent since its first publication, yet it exerted an important influence on the systematic study of comparative anatomy, embodying as it did the results of previous observers and the author's own labours in this department of scientific inquiry.

One of the results of the author's inquiries with regard to the varieties of the human race was the collection of a large number of skulls of the inhabitants of the various parts of the world. In 1791 he commenced the publication of a work in parts, containing descriptions and illustrations of these skulls. It was entitled 'Decas Collectionis sup Cranium diversarum Gentium illustrata,' 4to, Göttingen. This work extended to several volumes, and was finished in 1808. Besides his large works, Blumenbach contributed to various scientific journals a great number of papers on particular departments of medical and physiological inquiry, and indeed on almost every subject connected with medicine.

In 1783 Blumenbach visited Switzerland. During this journey he made notes on the medical topography of the districts through which he travelled, and afterwards published them in his 'Medicinische Bibliothek,' a work which he edited at Göttingen from 1780 to 1794. He visited England in 1788, and again in 1792. In 1812 he was appointed secretary to the Royal Society of Sciences at Göttingen. In 1816 he was made physician to the king of Great Britain and Hanover; and in 1821 was made a knight commander of the Guelphic order. In 1831 he was chosen a member of the Academy of Sciences in Paris. The jubilee of his graduation was celebrated by the university in Göttingen in 1825, and the jubilee of his professorship in the following year. He died on the 22nd of January 1840.

(Kallisen, *Medicinisches Schriftsteller-Lexikon*; Blumenbach, *Works*.)

BOADICEA, BOODICEA, BONDICEA, or BOUNDORICEA, lived in the middle of the first century, and was the wife of Prasutagus, the king of the Iceni, a tribe of Britons inhabiting Norfolk and Suffolk. Prasutagus at his death bequeathed his wealth, which was very great, to his two daughters and to the Roman emperor, a device resorted to in those times with the hope that it would confine the emperor to a share of the deceased's possessions, and would rescue the remainder from his officers. Nero was at this time emperor; and Suetonius Paulinus, a general of great skill and energy, commanded in Britain. While Suetonius was occupied in attacking the Isle of Anglesey (then called Mona), Catus, the procurator or collector of the revenue, was guilty of great rapacity among the Britons in the east. He caused Boadicea, on whom the government of her nation had devolved by the death of her husband, to be scourged, and her daughters to be violated. In consequence of these atrocities, the Iceni and their neighbours, the Trinobantes (who dwelt in what is now

Essex and Middlesex), flew to arms. They first attacked and destroyed the Roman colony of Camalodunum (Colchester), and defeated a Roman legion which was coming to the relief of the place, under the command of Petilius Cerialis. The insurgents also massacred the Romans at Verulamium (St. Alban's), and at London, which was then famous for its commerce. Catus fled into Gaul. Tacitus says that the Romans and their allies were destroyed to the number of 70,000, many of whom perished under torture.

Suetonius hastened to the scene of this revolt; and abandoning London, which he had no means of defending, posted himself with an army of about 10,000 men in a narrow pass, his rear being guarded by a wood, A.D. 61. The Britons were commanded by Boadicea, who, in a chariot with her two daughters, went from one tribe to another exhorting them to fight bravely. They seem however to have met the usual fate of uncivilised armies. Without combination, incumbered by their very multitude, impeded by their women who surrounded them, and by their unwieldy chariots, they suffered a terrible carnage. Tacitus, a nearly contemporary historian, estimates the destruction at 80,000 persons, an incredible number, although he says that the Romans did not spare even the women and the animals, who added to the heaps of slain. Boadicea, he tells us, killed herself by poison.

(Tacitus, *Annal.* xiv. 31, &c.)

BOBROV, SEMEN SERGÆEVITCH, a Russian poet of some distinction, who commenced his literary career about 1784. His most important, if not most extensive work is the 'Khersonida,' a poem descriptive of the wild scenery, natural history, and antiquities of the Taurida. In this production, which first appeared in 1803, and was afterwards corrected and enlarged, there is much originality both of subject and manner, and it is further remarkable for being written in blank verse, a form before unknown to Russian poetry. Besides containing many very animated pictures of nature in the mountainous regions of the Tauridan peninsula, there are many lyrical passages of great vigour, which, while they relieve the sameness of landscape description, breathe a powerful moral strain, and are replete with elevated sentiment and religious fervour. Some of the episodical parts are of a dramatic cast, being thrown into the form of dialogue, and along with these may be classed the narrative of the aged Shereef Omar, in the course of which he relates the history of the Taurida from the fabulous ages of Greece. Bobrov was gifted with much imagination and feeling, but in aiming at energy and loftiness he was occasionally inflated in his language. He was exceedingly well read in English poetry, to which he is perhaps in some measure indebted for the best characteristics of his own. He died at St. Petersburg in 1810.

BOCCA'CCIO, GIOVANNI, born in 1313, was the son of Boccaccio di Chellino, a merchant of Florence, whose family belonged to Certaldo in the Val d'Elsa in the territory of Florence. His mother was a Frenchwoman, with whom his father had become acquainted during a visit to Paris, where Boccaccio was born. He studied at Florence under the grammarian Giovanni da Strada until he was ten years of age, when his father apprenticed him to a merchant at Paris, where he spent six years. On his return to Florence, having expressed a dislike of mercantile pursuits, his father set him to study the canon law. After some years passed in this study, he was sent to Naples, where he became acquainted with several learned men about the court of King Robert, who was a patron of learning. Boccaccio says that the sight of Virgil's tomb near Naples determined his literary vocation for life, and that he then renounced all other pursuits.

In 1341, on Easter-eve, as he was attending service in the church of San Lorenzo, he was struck by the appearance of a beautiful young lady, with whom he fell deeply in love. The object of Boccaccio's admiration proved to be Mary, of the family of Aquino, and a presumed daughter of King Robert of Naples. Boccaccio's attachment was returned; and to please his mistress he wrote 'Il Filocopo,' a romance in prose, at the beginning of which he relates the history of their love, and afterwards 'La Teseide,' a poem in ottava rima on the fabulous adventures of Theseus. This was the first romantic and chivalrous poem in the Italian language. Chaucer borrowed from the 'Teseide' his 'Knight's Tale,' afterwards remodelled by Dryden under the name of 'Palamon and Arcite.' Boccaccio dedicated the 'Teseide' to his Fiammetta, the name which he gave to his mistress Mary. In 1342 Boccaccio was recalled home by his father, but in 1344 he returned to Naples, where he remained for several years. He there wrote the 'Amorosa Fiammetta;' 'Il Filostrato,' a poem in ottava rima, and 'L'Amorosa Visione,' a poem in terza rima, of which the initial letters of the first line of each terza being placed in succession together by way of acrostic, compose two sonnets and a canzone in praise of his mistress, and this is the only way in which he has called her by her real name 'Mirja.' At this time he frequented the court of Queen Joanna, who had succeeded her father Robert. He read his works to the queen, and at her desire, as it appears, he wrote his 'Decamerone,' a hundred tales, ten of which are supposed to be told every afternoon of ten successive days by a society of seven young women and three young men, who, having fled from the plague which afflicted Florence in 1348, had retired to a country-house some distance from the town. Most of the stories turn upon love-intrigues; they are full of humour and admirably told, but the details are often very licentious. Several of the tales however are unexceptionable.

Some of the subjects of these tales are taken from older works, but most of them are original.

While at Naples Boccaccio amused himself with writing in the Neapolitan dialect, in which there is extant a humorous letter addressed by him to Francesco de' Bardi, a Florentine merchant, in the year 1349. It appears that Boccaccio went from Naples to Calabria, and some say also to Sicily, either for the purpose of studying Greek, or in order to collect manuscripts for his library. About 1350 Boccaccio returned to Florence, where, by the death of his father, he had become possessed of his inheritance, which he spent in travelling and in purchasing manuscripts chiefly of the Greek and Latin classics. What manuscripts he could not purchase he contrived to copy.

Boccaccio's merits being now known and appreciated by his countrymen, he was employed by the state in several offices and missions. He was sent several times to Romagna, to the lords of Ravenna and Forlì, and afterwards on a mission to Louis of Bavaria, Marquis of Brandenburg, in Germany, and again to Pope Innocent VI. In 1351 he was sent to Petrarch, who was then at Padua, to communicate to him the revocation of the sentence of exile passed against his father during the factions of 1302, as well as the restoration of his paternal property, which had been confiscated; Petrarch was at the same time invited to return to his paternal country, but he declined the invitation. In 1355 Boccaccio wrote 'Il Corbaccio, ossia il Labirinto di Amore,' a kind of satire against women, full of indecent passages. His *Fiammetta* appears to have died at Naples some time before. In 1360, having induced the Florentines to found a chair of Greek literature in their university, he repaired to Venice for a professor, and brought home with him Leontius Pilatus, a native of Calabria, who wished to pass himself off for a Greek, as Petrarch says. ('*Epistola Senil.*' lib. iii. 6.) Pilatus was a learned but uncouth man. Boccaccio lodged him in his own house, and treated him with great kindness notwithstanding his repulsive manners and bad temper. Boccaccio learned Greek from Pilatus, who made for his pupil's use a Latin translation of Homer.

In 1361 a great change took place in Boccaccio's moral conduct. His life had till then been irregular, and most of his writings licentious, but in that year Father Ciani, a Carthusian monk, came to him and stated that Father Petroni of Siena of the same order, who had died shortly before in odour of sanctity, had commissioned him to exhort Boccaccio to forego his profane studies, reform his loose life, and prepare for death. To prove the truth of his mission, Ciani told Boccaccio several circumstances, known only to Boccaccio and Petrarch. Boccaccio wrote immediately in great agitation to his friend Petrarch, expressing his resolution to quit the world and shut himself up in a Carthusian convent. Petrarch's answer, which is among his Latin epistles, is remarkable for its sound and clear sense. Without ascribing much weight to the mysterious circumstances of the monk's communication, he exhorted his friend to listen to the warning, so far as to adopt a new and regular course of life, which he might do without shutting himself up in a convent, and without giving up his studies and his books. This letter calmed the excited imagination of Boccaccio, who from that time became an altered man. His studies took a more serious turn, and he devoted part of his time to the perusal of the Scriptures. It was soon after this that he wrote to Mainardo de' Cavalcanti, marshal of Sicily, imploring him not to allow his '*Decamerone*' to be perused by the females of his family, "who, though they might by education and honourable principles be above temptation, yet could not but have their minds tainted by such obscene stories." And as an apology for himself, he stated that it was a work of his youth, and that he had written it in great measure in compliance with the will of the powerful, "*majori coactus imperio,*" alluding probably to Queen Joanna's request.

In 1362 Boccaccio went to Naples at the request of Acciajuoli, the seneschal of the kingdom, but he soon left Naples for Venice, where he spent three months with Petrarch. After his return to Florence, he was sent by the republic to Pope Urban V., then at Avignon, and again to the same pope at Rome in 1367. At this period of his life he appears to have been distressed in his circumstances, and to have received occasional assistance from his kind friend Petrarch, who also, on his death-bed, left him by will fifty golden florins "to buy him a winter pelisse to protect him from cold while in his study at night," adding, that if he did no more for Boccaccio, it was only through want of means. In 1373 Boccaccio was appointed to lecture at Florence on Dante's '*Commedia*,' and to explain and comment upon the obscure passages of that poem. He wrote a commentary on the '*Inferno*,' which is much esteemed, and also a life of Dante, which is not very accurate. His health being bad, he gave up his lectureship in 1374, and retired to Certaldo, where he made his will, leaving his little property to his two nephews, except his library, which he bequeathed to his confessor, Father Martin of Sigma, an Augustine friar, and after his death, to the convent of Santo Spirito at Florence, for the use of students. A fire which occurred in the convent a century after destroyed this valuable collection, the work of Boccaccio's whole life. After lingering for several months, Boccaccio died at Certaldo on the 21st December 1375, at the age of sixty-two, sixteen months after the death of his friend Petrarch.

Boccaccio may be considered as the father of Italian prose. The merits of his '*Decamerone*' with regard to language have been perhaps

exaggerated, but still it has the merit of being the earliest prose work written in pure Italian. (Foscolo, '*Discorso Storico sul Testo del Decamerone*;' '*Journal of Education*,' No. x., 'On the Study of the Italian Language.') Boccaccio and Petrarch were the revivers of classical literature in Italy. They spared neither labour nor money in recovering the Greek and Latin classics, and in giving an impulse to the study of them. Boccaccio wrote several works in Latin: '*De Genealogia Deorum*;' '*De Montium, Sylvarum, Lacuum, Fluviorum, Stagnorum et Marium Nominibus, Liber*;' '*De Casibus Virorum et Fœminarum illustrium*;' '*De Claris Mulieribus*,' and sixteen '*Eclogues*,' in which he alludes, under the veil of allegory, to the events of his time. His Italian works have been published together, carefully corrected from the best existing manuscripts, in 17 vols. 8vo, Florence, 1827-34.

(Baldelli, *Vita di Giovanni Boccaccio*, Florence, 1806; Mazzuchelli, *Scrittori d'Italia*.)

BOCCAGE, MARIE ANNE LEPAGE, was a French poetess of the last century, so highly esteemed by her contemporaries that she was received as a member of the academies of Rome, Bologna, Padua, Lyon, and Rouen. She was born in Rouen in 1710, and educated in a convent at Paris, where, at an early age, she was distinguished for talent and a poetic turn; but it was not until the year 1746 that Madame du Bocage first appeared as an author, when her poem, entitled '*Prix Alternatif entre les Belles Lettres et les Sciences*,' gained the first prize given by the then recently founded Rouen Academy. She was from this time surrounded, courted, and eulogised by all the distinguished literati of France. Fontenelle called her his daughter; Voltaire placed a crown of laurel on her head, saying it was the only thing wanting to her dress; and the words '*Forma Venus arte Minerva*' were assigned her as a motto; but her productions display little real genius, and little that can command the admiration of posterity. Their chief merit seems to be an easy and correct versification. Her poetical works consist of an imitation of '*Paradise Lost*,' another of Geaner's '*Death of Abel*,' '*Les Amazones*,' a tragedy (which was acted eleven times), '*La Colombiade*,' an epic poem, and several small pieces. Her works ran through four editions between the years 1749 and 1770, and were translated into English, German, Spanish, and Italian. Her prose letters, written during her travels through England, Holland, and Italy, which were little thought of at the time, will probably be valued long after her poetry is forgotten. Madame du Bocage died at the age of ninety-two, in the year 1802.

BOCCALINI, TRAJANO, born at Loreto in 1556, studied at Rome, and afterwards applied himself to the profession of the law. He was employed by the court of Rome in several administrative offices, and Gregory XIII. sent him as governor to Benevento. He was well acquainted with the politics of the different courts in his time, and wrote satirical comments upon them, in which he was particularly vehement against the court of Spain, in that age the preponderating power in Europe. His principal work is '*I Ragguagli di Parnaso*,' in which Apollo is supposed to sit in judgment and hear the charges and complaints of princes, warriors, and authors. This work made him many enemies. He also wrote '*La Pietra del Paragone Politico*,' which he left in manuscript in the hands of a friend. In this work, which is a kind of continuation of the other, he especially attacks Spanish despotism. It was published after his death in 1652, and translated into English by Henry earl of Monmouth, with the title '*Politick Touchstone*,' London, 1674. Boccalfni also wrote commentaries upon Tacitus, '*Osservazioni sugli Annali di Cornelio Tacito*,' in which he develops his views of ancient politics, and makes frequent comparisons between them and the events of his own time. These commentaries, which also extend to the life of Agricola, were published in 2 vols. 4to, 1678, under the title of '*La Bilancia Politica di tutte le Opere di Trajano Boccalfni*,' with notes by Louis du May. The notes are written with greater freedom than the text, especially on religious subjects, for which reason the work was put in the Index of forbidden books. Owing to his invectives against Spain, Boccalfni, being afraid of the power of that government, took refuge at Venice, the only Italian state that kept itself comparatively independent of Spanish influence. He did not live there much more than a year, and died on the 16th of November 1613. According to some accounts he was murdered in his lodgings, and in his own bed, by hired assassins, but the statement is disbelieved by Mazzuchelli, Tiraboschi, and other Italian writers.

BOCCANERA, SIMONE, the first doge of Genoa, was elected by popular acclamation in 1339. Until that time the republic had been governed by two capitani chosen from among the patrician families, between whom frequent disputes occurred, they being divided into the factions of Guelphs and Ghibellines. These disputes were often accompanied with violence, and the citizens of Genoa growing tired of such commotions appointed a doge, or elective supreme magistrate, after the example of Venice. It was resolved at the same time that the doge should be chosen from among the private citizens, and not from any of the patrician families. The doges were appointed for life; but they were often driven from office by civil commotions. Boccanera himself was expelled in 1344, but returned some years after and was reinstated. His son Battista was elected doge in 1400, but was soon after beheaded. The institution of the doges for life lasted till 1523.

BOCCHERINI, LUIGI, was born at Lucca in 1740. His first instructions in music were from the Abbé Yannucci, and he subsequently studied composition generally, and the violoncello particularly, at Rome. Some time afterwards Charles IV. of Spain, a great connoisseur in music, engaged Boccherini as court composer, and during many years he lived in the sunshine of royal favour; but indiscreetly wounding the vanity of the royal dilettante, he was dismissed from his envied situation. About the same time Lucien Bonaparte, then ambassador at Madrid, took him under his protection, and settled on him a pension of a thousand crowns, on condition of his supplying him with six quintets every year. Boccherini continued to reside in the Spanish capital till his death, which took place in 1806. Boccherini produced little besides quintets for two violins, viola, and two violoncellos, which are remarkable for sweetness of harmony, and for gracefulness of melody; and, what renders them unlike all other compositions of the kind, he most commonly assigns the principal part to the first violoncello. Of these he composed no less than ninety-three, which have now been superseded by the more elaborate and undoubtedly superior works of the same class by Haydn, Mozart, and Beethoven.

BOCHART, MATTHIEU, Protestant minister at Alençon in the 17th century, published 'Traité contre les Reliques,' and 'Traité contre le Sacrifice de la Messe.' Judicial proceedings were commenced against him for having given in this treatise the forbidden title of pastors to Protestant ministers. He published also 'Dialogue sur les Difficultés que les Missionnaires font aux Protestans de France.' This dialogue on the tolerance of Lutheran errors induced the Elector Palatine to try if he could unite the two reformed churches in Germany, namely, the Lutherans and the Calvinists, and accordingly he advocated their union in the assembly of Protestant princes at Frankfurt. Upon hearing this, Matthieu Bochart published his 'Diallacticon,' that is, 'a conciliatory treatise,' 1662, which he dedicated to the Elector Palatine. It contains the plan of this projected union.

BOCHART, SAMUEL, of the family De Bochart Champigny, de la branche de Menillet, became by his great learning the most distinguished member of his illustrious family, although he did not enjoy such splendid titles as many of his relations. He was born at Rouen in 1599, and was the son of a Protestant minister. When Samuel Bochart was thirteen years old he composed forty-four Greek verses, and it is said that he read at an early age not merely the Hebrew Bible, but also the rabbinical commentators. Soon afterwards he studied philosophy at Sedan under the professor D. J. Smith, and defended his theses with great applause in 1615. He studied divinity under Caméro, or Caméron; and the Syriac, Chaldean, and Arabic under Capel. When Caméron escaped from the civil commotions to London in 1621, Bochart followed him and attended his private instructions.

After a short stay in England, Bochart went, towards the close of the year 1621, to Leyden, where he studied Hebrew and Arabic under Thomas Erpenius, and divinity under A. Rivetus, who had married a sister of P. du Moulin. Rivetus dedicated his 'Catholicus Orthodoxus' to Bochart. It is said that Bochart learned the Ethiopic from Job Ludolf.

Having finished his studies at Leyden, Bochart returned home. His father was then dead, but his mother still survived. He was soon invited by the Protestants at Caen to accept among them the office of pastor, and he became a zealous and popular preacher, admired even by Roman Catholics. During the siege of Rochelle a number of Roman Catholic controversialists went about in order to dispute with Protestant ministers, and to entrap them by unguarded expressions. The famous Veron, who had been trained by the Jesuits, and was now travelling through France, urged Bochart to a public disputation, which took place in the castle, in the presence of a large assembly of nobility and gentry, and lasted from the 22nd of September to the 3rd of October 1629. Sometimes the Duke of Longueville, viceroy of Normandy, himself attended. In nine sessions Bochart and Veron debated on the accuracy of the French version of the New Testament, the faults of the Vulgate, images, traditions, intercession of the saints, good works, the mass, presbyters, forbidden food, celibacy, certainty of salvation, authority of the Bible, the church, supremacy of St. Peter, power of the pope, the Virgin, saints, relics, free will, merits, vows, abstinences, justification, purgatory, limbus, prayers for the dead, number of sacraments, eucharist, *equivocæ*, &c. Veron, observing that Bochart had gained more general approbation than himself, left without having terminated the disputation. Bochart enriched his 'Actes de la Conférence tenue à Caen entre Samuel Bochart, et Jean Baillache, et François Verin, et Isaac le Conte,' Saun. 1630, 2 vols. 8vo, with several additions from the fathers, which prove that he was well versed in this branch of learning.

Having begun to expound Genesis to his congregation, these popular expositions, which terminate with Gen. xl. 18, led him to write the following works:—'De Paradiso Terrestri,' 'Geographia Sacra, seu Phaleg, et Canaan,' 'Hierozoicon, or the Animals mentioned in the Bible.' He wrote also some dissertations on the plants and gems mentioned in the Bible, but of these merely fragments remain. The 'Phaleg' and the 'Canaan' were published in 1646. The approbation with which 'Phaleg' and 'Canaan' were received by the learned induced Bochart to bestow all his energy upon the 'Hierozoicon,' but

two circumstances occasioned delay. Dr. Morley, then chaplain to King Charles II. of England, prevailed on Bochart to write a letter on episcopacy and presbyterianism, in order to pacify the minds of the English about the time of the Convention of Breda; and in 1652 Bochart was invited by an autograph letter of Christina, queen of Sweden, to come to Stockholm, where she had surrounded herself with learned men. Bochart was accompanied to Stockholm by Huetius, or Huet. They visited on their journey through Holland the learned of those days, as Heinsius at Leyden, and the famous Anna Maria à Schurmann, then at Utrecht. They passed through Hamburg and Copenhagen to Stockholm, where they were well received by the queen, but Bochart was much annoyed by the levity of the courtiers. He returned in 1653 to Caen, where he was welcomed by the members of the academy which had been founded during his absence, and of which he became one of the most distinguished members. In the Royal Library at Stockholm he had found many oriental sources of information for his 'Hierozoicon,' and he induced his young companion Huet to employ his leisure in editing the 'Commentaries of Origen' from a codex in the royal library at Stockholm. In 1661, having come to an agreement with a London bookseller for the 'Hierozoicon,' which is the best of his works, he obtained the assistance of Stephanus Morinus in his ministerial functions, in order that he might devote his time to the completion of it. Morinus was afterwards his biographer, and it is from his treatise 'De clarissimo Bocharto et omnibus ejus Scriptis,' that we derive our information. Bochart died suddenly of apoplexy on the 16th of May 1661, whilst speaking in an assembly of the academicians at Caen.

Bochart's works have been edited at Leyden by Johannes Leusden and Petrus de Villedandy, 'Opera omnia, hoc est, Phaleg, Chanaan, et Hierozoicon, quibus accesserunt Dissertationes Variæ, &c. Præmittitur Vita Auctoris à Stephano Morino scripta, editio quarta, 1712.' This edition is the best of the complete works, but the 'Hierozoicon' has been published by F. C. Rosenmüller, Lips., 1793-96, in 3 vols. 4to, with additions from modern travellers.

(*Dictionaries of Moreri and Bayle; Morinus, Vita; Pet. Dan. Huetii, Episcopi Abrincensis Commentarius de Rebus, &c.*)

BODLEY, SIR THOMAS, from whom the Bodleian or public library at Oxford takes its name, was the eldest son of Mr. John Bodley of Exeter, by Joan, daughter and heiress of Robert Home, Esq., of Ottery St. Mary. He was born at Exeter, March 2nd, 1544. He was about twelve years of age when his father, being obliged to leave England on account of religion, settled with his family at Geneva, where he lived a voluntary exile during the reign of Queen Mary. In the university of Geneva, then newly erected, young Mr. Bodley applied himself to the study of the learned languages and divinity under the most eminent professors. He frequented the public lectures of Chevalerius on the Hebrew tongue, of Beroaldus on the Greek, and of Calvin and Beza on divinity, and had also domestic teachers in the house of Philibertus Saracenus, a physician of that city, with whom he boarded, where Robert Constantine, author of the Greek Lexicon, read Homer to him. Upon the accession of Queen Elizabeth, in 1558, he returned to England with his father and family, who settled in London. He was soon after sent to Magdalen College, Oxford, where he was placed under the tuition of Dr. Humphrey, afterwards president of that society. In 1563 he took the degree of B.A., was chosen probationer of Merton College the same year, and the year following was admitted fellow. In 1566 he took the degree of M.A., and in the same year read natural philosophy in the public schools. In 1569 he was elected one of the proctors of the university, and after that, for a considerable time, supplied the place of university orator. In 1576, being desirous to improve himself in the modern languages, and to qualify himself for public business, he began his travels, and passed nearly four years in visiting France, Germany, and Italy. Afterwards, returning to his college, he applied himself to the study of history and politics. In 1583 he was made gentleman usher to Queen Elizabeth, and in 1585 married Anne, daughter of Mr. Carew of Bristol, and widow of Mr. Ball, a lady, as Wood informs us, of considerable fortune. Soon after, he was employed by Queen Elizabeth in several embassies to Frederic king of Denmark, Julius duke of Brunswick, William landgrave of Hesse, and other German princes, to engage them to join their forces with those of the English for the assistance of the King of Navarre, afterwards Henry IV. of France; and having discharged that commission, he was sent to king Henry III., at the time when that prince was forced by the Duke of Guise to quit Paris. This commission, he himself tells us, he performed with extraordinary secrecy, not being accompanied by any one servant (for so he was commanded), nor with any other letters than such as were written with the queen's own hand to the king, and some select persons about him. "The effect," he continues, "of that message it is fit I should conceal; but it tended greatly to the advantage of all the Protestants in France, and to the duke's apparent overthrow, which followed soon upon it." In 1588 Mr. Bodley was sent to the Hague to manage the queen's affairs in the United Provinces, where, according to an agreement between the queen and the States, he was admitted one of the Council of State, and took his place next to Count Maurice, giving his vote in every proposition made to that assembly. In this station he behaved greatly to the satisfaction of his royal mistress and the advancement of the public service.

After nearly five years' residence in Holland, Mr. Bodley obtained leave to return into England to look after his private affairs, but was shortly afterwards remanded back to the Hague. About a year afterwards he came into England again, to communicate some private discoveries to the queen, and presently returned to the States for the execution of the counsels which he had secretly proposed. He obtained his final recall in 1597. After his return, finding his advancement at court obstructed by the jealousies and intrigues of the great men, he retired from it and from all public business, and never could be prevailed with to return, or to accept any new employment. In the same year he set about the noble work of restoring or rather founding anew the public library at Oxford, which was completed in 1599. After King James's accession to the throne, Mr. Bodley received the honour of knighthood. He died the 28th of January 1612, and was buried with great solemnity at the upper end of Merton College choir. Sir Thomas Bodley wrote his own life to the year 1609, which, together with the first draught of his statutes for his library, and a collection of his letters, were published from the originals in the Bodleian by Thomas Hearne under the title of 'Reliquiæ Bodleianæ, or some genuine Remains of Sir Thomas Bodley, 8vo, London, 1703. The 'Life' alone had been previously published in 4to, Oxford, 1647.

BODMER, JOHANN JACOB, the son of a clergyman, was born at Zurich in July 1698. He applied himself particularly to the study of history and to poetry. Bodmer was struck with the want of national character in the German literature of his time, the style and manner of which were heavy imitations of the French. Bodmer and his friend Breitinger began publishing a series of critical articles on the subject, which were violently opposed by Gottsched, the Aristarchus of Germany in those days, who treated the two Swiss critics with great superciliousness; but this controversy, which continued for some years, was the means of effecting a complete revolution in German literature. Several young and gifted writers embraced Bodmer's views, and a thoroughly German school was formed, which produced Klopstock, Lessing, Schiller, Göthe, and a host of others.

Bodmer was deeply read in the Greek and Latin, as well as in the English poets, and he translated Homer and Milton into German. But his special delight was in the old romantic and chivalrous poetry of Germany, and he made the value of ancient German poetry known by publishing in 1758 a collection of the Minnesinger, or old German romantic poets. He likewise published the 'Helvetische Bibliothek,' Zurich, 1735-41, which is a collection of tracts relative to the history of Switzerland. He also wrote a poem in twelve cantos on the Deluge, which was translated into English under the title of 'Noah,' by J. Collyer, London, 1767. Bodmer filled for fifty years the chair of literature in the academy of his native town, Zurich. He died at a very advanced age in January 1783. In the latter part of his life he was regarded as the patriarch of German literature, and he took delight in directing and encouraging young men in their studies. His books and manuscripts he bequeathed to the National Library of Zurich. His correspondence was published, together with that of his countryman Solomon Gessner, by Körte, Zurich, 1804.

BODONI, JOHN BAPTIST, one of the most eminent printers of the 18th century, was born at Saluzzo in the Sardinian states, February 16, 1740. He learned the rudiments of his art in the office of his father. In his earlier days he showed a taste for design, and at hours of leisure engraved vignettes on wood. At eighteen years of age a desire to improve his condition induced him to undertake a journey to Rome. He left Saluzzo with a school-fellow, Dominic Costa, who expected to receive assistance from an uncle, at that time secretary to a Roman prelate. With some difficulty arising from their scarcity of means, they reached Rome, when Costa's uncle told them he could do nothing for them, and advised them to return. Bodoni yielded to the advice; but, before he quitted Rome, thought he would visit the printing-house of the Propaganda. His general demeanour and vivacity on this occasion attracted the notice of the Abbate Ruggieri, the superintendent of that establishment, who gave him an engagement. Here he attracted the notice of the Cardinal Spinelli, at that time the head of the Propaganda, who became his patron, and by whose advice he attended a course of lectures on the Oriental languages in the University of La Sapienza, and learned to read Arabic and Hebrew. Being intrusted with the printing of the 'Arab-Copt Miscell,' and the 'Alphabetum Tibetanum,' edited by Père Giorgi, he acquitted himself so well, that Ruggieri put his name at the end of the volume, with that of his town: 'Romæ exoudebat Johannes Baptistæ Bodonus Salutiensis, MDCCCLIII.' Ruggieri's suicide however in 1766 (or as other accounts say, as early as 1762) rendered Bodoni's longer stay at Rome insupportable from regret. At this time he had also accepted a proposal to come to England, but going to Saluzzo to see his parents, he fell ill; and the Marquis de Felino, in the interval, offering to place him at the head of the press intended to be established at Parma, upon the model of that of the Louvre, Bodoni broke through his engagements, and settled there in 1768. In 1771 he published specimens of his art in 'Saggio Tipografico di fregi e majuscole,' in 8vo; followed in 1774 by 'Iscrizioni esotiche,' composed by J. B. de Rossi; and in 1775, on occasion of the marriage of the Prince of Piedmont with the Princess Clotilde of France, a third work of the same description, entitled 'Epithalamia exoticis linguis

reddita,' exhibiting the alphabets of twenty-five languages. Between 1775 and 1788, although his fame became universal, his press was not over-actively employed. In 1789 the Duke of Parma furnished Bodoni with a portion of his palace and a press, from which issued some of the most beautiful, though not the most correct editions of the classics known: especially a 'Horace' in folio, in a single volume, in 1791; 'Virgil,' in two volumes in folio, in 1793; 'Catullus, Tibullus, and Propertius,' in 1794; and 'Tacitus's Annals,' in three vols. folio, in 1795. In 1794 Bodoni produced a most beautiful edition of the 'Gerusalemme Liberata' of Tasso, in three vols. folio.

His most sumptuous work of all was his 'Homer,' in three volumes in folio, printed in 1808, with a prefatory dedication to the Emperor Napoleon in Italian, French, and Latin. When the French armies entered Italy, in the early part of the revolutionary war, Bodoni and his labours had received a marked protection. On the 21st of January 1810 Bodoni presented a copy of this splendid work, printed upon vellum, in two volumes, to the emperor, in the gallery at St. Cloud, and in return, received a pension of 3000 francs. After this time, while Italy was under the French rule, Bodoni received the most tempting offers to quit Parma. Prince Eugene Beauharnois offered him the superintendence of the press at Milan, and Murat that of Naples; but he pleaded age and infirmities, and his wish to remain at Parma. In 1811, having received the Cross of the Two Sicilies from Murat, he proposed to publish for the education of the young prince, the son of Murat, a series of French classics, and commenced the execution of his project by a folio 'Telemachus' in 1812. 'Racine' was to have followed; but it was not published till 1814, after Bodoni's death. Bodoni had long suffered from the gout, to which a fever was at last superadded. He died November 20th, 1813. Within a few months of his death the Emperor Napoleon nominated him a 'Chevalier de la Réunion,' and sent him a present of 18,000 francs to aid him in the publication of the French classics.

BOECE, or BOETIUS, HECTOR, the Scottish historian, was of the family of Boece of Balbride, or Panbride, in the shire of Angus (now Forfarshire). He was born about the year 1465-66 in the town of Dundee: whence he had the appellation of Deidonanus, as he is styled in the edition of his history published by Ferrarius. He received his early education in his native town and at Aberdeen, whence he went to Montague College in the University of Paris, where he took the degree of A.M. in 1494, and in 1497 was appointed professor of philosophy. At Paris he became acquainted with many of the learned persons of his time; amongst others Erasmus, who kept up an epistolary correspondence with him, and, as a mark of his regard, dedicated to him a catalogue of his works. He calls Boece "vir singularis ingenii, felicitatis, et facundi oris;" and says of him that "he knew not to lie."

In the beginning of the 16th century, Boece was induced to accept an invitation made by Bishop Elphinstone of Aberdeen, to be principal of the college about to be erected in that city. When he came to Aberdeen he was made a canon of the cathedral, and chaplain of the choir of St. Ninian. In the end of the year 1514 his friend and patron, Bishop Elphinstone, died.

In the beginning of 1522 Boece published at Paris his 'Vita Episcoporum Murthlacensium et Aberdonensium,' a work to which he was, it seems, led by the exemplary life of the late bishop, an account of whom, indeed, occupies the greater part of it. The dedication, which is to Bishop Dunbar, is dated from the College of Aberdeen, prid. Cal. Sept. 1521. Major's or rather Mair's 'History of Scotland' appeared about this time; and its appearance probably led Boece to undertake a similar work. In 1526 the first edition of Boece's 'History of Scotland' was published. In estimating this work we must apply to it the standard of the day in which it was issued: when knowledge was in the hands of few, and in those few hands meagre and inaccurate; when communication was difficult, and intercourse rare; and when physical science was in its infancy. Taking these things into account, we must admit that Boece merited the admiration and reward which he received. In 1527 the king gave him a pension of 50*l.* Scots yearly, to be paid until the king should promote Boece to a benefice of 100 marks Scots of yearly value. Boece subsequently obtained the rectory of Fyvie in the shire of Aberdeen, which he held at his death in 1536. Bellenden's translation of Boece's 'History' was published in 1536 at Edinburgh. This translation was made at the command of King James V., whose limited education precluded him from perusing the Latin original. Bellenden's translation of Boece was a very free translation, the author having added and altered as he thought proper; and it again was put from the Scottish dialect, in which it was written, into English, with equal freedom, by Harrison. (Ap. Holinshed's 'Chron.' vol. I.)

In 1527, Boece's brother Arthur, who was a doctor of the canon law, and a licentiate in the civil law, and the author of a book of 'Excerpta' from the canon law, appears to have been appointed canonist of King's College. (Kennedy, 'Annals of Aberdeen.') The next year Boece himself took the degree of Doctor in Divinity in the college; and on this occasion the magistrates and town-council of Aberdeen voted him a present of a tun of wine, when the new wines arrived, or 20*l.* to buy a new bonnet. ('Council Register,' ap. Kennedy, 'Annals,' vol. ii. p. 367.) Boece died about the year 1536, and was buried in the chapel of the college near the tomb of Bishop Elphinstone.

* BOECKH, AUGUST, was born in the year 1785 at Carlsruhe, in the grand-duchy of Baden. He was educated at the university of Halle in the Prussian province of Saxony, was thence admitted into the Teachers' Seminary at Berlin, and was afterwards appointed professor of the Greek language and literature in the university of Berlin, which office he still holds. He also fills the situation of secretary to the class of history and philosophy in the Academy of Sciences in that city. He is an associate-member of the Academy of Inscriptions and Belles-Lettres of France, and a corresponding member of most of the other learned societies of Europe.

Professor Boeckh's principal philological and critical work is his edition of Pindar (Leipzig, 3 vols. 4to, 1811-21), consisting of the Greek text, with various readings, scholia, a Latin translation, a continuous commentary, notes, and a treatise on Greek versification. But the work which has established his reputation among the students of Greek antiquity throughout Europe is 'Die Staatshaushaltung der Athener' (Berlin, 2 vols. 8vo), which has been translated into English by the present chancellor of the exchequer, Sir George Cornewall Lewis, under the title of 'The Public Economy of Athens' (London, second edition, revised, 1842). It is divided into four books, the heads of which will best exhibit the extent of investigation which the work comprises:—Book 1, on the prices of commodities, wages of labour, rent of land and houses, and profits of stock, in Attica; book 2, on the financial administration and expenditure of the Athenian state; book 3, on the ordinary revenues of the Athenian state; book 4, on the extraordinary revenues of the Athenian state.

In 1819 Professor Boeckh published 'Die Entwicklung der Lehren des Pythagoräer Philolaos' ('Development of the Doctrines of Philolaus the Pythagorean'). In 1838 he published his 'Metrologische Untersuchungen über Gewichte, Münzfüsse, und Masse des Alterthums' ('Metrological Investigations concerning the Weights, Coins, and Measures of Antiquity'). This treatise includes a full inquiry into the subjects which were more summarily discussed in the first six chapters of the first book of 'The Public Economy of Athens.' In 1840 came out his 'Urkunden über das Seewesen des Attischen Staats' ('Documents relating to the Maritime Administration of the Athenian State'). He also published a 'Dissertation on the Silver-Mines of Laurion in Attica,' and in 1843 an edition of the 'Antigone' of Sophocles. The great work entitled 'Corpus Inscriptionum Græcarum,' printed under the authority and at the expense of the Royal Academy of Berlin, was commenced by Boeckh, and continued by Frantz, one of Boeckh's pupils, who has since died. This work, in three magnificent folio volumes, but not yet completed, is to contain all the Greek inscriptions known, whether printed or in manuscript.

(*Nouvelle Biographie Universelle.*)

BOERHAAVE, HERMANN, was born on the 31st of December 1668 at Voorhout, a village two miles from Leyden, of which his father, James Boerhaave, was the minister. Being designed for the Church, he was instructed by his father in the classical languages, and at the age of eleven he was already able to translate both Greek and Latin with tolerable accuracy. He went to Leyden in 1682, and at the university there he studied Greek, Latin, Hebrew, Chaldee, with ancient, modern, and ecclesiastical history, and the mathematics; and he soon began to give public proofs of his eloquence and erudition. In 1688 he delivered an oration before Gronovius, professor of Greek. In 1689 he took the degree of Doctor of Philosophy, the subject of his inaugural thesis being the distinction between the soul and the body. In this, as in his former discourse, he refuted the atheistical doctrines of Epicurus and Spinoza, and obtained a great reputation for piety and learning.

About this time he taught the mathematics as a means of enabling him to continue his studies, his resources having been much impaired by the death of his father in 1682. Without giving up his intention of entering the ministry, he now began the study of physic by a diligent perusal of Vesalius, Bartholinus, and Fallopius; he was a constant attendant at Nuck's anatomical demonstrations, and examined the anatomy of different animals himself. He carefully studied Hippocrates among the ancient and Sydenham among the modern medical writers. He likewise prosecuted the study of chemistry and botany with ardour, and still pursued his theological studies. Having taken the degree of Doctor of Physic at Hardewick in 1693, he returned to Leyden with the design of undertaking the ministry, but altered his views, and adopted the medical profession, in consequence it is said of an idle report having been propagated that he had gone over to Spinoza. Had Boerhaave been at this time firmly rooted in his design of entering the church, it is difficult to conceive that this absurd calumny could have made him change his resolution. It seems more probable that, feeling himself eminently skilled both in theology and physic, he was wavering in his choice of a profession; and as the slightest weight will turn a loaded but well-balanced beam, so even the breath of a slanderer made Boerhaave a physician.

He now commenced the practice of physic, and his time was taken up with visiting the sick, studying, making chemical experiments, investigating every part of medicine with the utmost diligence, teaching the mathematics, and reading the Scriptures. In 1701 he was recommended by Van Berg to the university as a proper person to succeed Dreincourt in the lectureship of the theory of medicine. He was elected on the 18th of May, and his inaugural discourse was

on the study of Hippocrates. His lectures were received with great applause, and he was soon prevailed upon by his audience to enlarge his original design, and instruct them in chemistry. This he undertook, not only to the advantage of his pupils, but to that of the science itself.

It was then in 1703 that Boerhaave delivered his lecture 'De usu Ratiocinii Mechanici in Medicina,' and also began, in theory at least, to leave the Hippocratic method of simple observation, and to enter upon mechanical speculations in connection with his researches in medical science. Thus he supposed that the adaptation of the calibre of the vessels to the size of the globules of the animal fluids was the principle which regulated the circulation of the humours, their separation from the blood in the different organs of secretion, as well as the morbid congestion of the blood in defluxions, tumours, and inflammations; so that, in the treatment of disease, all the efforts of the physician were to be directed to the re-establishment of this mechanical equilibrium; and the medicines given with this intention were called deobstruents, incisives, &c. To these mechanical hypotheses he joined chemical ones: thus he supposed many morbid phenomena to arise from acrimony of the blood, which it was the business of the physician to neutralise. This part of his doctrine, the humoral pathology, as it is called, though banished for a time from the schools, has always kept its hold on popular belief, and bids fair to revive again. Late investigations into animal chemistry have shown that certain deviations from the healthy composition of the blood accompany, if they do not produce, certain diseases. Thus in jaundice the blood contains both the colouring matter and the resin of the bile; in gout the blood is loaded with earthy phosphates; and in cholera it is deficient both in water and in alkaline salts. But the most remarkable of all these statements respects chlorosis: in this disease, where the sickly pallor of the patient would naturally be attributed by the ordinary observer to deficiency or poorness of the blood, we find a singular deficiency of colouring matter.

In 1703 the professorship of physic being vacant at Groningen, Boerhaave was invited thither, but he preferred remaining at Leyden. He had now read lectures on physic for eight years without the title or dignity of a professor, when in 1709 he obtained the chair of medicine and botany vacant by the death of Hotton. His inaugural discourse was on simplicity in the practice of physic, 'Oratio quæ repurgatæ medicinæ faciliis asseritur simplicitas,' Leyden, 1709. At this time also he published the 'Institutiones medicæ in usus annuæ exercitacionis domesticæ,' first published at Leyden in 1708, but several times reprinted. His 'Aphorismi de cognoscendis et curandis morbis, in usum doctrinæ medicinæ,' published in 1709, was also frequently republished. On these two great works the reputation of Boerhaave is founded. They have been translated into several European languages, and even into Arabic; and Van Swieten, himself a physician of no ordinary talent, illustrated the 'Aphorisms' with a commentary extending to five quarto volumes. Haller published a commentary on the 'Institutiones' in seven quarto volumes, Leyden, 1750; and Lamettrie published a French translation with notes, 'Institutions et Aphorismes,' Paris, 1743, 8 vols. 12mo.

In the 'Institutiones,' Boerhaave indicates the plan of study to be followed by a physician; he gives a compendious history of the art, and an account of the preliminary knowledge which is necessary for its practice; then, entering upon his subject, in five successive chapters he describes the parts and functions of the body, their alterations, the signs of health and disease, together with hygiene and the art of prolonging life. Lastly, he treats of the aids which art affords to medicine; here he details the system on the principles of which we slightly touched above. In his 'Aphorisms,' Boerhaave gives a classification of diseases, and sets forth their causes, their nature, and their treatment, with a short but accurate summary of the whole of ancient and modern medicine. These two works are masterpieces of learning, order, and correctness of style.

Boerhaave shed almost equal lustre upon the chair of botany, which he held with that of medicine, by the publication of his 'Index Plantarum quæ in horto academico Lugduno-Batavo reperiuntur,' Leyden, 1710, 8vo. An enlarged edition of this work, with plates, appeared under the title of 'Index alter Plantarum quæ in horto academico Lugduno-Batavo aluntur,' Leyden, 1720, 4to. Boerhaave greatly increased the number of specimens in the botanical garden; he figured new plants, established new genera, and was one of the first who introduced the stamina and the sexual differences among their characteristic distinctions.

In 1715 Boerhaave was made rector of the University of Leyden, and in the same year was appointed physician to St. Augustine's Hospital, and professor of practical medicine, having already delivered the lectures more than ten years. Twice a week he gave clinical lectures at the hospital, and, like other great physicians, forgetting his theories for awhile, distinguished and treated the complex forms of disease before him with that unrivalled tact which stamped him the first practitioner of his age. On laying down his office of rector, Boerhaave delivered one of his finest orations, 'Oratio de comparando certo in Physicis,' Leyden, 1715, 4to.

He already held the chairs of theoretical medicine, practical medicine, and botany, and, on the death of Lemort in 1718, that of chemistry was added to the number, a subject on which he had

lectured since 1703. In conformity with his custom, he opened his course by a general discourse worthy of his other performances of that kind, 'Oratio de Chemia suos errores expurgante,' Leyden, 1718, 4to.

Boerhaave was one of the first who made chemistry delightful and intelligible; and though the rapid progress of the science has rendered his works on this subject obsolete, he will ever be mentioned with respect in its history. He excelled in experiments, and repeated them with unwearied patience; he performed one experiment 300 and another 877 times. He was skilled in organic chemistry, and showed how the animal fluids might be decomposed by simple means, and how to avoid destructive distillation over the open fire, in the manner then practised. His work on the elements of chemistry went through numerous editions, and was translated into the French and English languages.

So many offices discharged with unparalleled success, obtained for Boerhaave a reputation which was almost without a precedent, and which scarcely knew any other limits than those of the civilised world. The learned of every part of Europe corresponded with him, and every academy desired to be honoured by dissertations from the hand of the most distinguished master of his art. Much of his time was of course taken up with patients, some of whom came to consult him from the most distant countries of Europe; and in answering letters, which in urgent cases were sent to ask the advice of the first physician in the world. The pecuniary proceeds of his practice must have been enormous, for at his death he left more than two millions of florins. He was elected a Correspondent of the Academy of Sciences at Paris in 1715, and a Foreign Associate in 1728; in 1730 he was elected a Fellow of the Royal Society of London. He communicated to the Royal Society and to the French Academy some observations on mercury, which were published in the 'Philosophical Transactions' and in the 'Memoirs of the Academy of Sciences' for 1734.

In 1722 his course both of lectures and practice was interrupted by the gout, which he brought upon himself, he says, by an imprudent confidence in the strength of his constitution, and by transgressing those rules which he had a thousand times inculcated upon his friends and pupils. In consequence of his illness, he lay five months in bed without daring to move, because any effort renewed his torments, which were so exquisite, that he was at length not only deprived of motion but of sense. In the sixth month of his illness, having obtained some remission, he took simple medicines in large quantities and got well. His unexpected recovery was celebrated on the 11th of January 1723 by a public illumination. Fresh attacks of illness in 1727 and 1729 shattered his constitution and forced him to resign the professorships of chemistry and botany; on this occasion he delivered the lecture entitled 'Oratio quam habuit cum Botanicam et Chemicam professionem publicè poneret,' Leyden, 1729, 4to.

In 1730 he was again elected rector of the university, and on quitting this honourable office he delivered a discourse on the subserviency of the physician to nature, 'De honore Medici servitute,' Leyden, 1731, 4to. About the middle of 1737 that illness began which proved fatal. In a letter to a friend in London, dated September 8th 1738, he details the symptoms with a masterly hand; and it appears clearly from his description that he was labouring under organic disease of the heart, with its ordinary concomitants—general dropsy, disturbed sleep, and a distressing sense of suffocation. He expired on the 23rd of September 1738, in his 70th year.

Boerhaave was the most remarkable physician of his age, perhaps the greatest of modern times: a man who, when we contemplate his genius, his erudition, the singular variety of his talents, his unfeigned piety, his spotless character, and the impress which he left not only on contemporaneous practice, but on that of succeeding generations, stands forth as one of the brightest names on the page of medical history, and may be quoted as an example not only to physicians, but to mankind at large. The town of Leyden, which on his recovery from his first illness, had given him so signal a proof of its affection, erected a monument to his memory in St. Peter's church.

He married, September 10th, 1710, Mary Drolenveaux, the only daughter of a burgomaster of Leyden, by whom he had four children, of whom one alone, Joanna Maria, survived her father; the others died in their infancy.

Besides the works already mentioned, Boerhaave published several orations and treatises, and many more have been attributed to him, which are not recognised as genuine in his own catalogue.

The works which he edited are—the works of Drelincourt; the observations of Piaz; the anatomical and surgical works of Vesalius, edited in conjunction with Albinus; the 'Tractatus Medicus de Lue Venerea, præfixis Aphrodisiaco'; the smaller anatomical works of Eustachius; Bellini 'On the Urine and Pulse'; Prosper Alpinus 'On the Prognosis of Life and Death'; and the celebrated edition of Aretæus.

Three works came out under the auspices of Boerhaave which probably would never have been published but for his friendly aid: these are—'The Physical History of the Sea,' by Count Marsigli, Amsterdam, 1725, folio; the 'Botanicon Parisiense,' by Le Vaillant, who when dying sent him the manuscript, Leyden, 1727, folio; and Swammerdam's 'History of Insecta,' printed at Amsterdam in 1737 in 2 vols. folio, with plates, and a Preface by Boerhaave.

(*Biographie Universelle*; Hutchinson, *Biographia Medica*.)

BOERNE, or PÖRNE, LUDWIG, was born in 1784, of Jewish parents, at Frankfurt-on-the-Main, where his father, Jacob Baruch, was a banker. After having received his preparatory education in his native place, he went to the University of Berlin, and then to that of Halle, where he studied medicine, though against his will; but as persons of the Jewish persuasion cannot hold any public office in Germany, the only scientific department that they can devote themselves to with any hope of advantage is medicine, which they are allowed to practise. In 1807 however he gave up his medical pursuits, and in the University of Heidelberg he began to study politics and political economy, which he continued in 1808 at Giessen. On his return to Frankfurt, which was then in the hands of the French, he received an office in the department of the police, which he held for several years, although it little agreed with his peculiar views. In 1815, when Frankfurt recovered its old constitution, Boerne, being a Jew, was of course dismissed from his office, but received a pension. Having thus got rid of all external ties, he now began to devote himself with energy and great success to what he conceived to be his calling: he became a political writer, and successively edited three periodicals, the 'Frankfurt Staats-Ris-tretto,' 'Die Zeitschwingen,' and 'Die Wage,' which were published at Offenbach, but some of the papers in these periodicals were too liberal for the government of Hesse-Darmstadt, which soon suppressed them, and Boerne himself was arrested at Frankfurt, and charged with having promulgated revolutionary ideas. He was tried as a criminal, but as no evidence was brought against him, he was acquitted, and declared innocent. In 1817 Boerne exchanged his Jewish religion for Protestantism, and altered his name Baruch into Boerne. After having given up 'Die Wage,' in 1821, he lived in complete retirement, partly at Frankfurt, partly at Paris, and partly at Hamburg, until, about the time of the French revolution of 1830, he went to reside at Paris. Here he endeavoured to act upon Germany through the medium of a French journal, 'La Balance,' which he intended also to be a sort of mediator between the two countries. But he gradually sank into a state of despondency and bitterness, which hastened his death, which took place on the 13th of February 1837.

Owing to his retirement he was nearly forgotten in Germany, when, shortly before the outbreak of the French revolution of 1830, he published a collection of all his political, critical, and philosophical writings, in 8 vols. 8vo (Hamburg, 1829-31; a second edition appeared in 1835). The occurrences in France contributed to make his works at the time very popular with the liberal party. During his residence at Paris he published six more volumes of political letters, entitled 'Briefe aus Paris,' and 'Neue Briefe aus Paris,' in which he attacked the German governments most unsparingly, and with a bitterness which must be accounted for by the disappointment of his hopes. Boerne, with all his faults, is one of the most eminent political and critical German writers of the present century. He was a man of great humour and wit; his deep feeling is most manifest in a splendid eulogium on Jean Paul ('Denkrede auf Jean Paul,' Erlangen and Hamburg, 1826, 8vo), and he was one of the few Germans at Paris who maintained his character as a German, and did not sink into that frivolity and licentiousness into which many able persons of his acquaintance fell. He remained what he had always been, a sincere warm-hearted man. All his writings are distinguished for power, clearness, and brilliancy of style, qualities rarely met with in German writers. Some years after his death his former friend, H. Heine, published a work on Boerne, entitled 'Heine über Boerne' (Hamburg, 1840, 8vo), which is of a most defamatory nature. A monument more worthy of the noble spirit of Boerne is his Life by Carl Gutakow ('L. Boerne's Leben,' Hamburg, 1840).

BOETHIUS, ANNIUS MANLIUS TORQUATUS SEVERINUS, the most learned and almost the only Latin philosopher of his time, descended from an ancient and noble family, was born at Rome A.D. 456, forty-six years after the taking of that city by Alaric. His father was put to death by Valentinian III., to whom he had been prefect of the palace, in the very year in which his son was born. Though deprived of his father, his other relations gave Boethius a good education, and encouraged in him an early taste for philosophy and letters. They sent him to Athens, where these studies still flourished, and where he remained for eighteen years, studying every branch of literature, but more especially philosophy and mathematics. Plato, Aristotle, Euclid, and Ptolemaeus were his favourite authors. Upon his return to Rome he soon attracted public attention, and the most eminent persons of the city sought his friendship. He married Elpis, a lady of literary attainments, descended from one of the most considerable families of Messina, who bore him two sons.

Boethius was made consul in the year 487, at the age of thirty-two, under Odoacer, king of the Heruli, who at that time reigned in Italy. Two years later, Theodoric, king of the Goths, invaded the country, put Odoacer to death, and fixed the seat of his government at Ravenna. The Romans and the inhabitants of Italy generally, became reconciled to the administration of affairs under Theodoric, who ruled them by the same laws to which they had been accustomed under the emperors; and Boethius had the singular felicity, in the eighth year of Theodoric's reign, to see his two sons, Patricius and Hypatius, raised to the consular dignity. During their continuance in office, Theodoric came to Rome. He was received by the senate and people with the greatest joy, and Boethius pronounced an elegant panegyric before him in the

senate. Theodoric answered in obliging terms, and promised never to encroach upon the privileges of the Senate. In the eighteenth year of Theodoric, Boethius was advanced a second time to the dignity of consul. In the same year he wrote his 'Commentary upon the Predicaments, or the Ten Categories of Aristotle.' He also wrote an explanation of that philosopher's 'Topics,' in eight books; another of his 'Sophisms' in two books; and commentaries upon many other parts of his writings. He translated the whole of Plato's works; wrote a commentary, in six books, upon Cicero's 'Topics;' commented also upon Porphyry's writings; published a discourse on Rhetoric, in one book; a treatise on Arithmetic, in two books; and another, in five books, upon Music; he also wrote three books upon Geometry, the last of which is lost; translated Euclid, and wrote a treatise upon the quadrature of the circle, neither of which performances is now extant; and published translations of the works of Ptolemæus of Alexandria, and of the writings of Archimedes, besides several treatises upon theological and metaphysical subjects, which are extant. The acuteness and profound erudition displayed in such a diversity of works, upon all subjects, acquired for Boethius a great reputation, not only among his countrymen, but with foreigners. Gondebald, king of the Burgundians, who had married a daughter of Theodoric, came to Ravenna on a visit to his father-in-law, and thence went to Rome, not only with a view to see the beauties of the city, but that he might have the pleasure of conversing with Boethius. The philosopher showed him several curious mechanical works of his own invention, particularly two time-keepers, one of which pointed out the sun's diurnal and annual motion in the ecliptic, upon a moveable sphere; and the other (a clepsydra) indicated the hours of the day by the dropping of water from one vessel into another. Gondebald was so well pleased with these contrivances, that upon his return home he despatched ambassadors to Theodoric, praying that he would procure for him the two wonderful time-pieces which he had seen at Rome.

During the course of these transactions Boethius lost his wife Elpis, but married a second time Rusticiana, the daughter of Symmachus, along with whom, in the year 522, he was a third time elected consul. It was during this consulship that he fell under the displeasure of Theodoric. Theodoric was an Arian; and Boethius, who was a Catholic, published about this time a book upon the unity of the Trinity, in opposition to the Arians, Nestorians, and Eutychians. This treatise, which was universally read, made him many enemies at court, who insinuated that Boethius wanted not only to destroy Arianism, but to effect a change of government, and deliver Italy from the dominion of the Goths. Theodoric, unmindful of his former friendship, directed the prosecution of Boethius upon the evidence of three persons of infamous reputation. The offences laid to his charge, as we are informed in the first book of the 'Consolation of Philosophy,' were, "That he wished to preserve the Senate and its authority; that he hindered an informer from producing proofs which would have convicted that assembly of treason; and that he formed a scheme for the restoration of the Roman liberty." In proof of the last article the witnesses produced forged letters, which they averred had been written by Boethius. For these supposed crimes, as we learn from the same authority, he was, unheard and undefended, at the distance of five hundred miles, proscribed and condemned to death. Theodoric, conscious that his severity would be blamed, contented himself for the time with confiscating his effects, banishing him to Pavia, and there confining him in prison.

Soon after this, Justin, the Catholic emperor of the east, finding himself thoroughly established upon the throne, published an edict against the Arians, depriving them of all their churches. Theodoric being highly offended at this edict, obliged Pope John I., together with four of the principal senators of Rome (among whom was Symmachus, the father-in-law of Boethius), to go on an embassy to Constantinople, to persuade Justin to revoke his edict against the Arians. The embassy was unsuccessful, and Theodoric was so incensed that on the return of Pope John and his colleagues he threw them into prison at Ravenna. Boethius was at the same time ordered into stricter confinement at Pavia. Though confined in prison, and deserted by the world, Boethius preserved his vigour and composure of mind, and wrote during his confinement, in five books, his excellent treatise on the 'Consolation of Philosophy,' the work upon which his fame chiefly rests. He had scarcely concluded this work, or, according to some of his commentators had not concluded it, when, Pope John being fished to death in prison, and Symmachus and the other senators put to death, Theodoric ordered Boethius to be beheaded. His execution took place in prison, October 23, 526. His body was interred by the inhabitants of Pavia, in the church of St. Augustine, near the steps of the chancel, where his monument existed till the last century, when that church was destroyed. The tomb had been erected to him by Otho III. in 996. Theodoric, who did not long survive Boethius, is said in his last hours to have repented of his cruelty.

The most celebrated production of Boethius, 'De Consolatione Philosophiæ,' has always been admired both for the style and sentiments. It is an imaginary conference between the author and philosophy personified, who endeavours to console and soothe him in his afflictions. The topics of consolation contained in this work are deducted from the tenets of Plato, Zeno, and Aristotle, but without

any notice of the sources of consolation which are peculiar to the Christian system, which circumstance has led many to think him more of a Stoic than a Christian. It is partly in prose and partly in verse; and was translated into Saxon by King Alfred, and illustrated with a commentary by Asser, bishop of St. David's. Two manuscripts of an English version of this work made by John Walton, canon of Oseney (commonly called John of Oseney) in 1410 are preserved among the Harleian manuscripts in the British Museum. Chaucer and Queen Elizabeth were also translators of Boethius's treatise 'De Consolatione;' with George Colville, or Coldewel, Richard (Graham) Viscount Preston, W. Causton, the Rev. Philip Ridpath, and R. Duncan of Edinburgh. King Alfred's translation into Saxon was published at Oxford in 8vo, 1698, by Mr. Christopher Rawlinson, and again with an English version from it by J. S. Cardale, 8vo, Lond., 1829. Other English versions have been published. A translation into French by Jean de Meun, was printed at Paris by Verard in 1494. Few books were more popular in the middle ages than this treatise; and few have passed through a greater number of editions in almost all languages. The best edition of Boethius's whole works is that 'cum commentariis, enarrationibus, et notis Jo. Murmelii, Rodolphi Agricolaë, Gilberti Poiretæ, Henrici Lorriti Glareani, et Martiani Rotæ,' printed in 2 vols. folio, at Basel in 1570.

(Life prefixed to Ridpath's translation of the Treatise *De Consolatione*, 8vo, Lond., 1785; Fabricius, *Bibl. Lat.* 4to, Ven., 1728, tom. ii. p. 146-165; Bruckeri, *Historia Philos.*; Baillet, *Vies des Saints*, vol. vii. p. 365, in which work 'Saint Boèce' is included, '13 Octobre.')

BOGATZKY, CARL-HEINRICH, was born in 1690 at Jankowa in Silesia, and died at Halle, in Saxony, in 1774. He published a large number of religious works, but is chiefly known in this country by the work called 'Bogatzky's Golden Treasury,' which is a translation of his 'Tägliches Hausbuch der Kinder Gottes,' and was first published in London in 8vo, in 1754, with the title of 'The Christian's Guide, or Golden Treasury for the Children of God.' It was formerly very popular among the stricter sects of English protestants; it has been frequently reprinted in various forms, and is still in circulation.

BOGDANOVITCH, HIPPOLYTUS THEODOROVITCH, was born December 3rd, 1743, in the town of Perevolotchna in Little Russia, where his father practised as a physician. When eleven years old he was sent to Moscow to be educated in the College of Justice, where he soon began to display a passionate fondness for poetry and the drama. So greatly was he for a time captivated by the drama, that at the age of fifteen he determined to make the stage his profession, and for that purpose presented himself to Khcraskov, the author of the *Rossiada*, and at that time the director of the Moscow theatre, who regarding the application as a boyish freak, exhorted Bogdanovitch to pursue his studies, and proffered his assistance and instruction in literary composition. Bogdanovitch had the good sense to adopt this friendly counsel, and forthwith began to apply himself diligently to the acquirement of foreign languages and the perusal of the best authors. His own industry was seconded by the judicious advice and good taste of Khcraskov, with whom he had now taken up his abode; and he began to try his pen in some pieces which were published in the University Journal entitled 'Polesnoe Uveselenie' (Profitable Recreation).

In 1761 he was appointed inspector at the University of Moscow, and also translator in the foreign office; but in less than two years he went with Count Bieloselsky as secretary of legation to Dresden. During his residence in that city he commenced his delightful poem entitled 'Dushenka,' which was not published till 1775. It is upon those three cantos that his reputation rests, and they earned for him celebrity and favour on their first appearance. The Empress Catherine was charmed with a production, so unlike anything that had preceded it in the language; and it almost immediately became a favourite with all classes. Its author became the idol of the court and the public; but this excessive popularity chilled his invention. Although he afterwards wrote much, he never attempted anything else in the same vein, nor produced anything that was calculated to win a second wreath for the author of 'Dushenka.' In this work, the fable of which is the mythological story of Psyche, the poet bestowed upon the narrative all the captivating graces of style in a language which, although it could boast of many productions marked by the lofty eloquence of poetry, did not, until then, contain any finished model of playfulness of language and refined vivacity. It is not to be wondered at therefore that it should have obtained such unbounded admiration.

Notwithstanding his early predilection for the stage, Bogdanovitch wrote only two dramatic pieces, one of them a comedy in verse entitled the 'Joy of Dushenka.' Except many short poetical productions and other contributions to various journals, by far the greater part of his remaining publications consist of translations. In 1795 he retired from St. Petersburg with the salary of president of the archives continued to him as a pension, and passed his latter years in the peaceful solitude of Little Russia, where he died on the 8th of December 1803, leaving a name which has yet obtained no rival or associate in that particular species of poem with which he was the first to adorn the literature of his country.

BOGERMAN, who signed himself Johannes Bogermanus Pastor Ecclesiæ Leowardensis, Synodi Dortrechtanæ Præses, was born in

1576, in the village of Oplewert in Friesland, and studied divinity at Heidelberg and Geneva, then the two principal seats of reformed theology. In 1604 he was made minister at Leeuwarden. In the polemics of his age he joined Gomarus against Arminius. He approved, translated, and commented on Bezza's work on the capital punishment of heretics. He also wrote a 'Mirror of the Jesuits,' in Dutch, Leeuw. 1608, 4to; a polemical work against Grotius, about or before 1614; and other polemical works which are now forgotten. In 1617 he effected the deprivation of a preacher who held Remonstrant opinions, and greatly contributed to the victory of the Gomarists, or Contra-Remonstrants, over the Remonstrants, or Arminians. He was not without learning, but obtained celebrity especially by his zeal against the Remonstrants. Count William Lewis of Nassau, an enemy to the Remonstrants, recommended Bogerman to the stadtholder Maurice, who, for political reasons, opposed the Remonstrants. Bogerman the president, and four other members of the synod of Dort, were commissioned to translate the Bible. Their translation, especially that of the Old Testament, is chiefly Bogerman's work. It is still used in the churches of Holland, and is admired for its correctness, oriental taste, and purity of language. It is said that Bogerman declined some lucrative invitations to the Hague and to Amsterdam, in order that he might devote his time to this translation of the Bible. Davenantius proposed that the debates of the synod should be published, but Bogerman opposed this motion successfully. On his return home he was sharply reproved by the states and the synod of Friesland, to which province he belonged. He was also accused of having exceeded his instructions. Bogerman remained a partisan of the stadtholder Maurice, and wrote an account of his death. Bogerman died in 1633, as professor primarius at Franeker.

(Brandt, *Historie der Reformatie*, vol. 2—this work has been translated into English and into French; Le Clerc, *Hist. der Vereenigde Nederl.* ii. d. bl. 441; E. L. BOGUE, DAVID, one of the principal founders of the London Missionary Society, was born on the 18th of February (old style), 1750, at Dowland, near Eyemouth, in Berwickshire, and was a younger son of John Bogue, a landed proprietor. He received his early education at the grammar-school at Dunse, and afterwards removed to the university of Edinburgh, where he continued his studies for nine years; and took the degree of A.M. in 1771. He was licensed as a preacher in the Church of Scotland; but his views on the subject of church patronage led him to relinquish his prospects of promotion, and in 1771 to proceed to London. He shortly after engaged himself as usher in a school at Chelsea, kept by the Rev. Mr. Smith, of Silverstreet Chapel, whom he assisted also in his ministerial duties; and in 1776 he visited Holland, having been invited to take the pastoral charge of a Scotch church at Amsterdam. Having declined this engagement Bogue returned to England, and in the next year was chosen pastor of an Independent church at Gosport, where he remained until his death, a period of nearly fifty years. About the year 1789, at the request of an opulent friend who desired to promote the education of young ministers of the Independent denomination, Bogue began to superintend a kind of dissenting college, many of the students in which attained eminence. In 1792 he published a discourse on the subject of Christian missions, which, while it tended to excite the zeal of those favourable to missions, drew upon the author, on account of certain expressions in it, much obloquy from those who looked with more jealousy than himself upon the political changes then commencing on the continent of Europe. A paper supplied by Bogue to the 'Evangelical Magazine' for September 1794, was the more immediate precursor of the London Missionary Society, in the formation of which, in the following year, he took an active part. Shortly afterwards he made arrangements for going out with a new mission to Bengal, the expenses of which were to be borne by his friend Robert Haldane; but permission having been refused by the East India Company, the design was relinquished. He then undertook the charge of a missionary seminary which the directors of the London Missionary Society deemed it advisable to found in aid of their foreign labours. Immediately after the peace of Amiens, in 1802, Bogue, in company with Mr. Hardecastle, Dr. Waugh, and the Rev. Matthew Wilks, visited Paris for the purpose of promoting measures which had long been contemplated for the introduction of Bibles and religious books into France, and in furtherance of which object he had written his 'Essay on the Divine Authority of the New Testament,' a work which, in addition to being very widely circulated in the English and French languages, has been translated into Spanish, Italian, and German. In 1816, in conjunction with Dr. Bennett, Bogue undertook another continental missionary tour, for the promotion of the cause of missions in the Netherlands. In the autumn of 1825, when upon one of his numerous preaching tours for the Missionary Society, he was taken ill at Brighton, where he died on the 25th of October, in his seventy-sixth year.

Bogue was one of the originators of the Religious Tract Society, and wrote the first tract issued by it. He was also one of the founders

and first editors of the 'Evangelical Magazine,' and was more or less connected with most of the important religious movements of his age. Besides various minor works, he published discourses on the Millennium, and, in conjunction with his pupil and friend, Dr. James Bennett, a 'History of Dissenters, from the Revolution in 1688 to the year 1808,' in four volumes, 8vo, 1808-12.

(Bennett, *Memoir of Dr. Bogue*; Morison, *Fathers and Founders of the London Missionary Society*.)

BOHEMOND, the eldest son of Robert Guiscard, the Norman conqueror of Apulia and Calabria in the 11th century. After Robert had become Duke of Apulia and Calabria, and his brother Roger had made himself Count of Sicily, Bohemond accompanied his father in his various expeditions to Greece and Illyria, against the emperor Alexis Comnenus. They took Corfu, and defeated the Greeks near Durazzo. His father returning to Italy, Bohemond remained in Illyria with his Norman and Apulian army. He defeated the Greeks near Arta, entered Thessaly, and besieged Larissa.

At his father's death in 1085, Roger, Robert's second son, took possession of Apulia and Calabria, and Bohemond on his return from Greece found himself deprived of all share of his paternal inheritance. Roger, count of Sicily, Robert's brother, took the part of his nephew and namesake against Bohemond. A war ensued between the two brothers, which terminated by Bohemond accepting the principality of Tarentum, and leaving his brother Roger in possession of the rest. When the great Crusade was resolved upon in 1092, part of the Crusaders took their way through Italy, and assembled at Bari to embark there. Bohemond, bold and aspiring, resolved upon joining them, and trying his fortune in the East. Being at the time in his brother's camp near Amalfi, which town had revolted against Roger, he addressed the assembled warriors; and so inspired them with his own sentiments, that nearly the whole of his brother's army determined on taking the cross, amidst the cries of 'Dieu le veut,' and proclaimed Bohemond for their commander. Roger being thus deserted by his troops was obliged to raise the siege of Amalfi. Both the Prince of Salerno, and Tancred, the hero of romance, immortalised by Tasso, and who was Bohemond's cousin, agreed to follow Bohemond's banner. The Norman and Apulian expedition embarked at Bari, and landed at Durazzo. Bohemond took his way by land across Macedonia, and he was treated with great distinction by the emperor Alexis, who, by his polite behaviour, aided by splendid presents, prevailed on Bohemond and several of the other chiefs to swear allegiance to him for the conquests they should make in the East. Anna Comnena, the daughter of Alexis, has left a striking portrait of Bohemond. "He was remarkably tall and handsome, his eyes were blue, his complexion florid, his demeanour haughty, his look fierce, and yet his smile was soft and insinuating;" but she says that he was crafty and deceitful, a despiser of laws and promises. In the arts of cunning policy he appears to have been quite a match for her father. After the capture of Nicæa, 1096, Bohemond, who commanded the left division of the Crusaders, was attacked by a vast multitude of Turks near Doryleum, and his division was mostly cut to pieces, but by his exertions he maintained the conflict until Godfrey of Bouillon came to his assistance, and routed the enemy. Bohemond succeeded in taking Antioch by the help of an Armenian renegade, who agreed to introduce him and his men by night within the walls; and he prevailed upon his brother Crusaders, with the exception of Raymond of Toulouse, to agree that he should be prince of Antioch. The Christians were soon after besieged in their turn by Kerboga, and after suffering the extremities of hunger they came out to offer the Sultan battle, in which the Saracens and Turks were completely routed, and Bohemond greatly signalised himself. In 1099, in an excursion into Mesopotamia, he was taken prisoner by a Turkish emir, and remained two years in captivity. Both the sultan of Iconium and the emperor Alexis offered large sums to the emir in order to obtain possession of Bohemond, who however contrived to persuade the emir to accept his own ransom, although of less amount, and to make alliance with the Christians against the sultan of Iconium. Returning to Antioch he found there the faithful Tancred, who had taken care of his interests during his absence. In 1103 Bohemond returned to Italy, and in 1106 he visited France, where Philip I. gave him his daughter Constance in marriage: Philip's natural daughter Cecil married Tancred. Upon Bohemond's return to Italy he collected a large force, and sailed from Bari for Durazzo. After several combats with Alexis's troops, he had an interview with the emperor, in which the latter acknowledged him Prince of Antioch. Bohemond died in Apulia in 1111, and was buried at Canosa. His son, Bohemond II., succeeded him as Prince of Antioch.

BOHLEN, PETER VON, was born on the 13th of March 1796 of poor parents in the village of Wuppels, near Jever, not far from the mouth of the Weser. He lost his father when nine years of age, and he and his mother with two young daughters were left without any support; but they were assisted by the villagers. Bohlen received his first education in the village school, to which he was admitted gratis. The clergyman of the place took great interest in him, giving him instruction along with his own children. The knowledge thus acquired created in young Bohlen a love of learning, but as he felt that he ought to earn something to contribute to the support of his poor mother, he obtained occasional employment with the neighbouring

farmers. When he was twelve years old he was put apprentice to a village tailor, by whom he was ill-used in a manner which he afterwards related with shuddering. In 1810, his mother having died in the meantime, he was called upon as an orphan boy to appear at Jever to be examined as to his fitness for serving in the army of Napoleon. He was delighted at the prospect of getting away from his master and of seeing something of the world; but he was found to be too short, and was obliged to return to the tailor. Some time afterwards he was called upon again, and was admitted into the army. At the examination the French general Guiton was pleased with his appearance, and took him into his service. In 1812 he accompanied his new master, who was extremely kind to him, to Hanover, from which place frequent excursions were made to the neighbouring towns. Afterwards they travelled to Stutgardt, Switzerland, and Berlin. General Guiton gradually ceased to demand any services of Bohlen, and treated him more as a son than as a servant. In 1813, when the French army returned from Russia, Guiton and his corps retreated to Magdeburg. Bohlen afterwards accompanied the general to Hamburg. At this time however the relation between the general and Bohlen became much less cordial. Fromont, the adjutant of General Guiton, out of friendship for Bohlen, at length procured him another situation as servant to Admiral l'Hermite, but he did not remain with the admiral above two months. Early in 1814 the French quitted Hamburg, and Bohlen, although he had nothing to live upon, refused to accompany the admiral. He remained at Hamburg, and obtained a place as waiter in an hotel; but the incessant work and the want of rest was more than he could bear; he accordingly left his place, and engaged himself as servant to a rich India merchant. As he had not much to do in his new situation, he got his master's clerk to instruct him in letter-writing and the like, and employed his time in reading. In the meantime he acquired a passion for writing poetry. He had learned to speak French in his intercourse with Frenchmen, and he now learned English in the same way; for in the house of his employer scarcely any other language than English was spoken. He then began translating Burns into German, and with the assistance of a dictionary and grammar he even ventured upon translating Virgil. In 1817 he became a pupil of the Johanneum at Hamburg. His diligence in prosecuting his studies was extraordinary, and his conduct secured the goodwill of all. His intention was at first to study theology; but the preparation that he made for it, the study of Hebrew, Arabic, and Persian, led him in another direction. About this time he was induced by a fit of vanity to assume the prefix that indicates a nobleman, Von Bohlen, as he remembered to have heard that his father was descended from a noble family.

In 1821 he went to the University of Halle, some distinguished and wealthy Hamburgers having provided him with the means of pursuing his studies there for three years. At the suggestion of Gesenius, who was his principal teacher, Bohlen copied, translated, and commented upon an episode of Ferdusi, which was sent to the Prussian ministry, with the view of obtaining the patronage of the government. In 1822, before he left Halle, Von Bohlen published a little work, 'Symbolæ ad Interpretationem S. Cod. ex Lingua Persica,' which was well received; and in the autumn of the same year he went to Bonn to study Arabic under Freytag. Here he wrote a dissertation on the life and character of Motenabbi, which received the prize, and was printed at Bonn in 1824. In the meantime he continued his studies of the Persian language, and gave attention also to Sanscrit, and to Italian and Spanish. Towards the end of this year the Prussian ministry summoned him to Berlin, that he might complete his studies there, and prepare himself for a professorship at Königsberg, where it was proposed to give him an appointment. At Berlin he attended the lectures of Bopp, and formed an intimate friendship with the late Dr. Rosen. In 1825 he went to Königsberg to begin his career of academical teacher, in the usual way, as a private lecturer. He received however from the first a considerable salary, and in 1826 he was appointed professor extraordinary. In 1827 he travelled to Bonn, and married a lady whose acquaintance he had made during his stay there; and the year after he was appointed ordinary professor of oriental literature. The unhealthy climate of Königsberg began gradually to undermine his health, and its influence was increased by his incessant studies and neglect of exercise. He then visited England, for the purpose of acquiring oriental manuscripts and books, for which the Prussian ministry placed funds at his disposal. He was also provided by the government with Arabic and Devanagari types, and printed with his own hands the 'Carmen Amali.' Soon after he published his great work on Indian antiquities, entitled 'Das Alte Indien,' which with all its defects is a most valuable work on ancient India. In 1837 he undertook a second journey to England. He stayed some time with the son of the Marquis of Lansdowne, and pursued his oriental studies with his friend Dr. Rosen. On his return to the continent he travelled with his wife to the south of France and Italy for the benefit of her health. Bohlen's health also was in such a precarious state that his friends advised him not to return to the north. He therefore lingered at Heidelberg and Bonn for some time, and then went to Halle. His wife died on the 7th of March 1839, and from this blow he never recovered. He was unable to return to Königsberg, and remained at Halle. In the beginning of 1840 his condition became worse, and he died on the 6th of February at Halle, where he was buried.

Bohlen appears to have been a most amiable man; and in his autobiography, from which this account is taken, he relates without any reserve all the vicissitudes of his life, in a manner which secures the affection and admiration of every reader. In 1826 he was elected a member of the Royal Asiatic Society of London. He possessed a most extensive knowledge of Eastern history and literature, and his works rank among the first of their class. Their deficiencies arise mainly from two causes: first, the great haste with which he worked; and secondly, a want of sound philological knowledge, for which he had little taste, though in later years this defect greatly impeded his antiquarian researches, as he himself confesses. We subjoin a list of his separate works:—1, 'Symbolæ ad Interpretationem Sac. Cod. ex Lingua Persica,' Leipzig, 1822; 2, 'Commentatio de Motenabbio, celeberrimo Arabum Poeta,' Bonn, 1824; 3, 'Carmen Arabicum, Amali dictum,' Königsberg, 1825; 4, 'Vermischte Gedichte und Uebersetzungen,' Königsberg, 1826; 5, 'De Buddhismo Tentamen,' Königsberg, 1827; 6, 'Das alte Indien mit besonderer Rücksicht auf Aegypten,' 2 vols., Königsberg, 1830; 7, 'Bhartriharis Sententiæ et Carmen Chauropanchásica,' Berlin, 1833; 8, 'Die Genesis, historisch-kritisch erläutert,' Königsberg, 1835; 9, 'Die Sprüche des Bhartrihari, metrisch nachgebildet,' Hamburg, 1835; 10, 'Ritusanhára, sive Tempstatum Cyclus, Carmen Kálidási,' Lipz., 1840. Bohlen was a contributor to the 'Penny Cyclopædia,' for which he wrote the articles 'Lokman,' 'Mahabharatam,' 'Mahmud of Ghisni,' 'Manu,' 'Mohammed' (including 'Koran'), and 'Mongols and Tartars.' (*Autobiographie des Dr. Peter von Bohlen, herausgegeben von Joh. Voigt, Königsberg, 1842, second edition.*)

BÖHME, or BÖHM, JACOB, frequently mis-written BEHMEN was born at Alt-Seidenberg, in Upper Lusatia, in 1575, of poor but sober and honest parents. Young Jacob's first employment was the care of cattle, after which he was for some time sent to a common school, and then apprenticed to a shoemaker at Görlitz. He married in 1594 Catherine Hunschmann, the daughter of a citizen of Görlitz, by whom he had four sons. He became a master-shoemaker in 1595.

Jacob Böhme relates several remarkable incidents which he says occurred to him in early life. Among other things, he says, that when he was an apprentice, his master and mistress being abroad, there came to the shop a stranger, of a reverend and grave countenance, yet in mean apparel, and taking up a pair of shoes desired to buy them. The boy, being yet new to the business, would not presume to set a price on them; but the stranger being very importunate, Jacob at last named a price which he was certain would keep him harmless in parting with them. The old man paid the money, took the shoes, and went from the shop a little way, when, standing still, with a loud and earnest voice he called, "Jacob, Jacob, come forth." The boy came out in a great fright, amazed that the stranger should call him by his Christian name. The man, with a severe but friendly countenance, fixing his eyes upon him, which were bright and sparkling, took him by his right hand, and said to him—"Jacob, thou art little but shalt be great, and become another man, such a one as the world shall wonder at; therefore be pious, fear God, and reverence his word. Read diligently the Holy Scriptures, wherein thou hast comfort and instruction. For thou must endure much misery and poverty, and suffer persecution; but be courageous and persevere, for God loves and is gracious unto thee;" and therewith pressing his hand with a bright sparkling eye fixed on his face, he departed. This prediction made a deep impression upon Jacob's mind, and made him bethink himself, and grow serious in his actions, keeping his thoughts stirring in consideration of the caution received. Considering Luke xi. 13—"My Father in Heaven will give his spirit to them that ask him," he desired that comforter. He says that he was at last "surrounded with a divine light for seven days, and stood in the highest contemplation and in the kingdom of joys whilst he was with his master in the country about the affairs of his vocation." He then grew still more attentive to his duties, read the Scriptures, and lived in all the observance of outward ministrations. Scurrilous and blasphemous words he would rebuke even in his own master, who, being not able to bear this, set him at liberty with full permission to seek his livelihood as he liked best. About the year 1600, in the 25th year of his age, Jacob was again surrounded by the divine light, and viewing the herbs and the grass in the fields near Görlitz in his inward light, he saw into their essences, use, and properties, which were discovered to him by their lineaments, figures, and signatures.

In like manner he beheld the whole creation, and from that fountain of revelation he wrote his book 'De Signatura Rerum.' In unfolding these mysteries he had great joy, yet he looked carefully after his family, and lived in peace and silence, scarce intimating to any these wonderful things, till in the year 1610 he wrote his first book, called 'Aurora,' or the 'Morning Redness.' This work, contrary to the author's intention, was copied and became public. It fell into the hands of Gregory Richter, superintendent of Görlitz, who attacked it from the pulpit, and endeavoured to stir up the magistracy to exercise their jurisdiction in rooting out this supposed church-weed. The senate convened Jacob Böhme, seized his book, and admonished him to stick to his last, and leave off writing books. Upon the command of the senate he abstained from writing for seven years, after which he was moved again to write. The list of his works stands as follows; the books which he left unfinished are put in parenthesis:—

1, 'Aurora.' 2, 'Of the Three Principles,' 1619. 3, 'Of the Three-fold Life of Man,' 1620. 4, 'Answers to the Forty Questions of the Soul.' 5, 'Of the Incarnation of Jesus Christ.' 'Of the Suffering, Death, and Resurrection of Christ.' 'Of the Tree of Faith.' 6, 'Of the Six Points, great and small.' 7, 'Of the Heavenly and Earthly Mystery.' 8, 'Of the Last Times,' to P. K. 9, 'De Signatura Rerum.' 10, 'A Consolatory Book of the Four Complexions.' 11, 'An Apology to Balthasar Tilken,' in two parts. 12, 'Considerations upon Isaias Stiefel's Book.' 13, 'Of True Repentance,' 1622. 14, 'Of True Renunciation.' 15, 'A Book of Regeneration.' 16, 'A Book of Predestination and Election of God,' 1623. 17, 'A Compendium upon Repentance.' 18, 'Mysterium Magnum, or an Exposition upon Genesis.' 19, 'A Table of the Principles, or a Key of his Writings.' 20, 'Of the Supernatural Life.' 21, '(Of the Divine Vision.)' 22, 'Of the Two Testaments of Christ, Baptism and the Supper.' 23, 'A Dialogue between the Enlightened and Unenlightened Soul.' 24, 'An Apology for the Book on True Repentance, against a Pamphlet of the Primate of Görlitz, Gregory Richter.' 25, '(A Book of 177 Theosophick Questions.)' 26, 'An Epitome of the Mysterium Magnum.' 27, '(The Holy Weeks, or the Prayer Book.)' 28, 'A Table of the Divine Manifestation.' 29, 'Of the Errors of the Sects of Ezekiel Metha and Isaias Stiefel, or Antistiefelius II.' 30, 'A Book of the Last Judgment.' 31, 'Letters to Divers Persons with Keys for Hidden Words.'

Among the many learned men who visited Böhme after the publication of his 'Aurora,' was a physician, Balthasar Walter from Silesia, who had travelled in search of ancient magical learning through Egypt, Syria, Arabia, &c., where he found such small remnants of it, that he returned unsatisfied to his own country, where he became inspector of the chemical laboratory at Dresden. Having become acquainted with Böhme, he rejoiced that at last he had found at home, in a poor cottage, that for which he had travelled so far in vain. Walter introduced the appellation of 'Philosophus Teutonicus.' Walter went to the German universities, and collected such questions concerning the soul as were thought and accounted impossible to be resolved fundamentally, of which he made a catalogue, being forty in number, and sent them to Böhme, from whom he received answers to his satisfaction. These answers have all been published, and translated into many languages.

Dr. Weiser, after giving in a letter a curious account of the persecution of Böhme by Gregorius Richter, the primate of Görlitz, of Jacob's banishment by the senate, of their repealing their absurd and unjust order, goes on to say, that tired with the prelate's incessant clamour, they at length sent for him again, and entreated him that in love to the city's quiet he would seek himself a habitation elsewhere; which if he would do they should hold themselves obliged to him for it, as an acceptable service. In compliance with this friendly request of theirs he removed from thence. After this upon a citation, Jacob Böhme went to Dresden before his highness the prince elector of Saxony, where were assembled six doctors of divinity and two professors of the mathematics, who, in the presence of the prince elector, examined him concerning his writings, and the high mysteries therein. They also proposed to him many profound queries in divinity, philosophy, and the mathematics: to all which he replied with such meekness of spirit, depth of knowledge, and fulness of matter, that none of those doctors and professors returned one word of dislike or contradiction. The prince his highness much admired his demeanour, and was so interested with Böhme that he took him apart, and discoursed with him concerning difficult points, and courteously dismissed him. Soon after Böhme's return to Görlitz his adversary the pastor primarius Gregorius Richter died; and Böhme himself died three months and a half later. On Sunday, November 18, 1624, early in the morning, he asked his son Tobias if he heard the excellent music! The son replied, "No." "Open," said he, "the door, that it may be better heard." Afterwards he asked what the clock had struck, and said, "Three hours hence is my time." When it was near six he took leave of his wife and son, blessed them, and said, "Now go I hence into Paradise;" and bidding his son to turn him, he fetched a deep sigh and departed.

Jacob Böhme was lean, and of small stature; had a low forehead; his temples were prominent; was somewhat hawk-nosed; his eyes were grey and very azure; his beard was thin and short; his voice low, but he had a pleasing speech, and was modest and humble in his conversation. He wrote very slowly but legibly, and seldom or never struck out and corrected what he had written.

After Böhme's death his opinions spread over Germany, Holland, and England. Even a son of his persecutor Richter, being then a merchant's clerk at Thorn, edited at his own expense an epitome of Böhme's work in eight volumes, and arranged their contents in a sort of index. The first collection of Böhme's works was published by Heinrich Betke, Amst. 1675, 4to. At the conclusion of the 17th, and in the first years of the 18th century, the works of Böhme were translated into Dutch by Abraham Wilhelm van Beyerland, and published by him in 12mo, 8vo, and 4to. More complete than Beyerland's is the edition by Gichtel in 10 vols. 8vo, Amst., 1682. For this edition the manuscripts were bought from the heirs of Beyerland. This was reprinted with Gichtel's manuscript 'Marginalia,' Altona, 1715, 2 vols. 4to, and again with a notice of former editions and some additions

from Gichtel's 'Memorialia,' 1780. There are some later editions of separate works. The best translation of his works into English is that by the celebrated William Law of Oxford, Lond. 1764, in two vols. 4to. Several accounts of his views were published about the end of the 17th century; among these the following may be mentioned:—Jacob Böhme's 'Theosophic Philosophy, unfolded by Edward Taylor, with a short account of the life of J. B.,' Lond., 1691-4. The preacher and physician John Portage, who was born about 1625, and died in London, 1698, endeavoured to systematise the opinions of Böhme in 'Metaphysica vera et divina;' and several other works. The 'Metaphysica' was translated into German in three volumes, Franck. and Leipzig, 1735-28. Henry More also wrote on the mystical views of Böhme. Among the most zealous supporters of Böhme's theosophy in England were Charles and Durand Hotham, who published 'Ad Philosophiam Teutonicam,' a Carolo Hotham, 1648; and 'The Life of Jacob Behmen,' by Durand Hotham, Esq., 1654, 4to. A later English Böhmenite's work ought perhaps to be named—'Memoirs of the Life, Death, Burial, and wonderful Writings of Jacob Behmen, now first done at large into English from the best edition of his works in the original German, with an introductory preface of the translator, directing to the due and right use of this mysterious and extraordinary Theosopher,' by Francis Okely, formerly of St. John's College, Cambridge, Northampton, 1780, 8vo. Claude St. Martin, who died at the beginning of the present century, published French translations of several of Böhme's writings.

Böhme and his followers were especially persecuted by the clergy, who seemed to deem his writings on theosophical subjects an infringement of the prerogatives of the clerical order. The ecclesiastical at Görlitz persecuted Böhme during his life, and refused to bury his corpse until they were compelled by the magistrates not to disgrace the earthly remains of a man who had led a harmless life and always been in strict communion with the Lutheran Church. The admirers of Böhme were for the greater part not professional divines, but noblemen, country gentlemen, courtiers, physicians, chemists, merchants, and in general men who were eager in the pursuit of truth, and who did not stickle for modes of speech and established formalities. The persecutions raised against him brought Böhme first into the notice of men of rank, who took delight in conversing with the poor shoemaker and his followers, while universities and ecclesiastical courts enacted laws against his opinions, and his persecuted disciples appealed even in England to the high court of parliament. Sir Isaac Newton, William Law, Schelling, and Hegel were all readers of Böhme. William Law, in the appendix to the second edition of his 'Appeal to all that doubt or disbelieve the Truths of the Gospel,' 1756, mentions that among the papers of Newton were found many autograph extracts from the works of Böhme. Law conjectures that Newton derived his system of fundamental powers from Böhme, and that he avoided mentioning Böhme as the originator of his system, lest it should come into disrepute; but this may be doubted.

Böhme's philosophy consists in the endeavour to demonstrate in everything its necessity by tracing its origin to the attributes of God. Consequently some of Böhme's phrases sound like the doctrines of Manichæan emanation, and have been misinterpreted as being such. Böhme traces the parallelism between the visible physical, and the invisible metaphysical world. His comparisons and images are not the essence of his theosophy, but only illustrative of thoughts which have commanded the admiration and approbation of some of the deepest thinkers, while others are apt to neglect him entirely on account of his errors in subordinate non-essentials. Böhme forms undoubtedly an important link in the present state of the history of the progress of mental philosophy. He often produces magnificent ideas, but he occasionally supports his theory by false etymologies, and by chemical and astrological notions which have been long ago rejected. Böhme has many devoted admirers in the present day, especially in Germany, and many of his followers have accepted wholly or partially the in some respects not dissimilar 'revelations' of Emmanuel Swedenborg.

BOIELDIEU, ADRIEN-FRANÇOIS, a French composer of high and well deserved reputation, was born at Rouen, in 1775. At a very early period of his life he manifested a decided talent for music, and at eighteen wrote a one-act opera, which was produced at Rouen, and drew all the amateurs of Normandy to hear it. In 1795 he went to Paris, and brought out several compositions, of which many met with great success, and some are still admired. In 1797 he produced 'La Famille Suisse,' at the Opera Comique; in 1800 he wrote three operas,—'Heniewski,' 'Le Calife de Bagdad,' and 'Ma Tante Anore,' all of which abound in musical beauties. On the establishment of the Conservatoire de Musique, by the National Convention, Boieldieu was appointed one of the professors. In 1803 he accepted from the Emperor Alexander the appointment of Maitre-de-Chapelle at the imperial court of Russia, and composed, for the Hermitage theatre, some operas, and various smaller dramatic works. In 1811 he returned to Paris, and there, among other operas, produced 'Jean de Paris,' 'Le Petit Chaperon Rouge,' and his most popular work, 'La Dame Blanche.' He afterwards was called upon to compose music for the baptism of the Duc de Bordeaux, and the coronation of Charles X. After this, the state of his health indicating the want of some repose, he proceeded to a watering-place in the Pyrenees, and appeared to be much benefited

by his retirement and relief from business and care; but soon after he was suddenly attacked by illness, and died, October 3rd, 1835, after a very short confinement. Boieldieu was honoured by a splendid public funeral, which was, in some degree, a military one, for he was an officer of the National Guard, and held the order of the Legion of Honour. His heart was claimed by the city of Rouen, and received with great pomp in the cathedral, the council of the town having voted 12,000 francs to defray the expense of the solemnity. They also erected a column to his memory; and the government settled a pension on his son.

BOILEAU, NICOLAS, SIEUR DESPREAUX, was born at or near Paris, on November 1, 1636, and was the eleventh child of Gilles Boileau, first Registrar (Greffier) of the Great Chamber of the Parliament of Paris.

Nicolas Boileau finished his education at the College of Beauvais, where his predominant taste was discovered by Sevin, one of the professors. Nevertheless the future guide of the French Muse was not at all distinguished by precocity in the pursuit through which he afterwards gained his fame: nor was it until he had perceived his own inaptness both for the bar and for the pulpit, that he devoted himself altogether to Parnassus.

The law had few attractions for him: and although he obtained from the church a priory of 800 livres annual rent, he afterwards resigned it, and most honourably distributed in charities the whole of his calculated receipts. His earliest poetical attempts were in satire, by which he nullified a prediction made by his father, who, when comparing the genius of each of his three sons, used to say, "That as for Colin, he would never speak ill of anybody." But the seven 'Satires' which Boileau published in 1666, with a preliminary address to the king (a formula not to be omitted by any author who courted popular notice), were playful and sportive, not rabid and virulent; they showed, as he used to observe of himself, neither fang nor talon. They excited considerable attention among the lettered circles of the capital, by a terseness of language and a polish of versification to which the public ear had not heretofore been accustomed. The number was increased from time to time till they amounted to twelve.

The fearlessness of Boileau's attack upon the bad taste which had elevated Chapelaine and Quinault to the loftiest poetical eminence was quickly repaid by general applause, by royal favour, and by substantial patronage. Boileau received a considerable pension, and when the treasurer's clerk, a matter-of-fact man, one day inquired where were "the works" for which the order instructed him to make this payment, the poet amused himself by answering that he was a "builder." He was also appointed joint historiographer with Racine; an office which, notwithstanding the brilliancy of their master's exploits, appears to have been regarded by both of them as a sinecure, unless so far as they contributed some illustrations to a medallic history. So well however were Boileau's habits and manners adapted to the court, that he won over the single harsh critic whom he encountered in it, the rigid Duke of Montausier, who at first had not scrupled to pronounce that the satire which had been unprovoked must of necessity be ill-natured. In 1684 Boileau had the melancholy task of announcing to the king the death of his historiographical colleague: Louis, who had his watch in his hand at the time, paid him the high compliment of saying, that notwithstanding his many engagements, an hour in every week should be reserved for the enjoyment of his conversation. It was not till that year that he was admitted a member of the Academy. Twelve 'Epistles,' which flow with much greater ease than the 'Satires,' were produced between 1669 and 1696. The 'Art of Poetry,' accompanied by a translation of 'Longinus on the Sublime,' with critical remarks on that writer, was published in 1673; in which year also appeared four cantos of the 'Lutrin,' a mock-heroic, suggested by the President Lamoignon.

The two concluding cantos were not appended to the 'Lutrin' till ten years after its first appearance. The minor poems which escaped Boileau from time to time are altogether unworthy of his pen. The 'Ode on the Capture of Namur' by Louis in 1692 is tame, cold, and spiritless; and his occasional verses, if written in our own days, would scarcely find gratuitous admission into a magazine or an annual. 'Les Héros des Romains,' a dialogue after the manner of Lucian (as all dialogues at that time were said to be), is the chief of his original prose works. It was written in the beginning of 1685, and it very pleasantly exposes the absurdity of Honoré d'Urfé, Madame de Scudéry, and their imitators. It probably gave a death-blow to the 'Astrées,' the 'Cyrus,' and the 'Clélie,' and it formed part of a controversy which at that time raged in France, and which produced lasting enmity between Boileau and Fontenelle—the comparative merits of the ancients and of the moderns.

Boileau lived till 1706 in familiar intercourse with the choicest contemporary writers, and in the enjoyment of the best society of the capital. Repeated attacks of infirmity and an increasing deafness then warned him to retire, and he closed an honourable existence, peaceably and piously, on March 13, 1711, having exceeded his seventy-fourth birthday by a few months.

Boileau is one of that scanty number of poets who have left behind them—

"No line which, dying, they would wish to blot;"

and the high moral standard of his writings may be best estimated by the innocence of the very expressions to which the enmity of Perreault objected. Boileau in his tenth 'Satire,' while denouncing the opera, speaks of the 'Héros à voix luxurieuse,' and of the 'morals lubricques.' These terms were gravely represented to be offensive to modesty; and the silly charge awakened no less a champion than Arnauld, whose letter, together with a grateful acknowledgment which it received from Boileau, is printed in most editions of the poet's works. His purse was always open for purposes of benevolence. When indigence compelled the advocate Patin to dispose of his library, Boileau paid down a third more purchase-money than had been offered for the collection, at the same time signifying that he bought only the reversion, and that the books were to remain the property of their original owner during his lifetime. In a similar spirit he prevailed upon the king to continue the pension to Corneille, which had been revoked on Colbert's death. The French critics are much inclined to compare Boileau with Pope, and naturally to give preference to the former; but we think, so far as they admit comparison, the English poet may encounter it without apprehension. Both of them were great imitators; and as Pope was twenty-one years of age at the time of Boileau's death, the former had the advantage of one additional model, which there cannot be a doubt he studied very attentively. There are passages in the works of Pope which are undisguised translations, and which he avowed to be so. Memory or observation will supply innumerable close parallels; and the 'Essay on Criticism' especially, one of Pope's earliest works, is very largely indebted to the 'Art of Poetry.'

The 'Moral Essays' are immeasurably superior to the 'Satires,' inasmuch as Pope looked abroad into the world and upon mankind, while the narrower view of Boileau was circumscribed by Paris and the courtiers of the Grand Monarque. Each has failed in lyric poetry; and it almost seems as if the comparisons of the heroic couplet were indispensable for the development of their full powers, for the exhibition, if we may so speak, of their paces: yet Pope, happily for his reputation, has escaped any approach to the downright epigram with which the 'Ode sur la Prise de Namur' concludes. The 'Rape of the Lock' is far richer in imagery and much more playful in expression than the 'Lutrin'; and after-thought, which added to the one its graceful machinery of Sylphs and Gnomes, gave to the other only two more cantos with the lumbering personifications of Poetry and Justice. Of the sentiments which inspired the greatest effort of the English bard, the 'Eloise to Abelard,' Boileau, as we have already hinted, was perhaps physically incapable; and from the labour required by the version of Homer there can be little doubt that he would have shrunk in dismay.

Yet, after all the assertions of minute criticism, Boileau deserves a much higher station than he is allowed by Fontenelle. From the charge of a want of poetical feeling he has been well defended by La Harpe, who says even of the 'Satires' (among which he reckons the eleventh as the 'chef-d'œuvre')—"I like to read them, because I like good poetry, good wit, and good sense."

Each of two elder brothers of Nicolas Boileau attained some distinction in his time. GILLES BOILEAU, born in 1631, pursued the law, and became Paymaster of the Hôtel-de-Ville in Paris, and Comptroller of the Royal Treasury. He gained also the coveted honour of admission into the French Academy. Nicolas satirised his brother, in some lines which he afterwards cancelled, for having obtained a pension from Colbert, through the interest of Chapelaine. They were reconciled however before the death of Gilles Boileau, which occurred in 1669. In his lifetime Gilles published a translation of the 'Encheiridion' of Epictetus and of the 'Tablet' of Cebes, and another of Diogenes Laertius; a controversial pamphlet addressed to Ménage, and one also to Costar. His posthumous works, consisting of Poems, Letters, his Speech on admission into the Academy, and a translation of the fourth book of the 'Æneid' into French verse, were collected by Nicolas in one volume, 12mo.

JACQUES BOILEAU was born in 1635, and studied at the College of Harcourt, where he graduated in theology. He became Dean, Grand Vicar, and Official of the Diocese of Sens. In 1694 he was promoted to a Canonry in the Sainte Chapelle at Paris, and he died in 1716, at the advanced age of eighty-two. His avowed works are numerous, but chiefly on forgotten questions of theology; and he wrote much also either anonymously or under feigned names, as Marcellus Anou-ranus, Claudius Fontei-us, Jacques Barnabé, &c. A complete list of his works is given in the twelfth volume of the 'Mémoires' of Nicéron. The only one which is now remembered is the 'Historia Flagellantium, sive de recto et perverso Flagellorum usu apud Christianos,' Paris, 1700, 12mo. The freedom with which the author of this work has visited the abuses of superstitious penance occasioned much scandal, and exposed him to numerous attacks, which however he disregarded. The treatise was translated into French about a year after its appearance; and it has been rendered into English by De Lolme.

BOISROBERT, FRANÇOIS LE METEL DE, was born at Caen, in Normandy, in 1592. He studied for the legal profession, but having taken a journey to Rome, he attracted so much notice by the gaiety of his conversation, that the pope, Urban VIII., requested that he might be introduced to him. This was accordingly done, and the pope was so much delighted with his society, that he bestowed on

him a priory in Brittany. Boisrobert forthwith qualified himself for the ecclesiastical profession, took holy orders, and not long afterwards was provided with a canonry at Rouen. His reputation for wit and humour soon afterwards reached the ear of Cardinal Richelieu, to whom Boisrobert was of course introduced. The Cardinal was no less gratified by his conversation than the pope had been, and not only became his patron, but made him his companion at dinner, and more especially after dinner. Boisrobert in a brief period received substantial proofs of the cardinal's favour, by gifts of the abbey of Châtillon-sur-Seine and the priory of Ferté-sur-Aube, to which were added the titles of king's almoner and counsellor of state, with letters of nobility.

Boisrobert's time was afterwards chiefly spent in entertaining the cardinal, attending the theatres, and writing comedies, tragi-comedies, tragedies, verses, and novels, none of which are worthy of being quoted. His chief merit was perhaps that of having induced Cardinal Richelieu to establish the Académie Française. He died at Paris, March 30, 1682. Boisrobert seems to have been an ecclesiastic of loose conduct as well as lively conversation, and to have died at the age of seventy without any apparent change of mind or improvement of manners.

BOISSERÉE, SULPIZ, was born at Cologne, in 1783. Sulpiz, his brother Melchior, and his friend Jean-Baptiste Bertram, in 1803 formed the design of making a collection of the paintings of the early German masters. They took separate routes. Boisserée himself travelled along the banks of the Rhine, and in 1814 was at Heidelberg, on the Neckar, where he made some valuable purchases. They at first united their acquisitions at Cologne, but afterwards transferred them to Stuttgart, where the King of Wurtemberg made them a grant of a spacious building for the reception of the paintings, which were named the Boisserée Collection. The whole were arranged in three historical divisions, the first consisting of the school of Cologne in the 14th century, the second of the works of John Van Eyck and his disciples of the early part of the 15th century, and the third of the paintings of the latter part of the 15th century and commencement of the 16th. The collection was purchased in 1827 by Ludwig I., king of Bavaria, for 120,000 thalers (about 12,350*l.*), and transferred to Munich, where Sulpiz, his brother Melchior, and his friend Bertram, established themselves. Sulpiz himself in 1835 received the appointment of conservator of the works of plastic art of Bavaria. In 1814 an old parchment roll had been found, which among other architectural drawings contained an elevation of the portal and north tower of the façade of Cologne Cathedral, well drawn and in good preservation, and in 1816 Sulpiz Boisserée discovered at Paris the drawing of the other tower, also an elevation, in less perfect condition than the other drawing, but sufficient for an architect's purpose. The restoration of the cathedral in accordance with these drawings was commenced in 1824; the first works being confined to the repairs and renewal of the building as it stood. Sulpiz Boisserée published at Paris and Stuttgart, 1823-32, a magnificent work in royal folio, consisting of views, plans, and details of the Cathedral of Cologne, with restorations after the original plan, and inquiries into the architecture of ancient cathedrals. In 1842 the King of Prussia laid the first stone for the commencement of those parts of the structure which remained unfinished or had not been commenced, and great progress has since been made towards the completion of this splendid structure under the direction of Zwerner.

Boisserée also published 'Die Denkmale der Baukunst am Niederrhein, vom 7-13 Jahrhundert' ('The Monuments of Architecture of the Lower Rhine, from the 7th to the 13th century'), Munich, royal folio, 1830-33; also, at Munich, 1832-39, 'A Series of Lithographic Drawings of the Boisserée Collection of Ancient Paintings, with Biographical notices of the old German masters whose works are included in it.'

* BOISSONADE, JEAN-FRANÇOIS, was born at Paris, August 12, 1774. Towards the end of the year 1792 Boissonade entered into the public service under the ministry of General Dumouriez; he was expelled from the administration in 1795, but was restored in 1801 by Lucien Bonaparte, who was then minister of the interior, and who made him secretary-general of the prefecture of the Haute-Marne. When Lucien retired from the public service, Boissonade retired also; and thenceforward devoted himself to literature, which had indeed previously occupied nearly all his leisure hours. He had from the year 1802 contributed numerous articles to the periodicals of the day. In 1809 he was appointed professor of the Greek language and literature in the Académie de Paris, but assumed only the title of assistant-professor, resigning the title of professor to Larocher, who retained it till his death in 1812. Boissonade then succeeded him, and also supplied his place in the Académie des Inscriptions et Belles-Lettres. On the death of J. B. Gail in 1823 Boissonade was appointed professor of Greek in the Collège de France. Other situations of honour and emolument were afterwards offered to him, but he declined to accept any of them.

M. Boissonade occupied a considerable portion of his time in the critical examination of Greek writers previously unedited, and published a very large number of works and fragments of works by Philostratus, Proclus, Tiberius the Rhetorician, Holstenius, Herodianus, Eunapius, Aristænetus, and several others.

In the period from 1823 to 1826 Boissonade published in 24 vols. 32mo, a 'Sylloge Poetarum Græcorum,' and in consequence of the discovery in 1839, in a monastery on Mount Athos in Greece, of a manuscript which contained a large number of the lost Fables of Babrius, Boissonade published 'Babrii Fabulæ Iambicæ,' 8vo, Paris, 1844. [BABRIUS.]

Boissonade contributed to the edition of 'Athenæus' by Schweighæuser, to the 'Euripides' of Matthiæ, and to the edition of Stephens's 'Thesaurus Græcæ Linguae,' which was printed and published in London by Valpy. He also wrote several articles for Valpy's 'Classical Journal,' and he gave his assistance to the Paris edition of Stephens's 'Thesaurus,' printed by Didot. M. Boissonade has been an indefatigable labourer not only in Greek but also in modern literature, having, for instance, published collections of the unedited letters of Voltaire, of the works of Parny, and having furnished a large number of the lives in the 'Biographie Universelle.'

(*Nouvelle Biographie Universelle.*)

BOISTE, PIERRE-CLAUDE VICTOIRE, a French lexicographer, was born in 1765 at Paris, and died April 24, 1824, at Ivry-sur-Seine. He at first studied law, but left it early for literature, in which his favourite subjects of investigation related to the origin and structure of languages, especially that of his native country. His great work is the 'Dictionnaire Universel de la Langue Française.' The first edition was published at Paris in 1800, 1 vol. 8vo; the second edition in 1803 in 2 vols. 8vo; the seventh edition in 1834 in 1 vol. 4to. It is a very complete and valuable work, somewhat on the plan of Johnson's large 'English Dictionary,' with examples and authorities illustrative of the definitions, but more compressed than those of Johnson. It has in addition vocabularies of scientific words, and treatises on French grammar, on synonymous words, on tropes and figures of speech, and on French versification. Boiste published in 1801 a sort of prose epic, called 'L'Univers délivré,' in which he describes the creation and primitive history of the human race: it has sunk into oblivion. He wrote also a work on the 'Principles of Grammar,' 8vo, 1820, and a 'Dictionnaire de Géographie Universelle, Ancienne et Moderne,' 1 vol. 8vo, which was published in the same year.

BOJARDO, MATTEO MARIA, Count of Scandiano, was born at Scandiano in 1434, of a noble and ancient family. His ancestors were lords of Rubiera, a small town between Reggio and Modena, but they exchanged this fief for that of Scandiano, the feudal castle of which lies at the foot of the Apennines, seven miles south of Reggio. Bojardo was the son of Giovanni, count of Scandiano, and of Lucia Strozzi of Ferrara, sister to Tito Vespasiano Strozzi, who, as well as his son Ercole, were known as Latin poets of considerable celebrity in their time. Young Bojardo studied philosophy, medicine, and law at the University of Ferrara, and he made himself well acquainted with the Latin and Greek languages. After completing his studies he became attached to the court of his sovereign, Duke Borso d'Este, and was one of the noblemen who accompanied that prince to Rome in 1471, when Pope Paul II. gave Borso the investiture of the dukedom of Ferrara. After Borso's death, which occurred in the same year, Bojardo enjoyed the friendship of his brother and successor, Duke Ercole I. In 1472 Bojardo married Taddea, daughter of the Count Novellara of the house of Gonzaga. In 1475 he went to meet and escort to Ferrara Ercole's bride, Eleonora, daughter of King Ferdinand of Naples. In 1478 he was made governor of Reggio, and in 1481 governor of Modena, which place he held till 1487, when he resumed his former station of governor of Reggio. He died at Reggio, 20th of December 1494, and was buried in the church of Scandiano. His administration is recorded to have been equitable and mild; he was averse to severe punishments, and especially to that of death. Bojardo was a wealthy noble, who had a small court of his own at his castle of Scandiano, and the tone of his poetry bespeaks his independence and lofty bearing. He was a favourable specimen of the later generations of the feudal barons of Italy, before French invasion and Spanish conquests transformed them into servile courtiers.

Bojardo wrote a comedy, 'Il Timone,' which is partly taken from Lucian's 'Timon.' He also translated into Italian the 'Golden Ass' of Apuleius, and Lucian's dialogue of 'Lucius or the Ass.' He likewise translated Herodotus and Xenophon's 'Cyropædia,' but the latter has never been printed. Bojardo wrote many lyrical pieces of considerable poetical merit, which were published after his death: 'Sonetti e Canzoni,' 4to, Reggio, 1499. He also wrote some Latin as well as Italian eclogues, which were published for the first time, together with a selection of his lyrics and the 'Timone,' under the title of 'Poesie di Matteo Maria Bojardo,' 8vo, Modena, 1820. But the work for which he is best known is the 'Orlando Innamorato,' a romantic poem in ottava rima, in sixty-nine cantos. Bojardo took for his subject the fabulous wars of Charlemagne against the Saracens, the theme of many an old legend and romance, but he placed the scene in France and under the walls of Paris, which he represents as besieged by two hosts of infidels, one from Spain and another which had landed in the south of France from Africa. He adopted Orlando, the Roland of the French romances, for his hero; but while others had represented him as the champion of Christendom, passionless and above frailty, Bojardo makes him fall in love with Angelica, a consummate coquette, who had come all the way from the farthest Asia to sow dissension among the Christians. By these means Bojardo

introduced a fresh plot in the action of his poem. The design of his poem is grand, the characters are well delineated, the various threads of his argument cross each other without confusion, but they are all left interrupted by the abrupt breaking off of the poem at the end of the ninth canto of the third book, when the author was perhaps hardly arrived at the middle of his narrative. Bojardo himself accounts for this interruption by alluding to the "Gallic storm" which was then bursting upon Italy, and scared away his romantic muse.

This was towards the close of 1494, when Charles VIII, with a formidable army, had just invaded Italy, and was marching to the conquest of Naples. He entered Florence in November, spreading consternation everywhere before him. On the 20th of the following December Bojardo died at Reggio. The subject of his poem was afterwards resumed by Ariosto.

The first two books, containing sixty cantos of the 'Innamorato,' were printed at Venice in 1486. They were printed again, together with the nine cantos of the third book, which were all Bojardo wrote, at Scandiano in 1495, under the direction of Count Camillo, his son. Several reprints were afterwards made at Venice and at Milan, all more or less incorrect. Nicolo degli Agostini wrote a continuation of the 'Innamorato' in three books, which however is very inferior to the original. In 1545 Lodovico Domenichi published an edition of Bojardo's 'Innamorato' with many verbal and orthographical corrections. But before this, Berni had written his 'Rifacimento' of the 'Innamorato,' which was published in 1541-42, and obliterated the editions of the original poem of Bojardo, the copies of which became very scarce, and the very name of Bojardo was almost forgotten. [BERNI.] After three centuries of unmerited neglect, a new and correct edition of Bojardo's text of the 'Innamorato' was edited by Panizzi, with notes and a life of Bojardo, London, 1831.

Bojardo wrote also a sort of chronicle of the dark ages, of Charlemagne and his successors, of the Crusades, the wars of the Normans and Saracens in South Italy, &c.—'Istoria Imperiale di Riccobaldo Ferrarese tradotta del Latino.' He called it a translation from Riccobaldi, a chronicler of the 13th century; but it is in fact a compilation, partly from Riccobaldi's work, 'Pomarium, sive Historia Universalis,' and partly from other sources. It contains many strange historical blunders and anachronisms, which serve to show how imperfect historical knowledge was in Bojardo's time, while they throw much light on those popular and confused traditions which gave rise to the stories contained in the romantic poems of Italy, and especially in the 'Innamorato.'

BOL, FERDINAND, a portrait painter and etcher, born at Dort in the early part of the 17th century. He was the pupil of Rembrandt, and executed some excellent portraits in his style. He painted also some historical pieces of great merit, which are at Amsterdam, but they are inferior to his portraits. He etched also sixteen spirited plates. Bol died in affluent circumstances, and at a good old age, in 1681, at Amsterdam, where he had principally lived.

BOLEYN, ANNE, or, more properly, BULLEN, or BULLEYNE, was the daughter of Sir Thomas Bullen, afterwards created Viscount Rochford and Earl of Wiltshire. He was the representative of an ancient line in Norfolk, which had in three descents been allied to the noblest families in England; and he had himself filled important offices in the state. Anne's mother was Lady Elizabeth Howard, daughter of the Duke of Norfolk.

Anne Boleyn was born in the year 1507, and in her childhood accompanied Mary, the sister of Henry VIII., to France, where she remained in the court of that queen and of her successor, the wife of Francis I., for many years. She was afterwards attached to the household of the Duchess of Alençon. The time of her return from France is doubtful, but Burnet places it in 1527, when her father was sent in an embassy to France. At that time she became a maid of honour to Queen Katherine, the wife of Henry VIII., and was receiving the addresses of Lord Percy, the eldest son of the Duke of Northumberland. She appears to have quickly attracted the notice of the king, who in a letter to her in 1528 alludes to his having been one whole year struck with the dart of love; and her engagement with Lord Percy was at this time broken off by the intervention of Wolsey, in whose household that nobleman had been brought up. Anne retired into the country during the early part of Henry's process for a divorce from Queen Katherine, but she kept up a correspondence by letters with him. In 1529 she returned to court, and was known to be intended by Henry for his future queen.

In the meantime the king's divorce from Katherine was retarded by various delays; and at the beginning of the year 1533 Henry married Anne Boleyn secretly, in the presence of her uncle, the Duke of Norfolk, and of her father and mother. Dr. Rowland Lee, afterwards bishop of Litchfield, performed the ceremony "much about St. Paul's day," which is probably the 25th of January, the feast of the conversion of St. Paul. This date is established by a letter from Cranmer in the British Museum, quoted by Burnet, and printed in Ellis's 'Letters' (first series, p. 34); and Cranmer's assertion is corroborated by that of Stow; although Hall, and after him Holinshed and Speed, mention St. Erkenwald's day, the preceding 14th of November. It was not until the 23rd of May following that the nullity of the king's previous marriage was declared by Cranmer, who five days afterwards confirmed that of Anne Boleyn; and on the 1st of June Queen Anne

was crowned with great pomp. On the 13th of the following September the Princess Elizabeth was born.

Of the events of the queen's life during the two subsequent years little is known, except that she favoured the Reformation, and promoted the translation of the Bible. In January 1536 she brought forth a dead child, and it was at that time and during her previous pregnancy that the affections of her husband were alienated from her, and fixed upon Jane Seymour, daughter of Sir John Seymour, and one of the maids of honour to the queen. Queen Anne was accused of criminal intercourse with her brother Viscount Rochford. The evidence to support the charge proved that he had leant on her bed. She was accused also of grossly criminal intercourse with Henry Norris, groom of the stole; Sir Francis Weston and William Brereton, gentlemen of the chamber; and Mark Smeton, a groom of the chamber. To support these charges something said by Lady Wingfield before her death was adduced, which amounted only to this: that the queen had told each of these persons that she loved him better than any person whatever. This was stretched into high treason, under the act of the 26th of Henry VIII., which made those who slandered the issue begotten between the king and Queen Anne guilty of that crime. The other evidence against her was Mark Smeton, who however was never confronted with her. Two days after she was condemned to death, Cranmer pronounced the nullity of her marriage, in consequence of certain lawful impediments confessed by her.

Of her conduct in the Tower an exact account may be derived from the letters of Sir William Kingston, the lieutenant, of which five, together with one from Edward Baynton, have been printed by Sir H. Ellis from the originals in the British Museum. To her aunt, the Lady Boleyn, she confessed that she had allowed somewhat too familiar approaches by her courtiers, but she never varied in her denial of any criminal act. On the 15th of May she was arraigned, together with her brother, before a special commission, of which her uncle, the Duke of Norfolk, was president. The sitting of this commission was secret, but the tradition of all contemporary writers agrees that the queen, unassisted by legal advisers, defended herself firmly and skilfully, notwithstanding the indecent impatience of the president. She was of course convicted. After her conviction her feelings seem to have been absorbed in indignation at the baseness of her persecutors, and anxiety for her own posthumous fame. In the British Museum there is the copy of a letter, unquestionably authentic, addressed by Anne to the king, which is written in such a strain of conscious innocence and of unbending and indignant reproof, that it sets her immeasurably above her oppressor. She tells him—"Neither did I at any time so far forget myself in my exaltation, or received queenship, but that I always looked for such an alteration as I now find; for the ground of my preferment being on no surer foundation than your Grace's fancy, the least alteration was fit and sufficient I know to draw that fancy to some other subject. . . . Try me, good king, but let me have a lawful trial; and let not my sworn enemies sit as my accusers and judges; yea let me receive an open trial, for my truth shall fear no open shames." This appeal to her brutal husband was of course in vain.

Sir William Kingston, with the aid of his wife, and of the Lady Boleyn (the queen's aunt and known enemy), acted as a constant spy on her; reporting to Secretary Cromwell, for the king's information, all that escaped the prisoner's lips. On the 16th of May Kingston writes impatiently to "know the king's pleasure as shortly as may be, that we here may prepare for the same which is necessary for to do execution." On the 18th he writes: "And in the writing of this she sent for me, and at my coming she said, 'Mr. Kingston, I hear say I shall not die afore noon, and I am very sorry therefor, for I thought to be dead by this time and past my pain.' I told her it would be no pain, it was so subtle. And then she said, 'I heard say the executioner was very good, and I have a little neck;' and put her hands about it, laughing heartily." On the 19th of May she was executed on the green before the Tower, denying her guilt, but speaking charitably of the king, no doubt with a view to protect her daughter from his vengeance. "Her body was thrown into a common chest of elm-tree, used to put arrows in." Lord Rochford, Norris, Weston, Brereton, and Smeton, were also put to death. What would else seem the apparently inexplicable hatred of Henry towards Queen Anne is sufficiently explained by the fact that the day after her execution Henry married Jane Seymour; and he afterwards procured an Act of Parliament (28 Hen. VIII., c. 7) declaring his marriage with Anne void, and the issue of it and of his former marriage illegitimate.

If Anne Boleyn were only remarkable as the victim of the lusts, the caprice, and the heartless selfishness of Henry VIII., her history would be interesting as an illustration of the state of our jurisprudence in her time, and of the temper of a king whose personal character exercised more influence over the affairs of England than that of any of our kings since the Conqueror. But the name of Anne Boleyn is still more remarkable by her connection with the Reformation in England, of which incidentally perhaps she was the immediate cause. Henry VIII. could only obtain her hand by annulling his previous marriage, and the refusal of the pope to do this led to the severance of England from the Roman communion. Thus it is that the character of Anne Boleyn (a matter utterly beside the questions agitated between the Roman Catholic and Protestant churches) has become a subject of fierce controversy which three centuries have not extinguished.

BOLINGBROKE, HENRY ST. JOHN, VISCOUNT, the son of Sir Henry St. John, Bart., afterwards Viscount St. John, of Battersea, was born at Battersea, October 1, 1678. His mother was Mary, daughter of Robert Rich, earl of Warwick, under whose superintendence his early education was conducted on the strict puritanical principles which she had herself adopted; and this training, from its rigour, as Bolingbroke himself affirms, "prepared him to become a high Churchman." He was sent to school at Eton, from which he proceeded to Christchurch, Oxford; and on leaving the university he appears to have gone to travel on the continent. He is supposed to have been abroad during the years 1698 and 1699, but all that is known of his travels is that he visited Milan. In 1700, soon after his return, he married Frances, daughter and one of the co-heiresses of Sir Henry Winchcomb, by which alliance he came into the possession of considerable property. His wife and he however could not agree, and they soon parted.

St. John had before this produced a few short poetical pieces of little merit, but he was chiefly known as one of the most dissipated among the young men of fashion of the day. In February 1701 he entered parliament as member for Wotton Bassett, a family borough, from which his father retired to make room for him. At this time the Tories, with Rochester and Godolphin at their head, were in power; and to this party, which was also dominant in the new House of Commons, St. John from the first attached himself. Their leader Harley, whom they had placed in the chair, and St. John were already intimate friends. He sat also both in the next parliament which met in December of the same year, the last called by King William, and in the first held by Queen Anne, which assembled in October 1702. On Harley being made secretary of state in 1704, his friend St. John was brought into the ministry as secretary at war. This office he continued to hold for nearly four years till February 1708, when, upon the formation of a Whig administration under Marlborough and Godolphin (who had by this time changed their politics), he and Harley went out together.

He did not seek a place in the next parliament, which met in November 1708; but retiring to the country, withdrew altogether from politics, and gave himself up for two years to study. By the end of this period another complete revolution in the cabinet had taken place, and the dismissal of Godolphin in the beginning of August 1710 had again elevated the Tories to power, with Harley at their head. St. John was now made one of the secretaries of state, with the direction of foreign affairs. In the new parliament he was returned both for his old borough of Wotton Bassett and for the county of Berks. He elected to sit for Berkshire.

The biography of St. John for the next four years forms a principal part of the history of the memorable administration of which he was one of the leading members. That administration remained at the head of affairs till it was suddenly upset by the death of the queen in the beginning of August 1714. During its tenure of power it had terminated by the inglorious peace of Utrecht (signed 11th of April, 1713) the war with France, which had lasted since 1702. In the negotiations by which this event was brought about St. John bore the chief part. There is much reason for doubting however if the restoration of peace was the ultimate or principal object of his zealous exertions. There is indeed strong ground for believing that both he and Harley, almost from their first entrance upon office, contemplated the restoration of the Stuart family to the throne, if circumstances should prove favourable for such an attempt, or if their own interests should appear to demand the measure. St. John was called to the House of Lords by the title of Viscount Bolingbroke in July 1712; and soon after this, from various causes, an estrangement and rivalry arose between him and his old friend Harley (now Earl of Oxford and lord treasurer). Principally, as it is understood, through the aid of Lady Masham, Bolingbroke was enabled to effect the removal of his competitor on the 27th of July 1714.

Bolingbroke set about forming a cabinet chiefly composed of staunch Jacobites; but before he could complete his arrangements they were in an instant irretrievably overthrown. The death of the queen which followed within a week, and the prompt and decisive measures taken at the instant by the friends of the house of Hanover, made Bolingbroke's triumph only that of a moment. Utterly bewildered by the calamity, he was unable to act with the necessary promptness and decision, and the power passed wholly out of his hands. After having been treated by the Lords Justices in a manner which sufficiently showed what he had to expect, he was on the 28th of August by the king's order dismissed from his post. He remained in the country for some time after this, and even appeared in parliament and took an active part in debate, as if he had nothing to fear; but alarmed at length by the temper shown by the new House of Commons, which had commenced its sittings on the 17th of March 1715, on the 27th of the same month he suddenly left London in disguise, and succeeded in making his escape to France. On the 6th of August following, by order of the Commons, he was impeached by Walpole at the bar of the House of Lords of high treason and other high crimes and misdemeanours, and having failed to surrender himself to take his trial, he was attainted by Act of Parliament (Anno 1 Geo. 1, cap. 16). In the meantime he had entered into the service of the Pretender, who appointed him his secretary of state, or prime minister, and employed him to solicit the aid of the French government to the expedition then

preparing to assist in effecting a rising in favour of the exiled family in Great Britain. When the prince set out in person for Scotland at the end of the year, Bolingbroke was left in charge of his affairs in France. On his return however, after an absence of about six weeks, the prince suddenly dismissed him from his employment, and soon after had him formally impeached before what he called his parliament for neglect of the duties of his office. Bolingbroke now endeavoured to make his peace with the court of St. James's, but after some negotiations had taken place by means of Lord Stair, the English ambassador in Paris, the affair ended by the ministry declining to grant the pardon for the present.

Bolingbroke remained in exile for the next seven years, during which he kept up a correspondence with Swift, Pope, and other literary friends in England, and also drew around him a circle of new acquaintances, comprising some of the most eminent men of the continent. He resided principally on a small property called La Source, near Orléans, which he had purchased in 1719, and which he had taken great delight in laying out and decorating. His wife having died in November 1718, in May 1720 he privately married the widow of the Marquis de Villette, a niece of Madame de Maintenon, who brought him a considerable fortune. It was to this lady's exertions and management that he was eventually indebted for liberty to return to his own country, which he obtained in May 1723, principally it is understood through the intervention of the king's mistress, the Duchess of Kendal, whom Lady Bolingbroke bribed with a sum of eleven thousand pounds. Bolingbroke however, although he came over for a short time in June of this year, did not take up his residence in England till September 1724. He now, by means of a large sum which he had gained in Law's Mississippi scheme, gave the Duchess of Kendal ample additional inducements to advocate anew his claim to the restoration of his property and his seat in the House of Lords, and he sent in to the king and the houses of parliament a formal petition to the same effect. The restoration of his property was granted to him by an Act of Parliament which received the royal assent on the 31st of May 1725. The complete reversal of his attainder however, the operation of which still excluded him from the House of Lords, was steadily refused to all his solicitations. Upon finding the doors of parliament thus shut against him, he engaged in a course of active opposition to the ministry through the medium of the press; and his political papers, published first under the title of the 'Occasional Writer,' and afterwards continued in the 'Craftsman,' excited for some years much attention. It was in the 'Craftsman' that the series of papers from his pen originally appeared which were afterwards collected and published separately under the title of 'Letters upon the History of England, by Humphrey Oldcastle,' and also the subsequent series of letters forming his 'Dissertation upon Parties.'

While thus employed he resided at the villa of Dawley, near Uxbridge, which he had purchased on his return. Here he occupied himself not only in carrying on this political war, but also, as it afterwards appeared, in writing various treatises upon moral and metaphysical subjects which he did not send to the press. The state of parties in the new parliament, which met in January 1735, convinced Bolingbroke that the hopes in which he had so long indulged of the overthrow of the ministry were for the present at an end, and in disgust he suddenly left England, and returned to France. But another matter may have had some share in quickening his departure. In this year, as appears from a note in Tindal's 'History of England,' there was published in London an octavo pamphlet containing a correspondence of some length which had taken place between Bolingbroke and the secretary of the Pretender immediately after his dismissal from the Pretender's service in 1716. The pamphlet was immediately suppressed, but Tindal has printed the letters at large; and their contents are such as it certainly could not have been agreeable to Bolingbroke to see laid before the public.

He remained in France, residing at a seat called Chantelou, in Touraine, with the exception of a short visit which he paid to England to dispose of Dawley, till the death of his father in 1742. He then returned to take possession of the family estate at Battersea, where he resided for the most part till his death on the 12th of December 1751. The year before, the death of his wife, by whom he had no family, had terminated a union which seemed to the last to have been one of great happiness and strong affection on both sides. Most of his old friends also, both literary and political—among the number Pope, Swift, Gay, and Atterbury—were now gone. In politics he had almost ceased to take any active part for some years before his death; the fall of Walpole in 1742, the event to which he had looked for so many years for his full restoration to the rights of citizenship, and probably his re-admission to political power, having, when it came, brought no advantages either to himself or his party.

Bolingbroke bequeathed all his manuscripts, with liberty to print them, to David Mallet, who had gained his favour by consenting some years before to appear as the editor of his work entitled 'The Idea of a Patriot King,' and to put his name to an advertisement prefixed to it, in which some very injurious and, in the circumstances, unbecoming reflections were made upon the conduct of his recently deceased friend Pope, who, shortly before his death, had, without the knowledge of the author, got an impression of the work thrown off from the manuscript which had been lent to him. Mallet published the several treatises which had been thus left to him, along with all Bolingbroke's

writings which had previously appeared, in 5 vols. 4to, in 1754. The most important pieces in this collection are the 'Letter to Sir William Windham' (which had been first published in 1752, along with some other pieces); a short tract entitled 'Reflections upon Exile'; 'Letters on the Study and Use of History'; 'Remarks on the History of England,' in twenty-four letters (originally published in the 'Craftsman,' and afterwards published separately under the name of 'Humphrey Oldcastle'); 'A Dissertation upon Parties'; a 'Plan for a General History of Europe'; a 'Letter to Lord Bathurst, on the Use of Retirement and Study'; a 'Letter on the Spirit of Patriotism' (dated 1736); 'The Idea of a Patriot King' (dated 1738); a 'Letter on the State of Parties at the Accession of George I.:' 'Some Reflections on the Present State of the Nation;' and 'Concerning Authority in Matters of Religion.' In 1798 there appeared in 2 vols. 4to. (sometimes designated the sixth and seventh volumes of Bolingbroke's works), and also in 4 vols. 8vo, 'A Collection of the Letters and Correspondence of Bolingbroke, Public and Private, during the time he was Secretary of State to Queen Anne, with Explanatory Notes, &c., by Gilbert Parke, of Wadham College, Oxford.' There also appeared at Paris in 1808, in 3 vols. 8vo, a collection of letters by Bolingbroke, in French, edited by General Grimoard, who has prefixed an historical essay on the life of the writer. This collection consists for the most part of letters written in French by Bolingbroke to Madame de Ferriol, between 1712 and 1736, and to the Abbé Alari, between 1718 and 1726.

Lord Bolingbroke's writings are now little read, and indeed, in matter at least, they contain very little for which they are worth reading. He had no accurate or profound knowledge of any kind, and his reasonings and reflections, though they have often a certain speciousness, have rarely much solidity. A violent, and for the most part a thoroughly unprincipled partisan, he has even on what he has written on the transactions of his own time, and on those in which he was himself concerned, only perplexed and obscured history; and this seems to have been his object. His most important performances of this kind, though they sometimes profess to have been prepared immediately after the events to which they relate, and although in one or two instances a very few copies of them may have been privately printed and confided to certain intimate friends, appear to have been carefully concealed by their author from the public so long as he himself lived to be called to account for what they contained, or any of the persons who could best have either refuted or confirmed them. As a mere rhetorician however, Lord Bolingbroke had very considerable merit, and in this capacity he may even be allowed, though he added little if anything of much value to the general intelligence from his own stores, to have for the first time familiarised some important truths to the public mind. His style was a happy medium between that of the scholar and that of the man of society—or rather it was a happy combination of the best qualities of both, heightening the ease, freedom, fluency, and liveliness of elegant conversation with many of the deeper and richer tones of the eloquence of formal orations and of books. The example he thus set has produced a very considerable effect in moulding the style of popular writing since his time. The opposition of Bolingbroke's philosophical sentiments, as disclosed in those writings which appeared after his death, to revealed religion, is generally known; but it is now we believe admitted on all hands that Christianity has not found a very formidable opponent in Bolingbroke, and that his objections for the most part only betray his own half-learning.

BOLIVAR, SIMON, the liberator of South America from the Spanish yoke, was born in the city of Caracas, on the 25th of July 1783. His father was Don Juan Vicente Bolivar y Ponte, a colonel in the militia of the vale of Aragua; his mother, Doña Maria Concepcion Palacios y Sojo: both of very opulent families in Venezuela, of the rank of nobility called *Los Mantuanas*. He was sent, when about fourteen, to Madrid, for the completion of his education. After remaining several years in Madrid, and paying some attention to the study of jurisprudence, he made the tour of Italy, Switzerland, Germany, England, and France; and after a long residence at Paris, he returned in 1802 to Madrid, and there married the daughter of Don Toro, uncle of the Marquis Toro of Caracas, or, as others say, the daughter of the Marquis de Ustoriz de Cro, his age being then only nineteen, his wife, who is described as being remarkably beautiful and accomplished, being three years younger than himself. In 1809 he returned to his native country, where, in company with the new captain-general of the colony, Don Emparan, he arrived March 24th at the port of La Guayra, and retired to domestic seclusion on one of his large patrimonial estates in the beautiful vale of Aragua near Caracas. The yellow fever, so prevalent in that climate, soon terminated his domestic happiness; for his wife, shortly after her arrival, fell ill and died. To alleviate his grief he made a voyage to Europe, and thence proceeded to the United States, where he gathered some useful political knowledge, and about the beginning of 1810 again landed in Venezuela, in company with General Miranda, and retired to his estate of San Mateo.

The Spanish colonies of South America had remained in quiet submission to the government of the mother country until about the close of the 18th century. Then, when revolutionary ideas were being everywhere scattered abroad, the spirit of resistance was aroused in

Spanish America, and at length revolutionary proceedings broke out in Venezuela. Before 1810, the disposition to shake off the tyranny of Spain had already become sufficiently strong to occasion several desperate but unsuccessful attempts.

The first decisive movement of the revolutionists was made on a solemn festival, Maunday Thursday, the day preceding Good Friday, April 19, 1810, when the captain-general of Caracas was arrested and deposed, and a supreme junta or congress assembled to organise a new government for the state of Venezuela. On the 20th of the following July or August, the same was done at Bogotá, the capital of New Granada, which formed for itself a separate republican government; but it is far from certain that Bolivar had any share in these first insurrections, though it is asserted in several accounts that he was one of the principal actors. Soon after the establishment of the independent legislature at Caracas, Bolivar accepted the proposition to proceed to England, for the purpose of soliciting the British Cabinet to aid the cause of the independent party, and, with Don Luis Mendez, arrived in London in June, 1810. Finding that the English government professed to maintain a strict neutrality, Bolivar, who himself paid the expenses of the mission, after a short stay in England, left his companion, and returned in disgust to Caracas. Upon the appearance of Miranda as commander-in-chief of the patriot army in 1811, the declaration of independence was boldly maintained by military force: the tri-coloured flag was hoisted, and the Spanish standard cut down and destroyed. Bolivar was appointed colonel in the independent army, and governor of Puerto Cabello, the strongest fortress of Venezuela. The patriots were successful until the following year, 1812, when an earthquake destroyed, in the cities of Caracas, La Guayra, and Merida, about 20,000 persons; and as it happened on the very day and hour in which the revolution had broken out two years before, the clergy seized upon the coincidence to represent the awful calamity as a just visitation upon the revolutionists. Priests, monks, and friars were stationed in the streets, vociferating in the midst of credulous multitudes trembling with fear, while the royalist troops under Monteverde were getting possession of the whole province. About 1200 royalist prisoners of war, who were confined in the fortress of Puerto Cabello, having shortly after broken loose, murdered some of the garrison, and by the treachery of the officer on guard, taken possession of the citadel, Bolivar, being unable to regain it by storm without destroying the town, embarked in the night, and on the 1st of July 1812, returned by sea to his estate near Caracas. General Miranda, on learning at Vittoria that this very important place, with all its stores of ammunition and provisions, was deserted, capitulated in despair to Monteverde the royalist general, and prepared to leave the country, when he was unexpectedly arrested by a party of patriot leaders, of whom one was Bolivar himself. By him Miranda was accused of being a traitor and secretly allied with the British Cabinet, and being delivered with nine or ten hundred of his soldiers to Monteverde, was sent in irons to Spain, where he died in a dungeon. Bolivar received from Monteverde a passport to Curaçoa, where, with his cousin Ribas, he remained during the autumn of 1812. Venezuela was now again entirely in the hands of the royalists, but the ferocity of their proceedings soon made Bolivar a more enthusiastic convert to the patriot cause, and, with his cousin Ribas, he proceeded from the island of Curaçoa to Carthagena, in order to raise a liberating army. There, by the influence of Manuel Torrices, the republican president of New Granada, about 300 men were fitted out, and Castillo, the president's cousin, having joined with 500 more, in January 1813, Bolivar, as commander-in-chief, and Ribas as major-general, undertook to drive the Spanish royalists from Tenerife, on the river Magdalena. Having succeeded at Tenerife, he advanced in December to Mompox, in January 1813, to Ocana, and in February to Cucutá, whence he expelled the Spanish commander Correa, and attracted great notice by surmounting every difficulty, dispersing the enemy, and gaining several hundred volunteers, provisions, and money. With this encouragement he planned an expedition for the relief of Venezuela, after first proceeding to Bogotá, where the congress of New Granada received him well, and added largely to his means. As he proceeded there appeared to be a general rising in his support, and he soon found his army so swelled in numbers that he was enabled to form it into two divisions; Ribas led one, himself the other, and both, by forced marches along different roads, advanced rapidly on Caracas. Bolivar now in reprisal of the cruelties of Varinas, issued on the part of the patriots, the manifesto of "guerra à muerte," war to death. At Lostaguanes Monteverde was routed, and obliged to take refuge in Puerto Cabello; and on August 4th, 1813, the liberating army entered the city of Caracas, the capital of Venezuela, amidst unbounded rejoicings on the part of the inhabitants. Marino, who had recently raised an army in Cumana, and from whom the royalist general escaped only by being caught in the arms and carried off upon the horse of a brawny Capuchin who was fighting at his side, had assumed the name of Dictator and Liberator of the Eastern provinces of Venezuela. The same title was adopted by Bolivar for those of the West. At this time he was in possession of unlimited power; but he did not prevent the prevalence of popular dissatisfaction, which the conduct of his officers had excited. The legislative, executive, and judicial powers being united in the person of the dictator, occasioned great offence to the democratical party, and suspicions arose that his primary object was personal

aggrandisement. A consciousness of this opinion induced him, in the congress assembled at Caracas, January 1, 1814, to declare that as he had accepted the supreme power to save his country from anarchy, so now he desired to be permitted to resign it, only begging they would leave him the honour of combating their enemies. His retention of the dictatorial power was however agreed upon, for a great enthusiasm still prevailed in his favour, in consequence of the royalists beginning again to rally their forces and arm the negro slaves: a desperate expedient by which they were much assisted in raising a numerous army.

At Flores and other places the patriots were surprised, and all put to the sword. The royalist generals Boves, Roette, and Morales committed the greatest cruelties, destroying even women and children, arrested and put to death every man who refused to join them, and appeared to emulate the ferocity of the first invaders. Bolivar, in revenge of these and other atrocities, and for the sake, it is said, of deterring the enemy from their repetition, ordered about 800 Spaniards in La Guayra and Caracas to be arrested and shot, which accordingly, on the 14th February 1814, was done, and immediately was retaliated by the royalists, who shot several hundreds of patriot prisoners in Puerto Cabello. Bolivar soon came to see the impolicy, as well as wickedness, of this kind of procedure; and formally proclaimed at Cumare, in July 1816, that "no Spaniard shall be put to death except in battle: the war of death shall cease." Bolivar, after several successes, was beaten on the 14th of June 1814 at La Puerta, between Cura and San Juan Los Morros, where he lost 1500 men, in consequence of over-confidence, and the dividing of his army; and again, on the 17th of August, at his estate of San Mateo, where but for the fleetness of his horse he would have been taken prisoner. His cousin Ribas was seized and shot, and his head was stuck on the walls of Caracas. By September the Spanish generals were again in complete possession of all the provinces of Venezuela; and thousands of the patriot army deserted to their ranks. The two dictators, Bolivar and Marino, repaired as fugitives to Carthagena. They were received with great respect by the republican congress of New Granada, which commissioned Bolivar to compel the revolted province of Cundinamarca to join that republic. With 2000 men he marched, in December 1814, upon the city of Bogotà, which, after the outworks were stormed for two days, capitulated, and became the seat of congress. In April 1815, while Bolivar was engaged in reducing Carthagena, the arrival was suddenly announced of General Morillo from Spain, with an army of 12,000 Spaniards. The peace of 1814 with France had enabled the Spanish government to make a vigorous effort to regain the revolted colonies; and Bolivar retired in May 1815 to Jamaica, leaving Morillo to overrun the whole country. While at Kingston in Jamaica, Bolivar employed himself in writing a defence of his conduct in the civil war of New Granada, and issued several spirited exhortations to the patriots, for which his assassination was attempted by the royalist party; and the negro who was employed for this purpose stabbed to the heart his secretary, who accidentally occupied the hammock in which he usually slept. The island of Hayti became his next asylum. By the president Pétion he was supplied with four negro battalions, in addition to a body of several hundred patriot emigrants; and in May 1816 he was enabled, in conjunction with Brion, the commander of the republican naval forces, to land in the island of Margarita, where General Arismendi had again assembled the independent forces. With these various recruits, in July he appeared in Cumana, where he was suddenly surrounded by the royalists, and defeated with great slaughter at Cumare, after he had proclaimed the cessation of the 'war to death.' He for the present returned to Hayti, but in the following December reappeared in Margarita, whence, having issued a proclamation convoking the patriots of Venezuela to a general congress, he sailed to Barcelona and collected a force sufficient to repel Morillo, then advancing upon him with a powerful army. A battle of three days ended in the defeat and disorderly flight of Morillo, who was surprised in retreating, and again defeated by the ferocious Llaneros of General Paez. Bolivar, being now again recognised as supreme chief and captain-general, fixed his head-quarters in 1817 at Angostura, on the Orinoco. After numerous and obstinate battles, the republican party obtained a decided superiority over the royalist forces. On the 15th February 1819 a solemn installation of the congress of the Venezuelan Republic was made at Angostura; and Bolivar delivered a florid oration, in which, after declaring popular education to be the first concern of the congress, he goes on to lay down the political principles which ought to govern the infant republic; and with strange inconsistency Bolivar on the one hand asserts the social equality and universal brotherhood of man, and on the other as solemnly and fervently advises the adoption of a government system, in which the sovereign power is centred in one presiding individual. This advice of course created much distrust of Bolivar's republican professions; but his own explanation was, that in the circumstances of the country a supreme dictator was required by 'inevitable necessity,' and that this necessity alone could have induced him to undertake "the terrible and dangerous charge of supreme chief," which he then resigned. His authority as supreme chief, though resigned into the hands of the congress, was continued to him under the title of President, until the more violent commotions of society should subside, and the enemy be utterly expelled. In the same year he marched to the assistance of General Santander, in New Granada, and in July arrived at Tunja,

which, after a daring and well-planned engagement on the neighbouring heights of the Andes, he took from the royalists; and on the 7th of August a decisive victory at Bojaca, in addition to several others, gave him complete possession of the whole of New Granada. Sanamò, the viceroy reinstated by Morillo, precipitately fled; and Bolivar entered Bogotà in triumph, amid the acclamations of the inhabitants, who hailed him as their liberator: the congress appointed him president and captain-general of that republic, and supplied him with men, money, and munitions sufficient to insure the complete expulsion of the Spanish troops. Some opposition was manifested in Venezuela, but it was easily suppressed; and at a general congress of the provinces of Venezuela and New Granada, on December 17, 1819, a decree was passed by which these two republics were united under the name of Colombia; and the office of president was given of course to Bolivar.

In November 1820, after numerous advantages gained by the liberating army, an armistice for six months was agreed upon. Morillo appeared in fact to be weary of hopeless slaughter; and in January 1821 returned worn out to Spain, leaving the command to General La Torre. In June 1821 General La Torre was totally defeated by Bolivar at Carabobo, near the city of Valencia, when the royalists lost above 6000 men, with all their artillery and baggage: the victory was secured by the intrepidity of a body of English and Irish volunteers. This decisive battle concluded the war in Venezuela. The remnant of Spanish troops who escaped to the fortress of Puerto Cabello were compelled to surrender to General Paez. Bolivar the third time entered the city of Caracas in triumph, but the principal inhabitants having emigrated during the war, the streets presented a scene of desolation and misery, with groups only of ragged mendicants, who at once cried welcome and implored relief. A republican constitution was drawn up, and adopted on the 20th of August 1821, decreeing that its arrangements should continue until 1834. Colombia was now cleared of the royalist troops, except the province of Quito, which was liberated by the great victory of General Sucre on the 24th of May 1822 at Pichincha, one of the mountains of the Chimborazo overlooking the city of Quito. General San Martin, the founder of Peruvian independence, having solicited Bolivar to assist in driving the Spaniards out of Peru, he left the administration of government to the vice-president, General Santander, and putting himself at the head of the Colombian army at Popayan, marched to Guayaquil, where he had an interview with San Martin, and thence embarked his troops for Callao. On the 1st of September 1822 he entered Lima. The royalists on his approach evacuated the city; and the inhabitants, with every demonstration of delight, received him, and gave him the command of all the country's resources for the completion of its liberation. A republican constitution was adopted on the 13th of November 1823, by a congress from the provinces of Northern, or Lower Peru.

San Martin had gone to Europe; and the Peruvian congress, unable to govern, in February 1824 dissolved itself, and appointed Bolivar dictator; but an active dissentient faction at Lima declared that Colombia, in sending her army into Peru, had designs of territorial aggrandisement, and that Bolivar was actuated solely by sinister views of ambition: an accusation which Bolivar indignantly repelled. His army, consisting of 6000 Colombians under General Sucre, and 4000 Peruvians under General Miller, advanced in July from Huaras towards Pasco. In a tedious passage of the Andes, the greatest hardships and dangers were endured, and by no one with greater fortitude than Bolivar; the cavalry having sometimes to stand throughout the night upon the snow-path of a precipice without any room to lie down or to turn, while the thermometer was several degrees below the freezing point. The Spanish army was encountered on the plains of Junin, and defeated on the 2nd of August. Bolivar proceeded to Lima to reorganise the government; leaving the main army under Generals Sucre and Miller, who on the 9th of December won the great victory of Ayacucho, when the royalists were defeated with irreparable loss of men and means. Thus ended the revolutionary war of the Spanish American colonies, in which, for the possession of national independence, at least 100,000 lives were sacrificed. On February 10th, 1825, a congress was convoked by Bolivar, who resigned the dictatorship in the following words: "I felicitate Peru on being delivered from that which, of all things on earth, is most dreadful—war, by the victory of Ayacucho—and despotism, by this my resignation."

He set out in company with General Sucre and Miller, on the 10th of the following April, to visit the provinces of southern, or upper Peru; and proceeded to Arequipa, Cuzco, La Paz, and Potosi. The whole expedition was one continued scene of triumph and extravagant exultation; of dinners, balls, bull-fights, illuminations, triumphal arches, and processions. A convention of representatives met at Chuquisacoa, and vied with each other in rhetorical resolutions of gratitude to Bolivar and Sucre, whom they designated 'Grand Prince and Valiant Duke;' and having assumed for their country the name of Bolivia, they appointed Bolivar perpetual protector and requested him to prepare for them a plan of government. A million of dollars were offered to him, which he accepted, on the condition that they should be appropriated to the purchase and liberation of 1000 negro slaves in Bolivia. In January 1826 he returned to Lima, and on the

25th of the following May, the famous Bolivian code was presented to the congress of Bolivia. On the 22nd of June, the great congress of deputies from Colombia, Peru, Bolivia, Mexico, and Guatemala was convened at Panama. The object in view was the annual assemblage of state representatives to discuss diplomatic affairs, and decide international disputes; to promote liberal principles, and ensure a union of strength in repelling any foreign attack. In this first and only session a great profusion of eloquence was displayed to little purpose, in the philanthropic commendation of political liberality, religious toleration, and the abolition of slavery. The code of Bolivar was adopted in Bolivia, though not without partial dissatisfaction, on the 9th of December 1826, the anniversary of the battle of Ayacucho, and General Sucre was appointed president. It was soon afterwards adopted by the congress of Lima, where Bolivar himself was made under its provisions the president for life.

In Colombia, Bolivar's long absence had occasioned the prevalence of much disaffection and party strife. General Paez, who, with his numerous cavalry of wild Llaneros, had done much for the patriot cause, had excited in Venezuela an insurrection in favour of a federal instead of the existing central government. Another portion of the republic was determined to adopt the code of Bolivar, so that two-thirds of Colombia were in a state of rebellion, which was daily increasing, and blood was beginning to flow. The presence of the liberator being thus demanded in the north, he departed from Lima, still leaving in Peru his Colombian forces, and proceeded rapidly to Bogotà, where he assumed the extraordinary powers which are authorised by the constitution in cases of rebellion; but, at the same time, he proposed to reduce the army from 40,000 to 6000; to diminish the number of civil officers; to reduce the annual expenses from 14,000,000 dollars to 3,000,000, and to sell the ships of war. All parties, however conflicting, desired the appearance of Bolivar. There was still a charm in his name, and he was thought to be the only man who could save the republic from ruin. Paez himself issued a proclamation from Valencia, calling upon the people to "receive him as the thirsty earth receives the fertilising dew of heaven." In the end of December, the liberator arrived at Puerto Cabello, where he met General Paez; but instead of imposing any punishment for his rebellion, he confirmed him in his command in Venezuela, and issued a proclamation of amnesty to all the insurgents; a course of conduct that was readily taken to be a proof of his having himself instigated the insurrection, in order to furnish a pretext for assuming the power of dictator. But in the presence of Bolivar all disposition to rebel immediately disappeared; and in February 1827 he addressed to the senate a letter, in which he states that "suspicions of tyrannous usurpation rest upon my name, and disturb the hearts of Colombians. I desire to free my fellow-countrymen from all inquietude, and therefore I renounce, again and again, the presidency of the republic, and entreat the congress to make me only a private citizen." The discussion of this matter was prolonged by the collision of party opinions: in June it was finally decided by a majority of members not to accept the resignation, and Bolivar was consequently induced to retain his office. Still a very great mistrust of his assurances continued to prevail; and the Colombian troops in Peru being informed that Bolivar was making arrangements for the adoption of his code in Colombia, promoted a violent insurrection. The Peruvians being equally dissatisfied with their new institutions, on the 26th of January, 1827, a complete revolution ensued in the governments of Lima and Bolivia; so that the code of Bolivar was rejected only six weeks after its adoption. Another congress elected another president: the troops returned to Bolivar in Colombia, and after assurance of contrition their conduct was forgiven. Before a general assembly of Colombian representatives at Ocaña, on the 2nd of March 1828, an address was delivered by Bolivar, in which he insisted upon principles similar to those developed in his code; and attributed the unprosperous state of the republic to the deficiency of the executive power. A majority headed by the vice-president Santander, declared strongly against the proposition of creating Bolivar dictator; and the friends of Bolivar finding themselves in a minority vacated their seats, by which the meeting was left without a quorum, and thus became extinct.

In consequence of this event, a convention of the civil and military inhabitants of Bogotà resolved to confer upon the liberator the title of Supreme Chief of Colombia, with absolute power to regulate the whole affairs of government. On the 20th of June 1828 he accordingly entered that city in magnificent state, and assumed an authority which the contenders for the inviolability of the constitution most daringly denounced. Shortly afterwards several assassins broke into his chamber, and two colonels were shot dead in the struggle, while Bolivar escaped only by leaping headlong in the dark from the balcony of the window, and lying concealed under a bridge. Santander, with several military officers who were convicted of having participated in the conspiracy, was condemned to death, but eventually suffered only banishment from Colombia. In 1829 the republic was disturbed by violent factions: many military leaders were aspiring to supreme command, and the efforts of Bolivar to prevent disunion excited insurrections. At the head of one was General Cordova; another was headed by General Paez. Venezuela afterwards separated from the rest of the republic; Paez was made her president; and a declaration, signed by 486 leading men of Caracas, the scene of so many of

Bolivar's splendid triumphs, denounced his ambition, and rejected his authority. Under these circumstances a general convention, in January 1830, was held at Bogotà, in order to frame a new constitution for Colombia. The proceedings were opened by Bolivar, who, in a solemn address, again tendered his resignation; but, as on former occasions, it was not accepted. He was entreated to retain his authority, and assured that, "if you now abandon us, anarchy will succeed." He had however finally determined to resign his station. He therefore at once took leave of public life, and retired to Carthagena, broken down and exhausted in mind and body; and though a few months later again solicited to resume the supreme authority, he persisted in his refusal.

In December 1831 he sent to the people of Colombia a farewell address, in which he vindicated his conduct, and bitterly complains of calumny and ingratitude. A week after writing this address he expired at San Pedro, near Carthagena, on Friday the 17th of December 1831 at the age of forty-eight. It is said that, in his last moments, he conformed to all the rites of the Catholic religion, that he manifested great calmness and resignation, and constantly showed the utmost anxiety for the prosperity of his country.

BOLLANDUS, JOHN, a learned Jesuit, was born at Thienen (Tirlemont) in the Netherlands, August 13th, 1596. He entered the Society of Jesus at the age of sixteen, and became eminent in it as a teacher both in the Netherlands and other countries. The share which he took in the 'Acta Sanctorum,' or 'Lives of the Saints,' entitles him to especial notice.

The history of this work is not uninteresting, although the work itself, otherwise than for occasional consultation, defies time and patience. It consists of fifty-one volumes in folio, of the larger size and bulk. It was first projected by Père Heribert Rosweida, a Jesuit then of the age of sixty, and was to extend no further than sixteen volumes folio, with two volumes of illustrations. Rosweida began by printing in 1607 an octavo volume, entitled 'Fasti Sanctorum,' consisting of the manuscript lives of some saints which he happened to find in the Netherlands; but he died October 5th, 1629, before he could accomplish what he had undertaken. The execution of his project was then entrusted to Bollandus, now about thirty-four years of age; and he removed from Mechlin to Antwerp for the purpose. After examining Rosweida's collections, he established a general correspondence all over Europe, instructing his friends to search every library, register, or repository of any kind, where information might be found; but becoming soon sensible of the weight of his undertaking, he called in the assistance of another Jesuit, Godfrey Henschen of Guelderland, younger than himself, more healthy, and equally qualified in other respects. With this aid he was enabled to publish the first two volumes, folio, Antwerp, 1643, which contain the lives of the saints of the month of January, the order of the Calendar having been preferred. In 1658 he published those of February in three volumes; and two years after, his labours still increasing, he engaged with another associate, Père Daniel Papebroch, at that time about thirty-two years old, whom he sent with Henschen to Italy and France, to collect manuscripts, but he died before the publication of another volume, September 12th, 1665. After his death the work was continued by various hands, who were called 'Bollandists.' Henschen and Papebroch published the lives of the saints of the month of March in three volumes, Antw. 1663; and those of April in three volumes, 1675. The saints of the month of May occupy seven volumes, 1683-89. Henschen's personal labours had been concluded by his death, September 11th, 1681; and Francis Baert and Conrad Jauming supplied his place. The saints of June fill six volumes, published between 1695 and 1716. Papebroch died June 25th, 1714. The saints of July extended to seven volumes; the two first by Jauming, Sollier, and John Pinei, published in 1719 and 1721; the title of the third volume had the addition of the name of William Cuper; in the fourth volume, 1725, the name of Peter Bosch was added; and these names were continued in vol. v., 1727; vol. vi., 1729; and vol. vii., 1731; August, 6 vols., 1733-43; September, 8 vols., 1746-62; October, to the 16th of the month, 6 vols., 1765-94; up till 1770, when the third volume of October appeared, the editors had been all designated as members of the Society of the Jesuits; and the volumes were uniformly printed at Antwerp. The fourth volume of October was printed at Brussels, the editors being all styled 'Presbyteri Theologi.' The fifth volume was printed at Brussels in 1783. The sixth volume (the last of the entire series), printed at the Abbey of Tongerlo, 1794, is described as 'partim à Cornelio Bye, Joanne Baptista Fontono, presbb. Anselmo Berthodo Ord. S. Benedicti P. M. partim à Joanne Bueo presb. Sardo Dyckio, Cypriano Goorio, Mathia Stalsio, Ord. Pram. Cann. Regul.'

It is to be regretted that a work so full of curious information as the 'Acta Sanctorum,' continued through a series of volumes for a hundred and sixty-five years, should remain unfinished: but the continuation was interrupted, probably for ever, by the entrance of the French troops into Belgium in 1794.

Bollandus published separately:—1, 'Vita S. Liborii Episcopi,' 8vo, Antw. 1648. 2, 'Brevis Notitia Italiae ex Actis SS. Januarii et Februarii,' 8vo, Antw. 1648. 3, 'Brevis Notitia triplici status, Ecclesiastici, Monastici, et Sæcularis, excerpta ex Actis SS. vulgatis à Bollandus et sociis,' 8vo, Antw. 1648.

(Life of Bollandus prefixed to the first volume of the month of

March in the *Acta Sanctorum*, where is also the portrait of Bollandus; Foppens, *Bibliotheca Belgica*, 4to, Brux. 1739, tom. i. p. 584; Moreri; *Biographie Universelle*.)

BOLOGNA, JOHN OF, or **GIOVANNI DA**, a celebrated sculptor and architect, born at Douay in Flanders, about 1524. He went early to Rome, where he distinguished himself by his models of celebrated works. Though a Fleming, he is known only by the above name; yet he lived the greater part of his life at Florence. He seems to have acquired the name by which he is generally distinguished from his celebrated fountain at Bologna, of which the crowning colossal bronze figure of Neptune is one of the masterpieces of modern sculpture.

Several of the noblest works in sculpture at Florence are by the hand of John of Bologna, two of which are unsurpassed in modern art—the marble group of the 'Rape of the Sabine Woman,' in the Loggia de' Lanzi, in the Piazza Granduca; and the well bronze in the Imperial Gallery, of 'Mercury' in the act of springing into the air, with one foot still upon a globe. John was one of the original forty members of the Academy of Florence, and was also sculptor to the grand-duke Francesco I. In 1580 he was invited to Genoa, where he executed several admirable works, chiefly in bronze. He died at Florence in 1608, aged eighty-four. John of Bologna is the sculptor who, when he showed to Michelangelo, whilst at Rome, a carefully finished model, was told by the latter to learn to sketch before he attempted to finish—a precept which he did not forget. John of Bologna, with the exception of Michelangelo, surpassed all the sculptors of his age, or indeed of the 16th century, and he surpassed Michelangelo himself in proportion and execution.

(Vasari, *Vite de' Pittori*, &c., ed. of Leghorn; Baldinucci, *Notizie dei Professori del Disegno*, &c.)

BOLSWERT, SCHELIUS, a designer and very celebrated engraver, born at Bolswert in Friesland, in 1586. He lived and worked chiefly at Antwerp with his elder brother Boetius. His best works are after Rubens and Vandyck, after whom he has engraved several admirable works on a large scale. He was the personal friend of both painters, and Rubens is said to have examined and touched with the crayon all the proofs of Bolswert's engravings after his works. Bolswert's prints are distinguished as true works of art, not as mere excellent mechanical performances of the graver—a kind of excellence to which they make no pretensions. They are admirably drawn, various and true in their effects of colour, and effective in light and shade: he preserved also the characteristic style of the master after whom he engraved. Bolswert engraved altogether 87 plates after Rubens, including 21 landscapes, and some of his best historical works; 23 after Vandyck, including Bolswert's own portrait; 22 after other masters; and 22 after his own designs. He died at Antwerp at an advanced age.

(Watelet et Levesque, *Dictionnaire des Arts*, &c.; Huber, *Manuel des Amateurs*.)

BOMBELLI, RAPHAEL, a Bolognese mathematician of the 16th century. We know nothing of his birth, life, or death, except his work on Algebra, published in 1572 (Hutton), or in 1579 (Montucla, Bossut, Wallis, Dechales, De Thou's 'Catalogue,' &c.), or in both (Lacroix, 'Biog. Univ.'). The book itself is very scarce. Bombelli is principally known as the first who attempted the solution of what is called the 'irreducible case' in cubic equations. He gave the geometrical solution which depends upon the trisection of an angle, and observed that the latter problem may be reduced to a cubic equation. He is also the first who attempted the actual extraction of the cube root in the result of Cardan's (or Tartalea's) well-known formula.

Bombelli states that he discovered a manuscript of Diophantus in the Vatican Library, and with another had translated the greater part for publication. He says that he found frequent references to Indian authors, from which he learned that Algebra was known to the Hindus earlier than to the Arabs. This assertion has been much quoted and frequently censured. Cassali caused all the Vatican manuscripts now existing (three in number) to be closely examined, but without finding anything to confirm Bombelli's assertion; which remains a puzzle, since there is no suspicion of deceit, and the work of Diophantus is in reality full of questions akin to those treated in the Hindoo 'Viga Ganita.' But as Bombelli is said, in the Toulouse edition of Diophantus, to have misinterpreted the questions from that writer which he inserted in his own algebra, it is possible that he may have not well understood the Greek.

BONAPARTE, NAPOLEON I., EMPEROR OF THE FRENCH. Napoleon Bonaparte was born at Ajaccio, in the island of Corsica, on the 15th of August 1769. He was the second son (his brother Joseph being the eldest) of Carlo Bonaparte and Letizia Ramolini, both natives of Corsica. The house in which he was born forms one side of a court leading out of the Rue Charles. In his baptismal register, which is in the parish books, his name is written Bonaparte, but his father generally signed himself Buonaparte, a mode of spelling which seems more accordant with Italian orthoepy, although there are other Italian names in which the first component part is written and pronounced 'bona,' as, for instance, Bonaventura, Bonaccorsi, &c., besides common nouns, similarly compounded, such as bonarieta, bonaccia, &c. This appears in itself a question of little moment, but it has been made the subject of much controversy, to which a sort of national importance has been given, as if the dropping of the *s* had been done for the

purpose of Frenchifying the name. (Louis Bonaparte's 'Réponse à Sir Walter Scott.') Bonaparte being a family name, the correctness of the spelling must depend upon custom, and we find that Napoleon, after he became general of the army of Italy, always signed his name without the *s*, probably, as Bourienne observed, because it was a shorter way of signing, and probably also because it was better adapted to French pronunciation. Napoleon's name first became known to the world as Bonaparte, as such it is registered in his proclamations, despatches, and other documents, and as such therefore it ought to be written in history. His brothers likewise adopted the same way of writing it.

Napoleon's father's family was originally from Tuscany, but had been settled in Corsica for several generations. There is a comedy written by one of his ancestors, Niccolò Buonaparte of San Miniato, citizen of Florence, styled 'La Vedova,' Florence, 1568 and 1592. There is likewise a narrative of the pillage of Rome under Charles V., written by a Jacopo Buonaparte, 'Ragguaglio Storico del Sacco di Roma dell'anno 1527,' Cologne, 1736. Charles, Napoleon's father, was educated at Pisa for the profession of the law. Before the birth of Napoleon, his father had served under Paoli in the defence of his country against the French, to whom the Genoese had basely sold the island. The entire submission of Corsica to France took place in June 1769, about a month before Napoleon's birth, who therefore, legally speaking, was born a subject of France. In the following September, when Count Marboeuf, the French commissioner, convoked by the king's letters patent the States of Corsica, consisting of three orders—nobility, clergy, and commons—the family of Bonaparte, having shown their titles, was registered among the nobility; and Charles, some years after, repaired to Paris as member of a deputation of his order to Louis XVI. He was soon after appointed assessor to the judicial court of Ajaccio. He was then in straitened circumstances, as he had spent most of his little property in a bad speculation of some salt-pans, after having previously lost a law-suit against the Jesuits about an inheritance which he claimed. Through Count Marboeuf's interest he obtained the admission of his son Napoleon to the military school of Brienne as a king's pensioner. Napoleon left Corsica for Brienne when he was in his tenth year, in April 1779. At Brienne, where he passed five years and a half, he made great progress in mathematics, but showed less disposition for literature and the study of languages. Pichegru was for a time his monitor in the class of mathematics. The annual report made to the king by M. de Keralio, inspector general of the military schools of France, in 1784, has the following remarks on young Napoleon:—"Distinguished in mathematical studies, tolerably versed in history and geography, much behind in his Latin and in belles lettres, and other accomplishments; of regular habits, studious and well behaved, and enjoying excellent health." (Bourienne's 'Memoirs.') Much has been said of young Napoleon's taciturnity and moroseness while at school. Bourienne, who was his schoolfellow, states the facts very simply. Napoleon was a stranger, for the French considered the Corsicans as such; he spoke his own dialect until he learnt French at the school; he had no connections in France, he was comparatively poor, and yet proud-minded, as Corsicans generally are; the other boys, more fortunate or more lively in their disposition, teased him and taunted him, and therefore he kept himself distant and was often alone. But that he was susceptible of social and friendly feelings towards those who showed him sympathy, his intimacy with Bourienne sufficiently proves. Many stories have also been told of his assuming an authority over his comrades, showing a precocious ambition, and an instinct for command; but these are flatly contradicted by Bourienne, with the exception that in one instance when the snow had fallen very thick on the ground, and the boys were at a loss what to do to amuse themselves, he proposed to make entrenchments with the snow, and to perform a sham attack, of which he was the leader.

There was nothing extraordinary in young Napoleon's school life; he was a clever, steady, studious lad, and nothing more. The school of Brienne was under the direction of the monks of the order of St. Francis de Paula, called Minimi, and Bourienne speaks rather indifferently of their learning and system of education, though the teacher of mathematics seems to have been a favourable exception. Bourienne also states that Napoleon had made more proficiency in history than the report above mentioned gives him credit for: his favourite authors were Caesar, Plutarch, and Arrian; the last two he probably read in Latin, or perhaps French translations, for he does not appear to have studied Greek.

Napoleon left Brienne on October 17, 1784, and proceeded to the Military School at Paris, there to continue his course of studies until he had attained the age required for entering the army. The Paris school, and the students' manner of living, were on an expensive footing, which shocked young Napoleon, who wrote to Father Berton, his superior at Brienne, a long letter (of which Bourienne gives a copy), in which he forcibly exposed the error of such a system of education, as luxury and comforts were a bad preparation for the hardships and privations attendant on the military profession. In the regulations which he afterwards drew up for his military school at Fontainebleau, Napoleon followed the principles he had thus early manifested, Napoleon's spirit of observation, his active and inquisitive character, his censorious frankness, would appear to have excited the attention

of the superiors of the Paris school, who hastened the epoch of his examination, as if anxious to get rid of a troublesome guest. He was likewise remarked for the wild energy and strange amplifications in his style of expressing himself when excited, a peculiarity which distinguished many of his subsequent speeches and proclamations. In September 1785, he left the school, and received his commission as sub-lieutenant in the regiment of artillery de la Fère, and was soon after promoted to a first lieutenancy in the artillery regiment of Grenoble, stationed at Valence. His father had just died at Montpellier of a scirrhus in the stomach. An old great uncle, the Archdeacon Lucien of Ajaccio, now acted as father to the family; he was rich, and Charles had left his children poor. Napoleon's elder brother Joseph, after receiving his education at the College of Autun in Burgundy, returned to Corsica, where his mother, sisters, and younger brothers resided as well as a half-brother of his mother, of the name of Fesch, whose father had been an officer in a Swiss regiment in the Genoese service, formerly stationed in Corsica. Napoleon, while at Valence with his regiment, was allowed 1200 francs yearly from his family, probably from the archdeacon, which, added to his pay, enabled him to live comfortably and to go into company. He appears to have entered cheerfully into the sports and amusements of his brother officers, while at the same time he did not neglect improving himself in the studies connected with his profession. While at Valence he wrote a dissertation in answer to Raynal's question, 'What are the principles and institutions by which mankind can obtain the greatest possible happiness?' He sent his manuscript anonymously to the Academy of Lyon, which adjudged to him the prize attached to the best essay on the subject. Many years after, when at the height of his power, he happened to mention the circumstance, and Talleyrand having sought the forgotten manuscript among the archives of the Academy, presented it to him one morning. Napoleon, after reading a few pages of it, threw it into the fire, and no copy having been taken of it, we do not know what his early ideas might have been about the happiness of mankind. (Las Cases' 'Journal,' vol. i.) Napoleon had become acquainted with Raynal while at Paris. Having made an excursion from Valence to Mont Cénis, he designed writing a 'sentimental journey,' in imitation of Sterne's work, translations of which were much read in France at the time, but he ultimately resisted the temptation.

The first outbreaking of the revolution found Napoleon at Valence with his regiment. He took a lively interest in the proceedings of the first National Assembly. The officers of his regiment, like those of the army in general, were divided into royalists and democrats. Several of the former emigrated to join the Prince of Condé. Napoleon however refused to follow the same course; he took the popular side, and his example and his arguments influenced many of his brother officers in the regiment. In 1792 Napoleon became a captain in the regiment of Grenoble artillery (Las Cases, vol. i.), his promotion being favoured probably by the emigration of so many officers. Napoleon and Bourienne happened to be, on the 20th of June 1792, at a coffee-house in the street St. Honoré, when the mob from the faubourgs (a motley crowd armed with pikes, sticks, axes, &c.) were proceeding to the Tuileries. "Let us follow this canaille," whispered Napoleon to his friend. They went accordingly, and saw the mob break into the palace without any opposition, and the king afterwards appear at one of the windows with a red cap on his head. "It is all over henceforth with that man!" exclaimed Napoleon; and returning with his friend to the coffee-house to dinner, he explained to Bourienne all the consequences he foresaw from the degradation of the monarchy on that fatal day, now and then exclaiming indignantly, "How could they allow those despicable wretches to enter the palace! why, a few discharges of grape-shot amongst them would have made them all take to their heels; they would be running yet at this moment!" He was collected and extremely grave all the remainder of that day; the sight had made a deep impression upon him. He witnessed also the scenes of the 10th of August, after which he left Paris to return to his family in Corsica. General de Paoli then held the chief authority in that island from the king and the French National Assembly, and Napoleon was appointed by him to the temporary command of a battalion of national guards. Paoli had approved of the constitutional monarchy in France, but not of the excesses of the Jacobins, nor of the attempts to establish a republic. Factions had broken out in Corsica also, which Paoli endeavoured to repress. In January 1793, a French fleet, under Admiral Truguet, sailed from Toulon, for the purpose of attacking the island of Sardinia. Napoleon, with his battalion, was ordered to make a diversion by taking possession of the small islands which lie on the northern coast of Sardinia, which he effected; but Truguet's fleet having been repulsed in the attack upon Cagliari, Napoleon returned to Corsica with his men. Paoli had now openly renounced all obedience to the French Convention, and called upon his countrymen to shake off its yoke. Napoleon, on the contrary, rallied with the French troops under Lacombe St. Michel and Saliceti, and he was sent with a body of men to attack his native town Ajaccio, which was in possession of Paoli's party. He however did not succeed, and was obliged to return to Bastia. The English fleet soon after appeared on the coast, landed troops, and assisted Paoli, and the French were obliged to quit the island. Napoleon also left it about May 1793, and his mother and sisters with him. After

seeing them safe to Marseille, he went to join the 4th regiment of artillery, which was stationed at Nice with the army intended to act against Italy. So at least his brother Louis says, but from Las Cases' account it would appear that he repaired to Paris to ask for active employment. It was during his short residence at Marseille and in the neighbourhood, that he wrote a political pamphlet, called 'Le Souper de Beaucaire,' a supposed conversation between men of different parties: a Marseillaise, a man of Nîmes, a military man, and a manufacturer of Montpellier. Bonaparte speaks his own sentiments as the military man, and recommends union and obedience to the Convention, against which the Marseillaise were then in a state of revolt. This curious pamphlet became very rare afterwards. Napoleon was said to have suppressed it. Bourienne prints a copy of it from a manuscript given to him by Bonaparte in 1795. His language was then strongly republican.

Bonaparte was at Paris in September 1793. Being known as a good artillery officer, he was sent to join the besieging army before Toulon, with the rank of lieutenant-colonel of artillery, and with a letter for Cartaux, the republican general, a vain, vulgar, and extremely ignorant man. Napoleon himself has given, in Las Cases' 'Journal,' a most amusing account of his first interview with Cartaux, of the wretched state in which he found the artillery, of the total want of common sense in the dispositions that had been made for the attack, of his own remonstrances, of his difficulty in making Cartaux understand the simplest notions concerning a battery, &c. At last, luckily for him, Gasparin, a commissioner from the Convention, arrived at the camp. He had seen a little service, and understood Bonaparte's plain statements. A council of war was assembled, and although the orders of the Convention were to attack Toulon and carry the town, Napoleon succeeded in persuading them to attack first the outer works that commanded the harbour, the taking of which would insure the surrender of the place. It was decided that Bonaparte's plan should be adopted, even at the serious risk of incurring the displeasure of the Convention. Soon after, Cartaux was recalled, and another mock general, a physician, was sent in his place; but he was soon frightened away by the whistling of the shots. Dugommier, a brave veteran, then came to command the besieging army, and he and Bonaparte agreed perfectly. Napoleon constructed his batteries with great skill, and having opened his fire with effect, the works which commanded the harbour were carried by the French after a sharp resistance from the English, in which the British commander, General O'Hara, was taken prisoner, and Bonaparte received a bayonet wound. Upon this the evacuation of the place was resolved upon by the allies, as Bonaparte had foreseen. A scene of confusion, destruction, and conflagration took place which it is not within our province to dwell upon: the English, Spanish, and Neapolitan fleets sailed out of the harbour, carrying along with them about 14,000 of the inhabitants, whose only safety was in flight. The deputies of the Convention, Barras, Fréron, Fouché, and the younger Robespierre, entered Toulon, and exercised their vengeance upon the few that remained, 400 of whom were assembled in the square and exterminated by grape-shot. Bonaparte says that neither he nor the regular troops had anything to do with this butchery, which was executed by what was called 'the revolutionary army,' a set of wretches, the sans-culottes of Paris and other towns, who followed the army as volunteers.

In consequence of his services at the taking of Toulon, Bonaparte was recommended by General Dugommier for promotion, and was accordingly raised to the rank of brigadier-general of artillery in February 1794, with the chief command of that department of the army in the south. In this capacity he inspected the coasts, ordered the weak points to be fortified, strengthened the fortifications already existing, and displayed his abilities in these matters. He then joined the army under General Dumorbion, which was stationed at the foot of the Maritime Alps, and with which he made the campaign of 1794 against the Piedmontese troops. In that campaign the French, disregarding the neutrality of Genoa, and advancing by Ventimiglia and San Remo, turned the Piedmontese position at Saorgio, obtained possession of the Col-de-Tende, and penetrated into the valleys on the Piedmontese side of the Alps. A battle was fought at Cairo, in the valley of the Bormida, 21st of September, in which the French had the advantage; but the rainy season coming on, terminated the campaign, in which Bonaparte had taken an important part, together with Massena.

Previous however to the battle of Cairo, Bonaparte had run considerable risk from the factions that divided France. On the 13th of July 1794 the Deputies of the Convention who were superintending the operations of the army gave him a commission to proceed to Genoa, with secret instructions to examine the state of the fortifications as well as the nature of the country, and also to observe the conduct of the Genoese government towards the English and other belligerent powers. These instructions were dated Loano, and signed Ricord. Ricord and the younger Robespierre were then commissioners. Bonaparte went to Genoa and fulfilled his commission. Meantime the revolution of the 9th and 10th Thermidor (27th and 28th of July) took place, Robespierre fell, and his party were proscribed. Albitte, Saliceti, and Laporte, were the new commissioners appointed to the army of Italy. On Bonaparte's return from Genoa to head-quarters he was placed under arrest, his papers were seized, and an order was issued by the commissioners, stating that he had lost their confidence by his

suspicious conduct, and especially by his journey to Genoa; he was suspended from his functions of commander of the artillery, and ordered to proceed to Paris under an escort to appear before the Committee of Public Safety. This order was dated Barcelona, 6th of August, and signed by the three commissioners, and counter-signed by Dumorbion, general-in-chief. Bonaparte remained under arrest for a fortnight. He wrote a pithy remonstrance, which induced the commissioners to make a more precise investigation of the affair, and the result was a counter-order from them, dated Nice, 20th of August, in which they direct him to be "restored provisionally to liberty, and to remain at head-quarters until further instructions from the Committee of Public Safety." Bonaparte however seems to have had no further annoyance on the subject.

After the close of the campaign of 1794, Bonaparte repaired to Marseille, where his family then was. But we find him early in the following year at Paris unsuccessfully soliciting employment. He now took lodgings in the Rue du Mail, near the Place des Victoires, and led a private life. Bourrienne states that he had then some idea of going into the Turkish service, and gives a copy of a project which Bonaparte laid before the war-office, showing the advantages that would result to France by forming a closer connection with the Porte, and sending officers of artillery with a body of gunners to instruct the troops of the Sultan. His letters to his brother Joseph show him at this time to have been suffering greatly from ennui; but on the 10th of August he writes that he is appointed to succeed Carnot in the actual direction of military proceedings, and all traces of depression disappear at once. Meantime a new crisis arrived in the affairs of France. The Convention had framed a new constitution, establishing a council of elders, a council of juniors, and an executive directory of five members. This is known by the name of the Constitution of the year III., and was in fact the third constitution proclaimed since the beginning of the revolution. But the Convention, previously to its own dissolution, passed a resolution to the effect, that at least two-thirds of the members of the two legislative councils should be taken from the members of the actual Convention. This resolution was laid before the primary assemblies of the departments, and every kind of influence, legal and illegal, was used to insure its approbation. The department of Paris however refused, and the sections or districts of that city being assembled, demanded a strict scrutiny of the returns of the votes of the assemblies of the departments, and protested against the attempt of the Convention to perpetuate its own power. They declared they would no longer obey the orders of that body. It was said that the sections were urged or encouraged in their resistance by the royalists, who hoped to derive benefit from it. But it is also well known that the Convention, many of whose members were implicated in the bloodshed and atrocities of the reign of terror, was odious to the Parisians. On the other side the members of the Convention for this very reason were afraid of returning to the rank of private citizens. They determined therefore to risk everything in order to carry their object by force. They had at their disposal about 5000 regular troops in or near Paris, with a considerable quantity of artillery, and a body of volunteers from the suburbs. The command of these forces was given to Barras, a leading member of the Convention, who had mainly contributed to the fall of Robespierre. Barras, who had become acquainted with Bonaparte at the siege of Toulon, proposed to intrust him with the actual direction of the troops for the defence of the Convention. Bonaparte was also known to Carnot and Tallien, and other members of the Convention, as an able artillery officer. The choice being unanimously approved, Bonaparte quickly drew his line of defence round the Tuileries where the Convention was sitting, and along the adjoining quay on the north bank of the Seine. He depended mainly upon his cannon loaded with grape-shot, which he had placed at the head of the various avenues through which the national guards, the force of the citizens, must advance. The national guards had no cannon. They advanced on the morning of the 13th Vendémiaire (4th October 1795), nearly 20,000 in number, in several columns, along the quays and the street of St. Honoré. As soon as they were within musket-shot, they were ordered to disperse in the name of the Convention; they answered by discharging their firelocks, and their fire was returned by discharges of grape-shot and canister, which did great execution among the thick masses, cooped up in narrow streets. They however returned several times to the charge, and attempted but in vain to carry the guns; the fire of the cannon swept away the foremost, and threw the rest into disorder. Foiled at all points, after two hours' fighting, the national guards withdrew in the evening to their respective districts, where they made a stand in some churches and other buildings; but being followed by the troops of the Convention, their disunited resistance was of no avail; they were obliged to surrender, and were disarmed in the night. By the next morning all Paris was subdued. The Convention and its troops did not use their victory with cruelty: except those who were killed in the fight, few of the citizens were put to death, and only two of the leaders were publicly executed, others being sentenced to transportation. General Berruyer, Verdier, and others, served with Bonaparte on the occasion, but to Bonaparte chiefly the merit of the victory was justly attributed. He was appointed by a decree of the Convention second in command of the army of the interior, Barras retaining the nominal chief command himself: and

soon after the new constitution coming into operation, Barras being appointed one of the directors, resigned his military command, and Bonaparte became general of the interior.

About this time Bonaparte became acquainted with Josephine Beauharnois, a native of Martinique, and the widow of the Viscount Alexandre de Beauharnois. This lady had suffered imprisonment, but was liberated at the fall of Robespierre. The Director Barras, an old acquaintance of her husband, frequented her society, and she was also intimate with Madame Tallien, and other persons of note and influence at that time. She was amiable, elegant, and accomplished. Bonaparte saw her often, and became attached to her. She was several years older than he was. He was now rapidly rising in his fortunes, and his marriage with a lady of rank and fashion (for rank, although nominally proscribed, began again to exercise a sort of influence in society), who was upon terms of intimacy with the political leaders of that period, could not but prove advantageous to him. Such was the advice given to him by his friends, and particularly, it is reported, by Talleyrand. Barras, having heard of the projected marriage, approved of it also. Meantime Bonaparte had been applying to Carnot, the then minister at war, for active employment. The directors had at that time turned their attention towards Italy, where the French army, under General Scherer, was making no great progress. After gaining a victory over the Austrians at Loano, in November 1795, the French were still cooped up in the western Riviera of Genoa, between the mountains and the sea, without being able to penetrate into Piedmont; and this was the fourth year of that war carried on at the foot or in the defiles of the Alps and the Liguarian Apennines. Barras and Carnot agreed to give Bonaparte the command of the army of Italy, and the other directors approved of it. This appointment was signed the 23rd February 1796; on the 9th of March following he married Josephine, and a few days after parted from his bride to assume the command of the army of Italy. The stories that have been propagated about his marriage being made the condition of his appointment, and all the innuendos built upon that assumption, appear to have no foundation. He was appointed to the army of Italy because he was thought capable of succeeding, because he was already acquainted with the ground, perhaps also it was thought that his Italian origin might afford him facilities with the people of that country; and lastly, because the directors were not sorry to have a general at the head of one of their armies who was a man of their own choice, and seemingly dependent upon their favour, one whose growing reputation might serve as a counterpoise to the widely-extended popularity of Moreau, Pichegru, Hoche, and the other generals of the first years of the Republic.

The army at Bonaparte's disposal consisted of about 55,000 men, of whom only two-thirds were fit for the field. It was in a wretched state as to clothing, and ill supplied with provisions; the pay of the soldiers was in arrears, and the army was almost without horses. The discipline also was very relaxed. The Piedmontese and Austrian combined army was commanded by Beaulieu, a gallant veteran, past seventy years of age. It was posted along the ridge of the Apennines, at the foot of which the French were advancing. Bonaparte, in his despatches to the Directory, stated the allied army at 75,000 men, and his own effective troops at 35,000. On the 27th of March he arrived at Nice, and immediately moving his head-quarters to Albenga, pushed his advanced guard as far as Voltri, near Genoa. Beaulieu, with the Austrians' left, attacked Voltri and drove the French back; he at the same time ordered D'Argenteau, who commanded his centre, to descend by Montenotte upon Savona, and thus take the French in flank. On this road the French colonel, Rampon, was posted with 1500 men on the heights of Monteleone. He was repeatedly attacked on the 10th of April by D'Argenteau, but stood firm, and all the assaults of the Austrians could not dislodge him from the redoubt. This gave time to Bonaparte to collect his forces, and to march round in the night by Altare to the rear of D'Argenteau, whom he attacked on every side on the following day, and obliged to make a disorderly retreat beyond Montenotte, after losing the best part of his division, before Beaulieu on the left, or Colli, who commanded the Piedmontese at Ceva on the right, could come to his support. Bonaparte had now pushed into the valley of the Bormida, between the two wings of the allied army. Beaulieu and Colli hastened to repair this disaster, and re-establish their communications by Millesimo and Dego. On the 13th of April, Bonaparte sent Augereau to attack Millesimo, which he carried; but the Austrian general, Provera, with 2000 men, threw himself into the old castle of Cosarria, on the summit of a hill, where he withstood all the assaults of the French for that day. Two French general officers were killed in leading the attack, and another, Joubert, was severely wounded. On the 14th the whole of the two armies were engaged. Colli, after an unsuccessful endeavour to relieve Provera, was driven back towards Ceva; while Massena attacked Beaulieu at Dego, and forced him to retire towards Acqui. Provera, without provisions or water, was obliged to surrender. The Piedmontese were now completely separated from the Austrians, which was the great object of Bonaparte's movements. The French remained for the night at Magliani, near Dego. All at once, early in the morning of the 15th, an Austrian division 5000 strong, under General Wukassowich, coming from Voltri by Sassello, and expecting to find their countrymen at Dego, were astonished to find the French there, who were

equally surprised at seeing the Austrians, whom they had driven far away in their front, re-appear in their rear. Wukassowich did not hesitate; he charged into the village of Magliani and took it. Massena hurried to the spot to drive away the Austrians; Laharpe came also with reinforcements, but they could not succeed, until Bonaparte himself came and led a fresh charge, and at last obliged Wukassowich to retire. This was called the battle of Deگو, but more properly of Magliani, the last of a series of combats which opened to Bonaparte the road into the plains of North Italy.

Beaulieu retired to the Po with the intention of defending the Milanese territory, leaving Colli and the Piedmontese to their fate. Bonaparte turned against Colli, drove him from Ceva, and afterwards from Mondovi, and beyond Cherasco. Colli withdrew to Carignano, near Turin. The provinces of Piedmont, south of the Po, were now open to the French. The king, Victor Amadeus III., became alarmed, and asked for a truce, which Bonaparte granted on condition that the fortresses of Cuneo and Tortona should be placed in his hands. A peace was afterwards made between the king and the Directory, by which the other Piedmontese fortresses and all the passes of the Alps were given up to the French, and Piedmont in fact was surrendered at discretion. This defection of the king of Sardinia ensured the success of the French army.

Being now safe with regard to Piedmont, Bonaparte advanced to encounter Beaulieu, who had posted himself on the left bank of the Po, opposite to Valenza, his troops extending eastward as far as Pavia. Bonaparte made a feint of crossing the river at Valenza, while he dispatched a body of cavalry along the right bank into the state of Parma, where they met with no enemy, seized some boats near Piacenza, crossed over to the Milanese side, and dispersed some Austrian picquets who were posted there. Bonaparte, quickly following with a chosen body of infantry, crossed the river nearly thirty miles below Pavia. Beaulieu was now obliged to fall back upon the Adda after a sharp engagement at Fombio, on the road from Piacenza to Milan. Milan was evacuated by the Austrians with the exception of the castle. Bonaparte resolved to dislodge Beaulieu from his new position, and accordingly he attacked the bridge of Lodi, on the Adda, which the Austrians defended with a numerous artillery. He carried it by the daring bravery of his grenadiers and the bad dispositions of the Austrian commander, who had not placed his infantry near enough to support his guns. Beaulieu attempted to defend the line of the Mincio, but he had only time to throw a garrison into Mantua, and then withdraw behind the Adige into the Tyrol. Bonaparte took possession of Milan and of all Lombardy, with the exception of Mantua, which he blockaded. Thus ended the first Italian campaign of 1796.

At the first entrance of the French the people of Lombardy showed a quiet, passive spirit. There was no enthusiasm among them either for or against the invaders. The Milanese looked upon the French invasion rather with wonder than either satisfaction or hostility. Ideas of a republic existed only in a few speculative heads; but there were many who sided with the French, in order to share their superiority and advantages as conquerors. The people of the towns behaved hospitably to the French troops, who on their side maintained a stricter discipline than they had done in passing through Piedmont. But the army was to be supported, equipped, and paid by the conquered countries: such was the system of the Directory and of Bonaparte. The Directory, besides, wished to receive a share of the golden harvest to recruit its own finances, and its orders were to draw money from all the Italian states. Bonaparte accordingly put upon Lombardy a contribution of twenty millions of francs, which fell chiefly on the rich proprietors and the ecclesiastical bodies. Meantime he authorised the commissaries to seize provisions, stores, horses, and other things required, giving cheques to be paid out of the contributions. This was done in the towns with a certain regularity, but in the country places, away from the eyes of the general, the commissaries and soldiers often seized whatever they liked without any acknowledgment. The owners who remonstrated were insulted or ill-used; and many of the Italians calling themselves republicans assisted the French in the work of plunder, of which they took their share. All property belonging, or supposed to belong, to the archduke and the late government, was sequestered. But an act which exasperated the Milanese was the violation of the Monte di Piet  of Milan, a place of deposit for plate, jewels, &c., which were either left for security, or as pledges for money lent upon them. The Monte was broken into by orders from Bonaparte and Saliceti, who accompanied the army as commissioner of the Directory. They seized upon this deposit of private property, took away the most valuable objects, and sent them to Genoa to be at the disposal of the Directory. Many of the smaller articles belonged to poor people; many were placed there by the parents of young girls as a dowry when they came to be married. Although these smaller objects were not intended by Bonaparte to be detained, yet in the disorder of the seizure many of them disappeared, and a report spread through Milan that all had been seized. The same thing had been practiced at Piacenza when Bonaparte and Saliceti passed through it; and afterwards the plunder, either partial or entire, of the Monte di Piet , became a common practice of the French army in all the towns they entered.

These excesses led to insurrections in different parts of the country, in which French soldiers were killed by the peasantry. The inhabit-

ants of Binasco, a large village between Milan and Pavia, rose and killed a number of the French and their Italian partisans. The country people ran towards Pavia, and were joined by the lower classes of that town, who had been irritated at the hoisting of a tree of liberty in one of their squares, where an equestrian statue of an emperor had been thrown down by the republicans. On the 23rd of May Pavia was in open insurrection. The French soldiers took refuge in the castle; those scattered about the town were seized and ill-treated; some were killed, but most had their lives saved by the interference of the municipal magistrates and other respectable people. General Haquin, who happened to pass through on his way to Milan, was attacked by the frantic populace and wounded, but the magistrates, at their own risk, saved his life. In all this tumult the country people were the chief actors, by the acknowledgment of Haquin himself. Bonaparte, alarmed by this movement in his rear, and at the possibility of its spreading, determined to make an example, and "strike terror into the people," a sentence which was afterwards frequently carried into effect in the progress of his arms. A strong body of French troops marched on Binasco, killed or dispersed the inhabitants, burned the place, and then marched against Pavia, which being a walled town was capable of making some defence. Bonaparte sent the archbishop of Milan, who, from the balcony of the town-house, addressed the multitude, and exhorted them to lay down their arms and quietly to disperse, explaining to them the futility of their attempts at resistance. The ignorant and deluded people would not listen to his advice; the French soon forced one of the gates, and the cavalry entering the town, cut down all they met in the streets. The country people ran away by the other gates, and left the unfortunate city to the conqueror. Bonaparte then deliberately ordered Pavia to be given up to plunder for twenty-four hours, as though Pavia had been a fortified town taken by storm, while it was well known that the great majority of the inhabitants had taken no part in the insurrection, and had made no resistance to the French. This order was publicly signified to the inhabitants and the troops, and during the rest of that day, 25th of May, and the whole of that night, the soldiers rioted in plunder, debauchery, and every sort of violence within the houses of the unfortunate Pavese. Next morning (the 26th) at twelve o'clock the pillage ceased, but Pavia for a long time felt the effects of this cruel treatment. The municipal magistrates were sent for a time as hostages to France. Four of the leaders of the insurrection were publicly executed, and about one hundred had been killed on the first irruption of the French into the city. The university and the houses of some of the professors, Spallanzani's in particular, were exempted from pillage.

Bonaparte imposed on the Duke of Parma, who had not yet acknowledged the French Republic, a sort of peace, on condition of his paying to France a million and a half of francs, besides giving provisions and clothes for the army, and twenty of his best paintings to be sent to Paris. The Duke of Modena, alarmed for his own safety, fled to Venice with the greater part of his treasures, leaving a regency at Modena, who sent to Bonaparte to sue for peace. Modena had committed no hostilities against France, but the duke was allied to the house of Austria by the marriage of his daughter with one of the archdukes: he was also considered as a feudatory of the Emperor of Germany. He was required to pay six millions of francs in cash, besides two millions more in provisions, cattle, horses, carts, &c., and fifteen of his choice paintings; but as he was not quick enough in paying the whole of the money his duchy was taken from him a few months after. The Directory wanted cash, and Bonaparte says that he sent during his first Italian campaigns fifty millions of francs from Italy to Paris.

The Grand Duke of Tuscany, although brother to the Emperor of Austria, was an independent sovereign; he had long acknowledged the French Republic, and kept an ambassador at Paris; but the Directory ordered Bonaparte to seize Leghorn, and confiscate the property of the English, Austrians, Portuguese, and other enemies of the republic. Bonaparte executed the order, took Leghorn without any opposition, put a garrison in it, seized the English, Portuguese, and other goods in the warehouses, which were sold by auction, and insisted upon the native merchants delivering up all the property in their hands belonging to the enemies of the French republic. The Leghornese merchants, to avoid this odious act, agreed to pay five millions of francs, as a ransom for the whole. The pope's turn came next. That sovereign was really in a state of hostility towards the French republic, which he had never acknowledged, in consequence of the abolition of the Catholic church in France. On the 18th of June the French entered Bologna, whence Bonaparte ordered away the papal authorities, and established a municipal government. He did the same at Ferrara; and at the same time laid heavy contributions on both those provinces. The Monte di Piet  of Bologna shared the same fate as that of Milan, only the deposits or pledges not exceeding 200 livres each (8*l.* sterling), were ordered to be returned to the owners. The people of Lugo, a town between Imola and Ravenna, rose against the invaders. Augereau was sent against Lugo; after three hours' fight, in which 1000 of the natives and 200 French soldiers fell, Lugo was taken, given up to plunder, and partly burnt; the women and children were spared. Proclamations were then issued that every town or village that took up arms against the French should be burnt, and

that every individual not a regular soldier taken with arms in his hands should be put to death.

The court of Rome was now in great alarm, and Pius VI. sent envoys to Bonaparte to sue for terms. An armistice was signed on the 23rd of June, preparatory to a definite treaty of peace between the pope and the Directory. The conditions of the armistice were, that the pope should give up the provinces of Ferrara and Bologna, and the citadel of Ancona, should close his ports against the enemies of France, should pay fifteen millions of livres in gold or silver, and six millions in goods, provisions, horses, cattle, &c., besides surrendering a certain number of paintings, statues, vases, and 500 manuscripts, at the choice of the commissaries sent by the Directory. This new species of spoliation, unprecedented in modern history, was brought into a regular system, and carried on in all countries conquered by the French armies until the fall of Napoleon. Some of the scientific and learned men of France, among whom were Monge and Berthollet, went in succession to Parma, Milan, Bologna, Rome, and afterwards to Venice and Naples, to take an inventory of the works of art, from among which they chose the best, and sent them to Paris.

While these things were going on south of the Po, the court of Vienna was preparing a fresh army for the recovery of Lombardy. Marshal Wurmser, a veteran officer of considerable reputation, was detached with 30,000 men from the Austrian army of the Rhine, and marched into the Tyrol, where he collected the remains of Beaulieu's troops and the Tyrolean levies, forming altogether an army of between 50,000 and 60,000 men. Bonaparte's army was not quite 50,000, of which part was stationed round Mantua to blockade that fortress, which was garrisoned by 8000 Austrians. Towards the end of July, Wurmser, with the main body of his troops, advanced from Trento by the eastern shore of the Lake of Garda, towards Verona, while another corps under Quosnadovich marched by the western shore to Salò and Brescia, from which places they drove the French away. Bonaparte, after some hesitation, hastily raised the siege of Mantua, leaving his battering train, and collected the best part of his forces to meet Quosnadovich as the weaker of the two generals. He attacked him at Lonato, drove him back into the mountains, and then turned quickly to the right to face Wurmser, who having passed Verona, had entered Mantua, destroyed the French entrenchments, and was now advancing by Castiglione, from whence he had driven away the French under General Valette. This was a critical moment in Bonaparte's career, and it is said he was in doubt whether to fall back on the Po, but was dissuaded by Augereau. On the 3rd of August the French retook Castiglione after an obstinate combat. Wurmser however took up a position near the town, where he was attacked again on the 5th, and completely defeated, with the loss of his cannon and several thousand men. Wurmser withdrew beyond the Mincio, and afterwards up the Adige into the Tyrol, followed by the French, who attacked and defeated an Austrian division at Roveredo on the 4th of September, and entered the city of Trento. Wurmser then suddenly crossed the mountains that divide the valley of the Adige from that of the Brenta, and entered Bassano, where he was joined by some reinforcements from Carinthia, intending to march down again towards Verona and Mantua. But Bonaparte followed him quickly by the same road, and attacked and routed him at Bassano. Wurmser had now hardly 16,000 men left, and his artillery being lost, and his retreat cut off, he took the bold resolution to cut his way to Mantua, and shut himself up in that fortress. With a rapidity of movements then unusual in an Austrian army, he avoided the French divisions moving against him from various quarters, surprised the bridge of Legnago, passed the Adige, marched day and night followed by Bonaparte, beat a French division at Corea, cut down several other bodies who attempted to oppose him, and at last reached Mantua on the 14th of September. Thus, in the course of six weeks, a second Austrian army was destroyed in detail. The rapidity of movements of the French divisions, and the intricacy of their manœuvres, can only be appreciated by an attentive examination of the map of the country.

A third general and a third army were sent by Austria into Italy in the autumn of the same year. Marshal Alvinci, an officer of some reputation, advanced from Carinthia by way of Belluno with 30,000 men, while General Davidowich with 20,000 descended from the Tyrol by the valley of the Adige. They were to meet between Peschiera and Verona, and proceed to relieve Wurmser at Mantua. Bonaparte, who was determined to attack Alvinci before he could form his junction, gave him battle at Le Nove, near Bassano, 6th of November; but in spite of all the efforts of Massena and Augereau he could not break the Austrian line, and next day he retreated by Vicenza to Verona. On the same day Vaubois, whom Bonaparte had opposed to Davidowich, was driven away from Trento and Roveredo with great loss, and obliged to fall back to Rivoli and La Corona. Had Davidowich followed up his success he might have pushed on to the plains on the right bank of the Adige near Verona, and have placed Bonaparte in a very critical position, with Alvinci in front, Davidowich on his left flank, and Mantua in his rear. Instead of this, Davidowich stayed ten days at Roveredo. Alvinci meantime had advanced by Vicenza and Villanova to the heights of Caldiero facing Verona, where he waited for Davidowich's appearance. Bonaparte attempted on the 12th of November to dislodge Alvinci from Caldiero, but after considerable loss he was obliged to

withdraw his troops again into Verona. He wrote next day a desponding letter to Paris, in which he recapitulates his losses, his best officers killed or wounded, his soldiers exhausted by fatigue, and himself in danger of being surrounded. He however determined to make a last effort to dislodge Alvinci by turning his position. With two divisions under Massena and Augereau he marched quietly out of Verona in the night of the 14th, followed the right bank of the Adige, crossed that river at Ronco early next morning, and moved quickly by a cross road leading through a marshy country towards Villanova in the rear of Alvinci, where the Austrian baggage, stores, &c., were stationed. The Alpone, a mountain stream, ran between the French and Villanova. The French attempted to pass it by the bridge of Aroole, but found it defended; and this led to the celebrated battle of that name, which lasted three days, and which was unquestionably the hardest fought in all those Italian campaigns. On the 17th Bonaparte succeeded in turning the position of Aroole, when Alvinci thought it prudent to retire upon Vicenza and Bassano, where the Austrians took up their winter quarters. Bonaparte wrote to Carnot after the action of the third day:—"Never was a field of battle so obstinately contested; our enemies were numerous and determined. I have hardly any general officers left." They were almost all killed, wounded, or prisoners.

On the same day that Bonaparte obliged Alvinci to retire from the Adige, Davidowich, rousing himself from his inconceivable inaction, pushed down by Ala on the Adige, drove Vaubois before him, and entered the plains between Peschiera and Verona. But it was now too late: Bonaparte turned against him, and obliged him quickly to retrace his steps to Ala and Roveredo. Thus ended the third campaign of the year 1796.

Bonaparte had now some leisure to turn his attention to the internal affairs of the conquered countries. The Milanese in general remained passive, but the people of Modena and Bologna seemed anxious to constitute themselves into an independent state. Bonaparte himself had not directly encouraged such manifestations, but his subalterns had; and indeed the revolt of Reggio, which was the first Italian city that proclaimed its independence, was begun by a party of Corsican pontoniers, who were passing through on their way to the army. (Count Paradisi, 'Lettera a Carlo Botta.') Bonaparte allowed Modena, Reggio, Bologna, and Ferrara to form themselves into a republic, which was called Cispadana. As for the Milanese, the Directory wrote that it was not yet certain whether they should not be obliged to restore that country to the emperor at the peace. Bonaparte has clearly stated his policy at that time towards the North Italians in a letter to the Directory on the 28th of December 1796:—"There are in Lombardy (Milanese) three parties: 1st, that which is subservient to France and follows our directions; 2nd, that which aims at liberty and a national government, and that with some degree of impatience; 3rd, the party friendly to Austria and hostile to us. I support the first, restrain the second, and put down the third. As for the states south of the Po (Modena, Bologna, &c.), there are also three parties: 1st, the friends of the old governments; 2nd, the partisans of a free constitution, though somewhat aristocratical; 3rd, the partisans of pure democracy. I endeavour to put down the first; I support the second because it is the party of the great proprietors and of the clergy, who exercise the greatest influence over the masses of the people, whom it is our interest to win over to us; I restrain the third, which is composed chiefly of young men, of writers, and of people who, as in France and everywhere else, love liberty merely for the sake of revolution."

The pope found that he could not agree to a peace with the Directory, whose conditions were too hard, and consequently, after paying five millions of livres, he stopped all further remittances. Bonaparte, after disapproving in his despatches the abruptness of the Directory, and saying that it was impolitic to make too many enemies at once while Austria was still in the field, repaired to Bologna in January 1797 to threaten the Roman states, when he heard that Alvinci was preparing to move down again upon the Adige. The Austrian marshal had received reinforcements which raised his army again to 50,000 men. He marched them in several columns, threatening several points at once of the French line on the Adige, and Bonaparte for awhile was perplexed as to where the principal attack would be made. He learnt however through a spy that the main body of Alvinci was moving down from the Tyrol along the right bank of the Adige upon Rivoli, where Joubert was posted. On the 13th Bonaparte hurried from Verona with Massena's division to Rivoli, and on the 14th the battle of Rivoli took place. Alvinci, calculating upon having before him Joubert's corps only, had extended his line with the view of surrounding him. Twice was Rivoli carried by the Austrians, and twice retaken by the French. Massena, and afterwards Rey, with his division, coming to Joubert's assistance, carried the day. Alvinci's scattered divisions were routed in detail with immense loss. Another Austrian division under General Provera had meantime forced the passage of the Adige near Legnago, and arrived outside of Mantua, when Provera attacked the entrenchments of the besiegers, while Wurmser made a sortie with part of the garrison. Bonaparte hurried with Massena's division from Rivoli, and arrived just in time to prevent the junction of Provera and Wurmser. Provera, attacked on all sides, was obliged to surrender with his division of 5000 men, and Wurmser was driven back into the fortress. Alvinci, with the remainder of his army, was at the same time driven back to

Belluno at the foot of the Noric Alps. Soon after, Wurmser being reduced to extremities for want of provisions, the garrison having exhausted their last supply of horse-flesh, and being much reduced by disease, offered to capitulate. Bonaparte granted him honourable conditions, and behaved to the old marshal with the considerate regard due to his age and his bravery.

During these hard-fought campaigns the condition of the unfortunate inhabitants of North Italy, and especially of the Venetian provinces, where the seat of war lay, was miserable in the extreme: both armies treated them as enemies. The Austrian soldiers, especially in their hurried retreats, when discipline became relaxed, plundered and killed those who resisted. The French plundered, violated the women, and committed murder too in the villages and scattered habitations; the towns were laid under a more regular system of plunder by the French commissaries, by requisitions of provisions, clothes, horses and carts, and forced contributions of money. At the same time the greater part of these enormous exactions contributed little to the comforts of the soldiers, but went to enrich commissaries, purveyors, contractors, and all the predatory crew that follows an invading army. Bonaparte, although he resorted to the system of forced contributions, was indignant at the prodigal waste of the resources thus extorted from the natives, while his soldiers were in a state of utter destitution. "Four millions of English goods," he wrote to the Directory in October and November 1796 from Milan, "have been seized at Leghorn, the Duke of Modena has paid two millions more, Ferrara and Bologna have made large payments, and yet the soldiers are without shoes, in want of clothes, the chests without money, the sick in the hospitals sleeping on the ground. . . . The town of Cremona has given 50,000 ells of linen cloth for the hospitals, and the commissaries, agents, &c., have sold it: they sell everything. One has sold even a chest of bark sent us from Spain; others have sold the mattresses furnished for the hospitals. I am continually arresting some of them and sending them before the military courts, but they bribe the judges; it is a complete fair: everything is sold. An employé, charged with having levied for his own profit a contribution of 18,000 francs on the town of Salò in the Venetian states, has been condemned only to two months' imprisonment;" and he goes on naming the different commissaries, contractors, &c., concluding that, with very few exceptions, "they are all thieves." He recommends the Directory to dismiss them and replace them by more honest men, or at least more discreet ones. "Had I a month's time to attend to these matters, there is hardly one of these fellows but I could have shot; but I am obliged to set off to-morrow for the army, which is a great matter of rejoicing for the thieves, whom I have just had time to notice by casting my eyes on the accounts." The system of plunder however went on during the whole of these and the following campaigns until Bonaparte became First Consul, when he found means to repress in some degree the odious abuse; still the commissariat continued, even under the empire, to be the worst-administered department of the French armies.

Bonaparte being now secure from the Austrians in the north turned against the pope, who had refused the heavy terms imposed upon him by the Directory. The papal troops, to the number of about 8000, were posted along the river Senio between Imola and Faenza, but after a short resistance they gave way before the French, who immediately occupied Ancona and the Marches. Bonaparte advanced to Tolentino, where he received deputies from Pius VI., who sued for peace. The conditions dictated were fifteen millions of livres, part in cash, part in diamonds, within one month, and as many again within two months, besides horses, cattle, &c.; the possession of the town of Ancona till the general peace; and an additional number of paintings, statues, and manuscripts. On these terms the pope was allowed to remain at Rome a little longer.

Austria had meantime assembled a new army on the frontiers of Italy, and the command was given to the Archduke Charles, who had acquired a military reputation in the campaigns of the Rhine. But this fourth Austrian army no longer consisted of veteran regiments like those that had fought under Beaulieu, Wurmser, and Alvinzi; it was made up chiefly of recruits joined with the remnants of those troops that had survived the disasters of the former campaigns. Bonaparte, on the contrary, had an army now superior in numbers to that of the Austrians, flushed with success, and reinforced by a corps of 20,000 men from the Rhine under the command of General Bernadotte.

Bonaparte attacked the archduke on the river Tagliamento, the pass of which he forced; he then pushed on Massena, who forced the pass of La Ponteba in the Noric Alps, which was badly defended by the Austrian General Ocksay. The archduke made a stout resistance at Tarvis, where he fought in person; but was at last obliged to retire, which he did slowly and in an orderly manner, being now intent only on gaining time to receive reinforcements and to defend the road to Vienna. Bonaparte's object was to advance rapidly upon the capital of Austria and to frighten the emperor into a peace. He was not himself very secure concerning his rear, as he could not trust in the neutrality of Venice which he had himself openly violated. He was also informed that an Austrian corps in the Tyrol under General Laudon, after driving back the French opposed to it, had advanced again by the valley of the Adige towards Lombardy. Had this movement been supported by a rising in the Venetian territory,

Bonaparte's communications with Italy would have been cut off. He therefore, dissembling his anxiety, wrote to the archduke from Klagenfurth a flattering letter, in which, after calling him the Saviour of Germany, he appealed to his feelings in favour of humanity at large. To this note the archduke returned a civil answer, saying he had no commission for treating of peace, but that he had written to Vienna to inform the emperor of his (Bonaparte's) overtures. Meantime Bonaparte continued to advance towards Vienna and the archduke to retire before him, without any regular engagement between them. It would appear that the archduke's advice was to draw the enemy farther and farther into the interior of the hereditary states, and then make a bold stand under the walls of Vienna, while fresh troops would have time to come from Hungary and from the Rhine, and the whole population would rise in the rear of the French army and place Bonaparte in a desperate situation. But there was a party at the court of Vienna anxious for peace. Bonaparte had now arrived at Judenburg in Upper Styria, about eight days' march from Vienna. The citizens of that capital, who had not seen an enemy under their walls for more than a century, were greatly alarmed. The cabinet of Vienna resolved for peace, and Generals Bellegarde and Meerfeldt were sent to Bonaparte's head-quarters to arrange the preliminaries. After a suspension of arms was agreed upon on the 7th April 1797, the negotiations began at the village of Leoben, and the preliminaries of the peace were signed by Bonaparte on the 18th. Of the conditions of this convention some articles only were made known at the time, such as the cession by the emperor of the Austrian Netherlands and of Lombardy. The secret articles were that Austria should have a compensation for the above losses out of the territory of neutral Venice. This is a transaction which has been justly stigmatised as disgraceful to all parties concerned in it, in spite of the palliation attempted by Bonaparte's advocates, who pretend that the Venetian senate had first violated their neutrality, and that they had organised an insurrection in the rear of the French army while Bonaparte was engaged with the Archduke Charles in Carinthia. A careful attention to dates is sufficient to refute every attempt to palliate the dishonesty of the French Directory and of Bonaparte in their conduct towards Venice. In 1796 Bonaparte had seized upon the castles of Bergamo, Brescia, Verona, and other fortified places of the Venetian state, he made the country support his army, and meantime he favoured the disaffected against the senate, who at last, assisted by the Lombards and Poles in his army, revolted at Bergamo and Brescia and drove away the Venetian authorities. When the senate armed to put down the insurrection, the French officers stationed on the Venetian territory obstructed its measures, and accused it of arming against the French. They dispersed by force the militia who assembled in obedience to the senate. At last the conduct of the French having driven the people of Verona to desperation, a dreadful insurrection broke out in April 1797, which ended by Verona being plundered by the French. Bonaparte now insisted upon a total change in the Venetian government, and French troops being surreptitiously introduced into Venice, the Doge and all authorities resigned.

A provisional government was then formed, but meantime Bonaparte bartered away Venice to Austria, and thus settled the account with both aristocrats and democrats. By the definitive treaty of peace signed at Campoformio near Udine on the 17th October 1797, the emperor ceded to France the Netherlands and the left bank of the Rhine with the city of Mainz; he acknowledged the independence of the Milanese and Mantuan states under the name of the Cisalpine republic; and he consented that the French republic should have the Ionian Islands and the Venetian possessions in Albania. The French republic on its part consented (such was the word) that the emperor should have Venice and its territory as far as the Adige, with Istria and Dalmatia. The provinces between the Adige and the Adda were to be incorporated with the Cisalpine republic. The emperor was also to have an increase of territory at the expense of the Elector of Bavaria, and the Duke of Modena was to have the Brigau.

All this time the democrats of Venice were still thinking of a republic and independence: they had planted, with great solemnity, the tree of liberty in the square of St. Mark, and the French garrison graced the show. At last the time approached when the French were to evacuate Venice. Bonaparte wrote to Villetard, the French secretary of legation, a young enthusiastic republican, who had been a main instrument of the Venetian revolution, that all the Venetian democrats who chose to emigrate would find a refuge at Milan, and that the naval and military stores and other objects belonging to the late Venetian government might be sold to make a fund for their support. Villetard communicated this last proposal to the municipal council, but it was at once rejected; "They had not accepted," they said, "a brief authority for the sake of concurring in the spoliation of their country. They had been too confiding, it was true, but they would not prove themselves guilty also;" and they gave in their resignation. Villetard, sincere in his principles, wrote a strong letter to Bonaparte, in which he made an affecting picture of the despair of these men, who had trusted in him and now found themselves cruelly deceived. This drew from Bonaparte an answer which has been often quoted for its unfeeling sneering tone. Serrurier was ordered by Bonaparte to complete the sacrifice of Venice. Having emptied the arsenal, and the stores of biscuit and salt, having sent to sea the ships

of war, sunk those that were not fit for sea, and stripped the famous state barge called Bucintoro of all its ornaments and gold, he departed with the French garrison, and the next day the Austrians entered Venice. The Venetian senator Pesaro came as imperial commissioner to administer the oaths. The late Doge Manin while tendering his oath fell into a swoon, and died soon after. Thus ended the republic of Venice, after an existence of nearly fourteen centuries. With it the only naval power of Italy became extinct, and Italy lost the only colonies which she still possessed.

During the several months that the negotiations for the peace lasted, Bonaparte had time to effect other changes in Italy. He began with Genoa. That republic ever since the time of Andrea Doria had been governed by patricians, but the patrician order was not exclusive as at Venice, and new families were admitted into it from time to time. A club of democrats secretly encouraged by Saliceti, Faipoult, and other agents of the French Directory, conspired against the senate, and effected an insurrection. The lower classes of the people however rose in arms against the democrats, and routed them; several Frenchmen were also killed in the affray. Bonaparte immediately wrote threatening letters to demand satisfaction, the arrest of several patricians, the liberty of the prisoners, the disarming of the people, and a change in the constitution of the republic. All this was done; a sum of four millions of livres was paid by the principal nobles to the Directory, the French placed a garrison within Genoa, and a constitution modelled upon that then existing in France, with councils of elders and juniors, a Directory, &c., was put in operation. The people of the neighbouring valleys, who did not relish these novelties, revolted, but were put down by the French troops; and many of the prisoners were tried by court-martial and shot.

The king of Sardinia, by a treaty with the French Directory, remained for the present in possession of Piedmont. Insurrections broke out in several towns of Piedmont, which Bonaparte however openly discountenanced, professing, at the same time, a deep regard for the House of Savoy. His letters to the Marquis of St. Marsan, minister of the king, were made public, and the insurgents having thus lost all hope of support from him, were easily subdued by the king's troops, and many of them were executed. He however thought proper to consolidate the Cisalpine republic, and to give it a constitution after the model of France. The installation of the new authorities took place at Milan on the 9th of July with great solemnity. Bonaparte appointed the members of the legislative committees, of the Directory, the ministers, the magistrates, &c. His choice was generally good; it fell mostly upon men of steady character, attached to order, men of property, men of science, or men who had distinguished themselves in their respective professions. The republic consisted of the Milanese and Mantuan territories, of that part of the Venetian territory situated between the Adda and the Adige, of Modena, Massa, and Carrara, and of the papal provinces of Bologna, Ferrara, Ravenna, Faenza, and Rimini, as far as the Rubicon. Tuscany, Parma, Rome and Naples remained under their old princes; all however, with the exception of Naples, in complete subjection to France.

In all these important transactions, Bonaparte acted almost as if he were uncontrolled by any authority at home, and often at variance with the suggestions of the French Directory, though he afterwards obtained its sanction to all that he did. He was in fact the umpire of Italy. He at the same time supported the power of the Directory in France by offers of his services, and addresses from his army, and he sent Augereau to Paris, who sided with the Directory in the affair of the 18th Fructidor. Bonaparte however evinced on several occasions but an indifferent opinion of the Directory, calling it a government of lawyers and rhetoricians, unfit to rule over a great nation. He flatly refused, after his first Italian victories, to divide his command with Kellerman; he strongly censured the policy of the Directory with the Italian powers; he signed the preliminaries of Leoben, and withdrew his army from the hereditary states, without waiting for the Directory's ratification. He insisted upon concluding peace with the emperor, and threatened to give in his resignation if not allowed to do so; he made that peace on his own conditions, though some of those were contrary to the wishes expressed by the Directory, and in the end the Directory approved of all he had done.

After the treaty of Campoformio, Bonaparte was appointed minister plenipotentiary of the French republic at the congress of Rastadt for the settlement of the questions concerning the German empire. He now took leave of Italy and of his fine army, which had become enthusiastically attached to him. His personal conduct while in Italy had been marked by frugality, regularity, and temperance. There is no evidence of his having shown himself personally fond of money; he had exacted millions, but it was to satisfy the craving of the Directory, and partly to support his army and to reward his friends.

On his way to Rastadt, Bonaparte went through Switzerland, where he showed a haughty hostile bearing towards Bern, and the other aristocratic republics of that country. He did not stop long at Rastadt, but proceeded to Paris, where he arrived in December 1797. He was received with the greatest honour by the Directory: splendid public festivals were given to the conqueror of Italy, and writers, poets, and artists vied with each other in celebrating his triumphs. Great as his successes were, flattery contrived to outstrip truth. He

however appeared distant and reserved. He was appointed general-in-chief of the 'Army of England,' but after a rapid inspection of the French coasts and of the troops stationed near them he returned to Paris. The expedition of Egypt was then secretly contemplated by the Directory. A project concerning that country was found in the archives among the papers of the Duke de Choiseul, minister of Louis XV., and it was revived by the ministers of the Directory. The Directory on their part were not sorry to remove from France a man whose presence in Paris gave them uneasiness; and Bonaparte warmly approved of a plan which opened to his view the prospect of an independent command, while visions of an eastern empire floated before his mind. He had in his composition something of a vague kind of enthusiasm of the imagination for remote countries and high-sounding names. At the same time he saw there was nothing at present in France to satisfy his excited ambition, for he seems hardly to have thought as yet of the possibility of his attaining supreme power. He was still faithful to the republic, though he foresaw that its government must undergo further changes.

The expedition having been got ready, partly with the treasures that the French seized at Bern in their invasion of Switzerland in March 1798, in which Bonaparte took no active part, Bonaparte repaired to Toulon, whence he sailed on board the admiral's ship 'L'Orient' in the night of the 19th of May, while Nelson's blockading fleet had been forced by violent winds to remove from that coast. The destination of the French fleet was kept a profound secret: 30,000 men, chiefly from the army of Italy, composed the land force.

The fleet arrived before Malta on the 9th of June. The Order of St. John of Jerusalem, as it was called, had never acknowledged the French republic, and was therefore considered at war with it. The grand-master Hompesch, a weak old man, made no preparations against an attack; yet the fortifications of La Valette were such that they might have baffled the whole power of the French fleet and army, even supposing that Bonaparte could have spared time for the siege. But he was extremely anxious to pursue his way to Egypt, expecting every moment to be overtaken by Nelson and the English fleet, who having received information of his sailing from Toulon were eagerly looking out for him. Every moment was therefore of value to Bonaparte. With his usual boldness, he summoned the grand-master to surrender on the 11th, and the grand-master obeyed the summons. It is well known that there were traitors among the knights in high offices, who forced the grand-master to capitulate. As the French general and his staff passed through the triple line of fortifications, General Caffarelli observed to Bonaparte that "it was lucky there was some one within to open the massive gates to them, for had the place been altogether empty they would have found it rather difficult to get into it." After the usual spoliation of the churches, the alberghi, and other establishments of the order, the gold and silver of which were melted into bars and taken on board the French fleet, Bonaparte left a garrison at Malta under General Vaubois, and embarked on the 19th for Egypt. As the French fleet sailed by the island of Candia it passed near the English fleet, which having been at Alexandria, and hearing nothing of the French there, was sailing back towards Syracuse. Denon says the English were seen by some of the French ships on the 26th, but the French were not seen by Nelson's fleet, owing to the hazy weather. On the 29th of June Bonaparte came in sight of Alexandria, and landed a few miles from that city without any opposition. France was at peace with the Porte; its chargé d'affaires (Ruffin) was at Constantinople, and the Turkish ambassador (Ali-Effendi) was at Paris: the Turks of Egypt therefore did not expect the invasion. When they saw the French marching towards Alexandria the garrison shut the gates and prepared for defence. The town however was easily taken; when Bonaparte issued a proclamation to the inhabitants of Egypt, in which he told them that he came as a friend of the Sultan to deliver them from the oppression of the Mamelukes, and that he and his soldiers respected God, the Prophet, and the Koran. On the 7th of July the army moved on towards Cairo. They were much annoyed on the road by parties of Mamelukes and Arabs, who watched for any stragglers that fell out of the ranks, and immediately cut them down, without the French being able to check them, as they had no cavalry. At last, after a harassing march, the French on the 21st arrived in sight of the great pyramids, and saw the whole Mameluke force under Mourad and Ibrahim Beys encamped before them at Embabeh. The Mamelukes formed a splendid cavalry of about 5000 men, besides the Arab auxiliaries; but their infantry, composed chiefly of Fellahs, was contemptible. The Mamelukes had no idea of the resistance of which squares of disciplined infantry are capable. They charged furiously, and for a moment disordered one of the French squares, but succeeded no farther, having no guns to support them. The volleys of musketry and grape shot made fearful havoc among them; and after losing most of their men in desperate attempts to break the French ranks, the remnants of this brilliant cavalry retreated towards Upper Egypt; others crossed the Nile, and retreated towards Syria. This was called the battle of the Pyramids, in which victory was cheaply bought over a barbarian cavalry unacquainted with European tactics. Bonaparte two days after entered Cairo without resistance, and assembled a divan or council of the principal Turks and Arab sheiks, who were to have the civil administration of the country. He professed a determination

to administer equal justice and protection to all classes of people, even to the humblest Fellah—a thing unknown in that country for ages. He established an institute of sciences at Cairo; and he endeavoured to conciliate the good-will of the Ulemas and of the Imams, and to some extent he succeeded. It is not true however that he or any of his generals, except Menou, made profession of Islamism. The report originated in a desultory conversation he had with some of the sheiks, who hinted at the advantages that might result to him and his army from the adoption of the religion of the country. It was however a wild idea, unsuited both to him and the sort of men he commanded. It would have made him ridiculous in the eyes of his soldiers, and would not probably have conciliated the Moslem natives. While he was engaged in organising the internal affairs of Egypt, the destruction of his fleet by Nelson took place in the roads of Aboukir on the 1st and 2nd of August. He was now shut out from all communication with Europe. The sultan at the same time issued an indignant manifesto, dated 10th of September, declaring war against France for having invaded one of his provinces, and prepared to send an army for the recovery of Egypt. A popular insurrection broke out at Cairo on the 22nd of September, and the French found scattered in the streets were killed. Many, however, and especially the women and children, were saved in the houses of the better sort of inhabitants. Bonaparte, who was absent, returned quickly with troops; the insurgents were killed in the streets, and the survivors took refuge in the Great Mosque, the doors of which they barricaded. Bonaparte ordered them to be forced with cannon. A dreadful massacre ensued within the mosque, even after all resistance had been abandoned; 5000 Moslems were killed on that day. Bonaparte then issued a proclamation, in which, imitating the oriental style, he told the Egyptians that he was the man of fate who had been foretold in the Koran, and that any resistance to him was impious as well as unavailing, and that he could call them to account even for their most secret thoughts, as nothing was concealed from him.

In the month of December Bonaparte went to Suez, where he received deputations from several Arab tribes, as well as from the sheereef of Mecca, whom he had propitiated by giving protection to the great caravan of the pilgrims proceeding to that sanctuary. From Suez he crossed, at ebb tide, over the head of the gulf to the Arabian coast, where he received a deputation from the monks of Mount Sinai. On his return to Suez he was overtaken by the rising tide, and was in some danger of being drowned. This he told Las Cases at St. Helena.

Meantime the Turks were assembling forces in Syria, and Djezzar Pacha of Acre was appointed seraskier or commander. Bonaparte resolved on an expedition to Syria. In February, 1799, he crossed the desert with 10,000 men, took El Arish and Gaza, and on the 7th March he stormed Jaffa, which was bravely defended by several thousand Turks. A summons had been sent to them, but they cut off the head of the messenger. A great number of the garrison were put to the sword, and the town was given up to plunder, the horrors of which Bonaparte himself in his despatches to the Directory acknowledges to have been frightful. Fifteen hundred men of the garrison held out in the fort and other buildings, until at last they surrendered as prisoners. They were then mustered, and the natives of Egypt being separated from the Turks and Arnauts, the latter were put under a strong guard, but were supplied with provisions, &c. Two days after, on the 9th, this body of prisoners was marched out of Jaffa in the centre of a square battalion commanded by General Bon. They proceeded to the sand-hills south-east of Jaffa, and there being divided into small bodies, they were put to death in masses by volleys of musketry. Those who fell wounded were finished with the bayonet. The bodies were heaped up into the shape of a pyramid, and their bleached bones were still to be seen not many years since. Such was the massacre of Jaffa, which Napoleon at St. Helena sought to justify by saying that these men had formed part of the garrisons of El Arish and Gaza, upon the surrender of which they had been allowed to return home on condition of not serving against the French;—on arriving at Jaffa however, through which they must pass, their countrymen retained them to strengthen the defence of that place. It may be safely doubted whether the whole of these men were the identical men of El Arish or Gaza. But however this may be, it is true that the Turks did not at that time observe the rules of war among civilised nations, and therefore, it may be said, were liable to be treated with the extreme rigour of warfare. Still it was an act of cruelty, because done in cold blood and two days after their surrender. The motive of the act however was not wanton cruelty, but policy, in thus getting rid of a body of determined men, who would have embarrassed the French as prisoners, or increased the ranks of their enemies if set at liberty. This is the only apology, if apology it be, for the deed. Another and a worse reason is, the old principle of Bonaparte of striking terror into the country which he was invading. But this system, which succeeded pretty well with the North Italians or the Fellahs of Egypt, failed of its effect when applied to the Turks or the Arabs; it only made them the more desperate, as the defence of Acre soon after proved. The number of the victims, whom Moit states at two or three thousand, was in fact about 1200.

At Jaffa the French troops began to feel the first attack of the plague, and their hospitals were established in that town. On the 14th the army marched towards Acre, which they reached on the 17th.

Djezzar Pacha, a cruel but resolute old Turk, had prepared himself for a siege. Sir Sidney Smith, with the 'Tiger' and 'Theseus' English ships of the line, after assisting him in repairing the old fortifications of the place, brought his ships close to the town, which projects into the sea, ready to take part in the defence. The 'Theseus' intercepted a French flotilla with heavy cannon and ammunition destined for the siege, and the pieces were immediately mounted on the walls and turned against the French. Colonel Philippeaux, an able officer of engineers, who had been Bonaparte's schoolfellow at Paris, and afterwards emigrated, directed the artillery of Acre. Bonaparte was compelled to batter the walls with only 12-pounders: by the 28th of March however he had effected a breach. The French went to the assault, crossed the ditch, and mounted the breach, but were repulsed by the Turks led on by Djezzar himself. The Turks, joined by English sailors and marines, made several sorties, and partly destroyed the French works and mines. Meantime the mountaineers of Nablous and of the countries east of the Jordan, joined by Turks from Damascus, had assembled a large force near Tiberias for the relief of Acre. Bonaparte, leaving part of his forces to guard the trenches, marched against the Syrians, defeated their undisciplined crowds at Nazareth and near Mount Tabor, and completely dispersed them: the fugitives took the road to Damascus. Bonaparte quickly returned to his camp before Acre, when the arrival of several pieces of heavy ordnance from Jaffa enabled him to carry on his operations with redoubled vigour. The month of April was spent in useless attempts to storm the place. Philippeaux died on the 2nd of May, of illness and over-exertion, but was replaced by Colonel Douglas of the marines, assisted by Sir Sidney Smith and the other officers of the squadron. The French, after repeated assaults, made a lodgment in a large tower which commanded the rest of the fortifications, upon which the Turks and the British sailors, armed with pikes, hastened to dislodge them. At this moment the long-expected Turkish fleet arrived with fresh troops, under the command of Hassan Bey, and the regiment Tchifflik, of the Nizam or regular infantry, was immediately landed. Sir Sidney Smith, without losing time, sent them on a sortie against the French trenches, which the Turks forced, seizing on a battery and spiking the guns. This diversion had the effect of dislodging the French from the tower. After several other attempts Bonaparte ordered an assault on a wide breach which had been effected in the curtain. General Lannes led the column. Djezzar gave orders to let the French come in, and then close upon them man against man, in which sort of combat the Turks were sure to have the advantage. The foremost of the assailants advanced into the garden of the pacha's palace, where they were all cut down; General Rambaud was killed, and Lannes carried away wounded. On the 20th of May Bonaparte made a last effort, in which General Bon and Colonel Veneux were killed, with most of the storming party. General Caffarelli had died before. The army now began to murmur: seven or eight assaults had been made, the trenches and ditches were filled with the slain, which the fire of the besieged prevented them from burying; and disease, assisted by the heat of the climate, was spreading fast in their camp. After fifty-four days since the opening of the trenches, Bonaparte saw himself under the necessity of raising the siege. The people of Mount Lebanon, the Druses, and Mutualis, who were at one time disposed to join him against Djezzar, seeing his failure before Acre, altered their mind, and sent a deputation on board the Turkish and English fleet. At the same time Bonaparte learnt that the great Turkish armament from Rhodes was about to set sail for Egypt: the Mamelukes had also assembled in considerable numbers in Upper Egypt, and were threatening Cairo. Accordingly he resolved to return to Egypt.

On the 21st of May the French army broke up from before Acre, and began its retreat. In the order of the day which he issued on that occasion, Bonaparte affected to treat with disdain the check he had met with, but he expressed himself very differently to Murat and his other confidants, and we find him, towards the end of his life at St. Helena, reverting to the subject with expressions of disappointment and regret. "Possessed of Acre, the army would have gone to Damascus and the Euphrates; the Christians of Syria, the Druses, the Armenians, would have joined us. The provinces of the Ottoman Empire which speak Arabic were ready for a change, they were only waiting for a man. . . . With 100,000 men on the banks of the Euphrates I might have gone to Constantinople or to India; I might have changed the face of the world. I should have founded an empire in the East, and the destinies of France would have run into a different course." (Bonaparte's conversations in Las Cases.) Whatever may be thought of the chances of ultimate success, there is no doubt that Bonaparte, after taking Acre, would have become master of all Syria. But his position, and that of the countries around him, were very different from those of Alexander and the Persians.

The French army retreated through Jaffa, burning everything behind them, harvest and all. "The whole country is on fire in our rear," is Berthier's laconic expression in his report of that campaign. Before continuing their retreat from Jaffa, Bonaparte ordered the hospitals to be cleared, and all those who could be removed to be forwarded to Egypt by sea. There remained about twenty patients, chiefly suffering from the plague, who were in a desperate condition and could not be removed. To leave them behind would have exposed them to the barbarity of the Turks. Napoleon, some

may another officer, asked Desgenettes, the chief physician, whether it would not be an act of humanity to administer opium to them. Desgenettes replied that "his business was to cure and not to kill." A rear-guard was then left behind at Jaffa for the protection of these men, which remained there three days after the departure of the army. When the rear-guard left, all the patients were dead except one or two, who fell into the hands of the English, and they, or some other of the sick who were sent by sea and were also taken, having heard something of the suggestion about the opium, propagated the report that the sick had been really poisoned, which was believed both in France and in England for many years after. Such is the result of Las Cases' investigation of this business, both from Napoleon himself and from the chief persons who were at Jaffa at the time.

Bonaparte entered Cairo on the 14th of June. The Syrian campaign lasted little more than three months, and it cost the French about 4000 men, who were killed or died of the plague. While Bonaparte was in Syria, Desaix had driven the Mamelukes from Upper Egypt, and beyond the cataracts of Assouan. The French had also occupied Cosseir. The division of Desaix contained the French savants, and Denon among the rest, who examined the monuments of Thebes, Dendera, Etfou, &c. From their observations the splendid work on Egypt was afterwards compiled.

Towards the end of July, Bonaparte being informed that the Turkish fleet had landed 18,000 men at Aboukir, under Seid Mustapha Pacha, immediately assembled his army to attack them. He had formed a cavalry, which was commanded by Murat; the Turks had none. The Turks had entrenched themselves near the sea, and the French attacked their advanced posts and drove them back upon their entrenchments; but the Turkish guns checked their advance, and threw the foremost of the assailants into disorder. The main body of the Turks then sallied out, but in the eagerness of their pursuit falling into complete disorder, they were charged by the French, both infantry and cavalry, routed, and followed into their entrenchments, where they fell into inextricable confusion. About 10,000 of them perished, either by the bayonet or in the sea, where they threw themselves in hopes of regaining their ships. The sea appeared covered with their turbans. Six thousand men received quarter, together with the pacha, whom Bonaparte condescended to praise for the courage he had displayed. This victory of Aboukir, fought on the 25th of July 1799, closed Bonaparte's Egyptian campaign. It was after this battle that Bonaparte received intelligence of the state of France. He learnt the disasters of the French army, the loss of Italy, the general dissatisfaction prevailing in France against the Directory, and the intrigues and animosities among the directors themselves, and between them and the legislative councils. He determined at once to return to France. He kept it however a secret from the army, and ordered two frigates in the harbour of Alexandria to be got ready for sea, and having ordered his favourite officers, Murat, Lannes, Berthier, Marmont, and also Messrs. Monge, Denon, and Berthollet to meet him at Alexandria, he left Cairo on the 18th of August, and on arriving at Alexandria embarked secretly on board the frigate 'La Muiron' on the 23rd. He took leave of Kleber, whom he left in command, only by letter. He left in Egypt 20,000 men, having lost about 9000 in his campaign. The English fleet had gone to Cyprus to get provisions, and Bonaparte was again fortunate enough to avoid the English cruisers. He is said to have read during the passage both the Bible and the Koran with great assiduity. On the 30th September the two frigates entered the Gulf of Ajaccio; on the 7th October they sailed again, and passing unnoticed through the English squadron, they anchored on the 9th in the Gulf of Frejus, to the eastward of Toulon. The usual forms of quarantine were dispensed with, and on his landing he was received with applause by the inhabitants of the various towns on his road to Paris, and especially at Lyon, which had suffered so much in the Revolution. People were tired of the Directory, which had shown both incapacity and corruption, and to which they attributed all the late misfortunes of France. On arriving at Paris, Bonaparte found himself courted, as he probably expected, by the various parties. The republicans, with generals Jourdan, Bernadotte, Augereau, and a majority in the council of 500, wished to restrain the power of the Directory, to turn out Barras, but to maintain the constitution of the year III. Sieyes, one of the directors, with a majority of the Council of Elders, wished for a new constitution, less democratic, of which he had sketched the outline. Barras strove to maintain the power of the Directory, of which till then he had been the most influential member. But his party was small and in bad odour with the people. Bonaparte decided on joining Sieyes and giving him his military support; the day for attempting the proposed change in the constitution was fixed between them and their friends.

The Council of Elders met at six o'clock in the morning of the 18th Brumaire (9th November 1799) at the Tuileries; but several of the leading members of the republican party were not summoned. Cornudet, Lebrun, and other members in the interest of Sieyes, spoke of dangers which threatened the Republic, of conspiracies of the Jacobins, of a return of the reign of terror, &c. The majority of the council were either in the secret, or were really agitated by fear of the Jacobins. The council adopted a resolution, according to the powers given to it by the constitution, by which the two councils were appointed to meet at St. Cloud the next day, in order to be safer from

any attempts of the mob of the capital. By another resolution General Bonaparte was appointed commander-in-chief of the military division of Paris, and charged with protecting the safe removal of the councils. A message signifying this appointment, and summoning him to appear before the elders, was carried to Bonaparte while he was in the midst of his military levee. He immediately mounted on horseback, and invited all the officers to follow him. The greater number did so; but Bernadotte and a few more declined the invitation. Bonaparte had been talking privately with Bernadotte, but could not win him over to his side; he found him "as stubborn as a bar of iron." (Bourienne.) Bonaparte having given his orders to the adjutants of the various battalions of the national guards and to the commanding officers of the regular troops which were formed in the Champs Elysees, repaired to the Council of Elders, surrounded by a numerous retinue, among whom were Moreau, Berthier, Lannes, Murat, and Le Fèvre, who commanded the National Guards. He told the council that they represented the wisdom of the nation, that by their resolutions of that morning they had saved the Republic, that he and his brave companions would support them, and he swore this in his and their names. Coming out of the hall he read to the assembled troops the resolutions of the elders, which were received by the soldiers with bursts of applause.

Meantime the three directors, Barras, Moulins, and Gohier, who remained at the Luxembourg, after Sieyes and Ducos had gone to the Tuileries and given in their resignation, became alarmed. They had no force at their disposal; even their own personal guard had deserted them. Barras sent his secretary Bottot to endeavour to negotiate with Bonaparte. The general received him in public in the midst of his officers, and, assuming the tone of an angry master, upbraided the directors with their misconduct:—"What have you done with that France which I left to you prosperous and glorious? I left her at peace, and I find her at war; I left her triumphant, and I find nothing but spoliations and misery. What have you done with a hundred thousand Frenchmen whom I left behind—my companions in arms and in glory? They are no more." . . . He then signified to Bottot in private his friendly sentiments towards Barras, and assured him of his personal protection if he immediately abdicated. Talleyrand had meantime seen Barras, who, fearing perhaps to expose himself to an investigation of his official conduct, consented to resign. He wrote a letter to the Council of Elders to that effect, and then set off for his estate in the country under an escort which Bonaparte gave him. [BARRAS.] Gohier and Moulins being thus left alone, did not constitute the number required by the constitution in order to give to their deliberations the authority of an executive council. Moreau was sent by Bonaparte to guard the palace of the Luxembourg, and in fact to keep the two directors prisoners there.

The Council of Five Hundred having met at ten o'clock on the same day, received a message from the Elders, adjourning the sitting to St. Cloud for the next day. They separated amidst cries of "The Republic and the Constitution for ever!"

Fouché, the minister of police, Cambacères, minister of justice, Talleyrand, and other influential men, seconded the views of Bonaparte and of Sieyes. The power of the Directory was at an end. The question was, what form of government should be substituted for it. It was agreed at last that the council should adjourn themselves to the following year, after appointing a commission for the purpose of framing a new constitution, and that meantime an executive should be formed consisting of three consuls, Sieyes, Ducos, and Bonaparte. These measures it was known would obtain a majority in the Council of Elders, but would meet with a determined opposition in that of the Five Hundred.

On the 19th Brumaire (10th November) the councils assembled at St. Cloud. The republican minority in the Council of Elders complained loudly of the hasty and irregular convocation of the preceding day. In the midst of the debate Bonaparte appeared at the bar, accompanied by Berthier and his secretary Bourienne, the latter of whom gives an account of the scene. He told the deputies that they were treading upon a volcano, that he and his brethren in arms came to offer their assistance, that his views were disinterested, "and yet," he added, "I am calumniated, I am compared to Cromwell, to Caesar." This was uttered in a rambling, broken manner. Linglet, one of the minority, said to him, "General, will you swear to the constitution of the year III?" Bonaparte then became animated: "The Constitution!" he cried out, "you violated it on the 18th Fructidor [AUGEREAU], you violated it on the 22nd Floréal, you violated it on the 30th Prairial. All parties by turns have appealed to the Constitution, and all parties by turns have violated it. As we cannot preserve the Constitution, let us at least preserve liberty and equality." He then talked of conspiracies, of danger to the Republic, &c. Several members insisted on the General revealing these conspiracies, explaining these dangers. Bonaparte, after some hesitation, named Moulins and Barras, who he said had proposed to him to take the lead in the conspiracy. This increased the vociferations among the members: "The General must explain himself, every thing must be told before all France." But he had nothing to reveal. He spoke of a party in the Council of Five Hundred which wanted to re-establish the convention and the reign of terror. His sentences became incoherent, he was confused, but at last he said, "If any orator, paid by foreigners, attempts to put me

out of the pale of the law, let him beware! I shall appeal to my brave companions, whose caps I perceive at the entrance of this hall." Bourienne and Berthier advised him now to withdraw, and they came out together, when Bonaparte was received with acclamations by the military assembled before the palace.

The Council of Five Hundred had also assembled. Its president, Lucien Bonaparte, read aloud the resignation of Barras, which had been forwarded by the Council of Elders. Some of the leaders then proposed to repeat the oath of fidelity to the Constitution, which was carried by acclamation. "No dictator, no new Cromwell!" resounded through the hall. Augereau, who was present, went out and told Bonaparte what was passing in the council. "You have placed yourself in a pretty situation."—"Augereau," replied Bonaparte, "remember Arcole; things appeared still worse there at one time. Keep quiet, and in half an hour you will see." He then entered the Council of the Five Hundred, accompanied by four grenadiers. The soldiers remained at the entrance, he advanced towards the middle of the hall, uncovered. He was received with loud and indignant vociferations. "We will have no dictator, no soldiers in the sanctuary of the laws. Let him be outlawed! he is a traitor!" Bonaparte attempted to speak, but his voice was drowned in the general clamour. He was confused, and seemed uncertain what to do. Several members crowded around him; a cry of "Let us save our General!" was heard coming from the door of the hall, and a party of grenadiers rushed in, placed Bonaparte in the midst of them, and brought him out of the hall. One of the grenadiers had his coat torn in struggling with a deputy; but the story of the daggers drawn against Bonaparte appears to be unfounded. Lucien, after the departure of his brother, attempted to pacify the council, but the exasperation of the members was too great. A motion was put to outlaw General Bonaparte. Lucien refused to put it to the vote, saying, "I cannot outlaw my own brother," and he deposited the insignia of president, and left the chair. He then asked to be heard in his brother's defence, but he was not listened to. At this moment, a party of grenadiers sent by Napoleon entered the hall. Lucien put himself in the midst of them, and they marched out. He found the military outside already exasperated at the treatment their general had received. Lucien mounted on horseback, and in a loud voice cried out to them, that factious men, armed with daggers, and in the pay of England, had interrupted by violence the deliberations of the Council of Five Hundred, and that he, in his quality of president of that assembly, requested them to employ force against the disturbers. "I proclaim that the assembly of the Five Hundred is dissolved." This address of Lucien decided the business. The soldiers felt no more scruples in obeying the orders of the president. Murat entered the hall of the Council, at the head of a detachment of grenadiers with fixed bayonets. He summoned the deputies to disperse, but was answered by loud vociferations, execrations, and shouts of "The Republic for ever!" The drums were then ordered to beat, and the soldiers to clear the hall. They levelled their muskets, and advanced to the charge. The deputies now fled, many jumped out of the windows, others went out quietly by the door. In a few minutes the hall was entirely cleared. In this affair the military were the instruments, and Lucien the chief director.

On the night of the same day (19th Brumaire) the elders assembled again, and agreed that a provisional executive of three consuls should be appointed. The initiative however belonging to the other council, Lucien assembled a small minority, some say only thirty members, out of Five Hundred, who on that night passed several resolutions, by one of which it was stated that there was no longer a directory. By another, a list of the more ardent republican members was drawn up, who were declared to have forfeited their seats in consequence of their violence and their crimes. By another, three provisional consuls were appointed, Sieyes, Ducos, and Bonaparte. At one o'clock in the morning, Bonaparte took the oath before the council. At three o'clock the two councils adjourned for three months, after appointing a commission to revise the constitution.

Everything was now quiet at St. Cloud, and Bonaparte returned to Paris with Bourienne. After quieting the anxiety of his wife, he told Bourienne that he thought he had spoken some nonsense while before the councils. "I had rather speak to soldiers than to lawyers. These fellows really put me out of countenance, I have not the habit of speaking before large assemblies. But the habit will come by and by." On the evening of the following day, Bonaparte took up his residence in the Luxembourg, the palace of the ex-directors.

The fall of the Directorial Government, however irregularly brought about, was certainly not a subject of regret for the great majority of the French people, who had neither respect for it nor any confidence in it. The profrigancy and dishonesty of that government were notorious.

At the first sitting of the three consuls Sieyes having said something about a president, Ducos immediately replied, "The General takes the chair of course." Bonaparte then began to state his views on the various branches of the administration and on the policy to be pursued by the government, and supported them in a firm authoritative tone. Ducos of course assented, and from that moment Sieyes perceived that his own influence was at an end: he told his friends that they had given themselves a master, and that Bonaparte could and would manage everything himself and in his own way. The three consuls,

in conjunction with the commission appointed by the councils, framed a new constitution, which was called the constitution of the year VIII. The outline, with regard to the legislative power, was taken from a plan of Sieyes. It consisted of three consuls, of a senate called conservative, and composed of eighty members appointed for life and enjoying a considerable salary, of a legislative body of 300 members, one-fifth of whom was to be renewed every year, and of a tribunate of 100 members, one-fifth to be renewed every year. The consuls, or rather the first or chief consul (for the other two were appointed by him and acted only as his advisers and assistants, but could not oppose his decisions), proposed the laws, the tribunate discussed them in public, and either approved of or rejected them; if it approved, it made a report accordingly to the legislative body, which voted by ballot on the project of law without discussing it. If the proposed law obtained a majority of votes, the senate registered it, and the consuls, in their quality of executive, promulgated it. The sittings of the senate were secret; those of the legislative body were dumb; the tribunate was therefore the only deliberative assembly in the state, but it had not the power of originating laws; it could however denounce the measures of the government by an address to the senate. The members of the tribunate were appointed by the senate out of lists of candidates made out by the electoral colleges. The senate filled its own vacancies from a triple list of candidates,—one proposed by the chief consul, one by the tribunate, and one by the legislative body. As for the legislative body, the members were selected by the senate out of lists of candidates furnished by the electoral colleges of the departments. The people therefore had no direct election of their representatives. This was the essential anomaly of Sieyes' plan of a constitution styled republican. The three consuls were appointed for ten years and re-eligible, the first or chief one having the power of appointing to all public offices, and of proposing all public measures, such as war or peace: he commanded the forces of every description, superintended both the internal and foreign departments of the state, &c. The granting of these vast powers met with some opposition in the commission, but Bonaparte sternly overcame them by declaring that if they attempted to weaken the power of the executive, he would have nothing more to do in the business, that he was already first consul, and hinted that a civil war might be the result of further opposition. The commission accordingly yielded to his views. In fact, most men were tired of revolutions, and they felt the necessity of a strong executive in order to re-establish order and internal security.

Bonaparte being thus appointed, or rather confirmed, in his office of first consul or chief magistrate, had the right of naming the other two: he offered Sieyes one of the places, but Sieyes declined the offer. He accepted the place of senator, with the yearly salary of 25,000 francs, and the domain of Crosne, in the park of Versailles, belonging to the state. Bonaparte appointed Cambacères and Lebrun second and third consuls. They, together with Sieyes and Ducos, late consuls, appointed the majority of the members of the senate, who themselves appointed the remainder. The senate next named the 100 tribunes and the 300 members of the legislative body, and thus the whole legislature was filled up at once under the plea of urgency, as there was no time to wait for the lists of candidates to be named by the departments. ("Constitution of the Year VIII," in Appendix to Gourgand's "Memoirs of Napoleon.") The constitution was submitted to the acceptance of the people in every commune, and registers were opened for the purpose at the offices of the various local authorities; 3,012,569 votes were registered, out of which number 1562 rejected and 3,011,007 accepted the new constitution, which was then solemnly proclaimed on the 24th of December 1799. Bonaparte did not altogether approve of Sieyes' constitution, although he had greatly modified it by strengthening the executive to a vast extent. "Napoleon," thus he spoke afterwards of himself at St. Helena, "was convinced that France could only exist as a monarchy; but the French people being more desirous of equality than of liberty, and the very principle of the revolution being established in the equalisation of all classes, there was of necessity a complete abolition of the aristocracy. . . . The ideas of Napoleon were fixed, but the aid of time and events were necessary for their realisation. The organisation of the consulate presented nothing in contradiction to them; it taught unanimity, and that was the first step. This point gained, Napoleon was quite indifferent as to the forms and denominations of the several constituted bodies; he was a stranger to the revolution; it was natural that the will of those men who had followed it through all its phases should prevail in questions as difficult as they were abstract. The wisest plan was to go on from day to day without deviating from one fixed point, the polar star by which Napoleon meant to guide the revolution to the haven he desired." ("Memoirs of Napoleon," dictated to Gourgand, vol. i.) The above sentences furnish a clue to Bonaparte's subsequent policy with regard to the internal administration of France. Towards the end of January 1800, Bonaparte moved from the palace of the Luxembourg to the Tuileries. Of his public entrance into that royal residence amidst the acclamations of the multitude Madame de Stael has given a striking account.

The finances were left by the Directory in a wretched state; the treasury was empty; forced loans arbitrarily assessed had been till then the chief resource of the government. Gaudin, the new minister

appointed by Bonaparte, repealed the odious system, for which he substituted 25 per cent. additional upon all contributions direct or indirect. Confidence being thus restored, the merchants and bankers of Paris supplied a loan of twelve millions, the taxes were paid without difficulty, the sales of national domains were resumed, and money was no longer wanting for the expenses of the state. Cambacères continued to be minister of justice. The tyrannical law of hostages, by which nearly 200,000 Frenchmen were placed out of the pale of the law because they happened to be relatives of emigrants or of Vendéans, and were made answerable for the offences of the latter, was repealed. About 20,000 priests who had been banished or imprisoned were allowed to return, or were set at liberty on taking the oath of fidelity to the established government. All persons arrested on mere suspicion, or for their opinions, were set free. "Opinions," said Bonaparte, "are not amenable to the law; the right of the sovereign extends only to the exaction of obedience to the laws."

The subordinate situations under government were filled with men from all parties, chosen for their fitness. "We are creating a new era," said Bonaparte; "of the past we must remember only the good, and forget the evil. Times, habits of business and experience, have formed many able men and modified many characters." Agreeably to this principle, Fouché was retained as minister of police. Berthier was made minister at war instead of Dubois Crancé, the minister of the Directory, who could give no returns of the different corps, and who answered all questions by saying—"We neither pay, nor victual, nor clothe the army; it subsists and clothes itself by requisitions on the inhabitants."

The churches which had been closed by the Convention were reopened, and Christian worship was allowed to be performed all over France. The Sabbath was again recognised as a day of rest, the law of the Decades was repealed, and the computation by weeks resumed. The festival of the 21st January, being the anniversary of the death of Louis XVI., was discontinued. The oath of hatred to royalty was suppressed as useless, now that the republic was firmly established and acknowledged by all, and as being an obstacle to the good understanding between France and the other powers. At the same time the sentence of transportation passed on the 19th Brumaire, on fifty-nine members of the former Council of Five Hundred, was changed into their remaining at a distance from Paris, under the surveillance of the police.

France was still at war with Austria, England, and the Porte. Bonaparte sent Duroc on a mission to Berlin, by which he confirmed Prussia in its neutrality. The Emperor Paul of Russia had withdrawn from the confederation after the battle of Zürich, September 25th, 1799, in which Massena gained a victory over the Russian army. Bonaparte now wrote a letter to the King of England, expressing a wish for peace between the two nations. Lord Grenville, secretary of state for foreign affairs, returned an evasive answer, expressing doubts as to the stability of the present government of France, an uncertainty which would affect the security of the negotiations; "but disclaiming at the same time any claim to prescribe to France what shall be the form of her government, or in whose hands she shall vest the authority necessary for conducting the affairs of a great and powerful nation. His Majesty looks only to the security of his own dominions and those of his allies, and to the general safety of Europe. Whenever he shall judge that such security can in any manner be attained, His Majesty will eagerly embrace the opportunity to concert with his allies the means of immediate and general pacification." This correspondence was the subject of animated debates in the British parliament. ('Parliamentary Register for the year 1800.')

Bonaparte had made the overture in compliance with the general wish for peace, but he says himself that he was not sorry it was rejected, and "that the answer from London filled him with secret satisfaction, as war was necessary to maintain energy and union in the state, which was ill organised, as well as his own influence over the imaginations of the people." (Montholon, 'Memoirs of Napoleon,' vol. I. note on Pitt's policy.) Bonaparte at the same time succeeded in putting an end to the civil war in La Vendée; he entered into negotiations with the principal Vendean chiefs, offering a complete amnesty for the past, and at the same time he sent troops to La Vendée to put down any further resistance. The royalist party had gained considerable strength; owing to the weak and immoral policy of the Directory, many officers of the republic, both civil and military, had entered into correspondence with it, because, as they confessed to Bonaparte, they preferred anything to anarchy and the return of the reign of terror. But the temperate and yet firm policy of the first consul effected a great alteration in public opinion. The Vendéans themselves were affected by it. The principal of them, Chatillon, D'Autichamp, the Abbé Bernier, Bourmont, and others, made their peace with the government by the treaty of Montluçon in January 1800. Georges capitulated to General Brune, and the Vendean war was at an end.

Bonaparte now turned all his attention to the war against Austria. He gave to Moreau the command of the army of the Rhine, and himself assumed the direction of that of Italy. Massena was shut up in Genoa, and the Austrians under General Melas occupied Piedmont and the Genoese territory as far as the French frontiers. Bonaparte made a demonstration of assembling an army of reserve at Dijon in Burgundy,

which was composed of a few thousand men, chiefly conscripts or old invalids. The Austrians, lulled into security, continued their operations against Genoa and towards Nice, while Bonaparte secretly directed a number of regiments from the interior of France to assemble in Switzerland on the banks of the Lake of Geneva. He himself repaired to Lausanne on the 13th of May, and marched, with about 36,000 men and 40 pieces of cannon, up the Great St. Bernard, which had till then been considered impracticable for the passage of an army, and especially for artillery. The cannons were dismounted, put into hollow trunks of trees, and dragged by the soldiers; the carriages were taken to pieces, and carried on mules. The French army descended to Aosta, turned the fort of Bard, and found itself in the plains of Lombardy, in the rear of Melas's Austrian army, which was south of the Po, and intercepting its communications with the Austrian states. Bonaparte entered Milan on the 2nd of June without meeting with any opposition, and was there joined by other divisions which had passed by the Simplon and the St. Gothard. He now marched to meet Melas, who had hastily assembled his army near Alessandria. Passing the Po at Piacenza, he drove back Melas's advanced guard at Casteggio near Voghera, and took a position in the plain of Marengo, on the right bank of the river Bormida, in front of Alessandria. On the 14th of June Melas crossed the Bormida in three columns, and attacked the French. The Austrians carried the village of Marengo, and drove the French back upon that of San Giuliano, which was attacked by a column of 5000 Hungarian grenadiers. At four o'clock in the afternoon the battle seemed lost to the French, who were retiring on all points and in considerable disorder, when Desaix arriving with a fresh division attacked the advancing column, while the younger Kellerman with a body of heavy horse charged it in flank. The column was broken, and General Zach, the Austrian second in command, and his staff, were taken prisoners. The commander-in-chief, Melas, an old and gallant officer, exhausted with fatigue, and thinking the battle won, had just left the field and returned to Alessandria. The other French divisions now advanced in their turn; a panic spread among the Austrians, who, after fighting hard all day, had thought themselves sure of victory, and they fled in confusion towards the Bormida, many being trampled down by their own cavalry, which partook of the general disorder. The Austrian official report stated their loss in killed, wounded, and prisoners at 9069 men and 1433 horses. The French stated their own loss at 4000 only, and that of the Austrians at 12,000. But the loss of the French must have been greater. Desaix was shot through the breast in the charge; he fell from his horse, and, telling those around him not to say anything to his men, he expired. He and Kellerman turned the fate of the battle. An armistice was concluded on the 16th of June between the two armies, by which Melas was allowed to withdraw his troops to the line of Mantua and the Mincio, the French keeping Lombardy as far as the river Oglio. Melas, on his side, gave up Piedmont and the Genoese territory, with all their fortresses, including Genoa and Alessandria, to the French.

Bonaparte having established provisional governments at Milan, Turin, and Genoa, returned to Paris, where he arrived on the 3rd of July, and was received with the greatest enthusiasm. The battle of Marengo had wonderfully consolidated his power, and increased his influence on the opinion of the French. Negotiations for peace took place between Austria and France; Austria however refused to treat without England, and Bonaparte demanded an armistice by sea as a preliminary to the negotiations with England. Malta and Egypt were then on the point of surrendering to the English, and Bonaparte wished to send reinforcements to those countries during the naval armistice. This was refused by England, and hostilities were resumed by sea and by land. Moreau defeated the Austrians commanded by the Archduke John in the great battle of Hohenlinden, and advanced towards Vienna. The French in Italy drove the Austrians beyond the Adige and the Brenta. (For all this war of 1800 see 'Précis des Evénemens Militaires,' by Mathieu Dumas.)

Austria was now obliged to make a separate peace. The treaty of Lunéville, 9th February 1801, arranged by the two plenipotentiaries, Count Cobenzel and Joseph Bonaparte, was mainly grounded on that of Campoformio. Austria retained the Venetian territories, but Tuscany was taken away from the grand-duke Ferdinand, and bestowed upon Louis, son of the Duke of Parma, who had married a princess of Spain. Through the mediation of the Emperor Paul of Russia, with whom Bonaparte was now on very friendly terms, the King of Naples also obtained peace. The new pope, Pius VII., was likewise acknowledged by Bonaparte, and left in full possession of his territories, except the legations which had been annexed to the Cisalpine republic. In the course of the same year negotiations were begun with England, where Mr. Addington had succeeded Mr. Pitt as prime minister. Egypt and Malta having surrendered to the English, the chief obstacles to peace were removed. The preliminaries of peace were signed at Paris on the 10th of October 1801, and the definitive treaty was signed at Amiens, 27th of March 1802. The principal conditions were, that Malta should be restored to the Knights of St. John, and the forts be occupied by a Neapolitan garrison. The independence of the Cisalpine, Batavian, Helvetic, and Ligurian republics was guaranteed. Egypt was restored to the sultan, the Cape of Good Hope to Holland, and the French West India Islands to France. England retained the island of Ceylon.

Bonaparte had shown at this period an earnest desire for peace, which France stood greatly in need of. Both royalists and republicans were dissatisfied with his dictatorship. Joseph Arena, a Corsican, and brother of Bartolomeo Arena of the Council of Five Hundred, who had warmly opposed Bonaparte on the 19th Brumaire, Ceracchi and Dianna, Italian refugees, and several other violent republicans, formed a conspiracy against Bonaparte's life; but they were discovered and imprisoned. Soon after a fresh conspiracy of the royalists—some say of the royalists and Jacobins united—was near terminating the life of the first consul. As Bonaparte was passing in his carriage through the Rue-Nicaise on his way to the opera, 24th of December 1800, a tremendous explosion of several barrels of gunpowder in a waggon, that was drawn up on one side of the street, destroyed several houses and killed many persons. Bonaparte's carriage had just passed, owing to the furious driving of the coachman, who was half intoxicated, and who made his way through all obstacles that had been purposely placed on the road. The police discovered the conspirators, who were fanatical royalists connected with the Chouans in the west of France. They were tried and executed. At the same time Arena and his republican friends, who had been already found guilty, although, it was said, upon evidence not quite conclusive, were brought out of their confinement and executed. By a *Senatus Consultum*, for such the decrees of the Senate were styled, 130 known leaders of the old Jacobin party, several of whom had participated in the atrocities of the reign of terror, were ordered to be transported beyond the seas. Bonaparte expressed his determination to put down both Jacobins and Bourbonists. A law passed the Legislative Body empowering the executive to banish from Paris, and even from France, persons who should express opinions inimical to the present government. By another law, which passed the Tribunate by a majority of only eight, and was afterwards sanctioned by the legislative body, special criminal courts were established to try all persons accused of treason against the state. The secret police was now organised with the utmost skill by Fouché, and numerous informers from all classes were taken into its pay. Besides the general police there was a military police, and another police establishment under Bonaparte himself, in his own household.

In April 1801 a general amnesty was granted to all emigrants who chose to return to France and take the oath of fidelity to the government within a certain period. From this amnesty about 500 were excepted, including those who had been at the head of armed bodies of royalists, those who belonged to the household of the Bourbon princes, those French officers who had been guilty of treason, and those who had held rank in foreign armies against France. The property of the returned emigrants which had not been sold was restored to them. Another conciliatory measure was the concordat concluded between Joseph Bonaparte and Cardinal Consalvi, which was signed by Pius VII. in September 1801. The pope made several concessions seldom if ever granted by his predecessors. He suppressed many bishoprics, he sanctioned the sale of church property which had taken place, he superseded all bishops who had refused the oath to the republic, and he agreed that the first consul should appoint the bishops, subject to the approbation of the pontiff, who was to bestow upon them the canonical institution. The bishops, in concert with the government, were to make a new distribution of the parishes of their respective dioceses, and the incumbents appointed by them were to be approved by the civil authorities. The bishops, as well as the incumbents, were to take the oath of fidelity to the government, with the clause of revealing any plots they might hear of against the state. With these conditions it was proclaimed, on the part of the French government, that the Catholic religion was that of the majority of Frenchmen; that its worship should be free, public, and protected by the authorities, but under such regulations as the civil power should think proper to prescribe for the sake of public tranquillity; that its clergy should be provided for by the state; that the cathedrals and parish churches should be restored to them. The total abolition of convents was also confirmed. This concordat was not agreed to by the pope without some scruples, nor without much opposition from several of the theologians and canonists of the court of Rome. ('*Compendio Storico di Pio VII.*,' Milan, 1824; and also Botti, '*Storia d'Italia del 1789 al 1814.*') On Easter Sunday 1802 the concordat was published at Paris, together with a decree of regulations upon matters of discipline, which were so worded as to make them appear part of the text of the original concordat. The regulations were that no bull, brief, or decision from Rome should be acknowledged in France without the previous approbation of the government; no nuncio or apostolic commissioner to appear in France, and no council to be held without a similar consent; appeals against abuses of discipline to be laid before the council of state; professors of seminaries to subscribe to the four articles of the Gallican Church of 1682: no priest to be ordained unless he be twenty-five years of age, and have an income of at least 300 francs; and lastly, that the grand vicars of the respective dioceses should exercise the episcopal authority after the demise of the bishop, and until the election of his successor, instead of vicars elected ad hoc by the respective chapters, as prescribed by the Council of Trent. This last article grieved most the court of Rome, as it affected the spiritual jurisdiction of the church. The pope made remonstrances, to which Bonaparte turned a deaf ear. Regulations

concerning the discipline of the Protestant Churches in France were issued at the same time with those concerning the Catholic Church. The Protestant ministers were also paid by the state.

On the occasion of the solemn promulgation of the concordat in the cathedral of Notre Dame, the Archbishop of Aix officiated, and Bonaparte attended in full state. The old generals of the republic had been invited by Berthier in the morning to attend the levee of the first consul, who took them unawares with him to Notre Dame. Bonaparte said at St. Helena that he never repented having signed the concordat: that it was a great political measure; that it gave him influence over the pope, and through him over a great part of the world, and especially over Italy, and that he might one day have ended by directing the pope's councils altogether. "Had there been no pope," he added, "one ought to have been made for the occasion." (Gourgaud and Las Cases. See also a copy of the Concordat in the Appendix to Montholon's '*Memoirs*,' vol. i.)

Bonaparte established an order of knighthood both for military men and civilians, which he called the Legion of Honour. This measure met with considerable opposition in the tribunate. At the first renewal of one-fifth of the members of that body, the senate contrived to eject the most decided members of the opposition.

In January 1802 Bonaparte convoked together at Lyon the members of the provisional government of the Cisalpine republic, together with deputations of the bishops, of the courts of justice, of the universities and academies, of the several towns and departments, and the national guards, of the regular army, and of the chambers of commerce. The number of deputies amounted to about 500, out of whom a commission of thirty members was selected, which made a report to the first consul of France on the actual state of the Cisalpine republic. The report stated that, owing to the heterogeneous parts of which that republic was composed, there was a want of confidence among them; that the republic was in a state of infancy, which required for some time to come the tutelary support of France; and it ended by requesting that the first consul would assume the chief direction of its affairs. Bonaparte then repaired to the hall of the deputies, and delivered a speech which was an echo of the report: he agreed with all its conclusions, and confirmed them in more positive language. He told them that "they should still be protected by the strong arm of the first nation in Europe, and that as he found no one among them who had sufficient claims to the chief magistracy, he was willing to assume the direction of their affairs, with the title of President of the Italian Republic, and to retain it as long as circumstances should require it." The new constitution of the Italian republic was then proclaimed: three electoral colleges—1, of proprietors; 2, of the learned; 3, of the merchants—represented the nation, and appointed the members of the legislature and the judges of the upper courts. The legislative body of seventy-five members voted without discussion on the projects of law presented to it by the executive. There were two councils, under the names of Consulta of State and Legislative Council, which examined the projects of law proposed by the president, the treaties with foreign states, &c. The principal difference between this constitution and that of France was in the composition of the electoral colleges, they being selected in Italy by classes, and in France by communes and departments, without distinction of classes; and also that in Italy there was no tribunate to discuss the projects of law proposed by the executive. Bonaparte appointed Melzi d'Éril as vice-president to reside at Milan in his absence. This choice was generally approved of. Bonaparte gave also a new constitution to the Ligurian or Genoese republic, similar to that of the Italian republic: he did not assume the chief magistracy himself, but placed a native doge at the head of the state. On August the 2nd 1802 Bonaparte was proclaimed consul for life by a decree of the senate, which was sanctioned by the votes of the people in the departments to the number of three millions and a half. A few days after, another *Senatus Consultum* appeared, altering the formation of the electoral bodies, reducing the tribunate to fifty members, and paving the way in fact for absolute power.

Switzerland was at this time distracted by civil war. The French troops had evacuated the country after the peace of Amiens, but the spirit of dissension among the different cantons remained. Bonaparte called to Paris deputations from every part of Switzerland, and after listening to their various claims, he told them he would mediate among them: he rejected the schemes of unity and uniformity, saying, that nature itself had made Switzerland for a federal country; that the old forest cantons, the democracies of the Alps, being the cradle of Helvetic liberty, still formed the chief claim of Switzerland to the sympathies of Europe. "Destroy those free primitive commonwealths, the monument of five centuries," he added, "and you destroy your historical associations, you become a mere common people, liable to be swamped in the whirlpool of European politics." The new Helvetic federation was formed of nineteen cantons on the principle of equal rights between towns and country, the respective constitutions varying however according to localities. The general Diets of the confederation were re-established. The neutrality of Switzerland was recognised; no foreign troops were to touch its territory; but the Swiss were to maintain a body of 16,000 men in the service of France, as they formerly did under the old monarchy. Bonaparte assumed the title of Mediator of the Helvetic League. He retained however Geneva and the bishopric of Basel, which had been seized by the Directory, and

he separated the Valais, which he afterwards aggregated to France. To the end of his reign Bonaparte respected the boundaries of Switzerland, as settled by the act of mediation; that and little San Marino were the only Republics in Europe whose independence he maintained.

Bonaparte had directed a commission of lawyers of the first eminence under the presidency of Cambacères to frame or digest a code of civil laws for France. He himself frequently attended their meetings, and took great interest in the discussions. The result of their labours was the Civil Code, which has continued ever since to be the law of France. It was styled 'Code civil des Français,' and it was accompanied by a Code de procédure. A Code penal, accompanied likewise by a Code d'instruction criminelle, a commercial code, and a military code, were afterwards compiled and promulgated under Bonaparte's administration. Of these several codes, which are very different in their respective merits, and are often confusedly designated by the name of Code Napoleon, the Civil Code is considered by far the best, and constitutes perhaps the most useful bequest of Bonaparte's reign.

The various branches of public instruction also attracted Bonaparte's attention, though in very unequal proportions. The task of providing elementary education was thrown upon the communes, but the communes being mostly very poor, the establishment of primary schools met with many difficulties, and elementary education remained in a languishing and precarious state during the whole of Napoleon's reign. Several reports delivered by the councillor of state, Fourcroy, to the legislative body under the consulate and the empire, show the wretched state of primary and secondary instruction throughout France. The secondary instruction was chiefly given in private establishments. Fourcroy stated the number of pupils under ten years of age in the primary and secondary schools at only 75,000, and this in a population of 32,000,000. Classical and literary instruction was afforded by the lycées to about 4000 pupils, whose expenses were defrayed by the State, besides boarders kept at the charge of their parents. The discipline of these establishments was altogether military. Latin, mathematics, and military manoeuvres were the chief objects of instruction at the lycées. Scientific education was given in the special schools in the chief towns of France, such as the schools of law and of medicine, the college of France, and the Polytechnic School at Paris, the Military School at Fontainebleau, the School of Artillery and Engineers at Mainz, that of bridges and highways, or civil engineers, the schools for the mines, &c. Speculative, philosophical, or political studies met with little encouragement under Bonaparte's administration. He sneered at all such studies as ideology, and censured them as an idle and dangerous occupation.

The provincial administration of France was now organised upon one uniform plan, and was made entirely dependent on the central power or executive. Each department had a prefect, who had the chief civil authority; he was generally a stranger to the department, received a large salary, and was removed or dismissed at the will of Bonaparte. The mayors of the towns of 5000 inhabitants and upwards were appointed by Bonaparte; those of the communes under 5000 inhabitants, as well as all the members of the municipal councils, were appointed by the respective prefects. Thus all remains of municipal or communal liberty and popular election were quietly abrogated in France. The power possessed in fact by Napoleon was much greater than that of the kings of the old monarchy, as his prefects were not men distinguished by rank and fortune and connections, as the former governors and lieutenant-generals; they owed their whole power to their immediate commissions; they had no personal influence on opinion, and no force except the impulse they received from the chief of the state.

After the peace with England, Bonaparte sent a fleet and an army under his brother-in-law, General Leclerc, to St. Domingo, to reduce the blacks, who had revolted. A dreadful war ensued, which was marked by atrocities on both sides, and ended in the destruction of the French force, and the total emancipation of the blacks. At the same time he re-established the slavery of the blacks in Guadeloupe and Martinique, and authorised afresh the slave trade. By a treaty with Spain, that country gave up Louisiana to France, which France shortly afterwards sold to the United States for fifteen millions of dollars. By another treaty with Portugal, France acquired Portuguese Guiana. In Italy, France took possession of the duchy of Parma, at the death of the duke Ferdinand, in October 1802. She likewise took possession of the island of Elba, by an agreement with Naples and Tuscany. The annexation of Piedmont to France next filled up the measure of alarm of the other powers at Bonaparte's encroachments. Since the victory of Marengo, Piedmont had been provisionally occupied by the French, and Bonaparte had given out hopes that he would restore it to the old king, for whom Paul of Russia evinced a personal interest. He was then still at war with England, and he had formed a scheme of an offensive alliance with Russia at the expense of Turkey, with a view to march a combined army to India. The violent death of Paul having put an end to this scheme, he immediately procured a decree of the senate constituting Piedmont into a military division of the French empire, under a council of administration, with General Menou at the head. Still the ultimate fate of Piedmont remained in suspense, as it was understood that the emperor Alexander interested himself for the king of Sardinia.

But after the assumption of the presidency of the Italian republic, and the annexation of Parma and Elba, and other stretches of power on the side of Holland and the Rhine, at which Alexander openly expressed his displeasure, Bonaparte having no further reason to humour him, a *Senatus Consultum* appeared in September 1802, definitively incorporating Piedmont with the French republic, and dividing it into six departments, Po, Dora, Soasia, Stura, Marengo, and Tanaro. England on her side refused to deliver up Malta, as a Neapolitan garrison would have been a poor security against a sudden visit of the French. Lord Whitworth had a long and stormy conference with Bonaparte at the Tuileries on this subject. The English minister having represented to him that the state of things which the treaty of Amiens had contemplated was completely altered by his enormous accession of power in Italy, Bonaparte peremptorily rejected England's claim to interfere in his arrangements concerning other states; he insisted upon Malta being delivered up to some neutral power; and at the same time did not even disguise his further views upon Egypt. He complained of the attacks of the English press upon him, talked of conspiracies hatched in England against him, which he assumed that the English government was privy to, although Charles Fox himself, who was in opposition to the English minister of the day, had once during his visit to Paris told him with honest bluntness to drive that nonsense out of his head; he complained that every wind that blew from England was fraught with mischief for him; and at last, after an hour and a half of almost incessant talking, he dismissed the English minister to prepare for the renewal of hostilities. (See the instructions given by Bonaparte in his own handwriting to Talleyrand concerning the manner in which he was to receive Lord Whitworth at the last conference between them, in No. IV. Appendix to Sir W. Scott's 'Life of Napoleon.' See also in the 'Mémoires sur le Consulat' by Thibaudeau, the real opinion of Bonaparte concerning the peace of Amiens, expressed by him confidentially soon after the ratification:—"It was but a truce; his government stood in need of fresh victories to consolidate itself; it must be either the first government in Europe, or it must fall.") On the 25th of March 1803, a *Senatus Consultum* placed at the disposal of the first consul 120,000 conscripts. England on her side was making active preparations. On the 18th of May England declared war against France, and laid an embargo upon all French vessels in her ports. In retaliation for this, a decree of the 22nd of May ordered that all the English of whatever condition found on the territory of France should be detained as prisoners of war, under pretence that many of them belonged to the militia. General Mortier was sent to occupy the Electorate of Hanover belonging to the king of Great Britain.

In the following September a decree of the consuls, "in order," as it stated, "to secure the liberty of the press," forbade any bookseller to publish any work until he had submitted a copy of it to the commission of revision. Journals had already been placed under still greater restrictions.

In February 1804, the police discovered that a number of emigrants and Vendéans were concealed at Paris; that General Pichegru, who, after his escape from Guiana, had openly espoused the cause of the Bourbons, was with them, and that he had had some interviews with General Moreau. Georges Cadoudal, the Chouan chief, who had once before submitted to the first consul, was likewise lurking about Paris. Pichegru, Moreau, and Georges were arrested. The real purpose of the conspirators has never been clearly known. Georges, it seems, proposed to take away the life of the first consul, but it was not proved that the rest assented to this. (Bourienne.) It was also reported to Bonaparte that the young Duc d'Enghien, son of the Duke of Bourbon, and grandson of the Prince of Condé, who was living at Ettenheim in the grand-duchy of Baden, was in correspondence with some of the Paris conspirators, and that he was to enter France as soon as the intended insurrection should break out. Bonaparte, worried with reports of plots and conspiracies against him, gave orders to arrest the duke, although on a neutral territory. On the 14th of March a party of gendarmes from Strasbourg crossed the Rhine, entered the Baden territory, surrounded the château of Ettenheim, seized the duke and his attendants, and took him to the citadel of Strasbourg. On the morning of the 18th the duke was put into a carriage, and taken under an escort to the castle of Vincennes, near Paris, where he arrived in the evening of the 20th. A military court of seven members was ordered by the first consul to assemble at Vincennes that very night. The members were appointed by General Murat, commandant of Paris. General Hulin was president. The captain rapporteur, D'Autancourt, interrogated the duke. The charges laid before the court against the prisoner were: that he had borne arms against the French republic; that he had offered his services to the English government; that he was at the head of a party of emigrants assembled near the frontiers of France, and had treasonable correspondence with the neighbouring departments; and lastly, that he was an accomplice in the conspiracy formed at Paris against the life of the first consul. This last charge the duke indignantly denied, and there is not the least evidence that he was implicated in it, nor that he had corresponded with either Pichegru or Georges. (Bourienne.) He was however found guilty of all the charges. The duke expressed a desire to have an interview with the first consul. This however was overruled by Savary, who was present at the trial, though not one

of the members, and who abruptly told the court that it was inexpedient to grant the prisoner's request. The duke was sentenced, by the same court, to death for crimes of espionage, of correspondence with the enemies of the republic, and of attempts against the safety, internal and external, of the state. Savary had orders from Bonaparte to see the sentence carried into execution, which was done that very night, or rather early in the morning of the 21st of March. The duke asked for a priest, which was refused; he then knelt down, and prayed for a minute or two, after which he was led down by torch-light to a postern-gate, which opened into the castle ditch, where a party of gendarmes was drawn up, and a grave had been dug. It was dawn. Savary from the parapet gave the signal for firing. The duke fell dead, and was immediately buried in the dress he had on, without any funeral ceremony. (Savary's 'Memoirs,' and General Hulin's pamphlet in extenuation of his share in the transaction.) It is remarkable that Murat, afterwards King of Naples, when himself under sentence of death, told Captain Stratti, who guarded him, "I took no part in the tragedy of the Duc d'Enghien, and I swear this before that God into whose presence I am soon to appear." (Colletta, 'Storia del Reame di Napoli.') In fact, Murat, as governor of Paris, merely appointed the members of the court-martial according to the orders he received. It is not true that the duke wrote a letter to Bonaparte which was not delivered to him, as Bonaparte himself seems to have believed. (Las Cases and Bourienne.) The apology which Bonaparte made at St. Helena for this judicial murder, was, that he believed the duke was privy to the conspiracy against his life, and that he was obliged to strike terror among the royalists, and put an end to their plots by showing that he was not a man to be trifled with. Joseph Bonaparte in his 'Mémoires,' vol. i. published in 1853, asserts that "the Duc d'Enghien had been executed before the report of his sentence had been communicated to the emperor," but that he assumed the responsibility of the event, lest his denial of it should lay him open to the suspicion of being afraid to avow it. But it is scarcely necessary to say that this statement is contradicted in every part by contemporary evidence.

On the 6th of April Pichegru was found dead in his prison. About the same time, Captain Wright of the English navy, who, having been employed in landing Pichegru and the other emigrants in Brittany, was afterwards captured by the French, and brought to Paris for the purpose of being examined concerning the conspiracy, was likewise reported to have been found dead. The death of these two men is still involved in mystery. Bonaparte has positively denied any knowledge of Captain Wright's death, and has asserted his belief that Pichegru really strangled himself, as it was reported. Yet, even freely admitting the sincerity of his statements, one may suspect that the agents of his police, screened as they were from all public responsibility, might, in their eagerness to serve their master, or rather themselves, have resorted to foul means to get rid of these men when they could not extract from them confessions that would suit their purpose. In Wright's case there might have been special reasons for concealment. Some dark rumours were circulated about Captain Wright having been put to excruciating torture, and it is very possible that Bonaparte himself did not know at that time all the secrets of his prison-houses. There is a remarkable passage in Bourienne, who, when he was French agent at Hamburg, kidnapped a spy, a really bad character, and sent him to Paris, "where," he says, "Fouché no doubt took good care of him." These are ominous words.

The trial of Moreau, Georges, and the others, did not take place for several months after Pichegru's death. Meantime a motion was made in the Tribunal, by one Curée, to bestow upon Napoleon Bonaparte the title of Emperor of the French, with the hereditary succession in his family. Carnot alone spoke against the motion, which however was passed by a great majority on the 3rd of May. The resolution of the Tribunal was then carried to the Senate, where it was unanimously agreed to. It was then submitted to the votes of the people in the departments. Above three millions of the registered votes were favourable, and between three and four thousand contrary. But even before the votes were collected, Napoleon assumed the title of emperor at St. Cloud on the 18th of May 1804. On the 19th he issued a decree appointing eighteen of his first generals marshals of the French empire. Deputations with congratulatory addresses soon began to pour in from the departments, and the clergy followed in the wake.

In the month of June the trial of Moreau, Georges, and the others concerned in the conspiracy, took place before a special court. A decree of the senate had previously suspended for two years the functions of the jury in cases of attempts against the person of Napoleon Bonaparte. Twenty of the accused, with Georges at their head, were condemned to death; Moreau, with four more, to two years' imprisonment; and the rest were acquitted, but the police seized them on coming out of court, and replaced them in prison, at the command of the emperor. Riviere, Polignac, and some others who had been condemned to death, were relieved by Napoleon through the entreaties of his wife and sisters. Georges and some of his more stubborn friends were executed. Moreau had his sentence of imprisonment exchanged for perpetual banishment, and sailed for the United States.

Napoleon requested the pope to perform the ceremony of his coronation. After consulting with his cardinals, Pius VII. determined to

comply with his wish, and came to Paris at the end of November 1804. The coronation took place in the church of Notre Dame on the 2nd of December. The crown having been blessed by the pope, Napoleon took it himself from the altar and placed it on his head, after which he crowned his wife as empress. The heralds then proclaimed the accession "of the high and mighty Napoleon I., emperor of the French," &c. &c.

The Italian republic was soon after transformed into a kingdom. A deputation of the consulta or senate proceeded to Paris in March 1805, humbly requesting Napoleon to accept the ancient iron crown, the crown of Italy, with the condition that the two crowns of France and Italy should remain united only on Napoleon's head, and that he should appoint a separate successor to the Italian kingdom. On the 26th of May the ceremony was performed in the cathedral of Milan by the archbishop of that city. Napoleon seized the iron crown of the old Lombard kings and placed it on his brow, saying, "God has given it to me; woe to him who shall attempt to lay hands on it." He appointed his step-son, Eugene Beauharnais, his viceroy of the kingdom of Italy. On the 7th of June Napoleon opened in person the session of the Italian legislative body. About the same time the Doge of Genoa, Durazzo, repaired to Milan with a deputation of senators, and expressed a wish on the part of the Genoese to be united to the French empire. A decree of Napoleon, 9th of June, united Genoa to France. Soon after the republic of Lucca was transformed into a principality, and given to Elisa, Napoleon's sister, and her husband Baciocchi, to be holden as a fief of the French empire. Thus two more Italian republics disappeared: San Marino alone remained.

In the preceding year (1804) Napoleon had assembled a large force on the shores of the British channel, with a flotilla at Boulogne, and had given it the name of 'the army of England.' The invasion of England and the plunder of London were confidently talked of among his soldiers. After his return from Milan he gave a new impulse to the preparations for the projected invasion, and spoke of it publicly as an attempt resolved upon. His real intentions however have been a matter of much doubt and controversy. Bourienne, who was then still near Bonaparte's person, positively states that he did not entertain any serious view of landing in England; that he was fully aware of the difficulty and risk of such an undertaking; that even had he succeeded in landing 100,000 men, which was no easy matter, he might have lost one-half or two-thirds in taking possession of London; and then, had the English nation persevered, he, not having the superiority at sea, could not have obtained reinforcements, &c. Bonaparte at St. Helena spoke differently. He said he had taken all his measures; he had dispersed his ships all over the sea; and while the English were sailing after them to different parts of the world, his ships were to return suddenly and at the same time; he would have had seventy or eighty French and Spanish ships in the channel, with which he could have remained master of the narrow seas for two months; three or four thousand boats and 100,000 men were ready at a signal. The enterprise was popular with the French, and was supported, Napoleon said, by the wishes of a great number of English. One pitched battle after landing, the result of which could not be doubtful, and in four days he would have been in London, as the nature of the country does not admit of a war of manoeuvres; his army should have preserved the strictest discipline; he would have presented himself to the English people with the magical words of liberty and equality, and as having come to restore to them their rights and liberties, &c. (Las Cases, vol. i., part ii.) It must be observed that all this declamation applies to his preparations towards the end of 1803 and the beginning of 1804, when he was still first consul, and preserved a show of respect for the liberties of the people. To O'Meara he spoke in a rather different strain. Luckily, perhaps for all parties, the trial was not made. While his army was assembled near Boulogne, a new storm burst on the side of Germany.

Austria had remonstrated against the never-ending encroachments of Napoleon in Italy. The Emperor of Russia and Gustavus, king of Sweden, protested against the violation of the German territory on the occasion of the seizure of the Duc d'Enghien; the 'Moniteur' answered them by taunts and jibes against the two sovereigns. By the treaty of Luneville the Italian, Batavian, and Ligurian republics were acknowledged as independent states; but Napoleon had now seized the crown of Italy, had annexed Liguria to France, and both Holland and Hanover were occupied by his troops. Both Russia and Austria complained, but their complaints remained unheeded. A new coalition was formed in the summer of 1805 between England, Russia, Austria, and Sweden. Prussia was urged to join it; she hesitated, increased her armies, but remained neutral, looking forward to the events of the war. Austria, without waiting for the arrival of the Russians, who were assembling on the frontiers of Galicia, marched an army into the electorate of Bavaria; and on the elector refusing to join the coalition, they entered Munich. General Mack, who had given sufficient proofs of incapacity in the field while commanding the Neapolitans in 1798, was by some strange influence placed at the head of the great Austrian army. The Archduke Charles commanded the Austrian forces on the side of Italy. Napoleon directed his army of England to march quickly to the Rhine; other troops from Holland, Hanover, and the interior of France, were ordered to march to the same quarter. He appointed Massena to command the army in Italy.

On the 23rd of September 1805 Bonaparte went in state to the senate, where he delivered a speech in his peculiar style of oratory on the occasion of the war. By constantly throwing all the blame of the war upon the English, by continually representing them as a sort of incarnation of the evil principle ever intent on the ruin of France, Bonaparte succeeded, in a country where great ignorance prevailed on political subjects, and where the press was sure not to contradict him, to create that spirit of bitter and deep animosity against England which continued to exist long after his death. It is curious to read the 'Moniteur' of those times, and to see the extravagant assertions and charges against England with which its columns are filled. ('Recueil de décrets, ordonnances, traités de paix, manifestes, proclamations, discours, &c. de Napoléon Bonaparte et des membres du Gouvernement Français depuis le 18 brumaire en 8 [Novembre 1799], jusqu'à l'année 1812 inclusivement, extraits du Moniteur,' 4 vols. 8vo, 1813, a very useful book of reference.) In one instance the English were gravely accused of having thrown bales of infected cotton on the coast of France in 1804, in order to introduce the plague into that country; and the 'Moniteur' (the official journal) added, "the English cannot conquer us by the sword, they assail us with the plague;" and strange to say, this absurd story was revived in the 'Memoirs of Marshal Ney,' published at Paris in 1832.

Napoleon repaired to Mainz, where he took the command of the grand army, a name which was afterwards always applied to the army while he commanded in person. He also began in this campaign to issue regular bulletins of the events of the war. Coloured as these documents generally are (Bourienne, in his account of the Egyptian war, shows the process by which Napoleon used to frame them), they still constitute a series of important historical papers.

We cannot enter into the details of the campaign of 1805, and we must refer our readers to the professional statements of military men of both sides who were in it, such as Stutterheim's 'Campaign of Austerlitz;' Rapp's 'Memoirs,' &c. Suffice it to say that General Mack allowed himself to be surrounded at Ulm, and then surrendered, on the 17th of October, without fighting, with more than 20,000 men, all his staff, artillery, &c. The other Austrian divisions being now scattered about could make no effectual resistance, and the French entered Vienna on the 18th of November. The Russian army had by this time assembled in Moravia, under the Emperor Alexander in person. Being joined by some Austrian divisions it amounted to about 80,000 men. Napoleon told his soldiers that they were now going to meet a new enemy, "who had been brought from the ends of the world by the gold of England." Alluding to the high character borne by the Russian infantry, he added:—"This contest is of much importance to the honour of the French infantry. The question must be now finally settled whether the French infantry be the first or the second in Europe." The great battle of Austerlitz was fought on the 2nd of December, 1805. The two armies were nearly equal in number. The Russians, confident of success, extended their line too much. Bonaparte broke through it and separated their divisions, which, after a stout resistance, especially on the part of the Russian Guards, were routed in detail. The loss of the allies was tremendous; thousands were drowned in the frozen lakes in the rear of their position. The Emperor of Austria had an interview with Napoleon the day after, and an armistice was concluded, by which the remaining Russian troops were allowed to retire to their own country. Peace between Austria and France was signed at Presburg on the 26th of December. Austria gave up the Venetian provinces and Dalmatia to the kingdom of Italy, Tyrol to the elector of Bavaria, and other districts, besides a contribution of one hundred millions of francs. This war, which was to have checked the preponderance of Napoleon in Italy, left that country entirely at his disposal, and established his influence over a great part of Germany, where, having raised the electors of Bavaria and Wurtemberg to the rank of kings, he placed himself at the head of all the smaller states, which he formed into the confederation of the Rhine under his protection. The old German empire was thus dissolved. Soon after, the Emperor Francis formally renounced his title of Emperor of Germany, and assumed the title of Francis I., emperor of Austria and of his other hereditary states.

It must be observed that the position of Napoleon after the battle of Austerlitz in the heart of Moravia, the winter having set in, and he far from the frontiers of France and from his reinforcements and supplies, the Russians, who were expecting reinforcements, in his front, Prussia wavering on his flank, Bohemia untouched, the Archduke Charles and the Hungarian insurrection in his rear, was extremely critical, had he chosen to protract the war. This of course induced him to grant Austria better terms than what she appeared to have a right to, on a mere superficial view of the condition of the two powers. The Austrian empire was not overthrown because Vienna was in the power of the invader. But Napoleon calculated on the habits and the fears of the Emperor Francis, and on his affection for the citizens of Vienna; and he was not mistaken on this occasion.

The King of Naples, breaking his recent treaty with France, had allowed a Russian and English army to land in his dominions, where they remained useless during the great struggle that was going forward in Germany. Napoleon sent an army to Naples in February 1806; and King Ferdinand took refuge in Sicily. A decree of Napoleon, March 1806, appointed his brother Joseph king of Naples and of Sicily.

On the 6th of June following he appointed by another decree his brother Louis king of Holland, thus transforming by a stroke of the pen the Batavian republic into a kingdom dependent on France. His brother-in-law, Murat, was made grand-duke of Berg.

During his victorious progress in Germany, Napoleon received the news of the total destruction of the French and Spanish fleets by Nelson at the battle of Trafalgar, on the 21st of October 1805. His peevish remark on the occasion is said to have been—"I cannot be everywhere;" and he threw all the blame on his unfortunate admiral, Villeneuve, who soon after killed himself. From this time Napoleon renounced his plans of invading England, and he applied himself to destroy all English trade and correspondence with the continent. Charles Fox, who had succeeded Pitt as minister, was known to be favourable to peace. Negotiations accordingly were entered into by Napoleon, on the basis of the 'uti possidetis.' Lord Yarmouth, and afterwards Lord Lauderdale, were the English negotiators. Napoleon however required that Sicily should be given up to Joseph Bonaparte. But Sicily had never been conquered by the French, it had been throughout the war the ally of England, and, owing to that alliance, its sovereign had lost his continental dominions of Naples. To have bartered away Sicily to France would have been, on the part of England, an act of bad faith equal to if not worse than the former barter of Venice by the French. The English minister refused, and Fox dying soon after, the negotiations broke off.

The conduct of Prussia had been one of tergiversation. Napoleon knew that she had felt the wish, without having the resolution, to strike a blow while he was engaged in Moravia against the Russians. To keep her in good humour he had given Hanover up to her, which Prussia, though at peace with the King of England, scrupled not to accept. She moreover shut her ports against British vessels. Bonaparte, after having settled his affairs with Austria, altered his tone towards Prussia. The 'Moniteur' began to talk of Prussia as a secondary power, which assumed a tone that its extent and position did not warrant. In his negotiations with Lord Lauderdale, Napoleon had offered to restore Hanover to the King of England. The confederation of the Rhine extended round a great part of the Prussian frontiers. The Prussian minister at Paris, Von Knobelsdorf, in a note which he delivered to Talleyrand on the 1st of October, 1806, said truly, "that the king his master saw around his territories none but French soldiers or vassals of France, ready to march at her beck." The note demanded that the French troops should evacuate the territory of Germany. Napoleon answered in a tone of sneer and defiance, saying that "to provoke the enmity of France was as senseless a course as to pretend to withstand the waves of the ocean." The King of Prussia issued a long manifesto from his head-quarters at Erfurt on the 9th of October 1806, in which he recapitulated the long series of Napoleon's encroachments, which all the world was acquainted with, but which the King of Prussia seemed now to discover for the first time. Napoleon was speedily in the field; he attacked the Prussians first, and this time he had on his side a large superiority of numbers, added to his superiority of tactics. The double battle of Auerstadt and Jena (16th of October) decided the campaign. The Prussian troops fought bravely, but their generals committed the same error as the Austrian generals had committed before, of extending too much their line of operations. The consequences of the Prussian defeat were most disastrous. Most of their divisions were surrounded and obliged to lay down their arms. Almost all their strong fortresses—Magdeburg, Spandau, Kustrin, Stettin, Hameln, surrendered without firing a shot. The work of the great Frederic's whole life crumbled to pieces in a few weeks. Blücher and Lestocq were the only officers who kept some regiments together, with which they made a gallant stand in the northern provinces.

Bonaparte entered Berlin on the 21st of October. He dispatched Mortier to occupy Hamburg, and seize all English property there. On the 21st of November 1806, Napoleon issued his well-known Berlin decree against British commerce. "The British islands were to be considered as in a state of blockade by all the continent. All correspondence or trade with England was forbidden under most severe penalties. All articles of English manufacture or produce of the British colonies were considered as contraband. Property of every kind belonging to British subjects, wherever found, was declared lawful prize. All letters to and from England to be detained and opened at the post-offices." The English government retaliated by its orders in council, 11th of November 1807.

Meantime the King of Prussia had fled to Königsberg, and the Russian armies advanced to the Vistula: the French occupied Warsaw. French agents had previously penetrated into Russian Poland, and had spread a report that Kosciusko was at Napoleon's head-quarters. Napoleon had invited Kosciusko, who was then living in Switzerland, to come, but that single-minded patriot, mistrusting the views of the conqueror, declined the invitation.

Napoleon received at his head-quarters at Posen numerous addresses from various parts of Poland, entreating him to restore that country to its independence. His answers were cold and cautious. He began his winter campaign against the Russians by the battle of Pultusk (28th of December), in which the French experiencing a severe check retired towards the Vistula. The month of January 1807 passed without any engagements, but on the 8th of February the great battle

of Eylau was fought between the two grand armies. General Beningsen commanded the Russians. The French made repeated and furious attacks on the Russian infantry, which stood like walls of brass, and the assailants were at last obliged to desist. The battle lasted till near ten o'clock at night. The loss on both sides was dreadful; it has never been correctly ascertained, but has been roughly estimated at 50,000 men. After the battle Napoleon withdrew again to the line of the Vistula, and Beningsen retired towards Königsberg. There was no more fighting between the two armies for more than three months after. The French meantime besieged Danzig, which was defended by the Prussian General Kalkreuth, and surrendered at the end of May 1807. Napoleon having now reinforced his army to 200,000 men, advanced again towards the Russians. On the 13th of June the battle of Friedland took place, in which, after an obstinate struggle, the Russians were at last worsted, and driven beyond the river Aller. They did not lose however either cannon or baggage, and they effected their retreat upon Tilsit near the Russian frontiers.

As Bonaparte and Alexander both wished for peace, an armistice was made, and a personal interview took place between the two emperors on a raft in the middle of the river Niemen on the 25th of June. The two sovereigns after this took up their residence in the town of Tilsit, where the treaty of peace was finally signed. The King of Prussia was restored to about one-half of his former territories, as far as the Elbe. The duchy of Warsaw was given to the Elector of Saxony, who was made a king, and became the faithful ally of Napoleon. The principal Prussian fortresses and sea-port towns were to remain in the hands of the French till the general peace. Russia made no sacrifices; on the contrary, she obtained a part of Prussian Poland. But there were secret articles to the treaty, by which France allowed Russia to take Finland from Sweden, and Russia, on her part, promised to close her ports against British vessels. On the 9th of July Napoleon left Tilsit to return to Paris, where he received the usual tribute of servile addresses and fulsome flattery. On the 19th of August a *Senatus Consultum* suppressed the *Tribunate*, the only remains of a national deliberative body in France. It had been previously reduced to one-half of its original number. Three committees of administration, of legislation, and of finances, taken from the legislative body, discussed the projects of law in lieu of the *Tribunate*.

Having stripped the elector of Hesse Cassel of his dominions, under the plea that he had not joined him in the war against Prussia, as well as the Duke of Brunswick of his, on the ground that the duke had joined Prussia against him, Napoleon created out of these and other districts the kingdom of Westphalia, 18th of August, and gave it to his brother Jerome, who took up his residence at Cassel. Soon after, the prince regent of Portugal having refused to enforce the Berlin decree against England, Napoleon sent Junot with 30,000 men across Spain to take possession of Portugal. At the same time he published in the '*Moniteur*' that "the house of Braganza had ceased to reign in Europe." Junot entered Lisbon without opposition, November 30th, 1807, the prince regent and his court having just before embarked for Brazil. In December of the same year, Napoleon having gone to Milan, sent for the queen of Etruria and her son, and signified to her that she must resign Tuscany, which was immediately occupied by French troops; and in the following June (1808) Tuscany was formally annexed, not to the kingdom of Italy, but to the French empire, of which it formed three new departments. The queen was promised a compensation in Portugal, which she never obtained. On the 17th of December 1807, Napoleon issued from Milan a decree by which all merchant vessels which should submit to the British orders in council were declared to be lawful prizes by the French. In the following year (1808) a number of American vessels were seized and confiscated in the French and Italian ports. The pope was next to feel Napoleon's displeasure. The French troops had for some time occupied Ancona and Civita Vecchia, in order to keep away the English and the Russians; but Napoleon now insisted on the pope declaring war against England. The pope answered that he was a sovereign of peace, and could not declare war against any Christian power. Napoleon said that as the successor of Charlemagne he was emperor of the west, king of Italy, and suzerain of the pope; that the English were heretics, and therefore enemies of the Holy See; and that the donation of Charlemagne had been made to defend the holy church against its enemies: that if the pope did not comply with his wishes he, Napoleon, would take back Charlemagne's grant. We cannot go further here into the long and vexatious correspondence and controversy between Napoleon and the court of Rome, which were carried on for several years, and which form an interesting episode in the general history of those times. ('*Compendio Storico* di Pio VII., Milano, 1824; Botta, '*Storia d'Italia*'; Coppi, '*Annali d'Italia*,' and '*Memorie Storiche del Cardinal Pacca*.') By a decree of the 2nd of April 1808, Napoleon annexed the Marches or Adriatic provinces of the Roman state to his kingdom of Italy. There were other points of dispute between the pope and Napoleon on matters concerning the Concordat with the kingdom of Italy. (See a mild and well-written letter of the viceroy, Eugene Beauharnois, to Pius VII. on this subject in the '*Amministrazione del Regno d'Italia*.') About the same time (February 1808) a French force under General Miollis entered Rome, occupied the Castle St. Angelo, and began to do military duty in that

city. The general took the papal troops under his own command. The pope remained in his palace with the mere shadow of a civil power, which he had no means to enforce.

We now come to another and most important transaction of Napoleon's reign, the invasion of Spain. Spain was the humble and submissive ally of Napoleon: her navy, her army, her treasures were at his disposal. She was at war with Great Britain; she had allowed a free passage to the French troops through her territory to Portugal. Other French divisions had entered Spain as friends in the beginning of 1808, and seized by stratagem the fortresses of St. Sebastian, Pamplona, and Barcelona. At the same time the internal administration of Spain was carried on in a most corrupt and profligate manner. Charles IV., his queen, and the favourite Godoy, had completely disgusted the Spaniards. An insurrectional movement took place at Aranjuez, 20th of March, and Ferdinand, the heir to the crown, who was a favourite with the people, was proclaimed king, and Charles was induced to abdicate. Napoleon founded upon this a pretence for interfering. He invited father, mother, son, and favourite to Bayonne, where he himself repaired in April. Charles and his queen went readily—Ferdinand hesitated; but Napoleon sent Savary, who with many asseverations of his master's honourable and friendly intentions towards him, gradually decoyed the weak prince from stage to stage until he was fairly out of the Spanish territory. A scene of duplicity and dishonesty, of indecent and unnatural recriminations now took place between Napoleon, the old king, the queen, and her son, which for moral turpitude has no parallel in history. Charles resumed his character of king, stigmatised Ferdinand as a rebellious son, the queen joined in reviling and disgracing him at the expense of her own and her husband's honour, and Ferdinand, overwhelmed by insults and threats, renounced his claim to the throne of Spain on the 6th of May. Charles likewise resigned all his rights "in favour of his friend and ally the emperor of the French." Napoleon now issued a decree, appointing "his dearly-beloved brother Joseph Napoleon, king of Naples and Sicily, to the crowns of Spain and the Indies." By a subsequent decree, 15th of July, he appointed "his dearly-beloved cousin, Joachim Murat, grand-duke of Berg, to the throne of Naples and Sicily, which remained vacant by the accession of Joseph Napoleon to the kingdoms of Spain and the Indies." Both these curious documents are signed Napoleon, and countersigned by the minister secretary of state, Maret.

The memorable events which resulted from these nefarious transactions, the occupation of Madrid by Murat, the revolt and subsequent massacre of the people of that city on the 2nd of May, the insurrection which broke out simultaneously in all parts of the Peninsula against the invaders—the heroic though often unfortunate resistance of the Spaniards—the atrocities committed by the French troops, and the cruel retaliations by the Spanish guerrillas—the long murderous war of seven years, from 1808 till 1814, in which the British army acted a conspicuous part—all these may be read in the numerous works written expressly on the subject of the Peninsular war. For the military transactions see Colonel Napier, General Foy, and Major Vacani, and the '*Annals of the Peninsular Campaigns*,' by Captain Hamilton. For the Spanish view of the subject see Count Toreno, '*Historia del Levantamiento, Guerra, y Revolucion de España*,' Madrid, 1835; and Canga Arguelles, '*Observaciones sobre las Historias de Southey, Londonderry, Clarke, y Napier*.' For a general, historical, and political view of Spain during that period, see Southey's '*History of the Peninsular War*,' and compare Thiers, '*Histoire du Consulat et de l'Empire*.' But the work that gives perhaps the best insight into the feelings and conduct of the Spaniards in the various provinces throughout that memorable struggle, is the '*Histoire de la Révolution d'Espagne*,' by Colonel Schepeler, a Prussian officer, who was himself in the Spanish service during the whole time.

During the seven years of the Peninsular war, 600,000 Frenchmen entered Spain at different times by the two great roads of Bayonne and Perpignan. There returned into France at various times about 250,000. The other 350,000 did not return. Making full deduction for those who remained prisoners in the hands of the Spaniards and English, and were afterwards set free at the peace of 1814, the number who perished during that war cannot be estimated at less than 250,000, if it does not approach rather 300,000. (Schepeler and Foy.) The loss of the Spaniards, soldiers and peasants, who were destroyed in detail on almost every spot in the peninsula, cannot be calculated, but it must have been greater than that of the French.

In 1808 Napoleon re-established titles of nobility in France. Lefebvre, who had taken Danzig during the previous year, was the first duke that he created. Many others, both military and civilians, received titles from towns in Italy and Germany, with an income charged upon the revenues or national domains of the conquered countries. Both the titles and the incomes attached to them were made hereditary.

In September 1808 Napoleon repaired to Erfurt to hold conferences with the emperor Alexander. The subject of these conferences remained a secret, but it would seem that the question of Turkey was agitated. Napoleon says that the principal obstacle to a partition of that country was Constantinople. It seems however that he consented to Russia encroaching on the frontier provinces of Turkey, as the Russian troops invaded Moldavia and Wallachia soon after the

conference. On returning from Erfurt, Napoleon told his senate that he and the emperor of Russia were irrevocably united in a bond of alliance.

The English in the meantime had reconquered Portugal, and were advancing to the assistance of the Spaniards. King Joseph had been obliged to leave Madrid, and the French armies had withdrawn behind the Ebro. Napoleon resolved to set out for Spain himself. On the 25th of October he opened in person the session of the legislative body with one of his characteristic speeches:—"The hideous presence of the English leopards contaminates the continent of Spain and Portugal. I go to place myself at the head of my armies, to crown my brother at Madrid, and to plant the French eagles on the ramparts of Lisbon." Two days afterwards he set off for Spain. On the 23rd of November 1808, Napoleon defeated the Spanish troops at Tudela, and on the 4th of December Madrid capitulated. He then set off for Astorga, expecting to intercept Sir John Moore in his retreat. In this however he did not succeed; and leaving the task of pursuing the English to Soult and Ney, he suddenly quitted Astorga, and returned in great haste to France in January 1809.

A new Austrian war was on the point of breaking out. This time Austria came single into the field. She had made astonishing exertions to recruit her armies to the number of nearly half a million of men. Austria had apparently no new personal subject of complaint, except the alarm she naturally felt at the rapid strides of Napoleon towards universal dominion. The Archduke Charles commanded the Austrian army of Germany, and the Archduke John that of Italy. The Austrians crossed the Inn on the 9th of April, and occupied Bavaria and the Tyrol. Napoleon quickly assembled his army beyond the Rhine, repaired to Augsburg, and by one of his skillful manœuvres broke the line of the Austrians, gained the battle of Eckmühl, and obliged the Archduke Charles to retire into Bohemia, leaving the road to Vienna open to the French. (For the details of this campaign see General Pelet, 'Mémoires sur la Guerre de 1809,' 4 vols. 8vo, Paris, 1824-26.) On the 12th of May the French entered Vienna. The archduke now collected his army on the left bank of the Danube. Bonaparte crossed the river to attack him, and the great battle of Aspern took place, 21st of May. The battle remained undecided; but on the following day it was renewed with fury on both sides, when in the midst of the action Bonaparte was informed that the bridge in his rear, which communicated with the right bank of the Danube, had been carried off by a flood. He then ordered a retreat, and withdrew his army into the island of Lobau in the middle of the Danube. The loss of the French was very great: Marshal Lannes was among the generals killed. Napoleon remained for six weeks on the island. Having re-established the bridge, and received reinforcements, he crossed once more to the left bank, when he fought the battle of Wagram, 6th of July, in which he defeated the Austrians, with a tremendous loss on both sides. Still the Austrian army was not destroyed or dispersed, and the Archduke Charles was for continuing the struggle. Other counsels however prevailed, and an armistice was concluded at Znaim, and this led to the peace of Schönbrunn, which was not signed however till the 14th of October. Napoleon had entertained some idea of dismembering the Austrian empire; he had even addressed an invitation to the Hungarians to form an independent kingdom under a native ruler, but this address produced no effect. Germany began to be agitated by a spirit of popular resistance against him; bands of partisans under Schill, the Duke of Brunswick, and others, had appeared; Tyrol was still in arms, and he was not quite sure of Russia. The war in Spain continued with dubious success, and the English had landed a considerable force at Flushing. He thought best therefore to grant peace to Austria on moderate conditions. The Archduke Charles disapproved of the peace, and gave up his command. Austria ceded Trieste, Carniola, and part of Croatia, Salzburg, Cracow, and Western Galicia, and several other districts, to the amount of about two millions and a half of inhabitants. The brave Tyrolese were abandoned to their fate. Hofer and others of their chiefs were seized by the French, taken to Mantua, and there shot.

Whether the subsequent marriage of Napoleon with a daughter of the Emperor Francis was in course of negotiation at the time of the peace of Schönbrunn has been doubted, but soon after his return to Paris he made known to his wife Josephine his determination to divorce her. A painful scene took place on this occasion, which is well described by De Bausset, prefect of the imperial household, in his 'Mémoires Anecdotes sur l'Intérieur du Palais.' Napoleon himself seems to have been sincerely affected at Josephine's grief, but his notion of the necessity of having an heir to the empire subdued his feelings. It is known that from the time of the conferences of Erfurt, and perhaps of Tilsit, he had had in view a marriage with one of Alexander's sisters; and the project had been communicated to the Russian court, but the empress-mother had always objected to it on the plea of difference of religion. The divorce being consented to by Josephine in presence of commissioners from the senate, the act was solemnly passed and registered on the 16th of December 1809. On the 11th of March 1810 Napoleon married by proxy the Archduchess Maria Louisa, who soon after set off for Paris. The marriage ceremony was performed at Paris by Cardinal Fesch.

The years 1810 and 1811 were the period of Napoleon's greatest power. There an interesting report made by Count Montalivet

of the situation of the French empire in 1810, which displays the gigantic extent of its dominions. One passage which refers to Holland is curious. That country was under the government of Louis Bonaparte, who felt really anxious for the welfare of his Dutch subjects, and did not enforce very strictly the continental system, as it was styled, against English trade. This led to frequent reproaches from his imperious brother, who at last resolved to enforce his own decrees himself by uniting Holland to the French empire. (Louis Bonaparte, 'Historical Documents and Reflections on the Government of Holland.') Count Montalivet in his report made use of a curious argument to prepare the people's minds for this measure:—"Holland," he said, "is in reality a continuation of France; it may be defined as being formed out of the alluvia of the Rhine, the Meuse, and the Scheldt, which are the great arteries of the empire." And Champagny, minister for foreign affairs, in a report to the emperor said—"Holland is an emanation of the French empire. In order to possess the Rhine, your majesty must extend your territory to the Zuyderzee." But even the Zuyderzee was not far enough. By a *Senatus Consultum*, 13th December 1810, Holland, Friesland, Oldenburg, Bremen, and all the line of coast to Hamburg, and the country between that town and Lübeck, were annexed to the French empire, of which this new territory formed ten additional departments. The French empire now extended from the frontiers of Denmark to those of Naples, for Napoleon had finally annexed Rome and the southern papal provinces to France. The pope launched a bull of excommunication against Napoleon, upon which he was arrested in his palace on the Quirinal in the middle of the night of the 5th July 1809 by a party of gendarmes who escalated the walls, and was carried off to Savona, where he was kept prisoner until he was removed to Fontainebleau. The papal territory was divided into two departments of the French empire, called of Rome and of the Thyrasimene, of which last Perugia was the head town. Napoleon gave his 'good city of Rome' the rank of second town in the French empire.

Besides the French empire, which, thus extended, reckoned 180 departments and 42 millions of people, Napoleon held under his sway the kingdom of Italy, which included Lombardy and Venice, Modena, Bologna, and the other legations and the marches, with above six millions of inhabitants; also the Illyrian provinces, including Dalmatia, Carniola, and part of Croatia, which formed a separate government. The kingdom of Naples, with about five millions more, was also dependent on his will, as well as the kingdom of Westphalia, the grand-duchy of Berg, &c. The policy of Napoleon towards the countries which he bestowed on his brothers and other relatives was plainly stated by himself to his brother Lucien, in an interview at Mantua in 1811. "In the interior, as well as the exterior, all my relatives must follow my orders: everything must be subservient to the interest of France; conscription, laws, taxes, all must be in your respective states for the advantage and support of my crown. I should otherwise not against my duty and my interest." He would not allow his brothers to identify themselves with their subjects, and to strengthen themselves on their thrones, because he foresaw that it might suit him some day to remove them on the occasion of a general peace, or upon some new scheme of his own. He sacrificed the people of those countries and their interests, as well as the happiness and the greatness of his brothers, to what he conceived to be the interest and the glory of France. ('Réponse de Lucien Bonaparte aux Mémoires de Lamarque.') But even his brothers were reative under this discipline. Louis ran away from his kingdom of Holland: Murat was in continual disputes with his brother-in-law, and Lucien would not accept any crown under such conditions.

As Protector of the Confederation of the Rhine, Napoleon had under his orders the kings of Saxony, Bavaria, and Würtemberg, the Grand Duke of Baden, and the other German princes. He had also under his protection the Helvetic Confederation, which was bound to furnish him with troops, and to follow his policy. Prussia, humbled and dismembered, lay entirely at his mercy. He could thus dispose of more than eighty millions of people. Never, since the fall of the Roman empire, had so great a part of Europe been subject to the will of one man. Austria was his ally through fear as well as by family connection; Russia through prudence and self-interest. In Sweden, General Bernadotte had been chosen Crown Prince, and, after obtaining Napoleon's consent, had repaired to Stockholm. Spain, bleeding at every pore, struggled hard, and apparently with little hope of ultimate success. Britain alone continued to defy his power, and held Sicily and Portugal under her protection. Such was the political condition of Europe at the beginning of 1811. On the 20th of March of that year Maria Louisa was delivered of a son, who was saluted by Napoleon as 'King of Rome,' an ominous title to those Italians who still fancied that the crown of Italy was to be, according to Napoleon's promise, separated from that of France.

In 1811 the first symptoms of coolness between Alexander and Napoleon manifested themselves. The complaints of the Russian landholders against the continental system, which prevented their exporting by sea the produce of their vast estates, had induced Alexander to issue an ukase, 31st of December, 1810, by which colonial and other goods were allowed to be imported into the ports of Russia, unless they appeared to belong to subjects of Great Britain. This last restriction was of course easily evaded, and the trade with England

might be said to be in reality opened again. This was soon made a ground of complaint on the part of Napoleon. The Russian emperor, on his side, complained that his relative, the Duke of Oldenburg, had been dispossessed of his territory contrary to the treaty of Tilsit. A third subject of difference was concerning Poland. Napoleon having, by the peace of Schönbrunn, united western Galicia and Cracow to the duchy of Warsaw, seemed to encourage the prospect of re-establishing the whole of Poland as an independent state. But there was another and a deeper feeling of mistrust and insecurity on the part of the emperor, and the nobility of Russia in general, at the evident assumption of universal dictatorship by Napoleon, especially since his marriage with an Austrian archduchess. At Tilsit he had been willing to share the empire of the world with Russia, but now he would "have no brother near his throne." He summoned Sweden, in an imperious manner, to enforce his decrees against the British trade, while his armed vessels and privateers in the Baltic seized upon fifty Swedish merchantmen, which were confiscated, upon the charge of contraband trade with England. Lastly, in January 1812, General Davoust was sent to take possession of Swedish Pomerania and the island of Rugen. This act of aggression induced the crown prince, Bernadotte, to sign a treaty of alliance with the Emperor Alexander in March 1812. In the interview between these two princes at Abo in Finland, the plan of resistance to Napoleon was settled. Russia had not yet declared war, but she reinforced her armies, waiting to be attacked. Napoleon was pouring troops into Prussia, Pomerania, and the duchy of Warsaw.

Some of the older and wiser counsellors of Napoleon had the courage to remonstrate with him, not on the injustice, but on the impolicy of this new act of aggression. But he was proof against all remonstrance. It was his destiny he said to make one nation out of all the European states, and Paris must be the capital of the world. Even in calmer times, and after the full experience of disappointment, we find him confirming the sentiments he had now freely expressed. After his return from Elba, he said to Benjamin Constant, "I desired the empire of the world, and who in my situation would not? The world invited me to govern it; sovereigns and subjects vied with each other in bending before my sceptre. I have rarely found any opposition in France." And later, at St. Helena, "If I have been on the point of accomplishing the universal monarchy, it was without any original design, and because I was led to it step after step. The last effort wanting to arrive at it seemed so trifling, was it unreasonable to attempt it?" (*Las Cases*, vol. i.)

The events of the memorable Russian campaign of 1812 are known to the world. We can only refer our readers to the works of Segur, and of Colonel Boutourlin, aide-de-camp to the emperor Alexander; to the memoirs of Oginski; and to the Italian account of Captain Laugier, 'Gli Italiani in Russia'; and the histories of Thiers, Alison, &c. By consulting these various authorities, a sum of very correct information concerning that stupendous catastrophe may be obtained.

Before Napoleon set off from Paris for the Russian expedition, he directed Maret, duke of Bassano, to write a letter to Lord Castlereagh proposing negotiations for peace, on the basis of the 'uti possidetis.' He was willing this time to let Sicily remain under Ferdinand, and Portugal under the house of Braganza, but he insisted on Spain being secured to his brother Joseph. It must be observed that Lord Wellington had just taken possession of Badajos and Ciudad Rodrigo, and was advancing into Spain towards Madrid, which he shortly after entered upon gaining the battle of Salamanca. The English minister immediately replied, that England's engagements with the Spanish Cortes, acting in the name of King Ferdinand VII., rendered the acknowledgment of Joseph impossible.

The Russian minister, Prince Kourakin, still remained at Paris. Early in May he presented an official note to the Duke of Bassano, stating that the matters in dispute between the two empires might easily be made the subject of amicable negotiations, provided the French troops should evacuate Pomerania and the duchy of Warsaw, where they could be for no other purpose than that of threatening the frontiers of Russia. Napoleon pretended to be exceedingly angry at this demand, which he said was insolent; adding, that he was not used to be addressed in such a style, and to have his movements dictated by a foreign sovereign; and he sent Prince Kourakin his passports. On the 9th of May he himself set off with his empress for Dresden, where he had invited the kings of his own creation—Bavaria, Würtemberg, Saxony, Westphalia—and his other tributaries to meet him. The emperor of Austria also repaired to Dresden with his empress. The king of Prussia came too, as he had just signed a treaty with Napoleon, by which he placed 20,000 men at his disposal in the approaching campaign. Austria agreed to furnish 30,000 men to act against Russian Poland. Napoleon sent the Count de Narbonne to Wilna, where the emperor Alexander then was, to invite him to come to Dresden, but Alexander declined. After brilliant festivals, Napoleon quitted Dresden for Thorn, where he arrived on the 2nd of June. His immense army was assembled chiefly between the Vistula and the Niemen, which latter river formed the boundary of the Russian empire. There were 270,000 French, 80,000 Germans of the Confederation of the Rhine, 30,000 Poles under Prince Poniatowski, 20,000 Italians under Eugene, and 20,000 Prussians. On the 22nd of June Napoleon issued a proclamation to his soldiers, saying, "that the

second war of Poland had begun. The fate of Russia must be fulfilled. Let us cross the Niemen, and carry the war into her own territory," &c. On the 24th and 25th of June Napoleon's army, in three large masses, crossed the Niemen, and entered Lithuania without meeting with any opposition. The Russian army, under General Barclay de Tolly, 120,000 strong, evacuated Wilna, and retired to the banks of the Dwina. Another Russian army, 80,000 strong, under Prince Bagration, was stationed near the Dnieper. On the 28th of June Napoleon entered Wilna, where he remained till the 16th of July. He there received a deputation from the diet of the duchy of Warsaw, entreating him to proclaim the union and independence of Poland. Napoleon's answer was still cold and cautious. He told them that he had guaranteed to the emperor of Austria the part of Poland he still retained; that for the rest they must depend chiefly on their own efforts.

In the meantime the French soldiers treated Lithuania as an enemy's country. The provisions ordered by Napoleon to follow his army not having arrived, and the Russians having removed all the stores, the French and German soldiers went about marauding, plundering alike the mansions of the nobility and the huts of the peasants, feeding their horses on the green corn, violating the women, and killing those who resented such treatment. (Oginski and Segur.) Lithuania, a poor and thinly-inhabited country, which had suffered from the bad harvest of the preceding year (1811), was utterly devastated. At the same time disorganisation and demoralisation spread fearfully through the enormous masses of the invaders; disease thinned their ranks; 25,000 patients were crowded within Wilna in a few weeks, where there was not accommodation for one-third of their number; heavy rains rendered the roads impassable, and 10,000 horses were lost.

After partial engagements at Mohilow and Witepsk, the Russians continued their retreat upon Smolensk, in the interior of Russia. Napoleon determined to follow them. "Forward marches alone," he observed, "can keep such a vast army in its present condition together; to halt or retire would be the signal of dissolution. It is an army of attack, not of defence; an army of operation, not of position. We must advance upon Moscow, and strike a blow in order to obtain peace, or resting quarters and supplies." (Segur.) He crossed the Dnieper, and entered Russia Proper with about 180,000 men, leaving a body of reserve at Wilna and the corps of Macdonald on the Dwina, towards Riga. In his march through Lithuania no less than 100,000 men had dropped off from his ranks, and were either dead or sick, or had been taken prisoners by the Cossacks, or were straggling and marauding about the country.

On the 16th of August the two hostile armies met under the walls of Smolensk. But the Russians, after carrying off or destroying the provisions, and allowing time to the inhabitants to remove themselves, evacuated Smolensk, which their rear-guard set on fire. They continued their retreat upon Moscow, and Napoleon followed them. The battle of Borodino, near the banks of the river Moskwa, was fought on the 7th of September. The two armies were nearly equal in numbers, 120,000 each. After a dreadful slaughter on both sides, the Russian general sounded a retreat, and the French were left in possession of the bloody field; but the French took hardly any prisoners or guns: 15,000 Russians and about 10,000 Frenchmen lay dead. Next day the Russian army continued its retreat; and on the 14th of September it traversed the city of Moscow, which most of the inhabitants had already evacuated. On the same day the French entered Moscow and found it deserted, except by the convicts and some of the lowest class, who lingered behind for the sake of plunder. On the evening of this day a fire broke out in the coachmakers' street, but it was put down in the night. On the next day Napoleon took up his residence in the Kremlin, the ancient palace of the Czars. On the following night the fire burst out again in different quarters of the city, and no exertions of the French could stop it: the wind spread the flames all over the city, and on the third day Napoleon was obliged to leave the Kremlin, where he stood in imminent danger. The fire raged till the 19th, when it abated, after destroying 7682 houses—about four-fifths of the city. This burning of Moscow has been attributed to a premeditated plan of the Russians; but on the other hand Count Rostopchin, the governor, has denied this positively. "Several individuals," he says, "set fire to their own houses rather than leave them in possession of the invaders; and the French soldiers, seeking for plunder or for wine and spirits in the cellars, where they got intoxicated, did the rest." ('*La Verité sur l'Incendie de Moscou*,' par le Comte Rostopchin, Paris, 1823.)

The markets of Moscow used to be supplied, not from the immediate neighbourhood, but from a considerable distance in the interior, and especially from the southern districts towards Kaluga, where the Russian army was now posted. The French therefore could get no provisions, and they were obliged to live chiefly on the flesh of their horses, which was salted down. Napoleon remained among the ruins of Moscow for five weeks. He had sent Lauriston to the Russian head-quarters with a letter for the Emperor Alexander; the letter was forwarded to St. Petersburg, but no answer was returned. Napoleon was deceived in his calculations upon the temper of Alexander, and of the Russian people. At last, on the 19th October, seeing no chance of making peace, Napoleon began his retreat. The weather was fine and moderately cold. He attempted first to retire by Kaluga, where

he expected to find provisions, but the stout resistance he met at Malo Yaroslavets induced him reluctantly to turn again to the road by Varezia and Viazma to Smolensk, by which he had advanced. He was closely followed by the Russian army, but was more especially harassed by swarms of Cossacks under the Hetman Platoff. His rear divisions had sharp engagements at Viazma and at the passage of the Wop. His army dwindled away apace, through fatigue, privations, and the constant attacks of the Cossacks. It had left Moscow 120,000 strong, but was now reduced to one-half that number of fighting men; the rest formed a confused and disorderly mass in the rear, with an immense train of baggage and artillery. In this condition they were overtaken on the 6th November by the Russian winter, which that year set in earlier than usual. The emaciated frames of soldiers and horses could not resist this fresh enemy, and they dropped by thousands on the road, where they were soon buried under the snow. The bitter frosty nights killed thousands more; but the winter only completed the destruction of the army, which had begun during the advance in the summer. The wretchedness and the sufferings of the retreat from Moscow must be read in the works already referred to. The French at last reached Smolensk, where they found their stores, which had come up so far. Many had not tasted a piece of bread or biscuit since they had advanced through that town three months before. On the 14th of November Napoleon left Smolensk with about 40,000 men able to carry arms. His rear divisions had now to sustain repeated attacks from the Russians, and when he arrived at Orca, in Lithuania, he had only 12,000 men with arms in their hands. Of 40,000 horses there were hardly 3000 left. In this plight he reached the banks of the Berezina, where he was joined by a corps of reserve of nearly 50,000 men under Victor and Oudinot. The passage of the Berezina, on the 26th and 27th of November, cost him about one-half of his army thus reinforced.

On the 3rd of December Napoleon arrived at Malodeczno, whence he issued the famous 29th bulletin, which came like a clap of thunder to awaken Europe. This time he told the whole truth in all its sternness; except the guards, he had no longer an army. At Smorgoni, where he arrived on December the 5th, he took leave of his generals, left the command of the army, such as it was, to Murat, and set off in a sledge with Caulaincourt to return to Paris. He arrived at Warraw on the 10th, where he had that curious conversation with De Pradt, which the latter has so humorously related. Continuing his route, he passed through Dresden on the 14th, and arrived at Paris on the 18th of December at night. The remains of his unfortunate army were collected by Murat on the line of the Vistula. The report of the chief of the staff, Berthier, dated 16th December, gives a dismal picture of the state of the troops after Napoleon left them:—"The plunder, insubordination, and disorganisation have reached the highest pitch." The loss of the French and their auxiliaries in this campaign is reckoned by Boutourlin at 125,000 slain, 132,000 dead of fatigue, hunger, disease, and cold, and 193,000 prisoners, including 3000 officers and 48 generals. The 'St. Petersburg Gazette' stated that the bodies burnt in the spring after the thaw, in Russia proper and Lithuania, amounted to 308,000, of which of course a considerable proportion were Russians. In the Berezina alone, and the adjoining marches, 36,000 dead bodies were said to have been found. The French left behind 900 pieces of cannon and 25,000 waggons, caissons, &c.

Napoleon, after his return to Paris, exerted himself to recruit his army by fresh conscriptions, by drafting the national guards into his skeleton battalions, by recalling all the men he could spare from Spain, and by sending the sailors of his fleet to serve on land. He thus collected again in Germany, in the spring of 1813, an army of 350,000 men. The king of Prussia had now allied himself to Alexander, and the allies had advanced as far as the Elbe. Austria remained neutral; she offered her mediation, but Napoleon would hear of no cession on his part, in either Germany, Italy, or Spain. He soon after repaired to Germany, where he fought and won the battle of Lutzen, 2nd of May 1813, from the Russians and Prussians united. On the 21st he attacked them again at Bautzen, and compelled them to retreat. But these victories led to no decisive results; the allies retired in good order, and lost few prisoners and no guns. Bonaparte bitterly complained of this; and his generals observed to each other, that these were no longer the days of Marengo, Austerlitz, or Jena, when one battle decided the fate of the war. On the 22nd of May, in another engagement with the retreating allies, Duroc, his old and most faithful companion, who was one of the few personally attached to him, was struck by a cannon-ball and dreadfully mangled. The dying man was taken to the house of a clergyman near the spot. Napoleon went to see him, and was deeply affected. It was the only instance in which he refused to attend to the military reports which were brought to him. "Every thing to-morrow," was his answer to his aides-de-camp. He had a few days before lost another of his old brother-officers, Bessieres.

An armistice was now agreed to on the 4th of June, and Bonaparte returned to Dresden, where Metternich came with fresh offers of mediation on the part of Austria. Austria proposed as a principal condition that Germany should be evacuated by the French arms, and the boundaries of the French empire should be fixed at the Rhine, as Napoleon himself had repeatedly declared. But Napoleon would not

hear of giving up the new departments which he had annexed as far as Hamburg and Lubeck, nor would he resign the protectorate of Germany. This led to a warm discussion, in which Napoleon said he only wished Austria to remain neutral while he fought the Russians and Prussians, and he offered to restore to her the Illyrian provinces as the price of her neutrality. Metternich replied that things had come to that pass that Austria could no longer remain neutral; she must be either with France or against France; that Germany had been long enough tormented by these wars, and it was time she should be left to rest and to national independence. The conferences however were carried on at Prague without coming to any agreement; and in the midst of this the armistice expired on the 10th of August, and Austria joined the allies.

A series of battles was fought about Dresden on the 24th, 25th, and 27th of August, between the Austrians and Prussians on one side and the French on the other, in which the latter had the advantage; but in pursuing the allies into Bohemia, Vandamme, with a corps of 30,000, was surrounded and made prisoner with 8000 men at Culm. Oudinot was likewise worsted at Gross Beeren by the Swedes and Prussians under Bernadotte. Ney, who was sent by Napoleon to replace Oudinot, lost the battle of Dennewitz on the 6th of September, near Berlin. On the Katzbach, in Silesia, Blucher routed the French opposed to him. The month of September passed in this desultory warfare, Napoleon's armies losing ground and strength on every side. Bavaria made a separate peace with Austria. The Saxons and other German troops began to forsake the French cause. At last, after a painful struggle between pride and necessity, Napoleon was obliged to begin his retreat upon Leipzig, followed by the allies. At Leipzig he determined to make a final stand. "One victory alone," he said, "and Germany might still be his." On the 16th of October the first battle of Leipzig took place. It was fought gallantly on both sides, but the allies had now a great superiority in numbers, and the French were driven close upon the ramparts of the town. The 17th passed without fighting; on the 18th the battle was renewed, the French divisions lost ground, and a body of 10,000 Saxons left them and went over to the enemy. Napoleon now made his dispositions to effect his retreat towards the Rhine. But while his army was filing out of Leipzig by a long bridge, or rather a succession of bridges, in the morning of the 19th, the allies forced their way into the town after a desperate resistance, and the bridge being blown up, 25,000 Frenchmen were obliged to surrender prisoners of war. The retreat from Leipzig was nearly as disastrous to Napoleon as that from Moscow. His army was completely disorganised. He was however able to fight his way at Hanau, 30th of October, through the Bavarians, his late allies, who now wanted to oppose his passage. At last he reached the Rhine, and passing over the 70,000 or 80,000 men, all that remained out of an army of 350,000 with which he had begun the campaign, he placed them on the left bank, while he set off for Paris, where he arrived on the 9th of November. About 80,000 men left in the Prussian garrisons, Magdeburg, Danzig, Stettin, &c., surrendered to the allies.

The enormous losses and reverses of the French armies, and the approach of the allies to the frontiers of France, produced a strong feeling of dissatisfaction in that country. The legislative body showed for the first time a spirit of opposition to the headlong system of Napoleon. A committee was appointed to draw up a report on the state of the nation; Raynouard, Lainé, Gallois, and other members who had a character for independence, were of the committee. The report which they laid before the legislative body, 28th of December 1813, expressed a desire for peace consistent with the honour and the welfare of France, and a wish to know what steps the emperor had taken to attain so desirable an object, and it ended by saying that "while the government will take the most effective measures for the safety of the country, his Majesty should be entreated to maintain and enforce the entire and constant execution of the laws which ensure to the French citizens the rights of liberty, property, and security, and to the nation the free exercise of its political rights." The legislative body by a large majority ordered the report to be printed. This was a language which Napoleon had not been used to. He immediately ordered the doors of the hall of the legislative body to be closed and guarded by soldiers, and the copies of the report to be seized at the printers. On the 31st an imperial decree adjourned the legislative body. On the 1st of January 1814, several members of the legislative body having appeared at his levee, he gave vent to his ill-humour in a violent address, told them that they were not the representatives of the nation, but only the representatives of the individual departments; that he was the only representative of the people; that their report and the address founded upon it were seditious; that they ought not thus publicly to have commented on his conduct; and he ended by saying, "France stands more in need of me than I stand in need of France." The senate, more subservient, had already passed a decree for a new conscription of 300,000 men, including all those who had escaped the conscriptions of former years. The taxes were at the same time ordered to be doubled; but the people were weary of these never-ending sacrifices, and in many departments it was found difficult to collect either men or money. Napoleon's disposable army on the Rhine amounted to no more than from 70,000 to 80,000 men. He had to contend with twice that number, besides numerous reinforcements which were hastening through Germany. Meantime conferences were

held at Chatillon, in which the allies proposed to fix the limits of France as they were in 1792, that is to say, with the exclusion of Belgium; but Napoleon would not listen to this. It was his last chance of peace. At the end of January 1814, Napoleon began the campaign which has been considered by tacticians as that in which he most strikingly displayed his astonishing genius for military combinations, fertility of resources, and quickness of movements. For more than two months he held at bay the various armies of the allies; now beating one corps, and then flying to attack another; at times severely checked himself, and yet recovering his strength the next day. ('Memoirs of the Operations of the Allied Armies in 1813-14,' London, 1822; and Koch, 'Memoires pour servir à l'Histoire de la Campagne de 1814.')

But the odds were too many against him. While he by a bold movement placed himself in the rear of the allies, the latter marched upon Paris, and after a hard-fought battle, 30th of March, took possession of the whole line of defence which protected that city on the north-eastern side. The empress had left it for Blois, and Joseph Bonaparte, after the battle of the 30th, quitted Paris also. Marshal Marmont asked for an armistice, and this led to the capitulation of Paris, which the Emperor Alexander and the King of Prussia entered on the 31st, amidst the acclamations of the Parisians. Napoleon hearing of the attack upon Paris had fallen back to the relief of the capital, but it was too late. He met near Fontainebleau the columns of the garrison, which were evacuating the city. His own generals told him that he ought now to abdicate, as the allied sovereigns had declared that they would no longer treat with him. Meantime a decree of the senate declared that Napoleon Bonaparte, in consequence of sundry arbitrary acts and violations of the constitution (which were specified and classed under various heads in the preamble to the decree), and by his refusing to treat with the allies upon honourable conditions, had forfeited the throne and the right of inheritance established in his family, and that the people and the army of France were freed from their oath of allegiance to him. A provisional government was formed, consisting of Talleyrand, Bournonville, Dalberg, and others. Upon this, Bonaparte, after much reluctance, and upon his generals refusing to join him in a last desperate attempt upon Paris, which he meditated, signed the act of abdication at Fontainebleau on the 4th of April, 1814. In this first act there was a reservation in favour of the rights of the empress and of his son. By a second act however he 'renounced unconditionally' for himself and his heirs the throne of France and Italy. The emperor Alexander proposed that he should retain the title of emperor with the sovereignty of the island of Elba, and a revenue of six millions of francs to be paid by France. This was agreed to by Prussia and Austria; and England, though no party to the treaty, afterwards acceded to it. On the 20th of April, Napoleon, after taking an affectionate leave of his generals and his guards, left Fontainebleau for Elba. He ran some danger from the populace in passing through Provence, but arrived safe at Frejus, where he embarked on board the British frigate 'Undaunted,' and on the 4th of May landed at Porto Ferrajo, in the island of Elba.

Napoleon remained in the island of Elba about ten months. At first he seemed reconciled to his lot, set about making roads, improving the fortifications, &c.; but after some months he was observed to become more reserved, gloomy, and frequently absent and lost in thought. He was in fact at the time engaged in secret correspondence with his friends in France and Italy. During so many years of supreme power, attended by most splendid successes, he had formed of course many adherents; men whose fortune was dependent on his; most of whom had lost their emoluments and prospects by his fall: the bold and aspiring, the reckless and restless, saw no further prospect of conquest and new organisation of foreign states, which left at Napoleon's disposal thousands of offices and situations with which to reward his partisans. The old soldiers, to whom the camp had become a home, regretted him who used to lead them from victory to victory, affording them free quarters, a continual change of scenery, and pleasant cantonments in the finest cities of Europe. His brothers, sisters, and other relatives, all rich, some still powerful, as Murat at Naples, felt that by his fall they had lost the main prop of their family. On the other side, the restored Bourbons had committed grave faults, and had listened too much to the old emigrants by whom they were surrounded; and lastly, France in general had been too long in a state of violent excitement to subside at once into quiet and contented repose. Many of the subordinate agents of the police, post-office, and other departments, were in Napoleon's interest. A wide conspiracy was formed, the old republicans joined the Bonapartists, and Napoleon was invited to return to France. (See in Fleury de Chabulon's 'History of the Hundred Days,' an account of the intrigues carried on with Elba.)

On the 26th of February 1815, Napoleon embarked with about 1000 men of his old guards, who had followed him to Elba, and landed on the 1st of March at Cannes, not far from Frejus. At Grenoble, the first defection of the army took place: Colonel Labedoyere, commanding the 7th regiment of the line, joined Napoleon; the rest of the march to Paris was a triumphant one. The Bourbons were abandoned by the whole army; and Marshal Ney, sent by Louis XVIII. to stop Napoleon's progress, went over to him; Macdonald and Marmont, and several other marshals, remained faithful to the oath they had taken

to the king. Augereau also kept aloof from Napoleon; but the Bourbons had no troops they could depend upon. Napoleon arrived at the Tuileries on the 20th of March, Louis XVIII. having left the capital early in the morning by the road to Flanders. Napoleon's return to Paris was accompanied with the acclamations of the military and the lower classes; but the great body of the citizens looked on astounded and silent: he was recalled by a party, but evidently not by the body of the nation.

The Congress of Vienna was still sitting, when Talleyrand laid before them the news of Bonaparte's landing at Cannes. They immediately agreed to join again their forces, in order to frustrate his attempt, and to maintain entire the execution of the treaty of Paris, of the 30th May 1814, made with France under the constitutional monarchy of the Bourbon dynasty. The Austrian, Russian, and Prussian armies, which had evacuated France, resumed their march towards the frontiers of that country.

Napoleon found, on his return to Paris, that he could not resume the unlimited authority which he had before his abdication. The republicans and constitutionalists who had assisted, or not opposed his return, with Carnot, Fouché, Benjamin Constant, and his brother Lucien at their head, would support him only on condition of his reigning as a constitutional sovereign; he therefore proclaimed a constitution under the title of 'Acte additionnel aux Constitutions de l'Empire,' which greatly resembled the charter granted by Louis XVIII. the year before. There were to be an hereditary chamber of peers appointed by the emperor, a chamber of representatives elected by the electoral colleges, and to be renewed every five years, by which all taxes were to be voted; ministers were to be responsible; judges irremovable; the right of petition was acknowledged, and property was declared inviolable. Lastly, the French nation was made to declare, that they would never recall the Bourbons; deputies from the departments came to Paris to swear to the additional act, at the Champ de Mai, as it was called, although held on the 1st of June. The emperor and his brothers were present at the ceremony.

The chambers opened on the 4th of June, while Napoleon prepared to march towards the frontiers of Flanders, where the allied English and Prussian armies were gathering. He assembled an army of about 125,000 men, chiefly old troops, of whom 25,000 were cavalry, and 350 pieces of cannon, with which he advanced upon Charleroi on the 15th of June. Ney, Soult, and Grouchy held commands under Napoleon. On the 16th Napoleon attacked in person Marshal Blücher, who was posted with 80,000 men at Ligny, and drove him back with great loss. At the same time he sent Ney against part of the English army at Quatre Bras, which, after sustaining a severe attack, retained possession of the field. In the morning of the 17th the Duke of Wellington, in consequence of Blücher's retreat, fell back with his army to the position of Waterloo. Napoleon followed him, after despatching, on the 17th, Grouchy, with a body of 30,000 men, to follow the retreat of the Prussians. (Grouchy, 'Observations sur la Relation de la Campagne de 1815, par le General Gourgand,' Philadelphia, 1818.) On the 18th the famous battle of Waterloo was fought. Napoleon's army on the field was about 75,000 men, and Wellington's force opposed to him consisted of 54,000 men actually engaged at Waterloo, the rest, about 16,000, being stationed near Hal, and covering the approach to Brussels on that side. There were 32,000 British soldiers, including the German Legion; the rest was composed of Belgians, Dutch, and Nassau troops. The events of the battle are well known. The French made several furious attacks with infantry and cavalry upon the British line, gained some advantages, took possession of La Haye Sainte, but all the efforts of their cavalry could not break the British squares. In these repeated attacks the French cavalry was nearly destroyed. At six o'clock Bulow's Prussian corps appeared on the field of battle, and soon after Blücher came in person with two more corps. Napoleon now made a last desperate effort to break the English line, before the Prussians could act: he directed his guard, which had not yet taken part in the action, to advance in two columns against the English. They were received with a tremendous fire of artillery and musketry; they attempted to deploy, but in so doing became confused, and at last gave way. Napoleon, who was following with his eye, through a spy-glass, the motions of his favourite guards, turned pale and exclaimed, "They are mixed together!" and galloped off the field. (See and compare the various accounts of the battle of Waterloo, by English, French, and Prussian military writers; among the rest, Captain Pringle of the Engineers; Captain Batty; Baron Muffling, under the assumed initials of C. de W., 'Histoire de la Campagne de l'armée Anglaise et de l'armée Prussienne en 1815,' Stuttgart, 1817; Gourgand, 'Narrative of the War of 1815,' with Grouchy's important comments upon it; Foy, 'Campagne de 1815,' Napoleon's own account in Montholon and Las Cases, and in the 'Mémoires Historiques,' published by O'Meara; Ney, 'Letter to the Duke of Otranto,' Paris, 1815; Rogniat's account of the battle, and the accounts in the various English and French histories.)

The astonishing firmness of the British infantry (to which several French generals, and Foy among the rest, have paid an eloquent tribute of praise) gained the day. Bonaparte's army fled in dreadful confusion, pursued by the Prussians, and lost cannon, baggage, and all. The loss of the English was 15,000 men in killed and wounded. On the same day Grouchy was engaged at Wavre, 13 miles distant, with

one division of the Prussian army, which gave him full employment, while the other Prussian divisions were marching on to Waterloo. His orders were to follow the Prussians, and attack them wherever he met them. (Grouchy, 'Observations.') Napoleon seems to have underrated the strength of the Prussians, when he thought Grouchy's corps sufficient to keep in check the whole of their army.

The battle of Waterloo finally closed a war, or rather a succession of wars, which had lasted with little interruption for twenty-three years, beginning with 1792. As to these wars, Napoleon is only strictly accountable for those that took place after he had attained supreme power in France; in some of them, such as those of Spain and of Russia, he was decidedly the aggressor. Whether he did not likewise give sufficient provocation to those which Austria, England, and Prussia waged against him, the reader must judge for himself. His determination to be the dictator, the umpire of all Europe, left no chance of national independence to any one country. Had he subjected all Europe, he would have reverted to his old scheme of the conquest of the east. Even his peace establishment, supposing him ever to have been at peace, was to consist of an army of 800,000 men, besides 400,000 of reserve. (Menthon's 'Memoirs of Napoleon,' vol. i.) During the ten years of the empire, he raised by conscription two millions one hundred and seventy-three thousand men, of whom two-thirds, at the least, perished in foreign lands or were maimed for life.

After the defeat of Waterloo, Napoleon having given his brother Jerome directions to rally the remains of his army, hurried back to Paris. The house of representatives declared itself permanent, and demanded his abdication. Lucien appeared before the house, and spoke eloquently of the former services of his brother, and of the claims which he had on the gratitude of France. "We have followed your brother," answered Lafayette, "over the sands of Africa, and through the frozen deserts of Russia; the whitened bones of Frenchmen scattered over every part of the globe bear witness to our long fidelity to him." Lucien made no impression on the assembly. He advised his brother to dissolve the chamber; Napoleon refused: "It would be the signal," he said, "of civil war." The house of peers had adopted the same views as the lower house. There was but one man, it was openly stated, between France and peace. Napoleon signed his second abdication on the 22nd of June; but this time it was of his own accord, and against the advice of his intimate friends, Carnot, Lucien, &c. ('Réponse de Lucien aux Mémoires de Lamarque.') The abdication was in favour of his son, Napoleon II. A provisional government was appointed by the chambers, and they required that Napoleon should leave France, and embark at Rochefort for the United States. General Becker was appointed to escort him to Rochefort, where he arrived on the 3rd of July. All this did not take place however without many violent altercations in the chambers, and much reluctance on the part of Napoleon. The allies, who entered Paris on the 7th of July, refused to acknowledge Napoleon's right to abdicate in favour of his son, and on the following day Louis XVIII. re-entered the capital and resumed the government.

Napoleon at Rochefort, seeing that the whole country around him was submitting to the Bourbons, and finding that he had no chance of escaping by sea, through the vigilance of the English cruisers stationed along the coast, sent Count Las Cases and Savary to Captain Maitland, who commanded the English ship 'Bellerophon,' to ask for leave to proceed to America, either in a French or a neutral vessel. Captain Maitland replied, "That his instructions forbade this; but that if Napoleon chose to proceed to England he would take him there on board the 'Bellerophon,' without however entering into any promise as to the reception he might meet with there, as he was in total ignorance of the intentions of the British government as to his future disposal." (Captain Maitland's statement of the whole transaction.) This offer was made by Captain Maitland in his second interview with Las Cases, on the 14th of July; and Napoleon had already, the day before, written a letter, addressed to the Prince Regent of England, saying that "he came like Themistocles, to claim the hospitality of the British people, and the protection of its laws." Captain Maitland offered to dispatch General Gourgaud to England with this letter immediately, repeating at the same time to him "that he was not authorised to stipulate as to the reception of Bonaparte in England, where he must consider himself at the disposal of the prince regent." On the 15th Napoleon went on board the 'Bellerophon' with his suite: as Captain Maitland advanced to meet him on the quarter-deck, Napoleon said to him, "I come to place myself under the protection of your prince and your laws." On the 24th the ship entered Torbay. On the 31st of July Admiral Lord Keith and Sir Henry Bunbury, under secretary of state, came on board the 'Bellerophon,' to announce to him the final resolution of the British government—that the island of St. Helena should be his future residence. Napoleon protested against this determination; said he was not a prisoner of war; that he came as a voluntary passenger on board the 'Bellerophon'; that he wished to be allowed to remain in England as a private citizen, &c. On the 6th of August however Napoleon frankly acknowledged to Captain Maitland, that "he had certainly made no conditions on coming on board the 'Bellerophon,' that he had only claimed hospitality, and that he had no reason to complain of the captain's conduct, which had been that of a man of

honour." On the 7th Napoleon removed from the 'Bellerophon' to the 'Northumberland,' Sir George Cockburn's flag-ship, which was appointed to carry him to St. Helena. (For the particulars of Bonaparte's voyage, his landing at St. Helena, his residence, first at Briars and afterwards at Longwood, of his altercations with Sir G. Cockburn, and afterwards with Sir Hudson Lowe, we must refer our readers to the minute work of Count Las Cases, and the 'History of the Captivity of Napoleon at St. Helena, from the Letters and Journals of the late Lieut.-Gen. Sir Hudson Lowe,' 3 vols. 8vo, 1853.) He landed at St. Helena on the 16th of October 1815.

By a convention signed at Paris, 20th of August 1815, between Great Britain, Austria, Russia, and Prussia, the custody of Napoleon's person was intrusted to the British government, and commissioners were appointed by Russia, Austria, and France to reside at St. Helena to look after his safe detention. In July 1816, General Sir Hudson Lowe arrived at St. Helena as governor of the island. From the very first interview Bonaparte behaved uncivilly, or rather insultingly, to that officer, and this treatment was repeated with aggravation at every subsequent opportunity. One of Napoleon's great grievances was his being styled General Bonaparte; another, his not being allowed to stroll about the island unattended by a British officer. He was allowed a space measuring eight and afterwards twelve miles in circumference round Longwood, through which he might range at his pleasure; beyond these limits he was to be accompanied by an officer. But the real grievance was that of being detained as a prisoner at all. The governor however had no power to remedy these subjects of complaint. Various minor matters of dispute with the governor were laid hold of by Bonaparte and his attendants, as if with the view of keeping alive an interest in the public mind in favour of the exile of St. Helena. We cannot enter into the particulars of this petty system of warfare, in which, as it generally happens, both parties may have occasionally been in the wrong. But it is impossible to read even Napoleon's statements, made through Las Cases, Santini, Antommarchi, &c., without perceiving that there was a determination on his part not to be pleased with anything the governor could do for him, unless he had disobeyed his orders; while on the other hand Sir Hudson Lowe appears to have been a man of an unaccommodating temper, with a good deal of the military martinet in his habits. Napoleon's mind was in a state of irritation whenever it recurred to the subject of his confinement, which made him querulous and peevish. He seems also to have had, almost to the last, some latent hopes of making his escape. In other respects the particulars of his life and conversations at St. Helena are highly interesting. He could be very agreeable towards visitors who were admitted to pay their respects to him, as we may see from Mr. Ellis's and Captain Hall's accounts of their interviews with him. In September 1818, Napoleon's health began to be visibly affected, but he would take no medicines. He also refused to ride out, as advised, because he would not submit to the attendance of a British officer. In September 1819, Dr. Antommarchi, of the University of Pisa, came to St. Helena as physician to Napoleon. Two clergymen came also from Italy to act as his chaplains. Towards the end of 1820 he grew worse, and remained in a weak state until the following April, when the disease assumed an alarming character. It was then that Bonaparte said that he believed it was the same disorder which killed his father, namely a scirrhus in the pylorus; and he desired Dr. Antommarchi to examine his stomach after his death. He made his will, leaving large bequests to his friends and attendants ('Testament de Napoleon'), and on the 3rd of May 1821, the chaplain Vignali administered to him extreme unction. Napoleon stated "that he believed in God, and was of the religion of his father: that he was born a Catholic, and would fulfil all the duties of the Catholic church." On the 5th of May, after being some time delirious, he breathed his last about eleven minutes before six o'clock in the evening. The following day the body was opened by Dr. Antommarchi, in presence of several British staff and medical officers, when a large ulcer was found to occupy the greater part of the stomach. On the 8th of May his remains were interred with military honours in Slane's Valley, near a fountain overhung by weeping willows. This had been a favourite spot with Napoleon. The procession was followed to the grave by the governor, the admiral, Napoleon's attendants, and all the civil and military authorities. The grave was afterwards inclosed by a railing, and a sentry kept on duty to guard the spot. In May 1840 the government of Louis Philippe made an application to the British government to permit the removal of the body of Napoleon to France. The request was at once acceded to; and a hope expressed that "the promptness of the answer might be considered in France as a desire to blot out the last trace of those national animosities which during the life of the emperor armed England and France against each other." An expedition was immediately fitted out and placed under the command of the Prince de Joinville, with whom were associated several of the latest and most devoted of Napoleon's followers—Bertrand, Gourgaud, the younger Las Cases, and Marchand the emperor's valet. On opening the coffin the features though somewhat changed were perfectly recognisable. The body was received in Paris with unbounded marks of popular feeling; and on the 15th of December 1840 it was deposited with extraordinary pomp in the Hôtel des Invalides.

We have dealt here merely with the outward acts of Napoleon

Bonaparte. His military genius speaks for itself. His personal character, hidden motives and actual policy, can only be arrived at by a wide and calm consideration of his whole history as developed in public documents and private memoirs, correspondence and commentaries. But far more ample and satisfactory materials for estimating the character, policy, and motives of Bonaparte than had previously been obtainable, have quite recently been furnished to the student in the 'Mémoires et Correspondance du Roi Joseph Bonaparte,' published under the care of M. Du Casse, Paris, 1853-55, and of which a well made selection has been translated into English, under the title of 'The Confidential Correspondence of Napoleon Bonaparte with his brother Joseph, some time king of Spain,' 8vo., 1855. The letters of Napoleon to his brother, written with characteristic impetuosity, extend through the whole of the most important period of his career—from 1795 to 1815; and they refer to most of the great events in which he was the chief actor, as well as to his personal and family history. And while they bring out with the utmost force—because from his own pen, and, as it were, incidentally and unconsciously—the grave defects of his character, and above all his overweening arrogance and constant, intense, unscrupulous and remorseless selfishness—they exhibit most distinctly his lofty and comprehensive intellect; his thorough knowledge of human nature; his strange facility in making other men subservient to his purpose, and the utter recklessness with which he employs and casts aside his instruments; his clear perception of the force of circumstances, and his readiness in moulding them to his own end, until by his marvellous career of success he came with defiant perversity to speak and act as though circumstances were within his absolute control; and they bear equally clear testimony to his surpassing administrative ability, unswerving self-reliance, unwearied energy, indomitable vigour, and unhappily the utter disregard of all moral considerations which accompanied this gigantic manifestation of mental power and despotic will.

BONAPARTE, NAPOLEON II. NAPOLEON FRANÇOIS BONAPARTE, son of the Emperor Napoleon I. and of Maria Louisa of Austria, was born at Paris, March 20, 1811. From his birth he was styled 'King of Rome.' After his father's first abdication in 1814 he went with his mother to Vienna, where he was brought up at the court of his grandfather, the emperor Francis, who made him Duke of Reichstadt. His education was carefully attended to, and he was early trained up to the military profession. After passing through the various subordinate grades he was made a lieutenant-colonel in June 1831, and he took the command of a battalion of Hungarian infantry then in garrison at Vienna. He was extremely assiduous in his military duties, but his constitution was weak; he had grown very tall and slender, and symptoms of a consumptive habit had early shown themselves. His physician advised a removal to Schönbrunn, which had at first a beneficial effect, but a relapse soon followed, and after lingering for several months young Napoleon died on the 22nd of July 1832, in the palace of Schönbrunn, attended by his mother, who had come from Parma to visit him. He seems to have been generally regretted at the Austrian court, especially by his grandfather, the emperor, who had always behaved to him with paternal kindness. There is an interesting account of this young man's short career by M. de Montbel, 'Le Due de Reichstadt,' Paris, 1832.

Although Napoleon I. abdicated in favour of his son, the title of Napoleon II. was not admitted by the allies or by the French nation. Nor was it put forward by any party in France during the life of Napoleon François, nor did he himself ever assume the title. But when the question of conferring the title of emperor upon the prince-president Louis Napoleon was put to the popular vote in 1852, it was as Napoleon III.; the right of Napoleon François to the title of Napoleon II. being thus assumed. No objection was raised in France, and the governments of Europe by recognising Napoleon III. without protest, of course acknowledged Napoleon II. also.

***BONAPARTE, NAPOLEON III.** CHARLES LOUIS NAPOLEON is the third and youngest son of Louis Bonaparte, king of Holland, and of Hortense Eugenie, daughter of the Empress Josephine, first wife of Napoleon I., by her first husband, the Viscount de Beauharnais. He was born in Paris, at the palace of the Tuileries, on the 20th of April 1803. His father Louis was the fourth in age of the brothers of the emperor; but Napoleon I., by the imperial edicts of 1804 and 1805, set aside the usual order of descent, and declared the succession to the imperial crown to lie in the family of his brother Louis. Louis Napoleon was the first prince born under the imperial rule in the direct line of succession, and his birth was in consequence announced throughout the empire by discharges of artillery and other solemnities. At his baptism, in 1810, the sponsors were the emperor and the empress, Maria Louisa. From his infancy the young prince resided with his mother, and his education was conducted under her superintendence. Until the abdication of Napoleon, with whom she was always in great favour, Hortense resided at Paris, where she had an hotel and a princely household, and went by the title of Queen of Holland, though her husband was no longer king. She was in fact separated, though not divorced from her husband. Whilst Napoleon was at Elba, Louis Bonaparte instituted a suit in the courts at Paris to have his sons removed from their mother's charge and restored to him; but the emperor's return put a stop to the proceedings, and henceforth the children remained under the charge of their mother. During the

Hundred Days she resided at the Tuileries, and did the honours of Napoleon's court. At the great assemblage on the Champ-de-Mai, Napoleon presented his nephew Louis Napoleon, then seven years old, to the soldiers and to the deputies; and the scene is said to have left a deep and abiding impression on the memory and the imagination of the boy. After the battle of Waterloo, Hortense and her sons attended Napoleon in his retirement at Malmaison. Upon the restoration of the Bourbons she made a visit to Bavaria, but being forced to quit Germany, she retired to Switzerland, residing first at Constance, and subsequently, in 1816, at the estate she had purchased of Arenenberg in the canton of Thurgau. Here she used with her sons to spend the summers; the winters she passed in Rome, at the Villa Borghese, which belonged to her sister-in-law Pauline. Her sons had thus opportunities of observing very different forms of government, and forming extensive connections with politicians and political adventurers both in Switzerland and Italy—opportunities which the young Louis Napoleon by no means neglected.

The scholastic education of Louis Napoleon was conducted under the direction of M. Lebas, son of Robespierre's friend, a man, like his father, of stern republican principles; and from him it may have been that the young prince imbibed those social doctrines which he held in opening manhood, and which, as developed in his early writings, appeared to consort rather oddly with the determined and pervading imperialism of all his literary productions. He was for a time a student in the military college at Thun, and is said to have made much progress in the art of gunnery. In these years he also made several pedestrian tours, knapsack on shoulder, among the wilder parts of Switzerland.

On the revolution of 1830, Louis Napoleon memorialised Louis Philippe for permission to return to France, offering to serve as a common soldier in the national army. The request was peremptorily refused; and the government of Rome fancying that a meeting of the Bonaparte family in that city had a political tendency, Louis Napoleon and his brother were ordered to quit the papal territory. They retired to Tuscany, and at once united themselves with the Italian revolutionary party. In the insurrectionary movement of 1831 both the brothers took an active part; and under General Sercognani they shared in the victories gained over the papal troops. But the interference of Austria and France soon put an end to the progress of the popular arms. The elder brother, Napoleon, died at Pesaro, a victim to fatigue and anxiety, March 27, 1831; but Louis Napoleon succeeded, though with much difficulty, in escaping from Italy, and with his mother returned to the château of Arenenberg. Here he settled quietly for awhile, obtained letters of naturalisation as a citizen of the canton of Thurgau, and pursued steadily his military and political studies.

But a new career was gradually unfolding itself before him. His eldest brother died in infancy; the second, as we have seen, died in 1831; and in 1832 the only son of the emperor, now known as Napoleon II., but then as the Duke of Reichstadt, also died. Louis Napoleon had thus become, according to the decree of 1804, the immediate heir to the emperor. Thenceforward the restoration of the empire, and the Napoleon dynasty in his person, became the predominant idea of his life. He laboured hard, not only to fit himself for the lofty post his ambition led him to believe he should at no distant period occupy, but also to impress his countrymen with his views, and to accustom them to associate his name with the future. He now published his first work, 'Political Reviews,' in which the necessity of the emperor to the state is assumed throughout as the sole means of uniting republicanism with the genius and the requirements of the French people. His 'Idées Napoléoniennes' were afterwards more fully developed, but the germ is to be found in his first publication. The 'Political Reviews' were followed by 'Political and Military Reflections upon Switzerland,' a work of considerable labour and unquestionable ability; and this again, after an interval, by a large treatise entitled 'Manuel sur l'Artillerie,' the result of the studies begun in the military school of Thun.

At length he fancied the time had arrived for attempting to carry his great purpose into effect. He had become convinced that the French people were tired of their citizen king, and that it only needed a personal appeal on the part of the heir of the great Napoleon to rally the nation around his standard. He had obtained assurances of support from military officers and others; and finally at a meeting in Baden he secured the aid of Colonel Vaudry, the commandant of artillery in the garrison of Strasburg. His plan was to obtain possession of that fortress, and with the troops in garrison, who he doubted not would readily join him, to march directly on Paris, which he hoped to surprise before the government could make sufficient preparations to resist him. Having made all necessary preparations, on the morning of the 30th of October 1836 the signal was given by sound of trumpet, and Colonel Vaudry presented the prince to the regiment, assembled in the square of the artillery barracks, telling the soldiers that a great revolution was begun, and that the nephew of their emperor was before them. The soldiers who heard the address received him with acclamations; some of his partisans had secured the prefect and other civil officers; and for a few minutes all seemed prospering. But the commanders of the other regiments were true to their duty. One of them denounced the prince as an impostor, and

the soldiers hesitated. Louis was separated from his friends and hurried off a prisoner, and the affair was speedily at an end.

His mother, on the instant of hearing of his arrest, hastened to Paris, and her appeals, and perhaps the want of sympathy which the Parisians exhibited, induced the king to treat the aspirant to his throne with singular forbearance. The only punishment inflicted was banishment from France. He was accordingly embarked on board a ship bound for the United States. He remained in the New World but a comparatively short time, though in that time he travelled over a considerable space in South as well as in North America. Hearing of the illness of his mother, he hastened back to Europe, and was with her at her death, which occurred at Arenenberg, October 5, 1837. Hortense Bonaparte was devotedly attached to her son, and her affection was warmly returned. She was a woman of ardent feelings and of considerable mental power. She published some reminiscences of a portion of her life, which will also be found to throw some light on that period of the life of her son, under the title of 'La Reine Hortense en Italie, en France, et en Angleterre, pendant l'année 1831,' Svo, Paris, 1834. She was also fond of music, and composed several airs which have been much admired; among others the favourite one, 'Partant pour la Syrie,' now become, from its having been made by her son the national air of France, almost as familiar in this country as our own 'God Save the Queen.'

Louis Napoleon now set himself, by means of the press, to defend his conduct in regard to the affair at Strasburg, and the government of France, fearing the effect of his pertinacity, demanded his extradition from Switzerland. The cantons at first refused to comply, and expressed a determination to uphold his rights as a citizen of Thurgau. But Louis Philippe sent an army to enforce his demands, and Louis Napoleon, not wishing to involve Switzerland in difficulty, withdrew to England. Here for a couple of years he led the life apparently of a man of pleasure, but he was really revolving his lofty schemes, though he had as yet formed but a very inadequate notion of the obstacles which had to be overcome. In 1839 he published in London his famous 'Idées Napoléoniennes,' a remarkable illustration of the intensity of his own grand thought. In August 1840 he sailed from Margate in a hired steamer, accompanied by Count Montholin, the attendant of Napoleon I. at St. Helena, a retinue of about fifty persons, and a tame eagle. He landed on the morning of the 6th of August at Boulogne, and marching with his followers straight to the barracks, he summoned the few troops there to join him, or surrender. The soldiers did neither, and Louis Napoleon retreated to the hill on which stands the Napoleon column. Meanwhile the garrison mustered under arms, a few shots were fired, and the prince, in attempting to get back to the steamer, was arrested with most of his followers.

This time the government was less placable. Louis Napoleon was brought for trial before the House of Peers on a charge of treason. Berryer appeared as his advocate, and defended him with boldness and eloquence. The prince himself made a speech, exhibiting great firmness and resolution. He was found guilty of a conspiracy to overturn the government, and sentenced to perpetual imprisonment in a French fortress. He was sent to Ham, and there he remained till May 1846, when, in the dress of a workman, he succeeded, by the assistance of Dr. Conneau, the present court physician, in effecting his escape. Once more he took refuge in England. The revolution of February 1848 found him ready to avail himself of any favourable circumstances. But he had learned caution, and he bided his time.

He had not to wait long. The vast power still remaining in the name of Napoleon had been shown in the unbounded enthusiasm everywhere displayed on the restoration to France of the body of the great emperor, and Louis Napoleon's partisans had taken care to keep the nephew of the emperor prominently before the public eye. At the election of deputies to the National Assembly in June 1848 Louis Napoleon was chosen for the department of the Seine, and three other departments. The prince applied to take his seat. M. Lamartine on the 12th of June moved the adoption of a decree banishing Louis Napoleon from France. A warm debate ensued, and Paris got into a state of great excitement. The discussion was renewed on the next day, and ended in the admission of the prince, by a great majority, to take his seat in the assembly. At the next election he was returned by an immense majority for the department of the Seine and five other departments. He took his seat on the 26th of September.

Louis Napoleon's election as president, for a term ending May 1852, followed in December. From the moment of his election to this office he took a much more decided stand than either of those who had preceded him as head of the executive. There were symptoms of red republican discontent, but they were speedily checked. The contest with the legislative assembly was more important and of longer continuance. But the prince-president was looking to popular support, and he soon found the means of winning public favour by his progresses through the country, his sounding and significant addresses, and the desire he constantly expressed for the exaltation of France in the eyes of the surrounding nations. His dismissal, at the beginning of 1851, of a man so able and so popular as Changarnier from the command of the army in Paris, showed that he would not permit himself to be bearded with impunity; and rash as it might at first glance seem, it

served to strengthen his position. He was met apparently by an equally firm resolution in the National Assembly, who, after repeatedly expressing want of confidence in his ministers, proceeded on the 10th of February 1851, by a majority of 102, to reject the president's Dotation Bill. In November the president sent a message to the assembly proposing to restore universal suffrage, and in accordance with the message a bill was introduced by the ministers, but thrown out by a small majority. The contest was hastening to a close. In a public speech the president had denounced the assembly as obstructive of all amelioratory measures, and a government journal now plainly accused that body of conspiracy against the prince-president, and of designing to make Changarnier military dictator. Paris was filled with troops. It was evident some decided measure was at hand. The leaders of the assembly hesitated, and their cause was lost. On the 2nd of December the prince-president issued a decree dissolving the legislative assembly; declaring Paris in a state of siege; establishing universal suffrage; proposing the election of a president for ten years, and a second chamber or senate. In the course of the night 180 members of the assembly were placed under arrest, and M. Thiers and other leading statesmen, with generals Changarnier, Cavaignac, Lamoricière, &c., were seized and sent to the castle of Vincennes. This was the famous coup d'état; and it was eminently successful, if that can be called successful which was a violation of faith, and an occasion of fearful slaughter. Numerous other arrests and banishments occurred subsequently. On the 20th and 21st of December a 'plebiscite,' embodying the terms of the decree, with the name of Louis Napoleon as president, was adopted by the French people, the numbers, according to the official statement, being 7,439,216 in the affirmative and 640,737 negative. A decree, published on the day of the official announcement of the vote, restored the imperial eagles to the national colours and to the cross of the Legion of Honour. In January the new constitution was published; the National Guard re-organised; and the titles of the French nobility restored.

It soon became evident that the restoration of the empire was only a matter of time. Petitions which had been presented to the senate were printed in the newspapers, praying for the establishment of the hereditary sovereign power in the Bonaparte family; cries of 'Vive l'Empereur' were heard in every public ceremonial in which the president took part; and at length the president himself in a speech to the Chamber of Commerce of Bordeaux, declared that "the empire is peace." On the 21st and 22nd of November, the people were convoked to accept or reject a 'plebiscite,' resuscitating the imperial dignity in the person of Louis Napoleon, with hereditary in his direct legitimate or adoptive descendants. The affirmative was declared to be voted by 7,864,189 to 231,145. The prince in formally accepting the imperial dignity assumed the title of Napoleon III. The new emperor was at once acknowledged by England, and subsequently though not till after a greater or less delay by the other leading powers of Europe.

The career of the emperor is too recent to require to be related in detail. As is well known it has hitherto been a career of unbroken prosperity. In the January following his acceptance of the empire he married Eugénie Comtesse de Téba, a lady who had the good fortune to win general popularity, before she presented the emperor and the nation with an 'Enfant de France.' From the first, as president as well as emperor, Napoleon displayed a strong desire to draw closer the alliance with Great Britain. The feeling was warmly reciprocated in this country, and the aggression of Russia, by leading the two powers to unite their arms in resistance to the outrage, has served to render the union as ardent as such a union could possibly be. Should it be as lasting as it is ardent, and as for the common good of the two countries it is most earnestly to be desired it may be, it cannot fail to form one of the most abiding glories of the reign of Napoleon. In March 1854 France, in conjunction with England, declared war against Russia, and the soldiers of the two countries have stood side by side, winning equal renown, in many a famous field. As was to be expected, in a war against such a colossal empire, the war has proved a long and costly one. But the very expenditure rendered necessary by it has served to show in the most striking manner the deep hold the emperor has on the regard of the French people. It became necessary for the French government in December 1854 to ask for a loan of 500,000,000 francs; in ten days 2,175,000,000 were subscribed. Another loan was required in the following July of 750,000,000 francs (30,000,000L), the amount subscribed was 3,652,591,985 francs (146,103,680L), or nearly five times the amount required, and of this no less than 231,920,155 francs were made up of subscriptions of 50 francs and under.

In April 1855 the emperor and empress visited England, and in the following August Queen Victoria and Prince Albert visited Paris; and in each country the reception of the respective sovereigns was of the most splendid, and with the people of the most enthusiastic character. In May 1855 the emperor opened a Temple of Concord, the grand Exposition of the arts and industry of all nations, which had the effect of attracting to Paris the largest number of visitors almost ever known there. Paris itself too has been improved by new streets of almost unrivalled architectural splendour.

In March 1856 the conferences for negotiating a peace between the

western powers and Russia opened at Paris. And on the 16th of the same month, the emperor was made happy by the birth of a son, and a heir to the imperial crown.

BONAPARTE, FAMILY OF. The father of Napoleon Bonaparte has been noticed under **BONAPARTE, NAPOLEON I.** We propose under the present head to notice the mother and brothers of the emperor, and the younger members of the family who have acquired distinction.

LETIZIA RAMOLINO BONAPARTE, born at Ajaccio in Corsica, in August, 1750, married in 1767 Charles Buonaparte, a landed proprietor and a lawyer. Charles fought under Paoli for the independence of the island against the French, and his young wife accompanied him through their mountain expeditions. Their vicissitudes are narrated under **BONAPARTE, NAPOLEON I.** After her son Napoleon became First Consul of France, Madame Letizia fixed her residence at Paris, where she lived rather retired, but after the empire was proclaimed she received the title of 'Madame Mère': she had her own household, her chamberlains, ladies of honour, and all the accessories of a court. Des Cases was appointed her secretary. Her half-brother Fesch had been made a cardinal. Madame Mère was not bewildered by her sudden rise; she was economical in her expenditure, and contrived to save a handsome sum out of the amount appropriated to the maintenance of her establishment. She is said to have once observed on hearing that she was reproached for her savingness, "I may some day, perhaps, have to find bread for all these kings,"—meaning her sons. She was designated by Napoleon as especial patroness of the charitable institutions of France. After Napoleon's first abdication in 1814, she went to live at Rome, but repaired again to Paris when her son returned from Elba. After his second downfall she went back to Rome, where she spent her latter years in the company of her sons Lucien, Louis, and Jerome, and of her brother Cardinal Fesch. She retained almost to the last her shrewdness of intellect, and has the credit of having been a prime adviser in all the projects of the Bonaparte family. She is said to have been very charitable to the poor. She died in February, 1838. There is a fine seated statue of Madame Mère, by Canova, in the collection of the Duke of Devonshire at Chatsworth.

JOSEPH BONAPARTE, the eldest son of Charles and Letizia Bonaparte, was born at Ajaccio in Corsica, January 7, 1768. He received his education at the college of Autun in France, and at the University of Pisa. After the death of his father, he returned to Corsica in 1785. He applied himself to the study of the law, according to his father's wishes. In 1792 he was made a member of the new administration of Corsica, under Paoli, who was an old friend of the Bonaparte family. In the following year, when Paoli declared against the National Convention, and called the English to his assistance, Joseph emigrated to Marseille, where he married one of the daughters of a wealthy banker of the name of Clari, whose younger daughter married Bernadotte, afterwards King of Sweden. In 1796 Joseph was appointed commissary to the army of Italy, which was commanded by his brother Napoleon. In 1797 he was elected deputy to the Council of the Five Hundred for his own native department of the Liamone in Corsica, that island having been evacuated by the English. Joseph repaired to Paris, whence he was shortly after sent by the Executive Directory as ambassador to the pope. There was then at Rome a knot of enthusiasts who were bent upon establishing a Roman republic, and they relied upon the countenance and support of the French. On the 28th of December 1797, they assembled to the number of about three hundred, under the guidance of a sculptor named Ceracchi, and proceeded to the palace Corsini, where Joseph Bonaparte resided, vociferating "The Republic of the Roman people for ever!" and they applied to the ambassador, claiming French protection. Joseph desired them to leave the palace. In the mean time a detachment of the papal troops, who were in pursuit, arrived in front of the palace, and insisted that the insurgents should leave the premises. Those from within insulted and taunted the soldiers, who at last rushed into the court of the palace to clear it of the fugitives. Joseph, attended by Generals Duphot and Sherlock, came down the staircase to remonstrate with the papal officers, but could not make himself heard in the midst of the confusion, when Duphot, young and impetuous, drew his sword, and rushed forward, followed by the insurgents, in order to drive away the soldiers. The soldiers then fired, killing several of their opponents, and Duphot among the rest. The insurgents dispersed in the gardens of the palace, and the soldiers formed themselves in the street outside. These transactions were much misrepresented by the French and their partisans. Joseph wrote in a vehement strain to the Cardinal Doria, secretary of state, complaining of the violation of his residence, and requiring immediate satisfaction. The cardinal hesitated; Joseph demanded his passports, and, heedless of the explanations sent by the Roman government, he set off in the night of the same day to return to France. The Directory then ordered Berthier to take possession of Rome.

Joseph resumed his seat in the Council of the Five Hundred, and, during the absence of Napoleon in Egypt, he and his brother Lucien prepared the way for his return, and for the revolution which followed. Napoleon having become First Consul, made Joseph councillor of state, and he employed him in September 1800 to negotiate a treaty of peace and commerce with the United States of North America. Having exhibited some diplomatic skill in this transaction, he was sent in the

following year to Luneville, where he concluded a treaty of peace with the Emperor of Germany in 1801, and next year he was likewise employed at Amiens to negotiate the treaty with England. He was made a senator; and on his brother attaining the imperial crown, Joseph was recognised as an imperial prince and grand elector of the empire. When Napoleon sent an army to invade Naples at the beginning of 1806, he appointed his brother, 'Prince Joseph,' to lead the expedition as his lieutenant, Marshal Massena acting as military commander. Immediately afterwards the emperor announced to Joseph, after his usual imperious fashion, but in a private letter dated January 19, 1806, his intention to make him king of Naples:—"My will is that the Bourbons shall have ceased to reign in Naples. I intend to seat on that throne a prince of my own house. In the first place you, if it suits you: if not, another." But the intimation of his intention to make Joseph a king was followed in a few days by a plain announcement that he was to be only a subordinate king: "I intend my blood to reign in Naples as long as it does in France; the kingdom of Naples is necessary to me." Joseph after a little hesitation accepted the post. In the following March Napoleon appointed by a decree "his brother Joseph Napoleon King of Naples and Sicily." Joseph reigned in Naples, though not in Sicily, little more than two years. Acting as his brother's subordinate, he effected fundamental changes in the institutions of the country, the object being to assimilate its institutions to those of France. He abolished feudality, suppressed the convents, and by the sale of their property and that of the crown he restored order in the finances; he promulgated the French codes and judiciary system; he began a cadastral, or survey and estimation of the landed property, for the better assessment of the land-tax; and he established a new and regular system of provincial administration. He also embellished the capital, began new roads in the provinces, and organised an effective gendarmerie to repress the robber-bands in the provinces. Most of these measures were beneficial to the country, but they were effected in a hasty overbearing manner, like all the reforms made under Napoleon, and many individual rights and interests were overlooked and sacrificed. The times were stormy, and the country was still teeming with insurrections and conspiracies, which were suppressed in a summary way, and many executions took place. But the harsh and overbearing character of his government was not due to Joseph himself; on the contrary, he was most anxious to adopt humane and conciliatory measures. But he was constantly overruled and directed by the emperor, and often in the most peremptory style, in secondary as well as in the more important matters; and Joseph's appeals and remonstrances were dismissed sometimes in a contemptuous, sometimes in a petulant, but always in a very summary manner. (See the Correspondence in the 'Mémoires' referred to below.) It is needless to add that neither the nobility nor the body of the people became reconciled to the new system under a king who listened to their complaints and promised to help them, but whose inability to carry out his good intentions, or even keep his promises, soon became apparent. The Neapolitans soon learnt to despise as well as to fear their new king; and the pompous proclamations in which he imitated the inflated style of the emperor, proceeding as they did from one who was in fact only announcing the edicts of another, served as fertile themes for the Italian love of caricature.

When he had been king of Naples little more than two years, Napoleon announced to him his intention to remove him from the throne of Naples and place him on that of Spain: the announcement being made in almost as summary a way as that of his first elevation to regal honours. On the 18th of April 1808 the emperor wrote to say that in a few days he might want him to repair to Bayonne, and then, on the 11th of May, came the reason. "The nation, through the Supreme Council of Castile, asks me for a king: I destine this crown for you." The appointment quickly followed. By a decree of June 6, 1808, Napoleon appointed "Joseph Napoleon to be King of Spain and of the Indies," and soon after Joachim Murat succeeded him as King of Naples. In Spain Joseph met with much greater difficulties than at Naples. He tried mildness and conciliation, but even these failed, owing to the stern unbending character of the people. From the first he saw clearly the disadvantages and difficulties of his position. But the emperor treated his suggestions and remonstrances, as well as his frequent passionate appeals to his fraternal feelings, with equal disdain, and during the whole of his nominal rule he was in fact merely the puppet of his brother. During the five years of his Spanish reign, three times he was obliged by the success of the allied armies to leave his capital; the last time (1813) to return no more. Joseph would have wished to be really and not nominally king of Spain, but this was prevented both by the people, who would not submit to him, and by his brother Napoleon, who appointed by degrees his own generals to be military governors in the various divisions of Spain, and they acted quite independent of King Joseph and his Spanish ministers. More than once Joseph wrote to his brother, requesting to be allowed to resign his crown, as he saw that he could do no good in Spain; and in 1812 he repaired to Paris for the same object, but Napoleon induced him to remain in his place by telling him that he expected to make peace with England, and then he should withdraw his army from Spain. This was before the Russian expedition. General Foy, in his history of the war in the Peninsula, speaks of Joseph as follows:—"When he assumed the crown of Spain, Joseph

was forty years of age. His figure was graceful, and his manners elegant. He was fond of women, of the fine arts, and of literature. His conversation was fluent and methodical, and abounded with judicious remarks." After the battle of Vittoria (June 1813), where he narrowly escaped being taken prisoner by the English, he withdrew to France. In January 1814, when Napoleon set off for the army, he appointed Joseph lieutenant-general of the empire, and placed him at the head of the council of regency which was to assist the empress-regent. Napoleon wrote to him from Rheims on the 16th March, that in case the enemy should advance in irresistible force, he must send off towards the Loire the empress and her son, the great dignitaries, the ministers, and all the heads of the administration. "Do not leave my son for a moment," added he; "I should prefer hearing that he was at the bottom of the Seine rather than in the hands of the enemies of France." Accordingly when the great army under Schwarzenberg arrived before Paris on the 28th of the same month, Joseph sent off the empress and her son to Blois. After the battle of the 30th, in which the troops outside of Paris were driven in by the allies, Marmont told Joseph that he could no longer defend the capital, and Joseph authorised him to treat for a suspension of arms for a few hours in order to arrange the terms of a capitulation. Joseph then rejoined the empress at Blois. After Napoleon's abdication, Joseph and his brother Jerome thought of removing the empress and the regency to the south of France, but the empress refused, and was supported in her refusal by the members of the household. Soon after, the empress rejoined her father Francis of Austria, the regency was dissolved, and Joseph set out for Switzerland, where he purchased the estate of Prangin, near Nyon, on the banks of the Lake Leman. From thence he corresponded with his brother at Elba, and with Murat at Naples, who had become restless under his engagements with Austria; and he is said to have given Murat the advice of declaring against Austria in 1815, so as to make a diversion in favour of Napoleon—a diversion which proved of no use to Napoleon and was fatal to Murat. Napoleon having returned to Paris in March 1815, Joseph rejoined him there, and took his seat in the House of Peers.

After the return of Napoleon from his defeat at Waterloo and his second abdication, Joseph embarked for the United States, after having a last interview with his brother at the Île d'Aix. He was well received in the United States, and after a time he fixed his residence on the banks of the Delaware, near Philadelphia, where he purchased an estate. He assumed the title of Count de Survilliers, and lived in a style of affluence, affording employment to many of the labouring population, and hospitality to the French emigrants who resorted to America. His wife remained in Europe with her two daughters, and resided at Brussels and afterwards at Florence. When the Paris revolution of 1830 became known in America, Joseph wrote a long letter or address to the House of Deputies, in which he put forth the claims of his nephew, the present emperor. The letter was not read to the chamber. He came himself to England soon after, and resided some time in this country, and at last repaired to Italy, where he died at Florence, in July 1844. He was buried in the vaults of the church of Santa Croce. Joseph Bonaparte was a man of considerable intelligence and of good intentions, but he was too feeble of purpose to resist the imperious will of his brother, and was of course wholly unfitted to sit independently in the elevated positions to which he was raised.

(A. du Casse, *Mémoires et Correspondance du Roi Joseph*, &c., or the English selection from that work, noticed under BONAPARTE, NAPOLEON I.; Abel Hugo, *Précis Historique des Evénements qui ont conduit Joseph Napoléon sur le Trône d'Espagne*; Botta, *Storia d'Italia*; Coppi, *Annali d'Italia*; Colletta, *Storia del Reame di Napoli*; Thibaudeau, *Le Consulat et l'Empire*; Thiers, *Southey*, &c.)

LUCIEN'S BONAPARTE, the third son of Charles and Letizia Bonaparte, Napoleon being the second, was born at Ajaccio in 1775. He emigrated to Marseille with the rest of the family in 1793. He entered warmly into the revolutionary notions of that period, and made speeches at various clubs, and wrote pamphlets on liberty and equality. Soon after, he obtained employment in the commissariat at St. Maximin, a small town of Provence, where he married the daughter of an innkeeper. Being one of the republican municipality of that place, he exerted himself laudably, and at his own imminent peril, to save several unfortunate individuals accused of royalism, whom an agent of Barras and Freron, the terrorist commissioners in the south of France, wanted to remove to the prisons of Orange, where the guillotine was in constant activity. By showing a bold front to the agent, whom Lucien charged with informality in his commission, he detained the intended victims under arrest at St. Maximin, until the fall of Robespierre put a stop to the reign of terror. In the reaction however which took place in the south of France, Lucien was arrested as a Jacobin, on account of his speeches; and a royalist whom he had saved proved most hostile against him. He was however liberated after a time. In 1796 Lucien was appointed commissary at war, probably through the influence of his brother, General Bonaparte. In the following year he was elected deputy to the Council of the Five Hundred, and he went to reside at Paris, where he took a house, of which his sister, Elisa Baciocchi, did the honours. His drawing-room was resorted to by several men of note and of literary acquirements. Lucien took the opposition side in the council, and allied

himself to Sieyès and his party, who wished to try their hands at a new constitution. While Napoleon was in Egypt, Lucien wrote to him, complaining of the incapacity and misgovernment of the Executive Directory, and urging him to return to France, but the letters are said to have been intercepted by the English cruisers.

After Napoleon's return, in October 1799, Lucien, who was the president of the council, became the active leader of those who wished to overturn the Directory. In the stormy sitting of the 19th Brumaire [BONAPARTE, NAPOLEON I.] he resisted the motion made by several members to outlaw General Bonaparte, and as the confusion and uproar increased in the hall, he left the chair, and addressing his brother's soldiers outside, told them to march in and drive away the factious men who were no longer the representatives of France. After the accomplishment of that revolution, in which he rendered most material assistance to his brother, he was one of the members of the commission which framed the new or Consular constitution. Soon after he was appointed minister of the interior, but remained in office only a short time, having had some disagreement with his brother upon matters of administration; and in October 1800, after the campaign of Marengo, Napoleon sent him ambassador to Spain. His mission proved successful; he managed to ingratiate himself with Charles IV. and the favourite Godoy, and to re-establish French influence in Spain. He induced the weak Spanish government to join France in an attack upon Portugal, which ended by the latter country being obliged to sue for peace, for which it paid dearly. He also completed the arrangements concerning the new kingdom of Etruria, to be given to the young infante, son of the Duke of Parma, who had married a Spanish princess, in exchange for which Spain ceded to France her rights upon Parma and Piacenza. The cession of Louisiana to France was likewise confirmed. Having concluded these negotiations, Lucien returned to Paris in 1802. He was made a member of the Tribunal, and as such he supported with all his eloquence the concordat with the pope, and also the institution of the Legion of Honour. Lucien was made a senator, and his brother gave him the senatorship or living of Sopelsdorf, an estate of the former elector of Treves. His wife being dead, Lucien married, in 1803, Madame Joubertou, the widow of a stockbroker, who had died at St. Domingo. Napoleon disapproved of this marriage, as he had disapproved of the marriage of Jerome, because he looked forward to royal alliances for his brothers. Lucien however supported the project of making his brother consul for life; but he says in his memoirs that he wished to have stopped there, and that he opposed from the first the idea of establishing an hereditary dynasty. When he saw his brother determined on assuming the imperial crown, he left France in the spring of 1804 and went to Italy. Thibaudeau and others say that the two brothers quarrelled on other grounds; about Lucien's marriage in particular. Lucien accuses Fouché of having, by his insidious reports, contributed to alienate him from his brother. The *Senatus Consultum*, which fixed the hereditary succession in Napoleon's family, named his brothers Joseph and Louis as eventual heirs to the throne, but made no mention of either Lucien or Jerome. Lucien, after a time, fixed his residence at Rome, where he was very kindly received by Pope Pius VII. He took a large house, and lived in a style of affluence. Being fond of literature and the fine arts, his house was much frequented. After the peace of Tilait, Napoleon repaired to North Italy at the end of 1807, and sent for his brother Lucien to meet him at Mantua. The two brothers had there a conference, in which it seems that Napoleon offered to give Lucien a kingdom in Italy, at the same time telling him plainly that in such case he must be prepared to obey all his orders concerning the internal as well as the external policy of his administration. Lucien declined accepting a crown on these terms, and said that he preferred to remain in a private station. "Be it so," Napoleon replied; "you cannot have henceforth any ground of complaint against me." But he added in parting, that as Lucien would not fall in with his system of politics, he must prepare to quit the continent, where his silent opposition could no longer be tolerated. (*Réponse de Lucien Bonaparte aux Mémoires du Général Lamarque*.)

Lucien returned to Rome, where he purchased the estate of Canino, in the province of Viterbo, near the borders of Tuscany. Pope Pius VII. created him Prince of Canino and Musignano in 1808. Soon after Napoleon began a course of vexatious proceedings towards the court of Rome, which ended in the arrest of the pope, and the seizure of his dominions. When the French took possession of Rome in 1809, Lucien, who had expressed himself very freely against this part of his brother's policy, was advised to leave that city, and he retired to his country estate. In 1810 he resolved to go to the United States. With this view he embarked on board a vessel at Civitavecchia, but was seized by an English cruiser and carried to Malta, where after a time he obtained permission from the British government to reside in England under surveillance. Ludlow Castle was fixed upon as his residence. Some time after, he removed to a place in the neighbourhood, where he remained till the end of the war, and employed himself in writing his poem of 'Charlemagne.' After the peace of 1814 he returned to Rome, where he published his poem of 'Charlemagne,' which he dedicated to Pope Pius. When Napoleon returned to France from Elba, in 1815, Lucien repaired to Paris for the purpose, as is said, of obtaining his brother's favour

towards the pope. It has been surmised by some that Lucien acted from a generous impulse, to tender to his brother his advice in the hour of danger, and to keep him also, if possible, within constitutional limits. However this may be, he went to live at the palace of the Orleans family, assumed the style of an imperial prince, and claimed a seat of honour as such in the new House of Peers. This was resisted by several peers, on the ground that he had never been acknowledged as a prince of the empire, and had no diploma as such. He then took his seat in the body of the house as a common peer. In the privy councils that took place, he advised Napoleon to offer to the Emperor of Austria, in order to detach him from the allies, to abdicate in favour of his son. His advice after some hesitation was rejected. Napoleon set off for the army, lost the battle of Waterloo, and returned to Paris without an army. Lucien being appointed extraordinary commissioner of the emperor, to communicate with the representatives of the people, strove to revive in the Chamber of Deputies a feeling of sympathy for his brother; he spoke eloquently, he appealed to the gratitude of the nation, but was answered sternly by *La Fayette*, "The nation has followed your brother over fifty fields of battle, from the burning sands of Egypt to the frozen deserts of Russia, through disasters as well as triumphs, and it is for this that we mourn the loss of three millions of Frenchmen!" Lucien advised his brother to dissolve the Chambers, since he could not manage them, and to assume the dictatorship. Napoleon hesitated, and at last refused; he said that he would not kindle a civil war. He most likely perceived what Lucien did not see, that the attempt would only lead to a short protracted struggle, attended by additional calamities to France and to himself. Lucien says that he was opposed to Napoleon's abdication, but when he saw his brother determined upon it, he insisted upon its being made at least in favour of young Napoleon. Napoleon smiled and shook his head incredulously, but at length inserted the clause in favour of his son. Lucien then proceeded to address the House of Peers to induce them to proclaim at once Napoleon II., but in vain he cried out, according to the forms of the old monarchy, "The emperor has abdicated, long live the emperor!" the House remained mute, and as he went on speaking vehemently, one of the peers, Pontécoulant, taunted him with being an alien, a foreign titular, a Roman prince, and not even a citizen of France. Soon after the allied armies made their appearance, Napoleon went to Rochefort, and Lucien set out to return to Italy.

Lucien rejoined his family at Rome, where he afterwards spent many years in peaceful retirement. In 1828 he began digging at a place called La Cucumella on his estate of Canino, which is believed to have been the site of the ancient Vetulonia, once an important Etruscan city, and he gathered an ample collection of Etruscan antiquities, of which he published a description: 'Muséum Etrusque de Lucien Bonaparte, Prince de Canino.' During the insurrection in the Papal States in 1831, Lucien kept himself and his family aloof from that disorderly attempt. Some time after he revisited England, where he published several of his works. He returned to Italy, where he died in 1840. His eldest son, Charles Lucien Bonaparte, succeeded to the title. Lucien had in all eleven children, of whom four sons and five daughters are still living (1856).

Lucien ranks as a French author in prose and in verse. His published works are:—'Charlemagne, ou l'Eglise délivrée,' an epic poem in 24 cantos, which has been translated into English by S. Butler, D.D., and the Rev. F. Hodgson, 2 vols. 4to, London, 1815; 'La Cyrnéide, ou la Corse sauvée,' a poem in 12 cantos; 'Mémoires de Lucien Bonaparte, Prince de Canino, écrits par lui-même,' 8vo, London, 1836; and 'Réponse de Lucien Bonaparte aux Mémoires du Général Lamarque,' London, 1835. This is a sort of political confession, and at the same time an apology for his own and Napoleon's political conduct during the hundred days; it contains some curious revelations and frank avowals, though it is rather incoherent in its reasoning, like all the attempted justifications of Napoleon's political morality. Several of Lucien's speeches while a tribune have also been published; among others his 'Rapport sur l'Organisation des Cultes,' and 'Discours sur la Légion d'Honneur.' A defamatory book, entitled 'Mémoires de Lucien Bonaparte,' was published in France during the Restoration, but is of no authority.

(Thibaudeau, *Le Consulat et l'Empire*; *Biographie des Contemporains*; and the works of Lucien already quoted.)

LOUIS NAPOLEON BONAPARTE, the fourth son of Charles Bonaparte, and father of Napoleon III., was born at Ajaccio in Corsica, on September 21, 1778. At an early age he entered the French army, and accompanied his brother Napoleon to Italy and Egypt. In Italy he distinguished himself at the passage of the bridge of Arcola, braving the fire of the enemy, and shielding the body of his brother and commander. When Napoleon became first consul, he was sent on a mission to St. Petersburg; but on arriving at Berlin he learned the news of the death of the Emperor Paul. He returned to Paris after remaining at Berlin about a year, and became a general of brigade, a counsellor of state, and afterwards a general of division. In 1802 he married Hortense Eugénie de Beauharnais, the daughter of the Empress Josephine. When Napoleon became emperor, Louis was promoted to higher honours, and was made governor of Piedmont, and afterwards commanded the army of the north of Holland. After the Batavian republic had been converted into a kingdom, the states of Holland in

June 1806 sent an embassy to Napoleon, requesting that Louis might be their king, which was granted, and he immediately assumed the title. He strenuously exerted himself to better the condition of his people, and distinguished himself on several occasions by his personal humanity. His love for his people occasioned him to refuse without hesitation the offer made him by his brother of the crown of Spain; but his opposition to Napoleon's plans, which he thought were prejudicial to their welfare, gave great dissatisfaction at Paris. His wife was a most attached adherent of Napoleon's, and her inability to control her husband, the death of her eldest son in 1807, and the state of her health, induced her to repair to Paris, where a third son was born. She was afterwards sent by Napoleon in 1809 to induce Louis to comply with his wishes, but Louis refused. She then returned to Paris, where she resided in state as Queen of Holland, and Napoleon sent Oudinot with 20,000 men against Louis, who thereupon abdicated in favour of his son, which abdication Napoleon rejected; and on July 9, 1810, Holland was united to the empire. Louis retired to Gratz in Styria, where he lived three years under the title of Count de St. Leu, and his wife became wholly separated from him, though not divorced. In 1813, when the allies appeared about to fall upon France, Louis offered his services to the emperor, by whom they were accepted, and he proceeded to Switzerland, but he was not employed. On the downfall of Napoleon, when the Dutch threw off the French yoke, Louis addressed a letter to the provisional government from Soleure, asserting his claims to the throne, but they were rejected. He then commenced a suit at Paris for the restitution of his two sons, then living under the care of their mother, who had obtained a grant of the domain of St. Leu, with the title of Duchess, through the interest of the Emperor Alexander. The return of Napoleon put a stop to the suit, and the Duchess of St. Leu did the honours of Napoleon's court, and used her interest in favour of the unfortunate of all parties. After the battle of Waterloo she went to reside in Switzerland with her sons, as stated under BONAPARTE, NAPOLEON III. Louis retired to the Papal States, where others of his family had assembled, and devoted himself chiefly to literature. He published 'Marie, ou Les Hollandaises,' 'Documens Historiques sur la Hollande,' 5 vols. 8vo, 1820; 'Mémoires sur la Versification,' an opera, a tragedy, a collection of poems, and a reply to Sir Walter Scott on his 'History of Napoleon.' He died at Leghorn, June 15, 1846; and at his special desire, which after some delay was acceded to, his body was buried at St. Leu in France, with those of his father and his first son, September 29, 1847.

*JÉRÔME BONAPARTE, the youngest brother of Napoleon I., was born at Ajaccio, the 15th of December 1784. With the rest of the family, he went to France in 1793, and after some preparatory instruction under Madame Campan at Paris he was sent to the college of Juilly. When Napoleon became first consul he removed Jérôme, then fifteen years of age, from college, and placed him in the naval service, which he was then endeavouring to re-organise and improve. Jérôme went as lieutenant in 1801 to St. Domingo, with the expedition commanded by General Leclerc; but he did not stay long, being sent home by Leclerc with his despatches. He was almost immediately after appointed to command the frigate 'L'Épervier,' bound for Martinique. When hostilities broke out between France and England in 1803, Jérôme cruised off the West India Islands; but he was soon forced to quit that station, without having accomplished anything, and take refuge in the port of New York. While in the United States he became acquainted with Miss Elizabeth Paterson, the daughter of a wealthy merchant at Baltimore, whom he married, December 24, 1803. This marriage, contracted without his knowledge, gave great offence to Napoleon, who was now bent on forming high alliances for all the members of his family. In spite of the entreaties of Jérôme, Napoleon, as soon as he became emperor, caused the marriage to be annulled by a decree of the council of state, on the ground of his brother being a minor: the pope however, to whom Napoleon applied, refused to ratify the divorce. Jérôme, in returning to Europe with his wife, was chased by some English cruisers, but succeeded in carrying his ship safely home. His wife having been ordered not to enter France, went on to Holland, but not being allowed to land there she proceeded to England, where a few weeks later, July 1805, she gave birth to a son, Jérôme Napoleon Bonaparte.

Jérôme remained for some time in disgrace with his brother, as well on account of his want of success at sea as of his marriage; but after awhile he was sent as envoy to the Dey of Algiers, to obtain the liberty of a number of Genoese slaves. Having succeeded in his mission, he was appointed to the command of a vessel of 74 guns, and afterwards of a squadron of eight vessels, with which he sailed in 1806 to Martinique. On his return he was created a prince of the empire, and promoted to be rear-admiral; but the English navy had now such an indisputable superiority, that Napoleon no longer desired to have a member of his family attached to the maritime service, and, without much ceremony, he transferred Jérôme in 1807 to the army, with the rank of general. In the campaign of 1807, Jérôme received the command of a body of Bavarian and Wirtemberg troops, with which he attacked the Prussians, and made himself master of Silesia. On the 14th of March he was created a general of division.

On the 12th of August 1807, Jérôme married Frederique Catherine, daughter of Frederic king of Wirtemberg; and on the 18th of the same month Napoleon erected Westphalia into a kingdom, and created

Jérôme king of Westphalia. Jérôme directed all his energies to the performance of his royal duties. He was compelled to act in a great measure as the deputy of Napoleon, but he did not hesitate to exercise his own judgment. He set about the restoration of the national finances, the removal of administrative abuses, the reformation of various institutions, and the establishment of religious freedom; and following the example, perhaps obeying the directions, of the emperor, he commenced the embellishment of the capital, Cassel. But though he gained to a considerable extent the good will of his subjects he failed to satisfy his brother, who on several occasions loaded him with reproaches, and more than once summoned him to Paris, the better to enforce his instructions. In the Russian campaign Napoleon gave Jérôme the command of a German division, numbering 70,000 men, with which he rendered good service on more than one occasion. But suffering himself to be surprised at Smolensk, he was summoned before the emperor, who, after angrily reproaching him with disconcerting his plans, dismissed him from his command, which he gave to General Régnier, and sent him back to Germany. When in the following year the French forces were driven out of Germany, Jérôme was compelled to abandon his kingdom (October 26, 1813) and take refuge in France. On the abdication of Napoleon Jérôme and his wife, after a brief stay at Würtemberg, settled in Italy. He was watched by the Austrian government, but, by the aid of Murat, succeeded, on his brother's return from Elba, in escaping surveillance, and joined the emperor at Paris. He was favourably received, took part in the various public solemnities, and was called to the Chamber of Peers. Jérôme accompanied Napoleon to Waterloo, and distinguished himself by his repeated gallant, though unsuccessful attacks on the château of Hougoumont. In this affair Jérôme received a slight wound in the arm.

After Napoleon's final abdication, Jérôme, proscribed with the rest of his family from France, after wandering for awhile about Switzerland, returned to Würtemberg, where his father-in-law conferred on him the title of Prince of Montfort, with a handsome estate. Somewhat later he removed to the neighbourhood of Vienna, and afterwards to Trieste, where he purchased a palace. When his nephew Louis Napoleon had become the ruler of France, Jérôme was recalled to Paris; and shortly after the old man who had already witnessed so many vicissitudes, was by the new Emperor named Marechal of France, president of the Senate, and, in failure of direct succession, heir to the Imperial throne. Prince Jérôme has lived to see a son born to the emperor, and no doubt shares in the general hope that in him the Bonaparte dynasty may be firmly established. The only son of Prince Jérôme by his first wife is married to an American lady, and settled as a citizen of the United States. By his second wife, who died November 28, 1835, Prince Jérôme had three children, of whom two, a son, PRINCE NAPOLEON, noticed below, and a daughter, are still living.

* CHARLES LUCIEN JULES LAWRENCE BONAPARTE, PRINCE OF CANINO, eldest son of Lucien Bonaparte, was born at Paris, May 24, 1803. He received a careful education, and has always exhibited a much greater attachment to literary and scientific than political pursuits. As a naturalist the Prince of Canino has acquired great distinction. In ornithology especially, he is generally regarded as one of the chief living authorities; and he has been elected a member of nearly all the principal learned societies of Europe and America. For some years the prince resided in the United States, and it was by his writings on the birds of America that he first made himself known to the scientific world. His chief publications are a continuation of Wilson's 'Ornithology of America' in four folio volumes; and the 'Iconografia della Fauna Italica,' a splendidly illustrated work in three volumes folio. But besides these he has published numerous essays and memoirs on particular portions of American ornithology, and on other branches of natural history in the scientific journals of the United States and Europe. The prince has always been the zealous friend and patron of the votaries of science, and for many years he was the chief promoter of the annual congresses of the scientific men of Italy.

Prince Charles Bonaparte married at Brussels, June 29th, 1822, Zénaïde-Charlotte, daughter of his uncle Joseph Bonaparte, by whom he has had ten children, of whom three sons and five daughters are living.

* LOUIS LUCIEN BONAPARTE, second son of Lucien Bonaparte, was born in Worcestershire, January 4, 1813, during his father's residence in England. He was educated chiefly at Rome, and he early imbibed the literary and scientific tastes which distinguished his father and elder brother. He has written much on scientific subjects, particularly on chemistry; and he was for many years one of the most active and influential members of the annual congress of the scientific men of Italy. Of late years he has chiefly devoted his leisure hours to philosophical and linguistic studies. After the election of his cousin, the present emperor, as president of the French republic, Prince Louis Lucien, with most of the other members of the Bonaparte family, went to Paris, and took his place as a citizen of France. He was returned to the Legislative Assembly as deputy for the department of the Seine; and on the establishment of the empire he was made a member of the senate.

* NAPOLEON JOSEPH CHARLES PAUL BONAPARTE, second and only surviving son of Jérôme Bonaparte by his second wife, the princess Frederique of Würtemberg, was born September 9, 1822. He was

educated chiefly in Austria and Italy, but he subsequently travelled in Switzerland, America, and Brussels, in each of which places he resided some time. His first appearance on the political stage was after the recal of the Bonaparte family to Paris, under the presidency of Prince Louis Napoleon. Being elected a member of the Legislative Assembly, the prince Napoleon distinguished himself by his energetic support of ultra opinions, and soon became the recognised leader of the party of the Mountain. Since the accession of Napoleon III. to the imperial crown, Prince Napoleon has abandoned extreme political views, and has become one of the most devoted and valuable supporters of the policy of the emperor, by whom he is much esteemed and trusted. When the Anglo-French army was despatched to the Crimea, Prince Napoleon received the command of a division of the French army. He fought with distinction at the Alma; but his health gave way soon after the army had encamped before Sebastopol, and he was compelled to resign his command and return to France. Of the grand council of war which afterwards met at Paris to arrange the campaign of 1855, Prince Napoleon was a member. But he was soon called to a more peaceful pursuit. When the grand exposition of the arts and manufactures of all nations at Paris was fixed to take place in 1855, Prince Napoleon was appointed president and chief director of the whole proceedings. To this great work he devoted all his energies, and it is universally admitted that much of its success was owing to his great knowledge, tact, administrative ability, and untiring diligence. The jurors, and especially the foreign jurors, were particularly indebted to him for the most friendly assistance and constant support; and the exhibitors owed no little to his zeal and sympathy. The Prince Napoleon has devoted great attention to political, social, and commercial studies; and in respect to the commercial code of France he is understood to hold opinions far more liberal than those of the great bulk even of the commercial public of that country.

BONASO'NI, GIULIO, a native of Bologna, was born probably about 1498. It is conjectured that he studied painting under Lorenzo Sabbatini, but his few pictures which remain do not exhibit any extraordinary power. As an engraver he is excelled by few, for, though defective in the mechanical treatment of the plate, he exhibits great artistic feeling. He wrought almost entirely with the burin; and if he fails occasionally in the outline, he always catches the spirit of his original. His copies are so free, and yet so delicate and expressive, that they might be taken for original designs. His drawing is frequently uncertain, yet his versions of the great works which he copied are more valuable than those of many later and more dexterous artists. He has engraved from the works of Raphael, Michel Angelo, Titian, Parmigiano, and many of the other great painters. He has left many engravings from original designs which, though somewhat feeble in effect, are characterised by much grace and agreeable simplicity. The date of his death is uncertain, but he was alive in 1572.

BONAVENTURA, ST., was born in Bagnorea in 1221. At twenty-one years of age he became a friar of the order of St. Francis, and was sent by his superiors to Paris. He, as well as Thomas Aquinas of the Dominican Order, became involved in contentions with the University of Paris, which denied the academical honours, as well as the exercise of public professorship, to individuals of the mendicant orders. Pope Alexander IV. being appealed to, summoned the parties before him at Anagni, and gave sentence in favour of the mendicant orders; and after some resistance by the university, a sort of compromise took place in 1257, and Bonaventura received his doctor's degree. He had already been elected general of his order, in which capacity he enforced a strict discipline, giving himself the first example of implicit adherence to the monastic rules and regulations. Retiring to the convent on Mount Alvernia in Tuscany, he wrote 'Vita Sancti Francisci,' and also an ascetic work, 'Itinerarium Mentis in Deum,' for which last he received the appellation of the 'Seraphic Doctor.' His previous works were chiefly controversial. On the death of Pope Clement IV. in 1268 the cardinals could not agree for a long time in the choice of his successor, and the see of Rome had remained vacant for nearly three years, when Bonaventura succeeded by his eloquent exhortations in reconciling their differences, and producing unanimity of votes in favour of Tedaldus Visconti, afterwards Gregory X. The new pope appointed Bonaventura bishop of Albano, and took him with him to the council of Lyon. Bonaventura was actively engaged in the labours of the council when he was stopped by death in 1274. His funeral was attended by the pope, the cardinals, the patriarchs of Constantinople and of Antioch, and by more than five hundred bishops. His character for sanctity was already established in the popular opinion, and Dante, who wrote not many years after his death, places him among the saints in canto 12 of the 'Paradiso.' Bonaventura was afterwards regularly canonised by the Church. His works have been collected in 9 vols. folio, Rome, 1588; and 13 vols. 4to, Venice, 1751, to which last edition a well-written life of Bonaventura is prefixed. Luther places Bonaventura above all scholastic theologians. Several works have been attributed to Bonaventura which do not belong to him, but which have furnished an opportunity to Voltaire and other critics for throwing ridicule upon the supposed author. (*Dissertatio De Suppositis*, and *Life of Bonaventura*, prefixed to the Venice edition of his works.)

BONE, HENRY, R.A., the most distinguished enamel-painter of his time, was the son of a cabinet chair-maker at Truro in Cornwall, where he was born in 1755. He was apprenticed to a china manu-

facturer of the name of Cockworthy at Bristol. In 1779 he went to London, where he was for many years chiefly employed by jewellers and others in enamel-painting for watch-cases, brooches, lockets, and the like. He first attracted public notice by an enamel portrait of his wife, which he exhibited at the Royal Academy in 1780, and by an original picture of a 'Muse and Cupid,' which, though only five inches and a quarter by four inches and a quarter, was at that time considered to be of extraordinary dimensions: it was engraved in 1790 by R. Dagley. In a few years he was enabled to decline the drudgery of his profession, and to confine himself to miniature- and to enamel-painting, and he executed on enamel many of his own miniatures. In 1800 his reputation was established by the appointment of enamel-painter to the Prince of Wales, a distinction which was succeeded in the following year by his election as an Associate of the Royal Academy; and he was successively appointed enamel-painter to George III., George IV., and William IV. He was elected a full academician in 1811, and for twenty years from this time he was assiduously employed in producing a long succession of admirable works, most of them of unprecedented dimensions; but about 1831 his advanced years compelled him to cease his professional labours. He died in December 1834, aged 79.

The following are Bone's principal works:—'The Death of Dido,' 'Cymon and Iphigenia'; 'Venus'; and 'Hope nursing Love,' after Sir Joshua Reynolds; a copy of the picture of 'Bacchus and Ariadne,' by Titian, now in the National Gallery, eighteen inches by sixteen inches and a half, dimensions up to this time unapproached except by himself,—it was purchased by George Bowles, Esq., of Cavendish Square, for 2200 guineas; a 'Venus recumbent,' after Titian; 'Bathsheba,' after N. Poussin; 'La Belle Vierge,' after Raphael; and an 'Assumption of the Virgin,' after Murillo. He also executed a series of portraits of the Russell family, from the reign of Henry VII. to the present time, executed for the late Duke of Bedford, and now at Woburn Abbey; a set of portraits of the principal royalists distinguished during the civil war of Charles I., for J. P. Ord, Esq., of Edge Hill, near Derby, which Bone left unfinished at his death—its completion was undertaken by his son, H. P. Bone, the present excellent enamel-painter, who in all the great works was his father's assistant; and, finally, his greatest and most interesting work, a series of eighty-five portraits of distinguished persons in the reign of Queen Elizabeth, varying in size from five inches by four to thirteen inches by eight. This last series remained in the possession of the artist during his life, but it was his desire that after his decease it should be offered to the government for purchase, which was accordingly done; but although at the moderate price of 5000*l.*, the government declined the purchase. The sum was considered too much for a collection comprising eighty-five portraits, admirably copied in enamel, nearly all from authentic originals, of the most distinguished characters of one of the most interesting periods of English history. They were disposed of by public sale, and the greater part of them were purchased by W. J. Bankes, Esq.

BONET, JOHN PAUL, is said to have been attached to the secret service of the king of Spain; he was also secretary to the constable of Castile, out of friendship towards whom he undertook the instruction of his brother, who had been deaf and dumb from the age of two years. Only one person is known to have approached to success in the art of instructing deaf-mutes, previous to Bonet. This was Peter Ponce, also a Spaniard, and a monk of the order of St. Benedict, who must be regarded as the first instructor of the deaf and dumb. It does not appear that Bonet had any acquaintance with the means pursued by his predecessor; he represents himself as the inventor of the methods which he describes. (De Gerardo, 'De l'Education des Sourds-Muets,' tom. i. p. 312.) He published at Madrid in 1620 a work which is now very rare: it is entitled 'Reduccion de las Letras, y arte para enseñar a hablar los Mudos.' Having remarked that the deaf are only mute by reason of their deafness, he explains how various kinds of knowledge may be imparted to them by means of sight, to which they are unable to arrive by the ear. In the instruction of deaf-mutes Bonet made use of artificial pronunciation, the manual alphabet, writing, and gesture or the language of signs. Minute details of the proceedings of the instructor on these several heads are contained in his work. He taught his pupils to understand the Spanish language, and the rules of grammar. The Abbé de l'Épée designates M. Bonet's work as one of his "excellent guides" in the earlier part of his experience as an instructor of the deaf and dumb, and the manual alphabet which the abbé adopted, and which is at present used in the institutions on the continent of Europe and in America, is nearly the same as the one given in that work. An account of the success of Bonet has been left by Sir Kenelm Digby, in his treatise 'Of Bodies,' chap. 28. Sir Kenelm Digby and other authors speak of Bonet as a priest: he is also said to have been in the service of the prince of Carignan, and to have continued his employment as a teacher of the deaf and dumb for many years.

BONET (or BONNET), THEOPHILUS, an eminent physician, was born at Geneva on the 5th of March, 1620. His family was originally Italian and of noble rank, but his ancestors had removed from Rome to the south of France about a century previous, in order to enjoy the free exercise of their religion. His grandfather was for a time physician to Charles-Emmanuel, duke of Savoy; but he afterwards removed to Lyon. Andrew Bonet, the father of Theophilus, also practised medicine. He had two sons, John and Theophilus, both of

whom followed their father's profession; but though John arrived at great eminence, he left no work to testify his ability. Theophilus, after having visited many of the most celebrated universities, took the degree of Doctor of Medicine in 1643, and soon after became physician to the Duke of Longueville.

During the course of his practice he was diligent in collecting observations on the progress and terminations of diseases, which formed the basis of his subsequent publications. His earliest work was 'Pharos Medicorum, id est, Cautela, Animadversiones et Observationes Practicæ,' Geneva, 1668, 2 vols. 12mo. Each time this work was reprinted he enlarged it and altered the title, so that the edition of 1679 was called 'Labyrinthus Medicus extricatus,' 4to, Geneva; and that of 1687, 'Methodus Vitandorum Errorum qui in Praxi occurrunt,' 4to.

Incurable deafness having compelled him to retire from practice, he devoted his time to digesting his observations, and published his celebrated work, in 1679, entitled 'Sepulchretum, seu Anatomia Practica,' 2 vols. folio, Geneva, which Mangetus republished with additions at Geneva in 1700, 3 vols. folio. This formed the basis of the great work of Morgagni, 'De Causis et Sedibus Morborum.' The other works of Bonet attest his industry, but are of less utility:—'Mercurius Compilativus, seu Index Medico-Practicus,' Geneva, 1683, folio; 'Medicina Septentrionalis Collatitia,' Geneva, 1685, 2 vols. folio; 'Polyalthes,' 3 vols. folio, Geneva, 1690, 1691, 1693. This is a bulky commentary on 'Johnstoni Syntagma Nosocomices.' Bonet became subject to dropsy, and died on the 29th of March, 1689, in the seventieth year of his age. He possessed great knowledge, and was distinguished for his modesty and affability.

(Eloy, *Dictionnaire Historique*.)

BONFADIO, JA'COPO, was born in the beginning of the 16th century at Gazzano, near Salò, on the banks of the Lake of Garda. He studied at Padua, and afterwards proceeded to Rome, where he became secretary to Cardinal di Bari, with whom he remained three years, which he mentions in his letters as the happiest of his life. On his death he entered the service of Cardinal Ghinucci, but shortly after quitted it, and went to Naples. He afterwards wandered about several parts of Italy until about 1540, when he was invited to Padua to undertake the education of Bembo's son Torquato. Bonfadio appears to have remained at Padua five years. Having accepted in 1545 the professorship of philosophy in Genoa, he was commissioned to write the history of the republic. He began it from the year 1528, where Foglietta had closed his narrative, and continued it till the year 1550. The work, which is written in Latin, is entitled 'Annalium Genuentium Libri Quinque,' and was published after his death at Pavia, 1586. It was translated into Italian and published at Genoa the same year. In describing the organic changes effected in the constitution by Andrea Doria in 1528, the conspiracy of Fieschi, and other then recent events, Bonfadio spoke of several individuals connected with those factions in a tone which probably offended their relatives, who were still powerful at Genoa. However this may be, he was arrested in the year 1550, and condemned for a very different crime to be burnt. Several contemporary or nearly contemporary writers assert that he actually underwent that punishment, while others say that on the intercession of powerful friends he was beheaded in prison, and his body afterwards burnt. The statements of the various contemporary writers who relate this catastrophe are given in substance by Bayle, and at length by Mazzuchelli; but the question of Bonfadio's guilt, of his exact fate, and even the date when it occurred, is left in doubt. The proceedings of trials at that time were secret, and even the charges on which capital sentences were founded were not always made known to the public. Bonfadio's 'Genoese Annals' are generally admired for their style, which in many passages reminds the reader of Sallust. Bonfadio's Italian 'Letters,' already mentioned, have been collected and published by Mazzuchelli (Brescia, 1746). They are considered among the best specimens of Italian epistolary composition, and are also interesting for the descriptions of places, manners, and incidents. Bonfadio also wrote 'Carmina,' 12mo, Verona, 1740; 'Rime,' which are found scattered in various collections; and an Italian translation of 'Cicero pro Milone.'

* BONHEUR, ROSA, was born at Bordeaux, March 22nd, 1822. Evincing very early a decided predilection for art, her father, himself a painter of considerable ability, sedulously cultivated her powers and guided her tastes. As it became evident that landscapes and animals were what chiefly interested her, and what she exhibited most skill in representing, her father—as was the case with our own Landseer—very judiciously took her out constantly to observe, sketch, and paint in the open country, and from living animals during their ordinary unconstrained movements. A part of her course of study consisted in the practice common with the old masters in painting, but somewhat unusual among modern painters, of free modelling from life. Mdlle. Bonheur first sent specimens of her skill to the Exposition of 1841, at which two small pictures were exhibited by her, entitled 'Deux Lapins' and 'Chèvres et Moutons'; they were admired, but did not suggest that they were the work of so original and remarkable an artist as their painter has since proved to be. From this time Mdlle. Bonheur has seldom allowed a year to pass without sending some pictures to the exposition. For some years her studies lay chiefly among horses and sheep, with the peasants who were their attendants; and the

catalogues of the exposition continued to afford such titles as 'Le Cheval à Vendre,' 'Chevaux sortant de l'Abreuvoir,' 'Chevaux dans une Prairie,' 'Moutons et Chèvres,' and the like. But she was steadily advancing in her art, gaining firmness of hand, decision of touch, a better eye for colour, and confidence in her own powers. The range of her subjects widened, and she enlarged the size of her canvasses. Among the works which attracted notice were 'Les Trois Mousquetaires,' 'Un Troupeau Cheminant,' 'La Rencontre,' an 'Effet du Matin,' &c. In 1848 she exhibited a 'Bull' and a 'Sheep,' modelled by herself in bronze. Her fame rose to its highest in 1850, when she exhibited her great work, 'Le Labourage Nivernais,' which excited great interest in Paris, and received the honour which is the crowning ambition of the French artist—a place in the gallery of the Luxembourg. The chief works she has since painted, 'Vaches et Moutons dans un Chemin Creux,' and 'Le Marché aux Chevaux,' exhibited unfinished in Paris, fully sustained the reputation acquired by her 'Labourage Nivernais.' The 'Marché aux Chevaux,' when exhibited at the French Exhibition in London in 1855 as the 'Horse-Fair,' excited a very unusual amount of attention and admiration; and when Mdlle. Bonheur visited the English metropolis during the Exhibition she met with an enthusiastic reception from artists as well as amateurs. Rosa Bonheur is in truth an artist of no common order. Much of the admiration which has been lavished upon her works has been the idle iteration of fashionable criticism, and something has been due to the character of her subjects, so remarkable for a female painter. But her pictures require no allowance on account of sex—they would take a high rank as the works of any artist of any age or country. She represents her animals in free and spirited action, without any regard to conventional attitudes, in the most characteristic manner, with singular fidelity, and with the most life-like abandon; and this without any attempt to evade difficulties, or slur over or conceal any of the less graceful or unpicturesque features. Her pictures often show a choice of subjects very remarkable in a lady; but they are almost invariably simple and unaffected in composition, admirable in drawing, free, broad, and even what might be called masculine in execution, did not the contrast afforded by the prevalent petite and mincing manner of the rising English male painters suggest the inapplicability of such an epithet. Mdlle. Bonheur has another unfeminine quality—she is most successful in her large pictures. In these all her excellences are best seen, while the general heaviness of colouring and the want of atmosphere in her landscapes, often objected to in her works, and very observable in her smaller pictures, disappear when her great paintings are looked at from a proper distance. Mdlle. Bonheur belongs to a family of artists. She has both brothers and sisters who have attained some distinction as painters and sculptors, and she occasionally paints figures in some of their landscapes; but we have seen none of these joint productions of any marked merit. (*Nouvelle Biographie Universelle*, &c.)

BONIFACE, SAINT, a native of Devonshire, was born about 680. He became a monk, and resided for a time in a convent at Southampton, where he acquired reputation for learning and piety. When thirty-six years of age he set out for Rome, where he expressed to Pope Gregory II. his wish to preach the gospel to the heathen nations of Germany, where two of his countrymen, Wilfred and Willibrod from Northumberland, as well as Kilian, an Irish bishop, had preceded him. The pope having sanctioned his vocation, Boniface laboured in Germany for more than thirty years in the work of converting and civilising the rude natives, and he well deserved the title which has been given him of the 'Apostle of Germany.' He founded four cathedrals, Erfurt, Bonaberg, Aichstadt, and Wurzburg, with a school attached to each, and he established numerous monasteries both for monks and nuns. These monasteries were generally built upon uncultivated grounds, which were cleared and tilled by the new inmates, and thus agriculture kept pace with the diffusion of Christianity. The monastery of Fulda, founded by Sturm, one of Boniface's disciples, was the means of reclaiming a vast tract of ground which had been till then covered by forests. Boniface was made archbishop of Mainz and metropolitan of all the new dioceses on the right bank of the Rhine. At his request several missionaries joined him from Britain to assist him in his arduous task, and he was supported by Carloman, and afterwards by Pepin, sons of Charles Martel, whose authority or influence extended over a considerable part of Germany. In 755 Boniface again visited Frisia, a country still in great measure pagan. Having assembled a multitude of converts he pitched tents in a field for the purpose of giving them confirmation, when a band of heathens fell upon the encampment, and killed or dispersed the congregation. Boniface was among the killed.

(*Vita S. Bonifacii* in Mabillon, tom. iv.; Dunham, *History of the Germanic Empire*.)

BONIFACE I. was elected Bishop of Rome after the death of Zosimus in 419. Part of the clergy, supported by Symmachus, prefect of Rome, elected Eulalius, but the Emperor Honorius, who was then at Ravenna, confirmed Boniface's election. Several letters from Boniface to the bishops of Gaul concerning matters of discipline, and to the bishops of Africa, who would not allow of appeals to the see of Rome, are in Constant's collection, and give a favourable opinion of his character and learning. He asserted the authority of the Roman see over the churches of Illyricum, upon which contested point there are letters extant from Boniface to Rufus, bishop of Thessalonica, and also between

the two emperors, Arcadius and Honorius. Boniface died in 428, and was succeeded by Celestinus I.

BONIFACE II. succeeded Felix IV. in October 530. It is recorded of him that, although a native of Rome, he was the son of a Goth. His was a disputed election; but Dioscorus, the rival pope, fell ill, and died about a month after the election, and the schism ceased. Boniface passed several regulations against bribery in the elections of bishops, and he also condemned the practice of a bishop appointing his own successor. He died the 8th of November 532, and was succeeded by John II. (*Platina, Vita Pontif.*)

BONIFACE III. was elected in March 607, and died in November of the same year. He obtained of the Emperor Phocas the acknowledgment of the supremacy of the see of Rome over all other churches. This circumstance renders his pontificate remarkable.

BONIFACE IV. was the son of a physician in Valeria, and was elected pope on the death of Boniface III. He it was who consecrated the Pantheon, having first removed the images of the heathen gods, and dedicated it to the Virgin Mary and all the martyrs. He transformed his paternal house in the country of the Marsi into a monastery, on which he bestowed all his property. He died in 615, and was buried in St. Peter's church. Boniface has been canonised by the Church of Rome.

BONIFACE V., a Neapolitan, who succeeded Deusdedit in 619. He is remembered as having confirmed the right of sanctuary in churches; and for his efforts to convert the nations of Britain to Christianity. He died in 624, and was succeeded by Honorius I.

BONIFACE VI., a native of Tuscany, and son of the Bishop Adrian, succeeded Formosus in 895, and died fifteen days after his election. His election not being perfectly regular, he has been placed among the anti-popes by some writers. He was succeeded by Stephen VII.

BONIFACE VII. Cardinal Franco, or Francone, was elected in a popular tumult, when Benedict VI. was seized and strangled in 974. Boniface himself was expelled from Rome in the following year, having incurred general detestation through his licentiousness and cruelty. Boniface is not considered a legitimate pope, though his name is registered as such in most chronological tables. He returned to Rome in 985, and put John XIV. in prison, where he died of hunger, as it is reported. Boniface again assumed the papal dignity, which he retained till his death near the close of 985. His corpse is said to have been treated with great indignity. He was succeeded by John XV.

BONIFACE VIII., Cardinal Benedetto Gaetani of Anagni, was born about 1228, and succeeded in January 1294 Celestine V., whom he had persuaded to abdicate on the ground of incapacity, and whom he afterwards confined in the castle of Fumone, where Celestine died a few months after, under suspicious circumstances. Boniface played an active part in the political events of his time. He supported Charles II. of Anjou, king of Naples, against James of Aragon and Sicily, and subsequently against James's brother Frederic. He likewise took the part of Adolf of Nassau against Albert of Austria, son of Rudolph of Hapsburg. At the same time Boniface waged a war of destruction against the Colonna, a powerful feudal family, which held possession of several towns and estates in the countries of Rome and Naples. The origin of this quarrel is not clearly ascertained. It appears that two cardinals of the house of Colonna had opposed Boniface's election, and afterwards refused to admit papal garrisons into their castles. Boniface accused them of having dissipated the treasures of the church, of holding correspondence with Frederic of Sicily, and other charges. The two cardinals wrote to the French and other kings against Boniface, complaining of his arrogance, and questioning the validity of his election. Upon this the pope excommunicated the whole family of Colonna and their adherents, calling them heretics, and declaring that they had forfeited their honours and estates and property of every sort. Further, he proclaimed a crusade against them, besieged Preneste, which he took and razed to the ground; and he destroyed likewise Zagarolo and Colonna, fiefs of the same family. The two cardinals escaped to France, and Sciarra their uncle was obliged to conceal himself in the forests near Anzio, whence he afterwards escaped by sea only to fall into the hands of pirates.

Boniface proclaimed the first jubilee in the year 1300, granting by a bull a plenary indulgence to all those who should visit the sanctuaries of Rome in that year. This attracted an immense multitude of foreigners to Rome. The historian Villani, who went there himself, reckons the number of strangers at 200,000 at one time, and the chronicle of Asti states the number of all those who visited Rome during that year at two millions. This jubilee brought to Rome a vast quantity of money. Before Boniface's time plenary indulgence had been granted only to those who went to the crusades for the deliverance of the Holy Land.

Boniface, still aiming at the reduction of Sicily, sent for Charles de Valois, brother of Philippe Bel, king of France. On arriving at Florence Charles supported the faction of the Neri, by which Dante and many others were exiled. He then went over to Sicily, but after a desultory warfare peace was made, and Frederic was acknowledged as king of Trinacria in 1303, on condition of his paying to the Roman see a tribute of 3000 onze, or 15,000 florins. A serious quarrel soon after broke out between the pope and Philip le Bel. The pope claimed to share with the king the tithes levied on the clergy; he also created

the new bishopric of Pamiers without the king's consent, and he appointed the bishop his legate in France. The bishop behaved insolently to the king, who arrested him and gave him in charge to the Archbishop of Narbonne. Upon this Boniface excommunicated the king, placed his kingdom under interdict, and wrote to Albert of Austria, confirming his election and inviting him to make war against France. Philip assembled the states of the kingdom and laid before them twenty-nine charges against the pope, accusing him of simony, of heresy, of licentiousness, and even of sorcery, and appealing to a general council of the Church. The next measure of the pope was to proclaim all Philip's subjects released from their allegiance. The king resolving to put an end to this to him dangerous struggle, sent Guillaume de Nogaret, a bold unscrupulous man, to Italy, with money and letters for the partisans of the Colonna and the other enemies of the pope. Nogaret was joined by Sciarra, who had escaped from captivity. The pope was at Anagni, when Nogaret and Sciarra suddenly entered the town followed by armed men, overcame the pope's guards, and arrested Boniface himself. Nogaret was for taking him to Lyon, where the council was to assemble; but Sciarra insisted upon Boniface abdicating, abused him, and even struck the old man with his gauntlet. Boniface behaved with dignity and firmness; he was kept three days in confinement, during which it is said he would not take any food. At last Cardinal del Fiesco induced the people of Anagni to rise and deliver the pontiff, and Sciarra and Nogaret were obliged to leave the town. Boniface returned to Rome, but his health had received so severe a shock, that he fell ill and died, October 1303, after about nine years of a most turbulent pontificate. Boniface was one of the most strenuous assertors of the assumed supremacy of the pope over princes and nations in temporal as well as spiritual matters. He was an inveterate persecutor of the Ghibellines, for which Dante has alluded to him at length in canto xxvii. of the 'Inferno.'

BONIFACE IX. Cardinal Pietro Tomacelli, a Neapolitan by birth, was elected November 2, 1389, by the cardinals at Rome after the death of Urban VI. This was the time of the great Western schism as it is called, which began between Urban and Clement, styled the VIIth, who held his court at Avignon. Clement having died in 1394, the cardinals of his party elected Pedro de Luna by the name of Benedict XIII. Boniface however continued to exercise the papal authority at Rome, regardless of the Avignon popes and conclaves. Endeavours were made by several sovereigns to assemble a council and put an end to the schism, but both Boniface and Benedict were averse to this measure. Boniface died at Rome October 1, 1404, and was succeeded by Innocent VII. The Church of Rome has ever since acknowledged Urban and Boniface and their successors as legitimate popes, and considered Clement and Benedict as anti-popes. [BENEDICT, ANTI-POPE.]

During his pontificate of nearly fifteen years, Boniface was involved in the Italian wars of that turbulent period. He first favoured the claims of the Angevins to the throne of Naples, but afterwards recognised the more fortunate Ladislaus as king. Perugia and other towns of Umbria and the Marches acknowledged the pope as their suzerain in Boniface's time. Boniface is charged with being addicted to a worldly policy, having seized upon the ecclesiastical revenues for temporal purposes, and enriched his brothers and nephews.

BONINGTON, RICHARD PARKES, was born in the village of Arnold, near Nottingham, in October 1801. Bonington's father was a landscape and portrait painter, and perceiving a strong tendency in his son towards his own pursuit even at a very early age, he trained him from his childhood in such a manner as in his judgment was best calculated to fit him for his future profession, at the same time not neglecting his education in those branches of instruction requisite to qualify him for the ordinary business of life. Bonington's professional education was chiefly French. When he was only fifteen years old his father took him to Paris, where he afterwards chiefly resided, and procured him permission to study in the Louvre, where he made several excellent copies of some of the best Italian and Flemish landscapes in the collection. He became also a student of the Institute, attended occasionally the studio of Le Baron Gros, and spent the greater part of his time in the society of French artists. During this period he executed many lithographs for French publishers.

Having obtained a considerable reputation in Paris by his works, which were chiefly marine and coast views, he visited Italy, where Venice, 'throned on her hundred isles,' offered to Bonington particular attractions in her crumbling palaces and her many waters. He made oil pictures of the ducal palace and of the grand canal, which were exhibited in England, and attracted much notice. It was his intention to paint many other similar pictures, of which he had already prepared the sketches, but he was already the victim of a fatal disease: he was in a deep decline; and the nervous debility inherent in this complaint reduced him to such a low state, that his constitution sunk under the excitement of his very success when he returned to England. He died in London, shortly after his return from a second visit to Paris, in September 1828, having not quite finished his twenty-seventh year.

He painted to a great extent in water-colours, and mostly marine and river views. His style is simple and picturesque, but sketchy and neglectful of details. But he was assiduous in the practice of his art,

and up to the time of his premature death was steadily and obviously improving. Had he lived a few years longer he might have taken a high place among the landscape painters of England. A series of twenty-four lithographs from the works of Bonington was published shortly after his death.

BONNEFOY (or BONFIDIUS), EDMUND, a writer on Oriental law, or law of the Eastern empire, was born on the 20th of October, 1536, at Chabeuil near Valence, in France. Having applied himself to the law, he was early appointed colleague to the celebrated Cujacius, in the chair of law, in the university of Valence. Bonnefoy was only rescued from assassination in the massacre of St. Bartholomew by his friend Cujacius. He then went to Geneva, where, having been appointed to a chair, he lectured on oriental jurisprudence,—a chair for which he was eminently qualified by his knowledge of the languages, particularly Hebrew, Greek, and Latin. In 1573 he published 'Juris Orientalis libri tres, Imperatoris Constitutiones,' &c. The Greek text was accompanied by a Latin translation by the author, and was meant to comprise the laws civil and ecclesiastical of the Eastern or Greek empire. The first book contains the constitutions of the emperors of the East, from Heraclius to Michael Palæologus; the second contains the decrees of the archbishops and patriarchs of Constantinople; and the third the decrees and letters of the other patriarchs and pontiffs. Bonnefoy died at Geneva on the 8th of February, 1574, being then about thirty-eight years of age. His colleague Cujacius and the historian De Thou (who studied under him), unite in ascribing to Bonnefoy a character of unusual moral excellence as well as great ability and learning.

BONNER, EDMUND, Bishop of London, was born at Hanley in Worcestershire, about the close of the 15th century. According to contemporary tradition he was the natural son of a priest named Savage by Elizabeth Frodsham, who afterwards married Edmund Bonner, a sawyer at Hanley: but Strype asserts that he was the legitimate son of this Bonner, citing as his authority Baron Lechmon, whose ancestor had been an intimate friend and patron of the bishop, and the tradition may be as merely idle gossip as traditions often are. In the year 1512 he was admitted a student at Pembroke College, Oxford (then Broad-Gate Hall), where in 1519 he took, on two successive days, the degrees of Bachelor of the Canon and Civil Laws, and he was ordained about the same time. In 1525 he was admitted to the degree of Doctor, and had acquired so high a reputation as a canonist, that Cardinal Wolsey made him one of his chaplains and master of his faculties and jurisdiction. In consequence of these offices, Bonner was attending at Cawood on the cardinal when he was arrested there.

Soon afterwards we find Bonner chaplain to Henry VIII., incumbent of the livings of Blaydon and Cherry Burton in Yorkshire, of Ripple in Worcestershire, and of East Dereham in Norfolk, and a prebendary of St. Paul's. Much of this promotion was due to the favour of Cromwell, whose schemes for the reformation of religion Bonner promoted. In 1533 he was sent a second time to the pope, who was then at Marseille, to appeal to a general council against Clement's decree of excommunication against Henry VIII. on account of the divorce. In 1538 he was made Bishop of Hereford whilst he was on an embassy to Paris, and before his consecration he was translated to London and took his commission from the king in 1540.

Thus far Bonner not only concurred in, but zealously promoted the Reformation, and the separation from Rome. But when death had removed the despot whose ungovernable temper seems to have obtained submission even from men of virtue and of ordinary firmness, Bonner's compliance ceased; he protested against Cranmer's injunctions and homilies, and scrupled to take the oath of supremacy. For these offences he was committed to the Fleet, from which however upon submission he was soon after released. From this time Bonner was so negligent in all that related to the Reformation as to draw on himself, in two instances, the censure of the privy council; but as he had committed no offence which subjected him to prosecution, the council, according to the bad practice of those times, required him to do an act extraneous from his ordinary duties, knowing that he would be reluctant to perform it. They made him preach a sermon at St. Paul's Cross on four points. One of these Bonner omitted, and commissioners were appointed to try him, before whom he appeared during seven days. At the end of October 1549 he was committed to the Marshalsea, and deprived of his bishopric.

After the death of Edward VI. Bonner was restored by Queen Mary. His first acts were to deprive the married priests in his diocese, "and set up the mass in St. Paul's" before the queen's ordinance to that effect. It would be tedious to follow him in all the long list of executions for religion, which make the history of that reign a mere narrative of bloodshed. Fox enumerates 125 persons burnt in his diocese and through his agency during this reign; and a letter from him to Cardinal Pole (dated at Fulham, 26th of December 1556) is copied by Holinshed, in which Bonner justifies himself for proceeding to the condemnation of twenty-two heretics who had been sent up to him from Colchester. These persons were saved by the influence of Cardinal Pole, who checked Bonner's sanguinary activity.

When Queen Elizabeth succeeded to the throne, Bonner was made the single exception to the favourable reception given to the bishops. In May 1559 he was summoned before the privy council, and on the

cath of supremacy being tendered, and his refusal to take it, he was deprived a second time of his bishopric and indicted for a pre-munire. He escaped the penalties attached to this charge, but he was confined for the rest of his life to the Marshalsea, where he died on September 5th, 1569. The public acts of Bonner's life sufficiently show the character of the man; and whatever palliation may be offered, there can be little doubt that he well merited the popular abhorrence which attached to his name. But Burnett's assertion that he little understood divinity, but was a great master of the canon law, wherein he was excelled by very few in his time, is evidently inaccurate. He was no doubt a master both of the canon law and of scholastic divinity.

BONNET, CHARLES, was born March 13, 1720, at Geneva, where he died, June 20, 1793. He was descended from a family of French Protestants, who had left their native country in 1572, in order to escape from the religious persecutions of that period. Bonnet's first studies were applied to the science of jurisprudence, but the perusal of the works of Réaumur and other contemporary naturalists produced in his mind so decided a preference for the investigations of natural history, that he relinquished the legal profession, for which he had been destined by his family.

The discoveries of Trembley on the animal functions and modes of reproduction of the polypes named *Hydra*, led Bonnet into similar investigations with respect to insects, the results of which he published in his 'Traité d'Insectologie,' 2 vols. Paris, 1745. In this work his inquiries are especially directed to the processes of respiration in caterpillars and butterflies, and to the peculiar formation of the tape-worm. Bonnet's early education had sufficiently qualified him for the performance of political duties, so that in 1752 he was elected a member of the council of state of the republic of Geneva, a situation which he retained till 1768. After the publication of his work on insects, his inquiries were directed to the processes of the nourishment, respiration, and growth of plants, and his discoveries were made public in his 'Recherches sur l'Usage des Feuilles dans les Plantes,' 4to. Leyden, 1754. About this time his sight had become impaired, and he was consequently obliged to refrain from those minute examinations into animal and vegetable organisation to which he had been so long accustomed. He then retired to an estate which he possessed on the banks of the Lake of Geneva, where with his wife and in the society of literary men, by whom he was frequently visited, he passed the remainder of his life.

Bonnet, from the time when his sight became weak, seems to have employed his thoughts chiefly on subjects relating to the connection between the mental and corporeal organisation of man and also of the lower animals. In 1755 he published his 'Essai de Psychologie, ou Considérations sur les Opérations de l'Âme;' in 1760 an 'Essai Analytique sur les Facultés de l'Âme;' in 1762 'Considérations sur les Corps Organisés;' in 1764 the 'Contemplation de la Nature;' in 1769 'Idées sur l'État Futur des Êtres Vivants, ou Palingénésie Philosophique;' and in 1773 his 'Recherches Philosophiques sur les Preuves du Christianisme.' He also published an edition of his collected works, ('Œuvres d'Histoire Naturelle et des Philosophie,' 8 vols. 4to, and 18 vols. 12mo, Neuchâtel, 1779-1788. An account of his life and works was given by Trembley in 1794, 'Mémoire pour servir à l'Histoire de la Vie et des Ouvrages de Charles Bonnet,' 8vo, Bern.

BONNIVARD, FRANÇOIS DE, was born in 1496, at Scyssel, in the French district of Bugé, now included in the department of Ain. He studied at Turin, and while yet a young man received from his uncle, by resignation, the priory of St. Victor, situated close to the wall of the city of Geneva, and which had lands of considerable value attached to it. Bonnivard was of liberal opinions, and decidedly opposed to feudal oppression, and he adopted the republic of Geneva as his country. At that time there were disputes between the republic and Charles III., duke of Savoy, in consequence of the Prince-Bishop of Geneva having ceded to the duke the signiorial rights which were annexed to his bishopric. The duke in 1519 entered Geneva with an army, and Bonnivard, who had been conspicuous in his support of the rights of the republic, endeavoured to make his escape into Switzerland. He was however arrested, and delivered to the duke, by whom he was detained two years a prisoner at Grolée. After his release he continued to be active in support of the principles of the republic, and in his opposition to the claims of the duke. But he was again unfortunate, for in 1530, while travelling on the Jura, he was not only plundered by robbers, but they placed him again in the power of the duke. He was then immured in the dungeon of the Château-de-Chillon, a fortified castle at the eastern end of the Lake of Geneva, where he was kept in close confinement during six years. The Swiss cantons of Bern and Freiberg were at that time in alliance with the republic of Geneva, and the Bernese, having occupied the canton of Vaud, obtained possession also of the Château-de-Chillon, and released Bonnivard. On the fact of Bonnivard's imprisonment here, and certain traditions of the residents in the vicinity, Lord Byron founded his short narrative poem of 'The Prisoner of Chillon.' The additional circumstance of two of the brothers of Bonnivard having been imprisoned with him, has no foundation except in the imagination of the poet. The description of their sufferings and death, which forms the most affecting part of the

narrative, was probably suggested by Dante's Count Ugolino and his two sons. Bonnivard returned to Geneva, and continued to reside there till his death in 1570. He wrote a history of Geneva, made the republic heir to his ecclesiastical possessions, and left an extensive collection of books, which formed the foundation of the public library of the republic.

BONNYCASTLE, JOHN, professor of mathematics at the Royal Military Academy, Woolwich, was born at Whitchurch in Buckinghamshire, and came early to London, where he married at the age of nineteen. His wife dying soon after their marriage, he became tutor to the sons of a nobleman, after which he resided at Euston in Northamptonshire, till he obtained a place at the Woolwich Academy, where he finally became a professor, and where he died May 15, 1821. He is stated to have been a good scholar, and much attached to poetry, particularly to that of Shakspeare.

Bonnycastle is known by a large number of excellent elementary works, which, being still on sale, it is not necessary to enumerate. His 'Guide to Arithmetic' has long had a great circulation. His treatises on mensuration and astronomy are very good of their kind; but his 'Elements of Algebra' (not the abridgment, but the work in two volumes, 8vo, 1813) is a very excellent performance, and shows great knowledge of the state of the science. He does not enter much into principles, but his management of the mechanism of algebra, and his almost singular felicity in separating the most striking and powerful parts from the rest, render his work very useful to the reader.

Bonnycastle passes for the translator of Bossut's 'History of Mathematics,' but a correspondent of the 'Gentleman's Magazine' for 1821 (p. 482) states, as of his own knowledge, that Bonnycastle only wrote the preface, and added the list of mathematicians at the end, the translation being by Mr. T. O. Churchill. His name however is prefixed to the work.

BONOMI, JOSEPH, an Italian architect who practised in England, was born at Rome in 1739, and studied architecture under the Marchese Teodoli. In 1767 he was invited to England by the brothers Adam, and was for many years employed by them as an assistant and architectural draftsman. The acquaintance which he formed in London with Angelica Kauffman, then in the zenith of her fame, led to his marrying her cousin and ward, Rosa Florini, in 1775. When Angelica returned to Italy, after her marriage with Zucchi the painter, she induced Bonomi to do the same, and he left England in 1783, taking with him his family of three young children; but he did not remain in Italy above a year. About five years after his return, in November 1789, he was elected an Associate of the Royal Academy, but was never raised to the rank of R.A., although Sir Joshua Reynolds interested himself very warmly in his behalf, and did all he could to obtain for him the professorship of perspective: the feeling excited by his influence on behalf of Bonomi led to Reynolds's temporary resignation of his presidency of the Academy. Bonomi died March 9, 1808, leaving a widow and six children, the eldest of whom has acquired notice as an architect; and another son, who has visited Egypt, has obtained considerable distinction by his writings on Egyptian antiquities.

Bonomi's chief professional works are, additions and alterations at Langley Hall, Kent, 1790; the chapel of the Spanish embassy, near Manchester-square, London, 1792; Eastwell House, Kent, 1793; the pyramidal mausoleum in Blickling Park, Norfolk, 1794; Longford Hall, Salop; mansion at Laverstoke, Hants, 1797; the splendid mansion at Roeneath in Dumbartonshire, for the Duke of Argyll, 1803, which last, though left incomplete, is his most celebrated work, but is rather remarkable for its peculiarities than for any high architectural or artistic merits. Bonomi also made designs for the new sacristy of St. Peter's at Rome, of which edifice he had been appointed honorary architect in 1804.

BONONCINI, GIOVANNI, a musical composer whose name once rivalled Handel's, but is now chiefly known through the medium of Swift's epigram, appears to have been born about the year 1660 at Bologna, where his father, Giovanni Maria, followed the profession of music, and in 1673 published a book, 'Il Musico Practico,' from which we are inclined to infer that he was neither a very sound musician nor possessed of much good sense.

When the Italian Opera, under the title of the 'Corporation of the Royal Academy of Music,' was established in London by a party of nobility and gentry, who subscribed 50,000*l.* for the purpose, to which George I. as patron contributed 1000*l.*, the managers engaged Handel (then living at Cannons), Bononcini (who was sent for from Rome), and Ariosti (who came from Bologna), to compose for the theatre. Handel's productions displayed every great quality; Bononcini's were marked by tenderness and elegance, but wanted invention and vigour; Ariosti seems to have been a good musician without genius, whose name would soon have been consigned to oblivion but for his connection with the other two. The first new work presented by the academy was 'Muzio Scevola,' of which Ariosti, the senior of the three, furnished the first act, Bononcini the second, and Handel, as youngest of the party, the third. The comparative merits of the two last composers were judged, not by critical rules, but party feelings. Handel was patronised by the king, his rival had the support of the Marlborough family: Handel was the favourite of the Tories, Bononcini of the Whigs. The public generally however were on the side of

Handel, who gained a complete ascendancy and maintained it; but his rival continued on the establishment till 1727, though he produced little, and then retired. After this he confined his services to the Duchess of Marlborough, who had previously taken him into her family, and settled on him a pension of 500*l.* per annum. His imperious temper did not long permit him to enjoy his good fortune; and his dishonourable conduct in presenting to the Academy of Ancient Music a madrigal as his own, though the composition of Lotti of Venice, completed his downfall in this country, which he quitted in 1733. He then went to reside in Paris, where he wrote much sacred music for the Chapelle-du-Roi, and at the peace of Aix-la-Chapelle was invited to Vienna by the emperor, to compose music for the rejoicings on that occasion.

The exact period of Bononcini's decease does not appear, but it is supposed that he almost attained his 100th year. For the King's Theatre he composed several operas, now entirely forgotten; and in 1721 he published a volume of 'Cantate e Duetti,' published by subscription, and dedicated to George I.

*BONPLAND, AIMÉ, was born August 22, 1773, at La Rochelle, in the French department of Charente-Inférieure, where his father exercised the medical profession, and to which young Bonpland was also destined. He served as a surgeon during some years of the early part of the revolution on board a French frigate. He afterwards went to Paris in order to complete his studies in medicine, and became a pupil of Corvisart, at whose residence he met with Alexander von Humboldt. An intimate friendship soon grew up between the two young men, and they mutually assisted each other in their studies. Humboldt at the same time was making preparations for an extensive series of travels for scientific purposes, and asked Bonpland to accompany him, a proposal which was immediately accepted. They sailed from France in 1799, and landed in America, where they travelled five years, chiefly in Mexico and among the Andes. Bonpland during that period collected and dried more than 6000 plants previously unknown to European botanists. Their travels were published under the title of a 'Voyage aux Régions Équinoxiales du Nouveau Continent.' Bonpland presented his collection of dried plants to the Muséum d'Histoire Naturelle. Napoleon granted him a pension, and Josephine in 1804 appointed him superintendent of the gardens at her residence of Malmaison. While in this situation Bonpland published a description of his collection of plants, 'Plantes Équinoxiales recueillies au Mexique, à l'île de Cuba, &c., 2 vols. folio, with 220 copperplates, Paris, 1809-16; and about the same time a 'Description des Plantes Rares de Navarre et de la Malmaison,' folio, with 66 copperplates, Paris, 1813-17. He also published a 'Monographie des Melastomées,' with 120 plates, 2 vols. folio, Paris, 1809-16. Josephine died in 1814, and Bonpland resigned his situation, though requested by Prince Eugene to retain it.

Bonpland had formed the resolution of returning to America, and at the latter end of 1816 sailed from Havre, and landed at Buenos Ayres, with a large collection of the useful plants and fruit-trees of Europe. He was received favourably by the government, and was named professor of natural history, and he remained at Buenos Ayres nearly five years. He then resolved to undertake a journey across the desert of the Gran Chaco to the Andes, in order to continue his examinations into the vegetable kingdom of that region. With this intention he sailed up the river Paraná, with suitable attendants, and reached the territories which had been formerly occupied by the Spanish Jesuit missions on the eastern bank of that river. Here it became necessary, in order to cross the country, to obtain the sanction of Francia, the dictator of Paraguay, and Bonpland sent a deputation to him for that purpose. Instead however of acceding to his request, Francia sent a body of troops by night across the Paraná, who attacked the small body of unarmed men, killed some, and wounded others. This took place on the 3rd of December 1821. Two days afterwards Bonpland was conveyed as a prisoner to the station assigned to him as a place of residence, where he was compelled to remain more than nine years under strict superintendence. At length, on the 2nd of February 1831, he was set at liberty. He then travelled towards the southern boundary of Brazil, and settled in the vicinity of the small town of San Borja, near the eastern bank of the river Uruguay, where he has ever since resided.

BOOTH, BARTON. This eminent actor was descended from an ancient and honourable family, being the third son of John Booth, Esq., a near relation of Henry Booth, earl of Warrington, in Lancashire. He was born in 1681, and educated at Westminster by the famous Dr. Busby. Becoming at a very early age remarkable for the grace of his action and the sweetness of his voice, he was selected to perform the character of Pamphilus in the 'Andria' of Terence, at one of the customary school-exhibitions. The great applause he met with on this occasion was, by his own confession, the first spur to his theatrical ambition; and on being removed to Cambridge at the age of seventeen, to the great annoyance of his parents, who had intended him for the Church, he ran away from Trinity College, and joined a company of strolling players. The misdeeds of one of the actors, while at Bury in Suffolk, caused the dispersion of the company, and young Booth returned to London in great distress. He was speedily forgiven, and kindly received by his family; but his stage-fever had by no means abated, and in one of its fiercest paroxysms he engaged with a Mrs.

Mins to perform at Bartholomew Fair, where he achieved such renown that Betterton heard of him, and was prevented engaging him for Drury Lane only by the fear of offending the noble family to which he was related. Shortly afterwards Booth formed an acquaintance with Ashbury, the manager of the Dublin theatre, who chanced to be in London, and with him he went to Ireland in June 1693. His first appearance in Dublin was in the part of Oronoko, and his success, decided from the commencement, continued for two years increasing daily, when he determined to return to England; and having by letter reconciled himself a second time with his family, he obtained from Lord Fitzharding a recommendation to Mr. Betterton, who with great candour and kindness engaged and assisted him to the extent of his power. In 1701 Mr. Booth made his first bow in the Theatre-Royal, Drury Lane, in the character of Maximus, in Lord Rochester's 'Valentinian.' His reception was enthusiastic, and he quickly established himself in public favour as second only to his friend and instructor Betterton. In 1712, on the production of Mr. Addison's 'Cato,' Mr. Booth performed the principal character, and was complimented by the Tories, who presented him with fifty guineas, collected in the boxes during the performance, "as a slight acknowledgment of his honest opposition to a perpetual dictator, and his dying so bravely in the cause of liberty." The managers of the theatre also presented him with an equal sum, in consideration of the great success his talents had secured to the play; and shortly afterwards Queen Anne, at the request of Lord Bolingbroke, granted a special licence, recalling all former ones, and nominating Mr. Booth joint manager with Wilks, Cibber, and Dogget.

In 1727 Booth was attacked by a violent fever, from the effects of which he never perfectly recovered. In 1729 he was prevailed on to play, for seven nights only, in 'The Double Falsehood,' and they were his last performances. After four years' distressing alienation of mind, he expired, May 10, 1733, in the fifty-third year of his age. Mr. Booth was twice married: first in 1704, to a daughter of Sir William Barkham of Norfolk, Bart., who died in 1710; and secondly, in 1719, to Miss Hester Santlow, or Saintlow, a celebrated, beautiful and wealthy actress, who survived him; he had no children by either wife.

Booth's masterpiece as an actor is said by Cibber to have been Othello, but his favourite part was the far less important one of the Ghost in 'Hamlet,' a performance, according to Macklin, which has never been imitated successfully. His tone, manner, and gait were so solemn and unearthly, that the audience appeared to be under the impression that a positive spectre stood before them. The soles of his shoes were covered with felt so as to make no noise upon the stage, which he glided more than walked over, thus completing the illusion. So much was Booth in favour with the rich and noble of his day, that though he had no equipage of his own, there was not a nobleman in the kingdom, says Chetwood, who had so many sets of horses at his command. The chariot and six of some one or another was sure to be waiting for him every night to take him, after the play, to Windsor, where the court was then kept, and to bring him back the following day in time for the theatre.

*BOPP, FRANZ, a distinguished linguist, was born in 1791, at Mainz, now included in the grand-duchy of Hesse-Darmstadt, but then an electorate. Bopp's scientific education was commenced at Aschaffenburg, whither his parents had accompanied the court of the elector, and which was then the capital of a small principality belonging to the electorate of Mainz. Stimulated by the personal encouragement and writings of Windischmann, Bopp began to study the oriental languages at an early age. In 1812 he removed to Paris, where he had the good fortune to secure the friendship of Chézy, Sylvestre de Sacy, and A. W. von Schlegel, and to obtain their assistance in the prosecution of his favourite studies. With some small assistance from the King of Bavaria, he remained about five years in Paris, and then removed to London, to Göttingen, and finally to Berlin, where he was appointed professor of Sanscrit and the oriental languages to the university, a situation which he has ever since continued to fill with the highest reputation. The investigations of Bopp have been chiefly directed to comparative grammar, a science which has been called into existence by the study of Sanscrit. His first work was edited by Windischmann, and was published at Frankfurt-on-the-Main in 1816, 'Ueber die Conjugation-System der Sanscrit Sprache in Vergleich, mit der Persischer und Germanischen' ('The Conjugation-System of the Sanscrit Language compared with the Persian and German'). His great work is the 'Vergleichende Grammatik des Sanscrit, Zend, Griechischen, Lateinischen, Lithuanischen, Altlawischen, Gothicen, und Deutschen' ('Comparative Grammar of the Sanscrit, Zend, Greek, Latin, Lithuanian, Old-Slavish, Gothic, and German Languages'), 4to, Berlin, 1833. He had previously published a 'Glossarium Sanscritum,' 4to, 1828-30; a 'Grammatica Critica Lingue Sanscrita,' 4to, 1832; and some of the episodes from the great poem of the 'Mahabharata' in the original Sanscrit, with Latin and German versions, and notes. He also published an abridgment of his Sanscrit Grammar, 'Kritische Grammatik der Sanscrit-Sprache, in kurtzer Fassung,' 8vo, 2nd ed. 1845. His latest works were—'Ueber die Verwandtschaft der Malayisch-Polynesischen Sprachen mit den Indo-Germanischen' ('On the Relationship of the Malay-Polynesian Languages with the Indo-Germanic'), 1841, and 'Ueber die Kauka-

sischen Glieder des Indo-Europäischen Sprachsystems' ('On the Caucasian Branches of the Indo-European System of Languages'), Berlin, 1847. (*Conversations-Lexikon; Nouvelle Biographie Universelle*.)

BORDA, JEAN CHARLES, was born at Dax, in France, May 4, 1733. He studied military engineering, but afterwards entered the cavalry. Some mathematical papers written at the suggestion of D'Alembert procured him admission in 1756 into the Academy of Sciences at Paris. In 1757 he served at the battle of Hastenbeck; he then re-entered the engineering service; but in 1767 removed into the navy. He introduced into the French naval surveys the use of reflecting instruments, instead of determining positions by compass-bearings. In 1782 the frigate which he commanded was captured by an English squadron. Borda however was honourably treated, and allowed to return to France on his parole. From that time to the end of his life he was mostly employed on the great measurement of the meridian. He died February 20, 1799.

In 1767 Mayer had proposed a whole circle of reflexion for astronomical purposes. Borda published the account of his own improvement of the idea, since so well known, in 1787, under the title of 'Description et Usage du Cercle de Réflexion.' The repeating circle (a further modification of the ideas of Mayer) was not described by himself, but appeared first, so far as we can find, in the 'Exposé des Opérations,' &c., (94 pages) published in 1791 by the three commissioners, Cassini, Méchain, and Legendre, appointed to superintend the French part of the junction of the observatories of Paris and Greenwich.

In 1790 he found by experiment the length of the pendulum at Paris (which at that time was contemplated as the basis of the new system of measures). From that time to the end of his life he was employed in devising and executing the means of forwarding the great survey. The methods for measuring the base were formed under his inspection, and he was in fact the inventor of most of the original instruments employed. To him and Coulomb is attributed the rise of the sound experimental philosophy for which the French have since become distinguished.

In the meanwhile he had charged himself with the expense of calculating and printing new tables of logarithmic sines, &c., corresponding with the new division of the circle into 400 degrees. These were published in 1801, under the title of 'Tables Trigonométriques Décimales,' &c., with revision and an explanation by Delambre.

* BORDEAUX, DUC DE, HENRI CHARLES FERDINAND MARIE DIEUDONNE D'ARTOIS, son of Charles Ferdinand, Duc de Berry, was born September 29, 1820. When Charles X., king of France, was dethroned, his son the Dauphin, Louis Antoine, on the 2nd of August, 1830, renounced his claim to the throne of France in favour of the Duc de Bordeaux, who quitted France with the rest of the royal family, August 16, 1830. The French nation substituted Louis-Philippe for Charles X., and the Duc de Bordeaux has assumed the title of the Comte de Chambord. By the French 'legitimists' he is styled 'Henri V.' He married November 7, 1846, the Archduchess of Este, eldest daughter of the late Francis IV., duke of Modena.

BORDONE, PARIS CAVALIERE, one of the most distinguished painters of the Venetian school, especially in portrait, was born of a noble family at Treviso in 1566. He was for a short time the pupil of Titian in Venice, but they disagreed and separated, and Bordone chose afterwards Giorgione as his model, in preference to Titian. Eventually however he adopted a style of his own, based upon the styles of these two great Venetian masters. Bordone's works are eminently distinguished for all the beauties of the Venetian school, and are not deficient in drawing or invention. One of the best works is the 'Martyrdom of St. Andrew,' in the church of San Giobbe at Venice. His picture of the 'Fisherman presenting the Ring he had received from St. Mark to the Doge,' now in the Academy at Venice, is regarded as his masterpiece; in colour it is exceedingly fine, but the composition is confused, and the effect altogether far from satisfactory. It was taken to Paris by the French during the war, but was restored to Venice in 1815. His picture of 'Paradise,' formerly in the church of Ogni Santi at Treviso, is now also in the Venetian Academy. In the Dresden Gallery is a beautiful 'Holy Family' by Bordone, and a picture of 'Apollo with a Lyre,' and Marsyas and Midas in the background. Bordone spent some time in the service of Francis I. in France: he died in Venice about 1570.

(Zanetti, *Della Pittura Veneziana*; Ridolfi, *Le Maraviglie dell'Arte*, &c.)

BOREL and BORELLI. Our object here is to prevent two contemporaries being confounded, who have the same Latin name Borellus.

PIERRE BOREL, of Castres, born 1620, died 1689, was the author of the treatise 'De vero Telescopii inventore,' Hague, 1655, a work often cited. He was a physician by profession.

GIOVANNI ALFONSO BORELLI, of Naples, born 1608, was also a physician. He wrote 'Euclides Restitutus,' 1623, discovered and translated the lost books of Apollonius [APOLLONIUS PERGEUS], and also wrote the first theory of Jupiter's satellites, entitled 'Theoricæ Medicorum Planetarum ex causis physicis deductæ,' 1666. Weidler and Lalande unite in affirming that he suggested, or rather revived, the notion of attraction in this work; but Delambre ('Ast. Mod.' ii.

333), says "Il n'indique aucune cause physique." Borelli also wrote 'Observatione dell' Ecclia Lunare fatta in Roma,' 1675, inserted in the Journal of Rome for 1675, p. 34.

G. A. Borelli was one of the leaders of the iatro-mathematical sect, or of those who have attempted to apply mathematics to medicine. He was sent to Rome to complete his education, where, under the tuition of Castelli, he made such progress, that he was invited at an early age to Messina to teach the mathematics. As he had made medicine as well as mathematics his study, he wrote an account of a malignant fever which raged in Sicily during the years 1647 and 1648, in a treatise entitled 'Delle Cagioni delle Febri Maligni di Sicilia,' Cozenza, 1649, 12mo.

Having become tired of his situation he accepted a professor's chair at Pisa in 1656, where he lectured with great applause. The fame of his abilities procured him the favour of the Grand Duke Ferdinand and Prince Leopold, who obtained him the honour of being elected a member of the Academia del Cimento. It was about this time probably that he first conceived the design of employing mathematical principles in explaining the animal functions, and he now applied himself diligently to the dissection of animals. Several of his letters on the subject of anatomy, written between 1659 and 1664, are published in Malpighi's posthumous works. In 1658 he published at Pisa a second tract on the nature and treatment of malignant fevers, 'Della Causa delle Febri Maligni,' 4to. His first physiological work, 'De Renum Usu Jubicium,' appeared in 1664, with the treatise of Bellini, 'De Structurâ Renum,' Strasburg, 8vo. In 1669 he published, in the 'Giorn. di Lett.' an essay on the fact, that in most persons the eyes are of unequal power, the one seeing more distinctly than the other, 'Osservazioni intorno alla Virtù Ineguale degli Occhi.' In 1667 he published his 'Tractatus de Vi Percussionis.' The 'Historia et Meteorologia Incendii Ætnei, 1669; accedit Responso ad Censuras R. P. Honorati Fabri contra Librum de Vi Percussionis,' was published in 1670. He was present at the eruption of Ætna, having the preceding year quitted Pisa and returned to Messina. The account was written at the request of the Royal Society of London, with which he corresponded, and was printed in their 'Transactions.' In 1670 appeared his treatise 'De Motionibus Naturalibus a Gravitate Pendentibus,' a prelude to his great work 'De Motu Animalium,' which was not published until after his decease.

Being supposed to have favoured the insurgents at the revolt of Messina, to which city he had returned, he was obliged to quit the place. Christina, queen of Sweden, who was then residing at Rome, invited him thither, and he continued to enjoy her patronage till the termination of his life. During the last two years of his life he taught the mathematics to youth at the convent of St. Pantaleon, where he died December 31st, 1679, in the seventy-second year of his age.

The first volume of his work 'De Motu Animalium,' which appeared in 1680, Rome, 4to, is dedicated to Christina, and was printed at her expense; the second volume, which completed the book, came out the following year. There are many other editions of this great work. It is on this work that the medical reputation of Borelli depends. In the second part indeed, where he endeavours to explain the action of the heart, lungs, liver, and other viscera on mechanical principles, he is as much mistaken as the other physicians of the iatro-mathematical school; but in the first part he successfully applies the principles of mechanics to the explanation of the active and passive movements of the body. He shows that the bones are true levers, and that the muscles attached to them may be considered as their moving powers; and he proves that the length of the limb, and the distance at which the muscle or power is inserted from the extremity of the limb, or centre of articulation, influence the quantity of force required for the contraction of the muscle, and the execution of the motion; just as in mechanics the length of the lever and the distance of the power from the fulcrum alter the quantity of force required. He demonstrated too, that the muscles act at a disadvantage, considered merely as levers. In his attempts to estimate the force of muscles in numbers, he fails where success was probably impossible.

Borelli invented a diving apparatus; and a boat in which persons might row themselves under water.

BORGHESE, an Italian family originally from Siena, where they ranked among the patricians of that republic. In the early part of the 16th century, Marc Antonio Borghese, a juriconsult of some distinction, settled at Rome, where he was employed as advocate of the papal court. He had several sons and daughters. His third son, Camillo, born in 1552, became pope in May, 1605 (Paul V.). The eldest son, Giovan Battista, married Virginia Lanti of Pisa, by whom he had Marc Antonio Borghese, who by the influence of his uncle the pope was made prince of Sulmona, and grandee of Spain. Marc Antonio began the line of the princes Borghese, which still continues. His son Paolo married Olimpia Aldobrandini, the only child of the prince of Rossano, and grand niece to Pope Aldobrandini (Clement VIII.), and thus the Aldobrandini inheritance came into the Borghese family. Paolo's son, Giovan Battista, prince of Sulmona and Rossano, duke of Palombara, &c., was ambassador of Philip V. of Spain at the court of Rome, where he died in 1717, and was buried in the splendid family chapel at Santa Maria Maggiore. His son, Marc Antonio Borghese, was made viceroy of Naples for the emperor in 1721. Another Marc Antonio, a descendant of the viceroy, was Prince Borghese, who in the second

half of the last century, was well known as a patron of the fine arts, and a great collector of statues and other antiquities, with which he enriched his fine villa on the Pincian Hill. He left two sons, the eldest Don Camillo, who early embraced the part of the French, and went to Paris, where he married in 1803 Marie Pauline Bonaparte, Napoleon's sister, and widow of General Leclerc. He was made in 1805 prince of the French empire, afterwards duke of Guastalla, and lastly governor-general of the departments beyond the Alps, which included the former states of Piedmont and Genoa, then annexed to France. In his new capacity, Prince Borghese fixed his residence at Turin, where he held a sort of court, and seems to have behaved so as to conciliate the inhabitants. He sold to Napoleon his fine museum of the villa Borghese, at Rome, for thirteen millions of francs, the amount of which he received in demesne estates situated in Piedmont. On the fall of Napoleon, Prince Borghese returned to Rome, and afterwards fixed his residence at Florence, where he built a magnificent palace, and lived in great splendour. At the same time he did not neglect his Roman residence, and he replaced in great measure by fresh acquisitions of statues and reliefs for his villa, the former collection which is in the museum of the Louvre. Prince Don Camillo died in 1832; his wife Pauline had died in 1825. The House of Borghese had immense estates in the papal territory, and others in the kingdom of Naples, and in Tuscany. The vast town palace Borghese at Rome has a rich gallery of paintings. Beside the celebrated villa on the Pincian Mount, the family has the fine villa Aldobrandini, called also Belvedere, at Frascati, and other mansions on their various estates. The villa Borghese or Pinciana at Rome has been described in several works:—Montelatici, *Villa Borghese fuori di Porta Pinciana, con gli ornamenti, figure, &c.*, Roma, 1700; Lamberti, *Sculture del Palazzo della Villa Borghese*, and by Visconti, Rome, 1821. There have been several cardinals of the Borghese family.

* BORGHESI, BARTOLOMEO, was born July 11, 1781, at Savignano, near Rimini, in the Papal States. His father, Pietro Borghese, was a man of learning, who was fond of archaeological inquiries, and had accumulated a considerable collection of coins and medals. Bartolomeo at an early age manifested a partiality for pursuits similar to those of his father, who however died in 1795. The son then removed to Bologna, where he pursued his studies till the year 1800, when he returned to Savignano, and soon afterwards founded the *Accademia Savignanese*, and prosecuted his antiquarian investigations with great industry. He afterwards resided in Rome, Milan, and other cities of Italy, where he occupied much of his time in the examination and copying of ancient Roman inscriptions, besides augmenting the collection of coins and medals left by his father, till it has become one of the richest in Italy. He has contributed largely to the periodical publications of his time, but his most important work is the 'Nuovi Frammenti di Fasti Consolari Capitolini,' 2 vols. 4to, 1820, &c. In 1821 he retired to the small republic of San Marino, where he has since continued to reside, with occasional visits to Rome and other Italian cities, chiefly occupied in augmenting his collection of documents for the series of consular and triumphal fasti, to which the greater part of his time has been devoted. He is an associate and corresponding member of most of the learned societies of Europe. (*Nouvelle Biographie Universelle.*)

BORGIA, or BORJA, a family originally from Valencia in Spain. Alfonso Borja was raised to the pontificate in 1445 by the name of Calixtus III. One of his sisters married Geoffroy Lenzoli, who assumed the name and arms of Borja. Geoffroy had two sons, one of whom became Prefect of Rome, and the other, Rodriguez, was afterwards Pope Alexander VI. Before his exaltation to the pontificate Alexander had four sons and a daughter by Vanozia, a woman whose parentage is not exactly known. The eldest son John was made Duke of Gandia in Spain by King Ferdinand of Aragon; the second son, Cesare Borgia, and a daughter, Lucrezia Borgia, are famous in Italian history.

CESARE BORGIA was a student at Pisa when his father was elected pope in 1492. He immediately went to Rome, where he was soon after made Archbishop of Valenza in Italy, and afterwards cardinal. Cesare was early noted for his profligacy as well as for his abilities and deep cunning. His younger brother Geoffroy having married in 1494 Sancia, natural daughter of Alfonso II., king of Naples, was made Duke of Squillace. The arrival of the French under Charles VIII. at Rome in 1495 obliged Alexander VI. to forsake Alfonso, and apparently to countenance Charles's invasion of the kingdom of Naples. Charles even required Cardinal Cesare Borgia to accompany him to Naples as hostage for his father's fidelity. Cesare however had not gone farther than Velletri, on his flight from the French camp and return to Rome, when both he and his father turned against the French, after whose retreat from Italy they renewed their connection with the Aragonese dynasty at Naples. Cesare joined his father and brother (the Duke of Gandia) in waging a war of extermination against the Orsini, Colonna, Savelli, and other baronial families of the Roman state, whose castles and lands they seized. In June 1497 John Borgia duke of Gandia was murdered in the night, and his body thrown into the Tiber, by unknown assassins. His brother Cesare was strongly suspected of the murder. The charge rests on mere suspicion, but his character was so bad, that he was considered capable of any deed, however atrocious. Soon afterwards Cesare resigned his cardinalate, and in 1498 was sent by the pope to France with the bull of divorce between Louis XII. and his

wife Jeanne, daughter of Louis XI., after which Louis XII. married Anne of Brittany. On this occasion Louis made Cesare duke of Valentinois in Dauphiny, a title by which he is generally mentioned by Italian historians. In May 1499 Cesare married Charlotte, sister of Jean D'Albret, king of Navarre. With the assistance of the French he carried on war against the petty lords of the towns of Romagna, who refused to acknowledge the supremacy of the court of Rome. He began by taking Imola, and afterwards besieged the castle of Forli, which was bravely defended by Caterina Sforza; but the place was stormed, the garrison massacred, and Caterina sent prisoner to Rome, where she was liberated through D'Alègre's intercession. The French being recalled to Lombardy, Cesare returned to Rome, which he entered in triumph in February 1500, when the pope created him Duke of Romagna and Gonfaloniere of the Holy See. He then turned his arms against Giovanni Sforza, whom he drove out of Pesaro; he likewise took Rimini from the Malatesti. The people of Faenza defended themselves bravely for nearly a year on behalf of their young prince Astorre Manfredi, then fifteen years of age; at last they surrendered on condition that both Astorre and his brother Evangelista should be free. Borgia however sent them both prisoners to Rome, where they were cruelly put to death in 1501. He then attacked Bologna, but was stoutly resisted by Giovanni Bentivoglio, with whom he concluded a truce. In the same year he marched against Florence, but was obliged to desist by peremptory orders from the pope. He accompanied the French army in its invasion of Naples, under d'Aubigny, and was present at the taking of Capua, where the greatest atrocities were committed by the invaders. Borgia seized upon a number of women whom he sent to his palace at Rome; others were publicly sold. In 1502 he took Urbino and Camerino, where he put to death Giulio da Varano and his sons.

The army of Borgia was composed chiefly of mercenaries; and he had several condottieri under him, such as Vitellozzo Vitelli of Città di Castello and Baglioni of Perugia, Oliverotto of Fermo, Paolo Orsino, and others. These men, either jealous of his power or afraid of his ambition and treachery, deserted his cause while he had gone to Lombardy to meet king Louis XII. On his return to Romagna, Borgia affected a reconciliation with the revolted condottieri, and induced them to repair to Sinigaglia, where he went himself, accompanied by a troop of men. He there seized upon their persons, except Petrucci of Siena and Baglione of Perugia, who were fortunate enough to escape, and put them to death, together with many of their followers. Sinigaglia was plundered on that occasion. Machiavelli, who was with Borgia as envoy of the Florentine republic, gives a graphic account of the whole tragedy in his characteristic cool and concise style. When Alexander VI. received the news, he arrested Cardinal Orsini and other members of the same family, and ordered them to be put to death in prison. Borgia at this time was the terror of all Central Italy, from the Adriatic to the Mediterranean; he aimed at making himself, with the countenance of the pope, independent sovereign of Romagna, the Marches, and Umbria. On the 18th of August 1503 Alexander IV. died, after a great supper, at which Cesare was present, who felt himself dangerously ill at the same time, and it has been said, though without sufficient evidence, that they both drank by mistake some poisoned wine which they intended for Cardinal di Corneto. The death of the pope ruined Borgia's fortunes. His troops were defeated, and he was himself arrested and sent prisoner to Spain, where he was confined by King Ferdinand in the fortress of Medina del Campo for about two years. Having found means to escape, he went to his brother-in-law, the king of Navarre, and served in the Navarrese army as a volunteer. He was killed in 1507 by a musket-shot at the siege of the small town of Viana near the Ebro.

(Tomasi, *Vita di Cesare Borgia.*)

LUCREZIA BORGIA, sister to Cesare, was betrothed while yet a child to a Spanish nobleman, but her father having become pope, married her in 1493 to Giovanni Sforza, lord of Pesaro, with whom she remained four years, when her father dissolved the marriage, and gave her in 1498 to Alfonso duke of Bisceglia, natural son of Alfonso II., king of Naples. On this occasion she was created Duchess of Spoleto and of Sermoneta. She had by Alfonso a son, Rodrigo, who was brought up at the papal court, but died young. In June 1500 Alfonso was attacked on the steps of St. Peter's church by a party of assassins, and stabbed in several places; he was carried to the pontifical palace, where he died two months after. Cesare Borgia, as usual, was suspected of the crime. Lucrezia then retired for some time to Nepi, but was afterwards recalled to Rome by her father, and, according to Burchard, intrusted with the affairs of the government during his absence: but the correctness of this is doubted. (Roscoe, 'Dissertation on Lucrezia Borgia,' in the first volume of his 'Life of Leo X.,' and also Bossi's 'Notes' to the Italian translation of that work.) Towards the end of 1501 she married Alfonso d'Este, son of Ercole duke of Ferrara, and made her entrance into Ferrara with great pomp on the 2nd of February 1502.

At Ferrara Lucrezia appeared as the patroness of literature. Bembo, who was then at that court, conceived an attachment for her which appears to have been of a platonic nature. (Mazzuchelli, art. Bembo and Lucrezia Borgia.) Ten autograph letters of Lucrezia to Bembo are preserved in the Ambrosian Library, together with a lock of her hair which she sent him in one of them, and some Spanish verses addressed

to her by Bembo. Bembo continued to correspond with the Duchess of Este long after he had left Ferrara, and till 1517. Lucrezia was the mother of three sons by Alfonso, who had a high opinion of her, and intrusted her with the care of the government while he was absent in the field, in which capacity she seems to have conducted herself so as to gain general approbation. In the latter years of her life she became more rigid in her manners and more assiduous in the practice of devotion and charitable works. In short, her behaviour after she became Duchess of Ferrara affords no grounds for censure. Her former conduct, while at Rome with her father, has been the subject of much obloquy, which seems to rest however chiefly on inferences from her living in a flagitious court, where she witnessed the most profligate scenes. Still there is no individual charge substantiated against her. (See the 'Dissertation' of Roscoe referred to above.) Of any participation in the murder of her husband, or in any of her brother's atrocious deeds, she has never been accused. At Ferrara she was highly praised by Strozzi, Tibaldeo, Ariosto, and other poets of the court. Bembo dedicated his 'Asolani' to her, and Aldo Manuzio, in the dedication prefixed to his edition of Strozzi's works, speaks of her as an accomplished princess and a liberal patroness of his art; the historians Giraldi, Sardi, and Libanori, mention her in terms of the highest commendation. All this can hardly be mere flattery, for even flattery from so many different writers could not have been lavished on a person so profligate and debased as she has been represented. A drama full of horrible but gratuitous fictions concerning her life was published and performed at Paris in 1833, under the title of 'Lucrece Borgia.' Lucrezia died at Ferrara in 1523.

John, duke of Gandia, left a son who perpetuated the family of Borgia. One of his descendants was canonized as St. Francis de Borgia. Another Borgia was viceroy of Peru, and died in 1658. Lastly, Cardinal Stefano Borgia (prefect of Propaganda), a learned and amiable man, who died in 1804, while accompanying Pius VII. on his journey to Paris. The Museum Borgia at Velletri, rich in Egyptian and Mexican antiquities, belonged to this cardinal. He has left several learned works, among others a 'History of Benevento,' in 3 vols. 4to; 'De Cruce Veliterna Commentarii,' Roma, 1780; 'Bassirilievi in terra cotta dipinti in varij colori trovati nella città di Velletri,' Roma, 1785; 'Storia della città di Tadino,' 'De Cruce Vaticanæ,' &c.

BORGOGNONE, JACOPO CORTESE, called from his place of birth Borgognone, was born in 1621 in the city of St. Hippolite in Burgundy (Ital. Borgogna). His father, Giovanni Cortesi, was a painter of sacred subjects, and very successful in his way. Owing to an accidental temptation, Jacopo went into the army for three years; after which he returned to his art, and studied at Bologna, where Guido, then at the height of his fame, was residing. Guido, happening to see a picture of his in a window, inquired into his circumstances, and took him home with him, which, during the remaining six months that he stayed in Bologna, afforded him a fine opportunity of improving his colouring. Here he occasionally saw Albano, from whom, among other things, he learned this maxim, "That a painter, before setting to work upon any subject, should recal to mind something which he had seen in reality;" a saying which Jacopo kept constantly in view. Borgognone subsequently realized a handsome independence, and visited his native country for three years; then returned to Italy, and painted for a considerable time in Florence with great reputation. But he had early in life imbibed a passion for the monastic life from frequent association with members of the religious orders. In 1655 he conceived himself under a call to renounce the vanities of the world, and accordingly betook himself to Rome, where he begged to be admitted into the Order of Jesus, and was received as a novice. During his noviciate he painted, at the suggestion of his fellow-monks, pictures of sacred subjects. In such esteem was he held by the community to which he belonged that the second year of noviciate was dispensed with, and he never gave his order reason to repent of their confidence. His religious profession however did not make him idle, and he painted as vigorously as ever. He died of apoplexy, November 14th, 1676.

Borgognone painted with great facility and rapidity; his pictures consequently are very numerous. His execution was in dashing strokes, the colour laid on thick, and better suited therefore to a distant than a close view—a manner which has been ascribed to his living with Guido, and to his seeing the works of Paolo Veronese when at Venice; but is sufficiently explained by his early habits of study and practice. His pictures have excellences corresponding to the peculiarity of his style. They are chiefly of battle-pieces and the like; and there is in them a freedom of design, a force and suddenness in the action, a unity of composition, with a most natural variety in the accidents, which seem to convey to the gallery-visitor the impression of a real battle-field.

Jacopo had a brother, GUGLIELMO CORTESI, also called Borgognone, a painter of merit, who sometimes assisted his brother in his paintings, but he never attained the same eminence. He was a pupil of Pietro da Cortona, but chiefly formed his style after that of Carlo Maratta.

BORLASE, WILLIAM, was born at Pendeen, in the parish of St. Just in Cornwall, February 2nd 1696, where his family had been settled from the reign of King William Rufus. He was placed early at school at Penzance, where his master used to say "he could learn, but did not;" and was thence removed in 1709 to Plymouth, under the care of the Rev. Mr. Bedford. In March 1713 he was entered

of Exeter College, Oxford. He was ordained priest in 1720. In 1722 he was presented to the rectory of Ludgvan in Cornwall. In 1724 he was married to Anne, eldest surviving daughter and coheir of the Rev. William Smith; and in 1732 he was presented by Lord Chancellor King to the vicarage of St. Just, his native parish, where his father had considerable property.

At Ludgvan, a retired but delightful situation, Mr. Borlase soon recommended himself as a clergyman, a gentleman, and a man of learning. The parish of Ludgvan contained rich copper-works, abounding with mineral fossils, which Mr. Borlase collected from time to time; and his collection increasing by degrees, he was encouraged to study the natural history of his native county. While engaged in this design, his attention became strongly directed to the numerous monuments of remote antiquity in several parts of Cornwall, which had till then been nearly neglected. Enlarging his plan, he determined to gain as accurate an acquaintance as possible with the religion and customs of the ancient Britons, to which he was encouraged by several gentlemen of his neighbourhood, who were lovers of British antiquities, and by the antiquarians of other parts of England.

In 1750, being at London, he was admitted a Fellow of the Royal Society, into which he had been chosen the year before, after having communicated a paper on the nature and properties of spar and sparry productions, particularly on the spars or crystals found in the Cornish mines, printed in the 'Philosophical Transactions,' vol. xvi. p. 250. His next memoir was an account of the great alterations which the islands of Scilly have undergone since the time of the ancients who mention them, as to their number, extent, and position. ('Phil. Trans.' vol. xlvi. p. 55.) Various other communications from him, some relating to the antiquities, some to the natural history of his native county, appear in the 'Philosophical Transactions' between the years 1752 and 1771.

The antiquities of Cornwall were published at Oxford in February 1753, under the title of 'Observations on the Antiquities, Historical and Monumental, of the County of Cornwall,' folio, Oxford, 1754. It passed through a second edition at London in 1769. At the request of Dr. Lyttelton, president of the Society of Antiquaries, and afterwards bishop of Carlisle, his memoir on the Scilly Islands was published in an enlarged form as a distinct treatise, entitled 'Observations on the Ancient and Present State of the Islands of Scilly, and their importance to the trade of Great Britain;' in a Letter to the Rev. Charles Lyttelton, LL.D., dean of Exeter, 4to, Oxford, 1756.

Mr. Borlase printed at the Oxford press his 'Natural History of Cornwall,' for which he had been many years making collections: it was published in folio in April 1758. He presented a variety of fossils and remains of antiquity, which he had described in his works, to the Ashmolean Museum, to which he continued to send everything curious that fell in his way. In 1766 the University of Oxford conferred upon him the degree of LL.D. by diploma.

Dr. Borlase was diligent in his pastoral duties and the study of the Scriptures. He made a paraphrase of the book of Job and the books of Solomon, and wrote some other pieces of a religious kind. He occupied himself in superintending his parish, and particularly the improvement of the high roads, which were more numerous than in any parish in Cornwall. The belles-lettres and painting also occupied part of his leisure time. The correction and enlargement of his 'History of Cornwall' for a second edition engaged a portion of his time; and when this was completed he minutely revised his 'Natural History.' His 'Private Thoughts concerning the Creation and Deluge,' after being sent to the printer, were recalled when a few pages were printed, chiefly owing to his severe illness in January 1771. From this time his health began to decline. He died August 31st 1772, in his 77th year.

Dr. Borlase corresponded with many of the most eminent men of his time. Nichols, who, in his 'Literary Anecdotes of the Eighteenth Century,' vol. v., has printed Dr. Borlase's Life of Himself, with additions, says that there is still extant a large collection of letters written to Dr. Borlase by Pope, whom he furnished with the greatest part of the materials for forming his grotto at Twickenham, consisting of such curious fossils as the county of Cornwall abounds with.

BORROMEI, ST. CHARLES, son of Gilberto Borromeo, Count of Arona, Lord of Anghieri, &c., and of Margherita de' Medici, sister to Pope Pius IV., was born at Arona in October 1538. He studied at Pavia under Alciati, and took his doctor's degree at twenty-two years of age. Shortly after, his uncle Pius IV. called him to Rome, and made him a cardinal and archbishop of Milan. Borromeo established an academy in the Vatican for the promotion of learning, and he published its conferences, under the name of 'Noctæ Vaticanæ.' He urged the pope to hasten the termination of the Council of Trent; and upon its conclusion in 1563, he was commissioned to draw up an exposition of the doctrines of the Roman Catholic Church, as sanctioned by that council. This exposition is known by the name of 'Catechismus Tridentinus.' After the death of Pius IV., in 1565, Cardinal Borromeo went to his diocese, where he devoted himself entirely to his episcopal duties. He reformed his expensive style of living, and employed the greater part of his revenues in charitable purposes. He also enforced a reform in the clergy, especially among the monastic orders. The monks called Umiliati gave most scandal by their openly licentious conduct; and Borromeo having exerted

himself to check their disorders, one of them shot at the cardinal while he was at prayer in his chapel. The ball perforated his garments without hurting his person. The assassin, named Farina, was taken and executed, together with two of his superiors who had instigated the crime. Pope Pius V. suppressed the order, and applied their revenues to other purposes.

Cardinal Borromeo used to visit every part of his diocese, reforming abuses, examining the conduct of his clergy, and providing for the wants of the poor. He established colleges, schools, and asylums for destitute children. He held several provincial synods, the transactions of which are found in his 'Acta Ecclesie Mediolanensis,' folio, 1599. When the plague broke out at Milan in 1576, he exerted himself, at the risk of his life, in assisting the sick and relieving the wants of the population in that calamitous time. In some particulars, Cardinal Borromeo shared the errors and prejudices of his age, for we find that he believed in the existence of sorcery. His conduct however was exemplary, and his zeal for the flock committed to his care unremitting. He died the 3rd of November 1594. His body, dressed in his pontifical robes, is to be seen in a sarcophagus of natural crystal, in the subterraneous chapel of the cathedral of Milan. Borromeo was canonised by Pope Paul V. in 1610. He left many theological and ascetic works, homilies, and sermons, of which a catalogue is given by Mazzuchelli. Ripamonti and Bascapé have written his life.

BORROMEIO, FEDERICO, the son of Giulio Cesare Borromeo, and uncle of St. Charles Borromeo, and of Margherita Trivulzio, was born at Milan, in 1564. He resided first at Bologna and then at Pavia, and afterwards went to Rome, where he was made a cardinal, in 1587. He was both a classical and oriental scholar; and was intimate at Rome with Baronio, Bellarmino, and the pious philanthropist Filippo Neri. In 1595 he was made Archbishop of Milan, where he adopted the views of his cousin and predecessor St. Charles, and enforced his regulations concerning discipline with great success. He used to visit by turns all the districts, however remote and obscure, in his diocese; and his indefatigable zeal for the good of his flock, his charity and enlightened piety, are attested by Ripamonti and other contemporary writers, and have been recently eloquently eulogised by Manzoni, in his 'Promessi Sposi.' He was the founder of the Ambrosian Library, on which he spent very large sums; and he employed various learned men, who went about several parts of Europe and the East, for the purpose of collecting manuscripts. Oligati was sent to Germany, Holland, and France; Ferrari to Spain, Salmazi to Greece, a Maronite priest, called Michael, to Syria, &c. About 9000 manuscripts were thus collected. Cardinal Borromeo established a printing press, annexed to the library; and appointed several learned professors to examine and make known to the world these literary treasures. He also established several academies, schools, and charitable foundations. His philanthropy, charity, and energy of mind, were exhibited especially on the occasion of the famine which afflicted Milan in 1627-28; and also during the great plague of 1630. He died the 22nd of September 1631, universally regretted. Mazzuchelli gives a list of his printed works. He left also a number of works in manuscript.

BORROMINI, FRANCESCO, was born in the district of Como, in the year 1599, and at the early age of nine was sent by his father, who was an architect, to study sculpture at Milan. After passing seven years in that city he proceeded to Rome, where his relative, Carlo Maderno, was then employed in finishing St. Peter's. On the death of Maderno, in 1629, although Bernini was appointed to succeed him as architect to that building, Borromini continued under him as he had done under his predecessor. Borromini could not brook the superiority thus given to Bernini, and endeavoured to supplant him whenever occasion offered, and so far succeeded as to ingratiate himself with Urban VIII. Owing to the patronage of that pontiff, he was employed upon a variety of important works, most of which would have afforded ample scope for the display of architectural talent, had he not chosen to throw away the opportunities thus offered him: Instead of seeking to distinguish himself by showing that he was capable of turning his art to greater account than either his predecessors or contemporaries, he sought to astonish by novelties, and by caprices altogether at variance with the established principles both of the art itself and of construction, altering and reversing members, and applying them contrary to all analogy. His designs are of a singularly heterogeneous description, and the invention which he unquestionably possessed, is rendered for the most part valueless by the capricious use made of it. Nearly all the productions of Borromini offer to the eye a mass of confusion, and for the most part are as ungraceful as they are unmeaning. It must nevertheless be acknowledged that there are occasionally some happy accidents—some glimpses and glimmerings of beauty and gracefulness in his works.

It must also be allowed that he frequently exhibited an unusual degree of constructive skill; in fact, it required no ordinary ability to contrive the execution of some of his designs, because the supports are all disguised, and what ought to contribute to strength, required no little artifice to make it support itself. He appears to have been a man of perverse disposition as well as taste; and at length, although he obtained great wealth as well as popularity, he fell into a state of hypochondria, caused it has been said by envy of Bernini's superior reputation; but really there can be little doubt, by the approaches of insanity. In order to dissipate the malady, he made a journey

through Italy, but on his return again to Rome shut himself up in seclusion, occupying himself solely in drawing whatever fantastic architectural ideas occurred to him, with the intention of having them engraved. His disorder however continued to gather strength; and it was no doubt increased by his attendants not permitting him to apply himself any longer to the studies which they considered the cause of his disorder. One night when he was unable to sleep, and had ordered pens and paper to be brought him, he leaped out of bed and stabbed himself with a sword that happened to be hanging up in his chamber. This desperate act was committed in the year 1667, when he had reached the advanced age of sixty-eight. Borromini is said to have exhibited a morbid jealousy of temper and inordinate ambition, yet he was possessed of many estimable qualities: he was generous and disinterested, and his morals were unblemished.

Among his principal works is the church of La Sapienza at Rome, which he was commissioned to execute by his patron, Pope Urban, and which bears ample testimony to his singular taste, both outside and in the interior. The dome has the peculiarity of being formed externally by steps, and it has a spiral staircase placed above its lantern. His other more important works include the church of the College di Propaganda; the oratory of the fathers of Chiesa Nuova, which is perhaps one of his least faulty productions, after the church of St. Agnes; and the façade of the Doria Palace, a strange composition yet displaying considerable grandeur of effect seen from certain positions. His church of San Carlino alle Quattro Fontane is generally considered his masterpiece of extravagance, chiefly perhaps on account of the waving lines and surfaces of its façade. Besides the above and a great many other works, Borromini restored, or rather modernised, the nave of San Giovanni Laterano, which, capricious as the parts and decorations are, has nevertheless something grand and imposing in its general character.

*BORROW, GEORGE, was born near Norwich early in the present century. From intimations scattered through his various writings he would appear (even whilst with his parents) to have led a somewhat erratic life, and to have received a very irregular education, for which he was more than usually indebted to his own exertions. Early in life he was thrown into greater or less intimacy with several persons of literary and intellectual habits, among others William Taylor of Norwich, and from them he acquired a decided taste for literature with a predilection for the acquisition of languages; without however impairing his natural fondness for adventures, and especially for such as were to be found in roving among gipsies and other wandering tribes. For this kind of life his great physical strength, pliability of temper, readiness in the acquisition of living languages, dialects, patois, and even slang, fitted him in a very uncommon degree. In England he made himself perfectly familiar with the language, habits, and traditions of the gipsies, and then spent a considerable time amongst the gipsies of the continent, more particularly those of Spain. The result of his experience he published in a work, the character of which is sufficiently indicated by its title; and which opened quite a new field of information to the philologist and the student of human nature, while its popular interest was manifested by its quickly reaching a third edition. This work was entitled 'The Zincali; or an Account of the Gypsies of Spain, with an original Collection of their Songs and Poetry, and a copious Dictionary of their Language,' 2 vols. 8vo, 1841. In Spain Mr. Borrow undertook a mission which would seem at first ill-suited to his tastes, and for which he must have appeared to some of the graver members of the committee of the society singularly unfitted,—that of distributing for the Bible Society of London, copies of the Bible in the Spanish language. Mr. Borrow certainly set about his task in an original manner, though perhaps one better fitted to the circumstances of the country than any other which could have been adopted, but which no other man probably could have carried out in practice. Of this mission he published in 1843 a pretty full narrative: 'The Bible in Spain; or the Journeys, Adventures, and Imprisonments of an Englishman in an attempt to circulate the Scriptures in the peninsula,' 3 vols. 8vo. In many respects this remarkable book as a mere work of amusement might take its place alongside of 'Gil Blas.' It is unquestionably one of the most original and interesting narratives of travelling adventure in a well-known country which has recently appeared; and it won at once for its author a high place among English writers. Both of these works have been issued in a cheaper form in Murray's Home and Colonial Library. In 1851 Mr. Borrow published a very singular work which was apparently intended to be understood as half autobiography, half fiction. But although abundantly piquant in style, and narrating a course of life in England and Ireland to which the reading public had scarcely been previously introduced,—and intended, in the words of the writer, to satisfy the reader that "there are no countries in the world less known by the British than these self-same British Islands, or where more strange things are every day occurring, whether in road or street, house or dingle"—the work disappointed the expectations raised by the 'Zincali,' and the 'Bible in Spain,' and has not we believe reached a second edition. The narrative terminates abruptly, leaving the hero, while still little more than a youth, in the midst of a wood, with his adventures hardly begun; but no continuation of it has hitherto appeared or been formally promised. Mr. Borrow's first publication was a small

volume of 'Translations of Northern Poetry;' and he has long announced a much more extensive work of a similar kind, in which his almost unrivalled colloquial knowledge of modern languages will doubtless turn to good account. He has also translated the Gospel of St. Luke into the Spanish gipsy tongue: 'El Evangelio segun Lucas, traducido al Romani, o dialecto de los Gitanos de España,' 8vo, 1837.

BORTHWICK, DAVID, of Lochhill, lord advocate of Scotland in the reign of King James VI., afterwards King James I. of England. The early history of this learned man is involved in obscurity. When he first appears in the records he is designated 'Mr. David Borthwick of Auldstone,' an estate which he probably acquired by descent. In the spring of 1549, which was about seventeen years after the institution of the court of session, or college of justice, that court made choice of nine advocates "being persons of gude conscience and understanding, to procure (that is, practice in suits) befor thame in all actions and causes." Borthwick was one of these; and in 1552 he was made a member of the public commission then appointed to treat with the commissioners of England on the affairs of the borders between the two kingdoms. He appears to have met with a good share of professional employment, and to have been engaged in many important cases; he appears also to have been retained as standing counsel for the noble families of Huntley and Bothwell ('Act Parl.' vol. ii. p. 573). On the death of Spens of Condie, in 1573, Borthwick was associated with Creighton of Elliok, father of the admirable Crichton, and who had been colleague to Spens in the office of king's advocate, and was also advanced to the seat on the bench of the court of session vacant by Spens's decease, for it was then usual to make the king's advocate a lord of session. Borthwick is also remarkable in being, as it seems, the first who had the title of 'Lord Advocate.' The salary of the lord advocate at this time was 40*l.* Scots yearly, and that of a lord of session amounted to about the same sum. What the profits of the bar then were may be guessed from Sir David Lindsay's 'Puirman and Pardoner,' where the former says

"I haif na geir bot just an English groat,
Quhill I purpos to give ane man of law."

So that the emoluments and practice of the learned lord must have yielded him at least 100*l.* per annum, which though but 8*l.* 6*s.* 8*d.* sterling was a large income in those days. Borthwick retained the situations of a lord of session and lord advocate till his death, which occurred in January 1581, when his colleague Creighton, to whom the places had long been objects of much desire, became sole lord advocate, and also succeeded to the vacant seat on the bench.

BORY DE SAINT-VINCENT, JEAN-BAPTISTE-GEORGE-MARIE, was born in 1780, at Agen, in the French department of Lot-et-Garonne. As early as his fifteenth year he had addressed some communications to the Annals of the Society of Natural History of Bordeaux. In 1799 he accompanied Captain Baudin, as a naturalist, in the scientific expedition which was sent out to Australia by the French government. In the course of the voyage however a disagreement took place between the captain and several of the officers and scientific men who accompanied him, in consequence of which Bory de Saint-Vincent and others abandoned the expedition at Mauritius, then named the Ile de France. He was employed by the governor as one of the *état-major* of the colony, and provided with whatever was requisite for making a survey of the adjacent islands. His attention was particularly directed to the island of Bourbon, then named the Ile de la Réunion, of which he constructed a good map. On his voyage back to France, he touched at and examined several of the islands in the African seas, especially that of St. Helena, of which also he made a map. After his return to France he published his 'Essai sur les Îles Fortunées de l'Antique Atlantide, ou Précis de l'Histoire Générale de l'Archipel des Canaries,' 4to, Paris, 1803, and his 'Voyage dans les Quatre Principales Îles des Mers d'Afrique,' 3 vols. 8vo, with Atlas in 4to, Paris, 1804.

Bory de Saint-Vincent was afterwards promoted to the rank of captain on the staff of Marshal Davoust, and was present at the battles of Ulm and Austerlitz. When Marshal Ney was sent to Spain in 1805, Bory de Saint-Vincent accompanied him as one of his staff, and was promoted to the rank of major. He was afterwards attached to the staff of Marshal Soult, and was present with him at the final battle of Toulouse. He was included in the lists of proscription of July 24, 1815, and resided at Aix-la-Chapelle, Maastricht, Magdeburg, and Brussels. While at Maastricht he examined the vast quarries which extend under the mountain called Petersberg, and published an account of them under the title of 'Un Voyage Souterrain,' 8vo, 1823. At Brussels he was engaged with others in the 'Annales Générales des Sciences Physiques,' 8 vols. 8vo. He returned to France in 1820.

In 1829 Bory de Saint-Vincent was placed at the head of the scientific expedition sent out by the French government to the *Morea* and the *Cyclades*, the results of which were published in the 'Expédition Scientifique de Morée,' 4to, with Atlas in fol., Paris, 1832. In this work, besides the assistance given to other departments, he furnished the entire section of the botany ('Partie Botanique.') His contributions to the periodical publications of Paris were very numerous, mostly on subjects of natural history. In 1833 he published a 'Résumé de la Géographie de la Péninsule,' 12mo, with maps. In 1839 he was appointed to the management of the scientific com-

mission sent out by the French government to Algiers. He accompanied the expedition, and after the completion of the investigations returned to Paris. He died December 23, 1846.

(*Conversations-Lexikon; Nouvelle Biographie Universelle.*)

BOS, LAMBERT, an eminent philologist, was born November 23, 1670, at Worcum in Friesland, where his father was rector of the college. His mother, a woman of abilities, was aunt to Vitringa. Having gone through the classes in his father's school, and acquired a considerable knowledge of Greek and Latin, he became private tutor to the children of a man of rank, in whose house he continued to improve himself in classical studies. In 1694 he went to the University of Franeker, where Vitringa was professor of the Oriental languages, divinity, and sacred history. In October 1696, he was permitted to teach Greek in the university, and in the month of February of the following year, upon Sibranda's death, became the prelector in that language. In 1704, when the Greek professorship in that university became vacant by the death of Nicholas Blancard, the curators appointed Bos to be his successor. On taking the chair he read a dissertation on the propagation of learning by the Greeks through their colonies. About the end of 1716 he was attacked by a malignant fever, which ended in a consumption, a disorder which he inherited from his mother. He died January 3rd, 1717. About five years before his death he married the widow of a clergyman, by whom he left two sons. The extent of Bos's learning may be estimated by his works. In his studies he was so indefatigable, that he is said to have regretted every moment which was not employed in them. In his personal character he was candid, amiable, and pious.

He published, 1, 'Thomæ Magistri Dictionum Atticarum Ecologæ,' cum notis, 8vo, Franecq., 1693; 2, 'Exercitationes Philologicæ, in quibus Novi Fœderis nonnulla loca à profanis maxime auctoribus Græcis illustrantur,' 8vo, Franecq., 1700; republished in an enlarged form with the addition of a dissertation 'De Etymologiâ Græcâ,' 8vo, Franecq., 1713; 3, 'Mysterii Ellipsis Græcæ expositi Specimen,' 12mo, Franecq., 1702. Of this work there have been numerous editions, among others by Chr. Schoettgen, Schwebel, Chr. B. Michaelis, and by F. H. Schæffer; 4, 'Oratio Inaug. de eruditione Græcorum per Colonias eorum propagatâ,' fol., Franecq., 1704; 5, 'Observationes Miscellanæ ad loca quedam cum Novi Fœderis, tum exterorum Scriptorum Græcorum. Accedit Horatii Vitringæ Animadversionum ad Johannis Vorstii Philologiam sacram Specimen,' 8vo, Franecq., 1707; 6, 'An edition of the Septuagint, with prolegomena, &c., 2 tom. 4to, 1709; 7, 'Antiquitatum Græcarum, præcipue Atticarum Descriptio brevis,' 12mo, Franecq., 1713. Of this work, which became a school-book, there have been many editions. It has been translated into English by Percival Stockdale, in an abridged form, by the Rev. John Seagar, and by George Barber; 8, 'Animadversiones ad Scriptores quosdam Græcos. Accedit Specimen Animadversionum Latinarum,' 8vo, Franecq., 1715; 9, in the same year he published a new edition of Weller's 'Grammatica Græca nova,' 8vo, Amsterdam, adding two chapters on accentuation and syntax: this work was re-edited with Bos's and other notes by I. F. Fischer, 8vo, Leips., 1756. Bos's notes and emendations on Aristides are included in Jebb's edition of that author, 2 tom. 4to, 1722-30.

BOSCAN, ALMOGAVER, DON JUAN, was born at Barcelona, in the year 1500, of a noble family. On his outset in life he devoted himself for a short time to the profession of arms. He afterwards spent some time in travelling. Although Boscan at an early period became intimately acquainted with the literature of Italy, the poetry that he wrote in his youth was all in the ancient Spanish lyric style. It was not until 1526, when, after having lived at the court of Charles V., and having formed an intimate friendship with Andrea Navajero, the envoy from Venice, that he ventured to follow the counsel of this accomplished Italian, and assumed the character of a reformer of the lyric poetry of his nation, by transplanting the forms and manner of Italian poetry into Spain.

The metrical structure of the sonnet had long been known in Spain; but the genius of Castilian poetry was adverse to that form, and when Boscan began writing sonnets constructed in imitation of those of Petrarch, a thousand voices were raised against him and his friend and more highly-gifted fellow-reformer, Garcilaso de la Vega. Some insisted that a preference should be given to the old Castilian metre, on the ground of euphony. Others went farther, and asserted that the ear could perceive no distinction between the new hendecasyllabic verse and true prose. Finally, a third party discovered that Italian poetry was effeminate, and was fit only for Italians and women. In fact, the attempt was considered nothing short of treason against poetry; and one of this sort of zealots, Cristobal de Castillejo, goes so far in his satires against these innovators, whom he calls Petrarquistas, as to compare them to the followers of Luther, the perverters of another doctrine, the subverters of the old faith. Boscan states that this violent opposition made him reflect seriously and hesitate in his noble task; but he was soon convinced of the futility of the reasons urged against his literary reform; he persisted in carrying it on; and through his perseverance, and the great talents and powerful example of his friend Garcilaso, his party rapidly increased, and obtained the superiority.

The urbanity of his manners and his abilities recommended Boscan to the family of Alba, which was then one of the most brilliant among

the Castilian nobility, and to which many Spanish poets constantly paid their homage. Boscan for some time Ayo, or first governor, to the young Don Fernando de Alba, who was afterwards the terror of the enemies of the Spanish monarchy. He appears however to have resigned this employment, in order to divide his time between study and the society of literary friends. The year in which he died is not exactly known; it is only ascertained that his death happened prior to 1544.

Boscan's poetry is divided into three books. The first contains his 'Mar de Amor' (the Sea of Love), and exhibits the fantastic flights of the old Spanish muse. The second consists of his 'Sonetos' and 'Canciones,' which, although written in imitation of those of Petrarch, still display the spirit of the old poetry, in which the mild disposition of Boscan contrasts throughout with the enthusiastic vein of his model. The third book is occupied chiefly by a paraphrastic translation of the Greek poem of 'Hero and Leander,' the first of the kind which appeared in the Spanish language. It is elegantly written, with a pure diction and an easy versification. To this free translation succeeds a love elegy, the 'Capitolo,' abounding in pleasing images, but too much diluted in words, like most Italian poems of the same kind. In the 'Answer to Don Diego Mendoza,' the best of Boscan's epistles, he describes with delicacy and taste the charms of domestic happiness and rural life. A narrative poem in the Italian style, called 'Octava Rima,' closes this third book. A festive meeting of Venus, Cupid, and other mythological personages, forms the fable, rather carelessly executed, of this last poem, which is otherwise full of grace and animation.

The eighth volume of the 'Parnaso Español,' by Sedano, contains a supplement to the biographical notices which Nicolas Antonio collected under the article 'Boscan.'

BOSCAWEN, EDWARD, second son of Hugh, Lord Viscount Falmouth, was born on the 19th of August, 1711. He was placed in the navy early in youth, and at the age of twenty-one was lieutenant of the 'Hector.' In 1740 he became captain of a twenty-gun ship, the 'Shoreham;' and in the following year, under Admiral Vernon, acquired an honourable distinction for his intrepidity at the taking of the fortified city of Puerto Bello, on the Isthmus of Darien. Shortly after, at the siege of Carthagena, he led on a body of seamen, and resolutely attacked and took possession of a fascine battery of fifteen 24-pounders, while exposed to the fire of five guns from an adjoining fort. On the death of Lord Beauclerk, in the attack upon Boca Chica, Boscawen succeeded to the command of the 'Prince Frederick' of 70 guns. In 1742 he returned to England, married the daughter of William Glanville, Esq., of Kent, and in the same year was elected a member of parliament for Truro, in Cornwall. After the declaration of war with France, he took the command of the 'Dreadnought,' captured in April 1744 the French ship 'Medea,' and landed at Spithead with 800 prisoners. As captain of the 'Namur' of 74 guns, he greatly signalled himself under Admirals Anson and Warren, in the engagement off Cape Finisterre, when a capture was made of ten large French ships of war. In the commencement of the action he was struck in the shoulder with a musket-ball.

Boscawen was made in the same year rear-admiral of the blue, and commander-in-chief of the sea and land forces appointed for the war in India; and he sailed in November from St. Helen's Road, in the Isle of Wight, with six ships of the line, five frigates, and 2000 soldiers. In July 1748 his fleet appeared before the fort of St. David's, 15 miles S. from Pondicherry. Having marched his army to Pondicherry, and begun the siege, he was obliged, in consequence of the sickness of his men and the approach of the monsoons, to return to his ships; and is said to have made the retreat with prudence and skill. He soon afterwards obtained possession of Madras, which, in consequence of the declaration of peace, was delivered up to him by the French. In 1750 he arrived in the 'Exeter' at St. Helen's, and found that in his absence he had become rear-admiral of the white. In the course of the following year he was made a lord of the board of admiralty, an elder brother of the Trinity House, and again a representative for Truro. In company with Admiral Mostyn, he sailed in April 1755 from Spithead with twenty-four ships, to intercept the French squadron bound to America with supplies. Off the coast of Newfoundland he fell in with them, and captured two 64-gun ships, with 1500 prisoners, including the French commander Hoquart, who had twice before been defeated and taken prisoner by Boscawen. On his return to Spithead with his prizes, he received for this important service the thanks of the House of Commons.

The scene of war was now transferred to North America. A fleet of 150 ships, with 14,000 men, was fitted out, and Boscawen, now promoted to the rank of admiral of the blue, was appointed commander-in-chief of the expedition. In February 1758, accompanied by General (afterwards Lord) Amherst and General Wolfe, he sailed with these forces for Halifax, and on the 3rd of June arrived off the fortress of Louisbourg, which was taken, with the islands of Cape Breton and St. John, after some severe engagements, by the English admiral. In the following year, 1759, he was stationed with fourteen ships of the line and several frigates in the Mediterranean, and pursued the French fleet of Toulon, consisting of twelve large ships of war, through the Straits of Gibraltar to the Bay of Lagos, where he overtook them and fought a furious battle, which terminated in the

burning of two of the enemy's ships and the taking of three others, with 2000 prisoners. The French admiral, De la Clue, was carried on shore and died, in consequence of being struck by a cannon-ball, which carried off both his legs. Upon the return of Boscawen to England, the thanks of parliament were again conferred, with a pension of 3000*l.* a year, and he was sworn a member of the privy council, and made a general of the Marines. Admiral Boscawen died January 10th 1761, in his 50th year, at his residence, Hatchland Park, near Guildford, and was interred in the church of St. Michael Penkevel in Cornwall, where a handsome monument by Rysbrach was erected to his memory. The mind of Boscawen appears to have been wholly intent upon his professional pursuits. His ability and courage as a naval and even as a military officer were highly appreciated by Lord Chatham, who is said to have often observed, that when he proposed expeditions to other commanders he heard of nothing but difficulties; but that when he applied to Boscawen, expedients were immediately suggested.

BOSCOVICH, ROGER JOSEPH, was born at Ragusa on the 11th of May, 1711 (May 18, 1701, according to Lalande), and entered the order of Jesuits in 1725. He was appointed professor at the Collegio Romano in 1740, and was employed in various scientific duties by several popes. He was at Vienna on the part of the republic of Lucca in a dispute between that state and Tuscany, and at London in a similar character on behalf of his native place in 1762. He was recommended by the Royal Society as a proper person to be appointed to observe the transit of Venus at California, but the suppression of his order prevented his acceptance of the appointment. After this event he was made professor at Pavia and subsequently at Milan. In 1773 he was invited to Paris, where the post of 'Directeur d'Optique pour la Marine' was created for him. He left France in 1787, and settled at Milan, where he was received with distinction, and was appointed to measure a degree in Lombardy. He was seized with melancholy, amounting almost to madness, and died February 13, 1787.

Boscovich was a man of very varied attainments and considerable mathematical power. The different accounts of him partake of the bias of their several authors. His countryman, Fabroni, rates him as a man to whom Greece would have raised statues, even had she been obliged to throw down a hero or two to make room. Lalande, to whom a voluminous and miscellaneous writer was a brother in arms, affirms he had as much talent as D'Alembert, though not so much of the integral calculus. The Jesuits were not in favour with the Encyclopedists, so that probably there is some truth in the account of Lalande with respect to D'Alembert. Delambre says, "in all his dissertations we see a professor who loves to converse much better than to observe or calculate," which seems to us perfectly true; but at the same time Boscovich was a man of talent, though not of first-rate power or energy: exceedingly fertile in ideas of merit, but not of first-rate merit. The excessive number and length of his dissertations has rendered his name less known than it deserves to be, since there is not among them any one point d'appui for the highest sort of renown.

Boscovich was one of the earliest of the continental Newtonians, and introduced the doctrine of gravitation at Rome. His first appearance as a writer on this subject is in an explanatory tract published at Rome in 1743; but in his 'Philosophiæ Naturalis Theoria,' &c., Venice, 1758, he endeavours to apply the same principle to the actions of molecules on each other. It is remarkable that in spite of the prohibition of the Copernican theory (and in consequence of the Newtonian) by the superintendants of the 'Index Expurgatorius,' two Jesuits published an edition of Newton in 1739, and a third began to teach it at Rome in 1740. But previously to this (1736), Boscovich had distinguished himself by a solution of the problem of finding the sun's equator and rotation by observation of the spots, which Delambre calls one of the most elegant which had been given. It was the first of its kind.

In 1750 he began to measure an arc of the meridian from Rome to Rimini, by order of the pope; and the account of this celebrated and useful operation (which was carried on in conjunction with Christopher Maire, another Jesuit), was published in 1755. But Boscovich informs us, that while he was riding about or waiting for his observations, he was engaged in composing Latin verses on the eclipses of the sun and moon. These verses were published at London in 1760 by Millar and Dodsley, in six books, entitled 'De Solis et Lunæ defectibus.' It is lucky for the fame of Boscovich that the degree he measured was not as poetical as his poem is long and minute: the first has always been held a good observation, and the second is best described by Delambre's remark, that it is uninteresting to an astronomer and unintelligible to anybody else. The notes, which are often more poetical than the text, contain a large collection of his opinions.

Among his more important labours may be mentioned the admeasurement of the degree of the meridian above mentioned, his theory of comets, application of mathematics to the theory of the telescope, and to the perturbations of Saturn and Jupiter (of which Lagrange said that the motto 'Iræ olim, nunc turbat amor natumque patrumque' was the only good thing in it), the discussion relative to the invention of the double-refraction micrometer, the application of the differential calculus to problems of spherical trigonometry. Of his publications we will merely notice—the 'Elementa Universæ Matheseos,' &c., Rome, 1754, a course of mathematics for his pupils; the collection of works alluded to above, 'Opera pertinentia ad Opticam et Astronomiam,'

miam,' &c., 5 vols., Bassano, 1735; and the work on the degree of the meridian above mentioned, 'De Litteraria Expeditione per Pontificam Ditionem ad Dimetiendus Duos Meridiani Gradus,' &c., Rome, 1755. This work is much more esteemed than the French translation, Paris, 1770, as the map given in the latter is incorrectly reduced.

BOSIO, FRANÇOIS JOSEPH, BARON, an eminent French sculptor, was born at Monaco, March 19, 1769. He went at an early age to France, where under Pajou he received his professional education. He acquired great celebrity under the empire, and was much patronised by the Empress Josephine as well as by Bonaparte. For the emperor he executed busts of himself, of Josephine, his sister Pauline, the young King of Rome, &c. For Josephine he executed a fine marble statue 'l'Amour lançant des traits.' The well known bassi-rilievi of the column on the Place Vendôme are the work of Bosio. The restoration of the Bourbons did not interfere with Bosio's course of prosperity. The restored dynasty found employment for his chisel, and Bosio was equally ready to serve them. He was commissioned in 1817 to execute the equestrian statue of 'Louis XIV. triomphant' for the Place des Victoires. He also exhibited in the same year a marble statue of the Duc d'Enghien, and subsequently busts of Louis XVIII., the Dauphin, and Charles X. Under Louis Philippe his courtly chisel produced one of his best works, a bust of the Queen Marie Amélie. During all this period he was much engaged in the execution of various monuments, statues for public buildings, &c. Among the more important of his classical and poetic works may be named his 'l'Amour Séduisant l'Innocence;' 'Hercule combattant Achélaus métamorphosé en Serpent;' 'l'Histoire et les Arts consacrant les gloires de la France,' &c. Bosio, despite the high position he occupied during his prosperous career, is not likely to take permanent rank among the great sculptors of France. He was a skilful workman, and had much facility in designing, but his works evince little of the higher order of inventive or imaginative power. Bosio was created a baron by Charles X.; he was also a member of the Institute. He died July 29, 1845.

BOSQUET, GENERAL, was born in 1810, at Pau, in the French department of Basses-Pyrénées. In 1829 he entered the Polytechnic School. In 1833 he became a sub-lieutenant in the artillery; he passed a year in garrison at Valence, in the department of Drôme, and in 1835 went with his regiment to Algeria. Here the value of his services was soon appreciated, and his promotion was rapid. In 1836 he became lieutenant, in 1839 captain, in 1842 chef-de-bataillon, in 1845 lieutenant-colonel, in 1848 colonel. In 1848 he was appointed general of brigade by the republican government. In 1854 he was promoted by the Emperor to the rank of general of division, and placed on the staff of the army of Marshal St. Arnaud. He accompanied the French army to the Crimea, where he has greatly distinguished himself. At the battle of Balaclava, and more especially at the battle of Inkermann, he rendered timely and valuable service to the British. He was wounded when directing the Zouaves as they rushed to the assault of the Malakoff, at the taking of Sebastopol. He is now general of the first division of the French army. The French Emperor has recently announced, at a banquet, his having promoted General Bosquet to the rank of Marshal of France.

BOSSU, RENÉ DE, son of Jean de Bossu, Seigneur de Courbevoie, a king's counsellor and an advocate in the court of Aides, was born at Paris, March 16, 1631. He studied at Nant-erre, was admitted as a regular canon in the abbey of St. Genevieve in 1650, and took priest's orders in 1657. Twelve years of his life were occupied in teaching philosophy and the belles-lettres; the remainder were spent in the solitude of his cloister, in which he died March 14, 1680. His first work, 'Parallele de la Philosophie de Descartes et d'Aristote,' Paris, 1674, was not very favourably received at the time of its appearance, and is now altogether forgotten; but his second, which was published only a few months afterwards, 'Traité du Poème Epique,' for a time attracted considerable attention. The learned hypothesis of this chimerical essay teaches that an epic poem is essentially an allegory; thus the writer, before commencing his work, fixes upon some one great moral text which he designs to illustrate, considers fable, machinery, action, character, and all other accidents of poetry only as so many modes subservient to his grand object. Thus says Bossu, Homer, who saw the Greeks constitutionally divided into a great number of independent states, which it was often necessary to unite against a common enemy, feigned in his 'Iliad' the quarrel between Achilles and Agamemnon as productive of evil, in order that he might illustrate the advantages of a confederacy. On the reconciliation of those princes, victory, which had been long delayed, is rapidly achieved. But is the evil of disunion the only lesson taught by the 'Iliad?' Bossu would persuade us that the design of the 'Odyssey' was to show the national calamities resulting from a monarch's absence from his own seat of government. Yet the Grecian chiefs could not have captured Troy without their leaving for a time their own states. So that Bossu's theory of the lessons of the 'Iliad' and the 'Odyssey' are in direct contradiction to each other, which, if they are by the same author, as is generally supposed, we can scarcely believe would be intended by the writer. A defence of Boileau against some attacks by St. Sorlin, introduced Bossu advantageously to the friendship of the poet. In the ninth volume of the 'Mem. de l'Acad. des Inscriptions,' the Abbé Vatry twice appears as the champion of some of his

exploded notions, which are more soberly examined by the Abbé Batteux in the 39th volume of the same work; and at a later season incidentally by La Harpe.

BOSSUET, JACQUES BENIGNE, second son of a counsellor of the parliament of Metz, and descended from a respectable Burgundian family for the most part engaged in the law, was born at Dijon, September 27, 1627. He was placed by a maternal uncle, who was president of the parliament of that city, in the college of the Jesuits, where his laborious application to study soon obtained for him a nickname containing a punning allusion to his real name, 'Bomuetus aratro.' At a fitting age (1642) he was removed to the college of Navarre in Paris, where, after a ten years' course, he received the degree of Doctor and the Order of Priesthood. He then retired to perform the clerical duties of a canon in the cathedral of Metz, of which church he afterwards became archdeacon and dean, and where he distinguished himself by labouring arduously for the conversion of the Huguenots. The neighbourhood of the capital led him to preach frequently before Anne of Austria, who was so pleased by his pulpit eloquence, that she nominated him to deliver the Advent Sermons at court in the chapel of the Louvre in 1661, and the Lent Sermons in 1662. The king was highly gratified by his discourses, and in 1669 presented him to the bishopric of Condom. In the year after his consecration he was appointed to the important office of preceptor to the dauphin; and finding his necessary attendance at court incompatible with the performance of his episcopal duties, he asked and received permission to resign the see. The priory of Plessis-Grison, which he received in compensation, produced about 300*l.* a year, according to which revenue he framed his establishment. On promotion to the abbey of St. Lucien-de-Beauvais, a richer benefice, he assigned all its surplus to charity, in no manner altering his personal expenditure. The Duc de Montausier was governor; the learned Huet, afterwards bishop of Avranches, was sub-preceptor to the young prince. The method in which his education was conducted by these three most able men is fully exhibited in a letter written by Bossuet to Pope Innocent XI. Under the care of Huet appeared the well-known edition of the Delphin Classics, put forth ostensibly in *usum Serenissimi Principis*. At the express wish of the king, Bossuet studied anatomy, in order to afford his royal pupil some elementary instructions in that science. For that purpose he attended the lectures of Nicolas Steron, a Parisian professor, from which he compiled a short manual of 32 octavo pages, which has shared the fate of most other amateur treatises. For the use of the dauphin Bossuet composed also his 'Discours sur l'Histoire Universelle,' which he published in 1681. It consists of three parts, the first of which contains an abridgment of universal history, from the Creation to the reign of Charlemagne; the second embraces the chief proofs of Christianity; and the third attempts to unravel the causes of the rise and decline of nations. Upon this work Voltaire founded his opinion of Bossuet's pre-eminent eloquence; and of the first part, which most readers would suppose to be little more than a dry index, a later critic (Mr. Charles Butler) has declared that "it scarcely contains a sentence in which there is not some noun or verb that conveys an image or suggests a sentiment of the noblest kind."

The chief reward with which Louis compensated the services of Bossuet in the education of the dauphin was the bishopric of Meaux, to which see he was consecrated in 1681. He filled also the high posts of almoner to the dauphiness, principal of the college of Navarre, warden of the Sorbonne, counsellor of state, and first almoner to the Duchess of Burgundy. The bishop's time however was chiefly occupied in his diocese, where he devoted himself to the humble but useful task of pastoral instruction. Among his posthumous works are three catechisms, respectively, for beginners, for the instructed, and for the well-instructed. He composed also a manual of prayer, and translated many of the church hymns. His health continued uniformly good, and allowed the performance of all ministerial duties till the last year of his life, when he suffered under the stone. During intervals of ease he framed a commentary on the 22nd Psalm (the 21st of the Vulgate), many passages of which are equal in vigour to any of his earlier compositions. On the 12th of April 1704 he died at Paris, having passed his 76th year. Soon after the death of Bossuet his works were collected in 12 vols. 4to, to which three posthumous writings were afterwards added. The Benedictines of St. Maur undertook a complete collection of his works, which, we believe, is still unfinished, after extending to 20 vols. 4to.

Bossuet is esteemed by the Roman Catholics as the most eminent advocate of their creed; but whatever might be the influence which his controversial writings exercised at the time of their appearance, it is not upon these that his fame rests most securely at present. To give an exact catalogue of his works would far exceed our limits, and we shall confine ourselves to his chief productions. He commenced in 1655 with a 'Refutation du Catechisme de Paul Ferri,' a Huguenot minister at Metz; we find him, not long afterwards, vehemently engaged with Caffaro, a Theatine monk, in the reprobation of theatrical entertainments. Boursaut, a dramatic writer who enjoyed some contemporary reputation, was affected by scruples of conscience concerning the subjects to which his talents had been directed, and was relieved from his penitentiary burden by a letter which Father Caffaro addressed to him, and which may be found (if it is now to be found

at all) printed separately, and also prefixed to the 'Théâtre de Boursaut,' 1725. Bossuet replied to this letter in more polished language indeed, but with scarcely less severity of censure upon the diversions which he condemned than animated Prymne or Jeremie Collier. The argument was afterwards remoulded into an essay, published under the title of 'Maximes sur la Comédie.' But the most celebrated of Bossuet's polemical works are his 'Exposition de la Doctrine de l'Église Catholique sur les matières de Controverse' (1671), and his 'Histoire des Variations des Églises Protestantes.' The former was composed for the private use of the Marquis de Dangeau, and it is said that an accidental perusal of it greatly contributed to the conversion of the Maréchal de Turenne. It was circulated in manuscript long before its publication, and attained the final state which it now exhibits by very slow degrees. Its most important chapters, namely, those on the Eucharist, on Tradition, and on the Authority of the Church, were wanting in the original sketch, and the Sorbonne, when applied to for their approbation, privately censured many parts which they conceived to be unsound.

Nine years elapsed, and considerable alterations took place before it received the approval of the Holy See, and it is averred that many of the doctrines when preached by others were declared to be scandalous and pernicious. Clement IX. positively refused to acknowledge it, but two briefs were issued in its behalf by Innocent XI.; one, November 22nd, 1675; the other, July 12th, in the year following. The Gallican clergy, assembled in 1682, declared that it contained their doctrine; and an authority of our own time, which few of the Romish persuasion will be inclined to dispute (Mr. Charles Butler) has stated that "the Romish Church has but one opinion of it; in private and in public, by the learned and unlearned, it is equally acknowledged to be a full and faithful exhibition of the doctrine of their church." It has been translated into almost every European language, but unhappily the English version by the Abbé Montague in 1672 bears a bad character. The assertion that it was translated by Dryden rests, as Sir Walter Scott has shown, on very slight authority. ('Life of Dryden,' 'Works,' i. 339.) In the Bodleian Library, Oxford, there is a translation published in London in 1683, in the title-page of which is the following note in Baron Barlow's handwriting:—"By Mr. Dryden, then only a poet, now a papist too; may be he was a papist before, but not known till of late." Wake, afterwards archbishop of Canterbury, and M. de St. Bastide, a French Protestant minister, are the most distinguished opponents of the points in which it invites controversy.

The 'Exposition' awakened much attention in France; and out of it arose a personal conference between Bossuet and M. Claude, whom the Protestants considered to be their head, held in 1681, in the presence and at the request of Mademoiselle de Duras, a niece of Turenne, who sought an excuse for the change of faith in which she had resolved to imitate her uncle. One of the chief questions debated was the authority by which Jesus Christ directed that his future Church should be guided in cases of dissensions concerning doctrine. The debate was conducted with much regard to courtesy, but terminated, like all similar debates, without any approach to conviction. Each party published its own account of the conference, and each claimed the victory, after representing the contest with so wide a difference of facts that they might be supposed to relate to wholly distinct occurrences. Bossuet was admitted to the academy in 1671, and his next great controversial work appeared in 1688. The first five books of his 'Histoire des Variations des Églises Protestantes' narrate the rise and progress of the Reformation in Germany; the sixth is devoted to a consideration of the sanction given by Luther and Melancthon to the adulterous marriage of the Landgrave of Hesse; the seventh and eighth books contain the ecclesiastical history of England during the reigns of Henry VIII. and of Edward VI., and a continuation of that of Germany. The French Calvinists are discussed in book ix., and the assistance afforded to them by Queen Elizabeth, on the avowed principle that subjects might levy war against their sovereign on account of religious differences (a doctrine which Bossuet asserts to have been inculcated by the reformers), forms the groundwork of book x. Book xi. treats of the Albigenses and other sects from the 9th to the 12th centuries, who are usually esteemed precursors of the reformed. Books xii. and xiii. continue the Huguenot history till the synod of Gap. Book xiv. gives an account of the dissensions at Dort, Charenton, and Geneva; and book xv. and last endeavours to prove the divine authority and therefore the infallibility of the true Church, and to exhibit the marks by which Rome asserts her claim to that title. Basnage, Jurieu, and Bishop Burnet may be mentioned among the chief opponents of this work, to a perusal of which, in conjunction with that of the 'Exposition,' Gibbon attributes his short-lived adherence to popery. "I saw, I applauded, I believed; and surely I fell by a noble hand."

The fanciful project of a union between the Lutheran and Gallican churches occupied much of Bossuet's attention, and led to a correspondence of deep interest with Leibnitz. On matters of discipline the Bishop of Meaux professed an inclination to be indulgent. On those of faith (concerning which the Council of Trent was his final appeal) he peremptorily declared that there could not be any compromise. The discussion lasted during ten years: it is replete with learning, but it proved utterly fruitless.

In 1682 Bossuet assisted at the general assembly of the clergy of France, convened in order to restrain the aggressions made by Inno-

cent XII. on the 'Régale,' a right always claimed by the kings of that country, and almost always virtually tolerated by the Holy See, which vested in the French crown the revenues of any vacant bishopric, and the collation to simple benefices within their dominions. The Bishop of Meaux was selected to preach at the opening of this synod; and the four articles, which were published at its declaration, registered by all the parliaments, and confirmed by a royal edict which forbade the appointment of any person as professor of theology who did not previously consent to preach the doctrines contained in them, are known to be his production.

In the dispute with the nuns of Port-Royal relating to the five condemned propositions in Jansenius, Bossuet exerted himself to bring the fair enthusiasts to reason; and in like manner he opposed Quietism and Madame Guyon, till he incurred opposition from Fenelon and displeasure from Madame de Maintenon. The controversy with Fenelon is perhaps the single transaction in the life of Bossuet which his admirers would desire not to be remembered. Now that the question is almost as much forgotten even among theologians as if it had never existed, if any of the numerous writings by the Bishop of Meaux to which it gave birth are ever opened by some curious inquirer, he lays them aside with pain. They create indeed a strong wish that Bossuet had imitated the meekness of his antagonist. It is chiefly by his sermons that Bossuet is now remembered; although perhaps those by which he attained most celebrity, the 'Oraisons Funèbres,' are ill calculated for the English taste. They belong to a style of composition far too theatrical and dramatic for our temperament, but especially adapted to the court of the Grand Monarque, in which religion, like everything else, was reduced to mere show. The death to the world, which Madame de la Vallière voluntarily encountered by her conventual seclusion, is among the most pathetic occurrences related in modern history; but few things are less likely to suggest Christian devotion than a show, tricked out with ecclesiastical pomp, to exhibit, in the presence of the queen-consort whom she had injured, the retirement of a royal mistress, discarded by her licentious and unfeeling lover. Three volumes of the Benedictine edition of Bossuet's works are filled with sermons.

A life of Bossuet was published by M. de Burigny, Paris, 12mo, 1761. That written by Mr. Charles Butler possesses a raciness which could not be imparted by any biographer unless he shared the Romish persuasion; and yet, like most other writings of the same distinguished person, it is singularly free from the offensiveness of exclusive prejudices.

BOSSUT, CHARLES, was born at Tartaras, in the department of the Rhône-et-Loire, August 11, 1730. His family was, like that of the Bernoullis, Belgian, and expatriated during the civil troubles. He was educated partly by an uncle and partly by the college of Jesuits at Lyon. Happening to meet with the 'éloges' of scientific men by Fontenelle at an early age, he was struck with the desire of making his own career resemble those of which he had read: and finding no one to advise with, he wrote to Fontenelle himself, who, though then ninety years of age, answered his letter, begged for an account of his future progress, and said that he felt a presentiment that his young correspondent would rise to eminence. This benevolent politeness (which is made a prophecy by its fulfilment) brought Bossut to Paris, where he was cordially received by Fontenelle, and introduced to D'Alembert and Clairaut. D'Alembert became his friend and instructor, and so well versed did Bossut become in his works, that D'Alembert was accustomed to send those who asked him for explanation to Bossut, as Newton did to De Moivre. Camus, in 1752, procured for him the professorship of mathematics in the school of engineers at Mézières, and in the same year he was made a corresponding member of the Academy of Sciences. He had previously presented a memoir containing new methods in the integral calculus.

He continued at Mézières sixteen years, during which time he obtained alone, or in conjunction with others, several of the prizes of the academy. He divided one with Albert Euler (son of the Euler), another with the son of Daniel Bernoulli. He published during this period his course of mathematics, which for a long time was in high reputation, and procured him the means of living when he lost his professorship by the revolution. He succeeded his friend Camus as member of the Academy of Sciences, and as examiner of the candidates for the artillery and engineers. He was one of the contributors to the 'Encyclopédie,' and wrote the introductory discourse to the mathematical volumes. His articles are signed I. B. in that work. He gave in 1779 a complete edition of Pascal, of whose writings he was a great admirer.

His treatise on 'Hydrodynamics,' and his memoirs on that subject in the memoirs of the academy, contributed materially to the connection between the theory and practice of that science. In a memoir which gained the prize in 1796, he endeavoured to account for the acceleration of the moon's mean motion by the supposition of a resisting medium.

When he lost all his places by the revolution he went into retirement, and wrote his sketch of the history of mathematics. The second edition of this work he published in 1810: it is a lively and interesting sketch, but written, as it appears to us, in strong colouring. Delambre asserts that a misanthropic feeling, the consequence of his misfortunes, made him unjust towards his contemporaries;

but at the same time it is the only compendium which is likely to be useful to the student. Bossut was not likely to be either intentionally unjust or complaisant: Delambre remarks that his impartial intentions would necessarily be a consequence of that 'roideur de caractère' which distinguishes him.

Bossut was originally intended for the church, and was indeed an abbé, which title he bore until the abolition of clerical distinctions. He died January 14, 1814. The preceding account is entirely (as to facts) from Delambre's 'Eloge' in the 'Memoirs of the Institute' for 1816.

BOSTON, THOMAS, a Scottish divine, very popular with a large class of religious thinkers, was born in the village of Dunse, in Berwickshire, on the 7th of March 1678. He received the rudiments of his education at his native place, and afterwards attended the University of Edinburgh. His relations were poor, and his education appears to have been conducted in the face of impediments from pecuniary difficulties. After acting for some time as a private teacher, he obtained a licence as a probationer on the 16th of June 1697. His first efforts to obtain an ecclesiastical benefice, though thus subsequent to the establishment of the Presbyterian polity by the Revolution, appear to have been baffled by the objections entertained towards his anti-patronage and ultra-Presbyterian principles. He was ordained, on the 21st of September 1699, minister of the parish of Simprin, near his native place. In 1707 he was 'translated,' as it is termed, to the extensive but thinly peopled pastoral parish of Ettrick. He was a member of the General Assembly of 1703. While this assembly was in the midst of discussions on matters not likely to be acceptable to the court, it was dissolved by the commissioner, and the moderator, who, according to the theoretical principles of that ecclesiastical body, is the conductor of its routine, sanctioned the act by concluding the proceedings. Boston and others strongly protested against this compromise of clerical independence. He was opposed to the oath of abjuration, and in general to all measures which created restrictions on the independent movements of the ecclesiastical body to which he belonged. He joined those who supported the doctrines of 'The Marrow of Modern Divinity' in the controversy in the Scottish Church on that work. He died on the 20th of May 1732.

Boston was a very voluminous writer, and his works are eminently popular in Scotland, and among the Presbyterians of England. His well-known 'Fourfold State,' which was first printed in 1720, had a curious literary fate. It had been so far reconstructed by a person whom he had engaged to correct the press, that the author, scarcely recognising his own work, repudiated the book till he issued a genuine edition. The title of this book in full is, 'Human Nature in its Fourfold State: of Primitive Integrity subsisting in the Parents of Mankind in Paradise; Entire Depravation subsisting in the Unregenerate; Begun Recovery subsisting in the Regenerate; and Consummate Happiness or Misery subsisting in all Mankind in the Future State.' In 1776 there was published 'Memoirs of the Life, Time, and Writings of Thomas Boston, divided into Twelve Periods, written by Himself and addressed to his Children;' a work containing quite as ample an account of this writer as the majority of readers will wish to possess.

BOSWELL, JAMES, was born at Edinburgh, October 29, 1740. His father was Alexander Boswell, Esq., of Auchinleck (pronounced Affleck), in Ayrshire, who being in 1754 made a lord of session, assumed the title of Lord Auchinleck. His mother was Euphemia Erskine, great-grand-daughter of John, the twenty-third earl of Mar, who was lord high-treasurer of Scotland from 1615 to 1630. After having studied law at the universities of Edinburgh and Glasgow, Boswell visited London for the first time in 1760, and made many acquaintances both in the fashionable world and among the literary men of the day. In 1762 he made, as far as is known, his first essay in authorship by contributing some verses to a miscellany which appeared that year at Edinburgh, under the title of 'A Collection of Original Poems, by Scotch Gentlemen.' In 1763 he published a small volume of 'Letters' which had passed between himself and the honourable Andrew Erskine (the brother of Thomas, the sixth earl of Kellie, the eminent musical performer and composer). This is a very characteristic volume, sufficiently prognosticating, by its style of frank exposure and good-natured self-complacency, the most remarkable qualities of the author's subsequent productions. With his father's consent he determined to make the tour of the continent before being called to the bar; and accordingly he set out early in 1763. While passing through London he was introduced to Dr. Johnson, on the 16th of May in that year, in the back shop of Mr. Thomas Davies, the bookseller, in Russell-street, Covent Garden. He proceeded in the first instance to Utrecht, where he spent the winter in attending the law classes at the university. After visiting various places in the Netherlands, he continued his route, in company with his friend the Earl Marischal, through Germany, Switzerland, and Italy. With his passion for making the acquaintance of remarkable persons, he had, while in the neighbourhood of Geneva, visited both Rousseau and Voltaire; and he now crossed over to Corsica, and introduced himself by means of a letter from Rousseau to General Paoli, then in the height of his celebrity as the leader of his countrymen in their resistance to the Genoese. Returning home by the way of Paris in 1766, he passed as advocate in July of that year. He

soon after published a pamphlet, which was considered creditable to his abilities, entitled 'The Essence of the Douglas Cause,' being a defence of the claim of Mr. Archibald Douglas (afterwards Lord Douglas), to be considered as the nephew of the last Duke of Douglas, and as such to succeed to his property, against the counter-claim of the Hamilton family, who disputed his alleged birth. Although he thus signalised the commencement of his professional course, his business at the bar was from the first but a secondary object. He had come back from his travels so full of the Corsican chief, that he was speedily known by the nickname of Paoli Boswell. In 1768 he published at Glasgow 'An Account of Corsica, with Memoirs of General Paoli;' which was followed the next year by a duodecimo volume which he printed at London, under the title of 'British Essays in favour of the brave Corsicans, by several hands.'

In November 1769, he married his cousin, Miss Margaret Montgomery of Lainshaw. About the same time his intimacy with his literary friends in London, and especially with Dr. Johnson, was drawn closer by another visit to the metropolis. In 1773 he accompanied Johnson on his journey to the Western Islands of Scotland. In 1774 he sent to the press another professional tract, being a 'Report of the Decision of the Court of Session upon the question of Literary Property, in the cause John Hinton, Bookseller, London, against Alexander Donaldson and others, Edinburgh.' It is a mere report of the judgments delivered by the Lords of Session in this cause, in which he had been engaged as counsel. In 1782, on his father's death, he succeeded to the family estate, and soon after removing to London entered himself at the English bar. In 1784 he published a pamphlet in support of the new ministry of Mr. Pitt, under the title of 'A Letter to the People of Scotland on the present State of the Nation.' His great friend Johnson died towards the end of this year; and in 1785 he published the first and not the least remarkable sample of his Johnsoniana, in a 'Journal of the Tour to the Hebrides.' It appeared at Edinburgh in an octavo volume. The same year he published another 'Letter to the People of Scotland, respecting the alarming attempt to infringe the Articles of the Union, and introduce a most pernicious innovation, by diminishing the number of the Lords of Session.' Becoming now ambitious to make a figure in the political world, he made various unsuccessful attempts to obtain a seat in parliament. At the general election in 1790 he stood for the county of Ayr, but was defeated after an expensive contest. Before the close of the same year appeared in two volumes quarto the work which has made his name universally known, his 'Life of Johnson.' The sensation excited by this extraordinary production was very great; and if it be an evidence of superior talent to do anything whatever better than it has ever been done before, the work undoubtedly deserved all the immediate success it met with, and also the celebrity it has ever since enjoyed; for whatever may be thought of the character of either the intellectual or the moral qualities which its composition demanded, it cannot be disputed that the same qualities had never before been half so skillfully or felicitously exerted. Nor has any work of the same kind since appeared that can for a moment be compared with Boswell's. The best editions of this celebrated work are that in 10 vols. duodecimo, edited by Mr. Croker, and a carefully revised reprint of the same edition in a single volume royal octavo. Both these editions contain Boswell's 'Journal of the Tour to the Hebrides,' and also many other pieces relating to Johnson never before incorporated with the present books. Boswell is said to have contributed a series of papers, entitled the 'Hypochondriac,' to the first sixty-two numbers of the 'London Magazine' (from 1777 to 1782), which are said to be of very little merit; and a series of his 'Epistolary Correspondence and Conversations with many eminent Persons,' appeared in two volumes quarto in 1791, and again in three volumes octavo in 1793. He was preparing a second edition of his 'Life of Johnson' at the time of his death, May 19th, 1795. He left two sons and three daughters.

* BOSWORTH, JOSEPH, D.D., F.R.S., F.S.A., &c., was born in Derbyshire at the close of the year 1738, and was educated at the Repton Grammar School, under the care of the Rev. Dr. Sleath. He first graduated at Aberdeen as M.A., and subsequently proceeded LL.D. in the same university. He applied himself diligently to the study of science and literature; mathematics in particular engaging his early attention, with its application to navigation and astronomy. But his great object being to become a clergyman of the Church of England, he at an early age taught himself Hebrew—reading the language, with its cognate dialects, Chaldee, Syriac, and Arabic. In 1815 he was appointed curate of Buony and Ruddington, near Nottingham. Though engaged in active parochial duties, and regarding divinity as his profession, he found time to devote to literature, and to write papers for literary and scientific institutions. He was however always watchful that the clerical character should not merge into that of the mere literary man; and that in this he succeeded was shewn by the regret expressed by the people of his charge on his leaving Ruddington, which took the substantial form of a handsome piece of plate. Besides graduating as M.A. and Dr. Phil. at Leyden, he took the degree of B.D. at Trinity College, Cambridge, in 1834, and D.D. in 1839; also D.D. *ad eundem* at Oxford in 1847. While Vicar of Horwood Parva, Bucks, from 1817 to 1829, he published several pamphlets on the poor-laws. In the early part of his incum-

bency he received pupils into his house, to aid a younger brother in taking his degree at the university. Here he wrote and published for his pupils 'Introduction to Latin Construing,' 'The Eton Greek Grammar,' &c.

His health failing him under the prosecution of his clerical and scholastic duties, he accepted the British chaplaincy at Amsterdam, and remained there from 1829 to 1832. In the latter year he removed to Rotterdam and was British chaplain there till 1840. While in Holland he translated the Book of Common Prayer into Dutch, and made arrangements for printing the first Dutch Bible in the Roman type for the Society for Promoting Christian Knowledge; and printed for the use of foreigners the Book of Common Prayer, arranged in the order in which the prayers are read in the ordinary service. He also published an account of the 'Origin of the Dutch, with a Sketch of their Language.' And it ought to be mentioned that as he had been active in visiting the poor and ameliorating their condition while in England, the destitute members of his Dutch congregation were not forgotten. He instituted district visiting, and established Sunday and day-schools, by which the morality and the condition of the people were greatly improved. He resigned his chaplaincy in 1840, and accepted the vicarage of Waithe in the county of Lincoln, and he also took charge of the ecclesiastical district of Carrington near Nottingham, but his health failing in 1842 from over exertion, he relinquished his charge, and he has not since taken any regular duty.

It is by his researches in Anglo-Saxon and connected dialects that Dr. Bosworth has attained his eminent position as a philologist. In examining the English language in its earliest form, he saw the necessity of a knowledge of Anglo-Saxon, and he was the first to divest the grammar of that language of its Latin incumbrances by the publication in 1823 of the 'Elements of Anglo-Saxon Grammar.' This brought him into correspondence and intimate acquaintance with the leading Anglo-Saxon scholars of England and the continent, including Grimm, from whom he derived important aid, and the Danish professor Rask, whose Anglo-Saxon grammar, written in Danish, he was the first to translate into English, though the translation was not published.

Some fifteen years were afterwards employed by Dr. Bosworth in constructing his great work, 'A Dictionary of the Anglo-Saxon Language,' roy. 8vo. London, 1838. This volume contains, within a moderate compass, a complete apparatus for the study of the Anglo-Saxon. The dictionary itself, which gives the meaning of the Anglo-Saxon words in English and Latin, with parallel terms from the other Gothic languages, is preceded by a mass of useful matter on the origin and connection of the Germanic and Scandinavian languages, and the essentials of Anglo-Saxon grammar. This work has been since published in a somewhat abridged form and without the introductory matter, under the title of 'A Compendious Anglo-Saxon and English Dictionary,' 8vo. London, 1848. 'The Origin of the Danish, and an Abstract of Scandinavian Literature,' and 'The Origin of the Germanic and Scandinavian Languages and Nations, with a Sketch of their Literature, &c.,' though published as separate works are chiefly taken from the introduction to the Dictionary.

Dr. Bosworth has since published 'King Alfred's Anglo-Saxon Version of the History of the World, written in Latin by the Spanish monk Orosius.' In this translation Alfred has inserted his own account of Europe, and a detail of the voyage of Othhere, a Norwegian, from the coast of Norway into the White Sea. This is an important and interesting work, not merely as being Alfred's own composition, but from its being the only account of Europe written by a contemporary so early as the 9th century. A fac-simile of the whole Anglo-Saxon text, with an English translation and copious notes, has been published separately in a splendid quarto volume; and also in a cheaper form. Dr. Bosworth has been for some time engaged in preparing for publication the Anglo-Saxon and Mæso-Gothic Gospels in parallel columns.

Dr. Bosworth was elected a Fellow of the Royal Society in 1829; he is also a Fellow of the Society of Antiquaries and other learned bodies in this country; while his great services as a philologist have been recognised by his election as a Member of the Royal Institution of the Netherlands; Honorary Fellow of the Royal Society of Sciences, Norway; F.S.A., Copenhagen; and member of the Literary Societies of Leyden, Utrecht, Rotterdam, &c.

BOTH, JOHN and ANDREW, two eminent painters, were born at Utrecht, the former in the year 1610; the birth of the latter is of uncertain date. Their father was a painter on glass, and it is probable they received their first instructions from him. They were placed at an early age under Abraham Bloemart; and in their youth went to Italy to perfect themselves in their art. Here they acquired a great reputation, John painting landscapes after the manner of Claude, and Andrew adorning his brother's scenes with figures in the style of Bamboccio. They continued in Italy working in concert until separated by death. There is much confusion among writers as to which died first. One of them was drowned by falling into a canal at Venice, in the year 1650, in returning late from a supper party; and the survivor then left Italy, and returned to settle at Utrecht. From the fact of his painting portraits and conversation pieces, it is most probable that Andrew was the survivor, and that John, the landscape-painter, perished in Italy. Andrew died six years after his brother, his end being hastened by grief.

The landscapes of John are glowing with colour and sunshine, and rich in beauty and natural effects; his handling is light, free, and facile, so that he sometimes painted without an outline. A fulvous tint which occasionally pervades his landscapes has been objected to; but in his best productions this fault is avoided. He has less studied elegance than Claude, and his pictures are more like common nature; but his composition is far less perfect, and his artifices less artfully concealed. The beauty of his colouring however procured him the title, by which he is still known, of Both of Italy. The figures by Andrew are above all comparison superior to those of Claude; and the joint productions of the brothers, in which each laboured to set off the other, have ever been considered of the highest value.

BOTHWELL, JAMES HEPBURN, EARL OF, was the only son of Patrick, third earl of Bothwell, of the Hepburn family. His mother, Agnes, daughter of Henry Lord Sinclair, by a daughter of Patrick Hepburn, first earl of Bothwell, lived many years in a state of divorce from her husband, but for what reason is not certainly known. Earl Patrick was notoriously profligate in his public character. He died in September 1556, at the age of 51; when his son James succeeded to his honours, offices, and estates. The offices which he transmitted were those of Great Admiral of Scotland, Sheriffs of the Shores of Berwick, Edinburgh, and Haddington, and Bailie of Lauderdale, all which he had himself inherited. The Hepburns were originally mere tenants of the Earl of March; but in a short time they coped with their potent chief, and, on his forfeiture in the 15th century, they rose to be immediate tenants of the crown, and shortly afterwards the head of the house was made a lord of parliament. The affluence and power of the family reached its height in the time of Patrick Hepburn, second lord Hales, who received from the crown, among other grants, the lands and lordships of Bothwell and Crichton, which were thereupon erected into an earldom. The lands of the lordship of Bothwell however were hardly in his possession, when, at the king's command, they were transferred to the Earl of Angus, in exchange for the turbulent border country of Liddesdale, the king then saying there was no order to be had with the Earls of Angus so long as they kept Liddesdale. The second Earl of Bothwell succeeded to his father's titles, heritable offices, and vast estates in the several counties of Edinburgh, Haddington, Roxburgh, Dumfries, Kirkcudbright, and Lanark, which, on his fall at the fatal field of Flodden, passed to the father of Earl James, who, notwithstanding the misconduct of his parent, was by descent the most powerful noble of the south of Scotland, and had the castles of Hermitage, in Liddesdale; Hales in the shire of Haddington; and Crichton, in the shire of Edinburgh. These fortresses are now mouldering into dust, and the surrounding country is rich with the peaceful labours of the plough. In the times we speak of, the fortresses were furnished for a feud, and the adjacent country was scourged by predatory bands. The church and a few great lay proprietors mutually rivalled and despoiled each other, and a series of regal minorities allowed them all to attack and despoil the crown. It had also become the policy of the English kings to hire a secret party in Scotland to divide the nation; and in the year immediately preceding the succession of Earl James to the Bothwell estates, the Scottish reformer Knox had begun to denounce in the capital the errors of the established faith and the baneful spirit of its ecclesiastics.

Till his father's death, Earl James remained, as it seems, abroad probably with his father, who, after allying himself with Edward, king of England, against his sovereign, fled into foreign parts; but immediately on his father's decease Bothwell entered on the busy stage of public life, being then about thirty years of age. He was served heir to his father on the 3rd of November 1556, and he attended the parliament of December 1557, when a commission of the estates of the realm was appointed for negotiating the marriage of the infant queen of Scots with the dauphin of France. In the parliament of November 1558 he was named one of the lords of the articles; soon afterwards we find him, as lieutenant of the borders, meeting with the Earl of Northumberland, the English lieutenant, to adjust some border differences; on the 30th of October 1559 he is found, under the orders of the queen-regent, intercepting Cockburn of Ormiston near Haddington, when that baron was bringing supplies from England to the party of the reformation; and the following month, when the reformers retreated before the regent's forces, he proclaimed the Earl of Arran, one of the reform leaders, a traitor to the government. Next year the queen-regent died, and soon afterwards the Presbyterian form of Protestantism was formally established, the reform leaders, or lords of the congregation, taking the reins of administration. In the end of the same year, Francis II. of France died; and in contemplation of Mary his widowed queen's return to Scotland, several nobles of the Protestant party were despatched to France with a tender of their services. In this company we find Bothwell, who with all his father's suppleness had changed with the times, and acceded to the congregation. Mary, then scarce twenty years old, landed at Leith on the 19th of August 1561; and in forming her government, she set her illegitimate brother, Lord James Stewart, a Protestant, at the head of the administration, and made Bothwell, whose sister Lord James had recently married, one of her privy council; the other members of the government and chief officers of state being also Protestants. The government however of which Bothwell was thus a part was frequently disturbed

by his violence, his contests with the Earl of Arran, his brother-in-law, and his outrages on individuals. For his misconduct he was in December 1561 summoned to court, and then ordered to quit Edinburgh till the 8th of the following month.

In March 1562 he endeavoured to get Arran, to whom he had become reconciled, to conspire with him in seizing the queen at Falkland, in her progress to the north, in order to put her brother in possession of the forfeited earldom of Murray, and detaining her in captivity till she should acquiesce in their measures. But Arran having revealed the matter, he and Bothwell were both committed to Edinburgh castle, whence however Bothwell escaped; and after fortifying himself awhile in his own retreat at Hermitage, got to sea, but was taken again at Holy Island. Randolph pressed his detention much, representing him as the "determined enemy of England, spiteful out of measure, false and untrue as a devil." Notwithstanding he got to France, but soon afterwards he returned to Scotland again. "The queen" (Mary), says Randolph, in one of his despatches to Cecil at this time, "misliketh Bothwell's coming home, and hath summoned him to undergo the law or be proclaimed a rebel. He is charged to have spoken dishonourably of the queen, and to have threatened to kill Murray and Lethington." The dishonour here alluded to was probably the same as that mentioned in another despatch to Cecil, dated 30th of March, where he says:—"Bothwell hath grievously offended the Queen of Scots by words spoken against the English queen, and also against herself, calling her the cardinal's (Beaton) whore: she hath sworn unto me upon her honour that he shall never receive favour at her hands." The following month we find a despatch from Bedford to Cecil, in which Bothwell is represented as addicted to vice and unnatural crime; and about the same time Bedford writes to the same minister that Bothwell "hath been in divers places, at Haddington, with his mother, and elsewhere, and findeth no safety anywhere. Murray followeth him so earnestly, as he hath said 'Scotland shall not hold us both.'" By the queen's directions he was, for his treasonable conspiracy of March 1562, indicted before the Lord Justiciary on the 2nd of May. On that occasion the Earl of Argyle, the justiciary, and the Earl of Murray, came to Edinburgh at the head of 5000 men to hold a justice court; but Bothwell had embarked at North Berwick for foreign parts, and, not appearing at the trial, was outlawed.

In this depth of debasement however Bothwell watched every opportunity to spring again into royal favour, and when the queen married her cousin Darnley he returned to Scotland. In the beginning of October of the same year we find him one of the new privy councillors, and a leader of the royal army against Murray, Arran, and others who opposed the match; and on the 31st of the same month Randolph writes to Cecil, "My Lord Bothwell, for his great virtue, doth now all, next to the Earl of Athol." The following spring, Bothwell, then at the age of forty-one, married Lady Jane Gordon, sister of the Earl of Huntley, whose father had been Lord Chancellor of Scotland. In the murder of Rizzio, the queen's secretary, at the instigation of the jealous Darnley, Bothwell stood by the queen and was opposed to the enterprise; and the following night we find him among other nobles attending the royal pair within the castle of Dunbar, in his shire of Haddington, whither the queen persuaded Darnley to flee with her, and of which fort Bothwell had the custody. The king and queen soon afterwards returned in a sort of triumph to Edinburgh, and proceeded to the castle, where she immediately sent for Argyle and Murray, and had them reconciled to Huntley, Bothwell, and Athol. But Bothwell had only obtained the apparent friendship of the nobility. In a letter from Alnwick dated the 3rd of April 1566, it is stated that one of Bothwell's servants confessed that he and four more of his fellow-servants had been engaged by Lethington to murder Bothwell, the other servants on their examination making the like confession; and on the 2nd of August 1566 Bedford wrote to Cecil that "the lords Maxwell and Bothwell are now enemies. Bothwell is generally hated, and is more insolent than even David Rizzio was." With the sovereign however Bothwell was, as Bedford afterwards writes to Cecil, "in favour, and has a great hand in the management of affairs." He attended the king when he went to Tweeddale in August 1566 to enjoy the amusement of the chase; he returned with him to Edinburgh, where we find him in the council held in September of the above year, and also in the great council which voted a supply of 12,000*l.* for defraying the expense of the infant prince's baptism; and from Edinburgh he proceeded with the royal party to Stirling to see the prince. It being afterwards determined that the queen should hold a justice eyre on the borders, Bothwell was despatched as lieutenant of the marches to Leddesdale, the chief seat of outrage. But the people of that district had been gained to the English interest, and when Bothwell arrived he was attacked and severely wounded. On the 8th of October 1566 he was, says Birrel, "deidly wounded by John Killete, alias John of the Park, whose head was sent into Edinburgh thereafter."

The queen, on hearing of the injury Bothwell had sustained, immediately rode off from Jedburgh, where she then was, to Hermitage Castle, a distance of about 40 miles, through a rugged country, to visit him, and returned to Jedburgh the same day—a journey which, from the anxiety and exertions attendant on it, brought on a violent fever that threatened her life. She became, says Birrel, "deidly sick, and desired the bells to be rung, and the people

to resort to the kirk to pray for her." Bothwell was also, on the same occasion, conveyed to Jedburgh, where the queen lay. On her recovery she made a tour through the Merse, and arrived at Craigmillar Castle, near Edinburgh, where she remained till her removal to Stirling to attend the baptism of her son. While at Craigmillar, the project of her divorce from Darnley was opened to her, but she declined the proposal, fearing her own reputation and her son's succession. Bothwell, to quiet her fears on the latter point, quoted his own case, as having succeeded to his paternal estates notwithstanding a subsisting divorce between his parents. But the queen appearing to dislike it, the subject was not further pressed. When at Stirling, on occasion of the prince's baptism, she agreed, partly on the intercession of Bothwell, to restore Morton and the other murderers of Rizzio, and on the 25th of December 1566 their pardon was signed. It is probable that an ambition to possess the queen had already filled the mind of Bothwell, and that having failed in obtaining a divorce he had perceived Morton to be a fit instrument for his purpose.

On the 27th of December 1566, Darnley went to visit his father at Glasgow, where he was soon laid up with small-pox. On the 20th of the next month Mary went to visit him; and on the 31st the king and queen came to Edinburgh, where the former was conveyed to lodgings in the Kirk of Field. During the whole of January, Bothwell was in intercourse with Morton and others, to whom he said "it was the queen's mind that the king should be taken away." The queen spent the evening of the 9th of February in Darnley's lodging, and at 12 o'clock she left him for a masque, having first kissed him and put one of her rings on his finger. Two hours after the house where Darnley lay was blown up, and he and his servant destroyed in the explosion. The public voice was unanimous in declaring Bothwell accessory to this murder, and placards were put up in the streets accusing him of the crime; but though he continued in Edinburgh, no steps were taken against him till the 28th March, when Lennox, the father of Darnley, avowing himself his accuser, the privy council directed him and others to be indicted for the murder. Three days before the trial Murray set off for France without any known business; and at the trial Bothwell stood and was acquitted; but when the mode in which trials were at that time conducted in Scotland is considered, his acquittal will be held as really immaterial in determining the question of his innocence or guilt. Two days afterwards the parliament assembled at Edinburgh, and Bothwell was one of the commissioners who met the estates. He also carried the sword of state before the queen when she came to the parliament in person; and in the same parliament he was chosen one of the lords of the articles. On the last day of the parliament various ratifications were passed in favour of different persons. The Earl of Murray, though absent, obtained a ratification of his lands and earldom; Morton got a ratification of his lands with those of Angus his relation; Huntley's forfeiture was reversed, and Bothwell had his lands and offices, both hereditary and acquired, confirmed to him. The preamble of the statute in this last case is in the circumstances not a little singular. It sets out the queen's consideration of Bothwell's "gret and manifold gude service done and performit not onlie to her hienes honor weil and estimatioun, bot also to the comone weil of the realme and leiges thereof," and thereupon follows a ratification of his lands and heritage, and of the captaincy of Dunbar castle. On the morrow, after the rising of the parliament, the leading persons of the government met and had a supper at Ainsley, where they signed a bond in Bothwell's favour, approving of his acquittal, and recommending him as a fit husband for the widowed queen, pledging themselves also to defend the marriage. On the 21st April the queen went to Stirling to see her son, and while returning, on the 24th, she was met at Almond bridge, near Linlithgow, by Bothwell and a great company who seized her person and carried her off to the castle of Dunbar. "There" says Melville, "the Earl of Bothwell boasted he would marry the queen, who would or would not, yea whether she would herself or not." "Captain Blackwater (he adds) alleged it was with the queen's consent. And then the queen could not but marry him, seeing that he had ravished her and lain with her against her will." A double process of divorces was soon afterwards raised, one by Lady Bothwell against the earl for adultery, and another at his instance against her on the ground of consanguinity; and on the 8th and 6th of May sentence passed in favour of the parties respectively. Bothwell now brought the queen to Edinburgh, where the bans of their marriage were proclaimed, and on the 12th of the same month the queen came into the court of session, and after testifying her perfect freedom of person, signed instruments of pardon in favour of Bothwell and his accomplices in her abduction. She afterwards created Bothwell Duke of Orkney and on the 14th May she entered into a contract of marriage with him, which was recorded the same day. Next day the marriage was solemnized at Holyrood by Adam Bothwell, abbot of Holyrood-house and bishop of Orkney.

Bothwell had now gained the summit of his ambition; but it was attained with guilt, and from his height he was quickly precipitated into everlasting infamy. An indignant people rose in arms against him, and he and the queen fled from fortress to fortress till, on the 14th of June, she came out to meet the insurgents at Carberry-hill. In the evening however she joined the chiefs, and was by them conducted to Edinburgh. Bothwell left the queen, and fled to Dunbar, where

he was allowed twelve days to depart thence for the Orkney Isles. Being pursued in his voyage, he sailed for the Danish shores, where he was seized and put in prison. He prolonged a miserable life till 1576, when he expired in the castle of Malmoy. He left no children, and all his honours and estates were forfeited to the crown.

BOTTA, CARLO GIUSEPPE, born at San Giorgio in Piedmont, in 1766, studied medicine in the University of Turin, and took a doctor's degree in 1786. He also manifested an early turn for literary and historical studies. At the outbreak of the French revolution, Botta committed himself so far in some revolutionary plot, that he was arrested and confined in the citadel of Turin for two years, when being liberated, he emigrated to France. After living some time at Grenoble he was appointed surgeon to the French army called 'of the Alps,' and stationed at Gap. In 1796, after the first success of Bonaparte, he followed the French through their campaigns in Lombardy, and in the following year was present in Venice at the fall of that ancient republic, a catastrophe which he has related with lively grief and indignation in his history. From Venice he sailed with the expedition that went to take possession of Corfú and the other Venetian islands in the name of France. At Corfú he wrote a professional work on the military hospital of that garrison, with digressions on the climate and the natural history of the island. Botta returned to Italy in 1798, and was employed in his professional capacity with a detachment of Cisalpine troops stationed in the Valtellina, where he wrote a disquisition, in the form of a letter, on the analytical nosography of Pinel. At the end of that year, General Joubert, acting for the French Directory, nominated Botta a member of the provisional government of Piedmont. This government was driven away a few months after by the victorious Suvarow, and Botta being thus obliged to emigrate to France a second time, was appointed surgeon to the new army of the Alps. He returned to Italy after the battle of Marengo, June 1800, and was appointed member of the Consulta, or council of administration for Piedmont. The country was in a deplorable state, after being drained by so many revolutions and invasions; the French acted as imperious taskmasters, and the council had few means of doing good. In the twentieth book of his history Botta describes at length the calamities of the times. One important benefit was secured by Botta and his colleagues to their native country, namely, an annual permanent income of half a million of francs out of the public domain, for the support of the University, Colleges, and Academy of Sciences of Turin; a benefit which survived all subsequent political vicissitudes.

When Napoleon resolved, in 1803, to unite, definitively, Piedmont to France, Botta was one of the deputation sent to Paris on the occasion. He then published a 'Précis Historique de la Maison de Savoie et du Piémont.' In 1804 he was elected deputy to the French legislative body, for the department of the Dora, and in consequence removed to Paris. He retained his seat in the legislative body, having been re-elected for the department of the Loire, till the fall of Napoleon. Botta now availed himself of his ample leisure in preparing for the press his history of the North American revolution and war of independence, which he had begun during his first French emigration, and which he published at Paris in 1810: 'Storia della Guerra dell' Indipendenza d'America.'

In April 1814, Botta, with the other members of the legislative body, swore allegiance to the Bourbon dynasty; but at the end of March 1815, Napoleon's restored government appointed him Rector of the University of Nancy. He resigned his rectorship at the second Bourbon restoration, but was appointed instead Rector of the University of Rouen, an office which he did not retain long, for in 1816 he was living at Paris as a foreigner without employment or pension. He then applied himself to write a contemporary history of Italy during the French occupation, an arduous task amidst the growling of angry passions which had not yet had time to subside. He determined to write 'the whole truth,' as far as his means of information went; to speak with honest sincerity, not only of princes and ministers, but also of the people; to flatter no party; to calumniate no enemy. Disregarding the prejudices of men of all parties, he produced a book which went far to redeem Italian literature from the charge of almost Oriental servility which it had incurred during the period of Napoleon's reign. Alone perhaps among the nations of Europe, the Italians, or rather, a numerous and active class among them, had, or thought they had, reason to regret the fall of the Bonaparte dynasty. Botta displeased many of these by his plain speaking, nor did he care to conciliate the advocates of old absolutism. He published his work at Paris in 1824: 'Storia d'Italia dal 1789 al 1814,' 4 vols. 8vo. The book was assailed by strictures and denunciations, some of them very abusive and personal; but it stood its ground, went through numerous editions, both in Italy and abroad, and it has long since taken its place in every Italian library. The work is one of lasting interest: the author excels in the description of stirring events, the bustle of the camp, the alarms of a siege, the din and tumult of popular insurrections, the calamities of the devoted inhabitants—the victims of famine, pestilence, or the sword. His style however is upon the whole unequal, and his sentiments at times seem inconsistent with one another. There is also a disproportion between the various parts of the work; twenty-books are bestowed upon the Italian wars and vicissitudes from 1792 to the peace of Lunéville in 1801, and only

seven upon the subsequent period down to 1814. But notwithstanding these faults, Botta's history is a work that does honour to Italian literature.

Encouraged by the success of this work, a certain number of Italian and French lovers of literature urged Botta to attempt a continuation of Guicciardini's history of Italy, from 1530, down to 1789, so that the end should meet the beginning of his contemporary history. These friends made a subscription among themselves sufficient to allow the writer a decent annual income during the time that he should be engaged in his laborious undertaking. Botta accepted the task in 1826, and he completed it at the end of 1830: 'Storia d'Italia in Continuazione al Guicciardini, sino al 1789,' 10 vols., 8vo, Paris, 1832. This larger work was received with applause, owing in part to the author's already established reputation as an historian. The Academy of La Crusca bestowed on the author its decennial prize, and Charles Albert, king of Sardinia, created him a knight and gave him a pension. In 1832 Botta revisited his native Piedmont, and was very favourably received there. He afterwards returned to France, where he made an Italian translation of the journal of a French maritime expedition of discovery round the globe, which one of his sons accompanied in a medical capacity, and also as a naturalist. The translation was published after the father's death: 'Viaggio intorno al Globo, principalmente alla California e alle isole Sandwich, negli anni 1826-29, di A. Duhaut Cilly; con Note del giovane Botta,' Turin, 1841. Botta lived and died poor. He died at Paris, in August 1837. His native town San Giorgio has raised him a monument.

Besides the works mentioned in this article, Botta wrote—1, 'Il Camillo, o Vejo conquistato,' a poem, Paris, 1815; 2, 'Storia dei Popoli Italiani da Costantino fino à Napoleone,' a compilation published first in French in 1825, and afterwards in Italian in 1826. His history of American independence has been translated into English by Otis, and has been greatly praised in the United States. As a literary work however it is much inferior in merit to the two histories of Italy.

*BOTTA, PAUL-ÉMILE, was born about the year 1800. He is the son of Botta the historian. He studied medicine, and accompanied A. D. Cilly, as a surgeon, in his voyage round the world in 1826-29. [BOTTA, C. G.] He early distinguished himself as a naturalist. He spent some years in Egypt, was for a time consul at Alexandria, and visited the countries on the Upper Nile, Senaar, and the tracts inhabited by the Bishareen. In 1837 he made a journey through a portion of Arabia, of which he published a short but very interesting account, 'Relation d'un Voyage dans l'Yemen, entrepris en 1837 pour le Muséum d'Histoire Naturelle de Paris,' 8vo.

In 1843 M. Botta was at Mosul as French consul. This town is situated on the west bank of the Tigris, about 220 miles N.N.W. from Baghdad. On the eastern bank, nearly opposite, is a large mound called by the inhabitants Kouyunjik, supposed to have been a portion of the ancient city of Nineveh. M. Botta, early in 1843, soon after his arrival at Mosul, began to make excavations in this mound, on a small scale, but found only fragments similar to others which had been found there previously. While the small party employed by him were still at work on the mound of Kouyunjik, an Arab peasant happened to visit the spot, and being informed that they were searching for sculptured stones, advised them to try the mound on which his village was situated, where, he said, such stones had been found. This village, called Khorsabad, is about 14 miles N. by W. from Mosul. M. Botta followed the man's suggestion. A hole was dug into the mound of Khorsabad, the top of a wall was reached, and the whole of the apartments of an Assyrian palace were ultimately laid open. The walls were faced with slabs of stone sculptured with figures and cuneiform characters, and there were huge human-headed bulls and other statues, the whole being similar to those now in the British Museum, which have been brought from the mounds of Nimroud and Kouyunjik. The discoveries at Khorsabad were made before Mr. Layard had commenced his excavations at Nimroud, which is 18 miles S. from Kouyunjik; so that M. Botta led the way in the recent Assyrian discoveries. The French government supplied him with funds, and sent M. Flandin, an experienced artist, to make drawings. The palace at Khorsabad appears to have been destroyed by fire, and it was consequently found to be impossible to prevent the greater part of the slabs from being broken. Such however of the sculptures and other objects as have been saved are now exhibited in the Musée Assyrien of the Louvre at Paris. M. Botta, after his return to Paris, in conjunction with M. Flandin, and assisted by other scholars and artists, published 'Monument de Ninevé, decouvert et décrit par P.-É. Botta, mesuré et dessiné par E. Flandin,' 5 tom. folio, Paris, 1847-50. The two first volumes contain the plates of architecture and sculpture, the third and fourth the inscriptions, and the fifth the text.

BOTTARI, GIOVANNI, was born at Florence in 1689, studied Latin and belles-lettres under the learned Biscioni, and Greek under Salvini, and afterwards philosophy, mathematics, and theology, in which last he took his doctor's degree in 1716 in the University of Florence. The Academy of La Crusca made him one of its members, and entrusted him with the task of preparing a new edition of its great vocabulary, in company with Andrea Alamanni and Rosso Martini. This laborious work lasted several years, and the new edition was published in 1733, in 6 vols. folio. Bottari was also made

superintendent of the grand ducal printing establishment at Florence, where he published new editions of several Tuscan writers, with notes and comments, such as Varchi's 'Ereolano,' the works of Sacchetti, of Frà Guittón d'Arezzo, &c. In 1729 he wrote 'Lezioni tré sopra il Tremuoto,' on the occasion of an earthquake which occurred at Florence in that year. In 1730 he went to Rome, where he fixed his residence. Clement XII. gave him a canonry, and also the chair of ecclesiastical history in the University of La Sapienza, and employed him in 1732, together with Eustachio Manfredi, on a survey of the Tiber throughout Umbria, in order to ascertain whether it could be rendered navigable. The result of this survey was published: 'Relazione della visita del fiume Tevere da Ponte Nuovo sotto Perugia fino alla foce della Nera.' Bottari made a similar survey of the Teverone. His next publication was a learned work on the monuments found in the numerous and vast subterraneous vaults near Rome, commonly known by the name of catacombs—'Sculture e pitture sacre estratte dai cimiterj di Roma, pubblicate già dagli autori della Roma Sotterranea, ed ora nuovamente date in luce colla spiegazione ed indici,' 3 vols. folio, Rome, 1737-54. He used the plates of the 'Roma Sotterranea' of Bosio, which Clement XII. had purchased; but the letter-press may be said to be entirely Bottari's. He also published 'Storia dei SS. Barlaam e Giosafatte ridotta alla sua antica purità di favella collajuto degli antichi testi a penna con prefazione,' 4to, 1734. Clement XII., being pleased with his exertions, bestowed on him several preferments, made him a prelate of the Pontifical Court, and librarian of the Vatican. Benedict XIV., who succeeded Clement in 1740, made Bottari take up his abode near him in the pontifical palace. He published, in 1741, 'Del Museo Capitolino, tomo i. contenente le imagini d'uomini illustri,' folio; and afterwards, 'Musei Capitolini tomus secundus, Augustorum et Augustarum hermas continens, cum Observationibus,' folio, 1750; also, 'Antiquissimi Virgiliani Codicis fragmenta et picturæ ex Vaticana Bibliotheca ad priacas imaginum formas a Petro S. Bartoli incisæ,' 1741, folio. Bottari contributed to this work an important preface, with a dissertation on the age of two manuscripts of Virgil in the Vatican, and notes, variantes, &c. 'Descrizione del palazzo Apostolico Vaticano, opera postuma di Agostino Taja, rivista e accresciuta,' Roma, 1750: Taja had begun this work, which Bottari recast and completed. Bottari died at Rome in June 1775, at the age of eighty-six. He was one of the most distinguished scholars at the Roman court in the 18th century. Among his minor works are, dissertations on the origin of the invention of Dante's poem; two lectures upon Boccaccio, in which Bottari refutes the charge of infidelity brought against that writer; two lectures on Livy, defending the Roman historian against the charge of too great credulity in narrating prodigies; letters on the fine arts, dialogues on the same subject, &c. (Grazzini, *Elogio di Monignor Bottari*; Mazzebelli, *Scrittori d'Italia*.)

BOUCHARDON, EDME, a distinguished French sculptor, was born at Chaumont in Bas-ignny, in 1698. He was instructed in his youth by his father, who was likewise a sculptor and architect; and, after he had made sufficient progress, he entered the school of the younger Coustou at Paris, where he soon distinguished himself, and obtained the first prize of the Royal Academy in 1722. By this prize he was entitled to study for a limited period at Rome, at the expense of the French government, in the French academy established there by Louis XIV. Bouchardon remained at Rome for ten years, during which time he was much employed, especially in busts; and he was selected to execute the monument of Clement XI., but, being recalled by the French government about the same time, he did not execute it. He returned to Paris in 1732; in the year following he was elected Agréé, in 1744 a member, and in 1746 a professor of the Academy of Painting and Sculpture. He died at Paris in 1762.

Bouchardon's principal works were the 'Fontaine de Grenelle,' and the equestrian statue of Louis XV. The 'Fontaine de Grenelle' is one of the finest in Paris; it was commenced in 1739 and finished in 1745. The authorities of Paris, by whose order it was made, were so well satisfied with its execution that they voted Bouchardon, in 1746, a pension for life of 1500 francs. The statue of Louis XV., which was of marble, was placed in the Place-Louis XV. in 1763, and was destroyed by the populace in 1792. Bouchardon was occupied in its execution during twelve years, yet it was unfinished when he died: the pedestal was executed by Pigal, who was chosen by Bouchardon himself to complete the monument. It was engraved by Cathelin. There are also some statues by Bouchardon in the church of St. Sulpice, and in the gardens of Versailles, Choisy, and Gros-Bois. He was sculptor to the king. Many of his works and sketches have been engraved, and there are a few etchings by his own hand.

J. J. Preisler engraved fifty ancient statues from drawings by him. Count Caylus engraved many others, besides several of Bouchardon's original works; he also wrote a life of Bouchardon. Bouchardon had a younger brother, who was painter to the King of Sweden, in which country he died.

(L'Abbé de Fontenai, *Dictionnaire des Artistes*, &c.; Heineken, *Dictionnaire des Artistes*, &c.; Watelet and Levesque, *Dictionnaire des Arts*, &c.)

BOUCHER, FRANÇOIS, succeeded Vanloo as principal painter to Louis XV. He was born at Paris in 1704, studied under Le Moine, and at the age of nineteen obtained the first prize of the French

Academy of Painting. He went to Rome for a short time, and returned to Paris in 1731. In 1735 he was elected a member of the academy. He died in 1768, or, according to others, 1770, director of the academy.

Boucher was a painter of very great ability, and had extraordinary facility of execution; but he disregarded every correct principle, and devoted himself entirely to a picturesque effect, which consisted in a mere variegated tissue of light and shade. His figures are quite devoid of expression. His subjects were chiefly mythological, amorous, and pastoral, and he painted figures and landscapes with equal facility. The corruption of pure taste, partly effected by Watteau, was fully accomplished by the works of Boucher, for though in his time a great popular favourite, his style has been subsequently condemned in the very strongest terms, even by his own countrymen, especially by Watelet and Diderot. He has been called the Anacreon of painters, a compliment (if one) which, though it may apply to Boucher's subjects, cannot apply to his execution of them. His designs are extremely numerous, amounting to several thousands, and a great many of them have been engraved, a few by himself, and others by upwards of 140 different engravers, French and foreign.

(L'Abbé de Fontenai, *Dictionnaire des Artistes*; Heineken, *Dictionnaire des Artistes*, &c.; Watelet and Levesque, *Dictionnaire des Arts*, &c.; Fiorillo, *Geschichte der Malerey*, vol. iii.)

BOUCHER, REV. JONATHAN, born 1737, died 1804, a divine, a political writer, a general scholar, and an English philologist of the last century, to whose memory justice has been imperfectly rendered.

He was born in Cumberland, near the little town of Wigton, at a place called Blencogo, where his father had a few acres of land, and lived in a somewhat primitive style of frugality. Boucher was trained first at a school at Blencogo, and afterwards at Wigton, where he had for his master the clergyman of Graystock, Mr. Blaine, with whom he read some of the higher Latin and Greek classics. Under this master Boucher pursued his studies with great assiduity, and at the age of seventeen or eighteen he entered on the business of school instruction; in a little time he became an usher in the grammar-school at Saint Bees, which at that time, about 1756, enjoyed a high reputation under Dr. James, a good and learned master. While here, the instruction of youth in the rudiments of classical knowledge was his business; the perusal and study of the great writers, and especially of the great poets of antiquity, his recreation. He is said to have here executed a translation of Tyrtæus. About 1756 or 1757 he left England, and took up his residence amongst the American colonists. His services were soon engaged by a gentleman in Virginia of wealth and respectability as tutor to his children. That power which natural talent, attainment, and character united, never fail to give, where the natural tendency is not counteracted by some one of the various forms in which an over-estimate of them by the party himself appears, was soon manifested. The vestry of the parish of Hanover, in the county of King George, Virginia, nominated him to the rectory of that parish in 1761, when he was only four-and-twenty. This nomination he accepted, and instantly repaired to England, where he received ordination from the Bishop of London both as deacon and priest on the same day. From this time to 1775 he continued in an assiduous discharge of his ministerial duties. He removed from the parish of Hanover to that of St. Mary in Caroline county, Virginia, lying on the Rappahanock. When Sir Robert Eden became governor of Maryland, he appointed Mr. Boucher to the rectory of St. Anne's in Annapolis, and afterwards of Queen Anne's in Prince George's county, where he was living in 1775, when there was a violent and sudden change in his affairs. These fourteen years were a critical period in the history of the American colonies. Mr. Boucher has afforded us the means of judging with tolerable accuracy how his talents, station, and character were made to bear upon the feeling and action of the people with whose interests he had connected his own. Many years after he published a volume of discourses which he had delivered from the pulpit at various times during those years. Most of them were printed at the time when they were delivered. They are in fact for the most part political sermons, preached however usually on public occasions, when it is allowed to the ministers of religion to enlarge somewhat the usual limits of pulpit instruction. They exhibit a robust sense, a mind stored with classical erudition, and there are occasionally bursts of a simple eloquence. He advocates a liberal toleration to Dissenters, and a careful attention to a general diffusion of sound education on a religious basis. On the question of the Stamp Act he partook of the popular enthusiasm; and on the whole he seems to have been inclined to a liberal policy, and to the maintenance of the independence and just rights of the colonies.

But when the time came that all connection with the mother country was to be renounced, and all allegiance to the British throne, Mr. Boucher was one of those who neither admitted the principle nor thought themselves at liberty to remain entirely passive. He continued to use in his church the public liturgy, and to read the prayers for the king and the royal family as he had been accustomed, when all around him was resistance and rebellion. He was now regarded in the light of one who was a traitor to the common interest. It was intimated to him that he must either desist from reading those prayers or resign his charge. His conduct was decided; and without hesitation he resigned his charge. This was a time when there could

be no compromise. His property, all of which was in America, was lost. He became so much an object of popular dislike that his person was in hourly danger, and in 1775 he finally quitted the American shores and returned to his native land. His prospects thus blighted, he had to begin the world anew, aided by some compensation from the government at home for the losses which he had sustained with other American loyalists. Little is known of him during the next nine years of his life; but it is believed that he had recourse to his original profession, and that he established a school at Paddington. In the church he obtained no preferment till 1784, when Parkhurst, a clergyman, the author of two well-known Scripture lexicons, presented him to the vicarage of Epsom in Surrey, at which place it is believed he went immediately to reside, and where he died.

In this last twenty years of his life we find him devoted, as in the former period, to religion, to politics, and to literature. He collected and published, in 1797, the discourses before spoken of, and prefixed to them a dedication to Washington, with whom, before the war, he had been on terms of intimacy, and for whom he never ceased to feel a high personal respect. He added also a long preface, entitling the whole collection, 'A View of the Causes and Consequences of the American Revolution.' He printed also two assize sermons, and in every way supported to the utmost of his power the Pitt policy in respect of France, adhering to the principles which he had maintained in Maryland in such dangerous times and for which he had been so great a sufferer. But the kind of literature to which he directed his attention was changed. It became more English. The love of his native country, which is said to be stronger in those born in mountainous regions than in other persons, appeared in various forms. He addressed his Cumbrian friends on the backwardness which they showed in following in the track of public improvement. He wrote some of the best portions of Hutchinson's history of that county. He erected in the church of Sebergham a monument to the memory of Relph, a Cumbrian poet. He also became a Fellow of the Society of Antiquaries of London, and was made an honorary member of the Society of Antiquaries of Edinburgh, and also of the Stirling Literary Society. His acquaintance among the men devoted to antiquarian, and especially English philological literature, became extended, and he enjoyed the intimacy and particular friendship of several of them.

His mind at length became determined towards a particular object: it was, to prepare a kind of supplement to the 'Dictionary of the English Language' by Dr. Johnson, in which he should introduce words provincial and archaic. By provincial, he meant words which are still found in the speech of certain parts of England, though not found in writing or heard in the conversation of the cultivated and polite; words however which are genuine portions of the English language, and to be found, most of them at least, in our early and almost forgotten writers. By archaic, he meant words which are found in those writers, though now regarded as obsolete, and which are not now, and perhaps never were, in any general use by the common people. These words it was his intention to illustrate by quotations from the authors in which they occur, and also by dissertations on their history in a manner much more at large than Dr. Johnson had thought it necessary to do in respect of the purer and better terms which he had allowed to find a place in his Dictionary.

This was a design of great magnitude, and Boucher set himself to the accomplishment of it with great earnestness of purpose, and proceeded with an unwearied perseverance which was truly admirable. He made his classical knowledge bear upon it with effect, and he obtained no mean acquaintance with the languages cognate to our own and the other modern languages of Europe. He had an intimate acquaintance with the dialect of Cumberland and Westmoreland, where perhaps more of peculiar terms remain than in other counties, which he had acquired when a youth, a time of life when such knowledge is best attained. He made a large collection of books applicable to his purpose, and he established a correspondence with persons in many of the counties of England, from whom he received contributions for his vocabulary, and sometimes valuable remarks.

But the plan on which he proceeded included more than is generally understood to fall within the province of lexicography. He made his dictionary the deposit of what he was able to collect concerning many of the usages of the English nation—dress, sports, superstitions, whatever in short falls under the not-strictly defined term of popular antiquities: so that his work may, in many portions of it, be read for amusing or interesting information, as well as consulted as a dictionary for the illustration of the words which it contains. In this respect it resembles Dr. Jamieson's valuable dictionary of the Scottish language.

Mr. Boucher began this work in or about 1790. It was not too late a period of life for him to indulge the hope and a reasonable expectation of being able to complete it, well furnished as he already was with much of the information needed for such an undertaking. In 1802 it had so far advanced towards maturity that he issued a prospectus of the work, and proposals for publication. His health however was then beginning to decline. In 1803 he visited his native county. He lived till the 27th of April in the following year, when he died without having committed any part of his large manuscript to the press.

Of the dictionary thus left unfinished, the letter A was published

after his death as a specimen by his friend and frequent correspondent Sir Frederick M. Eden. The merits and the value of his collection were understood from this specimen, and appreciated in every way highly by those who take an interest in such inquiries. But still there was not sufficient encouragement given to the family to risk the publication of so large a manuscript. It remained, with other papers connected with it, in the hands of the family till 1831, when it was purchased with the intention of immediate publication. Two numbers of the projected work are however all that have appeared, containing Mr. Boucher's learned introduction to his work, which happily was left completed by him, and the words of the alphabet as far as 'Blade.'

For the facts in this life we have been principally indebted to Boucher's own writings, to the 'Gentleman's Magazine' (vol. lxxiv., p. 591), where is a biographical notice of him inserted at the time of his decease, and to a little volume printed at Carlisle in 1829, entitled 'The Life and Literary Remains of Thomas Sanderson.'

BOUFLERS. There were two remarkable females often mentioned in the literary history of the 18th century who bore this title, and who are frequently confounded with each other. The one was the MARQUISE DE BOUFLERS-RÉMENCOURT, a correspondent of Voltaire, and the principal female ornament of the court of Stanislaus Augustus of Poland. She was a great reader, and wrote some pleasing verses. The other was the COMTESSE DE BOUFLERS-ROUVRELL, who is perhaps better known in this country than her namesake, from having been a friend and correspondent of David Hume. She was mistress of the Prince of Conti, and on the death of her husband, in 1764, was disappointed at not becoming the wife of that prince. She wrote a tragedy in French prose. The ease and accurate idiom of her English letters show that she was a very accomplished woman.

BOUFLERS, LOUIS-FRANÇOIS DUC DE, descended from one of the most ancient and noble families in Picardy, the second son of François II, count of Boufflers and Cagni, was born January 10, 1644. He entered the royal guards as a cornet in 1663, during which year he was present at the siege of Marsal in Lorraine. In the following campaign he was engaged in an expedition to Gigari in Africa; and so much talent did he afterwards exhibit in Flanders, that he was allowed to purchase from the Duc de Lauzun the colonelcy of the royal dragoons. In all the enterprises of Turenne he bore a distinguished part; and he was severely wounded at the battle of Woerden, under the *maréchal* of Luxembourg, in the winter of 1673. Having passed into Germany, he was again wounded at the battle of Einshelm in 1674, and received the thanks of Turenne for having greatly contributed to the success of that day. In the memorable retreat after the death of Turenne, in 1675, he commanded the French rear; and from that time till the peace of Nimeguen, in 1678, he was employed on active service. He then commanded in Dauphiné and on the frontiers of Spain. His gallantry at the siege of Luxembourg was rewarded with the government of that city and province in 1686; and the reasonable detachment of a corps from the army of the Moselle, which he commanded in 1690, decided the event of the battle of Fleurus. In 1691 he was again wounded in an attack upon a hornwork at Mons; but during the remainder of that campaign he triumphantly kept the field against the allies, who were more than threefold his number, and continued the blockade of Liege and of Huy. On his return to court during the winter, he was personally invested by the king with the collars of the several orders into which he had hitherto been admitted only by proxy. When William III. moved to the relief of Namur, Boufflers was selected to oppose him. He then partook of the glories of Steenkerken. In 1693 he was elevated to the dignity of *maréchal* of France, and received the new order of St. Louis. He defended Namur against the allies, commanded by William III., for sixty-three days of open trenches in 1695, and repulsed four general assaults. After its capitulation, he was detained a prisoner of war for a fortnight; and the king, in recompense for his great services, erected the county of Cagni and some adjoining domains in Beauvaisis into the dukedom of Boufflers. In 1696 he superintended some preparations for a projected invasion of England in support of James II., which was not put in execution. In the war of the Spanish succession, he commanded in the Netherlands; and on June 30, 1703, in conjunction with the Marquis de Bedmar, he obtained a signal advantage over the Dutch at Eckaren, for which he received from the king of Spain the collar of the Golden Fleece. In 1708, after the battle of Oudenarde, he undertook to defend Lille against Prince Eugene; and he maintained the town from August 12th till October 25th, when he capitulated, after having repeatedly declined the king's urgent wish that he should cease to expose himself; but the citadel into which he retired held out till the 11th of December following. The king loaded him with new honours for the brilliant defence, and made his duchy into a peerage. His presence in the capital in March, 1709, and his deserved popularity among the citizens, contributed to allay a tumult which had arisen on account of scarcity of bread; after which, hastening to Flanders, he tendered his services to the *maréchal* Villars, an officer junior to him, and brought off the right wing of his army in good order, losing neither cannon nor prisoners at the disastrous battle of Malplaquet. This was his last public act; he died at Fontainebleau, March 22, 1711, in the sixty-eighth year of his age, and was buried with great military splendour in the church of St. Paul at Paris.

The above sketch of the exploits of this distinguished captain is necessarily very incomplete; his history, in truth, forms a very important part in the military history of the half century during which he served, and its details must be sought in the general annals of Europe.

BOUGAINVILLE. Two brothers of this name attained considerable distinction in the 18th century.

JEAN PIERRE DE BOUGAINVILLE, was born at Paris December 1st, 1722, and during his short career distinguished himself by some publications now forgotten; among them was a French translation of the 'Anti-Lucretius' of Cardinal Polignac, and a Parallel between the expedition of Kouli Khan and that of Alexander. Some poems, among which is the germ of Pope's 'Universal Prayer,' and several papers in the 'Mémoires' of the Academy, also were printed by him. He held numerous employments of high literary distinction, as secretary to the Academy of Inscriptions, censor royal, keeper of the antiquities in the Louvre, and secretary in ordinary to the Duke of Orleans, &c. He died at Loches June 22nd, 1763.

LOUIS ANTOINE DE BOUGAINVILLE, his younger brother, who more than doubled his years, led also a much more active existence. He was born at Paris November 11th, 1729, and studied in the university of that capital, with the intention of proceeding to the bar. Much of his time had been devoted to mathematics, and instead of commencing as an advocate at the Palais, he surprised his friends by enrolling himself in the Mousquetaires Noirs, and by publishing a treatise on the integral calculus within fifteen days from his enlistment. We know not in what manner he passed from military to diplomatic pursuits, but we afterwards find him employed as secretary of embassy in London, where he was elected fellow of the Royal Society. Returning to the army, he served in Canada with some distinction till 1759; and in 1763, when the merchants of St. Malo wished to colonise the barren territory of Falkland's Islands (the Malouines, as they were called, from their pretended discoverer), Bougainville was active in promoting the settlement. The position which he had chosen for the establishment was at Port Louis, on the eastern side of the lesser of the two large islands, on a part of the coast which afforded a good harbour; and he was sanguine in his expectations that the new colony would in a great degree indemnify his country for the loss of the Canadas. The Parisian cabinet however thought otherwise; and as Spain protested against the French right of possession, the French government in 1766 bartered for the surrender of Port Louis to the Spaniards, who gave it the less swelling but perhaps more appropriate name of Port Solidad. Bougainville was instructed to execute the transfer, and his commission authorised him afterwards to traverse the South Sea between the tropics, for the purpose of making discoveries, and to return home by the East Indies. For this circumnavigation of the globe, a frigate, 'La Boudeuse,' carrying twenty-six twelve pounders, and a store ship, 'L'Etoile,' were placed under his command. His crew consisted of eleven commissioned officers, three volunteers, and 200 mariners; and the Prince of Nassau Sieghen obtained permission to accompany him. His voyage, although not to be compared in point of interest to that of Cook or Anson, is very agreeably related by himself. It was translated into English by Forster in 1772, and an abridgment of it is given in the appendix to the thirteenth volume of Kerr's 'General Collection of Voyages and Travels.'

Bougainville sailed from Nantes November 15th, 1766. On the 1st of April following he surrendered Falkland's Islands to some Spanish frigates which had been dispatched for the purpose, and he was then delayed till November at Monte Video by the non-arrival and the necessary repairs of his store-ship. In working off the shores of Tierra del Fuego he suffered much from boisterous weather. Storms, mists, sunken rocks, difficult currents, and an archipelago which appropriately received the name of 'The Dangerous,' were encountered before he arrived in sight of Otaheite on April 2nd, 1768; and the well-known blandishments of that island appear to have exposed him to scarcely less peril than he had undergone at sea. At parting he carried with him as a volunteer Aotourou, the son of a native chief. The youth's talents appear unhappily to have been very slender, and he acquired little benefit from mixing with the civilised world at Paris: he died on his homeward passage in 1770. Scurvy and a failure of provisions occasioned very severe suffering during the latter part of this voyage, till on September 28th Bougainville, having been at sea for ten months and a half, cast anchor off Batavia. On March 16th, 1769, he entered St. Malo, having been engaged upon his expedition two years and four months. Bougainville commanded a ship of war during the American revolutionary contest. He died at the advanced age of eighty-two years, on August 31st, 1811.

BOUGUER, PIERRE, was born February 16, 1698, at Croisic, in Basse-Bretagne, where his father was professor of hydrography. The son, after receiving the instructions of his father in mathematics, and making considerable progress by himself, taught first at Croisic, and afterwards at Havre-de-Grace. In 1727 he gained the prize of the Academy of Sciences for a memoir on the method of masting ships; in 1729, for one on the method of observing the stars at sea and on astronomical refractions, his formula and results being the same as those afterwards given by Simpson, but more complicated in form; in 1731, for a method of observing the dip of the compass at sea. In

1732 he presented a memoir on the inclinations of the planets' orbits, in which he treats the subject on the theory of Des Cartes: he was the last of the academicians who held by that system. In 1739 he published a memoir on the gradual extinction of light in passing through successive imperfectly transparent substances. By a series of experiments, of which M. Biot speaks in high terms ('Biog. Univ.'), he imagined he had proved that the light from the edges of the sun is weaker than that from the centre. M. Arago has disproved this assertion by new experiments.

The reputation of Bouguer being established as a profound mathematician, and particularly (to use a phrase of M. Condorcet when speaking of him in his *Éloge* of La Condamine) as "possessing that sort of talent which is able to distinguish the little causes of error, and to find the means of remedying them," he was chosen, in company with La Condamine and others, together with two Spanish commissioners, to proceed to Peru, for the purpose of measuring a degree of the meridian. Thither he accordingly departed in May 1735, and remained till 1743. The most essential parts of the operation necessarily fell upon him, as La Condamine was comparatively new to the subject. This important operation, which is one of the best of its kind, was carried on under difficulties as great as were ever encountered by any scientific expedition. The inhabitants of the country were jealous of the French commissioners, and supposed them either to be heretics or sorcerers, or to have come in search of new gold mines. Even persons attached to the administration employed themselves in stirring up the minds of the people, and when at last they had procured the assassination of the surgeon of the expedition, one was able to escape the consequences by procuring a verdict of lunacy against himself, and another by taking orders. The country itself was difficult and dangerous: and this obstacle was increased by jealousies which arose between the French and Spanish commissioners, as well as between Bouguer and La Condamine. Bouguer, who felt that he was the main resource of the expedition, suspected that La Condamine would appropriate an undue share of the merit to himself. The consequence was however of no harm to the real objects of the expedition, but perhaps rather the contrary; for it caused Bouguer, La Condamine, and the Spaniards George Juan and Antonio de Ulloa to conduct their operations separately, while the near accordance of the three in their results was a favourable presumption for their accuracy. The results did not differ from their average by a five-thousandth part of the whole, in a length of a degree of the meridian.

The leisure which impediments occasionally gave enabled Bouguer to apply himself to the determination of points not immediately connected with the main object. Among other things, he ascertained the amount of refraction at considerable heights above the sea. He found reason to suspect the effect of the attraction of Chimborazo upon the plumb-line, but not knowing the mean density of the mountain, could not perform the task which Maskelyne afterwards undertook. A part of the observations (on the obliquity of the ecliptic) were forwarded as soon as made to Halley, who published them in 1739 in England: but an account of the whole was published in Paris, in 1740, under the title of 'Figure de la Terre,' &c. In 1752 followed a justificatory tract on several disputed points; in 1753 a treatise on navigation, abridged in octavo by Lacaille in 1769, and reprinted in 1781 and in 1792, with notes by Lalande. In 1754 Bouguer published an attack on La Condamine, relative to the part of the great survey claimed by both. The latter replied with temper; and as his tract was the more amusing of the two (an observation both of Condorcet and Biot), he carried the public with him. It seems to be admitted on all sides, that Bouguer had no ground of offence whatsoever, and that La Condamine behaved towards him with great respect and moderation.

Bouguer was afterwards employed to verify the degree measured by Dominic Cassini between Paris and Amiens. This he did in conjunction with Cassini de Thury, Camus, and Pingré. The results were published in 1757. He died August 15, 1758, while preparing a new edition of his work on the gradual extinction of light, which was afterwards completed and published by Lacaille in 1760. In this work he mentions an invention of his in 1748, which he calls the heliometer, and which is in fact the first double object-glass micrometer, and was properly so called. That of Dollond, which is the more easily used, and is esteemed the better instrument, was invented independently a few years afterwards. Bouguer attacks the Royal Society of London, which a second time had had recourse to the preceding mentioned in the life of AUZOUZ, and had published (but not till after Bouguer's discovery had been made known) the prior invention of an Englishman named Savery.

As a scientific man, Bouguer must stand in the first rank of utility. The operations in Peru are among the first of their species, and the species one of the most difficult kind of scientific investigations.

BOUHOURS, DOMINIQUE, was born at Paris in 1628. He studied at the college of Clermont, professed with the Jesuits at sixteen years of age, and was appointed by that society to read lectures in the belles-lettres and rhetoric, both at Tours and at Paris. A heavy infirmity soon disqualified him for the task, and he was compelled by the recurrence of grievous headaches to embrace an occupation apparently just as ill-adapted as that which he quitted to relieve his peculiar complaint. He entered upon the tuition of the sons of Henry, duc de Longueville. That nobleman, who regarded him with singular affec-

tion, died in his arms, and Bouhours published an account of his illness and last moments (Paris, 1663). His second publication was 'Histoire de Pierre d'Aubusson, Grand Maître de Rhodes,' 8vo, 1667, which has been translated into English. He was then engaged on a commission to the Roman Catholic refugees from England to Dunkirk; and was introduced to the substantial patronage of Colbert by two critical works—'Remarques et doutes sur la Langue Française,' and 'Les Entretiens d'Ariste et d'Eugène,' 1671. In the latter occurs a question most offensive to German national pride—"Whether it be possible for a German to be a wit!" These works awakened a host of critics. Baillet affirmed that few exceeded Bouhours in knowledge of French "siles et des locutions;" and the 'Jugemens des Savans' contain more than one very favourable opinion from the censors of Trevoux. Ménage, on the contrary, stated that Bouhours wrote with politeness, but without either judgment or learning; that he was unacquainted with Greek and Hebrew, scholastic divinity, and canon law; that he had not read the fathers, the councils, or ecclesiastical history; that he was but a poor grammarian in his native tongue, and the most ignorant person in the world as to the general principles of grammar; that his 'Doutes' contained more faults in language, learning, and judgment than they filled pages; that he had never read the Bible; that he was unversed in Italian, concerning which he made great parade; was an unskilful etymologist, and an unsound logician. Notwithstanding this most cutting and ferocious declamation, it is said that Bouhours cultivated and enjoyed the friendship of Ménage; and Colbert certainly assigned to him the education of his son, the Marquis de Seignelay. The other chief works of Bouhours were 'Dialogues sur la manière de bien penser dans les Ouvrages d'Esprit,' 1687. Voiture is the hero of the piece, and Rapin is extolled as fully equal to Virgil. This false criticism received a very severe handling from Barbier d'Aucour. In 1683 Bouhours published a 'Life of Ignatius,' and not long afterwards one of 'Francis Xavier.' The latter is chiefly remarkable as having been selected for translation by Dryden soon after his profession of the Romish faith. Bouhours published in 1697 a French translation of the Vulgate New Testament, which was by common consent admitted to be a failure. Some minor devotional pieces may be added to the list of his writings. He died in the college at Clermont at Paris, May 27, 1702, in the seventy-fourth year of his age.

BOULLAUD, or BOULLIAU, latinised BULLIALDUS (ISMAEL), born at Loudun, September 28th, 1605, died November 25, 1694, at Paris. He was originally a Protestant, but became a Roman Catholic, and retired into the Abbey of St. Victor, at Paris. He travelled in various parts of Europe in the service of John Casimir, king of Poland. Nothing more of his life is remembered; but such of his works (which were many, see Lalande 'Bibliogr. Astron.') as by themselves or their consequences entitle him to a place here, are in the following list. Bouillaud was a combination of a fanciful speculator and hard-working calculator, a good scholar, and well versed in the history of astronomy. His notion that light is a sort of substance intermediate between mind and matter entitles him to the first appellation, and his Philolaic Astronomy to the rest.

The earlier followers of Copernicus were accustomed to rank themselves, and to be considered by others, as followers of some one or other among the ancients who advocated, or were supposed to have advocated, the motion of the earth; either Pythagoras, Aristarchus, or Philolaus. The first work we shall notice of Bouillaud is his 'Philolaus, seu de vero Systemate Mundi,' 1639. After this he gave an edition of Theon of Smyrna, 1644, and in the following year his 'Astronomia Philolaica' (in his own catalogue of De Thou's library he calls it 'Astrologia'), which contains: 1, 'Prolegomena' on the history of astronomy, which are often cited, and are the basis of several facts. 2, An exposition of a system of astronomy, which is Copernican as to the annual motion of the earth and Ptolemaic as to the diurnal motion, and the precession of the equinoxes. It is throughout an attack upon the laws of Kepler, of which he only admits that which asserts the planets to move in ellipses. Each ellipse he treats as the section of an oblique cone, one of the foci of which is in the axis (the sun being in the other focus), and he asserts that the planets describe equal angles in equal times round the axis, or rather that a plane passing through the planet and the axis describes equal angles in equal times. The celebrated hypothesis of Dr. Seth Ward consists in supposing the planet to describe equal angles in equal times about the focus in which the sun is not. Both hypotheses are very nearly true for ellipses of small eccentricity, and of the two, that of Bouillaud is said to come a little nearer. Seth Ward replied to Bouillaud in his 'Idea Trigonometriæ Demonstratæ,' &c. Oxford, 1654, and Bouillaud rejoined in a tract entitled 'Astr. Phil. fundamenta clarius explicata,' Paris, 1657. 3, A set of tables, styled 'Philolaicæ,' calculated for the meridian of Uraniburg (Tycho Brahe's Observatory). Bouillaud here makes use of various Arab observations detected by himself in the 'Bibliothèque Royale.' It must also be noticed that he was the first who disinterred the observations of Thius. These tables have received great praise, and are not without their merits: but most of their value consists in what is taken from Kepler's methods, or from the Rudolphine Tables.

Bouillaud imagined that the laws of the planetary motions could be entirely deduced from geometrical reasoning. He blames Kepler

for attending to any other method of determining a law. But still he had the good fortune to make a guess, which, had he been Newton, would not have lain idle in his hands. He asserts, in opposition to Kepler, that the law of the attracting force of the sun, if such a thing be, cannot be inversely as the distances, but inversely as the square of the distances. He is thus the first who started this notion. He has certainly the advantage of Kepler in another point, when he asks why the sun only attracts the planets, and why the planets only resist motion, and do not produce it.

We may also mention of Bouillaud his 'Opus novum ad Arithmeti-cam infinitorum, Paris,' 1682, which is a continuation of the researches contained in the 'Arith. infin.' of Wallis, but not applied to geometry; and also his 'Catalogus Bibliothecæ Thuanae,' made by him in conjunction with James and Peter Dupuis (Puteanus), Paris, 1679.

BOUILLON, GODFREY (GODEFROY), DUKE OF, in the Ardennes, was the eldest son of Gustavus II., count of Boulogne, a descendant by the female line from Charlemagne, and of Ida, sister of Godfrey le Bossu, duke of Brabant, or Basse-Lorraine. The date of his birth is not given, but the marriage of his parents took place in December, 1059. In his youth, Godfrey bore the great standard of the empire in the service of Henri IV. At the battle of Mersberg, October 2, 1081, his sword sheared off the right hand of the Pretender Rodolph, who died on the following day in consequence of his wound; and Godfrey, whose distinguished bravery had been rewarded by the ducal title, was among the first who scaled the walls of Rome in the subsequent attack upon it. It is believed that remorse for the violation of the holy city of the west occasioned his vow of joining in the crusade which was to rescue the still more holy oriental metropolis. His celebrity in arms, his noble descent, and his general high reputation for both morals and valour, readily procured him the chief command of the projected expedition; and 80,000 foot and 10,000 horsemen were placed under his immediate orders by the confederates. His gathering was formed on the banks of the Meuse and of the Moselle, and thence he advanced through Germany, Bohemia, and Hungary. By discretion, and by fearlessly trusting himself to the good faith of Carloman, king of Hungary, he removed the suspicions which had been justly excited in that prince and his subjects by the licentiousness of former pilgrims; and after a short delay, he was greatly assisted in his march upon the Saracens by an escort of Hungarian cavalry. In union with the other divisions of the Latin army under the towers of Constantinople, he was employed in dispelling the not unreasonable jealousy displayed by the Emperor Alexius; and afterwards, by the capture of Nicea and by retrieving the battle of Dorylæum, he opened the passage through Asia Minor. Antioch next fell before his arms, but not until it had detained him many months and had occasioned fearful loss. Among the prodigies of valour (and the phrase, however common-place, may here be received in its literal sense) which the original historians of the crusades delight to record of their heroes, is an instance that Godfrey, on one occasion, during this siege, by a single stroke of his sword, split a Saracen from the left shoulder to the right haunch, and that the entire head and a moiety of the trunk of the Infidel fell upon the spot into the river Orontes, while the sitting half entered the town on horseback. In May, 1099, the crusaders advanced from Antioch and Laodicea to Jerusalem; but of their own mighty host scarcely 40,000 men remained alive, of whom one-half was unfit for combat. Godfrey, while pursuing the hazardous diversion of the chase during his march through Pisidia, had been torn by a wild boar; and so greatly was he injured in this rough encounter, that a litter became necessary for his conveyance over Mount Taurus. On arriving at Jerusalem he encamped his division on Mount Calvary, and after five weeks of severe struggle and acute suffering, the Holy City was carried by storm on July 15th, 460 years after its conquest by Omar. Three days of unsparing butchery succeeded this brilliant triumph, during which the exertions of Godfrey were wholly inadequate to restrain the lawless passions of the soldiery flushed with victory. The unanimous voice of the Christian army, after much intrigue, proclaimed him first Latin King of Jerusalem; but his piety and modest forbearance rejected the title; and even when in the end he consented to assume the inferior style of 'Defender and Baron of the Holy Sepulchre,' he persisted in refusing to wear any diadem in that city in which his Redeemer had been crowned with thorns. He secured himself in the government to which he had been thus honourably elevated, by totally overthrowing the myriads brought against him by the sultan of Egypt, at Ascalon, August 12, 1099. With the assistance and advice of those pilgrims who were best skilled in European jurisprudence, Godfrey compiled and promulgated a code named 'Les Assises de Jerusalem;' which, as finally revised towards the close of the 14th century for the use of the Latin kingdom of Cyprus, is printed in old law French in Beaumanoir's 'Coutumes de Beauvaisis,' Bourges and Paris, 1690. Godfrey died in 1100. His virtues and talents are now chiefly remembered by the glowing eulogy of Tasso; but they are fully avouched by the concurrent testimony of historians frequently differing on other points.

BOULAINVILLIERS, HENRI DE, Count of St. Saire, in Normandy, was of an ancient and noble family, of Picard extraction. He was the eldest son of François, count of St. Saire, and of Susanne de Manneville; and was born at the place from which he derived his hereditary title, October 21st, 1658. He studied at St. Julien, where

he particularly addicted himself to the somewhat dry pursuit of genealogical history. After a short period of military service, embarrassed family circumstances, arising chiefly from an imprudent second marriage which his father contracted late in life, induced him to quit the army, and to live upon his estates in retirement. His time was devoted to literature; but none of his writings were published from his own manuscripts till after his death, which took place on January 23rd, 1722. His works on different portions of the feudal history of his own country occupy three volumes folio, and are characterised by the President Hénault as being so rigidly framed on a false system, as to permit their author to appear "ni bon critique, ni bon publiciste." Montesquieu and Voltaire however give a more favourable judgment—perhaps from partiality for his sceptical principles. A marked antipathy to revelation pervades his writings, and exhibits itself in singular contrast with a superstitious reverence for judicial astrology, and the mystic sciences, which he cultivated with much diligence. A 'Life of Mohammed' extends only to the Hegira, and represents him as a blameless hero. Languet du Fresnoy committed to the press the manuscript of the treatise which is called 'Réfutation des Erreurs de Benoît de Spinoza, par M. de Fénelon, Archevêque de Cambrai, par le Père Louis Bénédicte, et par M. le Comte de Boulainvilliers; avec la Vie de Spinoza, écrite par Jean Colerus, ministre de l'Eglise Luthérienne à la Haye, augmentée de beaucoup de Particularités tirées d'une Vie manuscrite de ce philosophe faite par un de ses amis' (Lucas, a physician), Brussels, 1731, 8vo. The tract, instead of being, as its title imports, a refutation of Spinoza, is an arrangement and a defence of his materialism. In the well-known letters on the Parliaments of France, which were translated into English, the author shows clearly that he was fully aware of the defects of the political system of France, as exhibited in the want of an efficient national legislature.

BOULTON, MATTHEW, was born September 3rd, 1728, at Birmingham, where his father carried on the business of a hardwareman. He received an ordinary education at a school at Deritend; and also acquired a knowledge of drawing and mathematics. At the age of seventeen he effected some improvements in shoe-buckles, buttons, and several other articles of Birmingham manufacture. The death of his father left him in possession of considerable property; and in order to extend his commercial operations, he purchased, about 1762, a lease of Soho, near Handsworth, about two miles from Birmingham, but in the county of Stafford. It would scarcely be possible to select a more striking instance of the beneficial changes effected by the combined operations of industry, ingenuity, and commerce, than that which was presented by Soho after it had been some time in Mr. Boulton's possession. It had previously been a bleak and barren heath, but was soon diversified by pleasure grounds, in the midst of which stood Mr. Boulton's spacious mansion, and a range of extensive and commodious workshops capable of receiving above a thousand artisans.

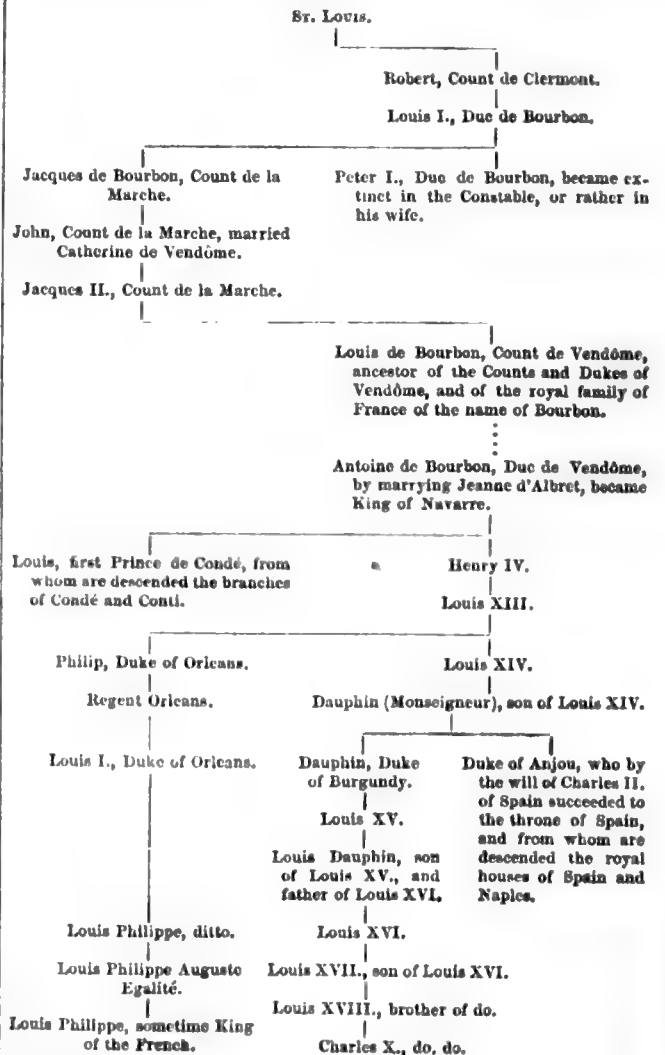

To Mr. Boulton's active mind this country is eminently indebted for the manner in which he extended its resources, and brought into repute its manufacturing ingenuity. Water was an inadequate moving power in seconding his designs, and he had recourse to steam. The old engine on Savary's plan was not adapted for some purposes in which it was requisite that great power should be combined with delicacy and precision of action. In 1769 Mr. Boulton having entered into communication with Watt, who had obtained a patent for improvements in the steam-engine, Watt was induced to settle at Soho. In 1775 parliament granted him a further extension of his patent for improvements in the steam-engine; and on his entering into partnership with Mr. Boulton, the Soho works soon became famous for their excellent engines. Not only was the steam-engine itself brought to greater perfection, but its powers were applied to a variety of new purposes. In none of these perhaps was the success so remarkable as in the machinery for coining, which was put in motion by steam. The coining apparatus was first put into operation in 1783, but it soon underwent important improvements, until it was at length brought to an astonishing degree of perfection. One engine put in motion eight machines, each of which stamped on both sides and milled at the edges from seventy to eighty-four pieces in a minute; and the eight machines together completed in a style far superior to anything which had previously been accomplished, from 30,000 to 40,000 coins in an hour. The manufacture of plated-ware, of works in bronze, and ormolu, such as vases, candelabra, and other ornamental articles, was successively introduced at Soho, and the taste and excellence which these productions displayed soon obtained for them an unrivalled reputation in every part of the world. Artists and men of taste were warmly encouraged, and their talents called forth by Mr. Boulton's liberal spirit. The united labours of the two partners contributed to give that impulse to British industry which has never since ceased.

Mr. Boulton has been described by Playfair as possessing a most generous and ardent mind, to which was added an enterprising spirit that led him to grapple with great and difficult undertakings. "He was a man of address" (continues the same writer), "delighting in society, active, and mixing with people of all ranks with great freedom and without ceremony." Watt, who survived Mr. Boulton, spoke of his deceased partner in the highest terms. He said, "To his friendly encouragement, to his partiality for scientific improve-

ments, and to his ready application of them to the purposes of art, to his intimate knowledge of business and manufactures, and to his extended views and liberal spirit, may in a great measure be ascribed whatever success may have attended my exertions." Mr. Boulton expended about 47,000*l.* in the course of experiments on the steam-engine, before Watt perfected the construction and occasioned any return of profit.

Mr. Boulton died August 17th, 1809, in his eighty-first year. His remains were attended to the grave by several thousand individuals, to whom medals were given, recording the age of the deceased and the day of his death. The body was borne to the grave by the oldest workmen connected with the works at Soho, and about five hundred persons belonging to that establishment joined in the procession.

BOURBON, the name of a family that succeeded the line of Valois in 1589, and reigned in France from 1589 to 1848, with an intermission during the republic and the empire of Napoleon Bonaparte. The families, both of Valois and Bourbon, were branches of the stock of Capet. The Bourbons had branched off earlier than the Valois; the former being descended from a son of St. Louis, the latter from a brother of Philip the Fair. The genealogy of the Bourbons, here given, is chiefly taken from the elaborate work of M. Desormeaux, historiographer of the house of Bourbon, &c. &c. This work is "de l'imprimerie royale," and may be considered as an official document, and the best authority on the points within its province. The following have also been consulted:—'Histoire des Bourbons,' 4 vols. 12mo, Paris, 1793; 'Memoires et Recueil de l'Origine, Alliances, et Succession de la Famille Royale de Bourbon, Branche de la Maison de France, à la Rochelle,' 1597; Coxe's 'Memoirs of the Kings of Spain of the House of Bourbon.' The ancestor of the Bourbon branch of the royal family of France was Robert, the sixth and youngest son of Louis IX., commonly called St. Louis, a title which few of the so-called saints have better earned, if the virtues of justice, temperance, and rigid probity confer a claim to that title.

Robert was born in 1256. In 1270 his father set out on his African expedition, where he perished before Tunis. Philip the Hardy, successor of St. Louis, gave Robert in marriage to Beatrice of Burgundy, a princess of the blood, only daughter and heiress of John of Burgundy,

baron of Charolois, and of Agnes, dame de Bourbon and de St. Just, daughter of Archambault, sire de Bourbon. By this marriage Robert united to his appanage of the Comté de Clermont, the province of the Bourbonnois, and the Charolois, and the seignoury of St. Just. His descendants took the name of Bourbon.

In the time of Robert's son, Louis, the Bourbonnois was created into a 'duché pairie.' The owner therefore assumed the title of Duke of Bourbon, retaining the arms of France. Duché pairie at that time denoted very high power and dignity. At the time of this creation there were in France only the dukes of Burgundy, Aquitaine, and Brittany, and the title of 'pair' was only bestowed on the children of the king, the princes of the blood, and seigneurs of the most noble fiefs. A younger son of this Louis, duke of Bourbon, named Jacques de Bourbon, bore the titles of Count de la Marche and de Ponthieu. The domain of Vendôme having come, as that of Bourbon had done before to Robert, to the second count of la Marche by marriage, his second son assumed the name of Bourbon Vendôme, and from him descended the royal house of France; the elder branch became extinct on the death of the famous Constable de Bourbon. The preceding table will convey at once a more distinct idea of the course of descent, and will give a synoptical and at the same time clear view of the branches of the Bourbon stock, which have more immediately given kings to France. It has not been judged necessary to give all the counts and dukes of Vendôme. A hiatus has therefore been left between Louis de Bourbon, the first count de Vendôme, and Antoine de Bourbon, duke of Vendôme, and king of Navarre, the father of Henry IV. of France; nor have we deemed it necessary to add the descendants of the last Bourbons who sat on the French throne.

BOURBON, CHARLES DE, Constable of France, commonly called the Constable de Bourbon, or the Constable Bourbon, was born on the 17th of February 1489. He was of the Montpensier branch of the Bourbon family, being the second son of Gilbert de Bourbon, count de Montpensier, viceroy of the kingdom of Naples. By the death of his brother at the age of eighteen, he became the eldest son of his branch, on which the principal territories of the Bourbons were entailed. He was educated at Moulins, the palace of the eldest branch of his family, the dukes of Bourbon, situated in the centre of their large possessions. He was carefully trained in all the athletic exercises, which were regarded as by far the most important part of the education of the nobility of his time. But while his physical education was thus attended to, he did not altogether neglect his mental: and the manner in which he received the lessons which were given him in the science of war, as far as it could then be called a science, gave indication of no inconsiderable capacity; while his general behaviour indicated more thought than could be expected from his years.

The last duke of Bourbon, Pierre II., died leaving a daughter, Suzanne de Bourbon, who had been betrothed to the Duc d'Alençon. It being considered impolitic to allow so many domains to accumulate in the person of the Duc d'Alençon, and there being also a doubt respecting Suzanne de Bourbon's title, Louis XII. appointed a commission, composed of princes, ministers, seigneurs, councillors of state, and lawyers, to examine the respective titles of Suzanne de Bourbon and the Count de Montpensier. The commissioners reported that the right of Montpensier appeared incontestable, but they proposed to settle the dispute by marrying the two claimants. Louis XII. approved of the recommendation, and the marriage took place accordingly.

In the marriage articles it was stipulated—1st, that there should be a cession of all their property in favour of the survivor; 2nd, that the children who should be born of the marriage should inherit all the domains of the house of Bourbon; 3rd, that, on failure of children, the whole succession should devolve on Francis, Monsieur de Bourbon, only brother of Montpensier; 4th, Montpensier assigned a jointure of 10,000 livres a year to his wife on the Bourbonnois. The king renounced for himself and his successors the pretended rights which the treaty of marriage of the Duke Pierre II. with Anne of France, daughter of Louis XI., gave to the crown over all the property of the House of Bourbon, if he should die without male children.

Having become the richest of all the princes of his house who have not worn the crown, the magnificence of the new Duc de Bourbon corresponded with his wealth. He never travelled without a brilliant body of horse-guards, and without being surrounded by the chief nobles of his domains and his principal officers, who composed a court little inferior to that of a powerful monarch. The first essay in arms of the duke was in the expedition which Louis XII. made in person into Italy. In this expedition Bourbon devoted himself with much industry and zeal to the study of strategies. He selected for his friends and masters La Tremoille, Bayard, and others, who were distinguished as military leaders. He conversed with them on plans of campaigns, marches, encampments, on the details of discipline and subsistence. From the generals he went to subordinate officers who had acquired reputation. At night, when he retired to his tent or his cabinet, he reduced to writing his observations and the result of his conferences. Bourbon returned to France in 1509. In the war of the league of Cambray he had an opportunity of displaying his talents for war.

Upon the death of Gaston de Foix in 1512, the army of Italy demanded with acclamations Bourbon for their leader. But Louis XII. did not comply with its wishes. It is reported that he appeared to be somewhat afraid of Bourbon; that he was heard to say that he should have wished to see in him more openness, more gaiety, and less taciturnity. "Nothing is worse," added he, "than the water which sleeps." Upon the accession of Francis I. to the crown, Bourbon was immediately (1515) appointed constable. It will afford some notion both of the character of the times and the magnificence of the Duc de Bourbon, to mention that at the king's coronation, when Bourbon represented the Duke of Normandy, his suite consisted of 200 noblemen.

The constable devoted himself assiduously to the duties of his new office, the highest in a military government like that which France then was. He introduced many important regulations respecting the discipline of the troops. He particularly directed his attention to the protection of the citizens and peasants against the insolence and oppression of the soldiery. His regulations under this head exhibit considerable administrative talent; and his unbending austerity in enforcing the rules he had laid down showed that he fully understood how much a severe discipline conduces to victory. The salutary effects of this system were shown very soon in the victory of Marignano, which was mainly owing to Bourbon's skill and valour. When Francis I. returned to France in 1516, he left the constable in Lombardy as his lieutenant-general. While here he proposed to the court the conquest of the kingdom of Naples. But while he was making preparations for this expedition, an unexpected invasion of the Milanese by the Emperor Maximilian of Austria took place. Against this irruption Bourbon speedily made every possible provision, pledging his own credit for the necessary funds; but the proceedings of both parties were brought to a sudden termination by the mutinous conduct of the Swiss mercenaries who formed the bulk of each army. Bourbon was compelled to disband his Swiss followers, and the formidable army of Maximilian was entirely dispersed.

When Bourbon appeared after these events at the French court, which was then at Lyon, he was received by Francis with great distinction. But gradually the king was observed to cool. Historians have usually ascribed this alteration of the king's behaviour towards Bourbon to the influence of his mother, Louisa of Savoy, duchesse d'Angoulême. The princess, who at forty retained striking remains of beauty, and who was not a woman of very nice morality, is said to have entertained a violent passion for Bourbon; and Bourbon is said to have treated her advances with coldness and even disdain. The king espoused the quarrel of his mother, of the cause of which, if correctly stated, charity would suppose him ignorant. The consequence was one of the most signal examples of ingratitude and injustice upon record.

They began by refusing the payment of the sums which he had borrowed in order to save the Milanese, as well as those accruing from his appointments as prince of the blood, constable and chamberlain of France, and governor of Languedoc. This however was light compared to what followed; and was the less to be considered as a wanton insult from the circumstance that Francis, partly by his own profligate expenditure, partly by the cupidity of his mother, was always in want of money, notwithstanding the resources opened to him by the chancellor Du Prat, in the sale of the offices of the magistracy. A breach between Francis and Bourbon was more easily effected from the contrast between their characters, which was great. Francis was gay, open, gallant, superficial, fond of pleasure, and averse from business; Bourbon was grave, reserved, thoughtful, profound, and laborious.

In April 1521 the constable's wife, Suzanne de Bourbon, died. He had previously lost the three children he had by her. The breach between the court and the constable daily widened. In a northern campaign against Charles V., Francis gave the command of the vanguard, which, by a practice established in the French armies, belonged to the constable, to the Duc d'Alençon. From that moment Bourbon regarded himself as degraded from his dignity. He was frequently heard to quote that answer of a courtier to Charles VII., who asked if anything was capable of shaking his fidelity:—"No, Sire, no, not the offer of three kingdoms such as yours; but an affront is." Fresh injuries and insults were heaped upon Bourbon. The chancellor Du Prat, by examining the titles of the house of Bourbon, thought he saw, that by perverting the use of some words, he might be able to deprive the constable of his estates, and convey them to the Duchesse d'Angoulême, or to the king. He explained to the duchess that she had a right to the greatest part of the property of the house of Bourbon, as the nearest relative of Suzanne de Bourbon, and that the rest reverted to the crown. Madame admired the ability and zeal of the chancellor, and entered fully into his views. She is said to have flattered herself that Bourbon would choose rather to secure his rights by marrying her, than be reduced to misery. But the haughty and austere Bourbon, when his friends pressed him to marry the princess, placing in the most favourable light her power, wit, and riches, said that he was so sure of his right that he was ready to try it before any or all of the courts; he declared moreover that honour was far dearer to him than property, and that he would never incur the reproach of having degraded himself by marrying a profligate woman. The result

of such a trial, under such a government as that of France at that time, may be easily foreseen. The parliament decreed that all the property in litigation should be sequestrated: which was to reduce Bourbon to beggary.

It will be unnecessary in a work like this to follow Bourbon step by step in the disastrous route that conducted him from being the first subject in France to be an exile and an outlaw. We have traced his career hitherto with some minuteness, as tending to throw light on the nature of the European governments in the 16th century. If such a thing had happened in France, two or perhaps even one century earlier, to a man so powerful as Bourbon at once by station and by talent and energy, the probable result would have been very different. The struggle would most likely have terminated in Charles of Bourbon filling the throne of France in the room of Francis of Valois. As it was, another fate was reserved for Bourbon. Francis having obtained intelligence that Bourbon had entered into a secret correspondence with the Emperor Charles V., Bourbon was obliged to make his escape from France, which he did with some difficulty. Some proposals which were afterwards made to him by Francis were rejected by Bourbon, who had good reason to distrust his sincerity. Bourbon was now thrown upon Charles V., who, though not a little disappointed at receiving a banished man instead of a powerful ally, as he had first expected, appointed him his lieutenant-general in Italy. He surrounded him however with colleagues and spies.

In 1525 the result of the famous battle of Pavia, where Bourbon commanded a body of about 19,000 Germans, whom he had raised professedly for the emperor's service, chiefly by means of his high military reputation, afforded him ample vengeance for his wrongs, in the destruction of the French army, and particularly in the capture of Francis and the death of Bonnivet, his chief personal enemy.

But Bourbon, although to his military talents and skill the victory at Pavia had been mainly owing, found that he was still regarded with distrust by Charles, and with jealousy by his generals. The slights and mortifications, too, to which his fighting against his king and his native country subjected him, rendered his position anything but an agreeable or easy one; and contributed, with the roving and unsettled life he had led since his exile, to produce in him something of the rocklessness, and even ferocity of the brigands he commanded, and to give to his natural ambition much of the genuine and legitimate character of large and wholesale robbery. It was in the complex state of mind, made up of some such elements as these, that he came to the resolution of acting independently of the emperor, and commencing business as king on his own account. Fortune seemed to throw in his way one means of accomplishing this object, in attaching to himself, by the allurements of an immense booty, the army which the emperor did not pay. He formed the daring resolution of leading that army to Rome, and giving up to it the riches of that famous city; and he immediately proceeded to put it in execution. This expedition has been considered one of the boldest recorded in history. Bourbon was obliged to abandon his communication with the Milanese, to march for more than a hundred leagues through an enemy's country, to cross rivers, to pass the Apennines, and to keep in check three armies. Add to this, what rendered the enterprise important as distinguishing it from others of a similar nature undertaken by large robbers, the moral danger and difficulty of attacking the very centre of the power of catholicism, as it were, laying bare the mysteries of its sanctuary, and, to a certain extent, destroying the powerful spell by which it had so long bound up the faculties of mankind.

On the evening of the 5th of May 1527 Bourbon arrived before Rome. On the following morning, at day-break, he commenced the assault, being himself the first who mounted the walls, and also, according to the French historian, the first who fell, by a shot fired, it is said, by a priest. Benvenuto Cellini says that it was he who shot Bourbon; and Guicciardini does not clear up the point. It is however of small consequence, two facts being certain, that he fell in the beginning of the assault, and that his army took the city, in which they committed all, and more than all, the usual excesses of a sack.

Charles V. made it one of the conditions of peace with Francis that the possessions of the constable should be restored to his family, and his memory re-established. Francis eluded, as much as he was able, the fulfilment of this condition. But the wreck of the constable's fortune was sufficient to render his nephew, Louis de Bourbon, Prince de la Roche-sur-Yon, and afterwards Duc de Montpensier, one of the richest princes of the blood, although it did not form, perhaps, a third part of the revenues of the Duc de Bourbon.

BOUCHIER JOHN. [BERNERS, LORD.]

BOURCHIER, or BOURGCHIER, THOMAS, Archbishop of Canterbury in the successive reigns of Henry VI., Edward IV., Edward V., Richard III., and Henry VII., was son of William Bouchier, earl of Eu in Normandy, by Anne, daughter of Thomas of Woodstock, sixth son of Edward III. His brother was Henry, earl of Essex. Bouchier received his education at Oxford, and was chancellor of that University from 1434 to 1437. His first dignity in the church was the deanery of St. Martin in London, from which in 1434 he was advanced by Pope Eugenius IV. to the see of Worcester. In 1436 he was elected by the monks of Ely bishop of that see, but the king refusing his consent the election was not complied with, and the see continued

vacant till 1443, when the king yielding his consent Bouchier was translated thither. In April 1454 Bouchier was elected archbishop of Canterbury; and in December following received the red hat from Rome, being created cardinal-priest of St. Cyriacus in Thermis. In 1456 he became lord chancellor of England, but resigned that office in October of the following year.

Several acts of Cardinal Bouchier's life were memorable. He was one of the chief persons by whose means the art of printing was introduced into England. He was the person who, seduced by the specious pretences of Richard, duke of Gloucester, persuaded the queen to deliver up the Duke of York, her son; and he performed the marriage ceremony between Henry VII. and Elizabeth of York.

He died at his palace of Knowle, near Sevenoaks on the 30th of March, 1486, and was buried at Canterbury, where his tomb still remains on the north side of the choir near the high altar. The archbishops of Canterbury and York, and the bishops of Durham, as the reader will remember, had anciently the privilege of coining money. A half-groat of Edward IV., struck at Canterbury during Bouchier's primacy, has the family cognisance, the Bouchier knot, under the king's head. This is unnoticed by any of the writers on English coins.

BOURDALOUE, LOUIS, was born at Bourges, Aug. 20, 1632, and professed among the Jesuits on Nov. 30, 1648. Having lectured successively in grammar, rhetoric, humanity, and moral philosophy, with considerable repute, he commenced as preacher in the Jesuit church of St. Louis at Paris in the year 1669. It was not long before Louis XIV. became a personal attendant upon his sermons, which were heard with undiminished delight by overflowing congregations in the seasons of Advent and Lent for four-and-twenty years. After the revocation of the edict of Nantes, Bourdaloue was despatched, in 1686, on an especial mission into Languedoc, in which province he produced a deep impression, chiefly at Montpellier. His latter years were principally devoted to attendance in the confessional, his advice and religious guidance being widely sought after, in visiting hospitals and prisons, and in the preaching of charity sermons; and he continued to be a frequent occupant of the pulpit till a very few days before his death, which occurred on May 13, 1704. His sermons have often been reprinted. The first complete edition was that by Bretonneau, 16 vols. 8vo. Paris 1707-34; the best edition is that of Méquignon, 1822-26 in 17 vols. 8vo, and 20 vols. 12mo. The sermons of Bourdaloue abound more in sound reasoning and theological learning than in oratorical power, and they are better suited to the chastened taste of Protestantism than the efforts of most other celebrated French divines. It has been said with more justice than usually belongs to antithesis, that Bossuet is sublime from elevation, Bourdaloue from depth of thought.

BOURDON, SEBASTIAN, one of the most eminent painters that France has produced, was born at Montpellier in 1616. His father, a painter on glass, instructed him in the elements of his art. At the age of seven a relation took him to Paris and placed him under an artist of no great ability; but the genius of the pupil supplied the deficiencies of the master. While yet a boy, being in want of other employment, he enlisted in the army. Luckily his commanding officer possessed taste enough to discern the natural powers of the young recruit, and he gave him his discharge. At eighteen he passed into Italy, where he made acquaintance with Claude Lorraine. He remained there but three years, being obliged to leave the country in consequence of a quarrel with a painter, who threatened to denounce him as a Calvinist. During his stay he occupied himself in studying, copying, and imitating the works of Titian, Poussin, Claude, Andrea Sacchi, Michel Angelo delle Battaglie, and Bamboccio. So retentive was his memory, that he copied a picture of Claude's from recollection; a performance which astonished that great master as much as any who saw it.

On his return to France, Bourdon received some instruction from Du Guernier, a miniature painter in great repute, whose sister he married; a connection which procured him an increase of employment. He succeeded in attaining in a short time a high professional standing, and he was one of the artists concerned in founding the Royal Academy of Painting and Sculpture, of which he became the first rector. Compelled to quit France by the civil wars in 1652, he went into Sweden, and Christina who then occupied the throne appointed him her principal painter. In this capacity he executed many pictures, and among them a portrait of his royal mistress on horseback. While he was at work upon it the queen took occasion to mention some pictures which her father had become possessed of, and desired him to examine them. Bourdon returned a very favourable report of the collection, particularly of some paintings by Correggio; and his generous patroness at once made him a present of them. The painter, however, with no less generosity, declined the offer; saying that the pictures were among the finest in Europe and that she ought not to part with them. The queen kept them accordingly, and taking them to Rome with her after her abdication, they ultimately found their way into the Orleans collection.

When Christina vacated the throne Bourdon returned to France, which had become somewhat quieter, and employment offered itself in abundance. At this period he painted the 'Dead Christ' and the 'Woman taken in Adultery,' two of his most famous pictures. He

died at Paris in 1671 aged fifty-five. He had two daughters, miniature painters, who survived him.

Bourdon had a most fertile genius, an ardent spirit, and great facility, which enabled him to indulge too much in a careless mode of study. He had no fixed style of painting, but followed his own caprice, imitating many; and he painted with equal facility in history, genre-pieces, landscapes, battle-pieces, and comic subjects. His colour is fresh, and his touch light and sharp; his expressions are lively, and his invention ready; but his drawing is hurried, and his extremities are modelled with great carelessness. He did not finish highly, nor are his most finished pictures his best. His execution was so rapid that he is said to have completed twelve heads after nature, and of the size of life, in a single day, and they were esteemed equal to some of his best productions. This surprising facility enabled him to enrich his landscapes with some of the most singular and happy effects from nature. When at Venice he had studied the works of Titian with great attention, and his admirers trace some of the beauties of the Venetian in his landscapes; they partake also of the style of Poussin, and have a wildness and singularity peculiar to himself. (D'Argenville; De Piles).

BOURGOIS, SIR FRANCIS, was the descendant of a family of respectability in Switzerland, where, it has been said, many of his ancestors filled offices of considerable trust in the state. The father of Sir Francis however resided for several years in England, it is believed, under the patronage of Lord Heathfield; and Francis was born in London in 1756. His early destination was the army, but having been instructed while a child in the rudiments of painting by a foreigner of inconsiderable merit as a painter of horses, he became so attached to the study that he soon relinquished all thoughts of the military profession, and resolved to devote his attention solely to painting. For this purpose he was placed under the tuition of Louthembourg; and having from his connections and acquaintance access to many of the most distinguished collections in the country, he soon acquired considerable reputation by his landscapes and sea pieces. In 1776 he travelled through Italy, France, and Holland, where his correct knowledge of the languages of each country, added to the politeness of his address and the pleasantness of his conversation, procured him an introduction to the best society, and the most valuable repositories of art. On his return to England Bourgeois exhibited several specimens of his studies at the Royal Academy, which obtained him reputation and patronage. In 1791 he was appointed painter to the king of Poland, whose brother, the prince primate, had been much pleased with his performances during his residence in this country; and at the same time he received the knighthood of the Order of Merit, which was afterwards confirmed by the king of England, who in 1794 appointed him his landscape painter. Previous to this he had, in 1792, been elected a member of the Royal Academy.

As a painter Sir Francis has no claim to remembrance. He is without invention or imagination, and unskilled in composition; his drawing is tame and lifeless, his colouring leaden and monotonous, and his touch heavy; and though there is an appearance of labour in the process, the result is insipid and unfinished. He is one of the evidences that a painter may obtain a certain amount of fashionable, and even royal patronage though devoid of all professional merit.

But though worthless as a painter, as the bequeather of the Bourgeois collection to the custody of Dulwich college for the use of the public, he has considerable claim to our gratitude. The collection was formed by Noel Desenfans, an eminent picture-dealer, who dying left it to Sir Francis, with whom he had lived in close friendship. Sir Francis, at his death, left it to the widow of his friend, with the greater part of his property, for life; bequeathing 2000*l.* to Dulwich college, the foundation of Alleyne the actor [ALLEYNE], for the purpose of building a gallery for the pictures, the reversion of which they were to have, together with the rest of the property, charged with expenses of preserving the pictures, and altering and enlarging the chapel. Desenfans had been interred in a chapel attached to Bourgeois's house, but Sir Francis desired in his will that their bodies might be removed and deposited together in a mausoleum in the chapel of Dulwich college, which was accordingly done.

The Dulwich gallery, as it is generally termed, comprises upwards of 300 pictures, mostly of a cabinet size. The collection contains some very beautiful specimens of Poussin, Cuypp, Rembrandt, Wouvermans, Murillo, besides other masters, chiefly of the Dutch and Flemish schools; there are also examples of the Italian masters in the collection, but the greater part of them are of little value, and many are of doubtful authenticity.

BOURGOING, JEAN FRANÇOIS, BARON DE, was descended from a noble house, not unknown in the history and literature of France. One member of the family, Edmond de Bourgoing, prior of a monastery of Jacobins at the time of the 'Ligue,' eulogised the regicide Jacobin Jacques Clement, declaimed and fought against Henri IV., and was sentenced by the parliament of Tours to be torn to pieces by four horses. Noel, Jean, and two François de Bourgoing, have since successively published works, now forgotten, upon history, finance, jurisprudence, philology, and divinity.

Jean François Bourgoing, the subject of the present article, was born at Nevers, the capital of the department of Nièvre, November 20, 1748. He was educated first at the École Militaire, Paris, whence he

proceeded, at the age of 16, to the University of Strasbourg. On leaving the university he was named officer of the regiment of Auvergne, and soon after was employed as Secretary of Legation. In that capacity, in the year 1777, he accompanied M. de Montmorin, the French Ambassador to the court of Spain, to Madrid, where he resided nine years, for the last two as Chargé d'Affaires. During this period he diligently collected information relative to the condition of Spain, political, statistical, and social, which upon his return to France he embodied in his 'Nouveau Voyage en Espagne, ou Tableau de l'État actuel de cette Monarchie,' published in 1789, and then esteemed the best work extant upon Spain. In 1791 Bourgoing returned to Spain as minister plenipotentiary, and remained there until 1793, when he collected additional materials for his book, of which a second edition thus enlarged appeared in 1797. Third and fourth editions, with successive additions of new information, bringing down the picture of Spain to later dates, appeared in 1803 and 1807, under the title of 'Tableau de l'Espagne Moderne.' It is upon this work, which has been translated into the English, German, and Spanish languages at least, that the Baron de Bourgoing's claims to notice rest. He lived retired from the time of his quitting Spain until Bonaparte assumed the government of France, when he was again employed in several diplomatic missions. He died July 20, 1811, whilst serving as French envoy to Saxony. His other works are 'Mémoires Historiques et Philosophiques sur Pie VI. et son Pontificat;' 'Correspondance d'un jeune Militaire, ou Mémoires du Marquis de Lusigny et d'Hortense de S. Just;' some translations from the German, and some articles in the 'Biographie Universelle.'

(*Allgemeine Deutsche Real Encyclopädie; Biographie Universelle; Biographie Contemporaine.*)

BOURIGNON, ANTOINETTE, was a celebrated religious enthusiast, and founder of a sect which acquired considerable importance under the name of the Bourignian Doctrine.

Antoinette Bourignon was the daughter of a merchant at Lille, where she was born, January 13, 1616. She is said to have been so singularly ugly that a family consultation was held upon the propriety of destroying the infant as a monster. This fate she escaped, but remained an object of dislike to her mother, in consequence of which her childhood was passed in solitude and neglect, and the first books she got hold of chancing to be 'Lives of the early Christians,' and mystical tracts, her ardent imagination acquired the visionary turn that marked her life. It has been asserted that her religious zeal displayed itself so early that at four years of age she entreated to be removed to a more Christian country than Lille, where the unevangelical lives of the townspeople shocked her.

As Antoinette was a considerable heiress her ugliness did not prevent her being sought in marriage; and when she reached her twentieth year one of her suitors was accepted by her parents. But the enthusiast had made a vow of virginity, and on the very day appointed for celebrating her nuptials she fled in man's clothes. She now obtained admittance into a convent, where she first began to make proselytes, and gained over so many of the nuns that the confessor of the sisterhood procured her expulsion not only from the convent but from the town. Antoinette now wandered about France, the Netherlands, Holland and Denmark, everywhere making converts, and supporting herself by the labour of her hands until the year 1648, when she inherited her father's property. She was then appointed governess of a hospital at Lille, but soon afterwards was expelled the town by the police, on account of the disorders that her doctrines occasioned. She then resumed her wanderings. About this time she was again persecuted with suitors, two of whom were so violent, each severally threatening to kill her if she would not marry him, that she was obliged to apply to the police for protection, and two men were sent to guard her house. She died in 1680, and left her property to the Lille hospital of which she had been governess.

At Amsterdam she appears to have made a formal renunciation of Roman Catholic doctrines. But she did not become a member of any other community. She taught that the true church was extinct, and God had sent her to restore it. She allowed no Liturgy, worship being properly internal. Her doctrines were highly mystical, and she required an impossible degree of perfection from her disciples. She is said to have been remarkably eloquent, and was at least equally diligent, for she wrote twenty-one bulky 8vo volumes which were published at Amsterdam 1679-84. Most of her writings were printed at a private press which she kept for the purpose. After her death Poirer, a mystical Protestant divine, and a disciple of the Cartesian philosophy, wrote her life, and reduced her doctrines into a regular system.

BOURMONT, LOUIS AUGUSTE VICTOR DE CHAISNE, MARSHAL COUNT DE, was born at Paris, or, according to other accounts, at the castle of Bourmont in Anjou, in the year 1773. Having entered the army in 1788 at the age of fifteen, he served as an officer in the Royal French Guards until 1790, when he emigrated, and joined the army of the Prince de Condé. His sanguine disposition and earnest character recommended him so strongly to the emigrant leader, that he was immediately employed in fomenting the insurrection of the western provinces. In October 1793 he was despatched by the prince to the head-quarters of the Viscount de Scépeaux, under whose orders he commanded one of the corps of the Vendean troops, and was

promoted to the rank of major-general. At this time he was only in his twenty-first year.

In December 1793 he was sent to England to endeavour to prevail on the British government to assist the Bourbon cause, but his mission proved abortive. He had the satisfaction however of seeing the Count d'Artois, afterwards Charles X., who received him in the most cordial manner, knighted him, and authorised him to confer the same honour on other loyal gentlemen adhering to the monarchical interests, and more particularly on the Viscount de Soépeaux. He paid a second visit to England in 1796, exhibiting the greatest zeal in animating the French emigrants against the republic, and in collecting all the elements of civil war. Soon after he returned to France to share the perils of a new insurrection of the Vendéens, and commanded a division of the Chouans in 1799. On the 16th of October of the same year he forced his way into Le-Mans, the chief place in the department of Sarthe, committing it in asserted great cruelties, pillaging the inhabitants of nearly a million of francs, burning the post-office, the public records, and the library in the Hôtel-de-Ville.

About the period of the 18th Brumaire, when M. de Chatillon and other insurgent leaders found it necessary to submit to the consular government, the Count de Bourmont followed their example. He strove to induce George Caudaudal to do the same; but that inflexible chief, far from complying, evinced his disgust at the proposal in 1801 by ordering Bourmont's brother-in-law to be shot. The active mind of the young soldier indisposed him to a life of ease; he therefore offered his services to Bonaparte, and appears to have exhibited more eagerness than discretion in so doing. The ever-vigilant Fouché suspected this zeal; he caused the count to be strictly watched, and, having discovered what he considered sufficient proofs of intended treachery, he sent him a prisoner to the Temple in 1803. From this prison he was transferred, first to the citadel of Dijon, and thence to that of Beaunçon. Having escaped from this last place of confinement, he went to Portugal, where he remained five years. The French army having become masters of that country in 1810, Bourmont made interest with the victorious general, was included in the capitulation, and returned to France with the army. He now submitted fully to the imperial government of Napoleon, and was offered the brevet of colonel, which he accepted. It must be observed however, that in the vindication of his career, published in 1840 by his son, it is stated that when the count made his submission he was at Nantes in France, and that he was allowed his liberty only on condition of taking service in the army of Napoleon. His son goes so far as to assert that in 1800 the First Consul offered him the post of lieutenant-general, which he declined.

From 1810 to 1814, Bourmont continued faithful to his new master; distinguished himself in several battles, especially at that of Nogent; and received no less than ten wounds, four of which were sabre cuts on the head. For this conduct he was rewarded with the rank of brigadier-general in 1813, and made a lieutenant-general the following year. When the fall of Napoleon tested the character of so many generals and marshals, Bourmont only followed the example of an almost universal defection. He did not betray Louis XVIII. in the spring of 1815; but offered him the use of his sword on the very eve of his departure from the Tuileries. After the flight of the king, he did not refuse to take service a second time under the powerful man, a single word from whom would have consigned his family to ruin. But he could not brook the despotism manifested in the Acte Additionnel, and tendered his resignation to the Emperor in consequence of it. Receiving no answer, he left the French army on the 15th June 1815, after fully communicating his design to his successor, General Hulst, to whom he likewise explained every requisite detail of the service. Marshal Gerard, under whom he commanded a division during the campaign, and General Hulst, have since then, exonerated Count de Bourmont from all imputation of treachery; whilst Napoleon, in his account of the battle of Waterloo, does not even accuse him.

After his second restoration, Louis XVIII. gave Count de Bourmont the command of a division, in the infantry of his Guards; and in this rank he served in the campaign of 1823, under the Duke of Angoulême in Spain; and on the return of the duke to France, he appointed Bourmont to the command of the army of occupation. In 1829 the portfolio of the ministry of war was offered to him by Prince Polignac; but the count declined the offer several times, recommended other generals in preference to himself, and was only persuaded to take office by the earnest request of the king. In 1830 the great expedition to Algiers was resolved upon, and the command of an army of 37,000 troops was conferred upon Bourmont. We have not space to follow his Algerine career. But it must be noted as somewhat remarkable that the man, who in a few weeks obtained for France this large and valuable colony,—the principal conquest she has retained during the present century,—should have been the object of so much aversion. The revolution of July added further bitterness to that dislike, and after Bourmont had been superseded in his command on the 2nd of September, by General Clausel, a charge was brought against the deposed leader of having appropriated to his own use, the treasure found in one of the captured towns. One of his sons had fallen in this campaign, and the custom-house officer at Marseille, after the landing of Bourmont, carried his zeal to such an excess, as to examine the corpse in search for the hidden gold. The count bore this out-

rage patiently, but the Countess de Bourmont received so great a shock, that she never rallied afterwards.

From the year 1830 Marshal de Bourmont lived in exile; residing at various times in England, Holland, Germany, and other countries. He was at length allowed to return to France by Louis Philippe, and in 1840 he took up his abode with his family at the castle of Bourmont. Here he continued to reside in the greatest retirement until the day of his death, which occurred on the 27th of October 1846, at the age of seventy-three. In France Bourmont is, of all the republican and imperial generals upon whom the charge of treason has been affixed, the most unpopular. Neither Moreau nor Pichegru, neither Bernadotte nor Marmont has been so furiously pursued with the public odium. Grouchy himself is only his second in obloquy. After a careful examination of their real conduct, and due allowance being made for the circumstances of the time, it would not require an unusual stress of charity to remove much of the opprobrium which now attaches to many of these great military names. But the time to do it effectually is not yet come; and public opinion must be respected even where most it appears to err.

(*Biographie des Contemporains*; Alison, *History of Europe*; Sarrut et Saint Edme, *Notice*; Feller, *Dictionnaire Historique*.)

BOURNE, HUGH, the founder of the Primitive Methodist Connexion, was born April 3rd, 1772, in the neighbourhood of Stoke-upon-Trent, in Staffordshire. He was brought up in the Wesleyan Methodist communion, and became an active and zealous preacher of that body. His zeal appears to have carried him beyond the bounds allowed by the leaders of the Wesleyan Conference, for when he was about thirty years of age he associated himself with William Clowe and some other preachers of the Wesleyan body in reviving open-air religious services and camp meetings, or great gatherings for preaching and public worship. These proceedings, although common enough in the early days of Methodism, and carried to very great lengths in America, were discountenanced by the Conference, which in 1807 passed a resolution to the following effect:—"It is our judgment that even supposing such meetings (camp meetings) to be allowed in America, they are highly improper in England, and likely to be productive of considerable mischief, and we disclaim all connection with them." This led to Mr. Bourne's separation from the Wesleyan Conference, and the establishment of the Primitive Methodist Connexion, the first class (or local society) of which was formed at Standley, in Staffordshire, in 1810. This body, which in 1811 had two preachers and about 200 members, had increased in 1821 to 202 travelling and 1435 local preachers, and 7842 members. In 1853 the Connexion numbered 1789 chapels and 3565 rented rooms, with 568 paid travelling preachers, and 9594 local preachers. The members at the same time had reached 108,926. The difference between the Primitive Methodists and the Wesleyan Methodists consists chiefly in the free admission of laymen to the conference of the former body.

Mr. Bourne, after he had organised the society in England, in which he was assisted by William Clowe, who had likewise been dismissed for similar irregularities from the Wesleyan body, made journeys in Scotland and Ireland for the purpose of forming religious societies in connection with his new organisation. In 1844 he visited the United States of America, where his preaching attracted large congregations. Mr. Bourne lived to be fourscore years of age, and was much revered by the members of the Connexion. From his youth he was a rigid abstainer from intoxicating drinks, in which respect many of the preachers and members of the Primitive Methodist Connexion have followed his example. He died at Bemersley in Staffordshire, October 11th, 1852.

BOURNE, VINCENT, was probably born three or four years before 1700, but the date of his birth does not appear to have been recorded. He became a king's scholar in Westminster School in 1710, whence he was elected to be sent to Trinity College, Cambridge, in 1714; he took the degree of A.B. in 1717, and that of A.M. in 1721. He obtained a fellowship at Trinity College, and was afterwards an usher in Westminster School, in which situation he seems to have continued for the rest of his life. He never took orders. He died December 2, 1747.

Vincent Bourne is the author of a considerable number of short Latin poems, of several translations of short English poems into Latin, and of a few epitaphs in Latin and English. He is an exceedingly pleasing writer. He has great originality and variety of thought, and great vividness of imagination, often combined with a delicate humour quite peculiar to himself. His subjects are generally occasional and of little importance; but the treatment is very delightful, and entirely free from classical or any other commonplaces. His Latin is remarkably pure; the expressions are chosen with exquisite tact, and his versification has a facility and harmony not surpassed by any modern writer of Latin poetry.

Some of Bourne's Latin translations are of poems admired once, but little valued now, such as Mallet's 'William and Margaret,' Rowe's 'Colin's Complaint,' and Tickle's 'Lucy and Colin;' but the versions are of singular excellence, retaining every trace of thought and expression which is really poetical, and improving, without appearing to change, the feeble imagery and spiritless language of the originals: the trivial and monotonous versification has also disappeared, and the poems have assumed a propriety and grace to which they had

previously little claim. In poems of a higher poetical character, such as Gay's beautiful ballad of 'Black-eyed Susan,' Bourne's mode of translation is very different, and is distinguished by a fidelity which, to those who know the difficulty of approximating two languages so dissimilar in structure, is as curious as it is admirable. But even here he gives an occasional heightening touch; for instance, in translating the exquisite simile

"So the sweet lark, high pois'd in air,
Shuts close his pinions to his breast,
If chance his mate's shrill note he hear,
And drops at once into her nest,"

Bourne not only poises the lark, as Gay has done, but he gives the vibrating motion of the wings, so characteristic of the lark when singing: he has also transposed the second and third lines, in which Gay has obviously inverted the natural order of thought for the sake of the rhymes:—

"Sic alto in caelo, tremulis se librat ut alis,
Si sociis accipiat forsan alaunda sonos,
Devolat extemplo, clausisque ad pectora pennis,
In carā nidum præcipitatur avis."

Cowper has translated four of Bourne's Latin poems into English—'The Jackdaw,' 'The Parrot,' 'The Cricket,' and the 'Glow-worm,' in none of which, skilful as he was, has he equalled his original. Cowper in one of his letters speaks of the good-nature and indolent habits of Bourne, with whom he was well acquainted, and of whose poetry he was a warm admirer.

The first edition of Bourne's 'Poemata' was in 1734, 8vo. To the third edition, in 1743, an appendix was added of other translations and poems, forming nearly one-half of the whole collection, 'Poemata, Latine partim reddita, partim scripta, à V. Bourne,' 12mo. There was another edition in 1750, 12mo. In 1772 a handsome volume in 4to was published by subscription, 'Miscellaneous Poems, consisting of Originals and Translations, by Vincent Bourne, formerly of Trinity College, Cambridge, and Usher of Westminster School.' It contains a few additional poems, and two letters, one to a young lady, and another to his wife, written a short time before his death. There have also been two or three subsequent editions.

BOURRIENNE, LOUIS ANTOINE FAUVELET DE, the biographer of Napoleon Bonaparte, was born at Sens, in the department of Yonne, in the province of Burgundy, on the 9th of July, 1769; the son of M. Bourrienne, a wealthy 'rentier' of that place, by a second marriage. His father dying shortly after his birth, the care of his education was left to his mother. At the age of nine he was entered as a pupil at the military school of Brienne; and here it was that his acquaintance with Bonaparte began. As boys of almost exactly the same age, Bonaparte and Bourrienne became fast friends. Of the two, Bourrienne seemed the more promising scholar; and in 1783, when Bonaparte, then about to leave the school, took a prize for mathematics, Bourrienne gained seven premiums for languages and other accomplishments. In 1784 Bonaparte left the school at Brienne for the higher military school at Paris; and Bourrienne accompanied him as far as Nogent-sur-Seine, where they bade each other adieu, he says, with much affection, and promises of everlasting friendship. As Bourrienne also looked forward to service in the French artillery, it did not then seem likely that they would be long separated; but shortly afterwards he unexpectedly found an obstacle to his entrance on this career, arising out of the strictness of the regulation which required that all who held commissions in the French army should exhibit proofs of noble pedigree. He was obliged to give up the military profession. Adopting diplomacy as an alternative, and having good introductions, he was sent, in 1789, when in his twentieth year, to Vienna, as clerk or 'attaché' to the Embassy of the Marquis de Noailles, ambassador of Louis XVI. at the court of the Austrian Emperor Joseph. After being in Vienna a few months he went, by the advice of the Marquis, to Leipsic, to increase his qualifications for diplomatic service, by studying international law, and the English and German languages. He remained at Leipsic two years; and removed thence to Warsaw, where, as a young Frenchman of good connections, he was well received at the court of the Polish King Poniatowski. While at Warsaw (1791) Bourrienne, in a temporary fit of literary ambition, translated into French prose, under the title of 'L'Inconnu,' the play of the German dramatist Kotzebue, of which 'The Stranger' is a famous English adaptation. The version was published in Paris in 1792, on Bourrienne's return to that capital. At Paris he again, after eight years of separation, met Bonaparte, then a young artillery-officer without prospects; and the two young men walked about the streets together, exchanging sympathies and purses, and witnessing many of the strange scenes of the Revolution—in particular the attack on the Tuileries on June 20, of which, and of Bonaparte's remarks on it Bourrienne gives so vivid an account. [BONAPARTE, NAPOLEON I.] In the same year Bourrienne was sent to Stutgardt as secretary to the embassy there; but he had hardly assumed office, when the execution of Louis XVI. (January 21, 1793) and the downfall of the French monarchy broke up the embassies. Having been in official employment under the late king, he did not venture to return; but remained in Germany. Suspected there of attachment to the cause of the revo-

lution, he was imprisoned for some months by the Saxon police; and on his release, went to Leipsic, where he married (1794) a lady with whom he had become acquainted during his former residence in that place. In 1795, Robespierre and the Terrorists having in the meantime fallen, he returned with his wife to Paris, where they found Bonaparte out of employment, and scarcely better off than he had been three years before. Suddenly the 13th Vendémiaire (October 4, 1795) came to lift the young artillery-officer, then only twenty-six years old, into reputation and power. From that moment, as Bourrienne and his wife thought, Bonaparte became colder towards them; and, when Bourrienne was arrested not long after (February, 1796) as an emigrant Royalist who had returned to France without leave, Bonaparte, as they fancied, did not show such alacrity in behalf of his old friend as he might have done. Still it was by Bonaparte's influence that Bourrienne was set at liberty; and a letter of thanks sent by Bourrienne to Bonaparte in Italy during the splendid campaign of 1796, was the means of drawing their relations closer than ever. Bonaparte, as general of the Directory in Italy, had immense business on his hands, and he wanted a private secretary in whom he could rely. He fixed on Bourrienne as a proper man; and, accordingly, from the close of the year 1796 when he joined Bonaparte in the camp by express invitation, till the year 1802, when Bonaparte, all the intervening toils of his Egyptian war, &c., being over, was seated firmly in the supreme government of France, he was continually by his side, as his amanuensis and confidential secretary, knowing all his most private affairs. When Bonaparte, as First Consul, occupied the Tuileries, Bourrienne had apartments close to his; and it was even proposed to hang a bell in his room, by means of which Bonaparte could summon him at any hour of the night—an indignity however to which he would not submit. In 1802, the failure in very scandalous circumstances of the house of Coulon, army-contractors, with which Bourrienne was implicated to a greater extent than he ought to have been, caused his dismissal from the private secretaryship. He and his wife continued nevertheless to see Bonaparte and Josephine, and to be intimately cognisant of all that was going on. In 1805, the Emperor sent him to Hamburg, as chargé d'affaires of France for the circle of Lower Saxony. As Napoleon was then enforcing his continental system against English commerce, this was a delicate and difficult mission. Bourrienne, according to his own account, discharged it with exemplary moderation and probity; but Napoleon did not think so, and, having received complaints, amounting to charges of peculation and extortion, against Bourrienne, he appointed a Commissioner to inquire and report. The result was that Bourrienne was recalled and ordered to refund one million of francs to the imperial treasury. This was in December, 1810; and from that time Bourrienne was in the position of a ruined and disgraced man. In 1814, indeed, he says, Napoleon again made overtures to him, and wished to send him to Switzerland as minister, with the title of Duke; but as the allies were then on the point of invading France, he refused the honour. Accordingly, on the emperor's fall and banishment to Elba, Bourrienne was in the position rather of one of his enemies than of one of his partisans. Talleyrand, the master of the situation for the moment, made him postmaster-general; but Louis XVIII. dismissed him from that office to make way for another. Bourrienne, therefore, was without employment till March 1815, when, in the excitement caused by Napoleon's escape from Elba and arrival in France, the king called him to the prefecture of police. His efforts in this post were of no avail; Napoleon marched to Paris in triumph; and Bourrienne, who was among those exempted by him from the general indemnity, fled after Louis XVIII. into Belgium. Here he remained during the Hundred Days. Returning to Paris after the battle of Waterloo and Napoleon's exile to St. Helena had assured the Bourbon dynasty, he was made councillor and minister of state by Louis, and was elected deputy to the Representative Chamber for his native department of Yonne. He was re-elected in 1821, and again in 1828, when Charles X. was on the throne. He had some reputation in the Chamber for his knowledge in financial matters. But, whatever were his talents in this line, they did not extend to the management of his private affairs. Always extravagant, and always deep in speculations, he had become so embarrassed, that, in 1828, he was obliged to give his creditors the slip and take refuge in Belgium. Here, supported by the bounty of the Duchesse de Brancas, at Fontaine-l'Évêque, near Charleroy, he set about a task he had long had in contemplation—the preparation, from his notes and papers, of the 'Memoirs of Napoleon.' Assisted, it is said, in this task by M. Max. de Villemarest, he sent the work by instalments to Paris, where it was published in ten volumes in the course of 1829-30. As the work had been long expected, it made an immense sensation. It was quickly translated into all languages, and provoked not a few rejoinders from persons who accused him of misrepresentations of facts, or of ingratitude to Napoleon. He did not long survive this, the greatest achievement of his life. Chagrin, it is said, at the revolution of 1830 unsettled his reason; and, having been removed to an hospital for the insane near Caen in Normandy, he died there on the 7th of February 1834, in the sixty-fifth year of his age.

Bourrienne's 'Memoirs of Napoleon' are too well known to require criticism. Not in all points trustworthy, and writing somewhat in the spirit of a discharged valet, he is yet, on the whole, the best of Napoleon's many Boswells. Neither morally nor intellectually does the

man himself rank high among those who owe their immortality to their connection with the colossus of his age. Napoleon, who knew the man he dealt with, described him at St. Helena as a man who had talents and other good qualities, but who was so inordinately greedy of money, that he could not even write the word 'millions' without a kind of nervous agitation, and fidgeting in his chair.

BOUTERWEK, FRIEDRICH, a German metaphysician, professor of moral philosophy at the University of Göttingen, is chiefly esteemed for his 'History of Modern Literature.' He was born in the year 1766, at an iron foundry near Goslar, and completed his studies at Göttingen. He was educated for the law, but was diverted from his legal pursuits by the charms of lighter literature. At an early age he published several poems and a novel, 'Graf Donamar,' which is said to give a good picture of German life; but at the age of twenty-five, being struck with a sense of the insufficiency of such occupation as the business of life, he devoted himself to metaphysics as a disciple of the then reigning masters, Kant and Jacobi. He was appointed to the chair of moral philosophy at Göttingen in 1797. In his lectures and in his metaphysical writings, he has ably expounded the doctrines of the above-named philosophers. His literary reputation rests upon his 'Geschichte der Neuern Poesie und Beredsamkeit,' in 12 volumes 8vo, published in 1801. This work contains separate critical histories of the belles-lettres of Italy, Spain, Portugal, France, England, and Germany, from the revival of letters to the close of the 18th century. The best parts of the work are those on English and German literature. Portions of Bouterwek's work have been translated into French and English. Professor Bouterwek died on the 8th of August, 1828. (*Allgemeine Deutsche Real Encyclopädie*; *Geschichte der Neuern Poesie und Beredsamkeit*.)

BOWDICH, THOMAS EDWARD, was born in 1790 at Bristol, where his father was a merchant. He was admitted while still very young a junior partner in his father's house, when he married; but, after a struggle of some years, both with his own inclinations and with want of success, he entered himself at Oxford, where he only remained for a very short time. By the interest of his uncle, Mr. J. Hope Smith, the governor-in-chief of the settlements belonging to the African Company, he obtained a writership in that service, and proceeded to Cape Coast Castle in 1814. About two years afterwards he returned for a short time to England, when he was appointed by the Company to conduct a mission to the king of the Ashantees; but on his arrival at Cape Coast Castle it was thought by his uncle and the council there that he was too young to go as the head of the mission, and Mr. James, the governor of the fort of Accra, was put in his place. While the party was at Coomarsie, the capital of Ashantee, Mr. Bowdich, with the concurrence of the other subordinate members of the mission, superseded Mr. James, and took the management of the negotiation into his own hands. His conduct was approved by the authorities at Cape Coast Castle; but its propriety has since been strongly questioned by Mr. Dupuis, 'Journal of a Residence in Ashantee,' 4to, 1824. After returning from this embassy Mr. Bowdich again visited England; and in 1819 he published at London, in a 4to volume, his account of the remarkable people among whom he had been, under the title of 'A Mission to Ashantee.' Soon after the publication of this work, which was read with great avidity, the author proceeded to Paris, and in that city he appears to have resided for some years, prosecuting his studies, principally in the mathematical and natural sciences, which he had neglected in his youth. He now also published a pamphlet in exposure of the system pursued by the African Company in the management of their possessions, which is understood to have induced the government to take these settlements into its own hands. This was followed by a translation, with notes, from the French, of a 'Treatise on Taxidermy,' to which he did not put his name. He afterwards published the following works:—'A Translation of Travels, by Mollien, to the Sources of the Senegal and Gambia;' an Appendix to the above, under the title of 'British and French Expedition to Teembo, with Remarks on Civilization,' &c.; an 'Essay on the Geography of North-Western Africa;' an 'Essay on the Superstitions, Customs, and Arts common to the Antient Egyptians, Abyssinians, and Ashantees;' three works, illustrated with lithographic figures, on Mammalia, on Birds, and on Shells; a Memoir, entitled 'The Contradictions in Park's last Journal Explained;' and a 'Mathematical Investigation, with Original Formule, for ascertaining the Longitude of the Sea by Eclipses of the Moon.' With the assistance of a friend, and the money he had realised by his publications, Mr. Bowdich, in August 1822, set out for Africa, in pursuance of a wish which he had constantly cherished of devoting himself to the exploration of that continent. He had only however reached the mouth of the Gambia, accompanied by his wife, when he was attacked by fever, under which, after several partial recoveries, he expired on the 10th of January, 1824. In the same year was published from his papers (8vo, London,) 'An Account of the Discoveries of the Portuguese in Angola and Mozambique,' the materials of which he had principally collected at Lisbon on his last journey; and in 1825 his widow, afterwards Mrs. Lee, published in 4to, 'Excursions in Madeira and Porto Santo, &c., by the late T. E. Bowdich, Esq. ; to which are added a Narrative of

Mr. Bowdich's last Voyage to Africa; Remarks on the Cape de Verde Islands; and a Description of the English Settlements on the River Gambia; by Mrs. Bowdich.'

BOWDITCH, NATHANIEL, was born at Salem, in Massachusetts, in 1778. His ancestors belonged to the west of England. His father was a poor working cooper. At ten years of age Nathaniel was taken by his father into the shop, and afterwards apprenticed to a ship-chandler. But an inclination for arithmetic and mathematics developed itself early, and was cultivated with all the energy of his character. In 1788 he was able to calculate an almanac for the year 1790. He taught himself the elements of geometry and algebra, and was taught navigation by an old British sailor. He also taught himself Latin that he might read the 'Principia' of Newton, which he had done by the age of twenty-one. At different times of his life he also learnt, with little assistance, most of the European languages: his plan was to take the New Testament and a dictionary, and begin to translate, writing down the original; and in this way he is said to have left specimens of his attention to twenty-five languages or dialects.

When he had reached the age of twenty-five, he took to a sea-faring life, and made four long voyages as clerk or supercargo, and one as master. Himself an excellent navigator, he taught every one on board his ship how to find a ship's place, and on one occasion had twelve seamen, being all his crew, every one of whom could take a lunar observation. He edited three editions of the celebrated work on navigation by John Hamilton Moore; but at last he had corrected so many errors, and made so many changes, that he thought himself justified in publishing it under his own name, as 'The new American Practical Navigator.' In this form it went through eight editions, and became very well known. His maritime life ended in 1804. In 1798 he married, but lost his wife before the end of the year. He married again in 1800; his second wife died in 1834, leaving a grown-up family. To the memory of this lady Dr. Bowditch dedicated his translation of the 'Mécanique Céleste.' After giving up seafaring pursuits he was engaged for many years in connection with the business of Assurance Companies. He died at Boston, March 16, 1838.

Dr. Bowditch is the author of a good many papers on astronomical subjects in the 'Transactions of the American Academy.' But the work which will carry his name down in Europe, and which entitles him to be considered as the first great promoter of mathematical analysis in the United States, is his translation of the 'Mécanique Céleste' of Laplace, with a commentary.

Four volumes of this work, corresponding to the first four volumes of the original, appeared in 1829, 1832, 1834, and 1839. The fourth volume was published posthumously.

The commentary has considerable value; not only as giving the reader of Laplace more recent views and simplifications, and bringing the results of extensive reading to bear upon the text, but also as a real and effective running explanation of the innumerable steps in the process of calculation which Laplace omits. Bowditch says, "I never come across one of Laplace's 'thus it plainly appears,' without feeling sure that I have got hours of hard study before me to fill up the chasm, and find out and show how 'it plainly appears.'" There is much in the work which a mathematician of higher pretensions would not have thought it needful to publish, but the fulness of the explanations renders the work of great value to students. Considered as the work of a self-taught man, closely engaged in professional business, Dr. Bowditch's translation of Laplace is a remarkable production. Dr. Bowditch bequeathed his library to the state of Massachusetts, and it formed the commencement of a public library, named after him at Boston.

(*Life of Dr. Bowditch*, by his son, prefixed to the fourth and posthumous volume of his translation of the 'Mécanique Céleste;' Pickering; Young; D. A. White, *Eulogy on the Life and Character of Nathaniel Bowditch*.)

BOWLES, REV. WILLIAM LISLE, a man of some importance as an English poet, but of still greater importance from the peculiar position he occupied in the history of English poetry, was born at King's Sutton, on the borders of Northamptonshire, on the 24th of September 1762. His father was vicar of the parish in which he was born; his grandfather, Dr. Bowles, also a clergyman in the same neighbourhood, was of a Wiltshire family. His mother was one of the daughters of the Rev. Dr. Richard Grey, author of 'Memoria Technica,' and other works. When the boy was seven years old, his father was appointed to the living of Uphill in Somersetshire; and one of his earliest recollections was the journey of the whole family, consisting of the vicar, his wife, and seven children, with two maid-servants, in two lumbering chaises, preceded by a rustic in livery, on their way far westward to the new parish. In 1776, at the age of fourteen, he was sent to Winchester school, where his master was Dr. Joseph Warton. He was one of Warton's favourite pupils, and he himself expresses his obligations to Warton for the kindly care with which he instructed him in the principles of literary taste and criticism. It was probably on the recommendation of Joseph Warton that, on leaving Winchester School in 1782, after rising to be senior boy, Bowles chose Trinity College, Oxford, as the place of his farther education. Thomas Warton, Joseph's more distinguished brother, was then senior fellow of that college. Among his contemporaries at

Trinity College, he seems to have taken a high place; gaining, among other honours, the prize for the chancellor's Latin poem in 1783. On quitting college, in 1787, at the age of twenty-five, he looked forward to some "independent provision in the church," which would enable him to marry a young lady to whom he was much attached. Dr. Moore, archbishop of Canterbury, had been indebted, when a poor curate, to his maternal grandfather, Dr. Grey; and the young clergyman was led in consequence to expect some preferment from that prelate. None came however; and "worldly circumstances interfering," the engagement with the young lady was broken off. A second engagement also came to a melancholy close by the death of the young lady. After it had been determined not to wait longer for "episcopal or archiepiscopal patronage," in great depression of spirits, Bowles made a tour through the north of England, Scotland, and some parts of the continent; and it was during this tour that he composed the 'Sonnets' which first made him known as a poet. The 'Sonnets' were intended for his own solace, and were not even committed to paper; but in 1789, when he had been some time back in England, it occurred to him, as he was passing through Bath on his way to Oxford, to write out as many of them as he could remember, correct them, and have them printed. Accordingly, he got Mr. Crutwell, printer of a Bath newspaper, to strike off a hundred copies in 4to, under the title of 'Fourteen Sonnets, written chiefly on Picturesque Spots during a Journey.' The expense of this modest publication was 5*l*. About six months after the publication, he received a letter from Mr. Crutwell informing him that the 100 copies were all sold, and that he could have sold 500. Much encouraged (his father was just dead, and his mother was in somewhat reduced circumstances), he printed a second edition of 500, adding some new sonnets; and some time afterwards a third edition of 750 was called for.

It is curious now, looking back, to think that, in a year like 1789, when France was in the throes of revolution, the publication from a provincial press of 'Fourteen Sonnets,' by a young clergyman disappointed in love, should have been an event of any consequence in England; and yet so it was. A new literary spirit, and new notions of poetry, were beginning to be abroad; and young men were craving for something fresh and natural, even if but feeble, after the strong and fine artificialities, as they are called, of Dryden, Pope, and their followers. Bowles's sonnets came at the proper moment. Other young men of promise had already attempted, or were attempting poems in a new vein; but, both as the pupil of the Wartons and by reason of his natural susceptibility, Bowles was fitted to take the lead. His sonnets were read and read again by all academic young men of taste and poetical aspiration, including Coleridge, Wordsworth, Southey, and Lovell. "I had just entered on my seventeenth year," says Coleridge, "when the sonnets of Mr. Bowles, twenty-one in number [this was the second edition], and just then published in a quarto pamphlet, were first made known and presented to me by a school-fellow who had quitted us [that is, Christ's Hospital] for the university. As my school finances did not permit me to purchase copies, I made, within less than a year and a half, more than forty transcripts, as the best presents I could offer to those who had in any way won my regard. And with almost equal delight did I receive the three or four following publications of the same author." These "three or four following publications" of Bowles were short copies of verses on occasional subjects, published separately at Bath or Salisbury in 1789, 1790, and 1791. Thus in 1789 were published 'Verses to John Howard on his "State of Prisons and Lazarettos;"' and in 1790 verses 'On the Grave of Howard.' In these, although not so conspicuously as in the 'Sonnets,' a tender and true spirit of poetry was visible, while the diction was far less artificial than had till that time been usual in poems. In short, though the revolution in British poetry had already broken forth in Cowper and Burns, and though it was to be completed in Wordsworth and Coleridge, Bowles's 'Sonnets' and other pieces, published in 1789 and the following years, were perhaps the first conscious insinuation of the new principles. Wordsworth and Coleridge soon proclaimed and illustrated them with greater power of genius; but all their lives these poets kept up a kind of dutiful allegiance to Bowles as their titular patriarch.

Hardly foreseeing all this, Bowles left Oxford finally in 1792, having taken his degree, and devoted himself to the duties of his profession. From an humble curacy in Wilts, which was his first appointment, he was transferred first to a living in the same county, and afterwards to another in Gloucestershire. In 1797 he married a daughter of the Rev. Dr. Wake, prebendary of Westminster. In 1803 he obtained a vacant prebend in the cathedral church of Salisbury; and in 1805 the long-expected patronage of Archbishop Moore at last visited him in the shape of a preferment to the valuable living of Bremhill in Wiltshire. Bowles was then forty-three years of age; but he continued to reside in his picturesque and elegant parsonage of Bremhill almost continually during the remaining forty-five years of his long life, discharging the duties of his parish in such a manner as to win the affection of his parishioners, varying his theological readings and his ecclesiastical business with continued exercises in literature, receiving visits from his friends, and happy in what he considered "the inestimable advantage of the social intercourse of such a family as that of Bowood" (Lord Lansdowne's). Subsequent ecclesiastical preferments, which did not interfere with the quiet tenor of his life as rector of

Bremhill, were, his appointment in 1818 to be chaplain to the prince regent, and his appointment in 1828 to be canon of Salisbury cathedral.

Till 1804, Bowles was contented with issuing fresh editions of his 'Sonnets' and early poems (an eighth edition of the 'Sonnets' appeared in 1802), and with adding a few occasional pieces to the collection. In 1804 he published his longest poem, entitled 'The Spirit of Discovery,' in six books of blank verse; which was followed by his edition of Pope's works in 10 vols. in 1807. These two publications, together with his general fame as a writer of sonnets, were the ground for the well-known attack upon him in Byron's 'English Bards and Scotch Reviewers.' Notwithstanding Byron's onslaught, Bowles, like Coleridge and Wordsworth, retained his reputation, and went on republishing old and producing new poems. He and Byron met in a friendly way at Rogers's in 1812; and Byron in later life made amend's for his satire by speaking of him with respect. Omitting minor productions, the following is a list of Bowles's poetical publications subsequent to the 'Spirit of Discovery':—'The Missionary of the Andes,' in six books of heroic verse, published in 1815; 'The Grave of the Last Saxon, a Legend of the Battle of Hastings,' in six books, published in 1822; 'Days Departed, or Banwell Hill,' a descriptive didactic poem in blank verse, published in 1829; 'St. John in Patmos,' a blank verse poem of considerable length, first published anonymously in 1833; 'Scenes and Shadows of Days Departed,' a series of poems with a prose autobiographic introduction, published in 1837, in the author's seventy-sixth year; and the 'Village Verse-Book,' published in the same year, and consisting of simple hymns composed by him for the use of the children of his parish. After 1837 Bowles did not publish much. Nor had any of his poems since 'The Missionary,' which is considered on the whole the best of his large works, greatly added to his reputation. In all of them were discerned the same free taste, the same sensibility to the gentler beauties of nature, the same pathos, the same poetic fancy, and the same power of cultured expression which had distinguished his first sonnets; but it was felt on the whole that he was a kind of feeble Wordsworth, whose poetry, so long as he chose to write any, was rather to be received with respect and dipped into at leisure than eagerly read and appreciated.

But the whole virtue of Bowles's life did not lie in his poems. He was also a very busy prose-writer. If the list of his prose-writings is classified, it will be found to prove considerable versatility on the part of the author.

The 'Pope and Bowles Controversy,' which lasted from 1819 to 1828, if indeed it may not date from 1807, when Bowles's edition of Pope was published, has a permanent interest in our literary history. It was the battle, fought in prose, between the old or eighteenth century school of English poetry and the so-called new or nineteenth century school. Bowles, while doing justice as he thought to Pope's true excellences, had made some reflections on his moral character, tending to depreciate it; and had also, in an appended essay 'On the Poetical Character of Pope,' laid down this proposition, as determining the comparatively inferior rank of certain portions of Pope's poetry—"All images drawn from what is beautiful or sublime in nature are more beautiful and sublime than images drawn from art, and are therefore more poetical; and in like manner the passions of the human heart, which belong to nature in general, are *per se* more adapted to the higher species of poetry than those which are derived from incidental and transient manners." Byron in his 'English Bards and Scotch Reviewers' had pilloried Bowles for what he had said of the moral character of Pope; but it was reserved for Campbell, when preparing his 'Specimens of the English Poets' in 1819, to offer the first distinct contradiction to Bowles's critical theory of poetry. Campbell vigorously defended the right of the world of the artificial to furnish images to poetry, and instanced 'ships' and the like to prove how beautiful and poetical such images might be. Bowles replied in his 'Letter on the Invariable Principles,' &c. Byron, then in Italy, wrote home to Murray that he was going "to plunge into the contest, and lay about him like a dragon, till he had made manure of Bowles for the top of Parnassus." He accordingly sent over two spirited letters for Pope and Campbell against Gilchrist, to which also Bowles replied. Other critics, including Octavius Gilchrist and the 'Quarterly Review,' took up the question on Campbell's side. Bowles manfully met them one after another, restating his real views in opposition to what he considered misrepresentations of them, and supporting these views by reasonings and examinations of the reasonings and examples of his antagonists. For some time he stood alone; but at last Hazlitt and the 'Blackwood' critics came to his assistance, and maintained that on the whole he had had the best of the argument. This view is now pretty generally acquiesced in. Bowles never said anything so absurd as that Pope was no poet—an opinion which has been ignorantly palmed on him by some who have engaged in the controversy; he only laid down some critical canons determining the *kind* of much of Pope's poetry, as compared with higher kinds, of which fine examples were found, he said, in other poems of Pope himself; and what he advanced on these points was founded on a right instinct, and was argued with much logical acumen, though not with any of that philosophical depth which distinguishes the similar reasonings of Coleridge and De Quincey.

Enjoying repose in his old age after this battle, and looking round

on such men as Rogers and Wordsworth as his junior coevals, and on younger poets rising in the room of the departed Coleridges and Southey's, and Scott's and Byrons, whose births and deaths lay within his own protracted span of life, Bowles survived to find himself almost forgotten in the midst of new persons and themes and interests. He had a presentiment of this as early as 1837, when he wrote these words: "Many years after my gray head shall have been laid at rest in Breamhill churchyard, or in the cloisters of Salisbury cathedral, the reader of the memorable controversy with Lord Byron, in which I believe all dispassionate judges will admit that his lordship was foiled and the polished lance of his sophistical rhetoric broken at his feet, or perhaps some who may have seen those poems of which Coleridge spoke in the days of his earliest song so enthusiastically, may perhaps inquire 'Who was W. L. Bowles?'" The event thus anticipated came to pass on the 7th of April 1850, when Bowles died at Salisbury at the age of 88, only a few days before the death of Wordsworth. His wife had died in 1844; and they left no family.

In his personal habits and manners Bowles was simple, genial, and kindly. He was also "famous," it is said, "for his Parson Adams-like forgetfulness." A life of him, the joint work of a relative and Mr. Alario Watts, has been advertised as forthcoming; meanwhile we have gathered the above particulars from various notices, and from the autobiographical parts of his own writings. As we said at the outset, he will be remembered with interest on account of some of his poems, particularly his 'Sonnets,' and his 'Missionary' and his 'Village Verse-Book,' but with greater interest as a man occupying a position in our literary history entitling him in the opinion of some to be called the 'Father of modern English Poetry.' If the designation is accepted, it must be allowed that he has had some very rebellious sons.

*BOWRING, SIR JOHN, was born Oct. 17, 1792, in the city of Exeter. He began at an early age to make known those acquirements in modern languages, especially of the Slavonic class, for which he was chiefly distinguished during many years of the earliest part of his life. He studied particularly the lyrical or rather the song poetry of the different European nations. In 1821-23 he published 'Specimens of the Russian Poets,' 2 vols.; in 1824, 'Batavian Anthology,' and 'Ancient Poetry and Romances of Spain'; in 1827, 'Specimens of the Polish Poets,' and 'Servian Popular Poetry'; in 1830, 'Poetry of the Magyars'; and in 1832, 'Czechian Anthology.' Mr. Bowring lived much in habits of intimacy with Jeremy Bentham, whose principles he mostly adopted, and who appointed him one of his executors. In 1825 he became the editor of the 'Westminster Review,' and wrote many articles for that periodical in support of the principles of radical reform and free trade. In 1828 he travelled in Holland, and received the diploma of LL.D. from the University of Groningen. In 1829 he collected at Copenhagen the materials for a collection of Scandinavian poetry. From the time of his connection with the 'Westminster Review' he had directed much of his attention to subjects of political economy, especially with respect to the commercial relations between Great Britain and the continental governments. In 1834-5 he was sent to France as the leading member of a commission for inquiring into the actual state of the commerce between the two countries, and laid a Report before parliament. He also presented a Report on the Commerce, Manufactures, and Trade of Switzerland. He travelled in Italy, and made particular investigations into the commerce and manufactures of Tuscany. He went to Syria for a similar purpose, and afterwards visited the different States of the German Customs' Union. The results of his various journeys and inquiries were made known by several communications and reports, which were laid before parliament, and most of which were published by order of the House of Commons. He was a member of parliament from 1835 to 1837, and again from 1841 to 1849. In 1838-39 'The Works of Jeremy Bentham, now first collected under the Superintendence of his Executor, John Bowring,' were published in 11 vols. 8vo at Edinburgh. In 1843 he published a translation of the 'Manuscript of the Queen's Court, a Collection of old Bohemian Lyrics, Epic Songs, with other ancient Bohemian Poems,' 12mo.

In 1849 Dr. Bowring was appointed British Consul at Hong Kong, and Superintendent of Trade in China, where he was subsequently a plenipotentiary. He returned in 1853 to London, where, in 1854, he published 'The Decimal System in Numbers, Coins, and Accounts, especially with Reference to the Decimalisation of the Currency and Accountancy of the United Kingdom,' 8vo. In 1854 he received the honour of knighthood, and was appointed governor of Hong Kong, where he now performs the duties of that important office. Sir John Bowring has published some original poetry, but it is not of high merit.

BOWYER, WILLIAM, the son of a printer of considerable eminence, who published many of the most distinguished theological, antiquarian, and scholastic works which appeared during the reigns of William and Mary, Anne, and George I. William, the son, was born in Whitefriars, London, December 19, 1699. He was educated at Headley in Surrey, in a private academy conducted by a respectable scholar, Ambrose Bonwicke, B.D. of Oxford, a nonjuring Jacobite clergyman, ejected on account of his nonconformity from the head-mastership of Merchant Taylors' School. Bowyer was entered in June 1716 a sizar of St. John's College, Cambridge, where he formed an intimate friendship with several eminent individuals whose services at a later period con-

tributed to his reputation and prosperity, more particularly with Jeremiah Markland and the learned numismatic scholar, the Rev. W. Clarke: with these two fellow-students a congenial mind and similarity of studies occasioned an intimacy which continued throughout the rest of their lives. When he left college he was employed in his father's business. At the close of the year 1721, during which he had been closely employed in the correction of proofs, he became a partner with his father, who in future superintended the mercantile and mechanical portion of the business, while the literary and critical department was assigned to the son. In his first year of office as corrector of the press he received from Maittaire a most flattering compliment, contained in the preface to his 'Miscellanea Græcorum Carmina,' 4to. His predilection for archæological and philological subjects was evinced in the peculiar attention which he bestowed upon the correction of every work of this kind. Of the costly and classical works which throughout a period of fifty-five years possessed the advantage of bearing the signature 'Typis Bowyer,' we can notice only a very few. For a complete chronological list of them, as well as for a great variety of information concerning the authors and the printer, we refer to the well-known voluminous work of his partner and successor, entitled 'Literary Anecdotes of the 18th Century, comprising Memoirs of William Bowyer, Printer, F.S.A., and many of his learned Friends, by John Nichols, F.S.A.,' in 9 vols. 8vo, of which the seventh volume forms an elaborate index, and six supplemental volumes complete the work. As the press of Bowyer was corrected by himself with a critical ability possessed by no other printer of his time, it was chiefly preferred for works of learning. But typographical accuracy was far from being the sole object of Bowyer: he exercised a searching criticism upon the subject-matter and language of the most learned works which he printed; supplied numerous notes, suggested emendations, wrote prefaces, made indexes, and in various ways increased their value. As specimens the following will suffice:—'Sædenti Opera Omnia,' collected by Wilkins, 3 vols. fol., 1726; of the learned dissertation 'De Synedriis et Præfecturis Juridicis Veterum Ebræorum,' which occupies all the second volume, a very judicious epitome was made by Bowyer while he rapidly examined the last proofs. It exhibits in 28 pages of English the substance of 1180 folio pages of rugged Latin, profusely garnished with Hebrew, Greek, and Arabic. In a review of 'Reliquiæ Baxterianæ,' a work replete with curious grammatical erudition, containing 'Glossarium Antiquitatum Brit. temporibus Romanorum,' Bowyer displayed an intimate acquaintance with the subject; the same with the 'Leges Wallicæ Ecclesiæ Hywel Dda,' by Dr. Wotton, 1730; and Chishull's 'Antiquitates Asiaticæ,' fol., 1732. On this learned work he made 28 quarto pages of 'additions and corrections.' To the sixth edition of Lyttleton's 'Latin Dictionary,' 1735, he made a large addition of words collected in the course of his reading. The 'Greek Lexicon' of Schrevelius received the same improvement in passing through his press in 1774. That of Hederic, the Hebrew Lexicon of Buxtorf, the Latin one by Faber, and Bailey's 'English Dictionary,' he similarly enlarged and corrected. In publishing in 1750 Bladen's English version of 'Cæsar's Commentaries,' he added numerous learned notes, in which alone consists all the worth of the book. He printed at the same time, on his own account, 'Küster de veris verb. med.,' to which he affixed some critical remarks and a preface in Latin. He supplied also an elaborate preface, with numerous notes and corrections, to a translation in 1759 of 'Montesquieu's Grandeur of the Romans.' On the 'Life of Cicero' by Dr. Middleton he wrote a masterly commentary, in which, without any assumption of superior learning, he rectifies many mistakes. As a supplement to the work of his friend, William Clarke, 'The Connexion of Roman, Saxon, and English Coins,' 4to, he wrote 'Remarks on Greek and Roman Money,' which with 'Notes on Kennett's Roman Antiquities' and 'Remarks on Roman History,' exhibit for that time an accurate and extensive knowledge of classical archæology. The whole of these commentaries, with many more, including 'Papers on Stephens's Thesaurus,' and a learned disquisition on 'The Feast of the Saxon Yule,' are separately printed in a large and now extremely scarce volume in 4to, published in 1785 by Mr. Nichols, entitled 'Miscellaneous Tracts by the late Wm. Bowyer.' There yet remain in manuscript, inserted in margins and interleaved copies of his favourite works, notes in great numbers, especially in Leigh's 'Critica Sacra,' Du Gard's 'Lexicon Græci Test.' and many of the Greek and Latin classics. Among the multitude of sumptuous folios and illustrated works which he printed, the following as specimens of typographical beauty may be selected:—'Matthæi Parker Cant. Arch. de Antiq. Brit. Eccles.,' fol., 1729; Vertot's 'Knights of Malta,' 2 vols. fol., 1728; Maittaire's 'Marmorum Arund. Inscript.,' fol., 1732; Churchill's 'Voyages and Travels,' 6 vols. fol., 1732; Pococke's 'Description of the East,' 8 vols. fol., 1743; the 'Coptic Pentateuch,' by Dr. Wilkins, 1731; 'Lysis Orationes,' by Dr. Taylor, 2 vols. 4to, 1739. Bowyer published in 1766 'The Origin of Printing, consisting of—1st, Dr. Middleton's Dissertation on its origin in England; 2nd, Meerman's account of its invention at Haarlem, with numerous notes and corrections,' which is valuable on account of Bowyer's learned illustrations, although the legend about Laurentius Coster at Haarlem is now discredited. But the reputation of Bowyer has been most extended by his 'Critical Conjectures on the New Testament,' which in part were published in the second volume of his edition of the Greek text. The 'Conjectures' have received the

highest commendations from Harwood, Le Long, Ernesti, Michaelis, and other eminent Greek scholars.

An enlarged and improved edition of the 'Conjectures' was published in 1772. It was translated into German by the Professor of Theology and Oriental Literature at Leipzig, Dr. Schulz. A third edition appeared in 1782, and the fourth and best edition in 1812 in 4to. As it furnishes the greatest evidence of Bowyer's erudition and critical sagacity, we subjoin at length its title:—'Critical Conjectures and Observations on the New Testament, collected from various authors, as well in regard to words as to pointing, with the reasons on which both are founded: by William Bowyer, Bishop Barrington, Mr. Markland, Professor Schulz, Professor Michaelis, Dr. Owen, Dr. Woide, Dr. Gosset, and Mr. Weston.' It contains a large and excellent engraving of Bowyer. In 1729 he was appointed by the Speaker of the House of Commons to the lucrative office of printer of the votes. He obtained in 1736 the appointment of printer to the Society of Antiquaries, and printer to the Society for the Encouragement of Learning; in 1760, printer to the Royal Society; and in 1767 printer of the Rolls of the House of Lords and the Journals of the House of Commons. In 1737, on the death of his father, he became sole proprietor of the Bowyer press; and in 1767 he moved from Whitefriars, where he had spent sixty-seven years, to more capacious premises in Red Lion Passage, Fleet-street, where he displayed a bust of the Roman orator, with the inscription, 'M. T. Cicero, à quo primordia preli,' in allusion to the early impression of the 'Liber de Officiis' by Fust in 1465. He also assumed the professional title of *Architectus Verborum* (see 'Cic. de Clar. Orat.,' c. 31); and continued until he arrived on the verge of eighty to correct all the Greek works which he printed. His long career of incessant application to study and business was terminated by the publication in 1777 of his edition of Bentley's 'Dissertation on the Epistle of Phalaris.' He had always manifested a great veneration for 'the mighty scholiast,' and augmented his 'Dissertation' with numerous remarks collected by himself from the works of Markland, Upton, Lowth, Owen, Clarke, Warburton, and Dr. Salter, Master of the Charter-House School, who is responsible for its whimsical system of spelling, as sought, retain, disdain, reproch, &c. In the same year, on the 18th of November, at the age of seventy-eight, Bowyer died, and was interred at Low Leighton in Essex. In his will he left considerable sums to indigent printers. His epitaph, by the Rev. Edward Clarke, describes him truly as '*Typographorum post Stephanos et Commelinos longè doctissimus; linguarum Latine, Græcæ, et Hebræicæ peritissimus.*' There were indeed at this time several celebrated printers, as Baskerville of Birmingham, Foulis of Glasgow, and Crapelet of Paris; but Bowyer, as to erudition and critical accuracy, was unrivalled by any of his profession in England or on the continent during more than half a century. Among the numerous individuals of literary eminence with whom he maintained a learned correspondence or an intimate personal friendship were Archbishop Secker; Bishops Lowth, Hurd, Warburton, Pearce, Sherlock, Clayton, Pococke, Atterbury; Drs. Wotton, Chandler, Whiston, Taylor, Prideaux, Jortin, Conyers Middleton; Pope and Thompson; Garrick, Lord Lyttleton; Dr. Mead, Gough, Chishull, Clarke, Ainsworth, De Missy, Markland, Maittaire, and Palairat, who in his Latin letters salutes him as '*vir doctissime et carissime.*' Bowyer was estimable not only for his learning, but for rigid probity and active unostentatious benevolence. In general moral rectitude and amiable simplicity of manners, few have exceeded 'the last of learned printers.' His bust in marble, with a portrait of his father, is in Stationers' Hall.

BOYCE, WILLIAM, Doctor in Music, who as an English composer is entitled to contend with Arne for the honour of ranking next to Purcell, was born in the city of London in 1710. He commenced his musical education as a chorister of St. Paul's, under Charles King, Mus. Bac., and completed it under Dr. Greene, then organist of the cathedral. Anxious to become acquainted with the philosophical principles of his art, he attended the learned lectures of Dr. Pepusch, from whom he also acquired a knowledge of the works of the early Flemish and Italian composers. In 1736 he succeeded Weldon as one of the composers to the Chapels-Royal, and in performing the duties of the office produced the two Services and many anthems, which reflect so much honour on the English school of church music. Some years after, he set Edward Moore's 'Solomon,' a serenata, to music, in which are the duet 'Together let us range the fields,' the airs 'Softly blow, O southern breeze,' 'Tell me, gentle shepherd,' and other highly-esteemed compositions. In 1749 he was selected to set an ode for the installation of the Duke of Newcastle, as chancellor of the University of Cambridge, when the degree of Doctor in Music was, unsolicited, conferred on him.

On the death of Dr. Greene in 1755, Dr. Boyce was appointed to the lucrative office of Master of his Majesty's band of Musicians. In that year he also produced his finest work, the grand anthem, 'Lord, thou hast been our refuge,' which he wrote for the Feast of the Sons of the Clergy; and at the annual meeting of that corporation in St. Paul's Cathedral, it has ever since been performed. In 1758, on the death of Travers, he became organist to the Chapels-Royal, which office he held in conjunction with that of composer. In 1760 he published in score, in three large folio volumes, the 'Cathedral Music of the English Masters of the last two hundred years;' a splendid and useful work, in which the disinterestedness of the editor is not less remarkable than his deep research and acute discrimination; for not

desiring any pecuniary recompense for his labours, he fixed a price on the publication—the sale of which was necessarily limited—which only indemnified him for the expense he had incurred in preparing and bringing it out.

Dr. Boyce during many years suffered much from the gout, the attacks of which became more frequent and severe as he advanced in age, and terminated his life in 1779. He was interred in St. Paul's Cathedral, and his funeral was attended by many persons of distinction, together with almost every musician of standing in London.

The published works of this excellent composer are—'Fifteen Anthems, together with a Te Deum and Jubilate, in score,' &c., 1780; a grand anthem, 'Lord, thou hast been our refuge,' for a full band; a second, 'Blessed is he that considereth the poor and needy,' for the same, 1802; a 'Te Deum, Jubilate, and six Anthems,' printed in Dr. Arnold's 'Collection of Cathedral Music;' the Serenata of 'Solomon;' the opera of 'The Chaplet;' and numerous detached pieces, which appeared in 'Lyra Britannica,' 'The British Orpheus,' 'The Vocal Musical Mask,' &c.

BOYDELL, JOHN, was born in 1719, but the place of his birth has been variously stated to be in Staffordshire; at Stanton in Shropshire; and in Derbyshire. In his youth he was designed for the profession of his father, that of a land surveyor, to which for some time he attended; but having, it is said, accidentally seen a volume of views of country seats by Baddeley, his taste was developed, and he resolved to become an engraver. He accordingly proceeded to London, where, though at the age of twenty-one, he bound himself for seven years to Mr. Tomms for the purpose of learning the art. At the expiration of his apprenticeship he published by subscription, in 1746, a volume of his own engravings, consisting of 152 views in England and Wales. They are now interesting chiefly as an indication of the imperfect state of the art in England at that period as compared with the improvement effected afterwards by his own exertions. These humble specimens served however to commence a very long and continuous course of prosperity; for with the profits of this publication he entered into business for himself as a printseller; and by the adoption of a very liberal policy in employing and amply remunerating the best artists of the time, he gradually extended his speculations, and acquired a large income, and a great reputation as an enterprising and generous patron of genius. He engaged Woollett to engrave the celebrated pictures of Niobe and Phaeton; paying for the former 100 guineas, and for the latter 120: they were sold by Boydell at 5s. each; but have since, at auctions, produced 10 and 11 guineas. He contrived in fact to employ almost every aspirant to distinction whose energies wanted encouragement. When Boydell began business there were no very eminent English engravers, and they were generally inferior to those of the continent. Our foreign commerce in this department consisted wholly in importations, and the cabinets of collectors were principally furnished by the artists of France. But when, after many years of persevering exertions, Boydell succeeded in forming an English school of engraving, the circumstances were reversed; for the importation of prints was almost entirely discontinued, and a large exportation ensued. Holland, Flanders, and Germany were the principal markets in which the engravings of Boydell were in demand. The complete success of his enterprise in the province of engraving, and his indignation at the opprobrium which foreigners cast upon his countrymen for the deficiency of their taste in other departments of the fine arts, led him to attempt a similar improvement in the art of painting. For the accomplishment of this design he secured the services of the first artists in the kingdom; and selected for illustration the works of Shakspeare, as supplying the most appropriate subjects for eliciting and displaying the abilities of each individual. West, Opie, Reynolds, Northcote, and others were employed. Spacious premises were purchased in Pall Mall, where was exhibited for several years the famous 'Shakspeare Gallery.' The beautiful plates which, under the liberal patronage of Boydell, were engraved from these numerous paintings, form a magnificent volume in royal elephant folio, of which the dimensions are three feet by two; the title, 'A Collection of Prints from Pictures painted for the purpose of Illustrating the Dramatical Works of Shakspeare, by the Artists of Great Britain,' Boydell, 1803. A superb edition of Shakspeare's dramatic works was at the same time undertaken by Boydell, and printed at the press of Bulmer, 1792-1801, in 9 vols. folio.

In 1804, when he had reached the age of eighty-five, and had, in consequence of the commercial obstacles occasioned by the wars of the French Revolution, become involved in unavoidable difficulties, he obtained an act of parliament enabling him to dispose of the paintings of his Shakspeare Gallery by a lottery. In the memorial of his situation he states that his enthusiasm for the promotion of the arts induced him to lay nothing by, but to employ continually the whole of his gains in further engagements with unemployed artists; that the sums he had laid out with his brethren in the advancement of this object amounted to 350,000*l.*, and that he had accumulated a stock of copper-plates which all the printsellers in Europe would together be unable to purchase. He lived only until the last ticket of his lottery was sold. The affair was finally decided subsequent to his death, which occurred on the 12th of December 1804. He had been elected alderman in 1782, sheriff in 1785, and mayor in 1790. He held also the office of master of the Stationers' Company. As the most generous

promoter of those arts which refine and elevate the moral sentiments of man, he was honoured with a public funeral.

Among the collections published by Boydell was that of 120 engravings from the Houghton Gallery, which was purchased by the Empress Catherine of Russia. In 1777 he published in folio the 'Liber Veritatis,' containing copies of 200 of Claude Lorraine's first sketches, in the cabinet of the Duke of Devonshire; in 1794, the 'History of the River Thames,' 2 vols. fol.; and in 1803, in 4to, 'An Alphabetic Catalogue of Plates engraved by the first Artists, from the finest Pictures of the Italian, Flemish, German, French, and English Schools.'

BOYLE, CHARLES, second son of Roger, the second earl of Orrery in Ireland, was born at Chelsea, August, 1676. He was entered, in his fifteenth year, at Christ Church, Oxford, as a nobleman. The directors of his studies were Dr. Atterbury, afterwards bishop of Rochester, and Dr. Friend, the eminent physician, or, as others say, his brother, the master of Westminster school. The elevated rank and accomplishments of their pupil appear to have given the highest satisfaction to the master of the college, Dr. Aldrich, for, in the dedication to him of his 'Manual of Logic,' since adopted as the Oxford University textbook, he declares him to be "magnum ædis nostræ ornamentum." It is requisite here to say a word or two in explanation of the circumstances which gave rise to the famous controversy ostensibly sustained by the Hon. Charles Boyle against the great Aristarchus of Cambridge, Dr. Bentley, but which in reality was an affair with which Boyle himself had almost nothing to do. In addition to the particulars in the article on BENTLEY, col. 653, concerning the origin of this fierce contention of wit and learning, it may be observed that Dr. Aldrich, in order to promote the reputation of his college, encouraged the students in the practice of editing, every year, some ancient classic author; and as Sir Wm. Temple, in his 'Essay on Ancient and Modern Learning,' had just then asserted ('Works,' vol. i. p. 168) that "The oldest books we have are still in their kind the best; the two most ancient in prose are 'Æsop's Fables' and 'The Epistles of Phalaris:' the latter exhibit every excellence of a statesman, soldier, wit and scholar; I think they have a greater force of wit and genius than any others I have ever seen either ancient or modern"—these two Greek relics of antiquity, which Temple imagined to be of the age of Cyrus and Pythagoras, were chosen as subjects for the stripling Christ Church editors. Æsop was published by Alsop, and Phalaris by Boyle, who was then at the age of 19. The title of his edition is 'Phalaridis Agrigentorum Tyranni Epistolæ ex MS. recensuit, versiones, annotationibus et vita insuper authoris donavit Car. Boyle; ex Æde Christi, Oxon., 1695.' In the preface it is stated that the text was collated only partially with the manuscript in the King's Library, because the librarian (Bentley) had the 'singular kindness' to refuse the use of it for the requisite time; the words are "pro singulari sua humanitate negavit." This petulant passage is said to have been occasioned by Bentley's remarking, at the time of lending the manuscript, that it was a spurious work, the subsequent forgery of a sophist, and not worthy of a new edition. In the 'Dissertation on the Epistles of Phalaris,' which Bentley annexed to the 2nd edition of Dr. Wotton's 'Reflections,' in 1697, their spurious character, as well as that of the present Æsopian Fables, is clearly exhibited; the King's manuscript is declared to have been "lent in violation of rules, and not reclaimed for six days, though for collating it four hours would suffice." "To show all the silliness and impertinence of these epistles," says Bentley, "would be endless; they are a fardle of common-places without life or spirit: the dead and empty cogitations of a dreaming pedant with his elbow on his desk." That Boyle, in his editorial office, received the aid of his tutor, Dr. Friend, is acknowledged by himself; indeed to those who can justly appreciate the labour of revising the text of an ancient Greek author, the great improbability needs not be suggested, that a young fashionable nobleman in his teens should, unassisted, accomplish a task so dull and difficult. Of the real circumstances of the case Bentley appears to have been aware when, in his 'Dissertation,' he shrewdly designates Boyle as "the young gentleman of great hopes whose name is set to the edition," and asserts that the editor no more than Phalaris wrote what is ascribed to him.

This declaration of Bentley's critical judgment elicited the witty and malignant attack upon him, entitled 'An Examination of the Dissertation, &c., by the Honourable Charles Boyle,' 1698, a work which in reality was the joint production of the leading men of Christ Church, instigated by Dr. Aldrich, while Boyle himself was absent from the country. This is the meaning of Swift in his 'Battle of the Books,' when he represents Boyle as being "clad in a suit of armour given him by all the gods:" that is, Dr. Friend, Dr. King, Dr. Smallridge, Dr. Atterbury, &c. A letter of the last, in his 'Epistolary Correspondence,' vol. ii. pp. 1-22, upbraids Boyle with ungratefully requiting his services in planning, writing half, and correcting the whole of the 'Examination.' See also Warburton's 'Letters,' 8vo, p. 11, for a confirmation of the fact that all the wit and erudition displayed under the name of Charles Boyle was the produce of his fellow-collegians. But the united efforts of the Oxford scholars resulted in total failure. "In many parts of the 'Examination,'" says Bishop Monk, "the critics seem to have parted too soon with their grammars and lexicons." It occasioned however at the time a very great excitement in the two rival universities; for though it left unimpaired the main arguments of the 'Dissertation,' yet, abounding in ready wit and satirical viva-

city, it procured for the young nobleman of Oxford a temporary triumph. Bentley put forth in 1699 his 'Dissertation' enlarged and separately printed; it effected the most complete demolition of the Oxford wits, who threatened but never attempted an answer. Boyle, in 1700, was elected a member of parliament for Huntingdon; and, in consequence of a quarrel with his opponent, Mr. Wortley, he fought a duel with him in a gravel-pit near Grosvenor Gate in Hyde Park—an affair which, from his extreme loss of blood, was nearly fatal to him. In 1703 he succeeded to the title of Earl of Orrery. He entered the service of Queen Anne, received the command of a regiment, and was made a Knight Companion of the Order of the Thistle. In 1709, as major-general, he fought at the famous battle of the Wood, under the Duke of Marlborough and Prince Eugene, at Malplaquet, near Mons in Belgium. On his return to England he was sworn a member of the privy council, and sent, at the time of the treaty of Utrecht in 1713, as envoy extraordinary to the states of Brabant and Flanders. For his services on this occasion he was raised to the English peerage with the title of Lord Boyle, baron of Marston in Somerset. On the accession of George I. he was made a lord of the bedchamber, and became a confidential favourite at court. In September 1722 he was abruptly committed to the Tower on a charge of high treason, as an accomplice in the sedition called Layer's Plot. After six months imprisonment he was bailed by Dr. Mead and others, and was ultimately acquitted. He amused himself in the latter part of his life with philosophical subjects; and patronised George Graham, an ingenious watchmaker, who constructed the mechanical instrument representing the planetary revolutions, and in gratitude to his benefactor gave it the name of an Orrery. "The whole merit of inventing it belongs," says Dr. Johnson, "to Rowley, a mathematician of Lichfield." (Index, vol. ii. Suppl. Swift's Works.) In the second volume of the works of Roger, earl of Orrery, are several literary compositions of Charles Boyle; among other trifles, a comedy called 'As you find it.' He published also a volume of 'Occasional Poems and Songs.' But none of his writings display any portion of the wit of the 'Examination,' and his name would scarcely find a place in a biography except for his connection with the controversy waged in his name. He died at the age of fifty-six, on the 23th of August 1731.

BOYLE, JOHN, only son of Charles, fourth earl of Orrery, was born February 2, 1706. On the death of his father in 1731, he took his seat in the House of Lords, and was a constant opposer of the administration of Sir Robert Walpole. He resided in Ireland a good deal, and formed an acquaintance with Swift; and in 1752 published 'Remarks on the Life and Writings of Dr. Swift.' In 1739 he published, in 2 vols. 8vo, an edition of the dramatic works of his great-grandfather. In 1741 he wrote 'Imitations of two of the Odes of Horace.' In 1742 he edited his great-grandfather's 'State Papers,' which were published in one vol. folio. In 1752 he published, in 2 vols. 4to, 'Pliny's Letters, with Observations on each, and an Essay on the Life of Pliny.' In 1759 appeared his 'Life of Robert Cary, earl of Monmouth.' He wrote several essays for 'The World,' 'The Connoisseur,' and the 'Gentleman's Magazine.' He was fond of retirement, and much attached to literary pursuits. The Earl of Orrery died at his seat at Marston, Somersetshire, November 16th 1762, in his fifty-sixth year. In 1774 appeared a volume entitled 'Letters from Italy,' which he had written while residing in that country in 1754-55.

BOYLE, RICHARD, was born at Canterbury on the 3rd of October, 1566. His family was respectable, and under the name of Biuville had been settled in Herefordshire for many generations; but it was first rendered illustrious by the subject of the present notice, who from having been employed in the service of the chief baron of the Exchequer as a clerk, rose to the highest honours of the state; and as if they were insufficient to mark the sense which was generally entertained of his abilities, it has been usual to style him "the great Earl of Cork."

From Bene't College, Cambridge, Mr. Boyle passed to the Middle Temple, but having lost both his father and mother, his resources were probably not sufficient for his maintenance during the usual course of study, and he was thus led to offer his services to Sir R. Manwood, at that time chief baron of the Exchequer. The circumstances in which he was now placed afforded him little opportunity for the exercise of his talents, and in his twenty-second year he went to Dublin in quest of a situation more suitable to the activity of his disposition. His first employment was to draw up memorials and other documents for individuals connected with the government, by which means he acquired considerable insight into public affairs. In 1595 he married one of the co-heiresses of a gentleman of Limerick, who in admiration of his talents overlooked the inadequacy of his fortune. His wife died in giving birth to her first child, and left him in possession of 500*l.* a-year arising from landed estates, and a sum in cash besides. He lived with strict economy without being parsimonious, and as land sold at a very cheap rate in Ireland, he increased his property by considerable purchases in Ulster. The envy of several influential persons was excited by his prosperity, and they respectively addressed letters to Queen Elizabeth, stating that Mr. Boyle, who only came into the country a few years before, made so many purchases of landed property as to occasion suspicion of his being aided by some

foreign prince; a circumstance which was the more evident, they alleged, owing to some of his newly-acquired possessions being on the coast, and possessed of advantages for facilitating an invasion, an event which at the time was generally anticipated. Mr. Boyle, who had been informed of these machinations, had resolved upon repairing to the English court in order to defend his interests and character, but the rebellion of Munster broke out before he could quit Ireland. His estate was ravaged by the rebels, and as he himself states, "I could not say that I had one penny of certain revenue left me."

He now returned with forlorn prospects to the Temple; but when the Earl of Essex was sent to Ireland, he was received in the suite of that nobleman. On again reaching the country his former enemies made another attempt to crush his reviving hopes. They were so far successful as to occasion his being put under confinement, but on his case coming before the English Privy Council he was fortunate to secure the presence of the queen, who listened with interest to his able and successful defence. Before he concluded he exhibited the principal instigator of the proceedings (Sir Henry Wallop, treasurer of Ireland) in the character of a public peculator, and clearly proved that he passed his accounts in an irregular and dishonest manner. When he had done speaking, the queen said, "By God's death, all these are but inventions against this young man, and all his sufferings are for his being able to do us service, and those complaints urged to forestall him therein; but we find him a man fit to be employed by ourselves, and will employ him in our services. Wallop and his adherents shall know that it shall not be in the power of any of them to wrong him, neither shall Wallop be our treasurer any longer." A new treasurer was immediately appointed, and Boyle was made clerk of the council of Munster; "and this," he says, "was the second rise that God gave to my fortunes."

He returned to Ireland to discharge the duties of his office, and shortly afterwards, on the Spaniards and Tyrone being defeated with great loss, was sent to announce the victory to the English court. He performed this duty with extraordinary celerity, having, as he says in his memoirs, left the lord president at Shannon Castle, near Cork, "on the Monday morning about two of the clock, and the next day, being Tuesday, I delivered my packet and supped with Sir Robert Cecil, being then principal secretary, at his house in the Strand, who after supper held me in discourse till two of the clock in the morning; and by seven that morning called upon me to attend him to the court, where he presented me to her Majesty in her bedchamber." The queen again received him in a gracious manner.

His fortunes now took a more prosperous turn. He bought at a low price the Irish estates of Sir Walter Raleigh, which contained 12,000 acres, and by judicious management greatly increased their value. In July 1603 Mr. Boyle married a daughter of Sir Geoffrey Fenton, principal secretary of state; on which occasion his friend Sir George Carew, the lord-deputy of Ireland, knighted him on his wedding-day. In 1606 he was sworn a privy councillor to King James for the province of Munster; in 1612 a privy councillor for the kingdom of Ireland; in 1616 he was created Lord Boyle, baron of Youghall; and in 1620 Viscount Dungarvan and Earl of Cork. In 1629 he was constituted one of the lords justices of Ireland; in 1631 lord high treasurer, an office which was made hereditary in his family.

Charles I., out of regard to the Earl of Cork's character and talents, and as an acknowledgment of his services, created the earl's second son then living, Lewis, a child of eight years old, Viscount Kynelmeaky. Lewis was killed in the battle of Liscarroll in 1642, and his widow was created Countess of Guildford in her own right by Charles II. The Earl of Cork was a witness against Lord Strafford, with whom he had not been on cordial terms in consequence partly of the jealousy with which Lord Strafford during his residence in Ireland as lord-lieutenant had regarded the influence of the Earl of Cork.

The Earl of Cork died September 15th, 1644, in the seventy-eighth year of his age. His wife, by whom he had fifteen children, died in 1630.

(*Budgell, Memoirs of the Family of the Boyles, 1732; Life of the Hon. Robert Boyle, by Birch; Memoirs written by the Earl of Cork in 1632, called True Remembrances.*)

BOYLE, ROBERT, was the seventh son of Richard Boyle, earl of Cork, and his wife Catherine, only daughter of Sir Geoffrey Fenton, secretary of state for Ireland. There were fifteen children of this marriage, and the subject of this memoir (the fourteenth) was born on the 25th of January 1626 at Lismore in the province of Munster.

The autobiography and correspondence of Robert Boyle have been almost entirely forgotten in the superior fame which he has attained in chemistry and medicine. If we consider the position in which he stands among our philosophers, it will not appear superfluous, having his own words to quote, if we give the account of his earlier years at some length. The narration in question (in which he calls himself Philaretus, and writes in the third person) is prefixed to Dr. Birch's edition of his works in 5 vols. fol., which we here cite once for all—'The Works of the Hon. Robert Boyle, in five volumes, to which is prefixed a Life of the Author,' London, 1744. Of his birth and station he says, "that it so suited his inclinations and designs, that, had he been permitted an election, his choice would scarce have altered God's assignment." He lost his mother at an early age, this

being one 'great disaster;' the other was the acquisition of a habit of stuttering, which came upon him from mocking other children. He was taught early to speak both French and Latin, and his studiousness and veracity endeared him to his father. At eight years old he was sent to Eton with his elder brother, the provost being Sir Henry Wotton, "a person that was not only a fine gentleman himself, but very well skilled in the art of making others so." Here he was placed under the immediate care of Mr. Harrison, one of the masters, and became immoderately fond of study from "the accidental perusal of Quintus Curtius, which first made him in love with other than pedantic books." He always declared that he was more obliged to this author than was Alexander. Two years afterwards the 'Romance of Amadis de Gaule' was put into his hands "to divert his melancholy," and by this and other such works his habit of persevering study was weakened. He was obliged afterwards systematically to conquer the ill-effects of this mental regimen, and "the most effectual way he found to be the extraction of the square and cube roots, and especially those more laborious operations of algebra which so entirely exact the whole man, that the smallest distraction or heedlessness constrains us to renew our trouble, and re-begin the operation." His father had now come to England, and settled at Stalbridge in Dorsetshire; on which account Robert Boyle was soon removed from Eton to his father's house, and placed under the tuition of the rector of the parish. In the autumn of 1638 he was sent to travel with an elder brother, under the care of M. Marcombes, a Frenchman, to whom he acknowledges himself in various ways greatly indebted. It had been intended that he should have served in a troop of horse which his eldest brother had raised, but the illness of another brother prevented this. He travelled through France, and settled with his governor at Geneva, for the prosecution of his studies. A thunderstorm which happened there in the night was the cause of those religious impressions which he retained throughout his life. He carried his theological studies to considerable depth. He cultivated both Hebrew and Greek, that he might read the originals of the Scriptures.

In September 1641 he left Geneva, and travelled in Italy, where he employed himself in learning the language, and "in the new paradoxes of the great star-gazer, Galileo, whose ingenious books, perhaps because they could not be so otherwise, were confuted by a decree from Rome." Having seen Florence, Rome, and Genoa, he proceeded to Marseille, and there his own narrative ends. At Marseille he was detained for want of money, owing to the troubles in England; having however procured funds from his governor, he returned to London, where he found (in 1644) his father dead, and himself in possession of the manor of Stalbridge, with other property. At that place he resided till 1650, not taking any part in politics, and being in communication with men of influence in both parties, whereby his property received protection from both. The epistolary correspondence of Boyle is amusing, and furnishes one of the earliest specimens of the lighter style.

From this time to the end of his life he appears to have been engaged in study. His chemical experiments date from 1646. He was one of the first members of the Invisible College, as he calls it, which has since become the Royal Society. The rest of his public life is little more than the history of his printed works, which are voluminous, and will presently be further specified. He must have written with singular rapidity, for an argumentative and elaborate letter, written as appears on the face of it in the morning, previously to making his preparations for a journey in the afternoon, is of a length equal to nearly four columns of this work. After various journeys to his Irish estates, he settled at Oxford in 1654, where he remained till 1668. Here his life ('Works,' vol. i.) states him to have invented the air-pump, which is not correct, though he made considerable improvements in it. On the accession of Charles II. in 1660 he was much pressed to enter the Church, but refused, both as feeling the want of a sufficient vocation towards that profession, and as desirous to add to his writings in favour of Christianity all the force which could be derived from his fortune not being interested in its defence. When he left Oxford he took up his abode with his elder sister, Lady Ranelagh, in London, and in 1663 was one of the first council of the newly-incorporated Royal Society. In the year 1666 his name appears as attesting the miraculous cures (as they were called by many) of Valentine Greatraks, an Irishman, who by a sort of animal magnetism made his own hands the medium of giving many patients almost instantaneous relief. At the same time, in illustration of what we shall presently have to say on the distinction between Boyle as an eye-witness and Boyle as a judge of evidence, we find him in 1669 not indisposed to receive, and that upon the hypothesis implied in the words, the "true relation of the things which an unclean spirit did and said at Mascon in Burgundy," &c. That he should have been inclined to prosecute inquiries about the transmutation of metals needs no excuse, considering the state of chemical knowledge in his day; and we find even Newton inclined to fear the consequences which might follow from the further prosecution of some experiments of Boyle, the results of which only had been stated.

It appears that both Boyle and Newton were startled with the result of Boyle's experiments; and the treatment which old believers in alchemy have experienced from the present age will render it no less than just to say that faith in alchemy now, and the same in the middle

of the 17th century, are two things so different in kind, that to laugh at both in one shows nothing but the ignorance of the laugher.

Boyle had been for years a director of the East India Company, and we find a letter of his in 1676 pressing upon that body the duty of promoting Christianity in the East. He caused the Gospels and the Acts of the Apostles to be translated into Malay, at his own cost, by Dr. Thomas Hyde; and he promoted an Irish version. He also gave a large reward to the translator of Grotius 'De Veritate,' &c., into Arabic; and would have been at the whole expense of a Turkish Testament, had not the East India Company relieved him of a part. In the year 1680 he was elected President of the Royal Society, a post which he declined, as appears by a letter to Hooke ('Works,' i. p. 74), from scruples of conscience about the religious tests and oaths required. In 1688 he advertised the public that some of his manuscripts had been lost or stolen, and others mutilated by accident; and in 1689, finding his health declining, he refused most visits, and set himself to repair the loss. In that year, being still in a sort of expectation that the alchemical project might succeed, he procured the repeal of the statute 5 Hen. IV. "against the multiplying of gold or silver;" and what was still more useful, the same statute contains a provision that "no mine of copper, &c., shall be adjudged a royal mine, although gold or silver may be extracted out of the same." In 1691 his complaints began to assume a more serious character. Lady Ranelagh died on the 23rd of December, and he followed her on the 30th of the same month. He was buried at St. Martin's-in-the-Fields, January 7, 1692, and a funeral sermon was preached on the occasion by Dr. Burnet, who had long been his friend, and to the expenses of whose 'History of the Reformation' he had largely contributed.

Boyle was never married. He was tall, slender, and emaciated; excessively abstemious in food, and somewhat oppressed by low spirits; but at the same time of a copiousness of conversation and wit which made Cowley and Davenant rank him in that respect among the first men of his age. His benevolence both in action and sentiment distinguished him from others as much as his acquirements and experiments, and that in an age when toleration was unknown. He constantly refused a peerage, though the personal friend of three successive kings. He was always a moderate adherent of the Church of England; nor is it recorded that he ever attended any other place of worship, except once when he went to hear Sir Henry Vane discourse at his own house, on which occasion he entered into a discussion with the preacher. Finally, he was a man of whom all spoke well. With such a character, it is not to be wondered at if his private virtues were made to reflect a lustre upon his scientific exploits which the latter could not have gained alone; the more especially when it is considered that his contemporaries, who viewed him as he was and from their own position, had a right to regard his genius as one which produced results of the first order, which could be but another way of saying that it was of the first order itself. So indeed it has been understood: and we are accustomed to talk of Bacon and Newton and Boyle together. The merits of Boyle are indeed singular and almost unprecedented; his discoveries are in several cases of the highest utility; but we do not think the inference that they were the result of a reasoning power or a distinctive sagacity of the highest kind, would be correct. Coming after Bacon, feeling all the beauty of his methods, disgusted with the spirit of system, and strong beyond his contemporaries in common sense, the same view of life which made him indifferent to the political and religious disputes of his time, and content himself with the knowledge and practice of the things which they all agreed in, also regulated his views of philosophy; so that he began to investigate for himself, on the simple principle of examining closely, and strictly relating what he saw. In this respect his writings remind us strongly of those of Roger Bacon: they are full of sensible views and experiments of his own, and of absurdities derived from the relation of others. He leans too much, for one of our day, to the attempt to discover the fundamental relations which touch close upon the primary qualities of matter, instead of endeavouring to connect and classify what he had actually observed. His discoveries do not show him to have that talent for suggestion and power of perceiving points of comparison, which is the distinguishing attribute of the greatest discoverers. To take an instance: in his experiments "showing how to make flame stable and ponderable," he finds that various substances gain weight by being heated. He states it then as proved that "either flame, or the analogous effluxions of the fire, will be, what chemists would call, corporified with metals or minerals exposed naked to its action;" but it never suggests itself to him that the additional substance added to the metal or mineral may be air, or a part of air.

When a character has been overrated in any respect, the discovery of it is usually attended by what the present age calls a 'reaction': the pendulum of opinion swings to the side opposite to that on which it has been unduly brought out of its position of equilibrium. And this has been the case with recent estimates of the character of Boyle as a man of science. Perhaps it will be a fair method to take a foreign history of physics (where national partiality is out of the question) and try the following point:—What are those discoveries of the Briton of the 17th century which would be thought worthy of record by a Frenchman of the 19th? In the 'Hist. Phil. du Progrès de la Physique,' Paris, 1810, by M. Libes, we find a chapter devoted to the Progrès de la Physique entre les mains de Boyle; and we are told

that the air-pump in his hands became a new machine—that such means in the hands of a man of genius multiply science, and that it is impossible to follow Boyle through his labours without being astonished at the immensity of his resources for tearing out the secrets of nature. The discovery of the propagation of sound by the air (the more creditable to Boyle that Otto von Guericke had been led astray as to the cause), of the absorbing power of the atmosphere, of the elastic force and combusive power of steam, the approximation to the weight of the air, the discovery of the 'reciprocal' attraction of the electrified and non-electrified body, are mentioned as additions to the science. There is a peculiar advantage consequent upon such a labourer as Boyle in the infancy of such a science as chemistry. Here are no observed facts of such common occurrence, and the phenomena of which are so distinctly understood, that any theory receives something like assent or dissent as soon as it is proposed. The science of mechanics must have originally stood to chemistry much in the same relation as the objects of botany to those of mineralogy: the first presenting themselves, the second to be sought for. The mine was to be found as well as worked; and every one who sunk a shaft diminished the labour of his successors by showing at least one place where it was not. In this point of view it is impossible to say to what degree of obligation chemistry is to limit its acknowledgments to Boyle. Searching every inlet which phenomena presented, trying the whole material world in detail, and with a disposition to prize an error prevented, as much as a truth discovered, it cannot be told how many were led to that which does exist, by the previous warning of Boyle as to that which does not. Perhaps had his genius been of a higher order he would have made fewer experiments and better deductions; but as it was, he was admirably fitted for the task he undertook, and no one can say that his works, the eldest progeny of the 'Novam Organum,' were anything but a credit to the source whence they sprung, or that their author is unworthy to occupy a high place in our Pantheon, though not precisely on the grounds taken in many biographies or popular treatises.

The characteristics of Boyle as a theological writer are much the same as those which appertain to him as a philosopher. He does not enter at all into disputed articles of faith, and preserves a quiet and argumentative tone throughout: but the very great prolixity which he falls into renders him almost unreadable. He was, as he informs us in his youth, a writer of verses, and one fancy-piece in prose, 'The Martyrdom of Theodora,' has been preserved, wherein his hero and heroine make set speeches to each other, of a kind somewhat like those in Cicero de Oratore, with a little dash of Amadis de Gaule, until the executioner relieves the reader. His 'Occasional Reflections' have fallen under the lash of the two greatest satirists in our language, Swift and Butler, in the 'Pious Meditation upon a Broomstick' of the former, and an 'Occasional Reflection on Dr. Charlton's feeling a dog's pulse at Gresham College,' published with the posthumous writings of the latter. The treatises 'On Seraphic Love,' 'Considerations on the Style of the Scriptures,' and 'On the great Veneration that Man's Intellect owes to God,' have a place in the 'Index librorum prohibitorum' of the Roman Church.

The 'Boylean Lectures' were instituted by him in his last will, and endowed with the proceeds of certain property, as a salary for a "divine or preaching minister," on condition of preaching eight sermons in the year for proving the Christian religion against notorious infidels, namely, atheists, theists, pagans, Jews, and Mohammedans, not descending lower to any controversies that are among Christians themselves. The minister is also required to promote the propagation of Christianity, and answer the scruples of all who apply to him. The stipend was made perpetual by Archbishop Tension. Dr. Bentley was appointed the first Boyle lecturer. We shall not give a detailed list of all the titles of Boyle's works, which would occupy much room to little purpose, as a complete set of the original editions is very rarely met with, and the two collected editions have their own indexes. During his lifetime, in 1677, a very imperfect and incorrect edition was published at Geneva. The first complete edition was published in 1744 by Dr. Birch, as already noticed. It is in five volumes folio, and contains the life which has furnished all succeeding writers with authorities, besides a very copious index. The collection of letters in the fifth volume is highly interesting. The second complete edition was published in 1772. But previously to either of these, Dr. Shaw, the editor of Bacon, deserved well of the scientific world by publishing an edition of Boyle in three volumes quarto, "abridged, methodised, and disposed under general heads." As far as may be, the various and scattered experiments are brought together, and a good index added, but we cannot find any references to the originals. There is a list of Boyle's works in Hutton's mathematical dictionary, and another in Moreri.

BOYLE, ROGER, fifth son and eleventh child of the first earl of Cork, born April 26, 1621, was created Baron Broghill, almost while in his infancy, by Charles I. He married a sister of the Earl of Suffolk, and landed with his wife in Ireland the day after the breaking out of the rebellion, which he displayed great activity in quelling.

The death of Charles I., and the state of his possessions in Ireland, which he almost gave up as lost, induced Boyle to seek retirement in England, where he occupied himself with projects for the restoration of royalty. He had gone so far as to obtain a passport, and was on

the point of leaving the kingdom for the purpose of having an interview with Charles II., when his proceedings, and the future course of his life, were turned in another direction by the dexterous management of Cromwell, who, with the members of the Committee of Public Safety, had become acquainted with Lord Broghill's intentions. Cromwell had been struck with the possibility of securing the services of Lord Broghill in the cause of the Commonwealth, and having the sanction of the members of the committee, he sent a message to his lordship informing him of his desire to wait upon him, and followed his own messenger so quickly, that he entered his lordship's apartments before he had time to deliberate upon the meaning of the communication. Cromwell informed Lord Broghill that the Committee of Safety were acquainted with his intended movements, which he detailed. Lord Broghill attempted to deny the facts, on which Cromwell produced copies of papers which his lordship had confidentially addressed to friends of the royalist cause. The frank and candid manner of Cromwell, the just compliments which he paid to Lord Broghill's merits, and the real service which he was doing him by protecting him from the consequences of his conduct, completely succeeded in gaining him to Cromwell's proposals. Cromwell, who was about to proceed with an army to Ireland, offered Broghill the command of a general officer, with a condition that his services should be limited to the immediate object of the expedition. Broghill, after some hesitation, accepted Cromwell's proposition. His services in Ireland proved that his abilities had not been overrated. On one or two occasions his boldness and activity were of signal value, especially during the siege of Clonmel, when his vigilance prevented the rebels from forming in the rear of the army during the siege. While engaged upon this service he received an urgent message from Cromwell recalling him to Clonmel, the siege of which he feared he should be compelled to raise, as there was much disease in the army, and it had been twice repulsed by the Irish. At the end of three days Lord Broghill appeared at the head of his division before Clonmel, when Cromwell caused the whole army to salute him by the cry of 'A Broghill! a Broghill!' Cromwell himself embraced him, and shortly afterwards, though it was in the depth of winter, Clonmel was taken.

Under the Protectorate Lord Broghill was one of the privy council, and at the special request of Cromwell he went to reside in Scotland. Richard Cromwell selected him as one of the cabinet council, along with Dr. Williams and Colonel Philips, and more than once his lordship's political talents were most dexterously employed in sustaining the Protector's interests. But the impossibility of Richard Cromwell any longer retaining the protectorate becoming soon evident, Lord Broghill, conceiving that the country might otherwise fall into the hands of a cabal, used every exertion to bring about the Restoration. He repaired to Ireland, and by his influence secured the co-operation of some of the most important individuals in the army, and soon after sent Lord Shannon, his younger brother, with a letter encouraging Charles II. to land in Ireland.

After the Restoration Lord Broghill was created earl of Orrery, and took his seat in the cabinet council. He also acted as one of the lords justices for the government of Ireland, and was appointed lord president of the province of Munster. In the leisure which succeeded the active part of his life, the Earl of Orrery, at the king's request, wrote several plays. He wrote also some verses on the death of Cowley, and other poetical pieces; a thin folio, on the art of war; and 'Parthenissa,' a large romance in folio, part of which he wrote by desire of Henrietta Maria, daughter of Charles I. These productions have no great merit, and were chiefly written during severe attacks of the gout.

He opposed a petition presented to the king by the Irish Catholics, praying for the restoration of their estates: the prayer of the petitioners was rejected. The Act of Settlement, which was drawn up by the Earl of Orrery, contains stipulations by which those Roman Catholics who had conducted themselves loyally were restored to their possessions. In a local court, in which he presided in virtue of his office of Lord President of Munster, he is stated to have acted with great wisdom and equity. The Earl of Orrery died Oct. 16th, 1679, in his 59th year.

BOYLSTON, ZABDIEL, an American physician, was born in the state of Massachusetts in 1684. He was the first to introduce inoculation into New England, where the practice became general before it was common in Great Britain. In 1721 the small-pox broke out at Boston in an alarming manner, when Dr. Cotton Mather pointed out to the profession an account of inoculation as practised in the East, which was contained in a volume of the 'Transactions of the Royal Society.' Notwithstanding the ridicule with which his medical brethren treated this mode of counteracting a virulent disease, Boylston had the courage to inoculate his own son. In the years 1721 and 1722, the practice of inoculation spread, and, with one or two exceptions, it was attended with the most successful results. But such were the obstinate prejudices of the profession and the public generally, that clamours were raised against Boylston, and his life was in danger in consequence of the excited state of popular feeling; even the 'select men' of Boston passed a by-law prohibitory of inoculation. It was alleged that the practice increased the probabilities of contagion, and also that the disease being a judgment from Heaven on men's sins, it was impious to adopt such means to avert its wrath. Boylston outlived these prejudices, and acquired a considerable fortune

by the successful practice of his profession. During a visit which he paid to England, he met with great attention, and was elected a Fellow of the Royal Society. He corresponded with this body on his return to America, and some of his papers are printed in the Society's 'Transactions.' He was the author of two works relating to the small-pox (one a pamphlet published at Boston), both of which are in the library of the British Museum. The other work was printed in London during the visit which he paid to this country.

BOYSE, SAMUEL, a writer of considerable poetical talent, but remarkable chiefly for the singular contrast of his elevated imagination and rectitude of moral sentiment, as displayed in his writings, and his dissolute propensities. He was the son of Joseph Boyse, an eminent dissenting minister, and was born in Dublin in 1708. Being destined for the pulpit, he was sent by his father to the University of Glasgow, where, after spending a few months in idleness, he married while yet in his teens; and with his wife and her sister, who in dissipation and indolence were similar to himself, he returned to Dublin, and occasioned by his dissolute conduct the ruin and death of his father. Boyse then went to Edinburgh, and published in 1731 a volume of poems, with a flattering dedication to the Countess of Eglinton, who, with Lord Stormont (on the death of whose lady Boyse had published a laudatory elegy), patronised him, and kindly recommended him to Lord Mansfield and the Duchess of Gordon, by whom, and also by Lords Stair and Tweedale, he was furnished with introductory letters to the lord chancellor, Sir Peter King, Pope, and other important personages in England, whither he removed to escape from the importunity of his creditors in Scotland. But his indolence and aversion to refined society defeated the friendly intentions of his patrons; so that, resorting to a squalid garret in London, he relied upon the sale of his verses and the charitable donations of literary individuals, whose compassion he excited by the most servile and pathetic protestations of his miserable condition. In 1740 he published his principal work, a poem entitled 'Deity'—one of the numerous attempts at poetical sublimity in which the most ridiculous faults are tolerated solely on account of the subject. The devotional reflections, though incoherent, and made often apparently to furnish a rhyme, display an occasional energy of poetical conception which even Pope declared he would not disown. But we can feel only disgust at the pious pretensions of a man who, often with a guinea obtained by employing his wife to write mendicant letters, could gratify his sensuality at a tavern while she and her child were suffering with cold and hunger. Boyse was a very copious contributor of verses to the 'Gentleman's Magazine': these verses have the signatures 'Y' and 'Alcaeus,' and if collected would form about six 8vo volumes. Among his separate publications are, 'Albion's Triumph,' a poem on the battle of Dettingen; 'An Historical Review of the Transactions in Europe during 1739-45'; 'Chaucer's Tales in Modern English,' &c. He was not deficient in ability as a classical scholar, and a translator of German, Dutch, and French; but his inveterate habit of drinking hot beer in the lowest pot-houses at length stupified his mind, and reduced him to the necessity of pledging even his clothes. In this predicament he sometimes, for several weeks, sat up in bed composing odes and elegies for the 'Gentleman's Magazine.' All the mourning he could afford on the death of his wife was a pennyworth of black ribbon, which he tied round the neck of his little dog. His wretchedness, like that of Savage, was commiserated by Dr. Johnson, who instituted for him, among his friends, a subscription of sixpences. His benefactors, wearied out with his applications, at length abandoned him, and in May 1749 he died in his garret in Shoe-lane, with his pen in his hand, as he sat in his blanket translating the treatise of Fenelon on the existence of God. He left a second wife in extreme poverty, and was buried at the expense of the parish.

BOZZARIS, MARCOS, a native of Souli in the mountains of Epirus, born about the end of the 18th century, was yet a boy at the time of the war of extermination waged by Ali Pasha of Jannina against the Souliotes. [ALI PASHA.] At the close of that war in 1808 Bozzaris and his father were among the remnant of the Souliote population who succeeded in reaching Parga, whence they went over to the Ionian Islands, then under the protection of Russia. In 1820, when the war broke out between the sultan and Ali, about 800 Souliotes, who were still in the Ionian Islands, offered their services to the Ottoman admiral against their old enemy, and were accordingly landed on the coast of Epirus. Soon after, however, having reason to complain of the Turks, and at the same time receiving favourable proposals with a bribe of money from Ali, they went over to the pasha, by whom they were replaced in possession of their native mountains. This enabled Ali to carry on the contest against the sultan for two years longer. The Souliotes now fought for him with their accustomed bravery under the command of Bozzaris, and their ranks were swelled by other Epirotes to about 3000 fighting men. With this force Bozzaris gained several advantages over the Turkish army, which was acting in Epirus against Ali. In the spring of 1821 the sultan sent Khourshid Pasha with a fresh army, who laid siege to Jannina. Bozzaris and his Souliotes annoyed the Turks by bold diversions in their rear, while the Greek revolution breaking out at the same time added to the difficulties of the sultan. On the taking of Jannina and the death of Ali in February 1822, the Souliotes continued the war on their own account, and being attacked by Khourshid in their mountains, they

defeated him with great loss in May and June of that year. Khourshid at last quitted Epirus, leaving Omer Vrioni in command there, while at the same time Prince Mavrocordato landed at Mesolonghi with a body of regular troops in the Greek service, and being joined by Bozzaris advanced towards Arta. This movement led to the battle of Petta, on the 16th of July 1822, which the Greeks and Philhellenes lost through the treachery of Gogos, an old Kleftis and captain of *Armatoles*. Bozzaris, after fighting bravely, was obliged to retire with Mavrocordato to Mesolonghi. Soon after the Souliotes, who had remained in their mountains, signed a capitulation with the Turks, by which they gave up Souli and the fortress of Khiafa, and on receiving a sum of money, retired with their families to Cefalonia, in September 1822. Bozzaris with a handful of Souliotes remained with Mavrocordato, determined to defend Mesolonghi to the last. He kept the Turks at bay by various sorties, and also amused them by promises of surrender, until a Hydriote flotilla coming to relieve the place, the Turks raised the siege and retired into Epirus, March 1823. The pasha of Soodra advanced next with a numerous force of Albanians, determined upon taking Mesolonghi. Bozzaris feeling the importance of that town to the Greek cause, and knowing the weakness of the fortifications, which were unfit to resist a regular siege, determined to meet the enemy. He left Mesolonghi with a body of only 1200 men, 800 of whom were his own Souliotes, and arrived on the 20th of August 1823, near Kerpenia, where the van of the Albanians, consisting of about 4000 Mirdites under Jeladeen Bey, was encamped. Having held a council with his officers, it was determined to attack the enemy's camp the following night. The Souliotes marched silently to the attack and surprised the Albanians, of whom they made a great slaughter. Bozzaris while leading on his men received a shot in the loins, and soon after another in the face, when he fell and expired. The Souliotes then withdrew, carrying away Bozzaris' body, which was interred at Mesolonghi with every honour. The executive government of Greece being informed of the event issued a decree in which they styled Bozzaris the Leonidas of modern Greece. His brother, Constantine Bozzaris, succeeded him in the command of the Souliote battalion. The self-devotedness of Bozzaris was the means of protracting the defence of Mesolonghi for two years more.

BRACCIO FORTEBRACCI, called also BRACCIO DA MONTONE, from the name of his patrimonial estate, was born at Perugia in 1368, of an old patrician family. Braccio, before he was twenty, served as a Condottiere, or leader of a mercenary troop, in the service of the Count of Montefeltro against the Malatesti, lords of Rimini. In 1393, when a general insurrection of the popular party took place at Perugia, in which a number of the nobles were killed and the remainder driven away, the castle of Montone became a rallying-point for the exiles, and Braccio one of their stoutest champions. After a desultory warfare between the two factions for several years, the popular party applied for protection to Gian Galeazzo Visconti, the powerful duke of Milan, and paid allegiance to him in January 1400; and after the death of Visconti, the party transferred its allegiance to Pope Boniface IX., under the plea of "the welfare of the Republic," on condition that the emigrant nobles should remain in banishment. Braccio now resumed his life of a Condottiere, and served in Lombardy under the great leader Alberico da Barbiano. He afterwards carried on a partisan warfare on his own account, in the Marches of Ancona, against the Marquis Ludovico Migliorati, the nephew of Pope Innocent VII., when he levied contributions, plundered towns, and got ransoms from the officers whom he made prisoners.

In 1406 the great Western schism began, which was only extinguished twelve years after by the Council of Constance, during which period several popes or antipopes distracted the church by their conflicting claims. Ladislaus, king of Naples, thought of availing himself of this confusion to occupy the Papal States and all central Italy, and he sent messengers to Braccio in 1408, to induce him to enter his service, promising to forward his views towards the subjection of his native town, Perugia. Braccio accepted the proposal, received a sum of money for his condotta, and crossing the Apennines at the head of a considerable body of horse and foot, he scoured the valley of the Tiber and took several towns in the name of the king. The people of Perugia, in alarm, sent ambassadors to Ladislaus, who was then at Rome, and offered him the dominion of their city, provided he would not let the emigrants return. "Rather than make peace with the nobles," said the leaders of the people in the council, "we will submit to a foreign king." Ladislaus accepted, in June 1408, the dominion of Perugia. He agreed that the emigrant nobles should not be allowed to remain within thirty miles of the gates of Perugia. He also sent a large body of Neapolitan cavalry to attack Braccio, who, having received timely information, retired to the Marches, from whence in 1409 he marched again towards the south, and joined the other great Condottiere, Sforza Attendolo, in driving away the troops of Ladislaus from the Roman State in the name of the new pope, John XXIII. Braccio again attacked Perugia, when Ladislaus, having made peace with Pope John, sent Sforza to check his movements, and Braccio moved towards Bologna in obedience to the orders of the pope. In 1414 Ladislaus died, and was succeeded by his sister Joanna II., a weak princess. In the following year the Council of Constance deposed John XXIII. Braccio, ever intent upon his object of re-entering his native town by force, having exacted a sum of eighty thousand ducats

from the people of Bologna, marched with his bands in the spring of 1416, and encamped in front of Perugia, before the citizens had time to prepare for defence. After some resistance, the citizens in despair sent him a deputation, offering to make him Lord of Perugia, provided he granted a general amnesty for the past. On the 19th of July 1416, Braccio at the head of his bands, and of all the emigrant nobles, after twenty-four years of exile, re-entered Perugia in triumph amidst acclamations, and received the oath of allegiance from the magistrates and the principal citizens. His conduct was temperate, but firm; he enjoined strict discipline on his soldiers; he divided, at first, the civil offices among the two parties, but by degrees he gave to his friends the larger share; he checked the importunities of the emigrants to recover possession of their confiscated property; he paid the debts of the republic with his own treasures, accumulated during his wars; and he encouraged the university of Perugia. The people began to like him, and the learned gave him their praises; but he was cruel towards those who offered him any resistance.

In 1417 Braccio marched towards Rome, which in the absence of a legitimate pope was occupied by the Neapolitans, and entered it by capitulation, but he was shortly after obliged to evacuate it at the approach of his rival Sforza. The Council of Constance had now elected Pope Martin V., a man of determination, who expressed his intention of recovering full possession of the Papal States, and ridding them of all lords and usurpers. A deputation was sent to him from the council and magistrates of Perugia, requesting him to confirm Braccio, count of Montone, as lord of Perugia. Martin gave an evasive answer, upon which Braccio prepared for the threatened danger by raising money from the neighbouring chieftains of the Marches and of Umbria, who paid his demands through fear. About this time Braccio issued a decree restoring to the emigrant nobility of Perugia their property, of which they had been deprived since 1393.

Pope Martin allied himself with Queen Joanna of Naples, who gave him her general, Sforza Attendolo, to reduce the Papal territories into subjection. Braccio made preparation to oppose him, but before the two rivals could meet in the field the pope quarrelled with Joanna, upon which both he and Sforza supported the claims of the Anjou dynasty to the crown of Naples. One consequence of this change was that Martin agreed to make terms with Braccio, whom he invited to meet him at Florence in February 1420. Braccio went to the conference with the retinue of a great potentate, and accompanied by the lords of Foligno, Camerino, Fabriano, and others, and by the principal nobles of Perugia, Assisi, Todi, Orvieto, Narni, and Rieti. On arriving at the gates of Florence, he took off his armour and put on a vest of purple and gold, and entered the city on foot, escorted by the magistrates and first citizens of the republic, who accompanied him to the palace of the pontiff. It was agreed that Perugia and its territory, and several towns in the Marches, should be administered by Braccio and his heirs. Braccio was to serve with his troops at the expense of the pope against Bologna, which had revolted under one of the Bentivogli.

On his return Braccio contributed to embellish Perugia, and he ordered the construction of the emissary to carry off the superabundant waters of the Thrasymene Lake. Bologna in the course of two months was obliged to capitulate to the troops of Braccio, and submit to the pope in July 1420. At the close of that year he married, with great pomp, the sister of Varani, lord of Camerino. Meantime a civil war broke out in the kingdom of Naples. Louis of Anjou, count of Provence, encouraged by Pope Martin, and supported by Sforza, who had quarrelled with Queen Joanna, invaded the kingdom, where he found numerous adherents among the nobles. Joanna sent Antonio Caraffa, nicknamed Malizia on account of his cunning, as her ambassador to Alfonso of Aragon and Sicily, who was then in Sardinia. Alfonso went to Sicily to collect his fleet for the assistance of Joanna, who at the same time offered to Braccio the command of her land forces, with the rank of high-constable of the kingdom, and paid him down 200,000 ducats in advance. In the spring of 1421 Braccio entered the Abruzzo with a large force, surprising by the rapidity of his march the partisans of the Angevins, who submitted, except Count Caldora, who took refuge in the mountains. Sulmona capitulated. Braccio, issuing out of the defiles of Abruzzo, surprised Capua, and suddenly appeared before Naples, which was then besieged by Sforza and by the fleet of Louis of Anjou. King Alfonso meantime arrived with his fleet at the entrance of the bay; Sforza was obliged to raise the siege, the Angevins retired to Castellamare, and Braccio entered Naples in triumph with King Alfonso, who, together with Queen Joanna, solemnly bestowed upon Braccio the golden staff of high-constable of the kingdom, with supreme command over both the Neapolitan and Aragonese forces, and caused the troops to swear obedience to him. The queen at the same time created him Count of Foggia and Prince of Capua, the last of which towns she gave him in fief. A desultory predatory warfare was carried on for some time by the troops of Braccio against those of Sforza, in which however the poor inhabitants of the fine plains of Campania were the greatest sufferers. Pope Martin now interfered as mediator, and Louis of Anjou, giving up his attempt for the present, withdrew to Rome. Sforza remained under arms, but Braccio undertook to win him over to the queen's party; in which he succeeded at an interview near

Monte Casino, when the two rival chiefs, who had both served in their youth under Alberico da Barbiano, renewed their former acquaintance. The war being now over, Braccio in the spring of 1422 returned to Perugia, after having taken on his way Città di Castello, which he added to his other territories.

In the following year, fresh disturbances having broken out at Naples, Alfonso sent again for Braccio, and Queen Joanna gave the messengers a crown to be placed on his head as Prince of Aquila and Capua, with full power to subdue and govern the important province of Abruzzo, which had again revolted. On the 13th of February 1423, the Lord of Perugia, seated on a seat of ivory in the great hall of the townhouse, and attended by the lords of Foligno and Camerino, received the Neapolitan envoys, from whom Corrado Trinci, lord of Foligno, having received the crown, placed it on the brow of Braccio and a golden chain round his neck, amidst loud acclamations of "Long live the Prince of Capua and Lord of Perugia." As the dominion of Braccio extended over great part of Umbria and the Marches, and on the south over the principality of Capua, the acquisition of Aquila and the Abruzzo would have joined these two portions so as to form the whole into a compact principality. Braccio's ambition is said to have soared still higher, and to have aspired to the crown of Naples. In May 1423 he gathered his bands near Todi, to the number of 3200 horsemen and some thousand foot, with which he entered the kingdom of Naples; he overran Campania and Apulia, defeated the partisans of the Angevins, took Bari, and advanced into Calabria; then retracing his steps towards the Abruzzo, he laid siege to the strong town of Aquila in the summer of 1423. He blockaded the town and devastated the surrounding country. Joanna, who had now revoked her adoption of Alfonso and made common cause with Louis of Anjou, ordered Sforza to march to the relief of Aquila. Braccio, being joined by other bands of the Aragonese party, was in possession of the whole Abruzzo. In December 1423 Sforza began his march from Apulia along the coast of the Adriatic, took Ortona, and crossed the river Pescara near its mouth, his advanced guard making their horses swim through the stream. As the body of Sforza's army remained on the opposite bank, Sforza plunged again into the river to encourage them to cross. One of his men, being carried away by the current, was in the act of drowning, when Sforza pushed his horse forwards to save him, seized him by the arm, and both sank into the water and disappeared. Thus died Sforza Attendolo, the great Condottiere, on the 4th of January 1424. His army, disheartened, retired from the Abruzzo. Braccio, who was at Chieti, upon hearing the news, extolled the fame of his rival, remarking that this unexpected catastrophe boded no good to himself. He however pushed on the siege of Aquila with renewed vigour. The town began to suffer through famine. The archbishop encouraged the besieged by telling them that the queen and the pope would soon relieve them, and he excommunicated Braccio in the name of the pontiff. At last, in the spring of 1424, the Angevin army, led by Count Caldora and other chiefs, marched into the Abruzzo, and encamped on the hills above Aquila. Braccio permitted them to enter the plain. The battle was fought on the 2nd of June. Caldora's army was greatly superior in numbers, and in the midst of the fight a sortie from the people of Aquila, falling on the rear of Braccio's line, decided the victory. Braccio, while fighting desperately, received a blow on the head and fell senseless. He was taken prisoner to the camp of Caldora, and treated with humanity. He survived for three days, refusing to take food, though urged to do so, and would not utter a word. It was said that his wound was not mortal. He died on the 5th of June 1424, in the fifty-sixth year of his age. Rome rejoiced at his fall; Ludovico Colonna took his body to Pope Martin, who ordered it to be buried in unconsecrated ground outside of the walls. Eight years after, Niccolò Fortebracci recovered from Pope Eugenius IV. the remains of his relative, and deposited them in the church of the Franciscan convent of Perugia. Oddo Fortebracci, son of Braccio, resigned the government of Perugia into the hands of the pope, in July 1424, retaining the various fiefs of his father, with the title of Count of Montone. The history of Braccio's life forms an important part of the history of Italy during the fifteenth century, which was the last age of its tumultuous independence.

(Febretti, *Biografie dei Capitani venturieri dell' Umbria*; Campanus, *De Vita et Gestis Brachii*; Lomasono, *Vite dei famosi Capitani d' Italia*; Compagnoni, *Storia della Marca*; and the contemporary local chroniclers, among whom must be noticed Lorenzo Spirito, who wrote a poem of one hundred and one chapters in terza rima, entitled *L'Altro Marte*, in which he narrates in chronological order the deeds of Braccio and of his contemporary Piccinino. This curious poem was printed at Vicenza in 1489: it is now extremely rare.)

BRACCIOLINI, POGGIO, son of Guccio Bracciolini, a notary, was born in 1380, at Terranuova, in the Florentine territory. He studied Latin at Florence under Giovanni da Ravenna, a disciple of Petrarch; and afterwards Greek under Chrysoloras, a learned Byzantine emigrant. About 1402 Poggio went to Rome, where Boniface IX. employed him in the pontifical chancellery, as apostolic secretary or writer of the papal letters. Boniface having died in October 1404, his successor, Innocent VII., continued Poggio in his office, which he held for about half a century, under eight successive popes. Poggio availed himself of the favour of Innocent to obtain an appointment in the apostolic chancellery for his friend and schoolfellow Leonardo

Bruni of Arezzo. The friendship between these two distinguished scholars continued till death. Innocent having died in 1406, was succeeded by Gregory XII., who was soon after deposed by the Council of Pisa, and replaced by Alexander V. This was the period of the great western schism. [BENEDICT, ANTIPOPE.] In the midst of these distractions Poggio withdrew to Florence, where he pursued his literary studies, and found a patron in Niccolò Nicoli, a wealthy Florentine, noted for his love of learning and his encouragement of the learned. When John XXIII. was elected pope, Poggio returned to his duties of pontifical secretary, and as such he accompanied the pope to the Council of Constance in 1414. At Constance he applied himself to the study of Hebrew; and in his excursions into the adjoining countries he visited the abbey of St. Gall, and other monasteries, where he had the good fortune to discover the manuscripts of several classical works which were considered as lost, or of which only imperfect copies existed. He complains, as Boccaccio had done before him, of the monks taking no care of the literary treasures which they possessed, and allowing the valuable manuscripts to rot "in cellars and dungeons unfit even for condemned criminals." Poggio found, among other manuscripts, copies of Quintilian's 'Institutions,' of Vegetius, Silius Italicus, Ammianus Marcellinus, Columella, Asconius Pedianus's commentaries upon some of Cicero's orations, the 'Argonautics' of Valerius Flaccus, several comedies of Plautus, &c. Continuing his researches after his return to Italy, either by himself or through his friends, he found at Monte Casino a copy of 'Frontinus de Aqueductibus,' he procured from Cologne the fifteenth book of 'Petronius Arbitr,' and from a monastery at Langres several of Cicero's orations, which had been regarded as lost. Poggio either purchased the manuscripts, or transcribed them, or pointed them out to persons wealthier than himself. His friends, Bartolomeo da Montepulciano and Cinzio, of Rome, assisted him by their own exertions, and Nicoli by his liberality.

While Poggio was staying at Constance, he witnessed the trial and execution, by the sentence of that council, of Jerome of Prague, on the charge of heresy. He gives a most vivid account of that deplorable transaction in a letter to his friend Leonardo Bruni, which has been often quoted by subsequent historians. Poggio was evidently moved by the constancy and the eloquence of the defence of the Bohemian reformer; and his own knowledge of the corruptions of the Roman Church at that time made him, if not openly advocate Jerome's cause, at least commiserate his fate in terms so strong that his more prudent friend Leonardo wrote to warn him against giving way to his feelings. Poggio was still, nominally at least, papal secretary at the time. After Martin V. was solemnly acknowledged as legitimate pope, and the council was dissolved in 1417, Poggio followed the pontiff on his return to Italy as far as Mantua, where he suddenly left the papal retinue and repaired to England. Whether he left in disgust, or through fear for having expressed his sentiments too freely on church matters, is not clearly ascertained. While in Constance he had received an invitation from Cardinal Beaufort, bishop of Winchester. His expectations from Beaufort's liberality were disappointed; and at length, having received through some friends in Italy an offer to resume his office at Rome, he left England about 1421. Of his remarks during his residence in England there are scattered fragments in his published letters, and still more in the unedited ones. His picture of the habits and manners of the English is not flattering. He says that they were more addicted to the pleasures of the table than to those of learning; and that the few who cultivated literature were more expert in sophisms and controversial quibbles than in real science.

Poggio continued in his office during Martin's pontificate, pursuing at the same time his researches after manuscripts and antiquities, for which latter object he made excavations at Ostia and other parts of the Campagna. He also made Latin translations of the first six books of Diodorus Siculus, and of Xenophon's 'Cyropædia.' Eugenius IV., having in 1431 succeeded Martin V., was soon after obliged by a popular rebellion to remove his court to Florence. Then came the controversies between the Pope and the Council of Basel, which lasted during the rest of Eugenius's pontificate, till his death in 1447. The greater part of this time was spent by Poggio at Florence, or at a country-house he had purchased in the Val d'Arno, some say with the produce of some classical manuscripts which he sold. He gives in his letters a description of this residence, which he had adorned with statues and other remains of antiquity that he had collected in various places. He wrote there several works, among others his 'Discourse on the Unhappiness of Princes,' which he dedicated to Thomas of Sarzana, afterwards Pope Nicholas V.; and his virulent invectives against Filelfo, who had attacked the character of Poggio's friend Nicoli. When the two fierce disputants became reconciled, Poggio wrote a sort of disavowal of his former accusations, which is found at the end of the invectives. In 1435 Poggio married Selvaggia, of the family of Buondelmonte of Florence, a young and handsome lady, with whom he lived happily. While making up his mind to his marriage, he wrote a dialogue on the question, 'An seni sit uxor ducenda?' From that time Poggio reformed his life, which had been before rather licentious. In 1437 he published a selection of his letters, written in Latin, like all the rest of his works, according to the fashion of that age. His friend Leonardo Bruni dying in 1444, Poggio composed a

funeral oration to his memory. He wrote also other funeral orations—for Cardinal Zabarella, who died at the Council of Constance; for the Cardinal Santa Croce, a patron of letters; for Lorenzo de Medici, brother of the great Cosimo; for Cardinal Sant Angelo, who fell in the battle of Varna against the Turks, &c. His friend Nicholas V. being raised to the pontifical throne in 1447, Poggio, who had returned to Rome and resumed the duties of his office, addressed to the new pontiff an eloquent oration, of mixed eulogy and advice on the duties and dangers of his exalted station, 'Oratio ad summum Pontificem Nicolaum V.' To this time belongs Poggio's treatise 'De Varietate Fortunae,' one of his best works, which presents a good view of Italian politics at the beginning of the 15th century, an interesting sketch of the remains of ancient Rome in Poggio's time, and a curious account of the travels of the Venetian, Niccolò Conti, in the east. He also wrote 'Dialogus adversus Hypocritas,' in which, as well as in his disquisition 'De Avaritia et Luxuria,' he inveighs against the vices of the clergy, and especially of the monks, which were certainly very flagrant in that age, and were the main cause that led to the great Reformation in the following century. Notwithstanding his satirical freedom he preserved the good graces of Nicholas, in support of whose right to the papacy he wrote a bitter invective against his rival the antipope Felix, in which, as usual with Poggio, his accusations outstripped truth. A violent quarrel with George of Trebizond about some literary matters brought the two scholars to blows, and the Greek was in consequence obliged to quit Rome. In 1450, the plague being in Rome, Poggio withdrew to Florence, where he wrote his 'Facetiae,' a collection of humorous anecdotes and repartees, some of which are very indecent. He also wrote 'Historia Disceptativa Convivialis,' or discussions upon various philological, historical, and moral subjects; 'Disputatio de Infelicitate Principum,' in which he speaks of princes in a strain of democratic contempt, rather odd in a man who had lived almost all his life at courts; 'De Nobilitate Dialogus,' in which the various meanings of nobility are examined; 'De Miseria Conditionis Humanae.' In 1453, on the death of Carlo Aretino, chancellor of Florence, Poggio, through the influence of the Medici, was appointed his successor. He finally quitted the Roman court after being fifty years in its service, and it was not without regret that he parted from his kind patron, Pope Nicholas.

Having now access to the archives of Florence, he undertook a history of that republic,—'Historiae Florentinae,' lib. viii., which embraces the period from 1350 to 1455. It was translated into Italian by his son Jacopo, and printed in 1476, and afterwards republished in a more correct and improved form by Serdonati, Florence, 1598. The Latin text was not published till 1715, by Reanati, who prefixed to it a biography of the author. Poggio has been charged with marked partiality for his countrymen in his history. Another deficiency is noted by a grave authority, Machiavelli, who, in the preface to his own history, observes that both "Poggio and Leonardo Bruni, two excellent historians, had diligently described the wars between Florence and the other states and princes, but with regard to the civil contentions of the republic, its internal factions and their results, they had been either silent or extremely laconic in their account, either because they fancied them beneath the dignity of history, or perhaps because they were afraid of offending the relatives and descendants of persons who had figured in those transactions."

Poggio died at Florence in 1459, and was buried with great honours in the church of Santa Croce, near his friend Leonardo Bruni. A statue of him by the sculptor Donatello is in the duomo or cathedral.

Poggio was one of the most distinguished scholars of the epoch of the revival of literature, and one of those who contributed most to the spreading of that revival. His long life, the offices of trust which he filled, his travels, his extensive correspondence, his multifarious learning, all contribute to render him one of the most remarkable writers of the 15th century. His works, especially his 'Orations' and his 'Epistles,' are remarkable for their eloquence and fluency of style, though their language does not equal in classic purity that of Poliziano and some other latinists of the following age. His sentiments are noted for their independence and frankness; even in his addresses to the great, his language, though courtly, is free from flattery.

Poggio's son Jacopo was a man of learning, but after being in his youth the friend of the Medici, he conspired with the Passi against Lorenzo, and being seized after the murder of Giuliano, was publicly hanged in 1478.

BRACTON, one of the writers who are meant when the phrase is used 'our ancient law-writers,' or 'the ancient text-writers of our law.' These writers lived from the close of the 12th to the middle of the 15th century. The oldest is Glanville, whose era is referred to the reign of Henry II. and Richard I. Bracton lived in the reign of Henry III. He appears to have been born about the beginning of the 13th century. The others are Britton, Littleton, and the unknown authors of 'Fleta,' 'The Mirror of Justice,' 'The Doctor and Student,' and the 'Old Book of Tenures.' These books all relate to the nature, principles, and operation of the ancient laws and constitution of the realm, and together with a few minor treatises, the collections of Welsh, Saxon, and Norman laws, the charters and statutes, the year-books which contain notes of causes and decisions, the records of writs, inquests, surveys, and of the receipts and issues by and from the king's revenue, and the incidental information to be found in the

chronicles, form the study of those persons who wish to become acquainted with the history of English judicature, of the courts for the administration of justice, and generally of the various operations of the English law.

Bracton's work is entitled 'De Consuetudinibus et Legibus Angliæ.' It is divided into five books, and the following is a slight sketch of the nature and object of the work.

In the first book he treats of distinctions existing in respect both of persons and things; in the second of the modes in which property may be acquired in things; in the third of actions or remedies at law. The fourth book is divided into several sections, which treat on the assize of 'novel disseisin,' the assize of 'ultima presentatio,' the assize of 'mort d'ancestor,' the writ of consanguinity, the grants in 'libera eleemosyna,' and on dower. The fifth and last book is also divided into sections, in which the author treats of the writ of right, escheat, default, warranty, and exceptions. A larger abstract of the contents of this work may be found in Reeve's 'History of the English Law,' vol. ii. p. 86, &c. A treatise so methodical in its arrangements, so precise in its statements, and so abundant in its information, must have been the work of some very able person. Little however is now known of this author. The writers to whom we are indebted for collecting what could be recovered of the English authors of the middle ages, are Leland, Bale, and Pits, of whom the two former lived in the reign of Henry VIII. and supplied Pits, who was a Catholic writer in the reign of Elizabeth and James I., with most of the information which his work, valuable as it is, contains. Their statements that Bracton was a judge of the Common Pleas, and that he was Chief Justice of England, are now regarded as questionable. There is better reason to believe that he was a Henry de Bracton who delivered law lectures in the University of Oxford towards the middle of the 13th century, and that he sat, once at least, as a justice itinerant in the reign of Henry III. The value of the work, and the high esteem in which it was held, is manifest by the numerous copies which were made of it before the invention of printing opened so much easier and cheaper a way of multiplying copies of valuable writings. The pains which it must have required to transcribe the work, and consequently the expense of it, may be collected from the extent of the work, which fills in its printed form not less than 883 folio pages. Many of these manuscript copies exist. It is said that there are no less than eight in the various libraries which compose the book-department of the British Museum. In 1569 it was printed in a folio volume, and again in quarto in 1640, the text of the old edition being collated, very imperfectly, with that of some of the manuscripts.

BRADDOCK, EDWARD, lost his life in Virginia, by the French and Indians, in the war in which General Wolfe afterwards fell on the heights at Quebec in Canada. The French having determined to connect their Canadian colony with their other possessions in Louisiana by a chain of fortified military stations which interfered with the British territories, General Braddock, with an army of 2000 English, was despatched to Virginia, where he arrived in February 1755, at Richmond. With 390 waggons of provisions, ammunition, and baggage, he reached in July the Monongahela, a branch of the river Ohio. Washington, who was then at the age of twenty-three, joined him as a volunteer, in the capacity of aide-de-camp; and from his accurate knowledge of his native country, and of the Indian mode of warfare, would have furnished the English commander with the information requisite for the success of his expedition, but Braddock's self-sufficiency contemptuously disregarded the advice of American officers. Having advanced on the 9th of July within six miles of Fort du Quesne, now Pittsburg, where he supposed the enemy awaited his approach, his columns, in passing silently through a deep forest ravine, were suddenly struck with terror by the frightful war-whoop of the Indians from the dense thickets on both sides, and the murderous fire of invisible rifles. Rushing forward they were surprised and attacked in front by the French forces, while the Indian warriors, leaping by hundreds from their ambush, fell upon them with fury in the rear. Their strange and hideous appearance, and the echo of their piercing dog-like yelp, in such a gloomy wilderness of trees, so startled the English soldiers, who for the first time heard it, that the panic which seized them continued until half the army was destroyed. With the single exception of Washington, who received several rifle balls through his dress, and had two horses shot under him, no officer escaped alive. Braddock himself, after mounting in succession five horses, was shot, and carried off on a tumbrel by the remnant of his troops, who fled precipitously forty miles to the place in which the baggage had been left, where he died.

BRADLEY, JAMES, the third Astronomer Royal, and the first, perhaps, of all astronomers in the union of theoretical sagacity with practical excellence, was born at Sherbourn in Gloucestershire (probably in March, 1692-93). For all authorities, &c., we must refer the reader to the excellent and minute account of him in the Oxford edition of his 'Miscellaneous Works and Correspondence,' Oxford, 1832, by Professor Rigaud.

His father, William Bradley, married Jane, the sister of the Rev. James Pound, known by the observations of the comet of 1680 which he supplied to Newton, together with other observations referred to in the 'Principia.' With this uncle James Bradley passed much of his time, and found in his house the means of applying himself to

astronomical observation. As early as 1716 there is a letter of Halley to Pound mentioning Bradley as an observer; and in 1718 and 1719, we find some observations of double stars (Castor and γ Virginis), which have since been used by Sir J. Herschel in his determination of the orbits which each of the pairs just mentioned describes round the other ('Mem. R. Astron. Soc.,' vol. v., pp. 195, 202). At the same time he turned his attention to the motions of Jupiter's satellites, and detected, by observation, the greater part of the inequalities afterwards discussed by Bailli. Tables of the satellites, from Bradley's observations, were published in Halley's collection, London, 1749, and in 'Phil. Trans.' vol. xxx.

Bradley was entered of Balliol College, Oxford, in 1710, and took the degrees of B.A. and M.A. in 1714 and 1717. In 1718 he became a fellow of the Royal Society. In 1719 he was ordained to the rectory of Bridstow, in Monmouthshire. In 1720 he obtained another living, but in 1721 resigned his preferments on obtaining the Savilian Professorship of Astronomy at Oxford, with the holding of which they are incompatible. He also resigned the office of chaplain to Bishop Hoadly. We find him now engaged in miscellaneous observation, particularly with the long telescope introduced by HUYGHENS. With one of these of 212 feet focal length, he measured the diameter of Venus in 1722. Pound died in 1724, and in the next year Bradley began the observations which led to his great discovery.

The circumstances connected with the discovery of ABERRATION are described under that title in the ARTS AND SCIENCES DIVISION of the ENGLISH CYCLOPEDIA. The scene of the first observations was at the house of Mr. Molyneux at Kew, which afterwards became the palace of that name, but was some years back pulled down. The associated observations of Bradley and Molyneux detected the motion of γ Draconis, and other stars, and established approximately the law of the motion of the first. That the motion in declination depended in some way or other on the latitude of the star was evident, and in this state the matter stood, when Bradley in 1727 erected a zenith sector for himself at Wanstead. The original entry of the first night's observation at Kew, which confirmed the fact of an unexplained motion in γ Draconis (Dec. 21, 1725), is preserved in Bradley's own handwriting. The following, written on a torn bit of paper, is the earliest of the observed phenomena which led to the greatest discovery of a man who has, more than any other, contributed to render a single observation of a star correct enough for the purposes of astronomy:—

"Dec 21st Tuesday 5^h 40' sider. time
Adjusted y^e mark to y^e Plumb Line
& then y^e Index stood at 8
5^h 48' 22" y^e star entred
49 52½ Star at y^e Cross
51 24 Star went out
s
could
At soon as I let go y^e course
screw I perceived y^e Star too
much to y^e right hand &
so it continued till it passed
y^e Cross thread and within a quarter
was
of a minute after it had passed
graduat
I turned y^e fine screw till I saw
y^e light of y^e star perfectly
bissected, and after y^e obser
vation I found y^e index
at 11½. so that by this
observation y^e
mark is about 3" ½
too much south.
but adjusting
y^e mark and plumbline
I found y^e Index at 8½."

Bradley began his observations at Wanstead with a better instrument than that at Kew, and capable of taking in a larger range of the heavens. He soon confirmed the general fact which he had observed, and it only remained to assign the cause. There is traditional evidence to the following anecdote, first given by Dr. Thomson in his 'History of the Royal Society,' and adopted by Professor Rigaud; but for which the real authority is Dr. Robison, who was old enough to have possibly heard it from one of Bradley's contemporaries. Dr. Robison has given the anecdote himself in a part of his 'Mechanical Philosophy,' where we should certainly not have gone to look for it, nor, we imagine, would Professor Rigaud: namely, in the chapter on 'Seamanship,' vol. iv. p. 629:—"When he despaired of being able to account for the phenomena which he had observed, a satisfactory explanation of it occurred to him all at once when he was not in search of it. He accompanied a pleasure party in a sail upon the river Thames. The boat in which they were was provided with a mast which had a vane upon the top of it. It blew a moderate wind, and the party sailed up and down the river for a considerable time. Dr. Bradley remarked, that every time the boat put about, the vane at the top of the boat's mast shifted a little, as if there had been a slight change in the direction of the wind. He observed this three or four times without speak-

ing: at last he mentioned it to the sailors, and expressed his surprise that the wind should shift so regularly every time they put about. The sailors told him that the wind had not shifted, but that the apparent change was owing to the change in the direction of the boat, and assured him that the same thing invariably happened in all cases." By tracing this phenomenon to its cause, namely, the combined motion of the boat and the wind, he was enabled to give the solution of the star's motion, namely, a small change of place arising from the spectator giving to the ray of light the effects of his own motion, as explained in the article Aberration, referred to above.

Upon this discovery, several observations must be made, relative to its importance in astronomy. It is the first positively direct and unanswerable proof of the earth's motion. In the next place, the explanation given was not purely an hypothetical one, or one which would allow of any velocity being attributed to light which would bear answer to observed phenomena, but required that the velocity already measured by Römer's observations of the retardation of the eclipses of Jupiter's satellites should be the sufficient reason for the annual oscillations of the fixed stars. A very simple geometrical analysis of the problem shows that when the angle of aberration is greatest, its sine must be the quotient of the earth's velocity divided by the velocity of light. Taking the first at 18 miles per second, depending upon the correctness of the measurement of the earth's orbit and of the length of the year, and the second at 200,000 miles per second, which depends upon a third and distinct phenomenon, namely, the observations of the time of eclipses of Jupiter's satellites at different periods of the year, we find à priori, that the sine of the greatest angle of aberration, if aberration there be, must be .00009, which is the sine of 19 seconds nearly, and has been made in round numbers. The greatest aberration from the mean place observed by Bradley was 20 seconds and two-tenths, in which the most correct modern observations, in masses of thousands at a time, have not shown an error of more than three-tenths of a second. This is one of the reasons why we have said that, in the union of theoretical sagacity with practical excellence, Bradley stands unrivalled. Newton, Laplace, &c. were not observers. Flamsteed, Cassini, &c. were not great theorists. Halley, who of all the men of Bradley's time, united the largest knowledge of both, was so far from being the equal of Bradley in minuteness of observation, that he constantly declared his suspicion of the impossibility of detecting a part of a second. Kepler was skilful in the detection of the laws which phenomena follow, but not in that of physical causes. In our opinion, Hipparchus is (difference of circumstances considered) the prototype of Bradley. The time of the discovery of the cause of aberration was probably about September 1728; it was communicated immediately to the Royal Society ('Phil. Trans.,' No. 406, vol. xxxv., p. 637).

In 1728 Bradley began lectures at Oxford, and in 1732 removed his residence to that university. We pass over the various labours by which he sustained the character of the "best astronomer in Europe," given to him by Newton, and proceed to the year 1742, when he was appointed astronomer royal. This was almost the last act of Sir Robert Walpole's administration, who, as Professor Rigaud has well observed, "appears to have determined that one of the first points he would secure before his retirement was the nomination in question: he declared his intention of resigning in the House of Commons on the 2nd of February, and Bradley's appointment was dated the 3rd." From this time to 1747 he was engaged (among other things) in the career of observation which led to his second great discovery of nutation communicated in that year ('Phil. Trans.' No. 485, vol. xlv., p. 1.) The phenomenon in its most simple state may be thus represented: the earth's axis, instead of describing a cone, describes a fluted cone; or, the pole of the equator, instead of moving uniformly round the pole of the ecliptic in a small circle, describes a wavy or undulating curve with a milled edge, if we may so speak, with about 1400 undulations in a complete revolution. The merit of Bradley consists, firstly, in his determination of so small a quantity, since the greatest effect of nutation is only half that of aberration, and distributed through nineteen years instead of one; secondly, in his discovery of the circumstance on which it depends, namely, the position of the moon's orbit with respect to the equator. This orbit shifts the position of its nodes gradually, making them complete a revolution in about eighteen years and a half. This was also found to be the period in which the pole of the equator describes one of the waves above mentioned, and subsequent investigation has confirmed the dependence of the greater part of the nutation on the motion of the moon's node, by showing the former to be a consequence of the non-sphericity of the earth, and of the moon's attraction on the protuberant parts. [PRECESSION AND NUTATION, in ARTS AND SCIENCES DIV.]

There is a third investigation of Bradley which stands out from the rest, and displays considerable mathematical sagacity: we refer to his empirical formula for the law of refraction. He was assisted in the necessary computations by Maskelyne, who first appeared before the world as the pupil of Bradley. In this very delicate research, Bradley had again gone beyond his contemporaries in the evaluation of minute quantities. His table is even yet very good for the first forty-five degrees of zenith distance; and his determination of the latitude of Greenwich (an investigation depending for its accuracy upon that of

the tables of refraction) does not differ more than half a second from that deduced by Mr. Pound from 720 observations with both the mural circles.

In 1751 the alteration of the style took place, and Bradley appears to have had some share in drawing up the necessary tables, as well as in aiding Lord Macclesfield, his early friend and the seconder of the measure in the House of Lords, and Mr. Pelham, then minister, with his advice on the subject. But this procured him some unpopularity, for the common people of all ranks imagined that the alteration was equivalent to robbing them of eleven days of their natural lives, and called Bradley's subsequent illness and decline a judgment of heaven. This was, as far as we know, the last expiring manifestation of a belief in the wickedness of altering the time of religious anniversaries, which had disturbed the world more or less, and at different periods, for 1400 years. In the same year Bradley obtained a pension of 250*l.* from the crown. From that time he continued his observations, of which we shall presently speak, till the 1st of September 1761, in the observations of which date his handwriting occurs for the last time in the Greenwich registers. He then retired among his wife's relations at Chalford in Gloucestershire, where he died July 13, 1762, and was buried at Minchinhampton. His health had been failing for some years, though he was originally of a strong constitution, and always of temperate habits. His wife died before him in 1757, and he left one daughter, but his line is now extinct.

Thus far we have obtained our materials for facts from the life by Professor Rigaud, above cited. This account does not mention the subsequent history of the manuscript observations made at the observatory of Greenwich. The following is Dr. Maskelyne's account (Answer to Mudge's 'Narrative,' &c., London, 1792):—"Dr. Bradley's valuable observations were made in the course of twenty years, from 1742 to 1762, and consist of thirteen volumes in folio. They were removed from the Royal Observatory before I was appointed to the care of it, by the doctor's executors, who thought proper to consider them as private property; and during a suit instituted on the part of the crown, in the Exchequer, to recover them, they were presented in 1776 to Lord North, now Earl of Guildford, chancellor of the University of Oxford, and by him presented to the university on condition of their printing and publishing them. The university put them immediately for that purpose into the hands of Dr. Hornsby, Savilian professor, &c., whose bad state of health has been alleged as the cause of the delay of the publication." The account of Dr. Hornsby, in the preface of the publication in question, differs from the preceding in an important particular. The above would allow us to infer that the University of Oxford accepted a donation the right to make which was under litigation, with a strong *prima facie* case against it. Now, Dr. Hornsby mentions—1, what is very well known, that both the predecessors of Bradley, Flamsteed, and Halley, were allowed to consider their own observations as their own property; that the former printed, and his executors published, his observations as private property, and that the daughter of the latter received compensation for relinquishing her right to her father's papers; 2, that a salaried office of only 100*l.* a year, with the duty of improving as much as possible the planetary tables and the method of finding the longitude, by no means implied an obligation to consider the actual observations made as the property of the government; and 3, that the Royal Society having first made and abandoned a claim, the government instituted its suit in 1767, and abandoned it in 1776, before the observations were presented, not to Lord North personally, but in trust for the university of which he was chancellor. Dr. Maskelyne wrote under feelings of pique at being refused the sheets of the observations as fast as they were printed; this, though it would have been under ordinary circumstances a churlish proceeding, might perhaps have been advisable in regard to the officer of a government that had pretended a claim to the property of the work, which, though dormant at the time, the university could not know to have been formally abandoned. And it has been suggested to us, that there is no method of abandoning a suit in the Exchequer, as a practical relinquishment of proceedings is no bar in that court to their revival at any future time. The observations in question were published at Oxford in two volumes: the first in 1798, under the superintendence of Dr. Hornsby; the second in 1805, under that of Dr. Abraham Robertson. They go from 1750 to 1762, and are about 60,000 in number.

But these observations might have remained a useless mass, except for occasional reference, to this day, had it not been for the energy of a distinguished German astronomer, Frederick William Bessel [BESSEL], who at Lilienthal and Königsberg successively, and from 1807 to 1818, added to other laborious occupations the enormous task of reducing and drawing conclusions from all Bradley's observations, published in the latter place and year under the title of 'Fundamenta Astronomiæ pro anno 1755, deducta ex observationibus viri incomparabilis James Bradley.' "This work has always been considered one of the most valuable contributions to our astronomy. It exhibits the result of all Bradley's observations of stars, reduced on a uniform system, and is always referred to by succeeding astronomers as the representative of Bradley's observations." (Professor Airy, 'Rep. Brit. Ass.' vol. i. p. 137.)

It may be said that Bradley changed the face of astronomy. The

discoveries of aberration and nutation, and the improvement of the tables of refraction, the attention to minute observation, and the tact with which every instrument was applied to the purposes for which it was best adapted, were so many great steps both in the art and science. Before his time every instrumental improvement was a new cause of confusion, by pointing out irregularities which seemed to baffle all attempts both at finding laws and causes. Nevertheless, the name of Bradley hardly appears in popular works, nor will do so until the state of astronomy is better understood. Let any man set up for the founder of a sect, and begin by asserting that he has found out the cause of attraction, or the structure of the moon; let him exalt himself in the daily papers, and he must be unfortunate indeed if in three years he is not more widely known in this country than its own Bradley, one of the first astronomers of any.

BRADSHAW, JOHN, president of the court which tried Charles I., was born in 1586. Bradshaw was of a good family in Cheshire. His mother was a daughter and coheir of Ralf Winnington of Offerton. He was a student of law in Gray's Inn. He had considerable chamber practice, especially among the partisans of the Parliament, and he is admitted by his enemies to have been not without ability and legal knowledge.

In October 1644 Bradshaw was employed by the Parliament, in conjunction with Prynne and Nudigate, to prosecute lords Macquire and Macmahon, the Irish rebels. In October 1646, by a vote of the House of Commons, in which the peers were desired to acquiesce, he was appointed one of the three commissioners of the Great Seal for six months; and in February following, by a vote of both houses, Chief Justice of Chester. In June 1647 he was named by the Parliament one of the counsel to prosecute the royalist Judge Jenkins. On October 12, 1648, by order of the Parliament, he received the degree of serjeant.

On January 1, 1648-49, it was adjudged by the Commons that by the fundamental laws of the land, it is treason in the King of England for the time being to levy war against the Parliament and kingdom. On the 4th an ordinance was passed for erecting a high court of justice for the trial of the king. The commissioners for the trial of the king elected Serjeant Bradshaw their president. Lord Clarendon says that at first he seemed much surprised and very resolute to refuse it. The offer and the acceptance of it are strong evidence of the staunchness of Bradshaw's republicanism. Of the manner in which he performed the office very different opinions have been expressed. He has been praised for having acted with dignity, firmness, and moderation; he has been censured for acting with rudeness, insolence, and haughtiness. The truth is, he was a great lawyer, but he was nothing more; and he acted as a rigid lawyer and a stern republican, impressed with a lofty notion of the dignity of the office he held, might be expected to act on such an occasion.

The court ordered, "that John Bradshaw, Serjeant-at-Law, who is appointed president of this court, should be called by the name, and have the title of Lord President, and that as well within as without the said court, during the commission and sitting of the said court." The deanery house in Westminster was given him as a residence for himself and his posterity; and the sum of 5000*l.* allowed him to procure an equipage suitable to the dignity of his office. The parliament further settled 4000*l.* a-year upon him and his heirs, in landed property. He was also made Chancellor of the Duchy of Lancaster. He had previously been appointed Chief Justice of Wales and of Chester, besides being Lord President of the Council of State. The accumulation of so many offices in one man looks something like pluralism in the Commonwealth: and unless very great allowance be made on account of the dignity of the work done, the remuneration must appear somewhat disproportioned to the quantity of it.

When Cromwell seized the government, Bradshaw was one of those who offered all the opposition in their power, and never went over to him. Bradshaw's conduct, in courage and firmness, almost equalled Ludlow's. His bold answer to Cromwell, when he came to dissolve the council, is well known. When Cromwell insisted upon every one taking out a commission from himself, if they chose to retain their places under his government, Bradshaw absolutely refused, alleging that he had received his commission as Chief Justice of Chester, to continue "quamdiu se bene gesserit," and he should retain it without any other, unless he could be proved to have justly forfeited it by want of integrity. He soon after set out on the circuit, without waiting further orders; nor did Oliver think it prudent to prevent or recal him, as he had said nothing but force should make him desist from his duty.

It was not to be expected that such conduct would find much favour in the eyes of Cromwell. He attempted to oppose his election for Cheshire; and though Bradshaw was returned by the sheriff, as others in the Cromwellian interest returned another, neither sat, it having been so decided in the case of double returns. Bradshaw was engaged in several designs against the power of Cromwell, one of which was connected with the Fifth Monarchy-men, who were to destroy and pull down Babylon, and bind kings in chains and nobles in fetters of iron; but Cromwell, though fully conscious of his enmity, merely continued, with his characteristic policy, to watch and defeat his designs. Bradshaw however was deprived of his office of Chief Justice of Chester.

On the death of Oliver, and the abdication of his son Richard,

Bradshaw obtained a seat in the Council of State, was elected Lord President, and appointed a Commissioner of the Great Seal; but his health, which had been some time declining, became so precarious that he was unable to perform the duties of that office.

The last act of Bradshaw's life was consistent with the spirit which he had always shown. The army had again put a force upon the House of Commons, by seizing the Speaker, Lenthall, on his way thither, and thereby suspending all further proceedings of the existing government. The almost expiring but unsubdued spirit of Bradshaw felt the insult. He repaired to the Council of State, which sat that day; and when Colonel Sydenham, one of the members of the council, endeavoured to justify the army in what they had done, and concluded his speech by saying, according to the cant of the day, that they were necessitated to make use of this last remedy by "particular call of the Divine Providence;" "weak and extenuated as he was," says Ludlow, "yet animated by his ardent zeal, and constant affection to the common cause, he stood up, and interrupting him, declared his abhorrence of that detestable action; and telling the council, that being now going to his God, he had not patience to sit there to hear his great name so openly blasphemed." He then abruptly left the council, and withdrew from public employment. He survived this but a few days, dying November 22nd 1659 of a quartan ague, which had lasted a year. He was buried with great pomp in Westminster Abbey, whence his body was dragged at the restoration, to be exposed upon a gibbet, with those of Cromwell and Ireton.

BRADY, NICOLAS, a divine whose name is known chiefly in connection with that of Nathan Tate, his verifying collaborator in producing the new version of the Psalms of David, which has since become generally used in the Church of England, in the place of the obsolete version made in the reign of Edward VI. by Sternhold and Hopkins. Brady was the son of an officer in the royalist army during the civil war, and was born October the 28th, 1659, at Bandon, a town in the county of Cork, Ireland. At the age of twelve he was sent to Westminster school, whence he proceeded to the college of Christ-Church, Oxford. He subsequently graduated at Trinity College, Dublin; which, in testimony of his zeal and assiduity in the Protestant cause, conferred upon him gratuitously, during his absence in England, the degree of D.D. He was appointed chaplain to Bishop Wettenhall, by whose patronage he obtained a prebend in the cathedral of Cork. At the time of the Revolution he made himself conspicuous among the most active partisans of the Prince of Orange, and on three occasions prevented the execution of King James's orders to destroy with fire and sword the town of Bandon, his native place. On the establishment of the new dynasty of William and Mary, he was deputed by his fellow-townsmen to present to the English parliament a petition for redress of the grievances which they had suffered under James; and remaining in London, he became minister of the church of St. Catherine Cree, and lecturer of St. Michael's in Wood-street. He was afterwards appointed chaplain, first to the Duke of Ormond, then to King William and Queen Mary. He held also the office of minister at Richmond in Surrey, and at Stratford-on-Avon in Warwickshire. From his several appointments alone he derived at least 600*l.* a year; but being a bad economist, he was obliged, for the purpose of increasing his income, to undertake the keeping of a school at Richmond. He died at the age of sixty-six, on the 20th of May 1726: the same year in which he published by subscription his "Translation of the Æneid of Virgil," in 4 vols. 8vo, which is now almost entirely unknown. Among several of his smaller productions is a tragedy, entitled "The Rape, or the Innocent Impostors." He published at different times three volumes of his sermons, of which three additional volumes were published after his death by his son; but the reputation of Dr. Brady rests solely upon his share in the new metrical version of the Psalms; of the merits or demerits of which every one who possesses a Prayer Book may judge for himself.

BRAGANÇA, HOUSE OF, is the original title of the reigning dynasty of the kingdom of Portugal. The origin of the Bragança family dates from the beginning of the 15th century, when Affonso, a natural son of King João, or John I., was created by his father Duke of Bragança and Lord of Guimaraens. Affonso married Beatrix, the daughter and heiress of Nuño Alvarez Pereira, count of Barcellos and Ourem. From this marriage the line of the dukes of Bragança, marquises of Villaviçosa, &c., has sprung. By the fundamental laws of the Portuguese monarchy, passed in the Cortes of Lamego in 1139, all foreign princes are excluded from the succession, and the consequence has been that, in default of legitimate heirs, the illegitimate issue of the royal blood has been repeatedly called to the throne. When the line of the Portuguese kings became extinct by the death of King Sebastian in Africa, 1578, and by that of his successor Cardinal Henrique, 1580, both dying without issue, Antonio Prior of Crato, and natural son of the Infante Dom Luiz, Henrique's brother, claimed the succession, but Philip II. of Spain, whose mother was a Portuguese princess, urged his own pretensions to the crown of Portugal in despite of the laws of Lamego, and he enforced his claim by means of an army commanded by the Duke of Alba. [ANTONIO; ALBA.] The Portuguese submitted, Antonio died an exile, and Philip and his successors on the throne of Spain continued to hold the crown of Portugal also till 1640, when the Portuguese, weary of the Spanish

BIOG. DIV. VOL. I.

yoke, revolted and proclaimed Dom João, the then duke of Bragança, their king, he being the next remaining heir to the crown. He assumed the title of João IV., and was styled 'the fortunate.' The crown of Portugal has continued in his line ever since. John IV. was succeeded by his son Affonso Henrique, who, being dethroned in 1668 for his misconduct, his brother Pedro assumed the crown. Pedro was succeeded in 1706 by his son João V., who, dying in 1750, the crown devolved upon his son Joseph I. Joseph was succeeded in 1777 by his daughter Donna Maria I., who afterwards becoming insane, her son Dom João was made prince regent in 1792, and at the death of his mother in 1816 he assumed the title of King João VI. He married a Spanish princess, by whom he had two sons, Pedro and Miguel, and several daughters. In 1822 his eldest son Pedro was proclaimed Constitutional Emperor of Brazil, which became thereby independent of Portugal. In 1826 King John VI. died at Lisbon, and his son Dom Pedro being considered as a foreign sovereign, Dom Pedro's infant daughter, Donna Maria II., was proclaimed Queen of Portugal. Dom Pedro died in September 1834 at Lisbon. His son Pedro II. is now (1856) emperor of Brazil. On the death of Donna Maria II., November 15, 1853, her son Dom Pedro V. succeeded to the throne of Portugal.

BRAHÉ, TYCHO. The influence which the labours of this great reviver of correct astronomy exercised upon the science of his own and succeeding ages, would justify a more minute detail of his life than we can here give. It will be convenient to place all references at the beginning of this article, which we shall accordingly do. [See also general references in ASTRONOMY, in ARTS AND SC. DIV.]

The life of Tycho Brahé was written by Gassendi; first edition, Parisis, 1654, with copperplate crown in the title-page; second edition with two title-pages, both 'Hagæ Comitum,' the first, 1665, marked 'Editio secunda auctior et correctior,' the second, 1664, without any mark of second edition, and with an empty space for the crown. The two editions do not appear different in matter. Both contain the 'Oratio Funebris,' &c., of John Jessenius. See also Teissier, 'Eloges des Hommes savans,' iv. 383; Blount, 'Censura,' &c.; 'Epistolæ ad Johannem Keplerum,' &c., 1718; Riccioli, 'Chronicon in Almagesto Novo,' v. i. p. 46. For modern accounts of his astronomy see Delaube 'Ast. Mod.,' and in English the chapter on Tycho Brahé and Kepler in Narrien's 'Account of the Progress of Astronomy,' 1833; and Grant, 'History of Physical Astronomy.' The life in the 'Biog. Univ.' is by Malte-Brun. The writings of Tycho Brahé are as follows. The capitals serve to separate different works:—

(A) 'De Novâ Stellâ,' anno 1572, &c.; 'Hafniæ' (Copenhagen), 1573. Extremely scarce, afterwards inserted in the 'Progymnasmata:' English translation, 1582 (copy in the Bodleian, Hyde, cited by Lalande). (B) 'De Mundi Ætherei recentioribus Phenomenis liber secundus, qui est de Illustri Stellâ Caudatâ, anno 1577, conspecta 1588' (?). Is Lalande correct, 'Bibl.,' 119? We have a copy answering in all respects to his description, but with title marked Prague, 1603; we cannot find 1588 at the end, as he says. The statement in the preface is not the same as he gives, but the point is of little importance. (C) 'Apologetica Responso,' &c., Uraniburg, 1591, an answer to an unknown opponent on the parallax of comets. (D) 'Epistolarum astronomicarum libri,' Uraniburg, 1596; some have on the title-page Frankfort, 1610 others Nuremberg, 1601. (E) 'Astronomiæ Instauratæ Mechanica,' Waudesburg, 1598, reprint, Nuremberg, 1602; plates only reprinted in 'Mem. Acad. Sci.,' 1763. (F) 'Astronomiæ Instauratæ Progymnasmata,' begun at Uraniburg, finished at Prague, 1601 (in the title-page) published posthumously: the executor's preface is dated 1602. It contains the great mass of Tycho Brahé's results of observation, though headed from beginning to end 'De Novâ Stellâ, anni 1572.' The treatise (B) with title-page, Prague, 1603, is always called and sold as the second volume of these 'Progymnasmata,' and though it treats of various other matters is headed throughout as 'De Cometâ anni 1577.' And (D) is very often made a third volume. The same works (all three) with alteration of title-page only, Frankfort, 1610. (G) In the 'Coeli et Siderum, &c. Observationes,' &c., Leyden, 1618, are two years' Bohemian observations of Tycho Brahé. (H) 'De Disciplinis mathematicis Oratio in qua Astrologia defenditur,' an academical lecture of 1574, printed, not by Tycho, but by Curtius, Hamburg, 1621. (I) 'Geistreiche Weissagung,' &c., 1632; translation of (A) with the astrological part, omitted in (F), date 1632, no place mentioned by Lalande. (K) 'Opera Omnia,' Frankfort, 1648, reprint of the two first in (F). (L) Lucii Barretti 'Sylloge Ferdinanda,' Vienna, 1657, contains Tycho's observations, 1582-1601. (M) 'Historia Cœlestis,' Augsburg, 1666, by this same Barretus, contains all Tycho's observations. Other title-pages 'Ang. Vind.,' 1668, Ratisb., 1672, Diling., 1675. Errors pointed out in Bartholinus 'Specimen recognitionis,' &c., Copenh., 1668. (N) Kepler, 'Tabulæ Rudolphinæ,' Ulm, 1627. These are the final tables deduced from all Tycho's observations. There is either an original life of Tycho, or a translation of Gassendi, in Danish, translated into German by Weistrias, Leipzig, 1756. Tycho Brahé printed his works at his own press of Uraniburg, so long as he remained there, and probably distributed them principally in presents. When they became dispersed, the booksellers varied the title-pages, and hence all the confusion of the preceding list. We suppose those marked (F) were put together after the Frankfort reprint (K), to look like them, if indeed that be a reprint.

The family of Brahé was originally Swedish, but Tycho, the grandfather of the astronomer, and Otto his father, belonged to a branch which had settled in Denmark. Tycho Brahé himself was the eldest son and second child of his father, and was born at Knudthorp, near the Baltic ($56^{\circ} 46' N.$ lat., according to Gassendi), on the 14th of December 1546. His father had ten children, of whom the last, Sophia Brahé, was known in her day as a Latin poetess, and also as a mathematician and astrologer. This family was as noble and as ignorant as sixteen undisputed quarterings could make them; but Steno, the maternal uncle of Tycho, volunteered to take charge of him. Perceiving that he had talent, his uncle employed masters to teach him Latin, much against the will of his father, who intended him to do nothing but bear arms. In 1559 Tycho was sent to the University of Copenhagen, where his attention was called to astronomy by the pretensions of the astrologers, and by the total eclipse of the sun, August 21, 1560. He began to study the doctrine of the sphere, and the ephemerides of Stadius. In 1562 his uncle, who intended him for the law, sent him to Leipzig with a tutor. But he disliked the study, and would attend no more to that science than just enough to save appearances. In the meanwhile he spent his time and money on astronomical instruments; and, while his tutor slept, used to watch the constellations by aid of a small globe not bigger than his fist. With these slender means he was able to see that both the Alphonsine and Prutenic tables gave the places of the planets visibly wrong, and particularly so in the case of a predicted conjunction of Saturn and Jupiter in 1563. He took strongly into his head the correction of these tables, and his first instrument was a pair of common compasses, which he used as an instrument for observing the angles between stars. By drawing a circle with the same radius as the leg of the compasses, and laying down angles upon it he was able to find the Alphonsine tables more than a month in error, and the Prutenic several days. He procured a better instrument, and corrected the deficiencies of its graduation by a table. This instrument was a parallactic rule, or radius, in the manner of Gemma Frisius.

He was recalled in 1565 by the death of an uncle, and soon became disgusted by the contempt with which his equals and associates spoke of all liberal knowledge. His uncle Steno however recommended him to follow his favourite pursuit, and he left his country once more and took up his residence at Wittenberg in 1566, from whence he was driven to Rostock in the autumn by the plague. While in this place a quarrel arose between him and one Pa-berg, a Dane of family like himself, at a public festival. The affair was decided by single combat, and Tycho lost all the front part of his nose. A contemporary, cited by Gassendi, hints that they took this method of settling which was the better mathematician of the two. Tycho always afterwards wore an artificial nose made of gold, but so well formed and coloured as to be hardly distinguishable from the one with which he began life; and he always carried a small box of ointment, with which to anoint this artificial member.

In 1569 he went to Augsburg, where, being pleased with the place, and finding astronomers there, he determined to remain. He here caused to be constructed a large quadrant, such as twenty strong men could hardly lift, with which he made observations while he remained there. He left Augsburg and returned home in 1571, when his uncle Steno offered him a part of his house, with the means of erecting an observatory and a laboratory; for Tycho had become much attached to chemistry, and declares himself that from his twenty-third year he attended as much to that science as to astronomy. He constructed only a large sextant, for he always intended to return and pursue his studies in Germany, finding the public life of a Danish noble to be a hindrance. An event however happened in 1572, which, if our memory serves us, has been sometimes stated in popular works as the first excitement he received to study astronomy—with what correctness we have seen. Returning from his laboratory on the evening of November 11, 1572, he cast his eyes upon the constellation Cassiopea, and was astounded by there perceiving not only a new star but one of greater splendour than any in that constellation. The country people also saw it, and he immediately set himself to determine its place and motion, if any. Happening to visit Copenhagen early in the year 1573, he carried with him his journal, and found that the 'savans' of the university had not yet taken notice of the phenomenon. He excited great derision at a convivial party by mentioning his discovery, which however was changed to astonishment on his actually showing them the star. They thereupon became urgent that he should publish his notes, which he refused, being, as he afterwards confessed, under the prejudice that it was unbecoming for a nobleman to publish anything; but afterwards, seeing how many and worthless were the writings on the same subject, and being pressed by his friends at Copenhagen, he sent his account, with additions, to one of them for publication. The star itself continued visible, though gradually diminishing in brightness, till March 1574. It was at one time as bright as Venus.

As soon as Tycho had conquered his aristocratic aversion to being useful, he committed a much more serious offence against his order by marrying in 1573 a peasant, or at least a plebeian girl of Knudthorp, named Christiana: some say she was the daughter of a clergyman. By the interposition of the king the fury of his family at this step was cooled. Never were man's prejudices subjected to a more salutary course of discipline than those of Tycho Brahé. In two short

years the proud noble became an author, a lecturer, and the husband of a woman of inferior rank. The students of the university desired to profit by his knowledge, and on his positive refusal, the king, to whom he felt his obligations, made it his own earnest request. No choice was therefore left to the unfortunate recusant; and he accordingly delivered the public lecture marked (H) in our preceding list, which, putting aside the astrology, is a sensible discourse; and, excepting a hint at the beginning, that nothing but the request of the king and of the audience (for politeness' sake) had made him undertake an office for which he was so unfit by station and mediocrity of talent (for modesty's sake), does not contain any allusion to the supposed derogation. He informs his audience at the end that he intends to lecture on the Prutenic tables, and he did so accordingly. This lecture was first published in 1610 by Conrad Aalacus (we cannot unlatinize Gassendi's name), who got it from Tycho himself.

Tycho Brahé had all this time intended to travel again. He set out in 1575, leaving his wife and infant daughter at home, and proceeded to the court of the Landgrave William of Hesse-Cassel, who was himself a persevering observer; so much so that when, during an observation of the new star of 1572, servants ran to tell him the house was on fire, he would not stir till he had finished. On leaving his court, Tycho wandered through Switzerland and Germany, apparently seeking where he might best set up his observatory, and he had fixed his thoughts upon Basel. But in the meanwhile ambassadors had been sent from Denmark to the Landgrave of Hesse-Cassel, and that prince took occasion warmly to recommend Tycho Brahé and his studies to the notice of his own sovereign. The latter (Frederic II.) accordingly sent for Tycho after his return to Knudthorp in 1576, and offered him possession for life of the island of Hven, or Høene, taking upon himself all the expenses of his settlement. The offer was gladly accepted, and the first stone of the astronomical castle, called Uraniberg, or Oranienberg (the City of the Heavens) was laid on August 13, 1576. There is a full description of it in Gassendi, as also in (D) and (E). The drawing in the following page is extracted from the former: it is scarcely necessary to warn our readers that the clumsiness of the old wood-cut is purposely imitated.

Besides this there was an observatory sunk in the ground, and named Stellberg (City of the Stars). These two buildings contained 28 instruments, all extra-meridional, but distinguished, as appears in (E), by many new contrivances for avoiding error, and by a size and solidity which rendered graduation to a single minute attainable; though it may be doubted whether the instruments themselves were calculated to give so small a quantity (for that time) with certainty. Tycho's instruments are vaguely said to have cost 200,000 crowns: the king allowed 2000 dollars a year, besides a fief in Norway and a canonry in the church of Roskilde.

In 1577 he began his observations, and on November 13th 1577 saw the comet which is the subject of (B). This luminary and others of the same kind, gave occasion to his discovery that the spheres of the planets [PRIMUM MOBILE; PTOLEMAIC SYSTEM, in ARTS AND SC. DIV.] could not be solid, since they were cut in all directions by the orbits of comets, which must be called the first decisive blow against the received notions. And Tycho was the first who proved comets to have such a parallax as was incompatible with their being atmospheric or even sublunary bodies. He observed altogether seven comets, the last in 1596.

It is not our intention to follow Tycho Brahé at length through his splendid career at Uraniberg. No space here allowable would suffice to detail his results sufficiently for astronomical reference. We must therefore content ourselves with a few words on the state in which he found and left astronomy. The reader may fill up various points from the article ASTRONOMY, in ARTS AND SC. DIV.

From the time of Ptolemy it may be said that astronomy had made some advances, but these did not certainly compensate the defects which time must introduce into tables of pure observation, unaided by any such knowledge of the system as will make accurate prediction possible. If the Arabs did some good by their observations, they did nearly as much mischief by their theories; and the Alphonsine tables are a proof that the astronomers of that day did not know their heavens so well as Ptolemy did his. It was impossible for any one to make a considerable advance with such instruments as Tycho Brahé actually found in use, or without rejecting all theories of the heavenly bodies then in vogue, and relying entirely upon observation. The test of a theory is its accordance with nature; those of the time in question were so defective that their falsehood might be perceived by merely a little globe large enough to be held in one hand. Those who were engaged in observation ought to have seen this: it is the merit of Tycho Brahé that he was the first who did see it. But he did more than this: he saw also the means of remedying the evil by his mechanical knowledge in the construction of instruments, his perception of the way in which those instruments were to be used, and the results of observation to be compared. He showed himself a sound mathematician in his methods for determining refraction, in his deduction of the variation and annual equation of the moon, and in many other ways. He proved himself to be at the same time an inventor of the means of observation and of the way of using them, such as had not appeared since Hipparchus; and it is to his observation that we owe, firstly, the deduction of the real laws of a planet's motion by Kepler,

and of their proximate cause by Newton. There are many instances in which good fortune seems to have made a result of more importance than the discoverer had any right to presume, either from the skill or labour employed in obtaining it; but in the case of Tycho Brahé we believe we are joined by a very large majority in thinking that fortune deputed her office, *pro hac vice*, to justice, and that the eminence of the success to which he has led the way is no more than is due to the excellence of the means which he employed, and the sagacity he displayed in combining his materials. Where Hipparchus and Ptolemy have left half a degree of uncertainty, Tycho Brahé left two minutes, if not one only. This Bradley afterwards reduced to as many seconds, in the case of the stars; and the ages of these three are the great epochs of astronomy, as a science of pure observation.

quarter of a minute of space, or less, to as much as two minutes. The telescope was not then invented which shows that this is an optical delusion, and that they are points of immeasurably small diameter. It was certain to Tycho Brahé that if the earth did move, the whole motion of the earth in its orbit did not alter the place of the stars by two minutes; and that consequently they must be so distant, that to have two minutes of apparent diameter, they must be spheres of as great a radius at least as the distance from the sun to the earth. This latter distance Tycho Brahé supposed to be 1150 times the semi-diameter of the earth, and the sun about 180 times as great as the earth. Both suppositions are grossly incorrect; but they were common ground, being nearly those of Ptolemy and Copernicus. It followed then, for anything a real Copernican could show to the contrary, that

We must now devote some space to the system which he promulgated against that of Copernicus, and which is considered as the great defect in his astronomy. And first, we must observe that it has been customary to keep the name of Copernicus under every improvement which his system has undergone in later times. His notions were received at his hands loaded with real difficulties, supported by arguments as trivial as those of his opponents; Galileo has answered the mechanical objections, Bradley has produced positive proofs, Newton has so altered the system that Copernicus would neither know it nor admit it, by overthrowing the idea that the sun was fixed in the centre of the universe (which is the real Copernican system); and thus mended in one part, augmented in another, overthrown in a third, and positively proved in a fourth, all that is known of the relative motions of the system in modern times is removed back two hundred years, called Copernican, and confronted with Tycho Brahé. Now the real state of the case is this: that Tycho Brahé did compound out of the systems of Ptolemy and Copernicus a system of his own, which, while it seized by far the greater portion of the advantages of the latter, was not open to the most material objection. (See a paper entitled 'Old Arguments against the Motion of the Earth,' 'Companion to the Almanac,' 1838.) And we assert moreover, that of all the inconclusive arguments of that day, which concern the subject in question, the reply of the Copernicans to Tycho Brahé is the most inconclusive. The system of Tycho Brahé consists in supposing, 1, that the stars all move round the earth as in the Ptolemaic system; 2, that all the planets, except the earth, move round the sun as in the Copernican system; 3, that the sun, and the imaginary orbits in which the planets are moving, are carried round the earth. Imagine a planetarium on the system of Copernicus placed over a table, above which is a light. As the earth moves, let the whole machine be always so moved that the shadow of the earth shall fall upon one and the same part of the table; then the motions of the shadows of the other planets and of the sun will be according to the system of Tycho Brahé. Mathematically speaking, it does not differ from that of Copernicus: we shall now consider it physically.

The stars, to the naked eye, present diameters varying from a

some of the fixed stars must be 1520 millions of times as great as the earth, or 9 millions of times as great as they supposed the sun to be. Now, one of the strong arguments against Ptolemy (and the one which has generally found its way into modern works) was the enormous motion which he supposed the stars to have. The Copernican of that day might have been compelled to choose between an incomprehensibly great magnitude and a similar motion. Delambre, who comments with brief contempt upon the several arguments of Tycho Brahé, has here only to say, "We should now answer that no star has an apparent diameter of a second." Undoubtedly, but what would you have answered then, is the reply. The stars were spheres of visible magnitude, and are so still; nobody can deny it who looks at the heavens without a telescope: did Tycho reason wrong because he did not know a fact which could only be known by an instrument invented after his death?

Again, the mechanical difficulties attending the earth's motion were without any answer which deserved attention even in that day. That a stone dropped from a height fell directly under the point it was dropped from, Copernicus accounts for by supposing that the air carries it: he, as well as his opponents, believing that but for the air the spot at first directly beneath the stone would move from under it. We are of opinion that the system of Tycho Brahé was the only one of that day not open to serious physical objections, taking as a basis the notions of mechanics admitted by all parties. To us the system of Copernicus appears a premature birth: the infant long remained sickly, and would certainly have died if it had not fallen under better management than that of its own parents.

Frederick II. died in 1588, and Tycho remained unmolested under his son Christian IV. till 1596. Gasendi relates that the nobles were envious when they saw foreigners of importance come to Denmark solely to converse with Tycho; that the medical men were displeased at his dispensing medicines gratis to the poor; and that the minister had a quarrel with Tycho about a dog. Malte-Brun relates this more distinctly, apparently from the 'Danske Magazin,' or from Hulberg's 'History of Denmark;' so that it seems most probable that the destruction of the observatory at Hoëne arose from a personal

quabble between this minister, called Walckendorf, and a dog of Tycho, whose name has not reached us. The astronomer was gradually deprived of his different appointments, and in 1596 removed, with all his smaller apparatus, to Copenhagen. A commission appointed by the minister had declared his methods not worth prosecuting, and his instruments worse than useless.

In the summer of 1597 he finally left his country, and removed with his wife, two sons, and four daughters, to Rostock, whence he shortly removed to Wandsbeck, near Hamburg, at the invitation of Count Rantzau. At the end of 1598 he received a pressing invitation from the Emperor Rudolph II., promising him every assistance if he would remove with all his apparatus to the imperial dominions. Thither Tycho arrived in the spring of 1599, having been detained during the winter at Wittenberg by the circumstance of a contagious disorder raging in Prague. The emperor settled upon him a pension of 3000 ducats, and offered him the choice of three different residences. He chose that of Benateck (Benachia, or Benatica, Gassendi), five miles from Prague, and called the Venice of Bohemia. He sent for the remainder of his instruments from Denmark, and remained at Benateck till February 1601, when he settled in Prague.

The celebrated Kepler joined him in February 1600. Tycho had repeatedly written to invite him, having first entered into communication with him in 1598, when he sent Tycho a copy of his 'Mysterium Cosmographicum.' It is to following the advice of Tycho, to lay aside speculations, and apply himself to the deduction of causes from phenomena, that Kepler owes all his fame; so that Tycho not only furnished him with the observations necessary, but was his adviser (and never was adviser more wanted) in the way of using them. In the year 1601 they were employed together in the composition of tables from the Uraniberg observations, which tables they agreed should be called Rudolphine. But on the 13th of October 1601, the effects of a convivial party, combined with inattention to himself, produced a mortification of the bladder. He continued for many days in pain, and died on the 24th of the month. During his delirium he several times repeated "ne frustra vixisse videar," which must be interpreted as something between a hope and a declaration that he had not lived in vain. Nor will he be thought to have done so by any one who ever found his longitude at sea, or slept in quiet while a comet was in the heavens, without fear of the once supposed minister of God's anger. For if the list of illustrious men be formed, to whom we owe such benefit, it will be found that his observations form the first great step of the moderns in astronomy. There was a report set abroad in Denmark, that he had been poisoned by the emperor, probably the imagination of those who had driven him from his country. He was buried at Prague, and his monument still exists there. (Malte-Brun.) He was of moderate stature, and latterly rather corpulent, of florid complexion, and light hair. Gassendi refers to the portrait in his own work in testimony of the skill with which the wound already mentioned was repaired; and certainly, with the exception of a very great fulness and cylindricality of figure about the lower part of the nostrils, there is nothing there to excite remark. In his younger days he cultivated astrology, but latterly renounced it altogether. He has left no record of his chemical and medical studies. He was a copious writer of Latin verses. Some of his earlier observations are preserved at Copenhagen.

It is our belief that the merits of Tycho have been underrated, both as an inventor of instruments and as a philosopher. As an observer, his works have spoken for themselves, in language which cannot be mistaken.

BRAIDWOOD, THOMAS, is known as one of the earliest teachers of the deaf and dumb in this island. He began this useful career at Edinburgh in 1760. No authentic record of the methods which he pursued has been made known, unless a work published by the late Dr. Watson, formerly the head master of the London Institution for the Deaf and Dumb, may be so considered. Dr. Watson, as an assistant to Mr. Braidwood, acquired his mode of tuition, and says, speaking of Braidwood, "His method was founded upon the same principles; and his indefatigable industry and great success would claim from me respectful notice, even if I could forget the ties of blood and of friendship." ('Instruction of the Deaf and Dumb,' Introduction, p. xxiii., London, 1809.) A work entitled 'Vox Oculis Subjecta,' published in London in 1783, the production of an American gentleman, whose son was educated by Braidwood, professes to give "a particular account of the academy of Messrs. Braidwood of Edinburgh," but it throws no light upon the system of instruction pursued by those gentlemen. It is chiefly valuable for its copious extracts from the writings of Bulwer, Holter, Amman, Wallis, and Lord Monboddo, who had all considered the subject of speech with philosophical attention, and in relation to those persons who are born deaf, or who become so at an early age, and who consequently labour under the deprivation of speech. There was doubtless much merit in the mechanical methods used by Braidwood and his son to produce in their pupils an artificial articulation, and in the persevering application of principles which had been previously ascertained. Braidwood succeeded in attracting the notice of many eminent persons. After having resided some years at Edinburgh, he removed his establishment to Hackney, near London, where he continued to instruct the deaf and dumb, and to relieve impediments in speech, till his death in 1806.

BRAMAH, JOSEPH, was born on the 18th of April 1749, at Stainborough in Yorkshire, where his father followed the occupation of a farmer. He was the eldest of five children, and was intended for his father's avocation; but he very early exhibited proofs of mechanical talent, and being, at the age of sixteen, incapacitated for agricultural labour by lameness, he was apprenticed to a carpenter and joiner. He subsequently removed to London, where he worked for some time as a journeyman cabinet-maker, and afterwards set up in the same business for himself. His adoption of the profession of engineer or machinist appears to have arisen from his invention of some important improvements in water-closets, in consequence of which he became a manufacturer of such articles. His next important mechanical invention was the ingenious lock still known by his name, and which, after a lapse of seventy years, during which time many new kinds of locks have been introduced, maintains its character as one of the most inviolable locks ever contrived. This invention was patented in 1784. Among the numerous other inventions of Bramah were improvements in water-cocks, pumps, and fire-engines, and the hydraulic press, a machine of immense power, acting on the principle of the philosophical toy called the hydrostatic paradox. This invaluable machine was patented in 1796. The boundless power which it enables one man to exert renders it an important agent in many manufacturing processes. In the following year Bramah patented the convenient beer-machine which is now so universally adopted in taverns for drawing liquors in the bar from barrels deposited in the cellar, by means of a force-pump. He was also the author of improvements in steam-engines, especially in boilers; in machinery for producing smooth and accurate surfaces on wood or metal; in paper-making machinery; in making pens by a mechanical process, by which several nibs resembling steel pens were cut out of one quill and fixed in a holder for use; and in the construction of carriages. In 1806 he contrived an exceedingly ingenious mode of printing, which was shortly afterwards applied to the consecutive numbering of bank-notes, and by the introduction of which, during the issue of one-pound notes by the Bank of England, the labour of 100 clerks out of 120 was dispensed with. In 1812 he patented a scheme for laying mains or large water-pipes through the principal streets of London, of sufficient strength to withstand great pressure, to be applied by force-pumps; his object being to provide the means of extinguishing fires by throwing water without the aid of a fire-engine, and also to supply a lifting power applicable to the raising of great weights, by forcing water or air into an apparatus consisting of a series of tubes, sliding into one another like the tubes of a telescope, and capable of being projected when necessary. He asserted his ability to make a series of 500 such tubes, each five feet long, capable of sliding within each other, and of being extended in a few seconds, by the pressure of air, to the length of 2500 feet; and with such an apparatus he proposed to raise wrecks and regulate the descent of weights. The last patent obtained by Bramah was for a mode of preventing dry-rot in timber, by covering it with a thin coat of Parker's Roman cement.

He died, in consequence of cold contracted while superintending the uprooting of trees in Holt Forest by his hydraulic press, on the 9th of December 1814, in his sixty-sixth year. In the construction of some water-works at Norwich, Bramah acted with success in the department of the civil engineer. He also appeared as an author in a 'Dissertation on the Construction of Locks,' and a 'Letter to the Right Honourable Sir James Eyre, Lord Chief Justice of the Common Pleas, on the subject of the cause Boulton and Watt versus Hornblower and Maberley,' which was published in 1797, and is referred to under WATT. A memoir, which gives a very pleasing account of his amiable private character, and of his energy and probity in business, was published in the 'New Monthly Magazine' for April 1814, from the pen of William Cullen Brown, M.D.

BRAMANTE, D'URBINO, or BRAMANTE LAZZORI, was one of the most eminent men in his profession at the time of the so-called revival of the arts in the 15th century, when he distinguished himself by a more accurate investigation of antique buildings than had before been adopted, thereby contributing in no small degree towards establishing that system of architecture which, founded upon the application of the Roman orders, arrogated to itself the title of 'classical,' and within a short time entirely superseded every other mode of building that had previously obtained in Italy. Seconded by the circumstances of the times, almost as much as by his genius, his diligence earned for him a reputation which appears quite adequate to his intrinsic merits. His name also derives some reflected lustre from being associated with the names of Raphael (his relative) and Michel Angelo, not only as that of their immediate predecessor, but for the encouragement he gave to the talents of the one, and the degree of rivalry which existed between himself and the other.

According to some, Bramante was born at Castel Durante, in the duchy of Urbino; according to others, at Fermignano in the same state, in 1444, the same year in which Filippo Brunelleschi (the architect of the then unrivalled cupola of the cathedral at Florence) died. Although in very humble circumstances, his family appears to have been respectable; and as he very early evinced a natural aptitude for drawing, his father placed him under the celebrated artist Fra Bartolomeo of Urbino. The proficiency he attained in this part of

his career is evinced by many pictures which he executed, and which are still to be seen at Milan; but his predilection for architecture prevailed over all other considerations, and he abandoned for that art the one where he had already a fair prospect of success before him.

At first he travelled through Lombardy, and passed some time at Milan, studying the works and construction of the celebrated duomo in that city, which was the most extraordinary work of architecture then in progress. He next proceeded to Rome, where after painting some frescoes (now destroyed) in the church of St. John Lateran, he determined to apply himself exclusively to investigating and measuring the principal ancient edifices in that metropolis and its environs. He soon became completely engrossed by his new pursuits, being incessantly occupied in making drawings, studies, and measurements of various works of antiquity. Among other edifices which he explored were the ruins of that prodigious pile, or rather collection of buildings, the Villa Adriana, which, not having been then despoiled of the columns, marbles, and other ornaments since carried off, must have been far more instructive to the architect than at present, when its scanty remains are interesting only to the antiquary. Unfortunately, Bramante's zeal and admiration do not appear to have been regulated by that discriminating taste which shows that it appreciates real beauties by rejecting all spurious alloy. Amplitude of masses and vastness of plan seems to have struck the imagination of the future projector of St. Peter's quite as forcibly as that architectural dignity which is independent of extraordinary dimensions, arising rather from nobleness and greatness of manner consistently kept up throughout.

After extending his researches as far as Naples, upon his return to Rome he was commissioned by Cardinal Oliviero Caraffa to erect the cloister of the convent Della Pace: which, although not a work of any particular merit for its design, gave such satisfaction as to bring him at once into notice, and obtain for him the patronage of Alexander VI. Under that pope however he did not execute any public works of importance, with the exception of the Cancelleria or palace of the chancery; a pile of imposing magnitude, and remarkable for its spacious 'cortile,' surrounded by open galleries formed by ranges of arches resting upon granite columns. Although such a combination of the column and arch constitutes in itself a mixed style, as it was here managed by Bramante it is at least free from absurdity. In the façade of the same building, which has two orders of pilasters above a lofty rusticated basement, he was not so happy; and he either did not aim at the character of the antique, or else failed in his attempt. In proportion to the building the orders are too minute to assist the idea of magnitude otherwise than at the expense of their own importance. There is magnitude in the general mass, but not in the constituent features. The arrangement of the pilasters again is more unusual than agreeable, for they cannot be said to be coupled, but distributed so as to form wider and narrower intercolumns alternately: in the former are placed the windows, while the others are left blank—a mode which, without possessing the richness of coupled columns or pilasters, is equally if not still more objectionable. Another circumstance which does not contribute greatly to beauty is, that the windows of the principal floor as well as those of the basement are arched, although crowned by a horizontal cornice, owing to which they have a heavy look in themselves, and also appear squat and depressed in comparison with the range above them. Nearly the same peculiarities, which may be taken as in some degree characteristic of Bramante's style in buildings of this class, prevail also in the façade of a palace begun, although not finished by him, in the street called Via Borgo Nuovo. This mansion, now called the Palazzo Giraud, has like the Cancelleria two orders of pilasters, forming narrow and wide intercolumns alternately, and arched windows to the first order, crowned by a horizontal frieze and cornice, but with these differences, that the lesser intercolumns are narrower than in the other instance, although still of too great width to allow the pilasters to be termed 'coupled;' and the arched windows are there wider and loftier than the others.

The elevation of Julius II. to the pontificate was a fortunate circumstance for Bramante; for that pope, who was no less enterprising and resolute in civil than he was in military undertakings, was ambitious of signalising his reign by some noble monuments of architecture and the other arts. By him Bramante was commissioned to project plans for uniting the Belvedere with the buildings of the old Vatican palace, so as to render the whole an imposing mass. The architect accordingly proposed to connect the two edifices by means of long wings or galleries, between which should be a court. On account of the inequality of the ground, this latter was formed on two levels, with flights of steps leading up to the large niche or tribune of the Belvedere. The design of this tribune, within which were five lesser niches containing the group of the Laocoon and other masterpieces of sculpture, may be seen (very rudely expressed) in Serlio's work on architecture. This grand composition, which however was not completed by Bramante himself, has since his time undergone so many extensive changes, that it is impossible now to judge from the place what it originally was; for the court has been divided into two by a range of buildings across it, at the junction of its two levels, which was erected by Sixtus V. for the Vatican library.

Complying with both the pope's impatience and his own, Bramante carried on the works at the Vatican with all possible despatch, by

night as well as day, in consequence of which precipitation many fissures afterwards discovered themselves. To reward the zeal and assiduity of his favourite architect, Julius conferred on him the office called 'del Piombo,' took him along with him in his military expeditions as his chief engineer, and otherwise manifested the confidence he placed in him. The credit he was in with the pope enabled him in time to patronise others, and he enjoys the honour of having been the first to recommend Raphael at the papal court; yet he has also been accused of availing himself of his interest with Julius for the purpose of thwarting the views of Michel Angelo. Certain it is that he persuaded the pope to abandon the idea of the vast mausoleum which was to have been ornamented with forty statues by that artist, some of them of colossal size.

But he could have had no very particular reason to be dissatisfied with the scheme of the mausoleum, because it was in order to provide a suitable situation for it that Julius determined upon taking down the old basilica of St. Peter, and erecting a new edifice, as had been intended by Nicholas V., who had actually commenced the end tribune or semicircle, which was chosen by Michel Angelo as the most fitting place for the mausoleum. Such was the origin of the present structure, called by Vasari 'la stupenda e terribilissima fabrica di San Pietro.' Giuliano di Sangallo was employed to make designs as well as Bramante, but those of the latter obtained the preference, and Sangallo felt so indignant that he retired to Florence. Bramante commenced his work in 1513, and such was the expedition with which he proceeded, that the four great piers and their arches were completed before his death in the following year. On this occasion he had recourse to a new mode of executing the ornaments of the soffits of the arches, by means of moulds fixed into the centerings of the arches, which were filled up with stucco and brickwork before the arches themselves were turned,—a mode supposed to have been practised by the ancients, although quite gone out of use until again applied by Bramante. As his labours extended no further, and as the subsequent mutations introduced by Michel Angelo and his successors were such that the original design was entirely lost sight of, the present edifice can in nowise be considered the work of Bramante. On the contrary, there is reason to imagine that it would have been a much nobler piece of architecture had his ideas been adhered to; and perhaps one of even still greater magnitude. As the model was not completed, we can only judge of his general intentions from the plan composed according to them by Raphael, which is given by Serlio in his work, and certainly, as far as plan alone goes, this appears far better conceived than the one actually executed, and superior in perspective effect, inasmuch as there would have been a greater number of arcades along the nave, and an uninterrupted vista in each of the side aisles to the very extremity of the building; besides which there would have been a spacious prostyle portico in front, the entire width of the church, formed by three ranks of insulated columns. Further it has been observed, that instead of appearing less than its actual dimensions, as is notoriously the case with the present St. Peter's, which even excites astonishment on that very account, it would have looked more spacious and extensive than it really was. The form of the Dome too, as proposed by Bramante, would have been more simple and more after the character of the antique, it being much less than a hemisphere externally, with a series of gradini similar to those of the Pantheon at its base, above the peristyle of its tambour;—and it may here be observed, that it was Bramante, not Michel Angelo, who first projected the idea of surmounting St. Peter's by a rotunda and dome equal to the Pantheon. Another celebrated work of Bramante, although upon an exceedingly small scale, is the little Temple or Oratory in the cloister of San Pietro Montorio at Rome. It is circular in plan, and surrounded externally by a peristyle of sixteen Doric columns, above which rise the walls of the cella, forming a disproportionably lofty attic, with windows and niches placed alternately; this circumstance, together with the number of doors, windows, and niches, gives the whole a heavy and confused appearance, quite unlike the finished simplicity observable in the best antique models. Besides all which there is a particularly uncouth balustrade above the entablature of the peristyle, whose balusters are continued the whole circumference, without any intervening pedestals. At the best it is a more showy than beautiful architectural object; yet would have produced a good general effect, had the circular court with a surrounding colonnade, for the centre of which it was intended, been completed according to the architect's design.

Numerous other buildings and projects are attributed to Bramante, but to some of them his claims are rather disputable, and of the edifices known to have been erected by him many no longer exist. He died at Rome in 1514, at the age of seventy, and his remains were interred with unusual solemnity.

BRAMHALL, JOHN, Archbishop of Armagh, in the 17th century, was born at Pontefract, in Yorkshire, about the year 1593, and was descended from an ancient family. He received his early education in the place of his birth, and was then sent to Sidney College, Cambridge, where he was admitted February 21st, 1608. In 1623 the Archbishop of York made him his chaplain. He was also prebendary of York and Ripon. In 1630 he took the degree of Doctor in Divinity. Soon after he was invited to Ireland by Viscount Wentworth, deputy of that kingdom, and Sir Christopher Wandesford, master of

the rolls. There he soon obtained the archdeaconry of Meath, the best in that kingdom. In 1634 he was promoted to the bishopric of Londonderry; while he held which, he doubled the yearly revenue by advancing the rents and recovering lands which had been detained from his predecessors.

Bramhall appears to have applied himself with about the same zeal in Ireland that Laud was then exhibiting in England for the increase of the wealth and power of the clergy. In pursuance of several acts passed in the Irish parliament, which met July 14, 1634, he abolished fee farms that were charged on church-lands; he obtained composition for the rent instead of the small reserved rents; by grants from the crown, and by purchase, he obtained impropriations. By these and other means he regained to the church, in the space of four years, thirty or forty thousand pounds a year. He likewise prevailed upon the Church of Ireland to embrace the thirty-nine Articles of Religion of the Church of England, agreed upon in the convocation holden at London in the year 1562. He tried also to get the English Canons established in Ireland, but did not succeed farther than that a few of them should be introduced, and other new ones framed.

On the 4th of March 1640-41, he was impeached, together with several others of Strafford's coadjutors, by the Irish House of Commons. He was in consequence imprisoned, and after some time, through the King's interference, set at liberty, but without any public acquittal. Some time after, not considering himself safe in Ireland, he went over to England, where he remained till the battle of Marston Moor; after which he embarked with several persons of distinction, and landed at Hamburg, July 8, 1644. It was during his exile, in the company of the Marquis of Newcastle, that he had that argument with Hobbes about liberty and necessity, which gave rise to the celebrated controversy, without which the prelate's name might have perhaps been forgotten. At the treaty of Uxbridge, Bramhall had the honour to be classed with Laud in being excepted out of the general pardon.

At the Restoration, Bramhall was made Archbishop of Armagh, Primate and Metropolitan of all Ireland. He now renewed his exertions for the enrichment and aggrandisement of the church. He died in 1663. By his wife he had four children, a son, Sir Thomas Bramhall, bart., and three daughters.

Bramhall, whatever in his day might be his reputation as a bustling and intriguing churchman, will be remembered, if he be remembered at all, by posterity on account of his controversy with Hobbes. As this controversy throws considerable light not only on the character of Bramhall but on that of his age, it is of importance to give some account of it, which will be done much better than we could do it in the following passages, with which Hobbes concludes the work. As the controversy is now very scarce, this extract, even though not viewed as by any means setting the question at rest, will scarcely be considered too long, especially when it is regarded as a specimen of the style of Hobbes, and a fair statement of the views of the two parties. As we have already remarked, the controversy originated in a conversation at Paris in the company of the Marquis of Newcastle, while they were all living there in exile.

"I shall briefly draw up the sum of what we have both said. That which I have maintained is—that no man hath his future will in his own present power;—that it may be changed by others, and by the change of things without him;—and when it is changed, it is not changed nor determined to anything by itself;—and that when it is undetermined, it is no will, because every one that willeth willeth something in particular;—that deliberation is common to men with beasts, as being alternate appetite, and not ratiocination; and the last act or appetite therein, and which is immediately followed by the action, the only will that can be taken notice of by others, and which only maketh an action in public judgment voluntary;—that to be free is no more than to do, if a man will, and if he will, to forbear; and consequently that this freedom is the freedom of the man, and not of the will;—that the will is not free, but subject to change by the operation of external causes;—that all external causes depend necessarily on the first eternal cause, God Almighty, who worketh in us, both to will and to do, by the mediation of second causes;—that seeing neither man nor anything else can work upon itself, it is impossible that any man, in the framing of his own will, should concur with God, either as an actor, or as an instrument; that there is nothing brought to pass by fortune as by a cause, nor anything without a cause or concurrence of causes sufficient to bring it so to pass; and that every such cause, and their concurrence, do proceed from the providence, good pleasure, and working of God; and consequently, though I do, with others, call many events contingent, and say they happen, yet because they had every of them their several sufficient causes, I say they happen necessarily; and though we perceive not what they are, yet there are of the most contingent events as necessary causes as of those events whose causes we perceive, or else they could not possibly be foreknown, as they are by him that foreknoweth all things.

"On the contrary, the bishop maintaineth—that the will is free from necessitation, and in order thereto that the judgment of the understanding is not always *practicè practicum*, nor of such a nature in itself as to oblige and determine the will to one, though it be true that spontaneity and determination to one may consist together;—that the will determineth itself; and that external things, when they

change the will, do work upon it not naturally but morally, not by natural motion but by moral and metaphysical motion;—that when the will is determined naturally it is not by God's general influence, whereon depend all second causes, but by special influence, God concurring and pouring something into the will;—that the will, when it suspends not its act, makes the act necessary; but because it may suspend and not assent, it is not absolutely necessary;—that sinful acts proceed not from God's will, but are willed by him by a permissive will, not an operative will, and he hardeneth the heart of man by a negative obduration;—that man's will is in his own power, but his *motus primo primi* not in his own power, nor necessary, save only by a hypothetical necessity;—that the will to change is not always a change of will;—that not all things which are produced are produced from sufficient but some from deficient causes;—that if the power of the will be present in *actu primo*, then there is nothing wanting to the production of the effect;—that a cause may be sufficient for the production of an effect, though it want something necessary to the production thereof, because the will may be wanting;—that a necessary cause doth not always necessarily produce its effect, but only then when the effect is necessarily produced. He proveth also that the will is free, by that universal notion which the world hath of election; for when of the six electors the votes are divided equally, the King of Bohemia hath a casting voice;—that the prescience of God supposeth no necessity of the future existence of the things foreknown, because God is not eternal but eternity; and eternity is a standing now, without succession of time, and therefore God sees all things intuitively by the presentiality they have in *esse stans*, which comprehendeth in it all time, past, present, and to come, not formally, but eminently and virtually;—that the will is free even then when it acteth, but that is in a compounded not in a divided sense;—that to be made and to be eternal do consist together, because God's decrees are made, and are nevertheless eternal;—that the order, beauty, and perfection of the world doth require that in the universe there should be agents of all sorts, some necessary, some free, some contingent;—that though it be true that to-morrow it shall rain or not rain, yet neither of them is true *determinatè*;—that the doctrine of necessity is a blasphemous, desperate, and destructive doctrine;—that it were better to be an atheist than to hold it, and he that maintaineth it is fitter to be refuted with rods than with arguments." "The Question concerning Liberty, Necessity, and Chance, clearly Stated and Debated" between Dr. Bramhall, Bishop of Derry, and Thomas Hobbes of Malmesbury. London, 1656, sub. fin.

BRANCALEONE D'ANDALO, a Bolognese noble and Count of Casalechio, was chosen by the people of Rome as their senator in 1253, with the summary powers of a dictator. The pope, Innocent IV., was absent at the time, and Rome was distracted by quarrels between its feudal nobles, who had fortified themselves in their respective palaces or in some of the ancient monuments, such as the Colosseum, the tomb of Cæcilia Metella, the mausoleums of Hadrian and Augustus, &c. They had also built a number of lofty towers, from which they defied the attacks of their enemies. Each baron had a band formed of his relatives, clients, or dependents, and of hired swordsmen. These frequently sallied out of their strongholds, either to attack a rival faction, or to plunder the unprotected citizens and country people. Such was at that time the general condition, not only of Rome but of Florence, Milan, and other great Italian cities, which lived in what was called municipal independence, until the citizens, weary of this state of anarchy, resorted to the establishment of the podestà, a temporary magistrate, who was always chosen out of a foreign city or state, and who had summary powers to put down the disturbers of the public peace. The Romans styled theirs 'Senator.' Brancalione was a man of a stern, peremptory temper, and, being a stranger, had no sympathy with any of the conflicting parties. He began a war of destruction against the barons, attacked their strongholds, razed their towers, hanged them and their adherents at the windows of their mansions, and thus succeeded by terror in restoring peace and security to the city. In the numerous conflicts that took place several of the ancient monuments suffered greatly. He summoned the haughty Innocent IV. in the name of the Roman people to leave Assisi, whither he had retired, and to return to Rome, threatening him, in case of non-compliance, with a visit from the armed citizens, with their senator at their head. The pope returned to Rome, where he died soon after, in 1254. The people of Rome however, fickle as they have generally shown themselves in modern history, became tired of Brancalione's severity: they revolted against him, and appointed another senator, Maggi of Brescia, whom however they soon after accused of being too partial towards the nobles; and in 1257 they recalled Brancalione, who resumed his authority, which he exercised with redoubled vigour. In 1258 Brancalione died, much regretted by the citizens, who elected his uncle, Castellano d'Andalo, as his successor, notwithstanding the opposition of the pope. A column was raised in honour of Brancalione, with an urn at the top, in which the head of the senator was inclosed.

BRANDENBURG, ELECTORS OF. The first known inhabitants of the electorate of Brandenburg were the Suevoi, a race recorded by Julius Cæsar as the most numerous and warlike in Germany. The Suevoi inhabited the territory extending from the banks of the Elbe and Saale to the Vistula, and for a time held the whole region which lay

between the Baltic and the Rhine and Danube. In the time of the Emperor Augustus, Drusus, his stepson, compelled the Suevi, who dwelt in what was afterwards called the 'Middle Mark,' and the Langobardi, who peopled the districts subsequently termed the 'Old Mark,' to accept Vannius as their ruler. A few years after the birth of Christ, the Langobardi were subjugated by Maroboduus, king of the Marcomanni, at that time sovereign of Bohemia; and A.D. 17, we find the Semnonæ, a branch of the Suevi, seeking protection against their oppressor from Arminius, leader of the Cherusci. At the period of the great movement of the northern nations to the south, both the Langobardi and Suevi abandoned their native country and broke into Italy, where they established the Lombardic empire. Their deserted home now fell into the hands of the Vandals or Slavonians, one race of whom, the Vilzes, settling in the Middle Mark, founded several towns, of which Brennabor or Brandenburg was one. These new settlers were subsequently subdued by the Franks, from whom descended Prince Sunna, who reigned over the country in the beginning of the 2nd century, and Prince Brando, who founded the new town of Brandenburg in 230. Thirty years afterwards, the Vandals having regained their superiority, repossessed themselves of the country, and maintained themselves in it for the next 500 years; but in 789 they fell under the sway of Charlemagne after a severe contest; and in 808 he appointed a count to act as his vicegerent in Brandenburg. His successor also sent two princes in 823 to fill the same office. He had likewise conquered the Vilzes, but his successors were unable to maintain the conquest or prevent them from making repeated inroads into Saxony and Thuringia. At last, Henry I, king of Germany, brought the Vandals under complete subjection, and in 931 appointed certain counts to watch over the Saxon borders. These were the first markgraves of Lower Saxony, or the Vandal-mark; they were also denominated markgraves of Stade, the mark having passed into the hands of the earls of Stade. The Vandals continued to struggle for their independence in this quarter until the year 1144, when the emperor Lotharius confirmed the North-mark as well as the Salzwedel-mark on Albert the Handsome (also called the Bear), count of Ascania or Anhalt, the line of Stade having become extinct. This prince, who extinguished the dominion of the Vandals in these parts, was the first who assumed the title of Markgrave of Brandenburg; he made himself also master of the Middle-mark, Ucker-mark, and Priegnitz, either founded Berlin or raised it to the rank of a city, and built Stendal and other towns. His son Otho I, received Pomerania as a fief in addition, and was the first arch-chamberlain of the German empire. His wife was interred in a vault of the cathedral church of Brandenburg, and the stone under which her remains are deposited has the words 'Judith, the gem of the Polacks,' still legible upon it. His successors increased their patrimony by the acquisition of the New-mark, Lebus, Sternberg, Lower Lusatia, and other districts; and they were the first who set about reclaiming the wastes and swamps of their dominions and cultivating them. Their line terminated in the person of Markgrave Henry, in 1320, whose death threatening the dismemberment of Brandenburg by conflicting claimants, Lewis of Bavaria, then emperor, declared it a lapsed fief of the empire, and bestowed it upon his son, Lewis the elder. This prince was succeeded by his brother Otho, who obtained from the emperor Charles IV. a recognition of his descendants' right of succession to the electorate of the Mark, a dignity to which Charles raised it in the golden bull, declaring it the seventh electorate of the holy Roman empire. In consequence of Otho's indolence and incompetence, Charles in 1373 bestowed the electoral Mark upon Wenzel, his eldest son, king of Bohemia; and when Wenzel was raised to the dignity of king of the Romans, he made it over to Sigismund, his second son. This prince's non-residence and unconcern involved the country in confusion, and its affairs growing worse after he had ascended the imperial throne of Germany, he made over the electoral Mark to his cousins, Jobst and Procopius, princes of Moravia, and the New Mark to the Teutonic order, in pawn for monies lent. In 1417, on the death of Jobst, Sigismund gave the electorate to Frederic, margrave of Nürnberg, with whom began a race of sovereigns whose talents and wisdom have elevated Brandenburg and its subsequent acquisitions to a distinguished rank among the monarchies of Europe. Having under the name of Frederic I. made himself respected both at home and abroad for 23 years, Frederic was, in 1440, succeeded by Frederic II. 'of the Iron Teeth,' his son, who got back the New Mark from the Teutonic knights for 100,000 gulden, and not only added the towns and dependencies of Kottbus, Pritz, Somersfield, Bobersberg, Storkow, and Borskow, to his dominions, but established his right as lord paramount of Pomerania and as heir to the Mecklenburg domains. In 1471 he was succeeded by his brother Albert Achilles or Ulysses, one of the most distinguished commanders of his day; but in 1486 Albert's ill state of health induced him to transfer the electoral dignity, together with the mark of Brandenburg, to his son, John Cicero; Ansbach to another son, and Baireuth to a third. The last dying without issue, his share fell to his brother Frederic of Ansbach, who was the founder of the elder line of the markgraves of Brandenburg, in Franconia. John Cicero was noted as much for his learning as for his wisdom and economical habits, and no less for the enormous size to which he grew; he died in 1499, and was followed by his son,

Joachim (Nestor) I, a prince equally distinguished for his erudition and prudence, though a fierce persecutor of the Jews, as well as hostile to the Reformation. The earldom of Ruppın devolved to him by inheritance. It was reserved for Joachim (Hector) II, his son, who succeeded him in 1535, to introduce the reformed religion into his states; he was a great patron of learning, founded the university of Frankfurt-on-the-Oder, erected Spandau into a fortress, built a new palace at Berlin, and became joint lord paramount over the duchy of Prussia. He was followed by John George in 1571, who inherited the new mark and principality of Crossen from his uncle, and under whom Brandenburg enjoyed continued tranquillity. To this prince succeeded, in 1598, another equally paternal sovereign, Joachim Frederic, his son, who was bishop of Havelberg, Lebus, and Brandenburg, and incorporated the possessions of his diocese with the electorate. He founded the gymnasium of Joachimsthal, now one of the best public schools in Berlin. His reign lasted from 1598 to 1608. John Sigismund, his son and successor, inherited not only a moiety of the domains of Juliers, Cleves, and Berg, but shortly before his death, the duchy of Prussia, which was at that time a Polish fief. From the year 1618, therefore, this duchy became part of the electorate, and Brandenburg and Prussia thenceforward rank as a single state. John Sigismund embraced the Protestant reformed religion, but not without exciting some serious commotions in Berlin. In 1619 he was succeeded by George William, who inherited a flourishing patrimony, but by his weak conduct during the Thirty years' war and the double dealing of Von Schwarzenberg, his minister, bequeathed it to his son the 'great elector,' Frederic William, in the most deplorable condition, exhausted and devastated by the inroads of the Swedes and their contests with the imperialists. Frederic William, who succeeded his father in 1640, speedily restored his dominions to a state of order and prosperity, and added largely to their extent. [FREDERIC WILLIAM OF PRUSSIA.] At the time of his death, 1688, this illustrious prince left the electorate in a state of renovated prosperity, and greatly augmented power and extent. His son Frederic III., assumed the regal dignity in 1701, under the style and title of Frederic I., king of Prussia. [FREDERIC I. OF PRUSSIA.]

BRANTÔME, the common designation of the French writer Pierre de Bourdailles, who was Lord Abbot of Brantôme in Guienne. Very little is known of the life of Brantôme, beyond the brief and general sketch given by himself in an epitaph which he left to be inscribed on his tomb. He was a younger son of an ancient and distinguished family of Perigord, where he appears to have been born about the year 1540. Having served his apprenticeship in arms under Francis of Guise, he eventually obtained two companies of foot from Charles IX. That king, with whom he was a great favourite, also made him a Chevalier of the Order of St. Michael; that of Habito de Christo was bestowed upon him by Don Sebastian of Portugal. He is supposed to have visited in the early part of his life most of the countries of Europe, either in a military capacity or as a traveller. After the accession of Henry III. he appears to have retired to his estate of Richemont in his native province. It is supposed to have been after this that he wrote his various works. He died at Richemont, on the 15th of July 1614.

By his last will he charged his heirs with the publication of his works, or memoirs, as they are often collectively called, ordering that the necessary funds should be provided from the revenues of his estate; although he has known, he adds, the booksellers pay for liberty to publish books not half so interesting or so likely to be well received by the public. They did not however appear till the year 1666, when they were printed in eight 16mo volumes, according to the title-page, "at Leyden, by John Sambix the younger," but in reality, it is said, at the Hague, by the brothers Steucker. The works were sent to the press by Claude de Bourdailles, comte de Montrésor, grand-nephew of the author. Another edition appeared in 1699, and another in 1722. But the most complete edition of Brantôme is that of 1740, in 15 vols. 16mo, which bears the impress of the Hague on the title-page, but is said to have been actually printed at Rouen. No printer's or bookseller's name appears. A reprint of it in the same number of volumes appeared in 1779 at Maastricht (but with the impress of London); and it was once more reproduced in 8 vols. 8vo in 1787, by Bastien, as a part of the collection entitled 'Mémoires pour servir à l'Histoire de France.'

Of the fifteen volumes, the first contains 'Les Vies des Dames Illustres Françaises et Étrangères'; the second and third, 'Les Vies des Dames Galantes'; the fourth and fifth, 'Les Vies des Hommes Illustres et Grands Capitaines Étrangers'; the sixth, seventh, eighth, ninth, and tenth, 'Les Vies des Hommes Illustres et Grands Capitaines François'; and the eleventh, 'Discours sur les Duels.' The remaining four volumes consist of pieces which had not been previously published. The twelfth contains a collection entitled 'Rhodomontades et Gentilles Rencontres Espagnoles,' which is stated to have been written by Brantôme in Spanish, and translated into French by Marc Phrasendorp; and two dissertations, the first 'Sur les Sermens et Juremens Espagnols,' the other 'Sur les Belles Retraites d'Armées de diverses Nations.' The thirteenth contains the author's 'Opuscules Divers,' seventeen in number, the last being his Testament, a very curious document, extending to about 50 pages. To these is added a piece entitled 'Maxims et Avis du Maniement de la Guerre,' by André

de Bourdeilles, Brantôme's elder brother. The letters of André to Charles IX., Henri III., and their mother Catharine de' Medici, with their answers, form the fourteenth volume of the collection; and the fifteenth is filled with a history of the family of Bourdeilles, principally taken from Dinet's 'Théâtre de la Noblesse Française,' and brought down to the time when the edition was published. In the course of this long genealogical detail there is given a life of Brantôme, which fills about 80 pages. His portrait is prefixed to the volume.

There is no English translation of Brantôme's works. This is no doubt to be accounted for from the comparatively late date at which they appeared; had they been published some fifty or sixty years earlier, it is probable that the extreme freedom of expression in which they abound would not have shut out Brantôme from our literature, any more than the same objection has deprived us of his equally unscrupulous contemporaries, Rabelais and Montaigne. In this respect, as well as in others, his 'Mémoires' afford us undoubtedly the most living picture that has been preserved of the age in which he lived, and of the odd system of manners and morality then prevalent. No mere statement of facts which may be gathered from more formal histories can convey the vivid impression which this writer's whole style and tone of sentiment give us of the entirely different light in which licentiousness in both sexes was then viewed from that in which we now regard it. It seems never to enter Brantôme's head that either man or woman can be considered dishonoured, or to have forfeited a character for virtue, by the most lavish indulgence in what he calls gallantry. The most abandoned of the female worthies whose lives he details are spoken of by him as both illustrious ladies and good Christians. So complete is his abstinence from every expression that might denote a sense of there being any thing to blame in the indulgences which he has recorded, that he has been suspected by some critics of composing his works with a determined purpose of undermining the belief of his readers in the common distinctions between virtue and vice. This however is probably an unfounded hypothesis. It can hardly be said that Brantôme's moral creed on the subject of gallantry, strange as it appears to us, is really different from that which was generally in fashion when he wrote, and had been so for ages before. He is not more lax in his judgments upon matters of this kind, for instance, than his predecessor Froissart, or, as we have already observed, than his contemporary Montaigne. In his praises of beauty and of knightly prowess and courtesy, Brantôme writes with warm and eloquent enthusiasm.

BRASIDAS. The first mention of this eminent Spartan occurs in the first year of the Peloponnesian war, in which he performed a very gallant action in throwing himself at the head of a body of troops into Methone when besieged by the Athenians, "and for this exploit was the first that was praised at Sparta in this war." ('Thucyd.,' ii. 25.) In the third year of the war he was associated with Cnemus in the command of the Peloponnesian fleet, was present in the second battle in which the Lacedæmonians were defeated by Phormion, and took probably a leading part in a well-contrived scheme for surprising the Athenian port of Piræus, which failed, as Thucydides intimates, chiefly from the want of due energy in its execution (ii. 85-94). In the fifth year he was associated with Alcidas in the command of the Peloponnesian fleet. In the seventh year he commanded a ship in the armament which attacked the fort of Pylos, newly erected by Demosthenes on the mainland opposite the island of Sphacteria; distinguished himself by superior bravery, and being severely wounded and fainting, he dropped his shield into the sea, which was picked up and made part of the Athenian trophy. This little incident is worth relating, because the loss of the shield was considered disgraceful. It does not appear that Brasidas suffered in reputation from this accident (iv. 11, 12).

Soon after a request for help was preferred to Sparta from some cities in the Chalcidian peninsula, which had thrown off their alliance, or rather their allegiance, to Athens. Brasidas was already so well known, that the Chalcidians requested that he might be the leader of any force which should be sent to their assistance; and the text of Thucydides (iv. 80) seems to indicate that no one contested with him the command of a distant and uncertain enterprise. The Lacedæmonians gave him 700 heavy-armed foot; the rest of his army, consisting of Peloponnesian mercenaries, he was collecting in the neighbourhood of Sicyon, where he had the opportunity of protecting and preserving to the Peloponnesian alliance the city of Megara, attacked by an Athenian army (iv. 70-74). This was early in the eighth year of the war. In the same summer he led his army of 1700 heavy-armed foot (containing altogether about 4000 soldiers) to Macedonia. A chief difficulty of the undertaking was to reach the scene of action. The Athenians commanded the sea, and the land route lay through Thessaly, a difficult and unfriendly country; but by the assistance of a few principal Thessalians, who acted as his guides, and by the decision, rapidity, and address of his own movements, he so managed as to reach the Macedonian frontier in safety.

We can only give an outline of this expedition, which is but an episode in the Peloponnesian war. Brasidas did not act with the haughtiness and severity usually manifested by Spartan commanders towards their subject allies, and his character for equity and mildness did the Lacedæmonians great service, as it induced many cities to go

over to them; and afterwards, even after the Sicilian war, the wisdom and virtue of Brasidas, to some known by experience, by others believed upon report, was the principal cause which made the Athenian confederates affect the Lacedæmonians; the Athenians probably supposing that his successors would be of similar character. ('Thucyd.,' iv. 81.) The first fruits of his appearance in Chalcidice were the revolt of Acanthus and Stagirus from Athens; and this success, before winter was completely set in, was followed by the acquisition of Amphipolis on the Strymon. This was the heaviest loss which could have befallen the Athenians, inasmuch as it was the most important of their Thracian dependencies, and they derived from it a considerable revenue, and plenty of timber for ship-building, which the soil of Attica did not supply.

After the capture of Amphipolis, Brasidas meditated building a fleet in the Strymon, and he requested reinforcements from Sparta, which were denied, partly because the leading men were jealous of him, partly because the government was intent on concluding the war, and obtaining the freedom of the Lacedæmonians made prisoners in Sphacteria. Accordingly in the following spring, in the ninth year of the war, a truce was concluded, which provided that each party was to retain what it then possessed. It became a question however to which of them Scione, which had surrendered to Brasidas just about the ratification of the truce, belonged; and Brasidas refused to give it up to the Athenians, probably because he was ill pleased with the negotiation, and reluctant to deliver up the city, by which he had been eminently trusted and honoured, to the certain revenge of the Athenians. This circumstance, and the revolt of Mende, a neighbouring city, which he also received into the alliance of Sparta, alleging that the Athenians had already infringed the terms of the truce, led to the continuance of hostilities on the coast of Thrace. In the following spring (B.C. 422) the Athenians sent out Cleon to assume the command, who speedily undertook the siege of Amphipolis. Brasidas superintended the defence. In the quality of his troops Cleon had the advantage; the numbers were about equal. But Brasidas, who watched Cleon's movements from the city, took at once advantage of a false manoeuvre, and led his troops to battle, in which the Athenians were completely defeated, but he himself received a mortal wound. He was buried in the public place of Amphipolis at the public expense, was worshipped as a hero, and, as a still higher mark of respect, it was ordained that he, instead of Agnon the Athenian, should thenceforward be honoured as the true founder of the city and colony.

The military talents of Brasidas were great; his temper was politic and conciliatory; his accomplishments were considerable, at least in Sparta, for Thucydides pithily observes that, "for a Lacedæmonian, he was not unable to speak" (iv. 84). That he was held in high respect throughout Greece may be gathered, not only from the testimony of Thucydides, but from the expression put into the mouth of Alcibiades by Plato in the 'Banquet,' that "such as Achilles was, we may conjecture Brasidas to have been."

BRAUWER, or BROUWER, ADRIAN, was born, according to some authors, at Oudenaarden, but, according to others, at Haarlem, of poor parents. He was apprenticed to Frank Hals; who, it is said, finding him uncommonly skilful, made money by his productions, while he kept him confined and almost starving at home. Brauwer excelled in painting such scenes as his irregular mode of living made him most familiar with. The singular recklessness of his conduct led him into many ludicrous and disagreeable situations. It is related of him that, being in Antwerp during the wars in the Low Countries, he was imprisoned as a spy, and in prison met with the Duke d'Areberg, who was intimate with Rubens, and was frequently visited by him. Discovering his fellow-captive to be an artist, the duke asked Rubens to procure him materials for painting. As soon as he had them, Brauwer set to work, taking for his subject a group of soldiers playing at cards in the prison. D'Areberg showed the picture to Rubens, who immediately recognised the work of Brauwer, and offered 600 guilders for it. The duke however presented the painter with a larger sum, and retained the picture for himself. Rubens exerted his interest, and procured the liberation of his brother artist, took him home with him, clothed him, and maintained him for some time. But Brauwer soon quitted Rubens again to plunge into excesses, which shortly after terminated his existence in an hospital, at the age of thirty-two, in the year 1640.

His subjects are taken from low life, of the most unpleasant class; but from the extraordinary skill displayed in the execution, the excellent colouring, the correct drawing, and the life and character of the design, they fetch a high price.

BRAY, SIR REGINALD, the reputed architect of Henry VII.'s Chapel at Westminster, was the second son of Sir Richard Bray, one of the privy council to Henry VI. All that has been ascertained of his personal history is that he was greatly attached to the study of architecture, and stood in high favour with Henry VII.: therefore that he should be employed by that king to design the sumptuous structure intended for his own mausoleum was almost matter of course. Nevertheless, Bray's claim to the honour of so fine a work has been disputed, on no better grounds than that he did not live to see the building greatly advanced, the first stone being laid on the 18th of January 1502 ("by the hands of John Islip, abbot of Westminster, Sir Reginald Braie, Kt. of the Garter, and others"), and he

dying on the 5th of August in the following year. While his death within a year and a half afterwards proves nothing more than that he did not live to see his designs for the edifice fully realised, the fact of his assisting with the abbot in the ceremony of laying the first stone affords strong proof that he was the architect or designer of the fabric, it being a very unlikely thing that he would have taken an active share in such a ceremony had the building been the work of a rival artist. That Bray possessed talents equal to the occasion is beyond all doubt, it being admitted even by those who would reduce his fame, that he erected the nave of that other singularly beautiful structure, St. George's Chapel at Windsor, commenced by Edward IV. Sir Reginald's arms, crest, and device, R. B., and a hemp-break, occur in many places on the ceiling of that building, and in the south aisle there is a chapel still called after him, in which he was buried.

BREDOW, GABRIEL GODFREY, born at Berlin in 1773, was professor at Eutin in Holstein at the same time as Voss, afterwards at Frankfurt-on-the-Oder, and lastly in the University of Breslau. He was a learned and laborious man, especially in matters concerning ancient and modern history. He wrote 'Handbuch der alten Geschichte' ('Manual of Ancient History,' translated into English, London, 1827), 'Untersuchungen über Geschichte Geographie und Chronologie' ('Researches on History, Geography, and Chronology'), and 'Historische Tabellen,' which are a series of chronological tables, in which the principal events of the history of the various countries of the world are placed in synchronical order by means of parallel columns. This last work went through several editions during the lifetime of the author, and consisted of ten tables, which carried the series to 1799. Bredow died in 1814. An edition was made after his death, which contains an additional table, including the events of Napoleon's time to 1811. Bredow's tables were translated into English (1820) by Major James Bell, who added a twelfth sheet, carrying the series of events to 1820, besides adding other columns concerning British and Indian affairs. This work of Major Bell has likewise gone through several editions, in the latest of which he has added another table, which brings the series down to 1833, and also a table of Oriental chronology. The work contains also four tables of literary and scientific chronology, translated from Bredow's text, and arranged likewise in synchronical order, exhibiting the progress of the human mind in the various countries from the oldest records in existence; and lastly, a similar table of the principal painters, classed according to the various schools, taken from the notes of M. Van Brea. It is altogether a useful work, and executed with considerable industry, although not wholly exempt from inaccuracies in some of the details. As a book of reference it is clearer and more comprehensive than the 'Atlas Historique' of Le Sage.

In the latter tables added by Major Bell, the writer has somewhat departed from the sober matter-of-fact style of the German professor, and has occasionally indulged in qualifications, either laudatory or condemnatory, applied to political parties and transactions, which appear out of place in a work of pure and simple chronology.

Bredow wrote also a 'Chronicle of the 19th Century,' in which he spoke of Napoleon's power, then at its height, with a boldness that acquired him a name among the patriots of Germany.

BREISLA'K, SCIPIONE, was born at Rome in 1748, of a family originally from Germany. Cardinal Scipione Borghese stood godfather to him, and gave him his own Christian name. Breislak early distinguished himself for his application to the physical sciences, by which he attracted the attention of the learned Stay of Ragusa, who offered him a professorship of mathematics and physics in a college newly established at Ragusa. In that city Breislak became acquainted with the Abate Fortis, from whose conversation he derived a fresh impulse towards the study of natural philosophy. After remaining several years at Ragusa, Breislak returned to Rome, where he was appointed professor in the College Nazareno. He mainly contributed to form the rich cabinet of mineralogy of that institution, and he made excursions to the hills near the lake of Bracciano, north-west of Rome, to investigate their geology and mineralogy. He published the result of his observations, 'Saggio d'Osservazioni sulla Tolfa, Oriolo e Latera,' in 1786. Afterwards, on his going to Naples, he was employed by that government in several mining researches, and in constructing a vast distilling apparatus on the volcanic mountain called La Solfatara. His health becoming seriously affected by these labours, he was obliged to desist, and was appointed teacher to the students of artillery in the royal military college of Naples. He made frequent perambulations through the province of Terra di Lavoro for the sake of geological research; the results of his observations are contained in his 'Topografia fisica della Campania,' Florence, 1796, afterwards translated into French, with additions; and an essay on the volcanic formation of the seven hills of Rome, 'Voyages dans la Campanie,' Paris, 1801. Breislak had been driven to Paris by the events of 1799. At Paris he was cordially received by Fourcroy, Chaptal, Cuvier, and the other scientific men of that capital. Having returned to Italy at the end of that war, he was appointed in 1802 inspector of the national manufactory of saltpetre and gunpowder of the Italian republic, and member of the Italian institute. From that time he resided chiefly at Milan. He wrote several treatises on the manufacture of saltpetre. 'Del Salnitro e dell'Arte del Salnitro,' 'Memoria sulla Fabbricazione e Raffinazione

dei Nitri,' 'Istruzione Pratica per le piccole Fabbricazione di Nitro, da farsi dalle persone di campagna.' Breislak continued in his office of inspector through the various changes of government, and also under the Austrian administration till his death. In order to encourage the study of geology, which was then in its infancy in Italy, Breislak published in 1811, his 'Introduzione alla Geologia,' which he afterwards enlarged and published in French under the title of 'Institutions Géologiques,' Milan, 1819. This work was well received, and was immediately translated into German. Breislak was elected a member of most scientific societies in Europe. In 1816, together with Monti, Giordani, and Acerbi, he formed the plan of the well-known Italian scientific and literary journal, 'Biblioteca Italiana,' which speedily attained the first rank among the periodicals of that country. In 1822 he published 'Descrizione Geologica della Provincia di Milano,' which was printed at the expense of the Austrian government of Lombardy. Breislak died at Milan, February 15, 1826, universally regretted both for his scientific merit and his personal qualities. His rich collection of minerals passed into the hands of the Borromeo family.

* BREMER, FREDERIKA, an eminent Swedish novelist, was born in 1802 at Abo in Finland. About the time when Finland was ceded to Russia, her father removed with his family into Sweden. For some years Frederika remained in the house of the countess of Sonnerhjelm, but her education was completed in an establishment at Stockholm. At an early age she began to write French verses; the formation of her literary taste and habits is however attributable to the study at a somewhat later period of the great poets and prose writers of Germany, especially of Schiller. She did not appear before the public as an author until she had read and observed much, and widened her sympathies by travel and by intercourse with various grades of society. The keenness of observation and delicate skill in painting family life, exhibited in her early writings, gained for her considerable notice in her native country and in Germany, but it is perhaps not too much to say that it was the great success of the English translation by Mrs. Howitt, of Miss Bremer's 'Neighbours,' published in 1842, and confirmed as that success was by the translation of 'Home,' which appeared in 1843, that caused her even in Sweden to be regarded as among the chief living novel-writers. These charming stories were in speedy succession followed by other somewhat similar sketches and studies of the northern domestic life, among others appearing, 'The Diary, or Strife and Peace;' 'The H. Family;' 'Brothers and Sisters;' 'Nina;' 'The President's Daughter;' 'Life in Dalecarlia,' &c.; all, or nearly all of which were translated by Mrs. Howitt.

Miss Bremer had already visited England, and travelled through Germany, when in 1849, she determined to extend her journeying to the United States, where her novels had achieved a popularity at least equal to that which they had won in England. On her return she published a florid account of her reception, and her estimate of the country and the people, under the title of 'Homes of the New World.' It was issued, simultaneously, in 1853, in Sweden, England, and the United States, and was much read. It is chiefly remarkable however for lavish indulgence in the redundant style, and somewhat exaggerated sentiment which had too strongly characterised some of her later novels. Since her return to Sweden, Miss Bremer has been much engaged in the promotion of various philanthropic schemes for ameliorating the condition of her sex, and for extending education among the poor.

BRENNUS, the Latinised form of the Celtic *Brenin*, 'king.' Two individuals are known in history by this name.

1. The first was the hero of an early Roman legend, which relates to the migration of the Gauls into Italy, and their march to Clusium and Rome. In the account given by Diodorus (xiv. 113, &c.) of this singular invasion, the name of Brennus is not mentioned; in the narrative of Livy (v. 33, &c.), he figures as the "regulus Gallorum," or chieftain of the Gauls. When he arrived at Clusium the inhabitants called on the Romans for aid. He engaged with and defeated the Romans on the banks of the Allia, the name of which river they ever after held in detestation. (Virg. *Æn.*, vii. 717.) The whole city was afterwards plundered and burnt; and the capitol would have been taken but for the bravery of Manlius. At last, induced by famine and pestilence, the Romans agreed that the Gauls should receive 1000 lbs. of gold, on the condition that they would quit Rome and its territory altogether. The barbarian brought false weights, but his fraud was detected. The tribune Sulpicius exclaimed against the injustice of Brennus, who immediately laid his sword and belt in the scale, and said "Woe to the vanquished." The dictator Camillus arrived with his forces at this critical time, annulled the capitulation, and ordered him to prepare for battle. The Gauls were defeated; there was a total slaughter, and not a man survived to carry home the news of the defeat. The date of the taking of Rome, assigned by Niebuhr, is the 3rd year of the 39th Olympiad, B.C. 382. ('Hist. Rom.,' vol. ii. pp. 509-567, English translation.)

2. A king of the Gauls, who (B.C. 279; 'Clintion,' vol. i. p. 237) made an irruption into Macedonia with a force of 150,000 men and 10,000 horse. Proceeding into Greece, he attempted to plunder the temple at Delphi. He engaged in many battles, lost many thousand men, and himself received many wounds. In despair and mortification, he

called a council of war, and advised the Gauls to kill him and all the wounded, to burn the waggons, and, returning home with all speed, to choose Cichorius (or Acichorius) king. Soon however, in a fit of intoxication, he killed himself. (Diodorus Siculus, xiii.; 'Fragm.,' p. 300, Bipont. edit.; Pausanias, x. 19-23.)

BREUGHEL, the name of a family of celebrated Flemish painters.

PETER BREUGHEL, the father, was the son of a peasant, and was born about 1530, at Breughel, a village in the neighbourhood of Breda. He was placed under Peter Koek of Aalst (Alost), whose daughter he subsequently married. Having learned painting under that master, he travelled into France and Italy. He took many views by the way, particularly among the Alps.

Returning from Italy, he fixed his residence at Antwerp, where he resided for a considerable time, when he removed to Brussels, and married the daughter of his old master, and was admitted into the academy of that city in 1551. While painting a view on the canal which communicates with the Schelde, by order of the magistrates of Brussels, he was seized with his last illness. As he lay on his death-bed he ordered many of his paintings, which were either satirical or licentious, to be brought before him, and made his wife burn them in his presence. He died about 1590, but the precise dates of his birth and death are unknown.

The elder Breughel painted chiefly comic subjects, after the manner of Jerome Bosche, whom he excelled; and he has been considered by many inferior to Teniers alone in that branch of art. His composition has been objected to; but his drawing is correct and spirited, though not very highly finished. It was his frequent custom to disguise himself and mix with the peasantry at their festivals and games; and the happiness with which he transferred the living actions he thus witnessed to the canvas has been aptly compared to Moliere's, though in a different kind of satire. Besides comic subjects, he painted landscapes, and a few historical pictures. Two sons survived him, John and Peter.

PETER BREUGHEL, the eldest son of Peter Breughel the elder, is said to have been born at Brussels about 1569. After the death of his father he became the pupil of Giles Coningsloo. From the diabolical nature of his favourite subjects he has been surnamed Hellish. He did not attain the eminence either of his father or brother. He died about 1625.

JOHN BREUGHEL was born at Brussels about 1589. According to the received account he lost his father very young, and was brought up by his grandmother, the widow of Peter Koek, from whom he learned to paint in distemper, and afterwards studied oil-painting under an artist named Goekindt. Another account is, that he received the first principles of his art from his father, Peter Breughel, and this account the internal evidence of his works tends to confirm; but unless the date commonly assigned to the death of the elder Breughel is much too early, it would of course have been impossible for his son to have received instructions in painting from him. For some time John Breughel confined himself to flower-painting; but travelling into Italy, he enlarged his style, and painted landscapes, which he adorned with small figures, executed with exquisite correctness and beauty. Many painters availed themselves of his liberality, and induced him to enrich their pictures with his beautiful little figures or landscapes; among them are Steenwick, Van Baelen, Rotenhamer, Lomper, &c. Even Rubens made use of his skill in more than one picture, in which Rubens painted the figures, and Breughel the landscapes, flowers, animals, and even insects.

John Breughel was extremely industrious, as the great number of his pictures, and the care with which they are finished, sufficiently attest. Growing rich by his industry, he adopted a magnificent style in his apparel, and was nicknamed 'Velvet Breughel,' from the usual material of his dress. His touch is light and spirited, his drawing correct, and his finish elaborate. His pictures are much admired, although his landscapes are injured by an exaggerated blueness in the distances. The time of his death is unknown to Flemish authors; M. Felibien conjectures it to have been about 1642.

BREWSTER, SIR DAVID, was born at Jedburgh, Scotland, 11th December, 1781. He was educated for, and became a licentiate of the Church of Scotland; but his inclination for science led him to other branches of study. In 1800 the University of Edinburgh conferred on him the honorary degree of M.A.; and here he had the advantage of intercourse with Robison, Playfair, and Dugald Stewart, who were then professors, and commenced that series of optical researches which have since made his name deservedly famous. In 1807 he received the distinction of LL.D. from the University of Aberdeen: he was elected a Fellow of the Royal Society of Edinburgh in 1808, and in the same year undertook the editorship of the 'Edinburgh Encyclopædia,' a task which occupied him for twenty-two years. Some results of his optical studies appeared in 1812, in the 'Treatise on Burning Instruments, containing the Method of Building large Polyzoal Lenses;' an important subject as regards illumination generally and lighthouses in particular. It was shown that coast navigation would be deprived of many of its dangers were all lighthouses fitted with lenses instead of imperfect reflectors; the light would be intensified and transmitted to a greater distance. The new lens consisted of a central disc with concentric zones built in several pieces around it. The invention was talked about; but led to no immediate improvements. Meanwhile Fresnel brought it into use in France.

Dr. Brewster had contributed to the 'Transactions of the Royal Society of Edinburgh;' and in 1813 he sent a paper to the Royal Society of London, 'On some Properties of Light'—in which, taking up the then new phenomena of polarization—showing the influence of a plate of agate on a ray of light, and the double dispersive power of chromate of lead—he multiplied the phenomena, and opened the way to his subsequent valuable discoveries. In 1815, the society awarded him their Copley medal for his paper 'On the Polarization of Light by Reflection,' and elected him a Fellow; and in the following year by an adjudication of the Institute of France he received 1500 francs, the half of their prize for discoveries in physics. It was in 1816 that Brewster made his name popularly known, as it was before scientifically, by his invention of the kaleidoscope. In 1818, the Royal Society gave him their Rumford medal, for further 'Discoveries relating to the Polarization of Light.' In 1819, in conjunction with Jameson, he started the 'Edinburgh Philosophical Journal,' and afterwards the 'Edinburgh Journal of Science,' of which sixteen volumes were published, containing many scientific papers from his own pen.

In 1827 Brewster brought out his 'Account of a New System of Illumination for Lighthouses,' and offered his services to the lighthouse boards of the United Kingdom; but nothing was done until 1833 when experiments, made in Scotland from Calton Hill to Gulian Hill, a distance of 12½ miles, showed that "one polyzoal lens, with an argand burner of four concentric circles, gave a light equal to nine parabolic reflectors, each carrying a single argand burner." From that date the illumination of British lighthouses has been improved.

Brewster received a third acknowledgment from the Royal Society in 1830, when their Royal medal was awarded to him for further researches in polarization and the properties of light whereby the theory of optics was enriched and widened. He, conjointly with Davy, Herschel, and Babbage originated the British Association; and his spirited appeals to the public in his Journal and other periodicals had an immediate effect in bringing about the first meeting of the Association at York in 1831. In the same year William IV. conferred on him the honour of knighthood, and the decoration of the Hanoverian Guelphic order. In 1841 he was appointed Principal of St. Leonard's College at St. Andrews; and in 1849 was chosen President of the British Association.

Sir David Brewster's numerous writings take in a wide range of science. His most valuable scientific papers are published in the 'Transactions' of the Royal Societies of London, and of Edinburgh. Among the more important are:—'On a new analysis of Solar light, indicating three primary colours, forming coincident spectra of equal length; 'On circular polarization;' 'On the effects of compression and dilatation in altering the polarizing structure of the doubly refracting crystals;' and others, in which the law is determined which connects the refractive index of a crystal with its angle of polarization, and the discovery of rings in biaxial crystals is made known. Other papers are to be found in the 'Edinburgh Review,' the 'Reports of the British Association,' the 'Library of Useful Knowledge,' the 'Philosophical Magazine' (of which Sir David is one of the editors), and the 'North British Review;' they embrace physical geography, astronomy, photography, meteorology, &c. Of separate works may be mentioned:—'A Treatise on the Kaleidoscope,' 8vo, 1819; the Notes to Robison's 'System of Mechanical Philosophy,' 4 vols. 8vo, 1822; Euler's 'Letters,' with a life of Euler, 2 vols. 12mo, 1823; Notes and Introductory Chapter to Legendre's 'Elements of Geometry,' 1824; 'A Treatise on Optics,' 8vo, 1831; 'Letters on Natural Magic,' 12mo, 1831; 'The Life of Sir Isaac Newton,' 12mo, 1831; 'The Martyrs of Science; or, the Lives of Galileo, Tycho Brahe, and Kepler,' 12mo, 1841 (2nd edition, 8vo, 1846); 'More Worlds than one, the Creed of the Philosopher, and the Hope of the Christian,' 8vo, 1854; 'Memoirs of the Life, Writings, and Discoveries of Sir Isaac Newton,' 2 vols. 8vo, 1855.

The French Academy of Sciences elected Sir David Brewster one of their corresponding members in 1825; and in 1849 he had the signal honour of being chosen one of their eight Foreign Associates, in place of Berselius, deceased. He is a Fellow also of the Astronomical and Geological Societies, and of the Royal Irish Academy.

BRIAN, surnamed **BOROMHE (BORU')**, a celebrated king of Ireland, son of Kennedy, king of Munster, son of Lorcán. He ascended the throne of both Munsters, that is, of Ormond and Thomond, or the present counties of Tipperary and Clare, A.D. 978. His earlier exploits were against the Danes of Limerick and Waterford, but being elated by frequent successes against these invaders, he deposed O'Maolachghlin, the supreme king of the island, and eventually became himself the monarch of Ireland. He derived his surname from the tribute which he now imposed upon the provinces. The 'Boroinhe,' or tax alluded to, was levied in the following proportions:—from Connaught, 800 hogs; from Tirconnell (the present county of Donegal), 500 mantles and 500 cows; from Tirone, 60 loads of iron; from the Clan Rory of Ulster (the present counties of Down and Antrim), 150 cows and 150 hogs; from Oriel (the present counties of Armagh and Monaghan), 160 cows; from the province of Leinster, 300 cows, 300 hogs, and 300 loads of iron; from Ossory (the present Queen's County), 60 cows, 60 hogs, and 60 loads of iron; from the Danes of Dublin, 150 hogheads of wine; from the Danes of Limerick and Waterford, 365 hogheads of red wine. On these and other

revenues King Brian supported a rude but royal magnificence at his chief residence of Kincoora, near the present town of Killaloe, in the county of Clare. He had also castles at Tara and Cashel. Brian continued for many years to rule his dominions with vigour and prosperity, reducing the Danes and subduing their native allies, building numerous duns or castles, causing roads and bridges to be constructed, and enforcing the law by taking hostages from all the petty kings of the country. Having however disputed with Maelmora, the king of Leinster, Maelmora revolted, and, inviting a new invasion of Danes to his assistance, brought on the battle of Clantar, in which King Brian fell, after gaining a glorious victory over the united forces of the invaders and revolted natives, on Good Friday, 1014. Brian and his son Murrogh, who fell in the same battle, were buried together in the cathedral of Armagh. The funeral obsequies lasted twelve days and nights, and the possession of the heroic remains was afterwards contested by rival potentates. Brian is said to have defeated the Danes in twenty-five pitched battles: prior to the battle of Clantar he had confined them to the cities of Dublin, Wexford, Waterford, and Limerick; and the final blow which he gave their power in that engagement they never recovered. He was the founder of the numerous sept of O'Brien, O or Ua being a distinctive adnomem not assumed by Irish families till after his time. This national prefix means 'descendant of,' or 'of the kindred of,' and was originally supplied by the more ancient Mac, which means 'son.' (O'Connor, *Rev. Hib. Script. Vet.*; *MSS. History of Ireland*, lib. R. I. Academy.)

BRIDGEWATER, FRANCIS EGERTON, DUKE OF, born in 1736, was the youngest son of Scroop, fourth Earl and first Duke of Bridgewater, by Lady Rachel Russel, daughter of Wriothesley, second duke of Bedford. He succeeded his brother, the second duke, in 1748. He was the heir of the Lord Chancellor Ellesmere in the sixth degree of descent. In his youth he was extremely thin and delicate, and his apparent predisposition to pulmonary complaints was so decided, that his education was entirely neglected. He not only got the better of this early tendency, which had proved very fatal to his family, but became a very strong man and extremely corpulent. As his bad health took him entirely out of society, he contracted habits of extreme shyness, which made him avoid company, especially that of ladies. But though the defects of his early education and the singularity of his character were not unfrequently exhibited, his mind was naturally of a powerful and determined character, bordering perhaps occasionally on obstinacy. It was in fact owing to this quality, and his extraordinary enterprise, sagacity, and prudence, that he earned a title of far higher distinction than that which he derived from the accident of birth. One of the estates which he inherited, situated at Worsley, near Manchester, contained a rich bed of coal, but it was comparatively of little value, in consequence of the heavy expense of land carriage and the inadequate means of communication afforded by the Irwell, which, though rendered navigable, was a tedious and imperfect medium for carrying on an extensive traffic. In deliberating on the best means of supplying Manchester with coal from his pits at Worsley, the obstacles were so great as to lead him to consider a great variety of expedients for overcoming them. At length he fixed on the expedient of constructing a navigable canal; and in the 32nd Geo. II. (1758-9) he obtained, though not without some difficulty, the Act of Parliament which enabled him to commence the first navigable canal constructed in Great Britain in modern times. From this circumstance he is frequently styled 'the Father of British Inland Navigation.' It was the Duke of Bridgewater's determination to render his canal as perfect as possible, and to adopt a line which should render it unnecessary to have recourse to locks. The duke had the good fortune to select as engineer a man whose genius was unfettered by commonplace rules, and one who was exactly fitted to carry into execution a project, not only perfectly novel at the time, but which, even at the present day, would demand the highest practical science. [BRINDLEY.] The duke nobly supported Brindley in his bold and original views, in the merit of which he undeniably deserves to share. When Brindley proposed carrying the canal over the Mersey and Irwell navigation at Barton, by an aqueduct 39 feet above the surface of the water, he desired, for the satisfaction of his employer, to have another engineer consulted. It is reported that the individual called in to give his opinion, said, on being taken to the place where the intended aqueduct was to be constructed, that he "had often heard of castles in the air, but never was shown before where any of them were to be erected." The duke was not however deterred by the difficulty and magnitude of Brindley's plans, nor by the unfavourable report of the other engineer, from prosecuting the work under his direction. He was rewarded for his enterprising spirit and confidence by the successful completion of the work, which is 200 yards in length. A considerable portion of the canal between Worsley Mill and Manchester was executed under the provisions of the first Act of Parliament, but a second Act was obtained in the following year for the purpose of making some changes in the line. The whole of the canal from Worsley to Manchester, with the subterraneous works at the coal-mines at Worsley, was executed under these two Acts: the underground canals and tunnels at Worsley are said to have cost 168,000*l.*, and to be 18 miles in length. In 1762 a third application was made to parliament, and the necessary powers were obtained for opening an artificial water communication with

Liverpool by the Mersey. Subsequent acts enabled the duke to complete his designs. The length of the main line is above 27 miles all on the same level, which has rendered great embankments necessary, as the canal crosses several depressions. At Preston-Brook the Grand Trunk Canal (the name by which this navigation is familiarly known in the country) joins the Duke of Bridgewater's Canal, which thus connects it with the Trent and with Birmingham and London, and with Bristol. With the exception of that part between Worsley and Leigh, every part of the canal was executed, under the direction of Brindley, in about five years. The aqueduct at Barton was opened July 17th 1761, and soon afterwards the whole line. It cannot be computed what the total expense incurred by the Duke of Bridgewater in completing this great undertaking amounted to. The duke's canal however has done as much to promote the public prosperity as to increase the wealth of the noble projector's heirs. Before its construction coals were retailed to the poor at Manchester at 7*d.* per cwt., but after its completion they were sold at 3*d.*, and six score were given to the cwt. The carriage by water from Manchester to Liverpool was 12*s.* per ton; by land it was as high as 40*s.*; on the duke's canal the charge was 6*s.* per ton. When the line of his canal had been tripled in length, the duke never demanded larger tolls, but contented himself with the profits which the increase of traffic fairly brought him. The duke was also one of the most zealous promoters of the Grand Trunk Navigation, and his brother-in-law, the first Marquis of Stafford, being at its head, they mutually aided each other. In the construction of his great work he had exhausted his credit to the utmost; he could not raise 500*l.* on his bill in the city of London, and his agent, Mr. Gilbert, had frequently to ride over the counties of Cheshire and Lancashire, from door to door, to raise sums, from 10*l.* and upwards, to enable him to pay the Saturday night's demand. At the same time the duke restricted himself to the simplest fare, and lived with scarcely a servant to attend upon him. His great estates at Ellesmere, which he held in fee simple, were quite unencumbered, but no persuasion would induce him to resort to the easy method of relieving himself from difficulties by borrowing money upon them. When in London he would not undertake the trouble of keeping house; he therefore made an allowance of 2000*l.* to a friend of his (Mr. Carvill), with whom he dined, when not otherwise engaged, and to whose table he had the privilege of inviting his intimate friends. The Duke of Bridgewater never took an active part in politics; but he was a decided friend to the Pitt Administration, and a large contributor to the Loyalty Loan. He died March 8th 1803, and never having been married, his great wealth was distributed among the collateral branches of his family.

BRIDGEWATER, EARL OF. The Right Honourable and Reverend Frances Henry Egerton, eighth Earl of Bridgewater, ninth Viscount Brackley, and Baron Ellesmere, was born November 11, 1758. He was the younger of two sons of John, Lord Bishop of Durham, by Lady A. S. Grey, daughter of Henry, duke of Kent (chamberlain to Queen Anne). He was educated at Eton and at All Souls' College, Oxford, where he took the degree of M.A. in 1780. In the same year his father appointed him a prebendary of Durham Cathedral, and in the following year the Duke of Bridgewater presented him to the rectory of Middle in Shropshire. In 1796 he published at Oxford, in a handsome volume royal 4to, an edition of the 'Hippolytus' of Euripides, with scholia, Latin version, various readings, and copious notes in Latin by Valckenauer and others. In 1797 the Duke of Bridgewater presented him to the rectory of Whitchurch in Shropshire. His brother, who was the seventh Earl of Bridgewater, died in 1823, leaving no children, and Mr. Egerton then succeeded him in his titles. The Earl of Bridgewater resided many years in Paris, where he died in 1829, and the title then became extinct. In the latter years of his life he fell into very eccentric habits, such as keeping a large number of dogs and cats, and having some of his favourite dogs occasionally dressed like men, and placed at his table to dine with him.

The Earl of Bridgewater, by his will, dated February 25, 1825, left 8000*l.* to be at the disposal of the President of the Royal Society of London, to be paid to the person or persons nominated by him, to write, print, and publish 1000 copies of a work 'On the power, wisdom, and goodness of God, as manifested in the creation; illustrating such work by all reasonable arguments, as, for instance, the variety and formation of God's creatures in the animal, vegetable, and mineral kingdoms; the effect of digestion; the construction of the hand of man; and an infinite variety of other arguments; as also by discoveries ancient and modern, in arts, sciences, and the whole extent of literature.' He also desired that the profits arising from the sale of the works so published should be paid to the authors of the works.

The then President of the Royal Society, Davies Gilbert, requested the assistance of the Archbishop of Canterbury and of the Bishop of London in determining on the best mode of carrying into effect the intentions of the testator. Acting with their advice, he appointed eight gentlemen to write separate treatises on the different branches of the subject, which treatises have been published, and are as follows:—1. By the Rev. Thomas Chalmers, D.D. 'The Adaptation of External Nature to the Moral and Intellectual Constitution of Man,' 2 vols. 8vo, Glasgow, 1839. 2. By John Kidd, M.D. 'The Adaptation of External Nature to the Physical Condition of Man,' 8vo, London, 1837. 3. By the Rev. William Whewell. 'Astronomy and General

Physics considered with reference to Natural Theology,' 8vo, London, 1839. 4. By Sir Charles Bell. 'The Hand, its Mechanism and Vital Endowments, as evincing Design,' 8vo, London, 1837. 5. By Peter Mark Roget, M.D. 'Animal and Vegetable Physiology, considered with reference to Natural Theology,' 2 vols. 8vo, London, 1840. 6. By the Rev. Dr. Buckland. 'On Geology and Mineralogy,' 2 vols. 8vo, London, 1837. 7. By the Rev. William Kirby. 'On the History, Habits, and Instincts of Animals,' 2 vols. 8vo, London, 1835. 8. By William Prout, M.D. 'Chemistry, Meteorology, and the Function of Digestion, considered with reference to Natural Theology,' 8vo, London, 1834. All these treatises have been reprinted in a cheaper form as a portion of Bohn's 'Standard Library.'

The Earl of Bridgewater also left upwards of 12,000*l.* to the British Museum, the annual income arising from which he directed to be employed in the purchase of manuscripts, and in taking due care of them for the use of the public.

BRIENNE, JOHN OF, third son of Erard II., Count of Brienne-sur-Aulie, a small town in Champagne near Troyes, and of Agnes of Montbelliard, was married by the recommendation of Philippe Auguste, to Mary, daughter of Isabella, wife of Conrad, marquis of Montferrat. Isabella was the youngest daughter of Amaury, king of Jerusalem, an empty title which Mary thus inherited from her maternal grandfather. Of the early life of John of Brienne nothing is known, but he was named by the king of France as the most worthy champion whom he could offer for the defence of the Holy Land, "as good in arms, faithful in war, and provident in action." He was crowned at Tyre in 1209, and he maintained himself against the Saracens as well as his scanty force would allow. In the fifth crusade he headed a large band of adventurers in the invasion of Egypt, whom he led to the capture of Damietta, after sixteen months' siege; and when the pride, obstinacy, and avarice of the Cardinal Pelagius, the papal legate, had compromised the safety of the Christian army, which was inclosed on one side by an overpowering host of Moslems, and on the other by the waters of the Nile, the king of Jerusalem became one of the hostages for the evacuation of Egypt.

When the emperor Frederic II., stimulated by ambition, undertook to fulfil his often evaded vows of joining the crusade, upon receiving the nominal sovereignty of the Holy Land, John of Brienne, wearied with the ineffectual struggle which he had long supported against the infidels, agreed to abdicate in his favour, and brought his eldest daughter and heiress, Yolande or Yolante, to Italy, where Frederic received her in marriage; yet in the subsequent wars between the pope and the emperor, John commanded the pontifical army against his son-in-law. In the year 1225, the emperor, during his successful expedition to Palestine, entered the Holy City; and, upon a demur of the patriarch, crowned himself with his own hands. From this union of Frederic with Yolante, the present royal house of Naples derives a claim to the title of king of Jerusalem, which it still preserves. (Giannone, xvi. 2; Hallam, 'Middle Age,' i. 264, 4to.)

John of Brienne in 1222 had married as a second wife, Berengaria, sister of Ferdinand, king of Castile; but his services in more advanced life were again needed in the East. On the death of Robert of Courtenay, and the succession of his youngest brother, Baldwin II., to the imperial throne of Constantinople, the barons of Romania, seeing that the Latin dynasty required a protector of greater vigour and maturer years than their boy-sovereign, invited John of Brienne to share the throne during his lifetime, a proposal which he accepted upon condition that Baldwin should espouse his youngest daughter. In 1229 he accordingly assumed the imperial dignity, and for the ensuing nine years he nobly maintained himself against the increasing power of Vataces, emperor of Nicæa. A contemporary poet affirms that the achievements of John of Brienne (who at that time had passed his eightieth year, according to the representation of the Byzantine historian Acropolita) exceeded those of Ajax, Hector, Roland, Uggier, and Judas Macabæus; and we should readily acquiesce in this assertion, if we were to believe the exploits related of him when Constantinople was besieged by the confederate forces of Vataces and of Azan, king of Bulgaria. Their allied army amounted to 100,000 men; their fleet consisted of 300 ships of war, against which the Latins could oppose only 160 knights and a few sergeants and archers. "I tremble to relate," says Gibbon, with well-justified apprehension, "that instead of defending the city, the hero made a sally at the head of his cavalry, and that of forty-eight squadrons of the enemy no more than three escaped from the edge of his invincible sword." The ensuing year was distinguished by a second victory; soon after which John of Brienne closed a life of military glory by an act of devotion which raised him equally high in spiritual reputation also. During his last illness, in 1237, he clothed himself in the habit of a Franciscan monk, and thus expired in that which superstition considered to be the richest odour of sanctity.

The reign of John of Brienne is given at length by Du Cange, in the third book of his 'Hist. Constantinop.,' and a life of him was published at Paris in 1727, 12mo, by Lafitau, a Jesuit.

BRIGGS, HENRY. Most of the accounts of Briggs are taken from Ward's 'Lives of the Gresham Professors,' which we shall also follow as to dates and personal facts. Mr. Ward cites Dr. Smith, 'Vita Henrici Briggii,' and Wood's 'Athenæ Oxonienses.'

Briggs was born at Warleywood, near Halifax, probably about 1556.

He was sent to St. John's College, Cambridge, about 1577, where he became scholar in 1579, B.A. in 1581, M.A. in 1585, fellow in 1588, and reader in natural philosophy, on Dr. Linacer's foundation, in 1592. In 1596, on the establishment of Gresham House, London, (not then called College) he was chosen the first reader (not professor) in geometry. In 1619 he was chosen first Savilian professor of geometry at Oxford, Sir Henry Saville himself having preceded him in the delivery of thirteen lectures. Briggs began where Saville left off, namely, at the ninth proposition of the first book of Euclid. He entered himself of Merton College, but he continued to hold the Gresham readership till 1620, when he resigned it, and continued to hold the Savilian professorship till his death, which took place January 26, 1630. He was buried in the chapel of Merton College.

The history of Briggs is that of his connection with the improvement and construction of logarithms. When Napier, in 1614, first published his invention of natural or hyperbolic logarithms, Briggs was so struck with the invention that he resolved to pay the author a visit in Scotland. He says in a letter to Archbishop Usher, dated March 10, 1615, "Naper, Lord of Markinston, hath set my head and hands a work with his new and admirable logarithms. I hope to see him this summer, if it please God, for I never saw book which pleased me better, and made me more wonder." He went into Scotland accordingly, both in 1616 and 1617, and stayed some time with Napier. It must be observed that the first logarithms of Napier are a table of the values of x to every value of θ for all the minutes of the quadrant, in the equation (as it would now be expressed)

$$\left(1 + 1 + \frac{1}{3} + \frac{1}{2 \cdot 3} + \&c.\right)^x = \frac{1}{\sin \theta}$$

How this apparently complicated system is more natural than any other is explained in the article LOGARITHMS IN ARTS AND SCIENCES DIVISION of this work. In 1615, Briggs, in his lectures at Gresham college, publicly explained the superior convenience of calculating the following table, on which he wrote to Napier, before his first journey to Scotland:—

$$10^x = \frac{1}{\sin \theta}$$

These are both on the supposition that the *whole sine*, as it was then called, or the sine of a right angle, is 1. Both Briggs and Napier made it such a power of 10 as left no decimals in the table, and therefore of course depending on the number of places in the logarithms contemplated. But Napier himself (according to his own account) had been struck with the convenience of adopting a decimal system, and (according to Briggs's account) mentioned to him that he (Napier) had long thought that the system would be amended by what we should now call the tabulation of x from the equation

$$10^{p+x} = (\sin. \theta \text{ to radius } 10^p) \text{ or } 10^x = \sin. \theta$$

if the *whole sine* be unity. The difference between the two last systems has nothing to do with the principle of the improvement in question. In the first two systems the logarithms of increasing sines diminish; in the third, the logarithms of increasing sines increase. Briggs, as he informs us, immediately admitted the merit of Napier's improvement. And be it observed, the difficulty then lay in making the calculations: probably both Briggs and Napier thought little of the step as an advance in the theory, compared with the merit of actually carrying it into effect. This latter part was done by Briggs, (Napier died in 1618,) who published, in 1618 (having printed them the year before,) his 'Chilias Prima Logarithmorum,' containing the first thousand numbers, with logarithms to nine places: and in 1624, his 'Arithmetica Logarithmica,' which contains the logarithms of numbers (not of sines) from 1 to 20,000 and from 90,000 to 101,000, all to 15 places, with a method of supplying the logarithms of intermediate numbers. This was fully done by Vlacq, who, in an edition of the work just cited, Goudæ, 1628, gave (to 11 places) the logarithms of all numbers from 1 to 100,000, together with a corresponding table of sines, cosines, &c., for every minute of the quadrant. During this time Briggs was labouring at a logarithmic table of sines, &c., of which he did not live to complete the preceding explanations, but which was completed and published by his friend Henry Gellibrand, (whom he had associated with himself in the task some years before his death,) under the title of 'Trigonometria Britannica,' Goudæ, 1633. It is to 15 places of figures, and to every hundredth of a degree. Gellibrand states, in the preface, that, about 30 years before his death, Briggs had calculated a canon of sines (natural sines of course) by algebraical equations and differences.

It seems from the preceding that Napier thought himself entitled to the discovery of the decimal method of logarithms, and that if Briggs's statement be correct, he did not act quite fairly in suppressing the latter name in the preface to his 'Rabdologia.' But as this little controversial episode is fully treated of in Dr. Hutton's preface to his 'Logarithms,' we shall content ourselves here with citing the passages which constitute the evidence:—

1. Napier, 'Rabdologia,' 1616, published after Briggs left him, claims the improvement and entrusts the execution to Briggs as follows: "Logarithmorum speciem aliam multo præstantiorem nunc

etiam invenimus, et creandi methodum una cum eorum usu, si Deus longiorem vitæ et valetudinis usuram concesserit, evulgare statuimus. Ipsam autem novi Canonis supputationem ob infirmam corporis nostri valetudinem viri in hoc studii genere versatis relinquimus; imprimis vero D. Henrico Briggs, Londini, publico geometriæ professori, et amico mihi longe charissimo."

2. Briggs, in the preface of 'Chilias Prima,' &c., written in 1618, after Napier's death, hints that in the forthcoming posthumous work of Napier (then announced by his son), justice should be done him, as follows:—"Quod autem hi logarithmi diversi sint ab iis, quos clarissimus inventor, memoriæ semper colendæ, in suo edidit Canone mirifico, sperandum ejus librum posthumum abunde nobis propediem satisfacturum."

3. Briggs, finding the above hint not attended to, makes the following statement in the preface of the 'Arithmetica Logarithmica,' 1624:—"Quod logarithmi isti diversi sunt ab iis, quos cl. vir, baro Merchistonii, in suo edidit Canone mirifico, non est quod mireris. Ego enim, cum meis auditoribus Londini publico in collegio Greshamensi, horum doctrinam explicarem, animadverti multo futurum commodius, si logarithmus sinus totius servaretur 0, ut in Canone mirifico; logarithmus autem partis decimæ ejusdem sinus totius, nempe sinus 5 gr. 44 m. 21 s. esset 10,000,000,000. Atque ea de re scripsi statim ad eum auctorem, et quam primum per anni tempus, et vacationem à publico docendi munere licuit, profectus sum Edinburgum, ubi humanissime ab eo acceptus, hæsi per integrum mensem. Cum autem inter nos de horum mutatione sermo haberetur, ille se idem dudum sensitisse et cupivisse dicebat; veruntamen istos, quos jam paraverat, edendos curasse, donec alios, si per negotia et valetudinem liceret, magis commodos perfecisset. Istantem autem mutationem ita faciendum censebat, ut 0 esset logarithmus unitatis, et 10,000,000,000 sinus totius, quod ego longe commodissimum esse, non potui non agnoscere."

The algebra of Vieta does not appear in the writings of Briggs, not even in the preface to the 'Trig. Brit.,' which must have been written many years after Vieta's death. Briggs made considerable use of interpolation by differences, but his symbols and methods in general are like those of Stevinus. It must however be observed, that the history of the introduction of Vieta's algebra into England is so scanty, and the little there is of it so confused, that it would be premature to attempt any comparison of Briggs's methods with his means. It is evident from the first page of the first book of the 'Trig. Brit.,' that Briggs was acquainted with one of Vieta's writings (the 'Rel. Versæ Cal. Gregor.'), and from the rest that he had some of his methods; but it seems to us that there is throughout the whole a general suppression of his notation, and even of his name, particularly in the following sentence, which will surprise those who know what Vieta did:—"Modus inveniendi subtenuas ab antiquis usitatus traditur à Ptolemæo, Regiomontano, Copernico Rhetico, et aliis; et ante hos ab Hipparcho et Menelao; sed ista ætas alium modum invenit magis compendiarium, et non minus certum."

(Hutton's Preface, above cited; Maseres, *Scrip. Log.*, vol. vi.; *Montucla*, &c.)

BRIGGS, HENRY PERRONET, R.A. This distinguished painter, both in history and portrait, died in London, in January 1844, aged fifty-one. He was of a Norfolk family, and was related to Opie the painter. He commenced his career as a portrait painter, and first appears as an exhibitor on the books of the Royal Academy in 1814. In 1818 he exhibited a picture of 'Lord Wake of Cottingham setting fire to his castle, to prevent a visit from King Henry VIII., who was enamoured of his wife.' In the year following he exhibited a subject from Boccaccio (Gior. viii. Nov. 3), representing Calandrino, a Florentine painter, thinking he had found the 'Elitropia,' and thereby become invisible, pelted home by his companions Bruno and Buffalmacco. These were followed by others of a higher class, as 'Othello relating his Adventures to Desdemona;' the 'First Interview between the Spaniards and the Peruvians;' and 'George III. on board the Queen Charlotte, presenting a sword to Earl Howe, after the victory of the 1st of June 1794.' The last picture was presented in 1825 by the British Institution to Greenwich Hospital. In 1831 he exhibited a large picture of 'The Ancient Britons instructed by the Romans in the Mechanical Arts,' for the Mechanics Institute at Hull. He was elected an academican in the following year, from which time he was nearly exclusively employed in portrait-painting.

The portraits of Briggs are very effective as regards colour; but the colouring is conventional, and the features are not sufficiently modelled. Many of the nobility have been painted by Briggs, and also various well-known persons, among others, Sir S. Meyrick, Baron Alderson, Sir Fowell Buxton, Rev. Sidney Smith, Mrs. Opie, Mrs. Siddons, Charles Kemble, and the Duke of Wellington. His historical pictures are generally of a pleasing character; but, like his portraits, they are conventional both in colour and composition, and evince little imagination or invention.

(*Art Union*, March 1844.)

* BRIGHT, JOHN, was born in 1811, and is the son of John Bright of Greenbank, near Rochdale, in Lancashire. He is of the extensive establishment of John Bright and Brothers, cotton-spinners and manufacturers of Rochdale. He joined the association called the Anti-Corn-Law League, which was formed in 1838, and of which he

became one of the leading members, perhaps next in importance to Mr. Cobden. In 1843 he stood a contest for the representation in parliament of the city of Durham, and was unsuccessful; but another election having taken place in the July following he was then returned, and continued to be the member for the city of Durham till 1847, when he was returned for Manchester. He opposed very decidedly the war with Russia; was one of the meeting of the Society of Friends, commonly called Quakers, who in 1854 sent a deputation to the Emperor Nicholas to persuade him to adopt a peace policy; and he is a leading member of the Peace Society. He has been twice married, and his second wife is living. He is a very animated and effective speaker, and in the House of Commons has acquired a position of considerable influence.

BRIL, PAUL, a celebrated landscape painter, was the younger brother and pupil of Matthew Bril, also a landscape painter, who was born in 1550, and died in 1584. Paul Bril was however far the greater artist. He was born at Antwerp, according to Van Mander, in 1556, and received his first instruction from D. Wortelman; but having heard of the success of his brother at Rome, who was in great esteem there as a landscape painter during the pontificate of Gregory XIII., Paul joined him there, and soon became not only a sharer of his brother's prosperity, but acquired a much greater reputation. From the death of Matthew in 1584, Paul pursued an unrivalled career at Rome. No Italian had up to this period turned his attention exclusively to landscape with success, and Paul's ability was the more valued. He executed several large landscapes in oil, in the apartments of the pope and other dignitaries of the church; in many cases, views of the villas or summer residences of his employers, all painted from nature. He painted landscapes also in several churches, some in fresco, and of very large dimensions. In many of his works he introduced subjects from the stories of ancient mythology, and Annibal Carracci is said to have sometimes painted the figures. He painted also many small easel pictures, often on copper, which are very highly finished; the foregrounds are fresh and bold, and the distances are well managed. His masterpiece was considered a large landscape in fresco, in the Sala Clementina in the Vatican, painted in 1602 for Clement VIII., and representing the 'Martyrdom of St. Clement;' it was 68 feet long, and of considerable height. Paul died at Rome in 1622, or, according to Balducci, in 1626.

Several of Paul Bril's pictures have been engraved, and he executed a few etchings himself. There is a print of him by De Jode, after a portrait by Vandyck. (Van Mander, *Het Leven der Schilders*, &c.)

BRINDLEY, JAMES, was born in 1716 at Thornsett, a few miles from Chapel-en-le-Frith, in the county of Derby. The great incident of his life was his introduction to the Duke of Bridgewater, and the application of his talents to the promotion of artificial navigation. [BRIDGEWATER, DUKE OF.] But he had previously acquired reputation by his improvements in machinery; and at an early age, although deprived of the advantages of even a common education, he evinced a mind fruitful in resources far above the common order. Brindley followed the usual labours of agriculture until about his seventeenth year, when he was apprenticed to a millwright named Bennet, residing near Macclesfield. Bennet being generally occupied in distant parts of the country, young Brindley was left at home with few or only indefinite directions as to the proper manner of executing the work which had been put into his hands. This circumstance however was well calculated to call forth the peculiar qualities of his mind; his inventive faculties were brought into exercise, and he frequently astonished his employer by the ingenious improvements which he effected. Mr. Bennet on one occasion was engaged in preparing machinery of a new kind for a paper-mill, and although he had inspected a mill in which similar machinery was in operation, it was reported that he would be unable to execute his contract. Brindley was informed of this rumour, and as soon as he had finished his week's work, he set out for the mill, took a complete survey of the machinery, and after a walk of fifty miles, reached home in time to commence work on Monday morning. He had marked the points in which Mr. Bennet's work was defective, and by enabling him to correct them, Bennet's engagement was satisfactorily fulfilled.

When the period of his apprenticeship had expired, Brindley engaged in business on his own account, but he did not confine himself to the making of mill machinery. In 1752 he contrived an improved engine for draining some coal-pits at Clifton, Lancashire, which was set in motion by a wheel 30 feet below the surface, and the water for turning it was supplied from the Irwell by a subterraneous tunnel 600 yards long. His reputation as a man of skill and ingenuity steadily increased. In 1755 a gentleman of London engaged him to execute a portion of the machinery for a silk-mill at Congleton. The construction of the more complex parts was intrusted to another individual, who, though eventually found incapable of performing his portion of the work, treated Brindley as a common mechanic, and refused to show him his general designs until it became necessary to take Brindley's advice. Brindley offered to complete the whole of the machinery in his own way; and as his integrity and talents had already won the confidence of the proprietors, he was allowed to do so. The ability with which he accomplished his undertaking raised his reputation still higher. In 1756 he erected a steam-engine at Newcastle-under-Lyne, which was calculated to effect a saving of one-half in fuel.

Shortly after this time, Brindley was consulted by the Duke of Bridgewater on the practicability of constructing a canal from Worsley to Manchester. Brindley's success in this undertaking was the means of fully awakening public attention to the advantages of canals. Had a man of less ability undertaken the work, it is not improbable that it might have turned out a failure, and the improvement of our inland navigation might have been deferred some years longer. Within forty-two years after the duke's canal was opened, application had been made to parliament for 165 Acts for cutting canals in Great Britain, at an expense of above 13,000,000*l.* All the ingenuity and resources which Brindley possessed were required in accomplishing the Duke of Bridgewater's noble scheme; and it may be fairly said that where there were most difficulties in the way, there Brindley's genius was displayed with the greatest effect. But it was not only in his expedients for overcoming difficulties that his talents were displayed; he made use of many new and ingenious contrivances for conducting the work with the utmost economy.

In 1766 the Trent and Mersey Canal was commenced under Brindley's superintendance. It is 93 miles long, and unites the navigation of the Mersey with that of the Trent and the Humber. It was called by Brindley the Grand Trunk Navigation, owing to the probability, from its great commercial importance, of many other canals being made to join it. The Grand Trunk Navigation, by means of a tunnel 2880 yards in length, passes through a hill at Harecastle in Staffordshire, which had previously been considered an insurmountable obstacle to the completion of a canal: this tunnel is 70 yards below the surface. The canal was not completed at Brindley's death, but his brother-in-law, Mr. Henshall, successfully finished it. Brindley next designed a canal, 46 miles long, called the Staffordshire and Worcestershire Canal, for the purpose of connecting the Grand Trunk with the Severn. He also planned the Coventry Canal, but owing to some dispute he did not superintend its execution. He however superintended the execution of the Oxford Canal, which connects the Thames with the Grand Trunk through the Coventry Canal. These undertakings opened an internal water-communication between the Thames, the Humber, the Severn, and the Mersey, and united the great ports of London, Liverpool, Bristol, and Hull, by canals which passed through the richest and most industrious districts of England.

The canal from the Trent at Stockwith to Chesterfield, 46 miles long, was Brindley's last public undertaking. He also surveyed and gave his opinion on many other lines for navigable canals besides those mentioned; among others, on a canal from Liverpool to Runcorn, where the Duke of Bridgewater's Canal locks into the Mersey. He proposed carrying this canal over that river at a point where the tidal water rises to the height of 14 feet. He formed also a scheme for uniting Great Britain and Ireland by a floating road and canal from Port Patrick to Donaghadee; and like most, other impracticable schemes of ingenious men, it became a favourite speculation. Phillips, in his 'History of Inland Navigation,' says that Brindley pointed out the method of building walls against the sea without mortar; that he invented a mode of cleansing dockyards, and for drawing water out of mines by a loosing and gaining bucket. Phillips states that he had been in the "employ of the great Brindley."

Brindley's designs were the resources of his own mind alone. When he was beset with any difficulty he secluded himself, and worked out unaided the means of accomplishing his schemes. Sometimes he lay in bed two or three days; but when he arose he proceeded at once to carry his plans into effect, without the help of drawings or models. A man like Brindley, who was so entirely absorbed in his own schemes, was not likely to partake much of the pleasures of society. A hectic fever, which had hung about him for several years, at length terminated his laborious and useful life. He died at Turnhurst, in Staffordshire, September 27th, 1772, aged 56, and was buried at New Chapel in the same county.

The principal events in Brindley's life were first communicated to the public from materials furnished by Mr. Henshall, his brother-in-law, and other friends, who spoke highly of "the integrity of his character, his devotion to the public interests, and the vast compass of his understanding, which seemed to have an affinity for all great objects, and likewise for many noble and beneficent designs which the multiplicity of his engagements and the shortness of his life prevented him from bringing to maturity." No man was so entirely free from jealous feelings. The reply which Brindley is said to have given to a committee of the House of Commons, when asked for what object rivers were created, namely, "To feed navigable canals," is characteristic, and very probably authentic; but it was made public by an anonymous writer in the 'Morning Post,' whose communications respecting Brindley were stated by some of his friends to contain many inaccuracies.

BRISSON, BARNABÉ, was born in 1531, at Fontenay-le-Comte, in the province of Poitou, of a family several members of which had distinguished themselves at the French bar. Brisson applied to the same profession, in which he attained the highest honours. He was made king's advocate in 1575, afterwards councillor of state, and lastly president a mortier in 1583. King Henri III. used to say that no other king could boast of having in his service so learned a man as Brisson. He sent him on several missions, among others to Queen Elizabeth of England; and he commissioned him to collect and edit the ordinances of his predecessors and his own, which appeared under

the following title, 'Code de Henry III., Roy de France et de Pologne, redigé en ordre par Messire Barnabé Brisson,' fol. 1587, afterwards republished with additions under Henri IV. by Le Caron, 1609, and commonly called 'Code Henri.' Brisson was well versed in the ancient writers, and several valuable works were the result of his studies:— 1. 'De verborum quæ ad jus pertinent significatione,' a useful glossary of words and sentences of the Roman law. This work went through several editions; the one by J. C. Itter, fol. Frankfurt, 1633, contains many additions. 2. 'De formulis et solemnibus Populi Romani verbis,' lib. viii., fol. 1583, a work of more general use to scholars. The author explains the proper meaning and application of certain established forms of words which had a fixed meaning, and were used by the Romans in their public acts, in their religious ceremonies, in the senate, in the comitia, in the forum, in their contracts, testaments, funerals, &c. An improved edition of this work was published by F. C. Conrad, fol., Leipzig, 1781, with a life of Brisson prefixed to it. 3. 'De regio Persarum principatu,' lib. iiii., in which he treats of the ancient Persian monarchy, its political institutions, its laws, the religion and habits of the people, and their military establishment. An edition with notes and corrections was published by Professor Lederlin, Strasburg, 1710. Several other works of Brisson, chiefly connected with the Roman laws and institutions, are found in his 'Opera Varia,' Paris, 1607, republished at Leyden, 1749, with the title of 'Opera Minora,' which contain 'Selectarum ex jure civili antiquitatum,' lib. iv.; 'De ritu nuptiarum;' 'De jure conubiorum;' 'Ad Legem Juliam de adulteriis;' 'De solutionibus et liberationibus;' 'Ad legem Dominico de spectaculis in Codice Theodosii;' 'Parergon liber singularis;' all works of considerable erudition.

The end of Brisson's life was remarkably unfortunate. When Henri III. was obliged to leave Paris on account of the factions of the League in January 1588, Brisson stayed behind, in the hope, as it would appear, of bringing about a reconciliation between the king and the people of the capital. After the murder of the Guises, the Leaguers being now in open revolt against the king, arrested in January 1589 the President de Harlay, and put Brisson in his place as first president of the parliament, which he accepted, as he said to his friends, in order to save his life and that of his wife, at the same time protesting privately before two notaries against any intention on his part of violating the king's prerogative. Henri III. having by an edict of February 1589 transferred the parliament to Tours, Brisson did not obey the summons, but remained in the capital. After Henri's death in August of the same year, Brisson proclaimed the Duke of Mayenne, the chief of the League, lieutenant-general of the kingdom; but he resisted the intrigues of Mendoza, the Spanish ambassador, who wanted to obtain the regency for his master, as well as the pretensions of Cardinal Gaetano, the pope's legate, who on presenting to the parliament his bull of credentials wished to take the seat reserved for the king. However Brisson soon after became suspected by the faction of the Sixteen who ruled in Paris, and who thought that he was favourable to Henri IV. Availing themselves of the absence of the Duke of Mayenne, they arrested Brisson, with two other councillors, on the 15th of November 1591 at nine o'clock, and hanged them at eleven o'clock the same morning. The Duke of Mayenne, on his return to Paris, hanged four of the most violent of the faction of the Sixteen.

(De Thou; and *Discours sur la Mort du Président Brisson*, par Denyse de Vigny, sa veuve, Paris, 1595.)

BRISSON, MATHURIN JACQUES, whose zoological and philosophical works have rendered his name deservedly celebrated, was born at Fontenay-le-Comte on the 30th of April, 1723. Educated, as he may be said to have been, under Reaumur (for his youth was passed in aiding the labours of that accurate observer of nature, and in superintending his cabinet), he imbibed at an early age a love for natural science, which only left him with his life. His progress must have been rapid; for we find him selected as the tutor in physics and natural history to the 'children of France,' and filling the office of 'Censeur Royal.' He became a member of the Academy of Sciences, and afterwards of the Institute, and succeeded the Abbé Nollet in the physical chair at the college of Navarre. A warm defender of the Abbé, whose theory of electricity he supported with all the weapons which his intimate knowledge of the subject afforded him, he attacked Franklin, and endeavoured to overturn Priestley; but he, notwithstanding, fairly stated to his class, in his capacity of professor, the new theory which had taken the place of that of the Abbé, explaining and discussing the facts on which it rested.

The government charged him with the care of providing lightning-conductors for the protection of many public buildings, and appointed him to examine those which other projectors might bring forward. Death crept upon him at Broissai, near Versailles, on the 23rd of June 1806, at the age of eighty-three; but for some months before he died he was a melancholy specimen of the body surviving the intellect. An apoplectic attack had defaced all his ideas, depriving him of the knowledge which he had so laboriously acquired, and even blotting out from his memory the French language.

His works are numerous: among the most important are his 'Ornithology,' and his treatise 'On the Specific Gravity of Bodies.' The first appeared at Paris in 1760, in 6 vols. 4to, in Latin and French. The second, under the title of 'Pesanteur Spécifique des Corps,' was published in quarto in 1787.

BRISSET, JACQUES PIERRE, was born on the 14th of January 1754, in the village of Ouarville, near Chartrea. His father, though only a poor pastry-cook, contrived to give all his children a good education. It was his intention that Jacques Pierre, who as a boy gave signs of great talents, should be brought up to the bar, but the youth's early passion for literature defeated this project. Brissot was particularly fond of the study of languages, and made himself a perfect master of English: he eagerly devoured the best authors, turning his attention more especially to the historians, economists, and political writers. On attaining the age of manhood he quitted the study of law and went to Boulogne, where he was intrusted with the editorship of the 'Courier de l'Europe.' This liberal journal was soon arbitrarily suppressed by the French government, and Brissot was thrown upon the world with no other resources than his acquirements and abilities.

In 1780 he published his 'Theory of Criminal Laws;' and the next year two eloquent discourses on the same subject gained him the prizes in the Academy of Châlons-sur-Marne. Between the years 1782 and 1786 he put forth ten volumes of 'The Philosophical Library' on criminal laws. At the same time he studied the natural sciences, and devoted part of his time to metaphysical pursuits, in which latter department he published an essay, entitled 'On Truth, or Meditations on the Means of reaching Truth in all branches of Human Knowledge.' During part of this time he resided in England, and it was in London, somewhere about the year 1783, that he undertook a periodical work, called 'Universal Correspondence on all that concerns the Happiness of Men and Society.' The laudable object of this work was to disseminate in France all such political principles as were based on reason. The constitutional laws and usages of England formed a leading topic. The French government seized and suppressed the book. His next works were 'A Picture of the Sciences and Arts of England,' and another on British India.

Returning to France, the ministry of the day arrested him and threw him into the Bastille. His imprisonment was not of long duration, but in obtaining his liberty he was compelled to give up an Anglo-French work, which was to have been written partly by Englishmen, and partly by Frenchmen, and circulated in both countries. These persecutions inflamed his hatred of arbitrary power. In 1785, during the insurrection of the Wallachians, he published two letters, addressed to the Emperor Joseph II., 'On the Right of Emigration,' and 'On the Right of Insurrection.' He continued to be indefatigable with his pen, but most of his works possessing only a temporary interest, have long since fallen into oblivion. He warmly favoured the revolutionary party in the English North American colonies, and wrote a good deal in support of their cause. He was an emancipationist, and one of the first members of the French society called 'The Friends of the Blacks.'

The freedom of his pen brought him again into difficulties, and on learning that a lettre-de-cachet was signed for his arrest, he fled and took refuge in England. After a short stay in London he crossed the Atlantic to the United States, where his love of republican institutions was increased by seeing their operation in that country.

In 1789 the progress of events in France enabled him to return home, and use his pen without any fear of the Bastille. He floated forward on the revolutionary torrent. He was elected member of the first municipal council of the city of Paris, and in that capacity received the keys of the captured Bastille, on the 14th of July. Soon after he was elected by the citizens of Paris to be their representative in the Constituent Assembly. He joined the party called the Gironde, and co-operated with Vergniaud, Guadet, Gensonné, the Provençal Isnard, and others, who were weak and imprudent politicians, but among the most eloquent and best men in France. "The opinions of Brissot, who desired a complete reform; his great activity of mind, which enabled him to re-produce himself in the journal called 'The Patriot,' at the tribune of the Assembly, in the club of the Jacobins; his precise and extensive information respecting the situation of foreign powers, gave him a great ascendancy at a moment of struggle between the parties and of war against all Europe." (Mignet, 'Hist. of the French Revolution.') The Girondists triumphed over the Feuillans or moderate constitutional monarchy party; but they were in their turn defeated in much the same manner by the Jacobins or party called the Mountain, who went as much farther than the Girondists, as the Girondists had gone farther than the Feuillans. The Gironde was nothing more in the revolution than a party of transition from the power of the middling classes of society to that of the mob. The members of it put themselves and their country in a position from which there was no escape except through seas of blood. During the fearful struggle Brissot incurred the deadly hatred of Robespierre, which was equivalent to a death-warrant. On the 2nd of June 1793, a sentence of arrest was passed against him. Brissot was calm and firm, and at first not inclined to do anything to escape death, but on the entreaties of his family and friends he attempted to get to Switzerland. Being arrested at Moulins, he was carried back to Paris, and brought before the revolutionary tribunal, where the Jacobins in vain endeavoured to destroy his courage and self-possession. The only regrets he expressed were at the political errors he had committed, and at leaving his wife and children in absolute poverty. He was condemned, of course, and went to the guillotine with twenty other Girondists, his associates and friends, on the 31st of October 1793,

just nine months and ten days after they had voted the death of Louis XVI. (whose life however they attempted to spare), and fifteen days after the execution of the Queen Marie Antoinette. They marched to the scaffold with all the stoicism of the times, and singing, as it was the fashion to do, the 'Marsellaise,' or song of the republic. They all died with courage. Brissot was only thirty-nine years old. His companions in death were Vergniaud, Gensonné, Fonfrède, Ducois, Valazé, Lasource, Silléry, Gardien, Carra, Duprat, Beauvais, Duchâtel, Mainville, Lacaze, Boileau, Lehardy, Antiboul, and Vigée.

Brissot stood at the head of the party which he embraced. At one time in his political career a large section of the house was called after his name, 'The Brissotins.' He was singularly honest and disinterested: he sincerely wished the good of his country, but he knew not how to accomplish it. His biographers have recorded of him, that he was mild and simple in his manners, small of stature, weak, and somewhat deformed in person, and that his countenance was frank, open, and expressive. After his return from America, he affected the simplicity of dress of the Quakers.

BRITANNICUS, son of the Emperor Claudius, and of his third wife the infamous Messalina, was born on the 11th of February, A.D. 42, on the twentieth day after his father's accession, and was at first named Tiberius Claudius Germanicus, a name which was changed in honour of the subsequent conquests in Britain. When only six years old, while exhibiting before his father in the mimic fights called 'Troja,' during the Circensian games, the wishes of the populace seemed to incline in favour of L. Domitius, the son of Agrippina, who headed the opposite band, and who afterwards succeeded to the imperial dignity under the title of Nero. On the death of Messalina, and the marriage of Claudius with his niece Agrippina, Octavia, sister of Britannicus, who had been betrothed to Silanus, was given in marriage to Lucius Domitius, and pains were taken by the courtiers, who had procured the death of Messalina, to elevate the adopted prince to equal honours with the son whom Claudius had hitherto acknowledged as his heir.

Medal, with the inscription 'Claudius Britannicus Cæsar.' Copper. (Capt. Smyth's collection.)

Copper. (Capt. Smyth's collection.)

At the Circensian games Britannicus appeared in the prætexta, or youthful dress; Nero in a triumphal robe; and the populace formed their opinion as to the future fortune of each accordingly. When the boys met each other afterwards, Nero saluted his playfellow as 'Britannicus;' Britannicus replied to him only by the family name of 'Domitius.' Agrippina expressed great indignation at this affront, and complained to her husband Claudius that his adoption was treated with contempt—that the decrees of the senate and the command of the people were abrogated within the palace walls—and that if a stop were not put to the perverseness of those preceptors by whom Britannicus had been instructed, public disasters must ensue. Claudius, moved by her remonstrances, banished or put to death the excellent tutors who had hitherto brought up his son, and placed him under the care of others recommended by his crafty step-mother.

When the intrigues and the crimes of Agrippina had obtained the imperial dignity for her own son, Britannicus necessarily became an object of suspicion to Nero, whose fears were by no means diminished by the threats in which his mother indulged upon the banishment of her lover Pallas. She took care indeed not to conceal her menaces from her son; and she pronounced Britannicus to be the true stock of the Cæsars, and alone worthy to succeed to his father's empire,

while Nero was only adopted into the family of the *Cæsaræ*. Little solicitous as to the revelation of her foul deeds, she rejoiced that her own providence and the gods had permitted the survival of her stepson, and she declared that she would accompany him to the camp, and demand from the soldiers his elevation to the throne, without fearing the futile arguments which might be urged against her by the unwarlike soldier Burrhus, or the wordy rhetorician Seneca, the two guardians of Nero's youth.

Britannicus was near the completion of his fourteenth year, and Nero, who was well acquainted with the violence of Agrippina, had recently discovered how much popularity the young prince retained. Among other sports of the 'Saturnalia' was one named 'Regnum,' in which the players threw dice for the kingship of the evening. Nero, who on one occasion happened to be the successful caster, issued his orders to each of the company to do some inoffensive trifle; but when it came to the turn of Britannicus, Nero commanded him to stand up and sing a song. Britannicus calmly obeyed, and began a song which implied that he had fallen from his patrimony and from sovereignty; lines which the keen-sightedness of the commentators of Ennius have determined to belong to the 'Andromache' of that poet. The licence of the season and the time of night made the courtiers less on their guard than usual, and a sentiment of pity was evidently excited among them. This incident, combined with the threats of Agrippina, determined Nero to remove Britannicus by poison, and he employed Locusta (whose name is rendered familiar to us by Juvenal) to assist his purpose.

The poison first administered was ineffectual; but Nero, impatient of delay, threatened Locusta with punishment (and, as Suetonius adds, beat her with his own hand), till she furnished him with a potion which she affirmed should be "as rapid in deadly effect as the sword itself;" it was prepared by the bedside of the emperor under his own inspection.

According to an old custom, the youths of the imperial family, with other noble children, ate their meals in the presence of their elder relations. Britannicus, when assisting at one of these banquets, was attended as usual by a taster, and some artifice became requisite to prevent any violation of the court fashion, and at the same time to avoid the suspicion which must have been created by the death of both the prince and this officer. An unpoisoned drink, already tasted, was therefore handed to Britannicus, and when he complained that it was too hot, the poison was poured into it with cold water. The moment after he had swallowed the draught, he lost the use of his limbs, his breath, and utterance. All present were in consternation, and some quitted the room; but those who were better acquainted with the habits of the palace sat still and watched the emperor's countenance. With a careless air, he pronounced the prince's disease to be an attack of epilepsy, with which, he said, Britannicus had been afflicted from infancy, and that he would speedily recover. The involuntary terror displayed by Agrippina and Octavia proved their ignorance of the crime: the former was a veteran in dissimulation; the latter, though still of tender years, had been taught to repress all outward signs of grief or of affection. After a short pause, the festivity was renewed.

Britannicus was buried on the very evening of his death, the funeral arrangements, which were but slender, having been provided beforehand. The pile was constructed in the Campus Martius, under a terrific storm of rain.

Suetonius adds to the other causes of hatred which Nero cherished against Britannicus, that he was jealous of the superior excellence of his voice; and that Titus, who was educated by the same tutors, happening to sit next him at the fatal banquet, tasted the poisoned cup, and for a long time felt the consequences. A metoposcopist (a diviner by marks on the forehead), introduced by Narcissus in order to inspect the forehead of the prince, predicted that Britannicus would never mount the throne, which however would certainly be ascended by Titus. Titus, after his accession, called to mind this circumstance, and as a testimony to his early friendship for Britannicus, erected a golden statue to his memory on the Palatine Hill, and had a second (equestrian) statue carved in ivory, which was exhibited in the Circensian processions. The potion, says Suetonius, medicated by Locusta, was first tried upon a kid, which survived five hours. This process being far too slow to satisfy Nero, a mixture of greater strength was prepared, which killed a pig immediately. The funeral of Britannicus is placed on the day after his death by Suetonius, and Dion (lxi.) records that his face, being discoloured by the poison, was covered with plaster by the order of Nero, but that the torrent of rain which fell during the ceremony washed off the plaster and revealed the crime.

The disastrous history of Britannicus has furnished the ground plan to a tragedy by Racine, which the French consider among the 'chef-d'œuvre' of their drama, but which to our taste abounds in the chief faults of their theatre.

(Tacit., *Annal.*, xii. xlii.; Suetonius, *Nero*; Dion Cass., lxi.)

BRITTON. We have, under BRACON, enumerated all the principal writings of those early English lawyers and masters of jurisprudence, who are meant when we hear of "the ancient text-writers of our law." In respect of the time in which they lived, it may be said to extend from towards the close of the 12th to the middle of the 15th century.

It is remarkable that so much obscurity should rest on the personal history of those writers, who were men of eminent abilities, treating of their subject with great precision and learning, and writing, it may be said, even with elegance.

We have seen that there is doubt who Bracton was. There is still more doubt respecting Britton, whose existence as an individual person has even been questioned. Selden who on such points is a high authority, in his notes upon Fleta, contends that 'Britton' is nothing more than a sophistication of 'Bracton,' and that to the same hand to which we owe the treatise in Latin before mentioned, we owe also the French treatise known by the name of 'Britton.' This was Selden's later opinion; for in an earlier work he has spoken of them as two distinct writers. John le Breton, bishop of Hereford, who died in the third year of Edward I., has been supposed to be the author (Tanner, 'Bibliotheca,' p. 119). Others attribute it to a John Breton, who was a judge in the first year of Edward II. There seems no reason to doubt that the work was composed in the reign of Edward I.

Britton treats of almost every point in the practice of the common law, in 126 chapters.

The high esteem in which the work was held, is evidenced by the numerous manuscripts of it which still exist in our great libraries. In the British Museum are several of great value.

It was first printed in 1540 by Redman, who had meditated doing so before; for he tells us in the preface that "he had of long time a fervent zeal and inward affection to imprint the fountain (as who saith) or well of the same learnings, from whence those old judges in the time of King Edward the First and since, have sucked their reasons and grounded their learnings." A century later, namely in 1640, there was another edition published by Wingate, a lawyer. These are the only editions which have appeared in England. Britton is contained in the edition of the early writers on English law, by M. Houard, a French lawyer, in six quarto volumes, a noble undertaking, intended to promote in France the study of comparative jurisprudence.

There still remains however the very necessary work to be performed of a collation of the existing manuscripts. This is a work which ought to be done for every writing of value in any department of literature which was published by the early printers, who seldom did more than follow some particular manuscript which happened to have fallen into their hands, and which might not always happen to be the purest and the best. It was in contemplation to prepare such an edition, and a specimen of the intended work may be seen in 'Cooper on the Public Records,' 8vo. 1832, vol. ii. p. 403-412; the text being taken from what is perhaps the best manuscript (Harleian, 324), and the margin presenting the various readings found in many other manuscripts; but the work fell to the ground on the suspension of the Record Commission.

In 1762, a translation of Britton, as far as the 25th chapter, was published by Mr. Robert Kelham; but the work did not receive much encouragement. He translated the remaining portions, but the manuscript remained in his hands till 1807, when being then the senior member of Lincoln's Inn, and eighty-nine years of age, he presented it to the library of that society, where it now remains.

*BRITTON, JOHN, was born the 7th of July 1771, at Kington-St. Michael, near Chippenham, Wiltshire, where his father was a small farmer and kept a village shop. His parents dying early, he was received as a servant by an uncle in London, who after a while apprenticed him to a wine-merchant. After he had served six years, his health gave way, and his master agreed to cancel his indentures. Young Britton had in the village schools received a little rudimentary instruction, and during his apprenticeship had become extremely fond of reading, but his reading was desultory and aimless. On reaching manhood he was still uneducated, and his mind quite unformed. At the close of his apprenticeship he found himself without connections, and without any definite pursuit. For some years he had to struggle hard with poverty, and was driven to a variety of shifts to earn a livelihood. Among other things, he engaged himself for a time to recite and sing at a kind of dioramic exhibition with the sounding title of Eidophusikon. During this unsettled course of life he formed the acquaintance of various persons connected with the humbler walks of literature, and he was induced to embark in a small way on authorship himself, by compiling some common street song-books, &c., and at length adventured on writing an 'Account of the Surprising Adventures of Pizarro.' Some short notices which he prepared for the 'Sporting Magazine' brought him acquainted with Mr. Wheble, its publisher, and to the connection thus formed Mr. Britton owed his introduction into the career which he so long and honourably pursued.

Mr. Wheble, whilst residing at Salisbury, had issued the prospectus of a work to be called the 'Beauties of Wiltshire,' but after having received some subscriptions for it, found himself unable to carry it on. But now, learning that Britton was a native of Wiltshire, Wheble proposed to him to compile the work he had announced. It is hardly possible to conceive of such a proposal being made to a person less qualified by previous pursuits or attainments, but among Britton's acquaintances was a young man named Brayley of about his own age, but somewhat better taught; they had assisted each other in their studies, and were prepared to enter upon a sort of literary partnership.

In conjunction with his friend Brayley, Britton promptly undertook to 'get up' from ready sources an 'Account of Wiltshire,' and as their first preparation for it, the friends set out on a tour, not, as might be supposed, through Wiltshire, but through Wales. In due time however the 'Beauties of Wiltshire' were completed in 2 vols. 8vo (1801), to the satisfaction of the publishers; and at their invitation the joint authors immediately set to work on the 'Beauties of Bedfordshire.' Eventually the 'Beauties' of all the other counties of England were published in 26 vols., but only the first nine volumes were written by the original authors. While compiling his 'Wiltshire,' Mr. Britton not only became conscious of his deficiencies, but endeavoured resolutely to supply them; and the criticisms and advice of various antiquaries and topographers with whom the work brought him into connection materially assisted his progress. Finding his publisher averse to the admission of antiquarian matter, he began to collect materials for another and more elaborate work, the 'Architectural Antiquities of England,' of which the first part was published in 1805, and which was above nine years in progress. It eventually formed five splendid quarto volumes. Henceforth Mr. Britton's course was one of laborious and persevering authorship in the path which he made for many years in a special manner his own—that of architectural and topographical description and antiquities. It would occupy too much space to enumerate his many publications, which in his own chronological list, in the second part of his 'Autobiography,' numbers eighty-seven distinct productions. The most important of them is the 'Cathedral Antiquities of England,' a magnificent work, which was commenced in 1814 by the publication in a detached form of the 'Antiquities of Salisbury Cathedral,' and ultimately embraced a series of elaborate illustrations of the entire cathedrals of England. In its completed form the 'Cathedral Antiquities' occupy 14 vols. fol. and 4to, 1814-35, with upwards of 300 highly-finished steel-engravings.

The production of these works was carried on throughout under Mr. Britton's immediate superintendence, many of the artists working in his own house, and being trained to their work by himself; and the facility he thus acquired in the production of this class of publications led to the preparation of many other works of a similar kind. Among the illustrated works of which he was either author or editor may be named—an 'Historical Account of Corsham House,' 1806; the 'Fine Arts of the English School,' 4to, 1812; 'Historical Account of Redcliffe Church,' 4to, 1813; 'Illustrations of Fonthill Abbey,' 1823; 'Historical Account of Bath Abbey Church,' 1825; the 'Public Buildings of London, from Drawings by A. Pugin,' 2 vols. royal 8vo, 1825-28; 'Architectural Antiquities of Normandy, drawn by A. Pugin,' 1825-27; 'Picturesque Antiquities of English Cities,' 4to, 1830; 'A Dictionary of the Architecture and Archaeology of the Middle Ages,' 4to, 1832-38; 'A History, &c., of the Ancient Palace and Houses of Parliament at Westminster,' jointly with E. W. Brayley, 8vo, 1834-36; 'Historical Account of Tuddington, Gloucestershire,' 1841; 'Historical Notices of Windsor Castle,' 1842; &c. &c. But besides these Mr. Britton has written on many subjects connected with general literature, either as distinct works or as contributions to literary journals, &c. In biography he published in 1845 a 'Memoir of John Aubrey,' and in 1848 an essay entitled 'The Authorship of the Letters of Junius Elucidated, including a Biographical Memoir of Colonel Barré, M.P.' Mr. Britton wrote the articles 'Avebury,' 'Stonehenge,' and 'Tumulus,' for the 'Penny Cyclopædia.'

In 1847 the literary and other friends of Mr. Britton gave the veteran author a dinner on his retirement from the active pursuit of his calling; and it being determined to mark their esteem for him by a permanent testimonial, a social gathering called the 'Britton Club' was organised to carry out the project. The form of the testimonial, at Mr. Britton's own suggestion, it was eventually agreed should be an 'Autobiography,' which he was to prepare and to print with the testimonial funds. Despite of his advanced age, Mr. Britton has continued to labour at his self-imposed task; but the 'Autobiography' has assumed so discouraging a form, that though the parts already issued are of considerable bulk, the real life has advanced very little further than that which appeared in an autobiographical sketch prefixed to vol. iii. of the 'Beauties of Wiltshire' in 1825. Mr. Britton is not a man of marked originality or great mental power, but as a careful and diligent writer in a branch of literature which had been cultivated chiefly by minute antiquarians, he did excellent service in calling the attention of the educated public to the long-neglected topographical and architectural antiquities of England; and there can be little doubt that his elegantly-illustrated works have been a chief exciting cause in bringing about the improved state of public feeling with reference to our national antiquities. The career of Mr. Britton is moreover an admirable illustration, as he himself describes it, "of what may be effected by zeal and industry, with moderate talents, and without academic learning."

BRIZIO, FRANCESCO, a distinguished Bolognese painter, and one of the best of the scholars of the Carracci, was born at Bologna in 1574. He was a journeyman shoemaker until his twentieth year, when by the permission of an uncle, he was allowed to learn painting under Passerotti. He however soon made sufficient progress to perceive that the school of Ludovico Carracci was a surer road to success than the instruction of Passerotti, whom he accordingly left. In the school of the Carracci he devoted himself to engraving as well as painting, and became a favourite both of Ludovico and Agostino.

Brizio did not, as is too often the case, restrict his studies in painting to the human figure and its draperies, but he divided his labours between the figure, perspective, architecture, and landscape. He was superior in these accessory parts of painting to all his Bolognese contemporaries, and says Lanzi, was, with the exception of Domenichino, the most universal genius of the school of the Carracci. His masterpiece is the 'Coronation of an image of the Virgin' in the church of San Petronio. He died in 1623, aged forty-nine. His son Filippo Brizio, and Domenico degli Ambrogii, called Menichino del Brizio, were his principal scholars, and were both very able painters.

Gandellini describes many prints by Brizio after the Carracci, Correggio, and others; 31 are noticed by Bartsch in the 'Peintre-Graveur.' They are executed in the style of Agostino Carracci, are scarce, and are much prized by collectors. Brizio is better known for his prints than his pictures.

(Malvasia, *Felsina Pittrice*; Gandellini, *Notizie Istoriche degli Intagliatori*, &c.; Lanzi, *Storia Pittorica*, &c.)

BROCCHI, GIOVANNI BATTISTA, was born at Bassano, in the Venetian territory, in February 1772. He studied in the college of his native town, and afterwards at the university of Padua, his father intending him for the profession of the law; but young Brocchi's chief attention was directed to botany and mineralogy, and when the time came for his examination previous to his taking his doctor's degree, he left Padua abruptly and went to Rome, where he became acquainted with the learned Lanzi, with whose assistance he became well versed in Roman and Greek archaeology. He paid particular attention to the Egyptian antiquities at Rome, and wrote some dissertations on Egyptian sculpture. Having returned to Bassano, he continued his studies of the natural sciences, and in 1802 was appointed professor of botany in the newly-established Lyceum of Brescia. He was made secretary to the Athenæum, or scientific academy of that city, and he was the first editor of the memoirs of that institution. He also made excursions in the valleys and mountains of the province of Brescia, and having examined their geology and their mineral productions, he published 'Trattato Mineralogico sulle Miniere di Ferro del Dipartimento del Mella, con l'Esposizione della Costituzione fisica delle Montagne metallifere della Val Trompia,' 2 vols. 8vo, Brescia, 1807. In 1808 he was made inspector of the mines of the kingdom of Italy, and soon after he was chosen a member of the Italian Institute. The results of his geological and mineralogical observations, made during his frequent excursions in various parts of Italy, were published in various works:—1. 'Memoria Mineralogica sulla Valle di Fassa nel Tirolo,' Milano, 1811. The valley of Fassa, in the Italian Tyrol, near Brixen, which is very rich in magnificent crystals, stalactites, &c., had not been examined before by any of the explorers of the Alpine regions. 2. 'Conchiologia fossile subappennina, con Osservazioni Geologiche sugli Apennini e sul Suolo adiacente,' 2 vols. 4to, Milano, 1814. This, the principal work of Brocchi, is the result of his repeated visits to the central and southern parts of Italy. It begins with an interesting historical sketch of the progress of geological studies in Italy, and of the persons who had cultivated the science previous to the author's time. This is followed by a general view of the structure of the Apennines, and a sketch of the physical constitution of the lower hills lying between these mountains and the sea, their various formations, and relative ages. It was to these subappennine hills and the adjacent valleys and plains, which abound in organic remains, that Brocchi's investigations were chiefly directed. He examined the numerous varieties of shells found among them, and identified those species which still exist in the seas of Italy, and which form nearly one-half of the whole. It should however be noticed that the rocks to which Brocchi assigned the name subappennine are not all precisely of the same geological age, and that the amount of recent shells detected in them has been since found to vary according to the relative antiquity of the rock in which they occur, the newer rocks containing the larger proportion of these shells. The second volume consists of a descriptive catalogue of the fossil shells, with the living analogues where they are known to exist. The work is accompanied with plates. 3. 'Catalogo ragionato di una raccolta di rocce disposte con ordine geografico per servire alla geognosia dell'Italia,' 8vo, Milano, 1817. This work contains a catalogue of more than 1500 specimens of rocks collected by Brocchi in various parts of Italy, and especially in the Campagna of Rome, the Terra di Lavoro and Puglia, the Marches, Tuscany, and Modena. It is preceded by a well-written introduction on the geology and mineralogy of the different regions of Italy. Several other minor works of Brocchi are printed in various numbers of the 'Biblioteca Italiana,' between the years 1816-23. In 1820 Brocchi, after residing some time at Rome, published 'Dello Stato fisico del suolo di Roma, Memoria per servire d'illustrazione alla carta geognostica di questa Città.' The work is divided into two parts: he treats first of the ancient condition and appearance of the surface of the ground on which Rome, both ancient and modern, now stands; and, secondly, of the character of the soil, of the various rocks and strata of the hills and of the valleys between them and the Tiber. The map which accompanies the work gives a very correct idea of the physical topography of Rome. Brocchi's observations are accurate and valuable; but some of his inferences and hypotheses have met with much opposition, especially those in the latter part of the work, which consists of a 'Discourse on the Condition of the Air of Rome in

Ancient Times.' He argues that the air in ancient times must have been more unwholesome than it is at present, although he admits that the country was much more populous and the people more healthy; he accounts for this apparent discrepancy by their dress and their manner of living.

In 1823 Brocchi sailed from Trieste for Egypt, a country which he had long wished to examine, especially with regard to its mineralogy. He found favour with Mehemet Ali, who sent him on several missions, supplying him with firmans, money, and an escort. He went first to direct the working of a coal-mine, and afterwards to look for the emerald-mines of Mount Zabarah, which Cailliaud and Belzoni had visited some years before. Brocchi however found only some loose pieces without their matrix, but seems to have considered any attempt at working the mines as useless labour. In 1825 Mehemet Ali sent Brocchi into the newly-conquered kingdom of Sennar, as one of a commission appointed to organise that country and make its resources available. In this expedition Brocchi fell a victim to the unhealthiness of the climate. He wrote to his friends in Italy in April 1826, that he was busy in prosecuting his scientific researches and in promoting the improvement of the natives; that he enjoyed good health, notwithstanding the heat was at 105°. He was taken ill however in the summer, and died at Cartum in September of that year. His friend Acerbi, Austrian consul general at Alexandria, recovered his papers and collections, and forwarded them, according to his will, to his native town, Bassano. His rich collection of Italian minerals and fossils he had given to his friend Parolini, of Bassano, before he set out for Egypt. Brocchi did more for the geology of Italy than any of his predecessors.

(Sacchi, *Varietà letterarie, Necrologia di G. B. Brocchi*.)

BROCKLESBY, RICHARD, the only son of Richard Brocklesby, Esq., of Cork, was born at Minehead, in Somersetshire, on the 11th of August 1722. After receiving the rudiments of education in his father's house at Cork, he was sent to Ballymore school, in the north of Ireland, where he formed an acquaintance with Edmund Burke, which ripened into the most cordial friendship when they again met in London. He afterwards studied at Edinburgh, and then at Leyden, where he took the degree of Doctor of Physic under the celebrated Gaubius, in June 1745, his inaugural thesis being a dissertation 'De salivâ sanâ et morbââ,' 4to, Lugd. Bat., 1745. In 1746 he came to London, and settled in Broad-street; and the same year he published an 'Essay concerning the Mortality of the Horned Cattle,' 8vo, which contributed to found his reputation. In 1751 he was admitted a licentiate of the College of Physicians; in 1754 he obtained the honorary degree of M.D. from the University of Dublin, and being admitted 'ad eundem' at Cambridge, he was enabled to become a candidate, and in 1756, a Fellow, of the London College of Physicians. In 1758 he was appointed physician to the army, and served in Germany during great part of the Seven years' war, where he was distinguished by his zeal, knowledge, and humanity; and particularly recommended himself to the notice of the Duke of Richmond, Lord Pembroke, and others. In 1760 he was appointed physician to the hospitals for the British forces, and returned to England before the peace of 1763. He now quickly obtained a large and increasing practice; and to this source of income were likewise added his half-pay, and his paternal estate of 600*l.* per annum. Being unmarried he was enabled to live in a very handsome style, and often entertained at his table some of the persons most distinguished for rank, abilities, or learning, in the kingdom. It is related to his honour that he made munificent use of his wealth, spending largely but judiciously in private and public charity, and assisting with a ready hand the deserving who stood in need of such assistance.

In 1763 Dr. Brocklesby was called in to attend Wilkes, who was suffering from a wound in the abdomen received in his duel with Mr. Martin; and it is thought that Wilkes's rapid recovery gave a great impulse to his physician's rising reputation. Dr. Brocklesby preserved in politics the same moderation which was his general characteristic; for though he was a member of the Constitutional club, and a warm advocate of Wilkes on the points of 'general warrants, and the Middlesex election,' he quitted the club as soon as it deviated into other doctrines, under other leaders. In spite of the placidity of his temperament, he was however once a principal in a duel, his antagonist being Dr., afterwards Sir John Elliott; but the seconds took care to place the combatants at such a distance from each other that their balls, even if they should hit, could not do much mischief.

In 1794 Dr. Brocklesby found the infirmities of age increase so fast upon him that he declined visiting patients, except among his most intimate acquaintance, and at the same time gave up his half-pay.

Dr. Brocklesby died on the 11th of December, 1797, in his seventy-sixth year, having returned that day from a visit to the widow of Edmund Burke, at Beaconsfield. With the exception of a few legacies, he left his fortune, which is said to have exceeded 30,000*l.*, between his two nephews, Mr. Beeby and Dr. Thomas Young.

Dr. Brocklesby was a Fellow of the Royal Society, and wrote two papers in their 'Transactions':—'An Account of the Poisonous Root lately found mixed with Gentian' (No. 486); and 'Experiments on Cutting the Tendons in various Animals' (vol. xlili.). Besides these, the Dissertations before mentioned, and two or three papers in vols. iii. and v. of 'Medical Observations,' he was the author of the following:—

'Eulogium Medicum, sive Oratio Anniversaria Harveiana,' &c., 4to, 1760; 'Economic and Medical Observations from 1758 to 1763 inclusive, tending to the Improvement of Medical Hospitals,' 8vo, 1764.

* BRODERIP, WILLIAM JOHN, has a claim to be recorded as one of the most distinguished popular naturalists of our time. He has an especial claim to a notice here, as one of the most valued contributors to the 'Penny Cyclopædia.' His articles in our 'English Cyclopædia' form the largest amount of the zoological department. Mr. Broderip was born at Bristol, the son of an eminent medical practitioner of that city, and received his early education in the classical school of the Rev. Samuel Seyer. He subsequently went to Oriel College, Oxford, where he took his degree. His destined profession was the law; and in the chambers of Mr. Godfrey Sykes he was a fellow-pupil with two distinguished lawyers who subsequently rose to the bench—Sir John Patterson and Mr. Justice Coleridge. Mr. Broderip was called to the bar in 1817; and after having edited a legal work on 'Sewers,' and assisted in the publication of three volumes of Law Reports, was appointed by Sir Robert Peel a police magistrate of the metropolis. In this position, of which he discharged the responsible duties with eminent industry and uprightiness for thirty-four years, Mr. Broderip devoted his leisure to scientific and literary pursuits. During this long period of official labour, in which his more agreeable studies never interfered with his devotion to the real business of his life, Mr. Broderip was steadily advancing in reputation as a learned naturalist, and a most agreeable writer. His articles in the 'Cyclopædia' are models of scientific exactness and popular attraction; and whilst they have instructed and delighted thousands of readers, have won the suffrages of the most fastidious, even amongst those who are slow to believe that the solid and the amusing have no necessary antagonism. Mr. Broderip was elected a Fellow of the Linnean Society in 1824, of the Geological Society in 1825, and of the Royal Society in 1828. He was one of the originators of the Zoological Society, of which he is now Vice-President; and he was Vice-President of the Geological Society in 1830, 1831, 1833, and 1834, and also Honorary Secretary for four years, with Sir Roger Murchison as his colleague.

In addition to his articles in the 'Cyclopædia,' which extended through the entire work, Mr. Broderip is the author of many most agreeable papers in the 'Quarterly Review,' on subjects of natural history. He has been a constant contributor to the 'Transactions' of various learned societies; and his amusing papers in periodical works have not been confined to scientific subjects. He has published two separate works of great merit—'Zoological Recreations' in 1847, and 'Leaves from the Note-Book of a Naturalist' in 1852. Mr. Broderip made a magnificent collection of shells, which has been purchased for the British Museum. From these and from other subjects of his valuable museum, many of the woodcuts of the 'English Cyclopædia' have been drawn. He has been a liberal purchaser of works of art, and a generous contributor from his stores to any useful undertaking. He is one of the executors of the will of Robert Vernon, the spirited founder of that valuable collection of modern English pictures, 'The Vernon Gallery.' Mr. Broderip's retirement from the magistracy has been thus noticed by 'The Examiner,' always foremost in its appreciation of eminent merit:—"Exemplary in the discharge of his duties, Mr. Broderip, in his retirement from them, sets a not less admirable example. A difficulty of hearing had lately increased upon him; and, mindful that an innocent man's fate may hang on a word his judge does not catch, he retires from an office he can no longer fill with a perfect efficiency." The same competent authority says, "We cannot recollect a single instance of any question raised upon his conduct or his decisions."

* BRODIE, SIR BENJAMIN COLLINS, BART., was born in 1783, at Winterslow, Wiltshire, of which place his father was rector. His mother was the daughter of Benjamin Collins, Esq., of Milford, near Salisbury. He received his professional education at Mr. Wilson's anatomical school in Great Windmill-street, London, and at St. George's Hospital, where he was pupil of Sir Everard Home. He afterwards lectured on anatomy jointly with Mr. Wilson; gave lectures on surgery; was elected assistant-surgeon to St. George's Hospital in 1808, and subsequently surgeon. In 1809 he contributed to the 'Philosophical Transactions,' an 'Account of the dissection of a Human foetus, in which the Circulation of the Blood was carried on without a Heart.' In the following year he was elected a Fellow of the Royal Society, and in 1811 received their Copley medal for his physiological papers. The subjects of these, published in the 'Philosophical Transactions,' are 'On some Physiological Researches respecting the Influence of the Brain on the Action of the Heart, and on the generation of animal Heat,' 1811; 'Experiments and Observations on the different modes in which death is produced by certain Vegetable Poisons,' 1811, on which he made further communications in the two following years. These papers were republished in a separate form, with notes, in 1851. In 1814 appeared 'Experiments and Observations on the Influence of the Nerves of the Eighth pair on the Secretions of the Stomach.'

Mr. Brodie was appointed serjeant-surgeon to the Queen in 1839; was created a Baronet in 1834; and in 1850 the University of Oxford conferred on him the degree of D.C.L. He is a corresponding member of the Institute of France, and a foreign member of other learned societies and academies in Europe and America. He has one son, who

is also F.R.S., and now professor of chemistry in the University of Oxford.

Some of Sir B. C. Brodie's professional papers are published in the 'Transactions of the Royal Medical and Chirurgical Society.' His other works are 'On Local Nervous Affections;' 'On Various Subjects in Pathology and Surgery;' 'Pathological and Surgical Observations on Diseases of the Joints,' 8vo, 1818 (5th edition, 1850); 'Lectures on the Diseases of the Urinary Organs,' 8vo, 1832 (4th edition, 1849); 'Physiological Researches,' 1851; 'Psychological Inquiries,' 1854 (3rd edition, 1856).

BROME, ALEXANDER, born in 1620, became an attorney in London. He was attached to the royalist party throughout the civil wars, and, while his bacchanalian poems were popular among the cavaliers, he rendered them more direct service by his satirical attacks on their enemies. He was the reputed author of most of the songs and epigrams in which the Rump Parliament was held up to ridicule. A collected edition of his poems, original and translated, was published in 1661. Several of his smaller pieces, lively and playful, though not very vigorous or original, are given by Campbell in his 'Specimens.' Among his compositions were contributions to a translation of Horace, by Cowley, Fanshawe, and others. He died also a comedy, 'The Cunning Lovers,' printed in 1654. He died in 1666. The first collected volume of Richard Brome's plays was edited by him.

BROME, RICHARD, originally a servant of Ben Jonson, gained a well-merited reputation as a comic dramatist. Of his life hardly any particulars are known, and it is only by inference that he is set down as having died in 1652. His extant comedies are fifteen. The earliest of these, 'The Northern Laas,' was printed in 1632. Five others appeared in one volume in 1653, and five more in a second volume published in 1659. His 'Jovial Crew, or the Merry Beggars,' has a place in the tenth volume of Dodsley's 'Old Plays.' Both it and several of the others are good specimens of dramatic composition in the school of Brome's old master. They possess, in particular, great force in the representation of character. Altogether he may fairly be ranked among the best of our old dramatists of the second class.

BROMLEY, WILLIAM, a distinguished line-engraver, born at Carisbrooke in the Isle of Wight in 1769. He served his time with an engraver of the name of Wooding, and in London soon attracted the notice of several eminent painters by his works. He was very much esteemed by Stothard, Flaxman, Fuseli, and Sir Thomas Lawrence. The most popular of his early works are the prints to 'Macklin's Bible,' and a 'History of England' after Stothard. He engraved several portraits after Sir T. Lawrence, including two of the 'Duke of Wellington,' one on horseback, and 'Young Napoleon.' He engraved also the 'Woman taken in Adultery,' after Rubens. He was latterly almost exclusively engaged by the Trustees of the British Museum, especially in engraving the Elgin marbles from drawings made by the late H. Corbould. Bromley survived his son John Bromley, likewise an eminent engraver, three years; he died in London in 1842, having been for many years an associate engraver of the Royal Academy of London, and a member of the Academy of St. Luke at Rome.

JOHN BROMLEY was born in Chelsea in 1795. He followed his father's profession, but he chose a different branch of it; his works are in mezzotint, in which line he has had few superiors. He died in 1839, aged only 44. Among his principal works are the following:—'The Trial of Lord William Russell,' after Sir G. Hayter; 'Lady Jane Grey refusing the Crown,' after G. R. Leslie, R.A.; the 'Monks preaching at Seville,' after J. Lewis; the 'Duke of Athol hunting in Glen Tilt,' after E. Landseer, R.A.; the 'Trial of Queen Caroline,' after Sir G. Hayter; and the 'Reform Banquet,' after B. R. Haydon. (*Art-Union Journal*, June, 1839; December, 1842.)

BRÖNDSTED PETER OLUF, a distinguished Danish archæologist, was born on the 17th of November 1781, at Horsens in Jütland, where his father was pastor. He afterwards studied at Copenhagen, and in 1806 he accompanied his friend Koes to Paris. After a stay of two years in that capital, both friends went to Italy. In 1810 a party consisting of Bröndsted himself, Koes, the architect Haller von Hallenstein, Linckh, and Baron Stackelberg, undertook a journey to Greece, where Bröndsted and Stackelberg in particular made very extensive excavations, by which great light was thrown upon various subjects of antiquity. In 1813 Bröndsted, on his return to Copenhagen, was appointed professor of Greek literature in the university of that city. He mainly occupied himself with preparing the results of his investigations in Greece for publication, but as he found that the literary resources of Denmark would not enable him to carry out his plan as he wished, the Danish government was prevailed upon to appoint him agent at the papal court of Rome, which post he entered upon in 1818. After having settled at Rome, he visited in 1820 and 1821 the Ionian Islands and Sicily; and when the artistic portion of his work was completed, he obtained leave to visit Paris to begin the printing of the work itself. From Paris he made a journey in 1826 to England, and the year after to Denmark, where he was honoured with the title of Counsellor of Legation. In 1832, on his return to Copenhagen, he was appointed Director of the Royal Museum of Antiquities, and ordinary professor of philology and archæology. In 1842 he was rector of the university, but in consequence of a fall from his horse he died in the same year, on the 26th of June.

The principal works of Bröndsted are his 'Travels and Investigations in Greece, with Representations and Explanations of newly-discovered Monuments,' which were published simultaneously in German and French, Paris, 1826-30, two parts, 4to. After the publication of this work he was severely attacked in the journal called 'Hermes' (vol. xxxii.), for having made too free use of Villosion's manuscripts in the royal library at Paris, especially with respect to the island of Ceos. Bröndsted defended himself in a pamphlet entitled 'Ueber den Aufsatz im Hermes: ein Beitrag zur Geschichte der Pasquille,' Paris, 1830; another defence had been published the year before by his friend Hage, under the title 'Bröndsted und Villosion,' Copenhagen. Among Bröndsted's numerous antiquarian dissertations, the two principal were published in English, 'A Brief Description of Thirty-two painted Greek Vases found near Vulci,' London, 1832, and 'The Bronzes of Siris,' London, 1836, fol., published at the expense of the Society of Dilettanti. A translation in German of this work, with some additions, &c., by the author, appeared at Copenhagen in the following year, 4to, 1837. Two other works of his may be mentioned as of considerable value to the historian, first, 'Beiträge zur Dänischen Geschichte aus Nordfranzösischen Manuscripten des Mittelalters,' Copenhagen, 1817-18, two parts; and secondly, 'Denkwürdigkeiten aus Griechenland in den Jahren 1827 und 1828, besonders in Militärischer Beziehung,' Paris, 1833. This last however was only edited by Bröndsted, the substance being taken from the posthumous papers of Major Frederic Müller of Altdorf, who had served in the Greek war.

Besides the above publications, most of them pointing to the illustration of ancient Greek art, and highly characteristic of the warm devotion of Bröndsted to that subject, he had been long occupied on the elaborate essays on the composition and details of the sculptures on the pediments of the Parthenon of Athens; in aid of which he had caused engravings to be executed of each of the entire groups, and of the separate figures—the former became a few years ago the property of the Society of Dilettanti. The essays, although never completed for the press, were liberally communicated by the author to others, and they have formed the basis of some of the more recent lectures and publications on the subject.

Bröndsted was also the author of a paper, printed at Naples in 1840 in the Italian language, on the bronze helmet discovered in 1817 near Olympia, bearing the inscription of Hiero, son of Dinomenes; and a memoir on the Panathenæic Vases, published by the Royal Society of Literature, London, 1833.

BRONGNIART, ALEXANDRE, an eminent chemist and mineralogist, son of the architect of the Invalides, was born at Paris in 1770. He received a good education, promoted by his father's care, and the friendship of Lavoisier and Franklin; and it is said, delivered a lecture on chemistry before he was fifteen. He pursued his earliest scientific studies at the École des Mines, and at the École de Médecine. At the age of nineteen he assisted in establishing the Société Philomatique, and in 1790 he visited England for a scientific examination of the mines and mining processes and pottery works of Derbyshire. One of the results showed itself on his return to France by his publication of a 'Mémoire sur l'art de l'émailleur,' in which improvements were suggested. He then became assistant for a time to his uncle, who was chemical demonstrator at the Jardin des Plantes.

By the requisition for military service which called every Frenchman to the frontier, Brongniart was attached as apothecary to the army of the Pyrenees, and for fifteen months he enjoyed opportunities, which he turned to good account, of studying the botany, zoology, and geology of the mountains. Having however been suspected of favouring the escape of the naturalist, Broussonnet, he was imprisoned; but the ninth Thermidor restored him to liberty. He returned to Paris, and was employed as engineer under the Agency of mines. Next he was chosen professor of natural history at the École centrale des Quatre Nations; and in 1800 he was appointed director of the porcelain manufactory at Sèvres, which office he held for the rest of his life. He owed it to his paper on enamelling, which having been read by Berthollet, procured him the recommendation of that distinguished chemist.

In 1807, at the instance of the Imperial University, Brongniart published his 'Traité élémentaire de Minéralogie,' which is described as "one of the best, and, in particular, one of the clearest and most practical" then known. It became a text-book for lecturers; and it exhibits the originality and lucidity which had been remarked in the author in his early years. Pursuing his zoological researches, he studied the freshwater formations of Auvergne, and re-visited England to study the corresponding formations of this country. It was he who established the four divisions of reptiles, and first gave the names *Saurians*, *Batrachians*, *Chelonians*, and *Ophidians*, by which they are now familiarly known. To him naturalists owe the name *Trilobite*, and a basis of classification for those singular *Crustacea*. It has been the starting-point for all subsequent works on the subject.

Brongniart's studies rendered him the congenial associate of Cuvier; he helped to classify the Montmartre fossils, and in 1810 appeared the joint publication "Essai sur la Géographie minéralogique des Environs de Paris." It was reprinted in the following year, with important additions, and has ever since been recognised as the classical type of similar works. It confirmed Brongniart's reputation, and in 1815 he

was elected a member of the Academy of Sciences of the Institute, and a foreign member of the Royal Society of London.

In 1817, accompanied by his son and one of his pupils, he made a scientific tour to Switzerland and Italy, during which, by his discoveries and generalisations, he strengthened his claim to be considered as "the legislator in fossil zoology." All the new results obtained were included in a third edition of the 'Essai,' published in 1822. In 1824 he travelled to Sweden, and with Berzelius for his companion and interpreter, laid down the first foundations of a classification of the most ancient fossiliferous formations, and gathered materials for a memoir on erratic blocks. He afterwards put forth his clear and ingenious views on volcanoes, particularly of Vesuvius, and an original memoir on the 'Ophiolithes of the Apennines.'

With all this activity Brongniart did not neglect his duties as director of the national manufactory of porcelain: his journeys and labours to acquaint himself with the best processes and materials would alone have sufficed to occupy any ordinary man. The results of his long experience appeared in 1845 in his 'Traité des Arts céramiques.' And carrying out his earliest researches on enamelling, he revived at Sèvres the almost lost art of painting on glass. He found time moreover for a diligent share in the affairs of the Institute, and in promoting the interests of science, and the views of scientific inquirers. He died on the 14th of October 1847.

Brongniart was a foreign member of the Geological Society of London, and of other learned societies. His writings are to be found in the 'Mémoires de l'Académie des Sciences,' 'Annales des Mines,' 'Annales de Chemie,' and 'Annales des Sciences Naturelles.' Many have been published in a separate form. Among them 'Essai d'une Classification des Reptiles,' 1805; 'Essai sur une Détermination et une Classification minéralogique des Roches mélangées,' 1818; 'Mémoire sur les Corps organisés fossiles nommés Trilobites,' 1814; 'Histoire Naturelle des Crustacés fossiles sous les Rapports zoologiques et géologiques,' 4to, 1822 (jointly with Desmarest); 'Introduction à la Minéralogie,' 8vo, 1825; 'Tableau des Terrains qui composent l'écorce du Globe,' 8vo, 1829; 'Premier Mémoire sur les Kaolins, ou Argiles à porcelaine,' 4to, 1839; 'Second Mémoire sur la Nature et l'origine de cette sorte d'Argile,' 4to, 1841.

(*L'Institut*; *Biog. Univ.*; *Proc. Royal Soc.*; *Journal Geol. Soc.*)

* BRONGNIART, ADOLPHE THÉODORE, son of the preceding, worthily maintains the scientific reputation of the family name. He was born in 1801; became professor of botany at the Jardin des Plantes, and member of the Academy of Sciences in 1834; and in 1852 was elected a foreign member of the Royal Society of London. His writings are held in deserved esteem. Among them are 'Considérations générales sur la Nature de la Végétation qui couvrait la Surface de la Terre aux diverses périodes de la Formation de son Écorce,' 8vo, 1823; 'Prodrome d'une Histoire des Végétaux fossiles,' 8vo, 1828; 'Histoire des Végétaux fossiles, ou Recherches botaniques et géologiques sur les Végétaux renfermés dans les diverses Couches du Globe,' 4to, 1828; 'Mémoire sur la Génération et le Développement de l'Embryon dans les Végétaux phanérogames,' 8vo, 1827, Atlas, fol.; 'Nouvelles Recherches sur le Pollen et les Granules spermiques des Végétaux,' 8vo, 1828; 'Observations sur la Structure intérieure du Sigillaria élégans,' 4to. The section 'Phanérogamie, &c.' in Duperrey's 'Voyage de la Coquille,' and papers in the 'Mémoires de l'Académie,' 'Annales des Sciences Naturelles,' and other publications.

BRONTÉ, CHARLOTTE (MRS. NICHOLLS, better known by her pseudonym CURRER BELL), was born in 1824, and was the daughter of the Rev. Patrick Brontë, curate of Haworth, in Yorkshire. The novel entitled 'Jane Eyre, by Currer Bell,' published in 1847, was the first production of Miss Brontë's pen which caught public attention, but it was not her first venture in authorship. Her first essay was in a little volume of 'Poems by Currer, Ellis, and Acton Bell,' published in 1846. The poems passed almost unnoticed, but the success of the novel was immediate and extraordinary; and curiosity was for some time exercised not only as to its paternity, but as to the sex of its author; many separate passages and traits bearing manifestly the traces of a woman's mind, yet the general cast of thought, it was urged on many sides, was as evidently unfeminine. The appearance almost simultaneously of other stories, marked by the same peculiarities of thought and general style, with the names of Acton Bell and Ellis Bell as their authors, served to stimulate still further the public curiosity, and when it was confidently announced that Currer Bell was the daughter of a curate in a remote part of Yorkshire, and that Acton and Ellis Bell were her sisters, there was a general feeling of surprise almost amounting to incredulity. In truth, 'Jane Eyre' is a remarkable work, and as the production of the daughter of a country clergyman, it would be still more remarkable if it were as necessary as sometimes seems to be supposed, to have a wide acquaintance with society to obtain intimate knowledge of the human heart, and to portray diversities of character. 'Jane Eyre' was followed in 1849 by 'Shirley,' and that in 1853, by 'Villette,' both marked by the same vigour of intellect, and keen, in fact morbidly keen dissection of character and motives, though with less of that somewhat wayward originality which had in her first work called forth so much adverse criticism, but at the same time had excited such intense interest.

What is unpleasant, painful, morbid in these powerful novels may, there can be little doubt, be set down to the action of disease upon an overwrought and intensely susceptible mind. Young as she was at her death, she was the last survivor of the three gifted sisters, and in fact of all her father's children. Anne Brontë (Acton Bell), the author of 'Agnes Grey,' died December 19, 1848. Emily Brontë (Ellis Bell), the author of 'Wuthering Heights,' and next to Charlotte the most gifted of the sisters, died May 28, 1849. Miss Brontë married in June, 1854, the Rev. Arthur Bell Nicholls, her father's curate; but pulmonary disease, the same insidious malady which had carried off her sisters, had already marked her as its victim. She died at the parsonage, Haworth, on the 31st of March, 1855; and was laid beside her sisters in the quiet churchyard there—a spot which will for their sakes attract the foot of many a stranger.

BRONZINO, ANGELO, a celebrated Italian historical and portrait painter, was born at Montecelli, near Florence, in 1501. He was the scholar of Pontormo, and the friend and contemporary of Vasari, and like him an enthusiastic admirer of Michel Angelo. Though Bronzino was not himself one of the gross anatomical mannerists with which Florence abounded in the latter part of his own life, he was one of the most influential causes of the predominance of the anatomical school; for by his unbounded admiration of Michel Angelo, he set an example to the younger artists less able to discriminate the good from the bad in Michel Angelo's style, and they of course appropriated what was most obvious to their senses and most easy of acquirement. Alessandro Allori, the nephew and favourite pupil of Bronzino, was one of the most uncompromising leaders of this school.

Bronzino painted in fresco and in oil; and executed many altarpieces (and smaller easel pictures, which are scattered over various parts of Europe, but his reputed masterpiece is still in the Imperial Gallery at Florence, and represents the "Descent of Christ into Hell," or Limbo; it has been engraved by J. B. Cechi. He was also a poet: he died in 1570. Alessandro Allori and his son Christofano Allori frequently adopted the surname of Bronzino, and it is a name often applied to them in catalogues.

(Vasari, *Vite de Pittori*, &c.; Lanzi, *Storia Pittorica*, &c.)

BROOKE, HENRY, is one of the occasionally recurring instances of men of letters who having, from accidental circumstances, enjoyed during life a reputation beyond their merits, afterwards sink into an oblivion so complete, that it might be said to be almost equally undeserved, were not mediocrity in belles-lettres, especially in poetry, almost the same as worthlessness. Henry Brooke published his first poem, 'Universal Beauty,' with the approbation and sanction, and even with the direct encouragement and under the patronage of Pope; he was received by him and Swift, if not as a literary compeer, yet as decidedly one of their class; and his tragedy of 'The Earl of Essex' long ranked, we believe, among what are called stock plays. Yet now the author is all but forgotten; he was not allowed a place in the list of Johnson's poets; and his 'Universal Beauty,' which though deformed by awkwardness and even incorrectness of language, admitted for the sake of metre and rhyme, displays considerable imagination and descriptive power, is now, and for years has been, so absolutely unknown, that later poets have borrowed ideas from it without fear of detection.

Henry Brooke, born in 1706, was the son of an Irish clergyman. At Trinity College, Dublin, he was a pupil of Dr. Sheridan, through whom, upon going to London to study the law, he was first introduced to Pope and Swift, when his own promising talents seem to have gained him their favour. After the publication of his principal poem he was presented to Frederic Prince of Wales, and received by him as one of the band of men of letters whom that prince considered as powerful agents in his hostility to his father's administration. In this character Brooke is accused of having written his tragedy of 'Gustavus Vasa,' not merely with a view of exciting and fostering a spirit of liberty, but in order to vituperate the premier, Sir Robert Walpole, under the name of the tyrannical minister Trollio. This suspicion has since been indignantly repelled by Brooke's admirers; but it was so universally entertained at the time, that the stage licencer prohibited the representation of the piece, and the author, in consequence, is said to have made 1000*l.* by its publication and sale—a sum much greater than he could have hoped from its utmost success upon the stage.

Ill-health and the persuasions of his wife, who dreaded and sought to withdraw him from his political connections, induced Brooke to return to Ireland, where he spent the remainder of his life, and obtained from Lord Chesterfield (when viceroy) the post of barrack-master, which he held till his death. But pecuniary difficulties, together with the loss of his wife, after a happy marriage of fifty years, and of several of his children, so preyed upon his mind, already weakened perhaps by age, as to impair his intellect; and, unfortunately for his fame, he continued to write and to publish after the decay of his faculties had become too apparent. He wrote in all 13 tragedies, of which only 'Gustavus Vasa' and 'The Earl of Essex' could boast any success, many small poems, and part of a translation of Tasso's 'Gerusalemme Liberata.' His novel of 'The Fool of Quality' was much admired in its day; and his 'Farmer's Letters,' addressed to his Irish countrymen, are said to have had considerable influence in maintaining the tranquillity of Ireland during the rebellion of 1745.

*BROOKE, SIR JAMES, Rajah of Sarawak, was born in 1803, at Bandel in Zillah Hooghly, Bengal. His father had been in the civil service of the East India Company in Bengal, and having returned to England, resided at Bath. He obtained a cadetship for his son, and sent him out to India. Soon after his arrival there he was despatched to the army, then engaged in the Birmese war. He received a severe wound at Rungpoor, in consequence of which he was obliged to return to England on furlough. When convalescent he made a tour on the continent, and afterwards returned to India; but, owing to the vessel in which he first embarked having been shipwrecked on the coast of the Isle of Wight, and the delay arising from his having to procure another passage, the term of his leave of absence had expired before he joined the army. His appointments were thus forfeited, and certain formalities were necessary to reinstate him, rather than undergo which he chose to quit the service of the East India Company. In 1830 he embarked on a voyage to China, and while sailing among the islands of the Indian archipelago seems to have first conceived the project of an expedition to those seas. After his return to England, his father having died and left him a considerable property, he purchased a yacht called the 'Royalist,' of 140 tons burden, which, being attached to the Royal Yacht Squadron, was entitled in foreign seas to the same privileges as a ship of war.

For about three years Mr. Brooke tested his vessel and practised his crew in the seas of Europe, especially the Mediterranean; he then departed for the eastern seas, leaving the river Thames October 27, 1833, in the 'Royalist,' which was then provided with four boats, was armed with six 6-pounders, besides swivels and small arms, and had a crew of twenty men. After some delay at Singapore and elsewhere, he proceeded to Sarawak, a province of Borneo, on the north-western coast, for the ostensible purpose of taking in a cargo of antimony-ore, of which there are several mines in the island. Muda Hassim, maternal uncle of Omar Ali, the sultan of Borneo, was then engaged in a war with some of the native tribes, the Dyaks, subjects of the Sultan of Borneo, who were in a state of insurrection in the vicinity of Sarawak. Mr. Brooke's crew had received an addition of some Javanese seamen, and he undertook to lend the aid of himself and his men to the troops of Muda Hassim. A battle was fought: European fire-arms and skill prevailed, and the insurgents surrendered. For this successful result, and for other services given or promised, Muda Hassim conferred on Mr. Brooke the title of Rajah and Governor of Sarawak, which, after some show of reluctance and considerable delay, was confirmed by the sultan, September 21, 1841—the previous governor, whose name was Macota, having been compelled to resign.

Rajah Brooke forthwith set about the reform of his government, the formation of a code of laws, and the amelioration of the condition of his people; and also obtained the co-operation of Captain Keppel, Sir Thomas Cochrane, and other commanders of British ships of war, in certain expeditions for the extirpation of piracy. The results of these expeditions were the destruction of a large number of persons said to be pirates, and the payment by the British government of a large sum of money, more than 20,000*l.*, as 'head-money,' to those who were engaged in the affairs. Also, on the charge of having murdered some of his relations, and perhaps other charges, the capital city of the sultan, called Bruné, was bombarded and stormed, and his army and himself put to flight. One of the commanders engaged thus speaks of the victory:—"The sultan, his boasted army, and all the inhabitants had fled; and as the full moon rose, she threw her rays over a city which, having flourished 500 years under Mohammedan rule, now fell before the arms of a Christian power." After due submission, the sultan was reinstated.

Rajah Brooke, having accomplished these successful operations, returned to England, where he was received with much favour by the government, received the degree of D.C.L. from Oxford in 1847, and was created a Knight Commander of the Bath by the queen in 1848. The small island of Labuan, near Sarawak, containing coal, which is now of great value in those seas, was purchased from the Sultan of Borneo. It was constituted a British colony, of which Sir James Brooke was appointed governor and commander-in-chief, with a salary of 2000*l.* a year, and when he returned to Sarawak a British ship of war was appointed to convey him there.

The late Mr. Hume, and other members of the House of Commons, brought charges against Sir James Brooke of having, under the pretence of extirpating piracy, destroyed a large number of unoffending natives, and expressed their belief that the chief stimulus to those employed in these expeditions was the head-money. Sir James Brooke returned again to England, chiefly for the purpose of rebutting these charges and justifying his own conduct. There was much conflicting evidence, and the matters were finally referred to a Royal Commission at Singapore, which has declared the charges to be unsubstantiated. Meantime, the head-money has been abolished, and Sir James Brooke has been superseded in the governorship of Labuan. He still retains his title and power as Rajah of Sarawak, is commissioner and consul-general to the sultan and independent chiefs, and is lessee of the valuable antimony-mines at Bintulu. Portions of his journals have been published by Captain Mundy and Captain Keppel, and also 'The Private Letters of Sir James Brooke, K.C.B., from 1833 to the Present Time, Edited by J. C. Templer, Esq.,' 3 vols. cr. 8vo, 1853.

BROTHERS, RICHARD. The birth and early years of Brothers are not well known; nor indeed would the events of his after life deserve to be remembered, if his ravings had not exercised a considerable influence on his contemporaries, and thus connected his history with that of the superstition of his day.

Richard Brothers held for several years the rank of lieutenant in the British navy, which he quitted in 1789. A controversy with the Lords of the Admiralty about his half-pay first developed that character of his mind which ultimately ripened into a complete delusion. With respect to taking a certain oath in order to qualify himself to receive his pay, he sent a well-written letter to Richard Stevens, Esq., of the Admiralty, dated September 9th, 1790, which appeared in the 'Public Advertiser' at the time. In this letter he exposes the dishonesty of compelling a man to swear that he takes a certain oath *voluntarily*, to which he may have an unconquerable objection. The absurdity of this practice he made so apparent that the Earl of Chatham had the word *voluntarily* erased from the form of oath. This however did not satisfy Brothers, who wished to be relieved from taking the oath altogether, an indulgence which he failed in obtaining.

In consequence of declining to take the oath, he was very near dying of hunger, and was ultimately taken to a workhouse. These privations, as well as many others which he afterwards endured, prove that the man was no impostor, but that he deceived others no more than he did himself, being firmly persuaded that his mission was from Heaven. He affirms, in a book which he published in two parts, entitled 'A Revealed Knowledge of the Prophecies and Times, &c.—London, printed in the year of Christ 1794' (which was eagerly bought by all classes, both in town and country)—"It is from visions and revelations, and through the Holy Ghost, that I write this book for the benefit of all men; therefore to say it is false, that I am mad, am an impostor, have a devil, or am out of my senses, constitutes the dangerous sin of blasphemy." He published a second part of this strange production in the course of the same year. He also published in 1795 an 'Exposition of the Trinity.'

From the year 1790 Brothers dates his first call. On May 12, 1792 he sent letters to the king, ministers of state, and speaker of the House of Commons, stating that he was commanded by God to go to the parliament house on the 17th of that month, and inform the members, for their safety, that the time was come for the fulfilment of the 7th chapter of Daniel. Accordingly, on the day named, he presented himself at the door of the House of Commons, and, according to his own account, met with a very scurvy reception.

Having some time after prophesied the death of the king, the destruction of the monarchy, and that the crown should be delivered up to him, he was committed to Newgate, where, if his statement be true, he was treated with great cruelty. But imprisonment did not damp his ardour. On his liberation, he continued what he denominated his ministry with renewed energy, and obtained many followers. While the more rational part of the community were laughing at the prophet, there were some persons of liberal education, and of good ability, who maintained the divinity of his mission. Among these, Nathaniel Brassey Halhed, Esq., M.P. for Lymington, and Mr. Sharp, an eminent engraver, were the most zealous: they published numerous pamphlets and testimonials in his favour; and others to the same effect appeared by Bryan, Wright, Mr. Weatherall, an apothecary, and a Mrs. Green. Among other things, Halhed bore testimony to his prophesying correctly the death of the three emperors of Germany. Among other strange letters which Brothers published was one entitled, 'A Letter from Mr. Brothers to Miss Cott, the recorded daughter of King David, and future Queen of the Hebrews: with an Address to the Members of his Britannic Majesty's Council,' 1793.

Such an effect had these and other similar writings on people of weak understanding, that many persons sold their goods, and prepared themselves to accompany the prophet to his New Jerusalem, which was to be built on both sides of the River Jordan, and where he was to arrive in the year 1795. Jerusalem was then to become the capital of the world; and in the year 1798, when the complete restoration of the Jews was to take place, he was to be revealed as the prince and ruler of the Jews, and the governor of all nations, for which office he appears to have had a greater predilection than for that of president of the council, or chancellor of the exchequer, which he said God offered for his acceptance.

Taken altogether, the writings of Brothers are a curious jumble of reason and insanity, with no small number of contradictions, as we might readily suppose. The following are some of the prophecies of Brothers, stated in the order in which they were published. Many of them have been either totally or partially fulfilled, a circumstance not at all surprising when we consider that they chiefly refer to the eventful period immediately subsequent to the French Revolution. As Brothers also gave himself considerable latitude in his prophecies, and prophesied very largely, the real wonder would be if none of them had been realised.

About July 1792, in letters to the king, queen, and ministers of state, he prophesied the violent death of Louis XVI., and at different times that the then Empress of Russia should die by the hands of man; the French Republic would be established for ever; the King of England's power was to cease, and his crown to be delivered up to the prophet. Rome and Venice were to fall under the power of the

Emperor of Germany, the former to be retaken by the French, the latter to be plundered and almost destroyed. The emperor was to be driven to make peace with the victorious French, and then quarrel with the English. This prediction was literally fulfilled: he made peace with France, December 26, 1805, and in 1808 declared war against England. After which, according to Brothers, he was to seize on Hanover, and subdue Germany entirely. An army was to be overthrown in Italy, which happened in 1809. Prussia was to acknowledge the French Republic and make peace with it, which took place April 1795, then to extend its dominions, and afterwards the king's life to be taken and the monarchy for ever destroyed by Russia and Austria. The Russian army (or bear), as if impatient for its food, was "to rise and devour much flesh;" to enter Turkey and comparatively overrun the land, tearing down and devouring with great fury all opposition. "At the capital it stops: here are its decreed limits, no farther it must go. Here the Russian general divides the spoil of many cities with his army and the rich provinces of Turkey between his officers. Here he despises the oath of fidelity, and throws away the submission of a subject, proclaiming himself *Emperor of Greece*." Russia was to be destroyed by Sweden—the Spanish monarchy to be destroyed and the Stadtholdership of Holland to be cut off close to the ground, which office in less than a year was actually abolished. The Popedom was to be destroyed:—An earthquake to swallow the parliament when sitting, and great part of London:—America to go to war with England:—France to lose her West Indian islands, &c.

In the notices which we have seen of Brothers in the biographies, it is stated that the government at length interfered, and treating him as a dangerous and mischievous lunatic, caused him to be placed in Bedlam, where he was confined during the remainder of his life. In the majority of the accounts the date of his death is not mentioned, but in one at least he is stated to have died at Bedlam in 1830.

This statement must however be incorrect. A zealous disciple of Richard Brothers named John Finlayson, printed in the 'Age of the World 5519, Christian era 1849,' a book more strange if possible than any of Brothers's own, entitled 'The Last Trumpet and the Flying Angel through the midst of Heaven proclaiming the Divine and True System of the Universe as it is; as given by God to the late Mr. Richard Brothers, and also to Myself,' &c. In the midst of this incoherent production between an account of the immovable earth and the moveable sun, the planets, and the stars in the whole of the heavens (which stars "are oval-shaped, immense masses of frozen waters from ten to thirty miles in diameter, with their largest ends foremost to assist their velocity and to keep them in their respective courses from east to west round the axle of the heavens and that of refixed earth"), and the seven seals and angels of the Revelations, is oddly enough inserted an account of the release of Brothers from the lunatic asylum, and of his death, so precise in statement, as to preclude the probability of error. His release took place April 14, 1806, the order being given by Lord Chancellor Erskine to Mr. Finlayson, who at once proceeded to the asylum and brought Brothers away with him. The death of Brothers occurred in 1824 in Finlayson's house, where he had been residing for the last nine years.

They had been applying to Lord Chancellor Eldon for a restoration of Brothers's half-pay, or a pension which he had been for some time paid, but which had been withheld. "On Sunday the 25th of January 1824," says Finlayson, "he said to me, 'We must now be done with chancery, and I must write to it, that he was seized with the cholera morbus and hectic fever.' . . . He then desired me to shut the door and open the window, and while holding his right hand in my right hand, he asked me if my sword and hammer were ready? and on my instantly answering in the affirmative he seemed pleased, and in a few minutes breathed his last, no one being present but myself:" and he goes on to say that he had Brothers buried in St. John's Wood burying-ground, "and caused a large flat stone to be placed over his grave, with his and my name on it." Finlayson went on teaching and publishing the doctrines of Brothers, notwithstanding the prophet's death, and he tells us that as late as 1848, "God gave me a dream and a vision of Mr. Brothers, who told me that he approved of all I had done, and lifting his two hands high over his head, he rejoiced mightily at all I had written and published." Finlayson printed several single leaf tracts in 1850, and these are the last publications of the school of Brothers which we have seen, but we have reason to believe that there is yet to be found here and there a firm believer that the prediction of the 'revealed knowledge' will in due time all be accomplished.

BROTIER, GABRIEL, was born at Tannay in the Nivernois, on the 5th of September, 1723, and received the appointment of librarian of the college of Louis le Grand from the Jesuits among whom he was educated. On the suppression of that order he lived in privacy, and devoted himself to literature. In 1781 he was elected member of the Academy, and died in Paris on the 12th of February, 1789. His original works hardly deserve notice, and it is upon his editions of Tacitus that his reputation is chiefly founded. The Paris editions, 4 vols. 4to, 1771, and 7 vols. 12mo, 1776, differ considerably from each other, but in the English editions the two are incorporated. Brotier published also an edition of Pliny's 'Natural History' in 6 vols. 12mo, 1779, the 'Fables of Phœdrus,' 1783, and Amyot's translation of 'Plutarch's Lives,' in 22 vols. 1783, revised and republished in 25 vols. 1801.

* BROUGHAM, HENRY, LORD, was born in St. Andrew's Square, Edinburgh, on the 19th of September, 1779. His father, Henry Brougham, Esq. of Scales Hall, Cumberland, and Brougham Hall, Westmoreland, was descended from the ancient family of the Broughams or De Burghama. He married Eleanor Syme, eldest daughter of the Rev. Dr. James Syme, one of the clergymen of Edinburgh, and niece, through her mother, of Robertson the historian. Of six children by this marriage—five sons and one daughter—Henry was the eldest. (Two of the other sons, James and William, were members of parliament, and took some part in public life during the brilliant career of their brother.) The family seems to have resided for the most part in Edinburgh, though sometimes at Brougham Hall, where Dr. Robertson visited them occasionally, and used to walk about with his grandnephew. It was at the famous High School of Edinburgh that Henry Brougham received his earliest classical education—first under Mr. Luke Fraser, one of the under-masters, mentioned by Lord Cockburn in his 'Life of Jeffrey,' as having had the distinguished honour of sending forth from three successive classes, three pupils no less celebrated than Scott, Jeffrey, and Brougham; and next under the head master or rector, Dr. Adam, the learned author of the 'Roman Antiquities, and a man of much weight and impressiveness of character, whose memory is not yet locally extinct. From the High School, Brougham passed, at the age of fifteen, to the university of Edinburgh, then so illustrious by having such men as Dugald Stewart, Robison, and Black among its professors, that English youths and youths from the colonies were sent to it to complete their education.

From the first distinguished by extraordinary quickness and talent, young Brougham began to attract notice at the university more particularly by his fondness for mathematics and physical science. Having, when not more than seventeen, written a paper on the refraction and reflection of light, containing what he considered some original speculations on that subject, he sent it through Sir Charles Blagden to the Royal Society, in whose 'Transactions' it was printed in the year 1796. He followed up this paper by another on the same subject, printed in the 'Transactions' for the year 1797; and in the 'Transactions' for 1798, there appeared a third paper from his pen, entitled 'General Theorems: chiefly Porisms in the Higher Geometry.' These papers, though the fact of their author's extreme youth was unknown, attracted some notice among scientific men both at home and abroad.

Having chosen the Scottish Bar as his profession, and completed his legal studies at Edinburgh, Brougham, after a tour in Prussia and Holland in the company of Mr. Stuart, afterwards Lord Stuart de Rothesay, was admitted a member of the Edinburgh Society of Advocates in 1800. His acquaintance with Horner, Jeffrey, and other rising young men of the Scottish Whig party began about this time; and he was one of the most prominent members of the renowned "Speculative Society," in which these and other Scotchmen, afterwards known to fame in various capacities, first cultivated their habits of extemporaneous debate. Accordingly in 1802, when the 'Edinburgh Review' was started, Brougham soon became one of the chief contributors. "After the third number," says Jeffrey, "he was admitted, and did more for us than anybody." They were all young men. Allen was thirty-two years of age; Sidney Smith was thirty-one; Jeffrey was twenty-nine; Thomas Brown, the metaphysician, was twenty-four; Horner was twenty-four; and Brougham was twenty-three. Brougham, though the youngest, had the greatest share of literary ambition. While writing his first articles for the 'Review,' he was preparing for the press a more elaborate work in his own name, entitled 'An Enquiry into the Colonial Policy of the European powers,' which was published in two volumes at Edinburgh in 1803, and was considered an extraordinary work for so young a man, both in respect of knowledge and in respect of boldness of opinion. After this work had been published, he concentrated his literary efforts on the 'Review.' The early numbers had been so immediately and largely successful that Constable the publisher had cheerfully acquiesced in the proposal that the articles, at first gratuitous, should be paid for at the rate of 10s. a sheet. Of all the contributors during Jeffrey's long editorship, which began in 1803 and closed in 1823, and during which the rate of payment was more than doubled, Brougham was the most industrious and versatile.

In 1807, Brougham was residing in London, where he was qualifying himself for the English bar. The reasons of this change were various. For one thing, as may be learnt from Lord Cockburn's account of the discouragements under which Scottish Whiggism then laboured in Edinburgh, and particularly within the precincts of the 'Parliament House' or Supreme Courts of Law, the prospects of a young Whig lawyer in Scotland cannot have been very brilliant. It is said however that a visit to London in 1807, in order to plead before the House of Lords in a case respecting the succession to the Scottish dukedom of Roxburgh, was the immediate cause of his resolution to come permanently to England. At all events, in 1808, when he was in his twenty-ninth year, he was called to the bar at Lincoln's Inn, and began to practise as an English barrister at the Court of King's Bench and on the northern circuit.

He had brought a high reputation for eloquence and ability with him from Scotland; and it was not long before he confirmed and

extended it. Perhaps the most splendid display of his powers as a pleader at this period of his career was in his advocacy before parliament of the case of certain merchants of London, Liverpool, and Manchester, who complained of the injury done to British commerce by the operation of the famous 'Orders in Council,' by which the government sought to retaliate on Napoleon's Berlin decrees. He was unsuccessful in his plea that the 'Orders' should be rescinded; but he gained great popularity by his speech on the question. To place such a man in parliament seemed the greatest service that could be rendered to the Whig party; and, accordingly, in the same year he was returned to the House of Commons for Camelford by the Earl of Darlington, afterwards Marquis and Duke of Cleveland, the patron of the borough. Brougham is thus one of the many eminent statesmen who, during the first thirty years of this century, owed their introduction to parliament to the convenience of rotten boroughs. His maiden speech in parliament, delivered on the 5th of March 1810, on the occasion of Mr. Whitbread's motion reprobating the conduct of the Earl of Chatham in privately transmitting to the king his narrative of the expedition to the Schelde, somewhat disappointed the anticipations that had been formed from his forensic appearances. It was able and appropriate, but nothing more. Very soon however he mastered his new element. The House began to feel that they had got among them a man of constitutional energy and daring, an orator such as had not sat on those benches since the days of Fox and Pitt, and Burke, and against whose passionate vehemence, unparalleled fluency, and remorseless invective, when roused, the boldest adversary felt that he was powerless. Canning alone, during the time that Brougham was in the House of Commons, could face him deliberately as an antagonist; and the difference of their styles of oratory rendered the occasions on which they were matched against each other among the most remarkable displays of gladiatorship known in the history of parliament.

When Mr. Brougham commenced his political career, Britain was in a condition to furnish him with abundant matter on which to exercise his oratory of denunciation and his passion for reform. It was the period of confirmed Tory ascendancy. The Perceval administration was struggling against Napoleon abroad, more especially in Spain, where Wellington was for the first time teaching Britain how to wrestle with the great conqueror on land. Out of this peculiar foreign policy arose many questions on which the Whigs differed from the Tories; while in the domestic and colonial policy there were principles and practices which the Tories of the present day would condemn as strongly as the Whigs did then. From 1810 to 1812, Mr. Brougham distinguished himself on the opposition side in all the great debates on questions of home, foreign, and colonial policy, between the government and the opposition. He delivered speeches against the 'Orders in Council' (which, very much through his means, were rescinded in 1812, as far as America was concerned), against flogging in the army, in behalf of the Roman Catholic claims, and in behalf of reform in the government of India. It was at this period, too, that he began his labours in some questions of general philanthropy, distinct from mere politics. As early as 1810 he carried a unanimous address to the king, praying him to take measures, both direct and diplomatic, for the suppression of the slave-trade; and in 1812 he spoke on the question of prison-management. Nor was it only in the House that his energy on the liberal side of politics and general opinion was manifested. In 1811, for example, he was counsel for Messrs. Hunt, the proprietors of the 'Examiner' newspaper, in a prosecution for libel on account of an article against government on the subject of flogging in the army, and also for Mr. Drakard, proprietor of the 'Stamford News,' in a similar action for libel on account of a republication of the same article. In the first case he obtained a verdict for his clients; in the second, he failed; but his speeches on both occasions were hailed as triumphant defences of the liberty of the press. In December 1812 he was again counsel for the Messrs. Hunt, in the famous trial for libel on account of an article offensive to the Prince Regent; and the defence is said to have been as offensive to the Prince as the article itself, and never to have been forgotten by him.

At the time of this last forensic display, Mr. Brougham was not a member of parliament. In October 1812—the administration of Lord Liverpool and Lord Castlereagh having just succeeded that of Mr. Perceval—he was induced to contest the Liverpool election, in association with another Whig, against Mr. Canning and another ministerial candidate; and, having lost this election, and also failed in a subsequent canvas for the Inverkeithing Burghs, he remained excluded from parliament for four years. During these four years, the Liverpool and Castlereagh administration carried on the final struggle against Napoleon, which ended in the battle of Waterloo and the treaty of Vienna; and during the same period were passed the Corn Laws, the repeal of which was to cost so much effort at a subsequent day.

In 1816 Mr. Brougham was returned to parliament (this time also through the influence of the Earl of Darlington) for the borough of Winchelsea; and he continued to represent that borough till the year 1830. Three times indeed during this period he contested the county of Westmoreland against the Tory and family influence then paramount in it—namely, at the general elections of 1818, 1820, and 1826—but without success.

The period between 1816 and 1830 was perhaps that of Mr. Brougham's greatest celebrity. The war being over, all the energies of the nation were free for the work of domestic and colonial inquiry and reform, and such men as Brougham found larger scope for their activity than ever. His biography at this time, so far as his political activity is concerned, naturally divides itself into stages corresponding with the successive ministers then in office. The Liverpool ministry continued in office during the rest of the nominal reign of George III., and as far into that of George IV. as April 1827, considerably modified in its policy however by the admission into it in 1816 of Canning, and farther by the accession of Canning to the Foreign Office in 1822, on the death of the Marquis of Londonderry. Then followed the brief administration of Canning (April to August 1827), succeeded by that of Lord Goderich (August 1827 to January 1828), and next by that of the Duke of Wellington (January 1828 to November 1830). Every one knows that the history of Great Britain under these successive ministers consisted in a continuous battle between the Tories and the opposition on a great variety of questions involving popular liberties in opposition to prerogative; and that the progress of victory was so steadily on the side of the opposition that point after point was conceded, and the views of the Tory party themselves in matters of government became entirely changed from what they had been in 1816. Much of this progress was owing to the genius and liberality of Canning, whose foreign policy in particular infused a new spirit into the later years of the Liverpool administration; but much of it also was owing to the oratory and energy of Mr. Brougham. A list of the topics of his principal speeches in the House during the period in question will best indicate the course of his parliamentary career:—In 1816 (the year of his re-admission to parliament) he took a leading part in the debates on the Reduction of the Army-Estimates, the Repeal of the Property-Tax, the Distresses of the Agricultural Interest, and other topics natural at a time of sudden transition from war to peace; and in the same session he commenced his long labours in the cause of Popular Education, by moving and obtaining the appointment of a committee to inquire into the education of the poor in the metropolis. In 1817 he made a speech on the Distresses of the Manufacturing Classes, recurred to the question of the Education of the Poor in the Metropolis, and attacked the foreign policy of the ministry. In 1818 he spoke on the Tithe Laws and Parliamentary Reform, recurred again to the subject of Metropolitan Education, and succeeded in obtaining the appointment of a commission, since so famous, for Inquiring into the Abuses of the Public Charitable Foundations of the Kingdom connected with Education. He was not himself nominated on this commission, but he continued to watch its proceedings with the greatest interest, and to keep public attention fixed on it. Thus, in 1818, he published 'A Letter to Sir Samuel Romilly, upon the Abuse of Public Charities,' which was so popular that it ran through ten editions in a few months. In 1819, besides his other appearances in parliament, he defended the Education Committee against certain charges of Sir Robert Peel. During the years 1820 and 1821 his time was chiefly occupied in proceedings connected with the case of Queen Caroline, whose differences with her husband had been a subject of public scandal for some years, but now assumed all the dimensions of a political convulsion, in consequence of her arrival in England to claim the honours of Queen-Consort on her husband's accession to the throne. Mr. Brougham's conduct of the whole case as her Majesty's Attorney-General, and in particular his two great speeches in that capacity—the one before the House of Lords on the trial for her Divorce, the other before the Privy Council in the argument for her Coronation—immensely increased his popularity; as did also his subsequent defence at the Durham assizes of Mr. Williams, proprietor of the 'Durham Chronicle,' in an action for libel brought against him by the Durham clergy, for an article reflecting on their conduct for not permitting the city bells to be tolled on the queen's death. His attack on the clergy on this occasion was terrific. All these displays of oratory in the queen's case were forensic rather than parliamentary; but the gravity of the case gave them political importance, and affected Mr. Brougham's position in the House of Commons. Here, whilst burdened with business as the queen's attorney-general, he had not ceased to take part in debates on Education, Admiralty Reform, the State of Ireland, and other topics. In the session of 1823, when Canning's foreign ministry was beginning a new era in our relations with foreign powers, Mr. Brougham, who had, in 1816, stood almost alone in the House in denouncing the Holy Alliance, and calling on the British government to pursue another policy in foreign affairs than that of the Alliance, was able to return to the topic under much more favourable auspices, in a speech attacking the alliance for their armed interference, through France, with the liberties of the Spanish nation. Canning, though not going so far, may be supposed on this occasion to have sympathised to some extent with his parliamentary rival; but on another occasion, during the same session, the two orators came to a personal quarrel. It was on a debate on Catholic Emancipation, and the scene was one of the most memorable that ever occurred in the house. Mr. Brougham, charging Canning with faithlessness to his previous declarations in behalf of emancipation, pressed the charge in a speech of extraordinary invective, which he wound up by pointing to Canning as having been guilty "of the most monstrous truckling for office that the whole history of political tergiversation could

present." Canning, goaded out of all power of self-control, started up and cried "It is false!" and the Speaker had to interpose and arrange the matter in parliamentary form by enforcing mutual explanations. In the same session Mr. Brougham spoke on Colonial Slavery and on Delays in Chancery. In 1824 his greatest effort was a speech on a motion censuring the Demerara authorities for their proceedings in the case of the Rev. John Smith, an Independent missionary, who, on suspicion of having incited the slaves to revolt, was tried in a very illegal manner, and while under sentence of death expired in prison. In 1825 the expulsion of a missionary from Barbadoes furnished a text of the same kind; and in that and the following session, Colonial Slavery, the Catholic claims, Chancery Reform, and the Corn Laws, were the chief topics of Mr. Brougham's oratory. On the accession of the Canning ministry in 1827, he signalled his independence in the House by defending the chief measures of that ministry, declaring that, "since Mr. Canning had established a system of liberal and manly foreign policy," he should have his support. On this occasion he even sat on the ministerial benches, though declaring that he had bound himself not to take office under Mr. Canning. In this peculiar position of independence he continued his parliamentary activity under the administrations of Lord Goderich and the Duke of Wellington, after Canning's death; taking part in the debates which led to the famous passing of the Catholic Relief Bill by Wellington's ministry (April, 1829), but at the same time pressing questions of his own. Among these was Law Reform, on which on February 7, 1828, he delivered a speech of six hours' length, containing the germs of many improvements in this important department of administration which have since been carried into effect. In 1829 he had the satisfaction of explaining to the House the proceedings of the great Charities Commission, the appointment of which he had procured eleven years before, and which during that interval had investigated into the condition and history of no fewer than 19,000 of the charitable foundations of Great Britain.

During the period of Mr. Brougham's life embraced in the last paragraph (1816-1830), his prodigious activity had by no means been confined to his duties in the House of Commons. Of his numerous pleadings before the law-courts during this time—many of them on questions of public and political interest—we cannot take account; suffice it to say that, after having occupied the distinguished position of attorney-general for the queen, which gave him for a time precedence at the bar, and after having on the queen's death resigned this precedence, he was permanently invested with the silk gown in 1827. His various literary contributions to the 'Edinburgh Review' during the same period would form a separate item in the account of his occupations. More important in some respects are the services he rendered out of parliament to the cause of popular education. We have seen how in 1816 he stood forth in parliament in behalf of this cause by procuring the appointment of a committee to examine into the state of education in the metropolis. The result of that inquiry was that it was found that 120,000 children in London were growing up without any means of education whatever. This fact, acting on his ardent mind, seems to have determined him to an unusual energy in all matters connected with the education of the people. Associating himself with Dr. Birkbeck, he was instrumental in founding in the year 1823 the London Mechanics Institution; and not long afterwards he published his 'Practical Observations on the Education of the People, addressed to the Working Classes and their Employers,' twenty editions of which were rapidly sold, and produced an extraordinary effect all over the country. Partly on account of his exertions in this cause, and partly on account of his general celebrity, he was elected in 1825 to the honorary post of Lord Rector of Glasgow University; his opponent on this occasion being Sir Walter Scott, against whom his election was determined by the casting-vote of the previous rector, Sir James Mackintosh. The 'Address' which he delivered to the students on his installation, and which has been often printed since, was prepared amid the fatigues of the Northern Circuit. During his visit to Scotland at this time he was entertained at a public dinner—one of the largest ever held in Scotland—by the citizens of Edinburgh; on which occasion his friend Mr., afterwards Lord Cockburn, occupied the chair, and reviewed his history since the time when, as a young barrister, he had left Edinburgh for the English capital. In the same year he introduced a bill into parliament for the incorporation of the University of London, in the establishment of which as an institution of the higher education on principles which would admit all classes of British subjects, irrespective of their religious opinions, and without any religious tests, he had taken an active part. Not the least of his extra-parliamentary services during the period in question were those which he rendered in connection with the foundation in 1827 of the 'Society for the Diffusion of Useful Knowledge,' whose object, as stated in its original prospectus, was "by the periodical publication of treatises, under the direction and with the sanction of a superintending committee, to impart useful information to all classes of the community, particularly to such as are unable to avail themselves of experienced teachers." That limited object was carried much farther during the labours of seventeen years. Mr. Brougham was appointed chairman of this committee, and his discourse 'On the Objects, Pleasures, and Advantages of Science,' was the first publication of the society.

The year 1830 was an eventful one in the life of Mr. Brougham, as

well as in the political history of Great Britain. Early in that year he resigned his seat for Winchelsea on the ground that he could not go along with the Marquis of Cleveland, the patron of the borough, in supporting the Wellington Ministry, whose determination to oppose Parliamentary Reform was inflexibly taken. He was immediately returned for Knarborough, and, as member for that borough, he made speeches on colonial slavery and other topics, and introduced a Bill for the Establishment experimentally in the three counties of Kent, Durham, and Northumberland, of Local Courts of Justice, somewhat on the model of the county courts which have since been instituted. In the midst of these exertions, the death of George IV. (June 1830), followed so speedily by the French Revolution of July, induced a national crisis. At the general election on the accession of William IV., Mr. Brougham stood for Yorkshire, and was returned for that great county, free of expense, along with Lord Morpeth, the Hon. William Duncombe, and Mr. Bethell. In the course of the canvass for this county, he gave an extraordinary proof of his physical and mental energy by attending and speaking at eight different electoral meetings in one day, travelling that day 120 miles (it was before the period of railroads), and appearing next morning at the York assizes. As member for the great constituency of York—which had till then been accustomed to elect only some men aristocratically connected with the county—Mr. Brougham was in a position as powerful as any British commoner could occupy. Backed by such a constituency, he could regard himself as a tribune of the British people, rather than as an ordinary member of parliament. It was with the consciousness of this that, when the new parliament met, he stood forth in that parliament as the champion of 'Parliamentary Reform'—then the one thought of the nation. As an independent member, but also with the understood sanction of the Whigs, he announced for the 16th of November a motion on this subject of a very comprehensive character. According to the sketch given by Mr. Roebuck in his 'History of the Whigs,' of the bill which Mr. Brougham intended to introduce on this occasion, he was prepared to reduce the number of representatives in the House of Commons from 658 to 500, allowing the representation of Scotland to stand numerically as it was, but curtailing the Irish representation; he was prepared also to give the franchise to all copyholders and leaseholders, and to all householders whatsoever; and he was to enfranchise the large commercial towns, and to mulct the rotten boroughs of one member each, allowing them to retain one. On the eve of this motion however there came a ministerial crisis. The Duke of Wellington and his colleagues, defeated on a government measure on the 15th of November, resigned on the following day; and when the House met, in which Mr. Brougham was to propose his motion, negotiations were going on between the king and Earl Grey for the formation of a Whig ministry. In these circumstances Mr. Brougham postponed his motion for a few days, and, in doing so, used certain phrases which were interpreted as an indication that he and the Whig leaders were not in communication, that he was not to be in the new ministry, but was to proceed as an independent member without reference to them. Indeed the Whigs, having been out of office nearly a quarter of a century, were in the position of a body which had yet to organise itself. A number of men had been acting together in opposition, but to adjust their places in a new ministry was not easy; and Mr. Brougham, in particular, though as largely identified as any man with the course of Whig principles in the past, occupied ground so peculiarly his own, and was so formidable in his peculiarities, that it was thought the hereditary Whig leaders would be glad 'to throw him overboard' if they could. Great then, was the surprise of the nation when, on the announcement of the new Whig ministry under the premiership of Earl Grey on the 22nd of November, it was found that Mr. Brougham had a place in it, no longer as plain Mr. Brougham, but as Baron Brougham and Vaux, Lord Chancellor of England. The whole private history of the transaction, and indeed of the formation of the ministry, is yet but obscurely known; but Mr. Roebuck, in his 'History of the Whigs,' gives the various rumours of the day, and adopts as the true conclusion the supposition that Mr. Brougham was offered the lord-chancellorship simply because Earl Grey found it utterly impossible to construct a government leaving him out, and that Mr. Brougham accepted it simply because to have refused it would have paralysed the Whig party at the moment of their first return to power, made an eternal separation between him and the Whigs, and ruined his own chances of further usefulness. As the Lord-Chancellor of a Whig ministry, he had a new career opened up to him, not so congenial perhaps as that of a great popular chief in the Lower House, untrammelled by party, but still promising opportunities of great public service.

During the continuance of the Whig ministry from November 1830 to November 1834, Lord Brougham was identified perhaps more than any other member with its policy and measures, sharing its first extraordinary popularity and its subsequent disfavour. To him and Earl Grey in the Upper House fell the difficult task of carrying against the opposition of the peers the bill for Parliamentary Reform, supported in the other house by Lord Althorp and Lord John Russell. In the debates on the bill Lord Brougham's eloquence rang through the House of Peers such peals as had long been unheard there; and his famous speech on the second reading of the bill, on the 7th of

October 1831, takes its place as one of the most extraordinary specimens of oratory in modern times. When the peers stood firm in rejecting the bill, and the throne and the government were felt to lie over a mine of popular wrath which might any day burst into civil war, Lord Brougham and Earl Grey conducted the memorable negotiations with the king, with a view to induce him to avoid the catastrophe by a new creation of peers, on purpose to turn the votes in the Upper House; and some very curious particulars showing his boldness in the crisis are related in Mr. Roebuck's 'History.' When, at length, the discretion of the Duke of Wellington, himself convinced of the impossibility of forming a Tory ministry, or resisting the bill any longer, induced the lords to yield, and the bill became law (June 1832), Lord Brougham and his colleagues were free to go on to new measures. "The abolition of slavery in all our colonies; the opening of the East India trade, and destruction of the company's monopoly; the Amendment of the Criminal Laws; vast improvements in the whole Municipal Jurisprudence, both as regards Law and Equity; the settlement of the Bank Charter; the total Reform of the Scotch Municipal Corporations; the entire alteration of the Poor Laws; an ample commencement made in reforming the Irish Church by the abolition of ten bishoprics"—such is Lord Brougham's own enumeration of the series of measures carried by the first Reform Parliament from 1832 to 1834, and in the preparation and passing of which he had his full share. His speeches in the Lords on these topics form a considerable proportion of the published collection. It is to be remembered, too, that all this time he was discharging his onerous judicial duties as Lord Chancellor. In this capacity also his prodigious activity was manifest; and the more so when it was contrasted with the dilatoriness of his predecessor Lord Eldon. In the first year of his chancellorship he sat two days longer than Lord Eldon had done, and "by devoting more hours each day to the business of his court, he was enabled in the course of a few months to decide no less than 120 appeals and, instead of leaving, as his predecessor had done, a large arrear of causes, he had the gratification of saying that he had not left a single appeal unheard, nor one letter unanswered." There have been various opinions as to Lord Brougham's accuracy as a lawyer; but his astonishing power of getting through work rendered the term of his supremacy a memorable one in the annals of Chancery, and his judgments, always carefully prepared, have shown the injustice of many of the attacks on his legal reputation. His manner of exercising his patronage as chancellor both in church and state, has also been a subject of general praise.

In 1834 there was a new ministerial crisis. What had been done in the first two sessions of the Reform Parliament, was "by some sanguine and impatient spirits," says Lord Brougham, "held quite as nothing compared with the vast change which they had expected." In other words, Radicalism as distinct from Whiggism had assumed shape and organisation out of doors, and the Whigs were accused of not going far or fast enough. Some of their later measures too, particularly their Irish coercive policy, were largely unpopular. In the ministry itself differences arose. In May 1834, Mr. Stanley, Sir James Graham, Lord Ripon, and the Duke of Richmond, seceded from the ministry; and in July Lord Grey himself and Lord Althorp resigned office on a point connected with Irish Coercion. Lord Althorp was prevailed upon to resume office, and the Whig ministry continued in existence till November, when the death of Lord Althorp's father, calling him to the Upper House as Earl Spencer, gave the king an opportunity for carrying out the intention he had for some time entertained, and changing the ministry entirely. Sir Robert Peel, who had in the meantime been organising the modern Conservative party, came into office. His ministry however lasted only till April 1835, when a second Whig ministry was formed under the premiership of Lord Melbourne, with Lord John Russell as Home-Secretary. From this reconstructed Whig cabinet Lord Brougham was excluded. The exact grounds of his exclusion have probably yet to be revealed, along with the rest of the secret political history of the time. April 1835 is the date of Lord Brougham's rupture of his connections with the Whig party. Since that time he has simply been an ex-chancellor with a pension of 5000*l.* a-year, but always ready for public duties of a legal nature; and a peer of the realm, criticising in a perfectly independent manner the measures brought forward by successive governments, whether Whig or Tory, and occasionally proposing measures of his own.

The political life of Lord Brougham since his rupture with the Whigs in 1835 till the present time has consisted in what may be called an energetic isolation, manifested in a series of independent interferences, either in the House of Lords or through the press, with the current Whig and Tory politics of the country. During the first two years, indeed, of the Melbourne administration, he was comparatively inactive; his only important appearance at this time being in a speech in the House of Lords in May 1835, proposing a series of comprehensive resolutions on the subject of national education. The year 1837 however—in the June of which year William IV. was succeeded by Queen Victoria—saw him again remarkably active. In February in that year, he introduced two bills—one for the establishment of local courts, and the other for the abolition of pluralities; in April he spoke at large on the subject of Irish emigration and land-improvement in Ireland; in May he was attacking the government policy with respect

to Canada; and in June he moved for a select committee to inquire into "the state of business" in the House of Peers. All this was before the death of William IV.; but in the latter part of the same year he took an active part in measures then before parliament for amending the law—supporting the forgery bill, and other alterations in the criminal code (hinting while doing so at the possibility of abolishing death-punishment entirely), and also supporting a bill for abolishing imprisonment for debt, except under peculiar circumstances. In December 1837 he again brought the subject of national education before the House at large in a formal bill. The year 1838 was marked by his violent opposition to the Melbourne government, on the subject of Canada; and his three speeches on this subject, delivered January 18, February 2, and February 8, and republished under the title of 'Speeches on the Maltreatment of the North American Colonies,' produced immense effect, and led to the extraordinary episode that year of Lord Durham's sudden return from Canada in anger with the Whigs. Among his public appearances in 1839 were—a 'Speech moving a Committee of the Whole House on the Corn Laws;' 'A Letter on National Education to the Duke of Bedford;' and 'A Reply to Lord John Russell's letter to the electors of Stroud on the principles of the Reform Act.' In the years that followed, he pursued a somewhat singular course in connection with the great anti-corn law agitation which then occupied the country—on the whole contributing by his declarations of opinion and votes to the final repeal of the corn laws in 1846, but at the same time denouncing the league as unconstitutional. During the Conservative ministry of Sir Robert Peel, indeed, from 1841 to 1846, Lord Brougham seemed on the whole to co-operate more amicably with the government than he had done with their Whig predecessors. He still however pushed on measures of his own, and, in particular, his favourite measures of law-reform. In 1843 he published 'Letters on Law-Reform,' addressed to the Right Hon. Sir James Graham; in 1844 he delivered in the House and afterwards published a 'Speech on the Criminal Code;' and in May 1845 he made another great speech on 'Law-Reform.' During the early part of Lord John Russell's ministry (1846-52), Lord Brougham was still chiefly occupied with law reform; but the extraordinary events of 1848 roused him to new displays of his still youthful spirit. After the downfall of Louis Philippe, he proposed to the revolutionary government of France to complete his connection with that country (he had already a certain connection with it as owner of an estate near Cannes, where he generally resided a considerable part of every year), by becoming in regular form a French citizen; a proposition to which M. Marrast replied on the part of the government, by informing him that if he became a French citizen he must cease to be an English peer. Lord Brougham's opinion on the revolution, its principles, and its consequences, were expressed in various speeches in the House of Lords in 1848 and 1849—as, for example, his 'Speech on Italian and French Affairs' on April 11, 1848, and his 'Speech on Foreign Affairs' on July 20, 1849; but more at large in his 'Letter to the Marquis of Lansdowne on the Late Revolution in France,' which ran through five or six editions. Far more generally acceptable have been his recent persevering services in law reform—represented, for example, in 1850, by his 'Inaugural Address on the Establishment of a Law-School;' his 'Letter to Lord Chancellor Cottenham upon the Bill, to give primary jurisdiction to the masters in ordinary of the High Court of Chancery in certain cases;' and his 'Letter to Lord Denman on the Legislation of 1850 as regards the Amendment of the Law;' in 1851 by his 'Speech on the Law of Evidence Bill;' and in 1853 by his 'Speeches on County Courts and Law Amendment.' Indeed even now Lord Brougham is the still active patriarch of law reform; and labours assiduously in this great duty, often in connection with 'The Law Amendment Society.'

Such is a simple statement of the facts of Lord Brougham's political life, as divided into the three distinct periods of his early activity, as Mr. Brougham the Reform chief and orator (1810-1830), his Lord Chancellorship in connection with a Whig ministry (1830-1834), and his later career of isolation and independence. There are some who criticise the last period of his career in an unfriendly spirit, and maintain that the Lord Brougham of 1835-56 is a totally different man from the Henry Brougham of 1810-30, or even from the Lord Chancellor Brougham of 1830-34. More than once Lord Brougham has replied to these charges of inconsistency founded on his conduct since 1835, maintaining, that in reality he has always been true to the principles he professed at first, and the appearance of inconsistency is caused by changed circumstances and conditions. It probably remains however for his future biographer to determine this point more exactly, by ascertaining, if possible, the real 'formula' of his whole political life. Meanwhile, this may be said, that at the age of seventy-seven Lord Brougham can look back upon a political past more active and more full of changes than perhaps any other man in Europe.

In addition to the juvenile work on the 'Colonial Policy of the European Powers,' mentioned above, and to the miscellaneous pamphlets and articles in the 'Edinburgh Review,' which have also been mentioned, Lord Brougham has, since his release from the cares of office in 1834, given various literary works to the world, proving his powers in authorship. The 'Collected Edition of his Speeches,' in four volumes, was published in 1838, and includes his chief orations up to that date, with historical notes and introductions, and a 'Discourse

on the Eloquence of the Ancients.' Amongst other works are his edition of Paley's 'Natural Theology,' and 'Dissertations on Subjects of Science connected with Natural Theology.' In 1839-43 appeared his series of 'Historic Sketches of Statesmen who flourished in the Time of George III. ;' and in 1845 his 'Lives of Men of Arts and Science who flourished in the Time of George III.' A new and complete edition of all these works, including one of his 'Political Philosophy,' not yet completed, and others till now unpublished, is at present in progress under his lordship's superintendence.

In 1833 Lord Brougham was elected a Foreign Associate of the Institute of France, and afterwards a member of the Royal Academy of Sciences of Naples. In 1850, resuming his optical researches, he communicated to the Royal Society, 'Experiments and Observations upon the Properties of Light,' followed in 1852 by 'Further Experiments,' and again by 'Further Experiments' in 1853. The argument of these papers, based on elaborate experiments, shows the principle on which Newton established his theory of light to be inconclusive. These researches were communicated simultaneously to the Academy of Sciences at Paris ('Comptes Rendus de l'Acad. des Sci. '), and the phenomena in question were referred by Arago to the "doctrine of interferences." In 1855 he published, conjointly with R. J. Routh, Esq., an 'Analytical View of Sir Isaac Newton's Principia.'

Lord Brougham married, in 1819, the eldest daughter of Thomas Eden, Esq., of Wimbledon, deputy auditor of Greenwich Hospital, and brother of Lords Auckland and Henley, this lady having been previously married to John Spalding, Esq. His daughter, the only issue of this marriage, died young.

BROUNCKER, or BROUNKER, WILLIAM, Viscount Brouncker, of Castle-Lyons in Ireland (which title was conferred on his father, who had been president of Munster in 1645), was born about 1620. In 1646 he was made Doctor of Physic at Oxford. In 1660, having then succeeded his father, who died in 1645, he subscribed the declaration issued in April by the friends of the Restoration. In 1662 and 1663 he was named President of the Royal Society in the charters of incorporation then granted, which office he held for fifteen years. He was also chancellor of the queen, a lord of the admiralty, and master of St. Catherine's Hospital. He died on the 5th of April, 1684.

Lord Brouncker was a mathematician, and is the author of two remarkable discoveries. He was the first who introduced continued fractions, as follows:—When Wallis was engaged upon the interpolation which led him to his well-known theorem on the quadrature of the circle, he applied to Brouncker to consider the question; and the latter arrived at the following conclusion:—If π represent the ratio of the circumference to the diameter, then

$$\frac{4}{\pi} = + \frac{1}{2 + \frac{1}{9 + \frac{1}{2 + \frac{1}{25 + \frac{1}{2 + \frac{1}{49 + \frac{1}{2 + \frac{1}{81 + \frac{1}{2 + \frac{1}{121 + \frac{1}{2 + \frac{1}{169 + \frac{1}{2 + \frac{1}{225 + \frac{1}{2 + \frac{1}{289 + \frac{1}{2 + \frac{1}{361 + \frac{1}{2 + \frac{1}{441 + \frac{1}{2 + \frac{1}{529 + \frac{1}{2 + \frac{1}{625 + \frac{1}{2 + \frac{1}{729 + \frac{1}{2 + of the Bible,' his 'Self-Interpreting Bible,' and his 'History of the British Churches;' but his other works were numerous, and some of them had an extensive sale.

* BROWN, JOHN, D.D., professor of Exegetical Theology to the United Presbyterian Church, was born in 1785 at Whitburn, Linlithgowshire, where his father was minister of the Burgher section of the Secession Church. His grandfather was John Brown of Haddington, professor of divinity in the same connexion. After passing through the course of literary and theological studies required of candidates for the ministry among the Seceders of that day, he was licensed as a probationer, and speedily received a call from the Burgher congregation at Biggar, to the pastoral charge of which he was ordained in 1806. In 1821 he became pastor of the United Secession Church, Rose-street, Edinburgh; and on the death of Dr. James Hall, he succeeded that minister as pastor of Broughton-place church, Edinburgh. The Burgher and Anti-Burgher Seceders having united in 1820 under the name of the United Associate Synod, Dr. Brown was chosen one of their professors of divinity in 1835. In most of the public questions which have been agitated in Scotland during the last thirty years Dr. Brown has taken a prominent, although on the whole a moderate part. On the division in the British and Foreign Bible Society respecting the circulation of the Apocrypha, he adhered to the parent society. On the question of church establishments, he publicly advocated the voluntary views. Having been resident for a short time within the bounds of the ancient royalty of the city of Edinburgh, he became liable to the annuity-tax which is levied for the support of the city ministers; and refusing to pay, his goods were distrained. This led to his preaching and publishing two sermons on the 'Law of Christ respecting Civil Obedience, especially in the Payment of Tribute,' which by additions, notes, and references, subsequently swelled to the dimensions of a thick octavo volume. Besides many practical theological works, Dr. Brown has published 'Expository Lectures on the First Epistle of Peter,' 2 vols. 8vo; also 'Discourses and Sayings of our Lord Jesus Christ, illustrated in a series of expositions,' 3 vols. 8vo. About the year 1840 considerable discussion arose in Scotland in reference to the doctrine of the atonement, and some of the members of the United Secession body being dissatisfied with the position taken by Dr. Brown in the matter, brought a charge against him before the Synod, in 1845, in the usual form of a 'libel.' The 'counts' of the libel were, by considerable majorities, found 'not proven,' and the Synod passed a vote of confidence in Dr. Brown. The agitation on the subject soon after subsided, the attention of the religious community being almost wholly engrossed by the preparations for the union of the Secession and Relief Churches, which took place in May 1847, by which union was constituted the United Presbyterian Church. For several years past Dr. Brown has found it necessary to have the assistance of a colleague in his pastoral duties. His congregation celebrated at the commencement of April 1856 the fiftieth anniversary of his ministry. As professor of theology, and one of the oldest ministers in the United Presbyterian Church, as well as from his learning, moderation, and high personal character, Dr. Brown has for some years held an important and influential position in the community to which he belongs.

BROWN, JOHN, M.D., founder of the system of medicine termed Brunonian. It is unnecessary to trace minutely the events of his life, as they are now of little interest. He was born in 1735 at Dunse, in Berwickshire, of parents in very limited circumstances, who designed him for the occupation of a weaver; but a love of learning, which he acquired when a child at school, determined him to study for the church. Accordingly he went to Edinburgh, and while pursuing his own studies, he taught Latin to obtain a livelihood. Having been employed to translate a medical thesis into Latin, he was induced to pay attention to medical studies, and began to attend the lectures of several of the medical professors of the University, among others, those of Dr. Cullen, who having discovered his knowledge of Latin, made him tutor to his sons. Having completed the requisite course of medical studies, he obtained the degree of Doctor from the University of St. Andrews. His improvident habits soon involved him in pecuniary difficulties, and his hasty temper in quarrels with his medical brethren. He imagined that Dr. Cullen did not assist him to the extent he might have done, and he conceived a dislike to his former preceptor and benefactor, which he displayed in a way that he thought would be most annoying and humiliating to Cullen. Cullen's system of medicine was then in the highest repute, and Brown conceived the idea of bringing forward a rival system, which would supersede that of his master. Actuated by these motives, he proceeded to frame a system, of which, unlike the complex doctrines of the Cullenian system, simplicity should be the basis and recommendation. This was the origin of his 'Elementa Medicinæ.'

The fundamental doctrine of this system was that life was a forced state, and only sustained by the action of external agents operating upon the body, every part of which was endowed, at the commencement of existence, with a certain amount of excitability. If the power or force of the external exciting agents was within a certain limit, the body was maintained in equilibrium, or in health: if the force fell short of a certain amount, the excitability accumulated in the body, and produced diseases which he termed 'asthenic;' while the external agents, if in excess, exhausted the excitability too rapidly, and

produced 'asthenic' diseases. The means of remedying these diseases were in accordance with the views of their origin, and were equally simple and few. He discarded the numerous drugs which his predecessors and contemporaries employed, and confined himself to two—alcohol in any of its forms, as wine, brandy, &c., as a remedy for the one set of diseases, and opium for the opposite set. He made some converts to his opinions among the students, but the fatal results which followed the application of these doctrines to practice brought discredit upon them in Edinburgh; and their author, hoping for greater success, removed to London, where he died of apoplexy in 1788, without having obtained the distinction and fortune which he expected. His system never found much favour in this country, except among a few whose minds inclined them to the adoption of hasty generalisations, such as Dr. Beddoes, who edited an edition of the 'Elements of Medicine,' 2 vols. 8vo, London, 1795, with a life of Brown prefixed. His whole works, with a more ample life, were published by his son William Cullen Brown, 3 vols. 8vo, Lond. 1804.

Brown's doctrines met with a more general reception in Germany and Italy; in the former country they were propagated with great zeal by Girtanner and Weikard. Rasori made them known in Italy, and at first believed them to be well-founded, but experience convinced him of their inaccuracy, and he subsequently renounced his belief in them.

BROWN, DR. JOHN, was born in 1715, at Rothbury in Northumberland, where his father, a Scotchman, was curate. He studied at St. John's College, Cambridge, and took his degree with reputation; after which he resided for some years at Carlisle on a minor canonship and lectureship, and distinguished himself by acting bravely as a volunteer in the rebellion of 1745. He successively held and resigned several livings in the church. Of these, one at least was procured through the influence of Warburton, a patron however whose letters show him to have treated with little tenderness Brown's capriciousness of temper, caused doubtless in part by his latent tendency to mental derangement. In 1766 the reputation which his writings had obtained gained for him an invitation from the Empress of Russia to visit St. Petersburg, and assist in organising a scheme for public education. Ill health compelled him to decline the engagement. Other vexations preyed upon his spirits; and in September of the same year, seized with a fit of insanity, he cut his throat. Brown's works were both numerous and varied, in verse as well as in prose. His versified 'Essay on Satire' was prefixed by Warburton to his editions of Pope's works. His tragedy of 'Barbarossa,' brought upon the stage in 1755, was highly successful for a time, in spite of its extravagance and feebleness, and has been reprinted in more than one collection. Its successor, 'Athelstan,' was not so fortunate. His principal prose writings were the following:—'Essays on the Characteristics of Lord Shaftesbury,' 1751; 'An Estimate of the Manners and Principles of the Times,' 1757, 2 vols. 8vo, a work which went through seven editions before the end of the next year, and received, abroad as well as at home, an attention which it owed to its severity of animadversion on national vices rather than to its merits as a philosophical speculation; an 'Additional Dialogue of the Dead, between Pericles and Cosmo,' 1760, which was a defence of the political character and conduct of Lord Chatham; and a 'Dissertation on the Rise, Union, and Power, the Progressions, Separations, and Corruptions, of Poetry and Music,' 1763, a treatise of considerable ingenuity.

BROWN, LANCELOT, best known by the familiar sobriquet of *Capability Brown*, who was originally a kitchen-gardener, raised himself to be the most eminent landscape-gardener of his day, and 'improver of grounds,' as to which he was considered the oracle of taste; and he also acquired no small degree of reputation by his skill in architecture.

Lancelot Brown was born at Kirkharle in Northumberland in 1715, and in the early part of his life was in the service of Lord Cobham as one of the persons employed in the gardens and grounds at Stowe; after which he was similarly engaged by other persons of distinction, but of his rise until he formally established himself professionally as an artist-gardener we have no account. His personal history is a scanty but an enviable one; he not only realised a handsome fortune, but he graced his acquired station of gentleman by the manners and feelings of one. After having arrived at the dignity of high sheriff for the county of Huntingdon, which office he filled in 1770, he died in 1773. His private worth as a man is highly eulogised by Repton, Mason, and others who knew him intimately.

Great as was the vogue of Brown as a landscape-gardener, his taste has since been very much questioned, and even severely so by Price, who accuses him of having done sad mischief by attempting to reform natural scenery and reduce it to rule, and of having thereby sinned against good taste even more than his predecessors by their formally laid out gardens and straight hedges and avenues. In fact, while endeavouring to avoid the formality which had become 'old-fashioned,' Brown fell into what was little better than formal mannerism and routine, applying to every scene alike the same set of features—'clumps,' 'belts,' and 'serpentine canals.' The grounds at Kew, Blenheim, Stowe, and Nuneham-Courtney were laid out or remodelled by Brown; and perhaps as they now appear, after nature has for three-quarters of a century been exerting her modifying influence, they exhibit a too favourable example of the powers of Brown as a land-

escape gardener; but certain it is, that their present appearance would seem to indicate considerable foresight in their designer as to eventual effect. As an architect, in which profession he naturally confined himself to country mansions, he excelled in what related to internal arrangement and accommodation, for the houses erected by him have been allowed to be models of comfort and convenience. The artistic power displayed was, as may be supposed, by no means of an elevated order. Among the mansions executed or altered by him, is the Earl of Coventry's at Croome, with the lodges, church, and other buildings, the recorded date of which (1751) shows that he was then in practice as an architect. At Fisherwick he erected the house, offices, and bridge for the Earl of Donegal; he also made additions at Burleigh for the Earl of Exeter; additions at Prior Park, near Bath, 1765; built the picture-gallery at Corsham; made considerable alterations at Trentham (now succeeded by more extensive ones by Barry); built a mansion for the Earl of Newbury at Redgrave, 1765; and made alterations at Nuneham and at the house of Claremont. This list might be considerably extended, but it will be sufficient to add that he designed several of the buildings in the gardens at Stowe.

(R-pton, *On Gardening*, by London.)

* BROWN, ROBERT, a distinguished botanist, was born in 1773 at Montrose, in which town he received his early education. In 1787 he entered Marischal College, Aberdeen, where he remained three years. From 1790 to 1794 he studied medicine at the University of Edinburgh. In 1795 he was appointed assistant-surgeon and subaltern in a Scotch Fencible regiment, which he accompanied to Ireland, and stayed there until the end of 1800.

Mr. Brown was next engaged as naturalist to Capt. Flinders' surveying expedition, and sailed with that officer for Australia in July 1801. During this voyage the Australian continent was circumnavigated, and many parts of the coast were visited, until the vessel was finally condemned as unseaworthy at Port Jackson in June 1803. [FLINDERS.] Mr. Brown remained, adding to his collections by excursions to different parts of the colony of New South Wales and to Van Diemen's Land. In October 1805 he arrived in England with his collections, among which the plants numbered nearly 3900 species.

A few months later he became librarian of the Linnæan Society. In 1809 he contributed an important paper to the 'Transactions' of the Wernerian Society—'On the Asclepiads.' In 1810 his paper 'On the Natural Order of Plants called Proteaceæ' appeared in the 'Transactions of the Linnæan Society'; and in the same year he published the first volume of his 'Prodromus Floræ Novæ Hollandiæ et Insulæ Van Diemen,' in which, besides his own collections, he describes those formed by Sir Joseph Banks during Cook's first voyage.

Mr. Brown was the first English botanist to write a systematic work of any extent according to the natural method of Jussieu. No one has done more than he to make that method known in England, and, as has been truly observed, "no one has done so much in any country to throw light on its intricacies." In 1811 he was elected a Fellow of the Royal Society.

In 1814, on the publication of Flinders' narrative of his voyage, an appendix by Mr. Brown was printed in the second volume, entitled 'General Remarks, Geographical and Systematical, on the Botany of Terra Australis,' in which the subject is treated in a masterly style, and the plants are compared with those of other countries.

In 1822 Mr. Brown was elected a Fellow of the Linnæan Society, having resigned his official appointment. The 'Transactions' of that society have been enriched from time to time with papers from his pen, remarkable for deep philosophical insight and for the clearness and method with which the subjects are set forth. Those on the fecundation and propagation of plants, placed their author's name in the foremost rank of scientific botanists. Among them the 'Observations on the natural family of Plants called Compositæ' (vol. xii.), and 'An Account of a new genus of Plants named *Rafflesia*' (vol. xiii.), are especially noteworthy. In 1823 he published in a separate form, 'A Brief Account of Microscopical Observations on the particles contained in the Pollen of Plants, and on the general existence of active Molecules in Organic and Inorganic Bodies,' 8vo, and followed it the next year by 'Additional Remarks,' in which some of the statements of the first were modified. He is the author also of the botanical appendices published with the narratives of the voyages of Ross and Parry to the arctic regions, of Tuckey's expedition to the Congo, and of Oudney, Denham, and Clapperton's exploration of Central Africa.

On the continent Mr. Brown's reputation is even higher than in England. Humboldt has called him 'Botanicorum facile Princeps'; and as 'our Princeps' he is known among his fellow savants. In 1826 he was named on the council of the Royal Society, and on several occasions since has been chosen to the same office. In 1827 he was appointed keeper of the Botanical department of the British Museum. In 1830 he published a 'Supplementum' to his 'Prodromus,' relating to Proteaceous plants only. In 1832 the degree of D.C.L. was conferred on him by the University of Oxford. In 1833 he was elected one of the eight foreign associates of the French Academy of Sciences. In 1839 the Royal Society awarded him their Copley medal for his 'Discoveries during a series of years on the subject of vegetable impregnation.' In 1849 he was elected president of the Linnæan Society, and retained that honourable post until 1853. He is an honorary

member of the Royal Society of Edinburgh, of the Royal Irish Academy, and Cambridge Philosophical Society, and is a foreign member of nearly thirty of the chief learned and scientific societies of Europe.

Mr. Brown's separate publications are few. Besides the works above mentioned, his writings are to be found in the 'Annals and Magazine of Natural History,' the 'Reports' of the British Association; and in Horsfield's 'Plantæ Javanicæ rarioræ.' Those prior to 1834 have been collected, translated into German, and published in five volumes, 8vo, by Nees von Esenbeck.

BROWN, ROBERT, the founder of the sect of Brownists, was born about the middle of the 16th century, and was nearly connected with the Lord Treasurer Cecil. He was educated at Corpus Christi college, Cambridge, and preached sometimes in Bennet church, where, says Neal, "the vehemence of his delivery gained him reputation with the people." He was subsequently a schoolmaster, and afterwards a lecturer at Islington. Neal terms him "a fiery, hot-headed young man;" and Mosheim, "an insinuating man, but very unsettled and inconsistent in his views and notions of things." He went about the country inveighing against the discipline and ceremonies of the church, and exhorting the people by no means to comply with them. In the year 1580 the Bishop of Norwich caused him to be taken into custody; but Brown, acknowledging that he had offended, was released. In 1582 he published a book entitled 'The Life and Manners of True Christians,' to which was prefixed 'A Treatise of Reformation without tarrying for any; and of the wickedness of those preachers who will not reform themselves and their charge, because they tarry till the magistrate command and compel them.' He was again taken into custody, but released on the intercession of his relative the lord treasurer. Four years afterwards he again travelled through various parts of the country preaching against bishops, ceremonies, ecclesiastical courts, ordaining of ministers, &c., for which, as he afterwards boasted, he had been committed to thirty-two prisons, in some of which he could not see his hand at noon-day. At length he formed a separate congregation on his own principles; but being forced to leave the kingdom in consequence of the persecutions which they met with, they accompanied Brown to Middleburg in Holland. Neal observes, that "when this handful of people were delivered from the bishops they crumbled into parties among themselves, inasmuch that Brown, being weary of his office, returned into England in the year 1589, and having renounced his principles of separation, became rector of a church in Northamptonshire. Here he lived an idle and dissolute life (according to Fuller) far from that sabbatarian strictness that his followers aspired after. He had a wife, with whom he did not live for many years, and a church in which he never preached. At length, being poor and proud, he struck the constable of his parish for demanding a rate of him; and being beloved by nobody, the officer summoned him before Sir Rowland St. John, who committed him to Northampton goal. The decrepit old man, not being able to walk, was carried thither upon a feather-bed in a cart, where he fell sick and died in the year 1630, and eighty-first year of his age."

After Brown's death his principles continued to gather strength in England. The Brownists were subsequently known both in England and Holland by the name of Independents. But the present very large and important community known as the Independents do not acknowledge Brown as the founder of the sect; they assert, on the contrary, that the distinguishing sentiments adopted by Brown and his followers had been professed in England, and churches established in accordance with their rules, before the time when Brown formed a separate congregation. Neal, in his 'History of the Puritans,' enumerates the leading principles of the Brownists. He says:—"The Brownists did not differ from the Church of England in any articles of faith, but they were very rigid and narrow in points of discipline. They denied the Church of England to be a true Church, and her ministers to be rightly ordained. They maintained the discipline of the Church of England to be popish and anti-Christian, and all her ordinances and sacraments invalid. They apprehended, according to scripture, that every church ought to be confined within the limits of a single congregation, and that the government should be democratical. The whole power of admitting and excluding members, with the deciding of all controversies, was in the brotherhood. Their church officers, for preaching the word and taking care of the poor, were chosen from among themselves, and separated to their several offices by fasting and prayer, and imposition of the hands of some of the brethren. They did not allow the priesthood to be a distinct order, or to give a man an indelible character; but as the vote of the brotherhood made him an officer, and gave him authority to preach and administer the sacraments among them, so the same power could discharge him from his office, and reduce him to the state of a private brother. Every church or society of Christians meeting in one place was, according to the Brownists, a body corporate, having full power within itself to admit and exclude members, to choose and ordain officers, and when the good of the society required it, to depose them, without being accountable to classes, convocations, synods, councils, or any jurisdiction whatsoever." (Vol. i, p. 376, edition 1732.)

BROWN, CAPT. SIR SAMUEL, R.N., was born in London in 1776. At the age of eighteen he entered the navy, and served with distinction during the French war. He passed through the successive

grades in his profession, rising to the rank of commander in 1811, and accepting that of retired captain in 1842.

It is however as a civil engineer that Sir Samuel Brown has claim to remembrance. To his ability and ingenuity may be ascribed the introduction into use of both chain-cables and suspension-bridges. The idea of substituting iron cables in the place of those made from hemp, first occurred to M. de Bougainville, whose account of a voyage which he made round the world was published in 1771. [BOUGAINVILLE, LOUIS A. DE.] But the idea was not put in practice; and though a patent was taken out by a Mr. Slater, a surgeon in the British army, in 1808, little was done until Captain Brown carried out a series of experiments, the results of which were deemed so satisfactory that the Board of Admiralty ordered iron chain-cables to be tried in the navy. Their use, it need hardly be added, has since become general. Iron suspension-bridges had, as is well known, been erected in several instances both in America and Europe before Captain Brown directed his attention to them. But they were generally regarded as insecure, except for crossing narrow streams, until Brown introduced his improved method of constructing chains for suspending the roadway. Instead of chains of the ordinary construction, he proposed to form them of long bars of flat or round iron, pinned together by short links and bolt-pins. He made a model of his invention in 1813, having however designed and prepared specifications for suspension-bridges much earlier, but he did not obtain his patent till 1817. Brown's plan was soon after adopted in principle by Telford (who had in the first instance proposed to use cables of merely the ordinary construction) in the erection of his magnificent bridge over the Menai Strait. The first extensive bridge erected wholly on Captain Brown's plan was the Union Bridge which crosses the Tweed at Berwick, in which the length of the chord-line between the points of suspension is 449 feet: it was opened for use in July 1820. In 1821 Captain Brown commenced the construction of the Trinity suspension-pier at Newhaven near Edinburgh. He subsequently erected several other bridges and piers, but it may suffice to mention, as his great work, the suspension-pier at Brighton, which consists of four openings of 255 feet each, with a deflection of 13 feet. The Brighton pier has suffered considerable damage on two occasions in severe storms, but, as subsequently strengthened, it has successfully withstood others of excessive force.

Captain Brown was knighted in 1835. He died on the 15th of March, 1852.

BROWN, THOMAS, better known by the familiar name of 'Tom Brown,' was born in Shropshire in the year 1663. At the age of fifteen he entered as a servitor of Christ Church, Oxford; but he left the university in disgrace without taking a degree, and, going to London, became a Grub-street writer. The most respectable part of his career was his holding for a short time the mastership of the free school at Kingston-upon-Thames. Among those hangers-on of literature whose character and conduct made the title of author disreputable in the latter part of the 17th century, Tom Brown was one of the most notorious. He was habitually attached to vicious indulgences, inveterately fond of low society, and indolent to a degree which made him unfit to earn his bread steadily by the equivocal kind of literary labour which was his trade. But his talents were of no mean order. His published writings, almost all of which were satirical squibs in prose or verse, are full of coarse and humorous buffoonery. Their gross personalities however more than once brought him into trouble, and were restrained by no considerations either of safety or of decency. Dryden, Sherlock, and Titus Oates, alike suffered under his lash. His earliest pamphlet, 'The Reason of Mr. Bayes changing his Religion,' appeared in 1688; and from that time till his death in 1704 he continued, by a series of ephemeral productions, to justify Anthony Wood's description of him as "a frequent and satirical writer." Wood gives a catalogue of his publications. They are not nearly all included in a collection professing to contain his works, which appeared in four small volumes in 1707, and was several times reprinted before the middle of the last century.

BROWN, THOMAS, son of the Rev. Samuel Brown, was born on the 9th of January 1778, at the manse of the parish of Kirkmabreck, in the Stewartry of Kircudbright.

About a year after her husband's death Mrs. Brown removed with her family to Edinburgh. Many stories are told of Thomas's early fondness for books and general precocity, but they are probably of little more value than the usual run of these infantile anecdotes. About his eighth year he was removed to a school at Chiswick, in which the present Lord Lyndhurst was one of his class fellows. His last school, which he left in his sixteenth year, was Dr. Thomson's at Kensington. In 1792, he returned to Edinburgh; and in the session of 1792-3 studied logic in the University of Edinburgh under Dr. Finlayson. Spending a part of the ensuing summer in Liverpool, he became acquainted with Dr. Currie, who put into his hands a copy of Stewart's 'Elements of the Philosophy of the Human Mind.' Brown was struck with an inconsistency in the doctrines of Stewart; he pointed it out to Dr. Currie, and next winter, when attending Stewart's class, he was bold enough to state it to him at the close of one of his lectures. Stewart heard him patiently, and read a letter to him from M. Prevost of Geneva, containing the same objection. Stewart held that in sleep the operations of the mind which depend on the will are suspended, along with the doctrine that memory depends on

attention, the creature of the will; the objection is obvious, why then do we remember our dreams? The acuteness which exposed the error consists more in seeing it through the glozes and colouring under which it was hid, than in the objection itself. The professor invited his pupil to his house, but never disputed with him.

For several years Brown attended the lectures of Stewart, Robison, Playfair, and Black: his evenings were generally spent in conversational discussions on all sorts of subjects with his friends Horner, Leyden, Reddie, and Erskine.

When little more than eighteen years of age, the remarks he had made in reading Darwin's 'Zoonomia' had swelled from a few notes, for an article in a periodical, to the size of a book. Before printing it, by the advice of Professor Stewart, he sent his MS. to Darwin, who received it very dryly, and answered it with no little asperity. In the beginning of 1798 appeared, in one vol. 8vo. 'Observations on the Zoonomia' of Erasmus Darwin, M.D., by Thomas Brown, Esq. The preface, which contains the germ of his doctrine of causation, was especially admired. Brown often attacks a false theory with weapons equally fallacious, and the errors and excellences of his book have the same source,—the delight of a young and acute mind in the detection of inconsistencies. One example will be sufficient. Darwin holds that irritation, sensation, volition, and association are essential qualities of every particle of sensorial power; a dogma which Brown considered that he refuted by the inference, that every individual must in this case be made up of a multitude of distinct beings.

In 1796 he studied law for a year, a profession in which his friends augured success from his acuteness. Becoming convinced however that acuteness and not subtlety of intellect was the successful quality at the bar, and finding the joint pursuit of legal and literary knowledge incompatible with his health, he began, in 1798, to study for the profession of medicine. In 1803, when he took his diploma as M.D., his thesis 'De Somno' excited the admiration of his examiners.

About 1798 Brown joined a debating society in the University, in which he argued against theism; a circumstance which was used against him in after life. A few of the members of the Literary Society formed themselves in 1797 into the Academy of Physica, a society for the "investigation of nature, the laws by which her phenomena are regulated, and the history of opinions concerning those laws." The names of Erskine, Brougham, Reddie, Brown, Rogerson, Birkbeck, Logan, and Leyden were immediately enrolled; and they were soon after joined by Lord Webbe Seymour, Horner, Jeffrey, Smith, Gillespie, &c. From this society arose the 'Edinburgh Review,' to which Brown contributed two or three articles in the beginning, but owing to some liberties taken with a paper of his in the third number his connection with it ceased. The first article in the second number is by Brown, on the 'Philosophy of Kant;' a subject of which he knew very little. All he knew of Kant's doctrines was derived from a fantastic French account of them; and though acute and just remarks occur in his critique, it is as bad as his preparation for writing it was imperfect.

A few months after taking his degree Brown published two volumes of poems written while he was at college. They pleased, it is said, the ladies and great people whom they praised; but poems on the 'Sun,' the 'Moon,' the 'Crown of Love,' and the 'War Fiend,' attracted little notice from any one else.

In pursuance of a system they had long adopted, what is called in Edinburgh the high church party, on the promotion of Professor Playfair to the chair of Natural Philosophy in the University of Edinburgh, determined to elect a clergyman to the chair of Mathematics, although the superiority of Mr. Leslie, the lay candidate, was incontestable. The approbation which this gentleman, in a note to his 'Essay on Heat,' had expressed of Hume's doctrine of causation was made the ground of a charge of infidelity. Brown published a pamphlet on the occasion, in which he proved that no such consequences flowed from the doctrine. In an extended and improved form this pamphlet has passed through several editions. The substance of the doctrine of causation which it contains is this:—"A cause is that which immediately precedes any change, and which existing at any time in similar circumstances has been always and will be always immediately followed by a similar change. Priority in the sequence observed, and invariableness of antecedence in the past and future sequences supposed, are the elements and the only elements combined in the notion of a cause. By a conversion of terms we obtain a definition of the correlative effect; and power is only another word for expressing abstractly and briefly the antecedence itself, and the invariableness of the relation. The words *property* and *quality* admit of exactly the same definition, expressing only a certain relation of invariable antecedence and consequence in changes that take place on the presence of the substance to which they are ascribed; with this difference, that *property* and *quality* as commonly used comprehend both the powers and susceptibility of substances—the powers of producing changes and the susceptibilities of being changed;—and with this difference only, *power*, *property*, and *quality* are in the physical use of these terms exactly synonymous. Water has the power of melting salt; it is a *property* of water to melt salt; it is a *quality* of water to melt salt: all these varieties of expression signify precisely the same thing—that when water is poured upon salt the solid will take the form of a liquid, and its particles be diffused in continued

combination through the mass. When we speak of all the powers of a body we consider it as existing in a variety of circumstances, and consider at the same time all the changes, that are or may be in these circumstances, its immediate effects. When we speak of all the qualities of a body we mean nothing more and we mean nothing less." In one respect this essay had a very unusual success; it convinced on one point the person at whom it aimed. On the question whether even after experience we are able to infer the relation of cause and effect as to the phenomena of the inertia of matter, the composition of forces, and such like, Professor Playfair declared himself completely convinced by his arguments.

In 1806 Dr. Brown became the partner of the eminent Dr. Gregory in his large practice. But his bias was to a literary life. In 1799 he was a candidate for the Rhetoric chair, and on the death of Dr. Finlayson for the Logic, but in both cases unsuccessfully. Owing to the decline of his health Mr. Stewart required a substitute in the Moral Philosophy class who could read lectures of his own. This Brown undertook, and lectured for a short time in session 1808-9. A similar request in the ensuing session led him to deliver a series of lectures, which were honoured by the attendance of many distinguished members of the bench, bar, and pulpit. When Mr. Stewart resumed his lectures, the students appointed Lord John Russell and others of their number to congratulate him on his recovery, and express their admiration of his substitute. Stewart, anxious to have Brown with him in the chair as assistant and successor, personally solicited every member of the town-council in his behalf, and accordingly on the recommendations of Dr. Gregory, Professor Playfair, and Lord Meadowbank, he was elected in May 1810.

Devoting himself to the cultivation of his health by air and exercise during the vacation, Dr. Brown made no preparation for the labours of the winter. He seldom began to write his lectures until after tea on the evening before the day on which he was to deliver them; he then wrote until two or three o'clock, slept a few hours, and, resuming his work, wrote until twelve, when he hurried off to his class. Light reading or a walk occupied the time until the recommencement of this routine. His lecture and theory of avarice were begun after one o'clock in the morning, and finished before twelve next day. Under colour of disagreeing with Dr. Reid he covered his differences with Stewart, his colleague. Nearly all the lectures contained in the first three volumes were written during his first session, and all the rest in the next. They have been published almost *verbatim*. The following are the more important of the peculiar and new opinions which they contain:—All physical inquiry has one of two ends in view—either to discover the parts of which bodies are made up, or to ascertain the changes they undergo—the elements which compose them, and their causes and effects in relation to each other. Bodies which, in relation to our sight, are one, are in reality many; they appear simple only because we cannot see the spaces which intervene between the corpuscles of which they are made up. What we can now perceive only by means of chemical and mechanical decomposition, finer powers of perception would perceive without them. But no perfection of the senses could enable us to foresee the second object of physical inquiry—the changes of bodies—in the relations of the parts to each other, and of the whole to other bodies; and on this point reason is equally incapable *a priori* of assisting us. More we can never know of any substance than the parts of which it is compounded, and the changes which it undergoes.

Every one will admit that the changes of the mind are as capable of investigation as the changes of a material object; but some will not see so readily how the mind which is simple and indivisible, can be considered in its elementary parts. But the inquiry is not into the parts and changes of the mind itself, viewed as a substance, for this is quite inscrutable; the object of investigation is thought, which being both changeful and complex, may be examined either as to the causes of its changes or the parts of its combinations.

The phenomena of mind, which may be considered either as successive or complex, as causes and effects, or as subjects of analysis, are the qualities, states, and affections of the mind of which we are conscious, such as perception, memory, reason, and emotion. Since the states of the mind are made known by consciousness, and relate to itself, a consideration of them involves an examination of consciousness and personal identity. Consciousness is a general name for all the states of which the phenomena of mind consist. The supposition of the existence of the mind in two separate states, sensation and consciousness, at the same moment, is absurd. The proposition, "I am conscious of a sensation," involves, besides the feeling of the sensation, a reference to self. When it means more than the present feeling, it adds to it a retrospect of some past feeling and the relation of both to the mind. Belief in our personal identity he resolves into intuition.

Brown divides the states of mind, according to their causes, into external and internal states or affections; the external are the perceptions or sensations of bodies affecting the senses; the internal affections he subdivides into two great classes, the intellectual states and the emotions.

Dr. Reid defines perception to be the feeling of the organ of sense and the reference of it to its external object. In opposition to this, Brown maintains that the sensation is referred to its object by the power of association, and not by a peculiar mental power.

The intellectual states he divides into two generic capacities, *simple* and *relative* suggestion. *Simple* suggestion is the name he gives to the successions and connexions of ideas and emotions, which occur according to certain primary and secondary laws. The primary are resemblance, contrast, and nearness in time or place; the secondary, by which the former are modified, are, 1st, the length of time of their co-existence; 2nd, degree of liveliness; 3rd, frequency; 4th, recency; 5th, exclusiveness of co-existence; 6th, original constitutional differences; 7th, differences of temporary emotion; 8th, changes on the state of the body; 9th, general tendency produced by prior habits.

The supposed faculties of conception, memory, imagination, and habit, he reduces to simple suggestion. The arguments by which he resolves memory into simple suggestion are these:—Remembrances are conceptions of the past; the state of mind is complex—the conception and its relation of antecedence to the present time; conceptions and suggestions are the same, and the feeling of priority is a judgment on succession in time, attributable therefore to the capacity of relative suggestion. When combined with desire, *perception* becomes *attention*, and *memory* becomes *recollection*; and a similar difference is produced on the phenomena of imagination, as it occurs with or without desire. Imagination without desire is reverie, and with it, combined with simple suggestion and the feeling of relation, all its phenomena are produced. Habit is suggestion and nothing more, since the increased tendency to certain motions by repeating them is explained by its primary and secondary laws.

Relative suggestion is the feeling which arises in the mind when two or more objects are perceived or conceived, which Brown divides into relations of co-existence and succession. The relations which do not involve any regard to time he subdivides according to the notions, 1st, of position; 2nd, resemblance or difference; 3rd, of degree; 4th, of proportion; 5th, of comprehensiveness, or the relation of the whole to the parts it includes. The relation of resemblance is the source of classification and definition. The process of reasoning he defines to be the succession of analyses. Judgment, reason, and abstraction, are reduced to relative suggestion.

In 1814 Dr. Brown finished his 'Paradise of Coquettes,' which he had begun six years before. It was published anonymously in London. Anxious to learn its fate, he came to London, and was received into the society of the principal persons connected with the Whigs in politics. In the winter of 1815 he published another volume of poetry under the name of 'The Wanderer in Norway.' After the rising of his class he generally spent the summer in some rural retreat. Near Dunkeld, in Perthshire, he wrote his 'Bower of Spring' in the autumn of 1816. In 1817 he gave his opinion on a case of great difficulty—the accusation of child-murder brought against a woman who was born deaf; and in the summer, while living at the manse of Balmaclellan, he wrote his poem of 'Agnes,' which was published in 1818. In the end of autumn 1819, on his return to Edinburgh, in high health and spirits, being anxious to publish outlines of his lectures, he engaged in the preparation of them with great ardour. After Christmas he felt unwell, and was obliged to find a substitute to read his lectures to his class. His illness increasing, his medical advisers recommended him to take a voyage to London. He died at Brompton, near London, in 1820.

Brown's metaphysical genius was of a high order, for he possessed to a considerable degree its most essential faculty, the power of analysis. But he did not sufficiently think out his conclusions, and hence there is with a great semblance of profundity often real want of depth. His style is bad in the estimation of persons of chastened taste; but its very exuberance has given such a degree of popularity to his lectures that they have passed through more editions than any other metaphysical work ever did in the same time, and thus the most subtle and analytic has also become the most popular and stimulating of metaphysical writers. It is not likely however that the fame of Brown as a metaphysician will be permanent. As a poet he is already nearly forgotten.

(Welsh, *Life of Brown*.)

BROWNE, SIR THOMAS, a learned and able antiquary and physician, has had the good fortune to find a biographer in Dr. Johnson, whose memoir we shall do little more than compress, making of course such corrections as Wilkins and later writers have indicated, or our own reading may suggest. Browne was born in St. Michael's, Cheapside, October 19, 1695. During his childhood his father (a merchant of ancient family at Upton in Cheshire) died, leaving him what in those days was considered an ample fortune. He was educated at Winchester, and afterwards entered as a gentleman commoner at Broadgate Hall (now Pembroke College), Oxford. Having graduated, he entered on the study of medicine, and practised for a short time in Oxfordshire. He then visited Ireland with his father-in-law, Sir Thomas Dutton, who had some public employment in the inspection of the fortifications of that country; and after having rambled through France and Italy he took the degree of Doctor of Medicine at Leyden in 1733. His first work, 'Religio Medici,' which appeared anonymously in 1642, is supposed to have been written about seven years before, on his return to London from the continent. It had great success, and was translated into Latin, Italian, German, Dutch, and French. After his return he established himself as a physician at

Shipden Hall near Halifax; but in 1636 he settled at Norwich, where he resided during the remainder of his life. Having soon obtained considerable practice, he was incorporated Doctor of Physic at Oxford, July 10, 1637. Notwithstanding very ungallant opinions advanced in the 'Religio Medici,' he married a lady who is described as both beautiful and attractive, Mrs. Dorothy Mileham, of a good Norfolk family. She bore him ten children, of whom a son and three daughters survived their parents. In 1646 he published with his name a work evincing most extensive reading and observation, and on which his fame is principally founded: 'Pseudodoxia Epidemica; or Inquiries into Vulgar and Common Errors,' which ran through six editions in twenty-seven years. A reply to it entitled 'Arcana Microcosmi' was attempted by Alexander Ross, a great lover of the marvellous. It was immediately translated into Dutch and German, and in later years into French, and acquired for its author an extraordinary amount of credit. In 1648 appeared 'Hydriotaphia, Urnburial, or a Discourse on Sepulchral Urns;' a treatise occasioned by the discovery of some ancient urns in Norfolk; and replete with antiquarian knowledge, and marked by many passages of a quaint sombre eloquence. To this was added a much more fanciful essay, entitled 'The Garden of Cyrus, or the Quincunxial Lozenge; or Net-work Plantations of the Ancients, artificially, naturally, and mystically considered.' So imbued was Browne with respect for his favourite figure, that an incautious reader (to use the powerful language of Johnson) "would imagine that decussation was the great business of the world, and that nature and art had no other purpose than to exemplify and imitate a quincunx." These were all the works published in his lifetime. Two collections of posthumous tracts found among papers transcribed and corrected by his own hand contain the following pieces:—

1, 'Observations on several Plants mentioned in Scripture;' 2, 'Of Garlands, and coronary and garland Plants;' 3, 'Of the Fishes eaten by our Saviour with his Disciples after his Resurrection from the Dead;' 4, 'Answers to certain Queries about Fishes, Birds, and Insects;' 5, 'A Letter on Hawks and Falconry, Ancient and Modern;' 6, 'Of the Cymbals of the Hebrews;' 7, 'Of Ropalic or gradual Verses;' 8, 'On Languages, and particularly the Saxon Tongue;' 9, 'Of artificial Hills, Mounts, and Barrows in England;' 10, 'Of Troas, &c.;' 11, 'Of the Answers of the Oracle of Apollo at Delphos to Croesus, King of Lydia;' 12, 'A Prophecy concerning the future State of several Nations;' 13, 'Museum clausum sive Bibliotheca abscondita.'

The above were published in one volume folio, together with works acknowledged by Browne himself, by Archbishop Tennyson in 1684; to which were added in 1722 in 8vo, 'Repertorium, or some Account of the Tombs and Monuments in the Cathedral of Norwich.' Other pieces by Browne published singly by his son in 1690 are: 1, 'Answers to Sir William Dugdale's Inquiries about the Fens;' 2, 'A Letter concerning Ireland;' 3, 'A Letter concerning the Urns newly discovered;' 4, 'Short Strictures on different Subjects;' 5, 'A Letter to a Friend on the death of his intimate Friend;' and in the 'Biographia Britannica' is inserted 'A Letter containing Instructions for the Study of Physic.' The 'Complete Works of Sir Thomas Browne,' with numerous personal and family letters, and a great body of valuable notes, was published in 1836 under the editorship of Mr. S. Wilkins, F.S.A.

In 1665 Browne was chosen honorary member of the College of Physicians, being, as his brethren expressed themselves in their vote, a man "Virtute et litteris ornatissimus." Charles II. knighted him in 1671 at Norwich, where, after a short illness, he expired on his seventy-seventh birthday, 1682. He was buried in the church of St. Peter Mancroft, in that city, and a short and unpretending Latin inscription on a mural tablet on the south pillar of the altar records his memory. It is a disgraceful fact that in our own day the skull of Sir Thomas Browne has been abstracted from his grave and placed for exhibition in a museum. The surviving son of Sir Thomas, Edward Browne, published an account of his own travels in Germany and Turkey, and practised in London as a physician with much reputation during and subsequently to the reign of Charles II.

The life of Browne by Dr. Johnson was prefixed in 1756 to a second edition of 'Christian Morals,' 12mo, which first appeared in 1716, printed from the original correct manuscript of the author by John Jeffery, D.D., archdeacon of Norwich. The Anglo-Latinity of Sir Thomas Browne is believed to have had a great influence on the style of Dr. Johnson. It is a style too peculiar and idiomatic ever to be generally liked, but Browne wrote at a time when our language was in a state of transition, and had scarcely assumed any fixed character. If it be blamed as too Latinised, it may be answered that it would be difficult to substitute adequate English words for those which he has employed, and that he by no means seeks to give false elevation to a mean idea by sounding phrases, but that he is compelled, by the remoteness of that idea from ordinary apprehensions, to adopt extraordinary modes of speech. Coleridge has borne strong testimony to the great intellectual power as well as to the quaint humour, extensive learning, and striking originality of the "philosopher of Norwich." Browne was in his own day charged with acceptionism, and the charge has been repeated in later times, but many passages occur in the 'Religio Medici' and elsewhere which show Browne to be a firm and sincere Christian, although perhaps not free from certain fanciful prejudices. His 'Inquiry into Vulgar Errors' may be almost received as an encyclopædia of contemporary knowledge.

BROWNE, WILLIAM, one of our minor English poets, was born in 1590, of a good family, at Tavistock in Devonshire. He resided at Exeter College, Oxford, but left the university without a degree, and went to London, where he entered at the Inner Temple. In 1624 he returned to his college, and acted as private tutor to Robert Dornor, afterwards Earl of Caernarvon; and the degree of M.A. was then conferred on him. He afterwards resided in the family of the Earl of Pembroke; and it is said by Anthony Wood that he was able to amass money enough to purchase an estate. The time of his death is uncertain, but was probably about 1645. His principal poems are Eclogues; a long series entitled 'Britannia's Pastorals;' a shorter entitled 'The Shepherd's Pipe.' In the narration of events, and in the delineation of characters or passions, he is feeble, confused, and tedious, especially in his more elaborate series of pastorals. But his poetry abounds in beautiful landscapes, painted with much delicacy of feeling, and not without frequent richness of fancy. In 1772 there was published a complete edition of his poems in 3 vols. 12mo, which contained his 'Inner Temple Masque,' printed for the first time from a Bodleian manuscript, transcribed by Dr. Farmer.

BROWNE, WILLIAM GEORGE, was born on Great Tower-Hill, London, on the 25th of July 1768. His father, a respectable wine-merchant in London, sent him to Oriol College, Oxford, where, as the traveller frequently lamented in after-life, he met with no encouragement and little assistance, in his academical studies. After leaving the University he kept a few terms in the Temple, and attended the courts of law; but he had never any love for his profession, and when, by the death of his father, he came into possession of a competence, he devoted himself altogether to general literature, to the acquiring of modern languages, and the general principles of chemistry, botany, and mineralogy, which were afterwards very useful to him in his travels.

An ardent lover of liberty, and, stimulated by the deceptive dawning of the French revolution, he republished several political tracts, with prefaces by himself, at his own expense. His ruling passion however from early life was a love of travelling, and a strong desire to distinguish himself as an explorer of remote and unknown countries. The publication of 'Bruce's Travels in Abyssinia,' and of the first volume of the 'Proceedings of the African Association' had the effect of determining him to attempt a passage into the interior of Africa. Accordingly he left England towards the close of 1791, and arrived at Alexandria, in Egypt, in January, 1792. After visiting the Oasis of Siwah (the ancient Ammonium), he returned to Alexandria in the month of April. In May he went to Cairo, where he diligently studied the Arabic language and customs, with which he made himself so familiar as to pass for an Arab even among Arabs.

In September 1792, he started for Abyssinia, but a Mamlûk war, which had broken out in Upper Egypt, prevented him from getting farther than Assouan (Syene) and the first rapids of the Nile. On his return down the Nile he turned off at Kenné, and visited the immense quarries near Cosseir, on the Red Sea. In May 1793, Mr. Browne set out from Egypt with the great Soudán Caravan (Caravan of the country of the Negroes), whose destination was Dar-Fûr, a Mohammedan country west of Abyssinia and north of the great western branch of the Nile—the Bahr-el-abiad, sometimes called the White River. He hoped to penetrate in this direction into Abyssinia; and the novelty of this route into the interior of Africa, and the circumstance that Dar-Fûr had never yet been visited by a European traveller, were in themselves very strong inducements. After many hardships he reached Dar-Fûr at the end of July; but soon after his arrival he fell ill, and after being plundered of almost everything, found himself a complete prisoner in the hands of the bigoted black Sultan of the country, who detained him nearly three years. During this time he lived in a clay-built hovel at Cobbe, the capital of Dar-Fûr, his principal amusement being the taming of two young lions. Mr. Browne did not reach Cairo till the autumn of 1796. During four months of this journey he could not procure a mouthful of animal food of any kind.

In January 1797, Mr. Browne embarked at Damietta for Syria, and in the course of that year he visited Acre, Tripoli, Aleppo, Damascus, Balbec, &c., and then, proceeding through the interior of Asia Minor, arrived at Constantinople on the 9th of December. He returned to London in September 1798, having been absent nearly seven years. In the spring of the year 1800 he published his 'Travels in Africa, Egypt and Syria, from the year 1792 to 1798.' As a writer Browne has no great merits;—he was frequently quaint and odd without being amusing; on not a few occasions he trespassed on delicacy, and he indulged in extravagant paradoxes. One of these paradoxes was—that the manners and customs of the people of the East were far preferable to those of civilised Europeans, and that they excelled us as much in virtue as they did in happiness. But notwithstanding these blemishes his book contains a great deal of information which was then both new and valuable, and it is impossible to read it without acquiring a strong conviction of the author's veracity. In the summer of 1800 Mr. Browne went by way of Berlin and Vienna to Trieste, where he embarked for the Levant. After seeing a great portion of Greece and Turkey he proceeded by a land journey from Constantinople to Antioch, whence he went to Cyprus and Egypt. In 1802 he visited Salonika, Mount Athos, Albania, the Ionian Islands, and then went to Venice. In 1803 he carefully examined Sicily and

the Lipari Islands, and then returned reluctantly to England. Of this extensive and interesting tour he himself never published any account, but seven years after his death some curious extracts from his journal were included in Mr. Walpole's 'Memoirs relating to European and Asiatic Turkey.'

After a long interval of repose Mr. Browne resolved to penetrate to the Tartar city of Samarcand and the central regions of Asia. He left London for Constantinople in the summer of 1812: at the end of that year he went from the Turkish capital to Smyrna, which city he left in the spring of 1813 to proceed through Asia Minor and Armenia. On the 1st of June he arrived at Tabriz, just within the frontiers of Persia, where he stayed till the end of summer. In pursuance of his plan of penetrating into Tartary he took his departure for Tehrán, the present capital of Persia, accompanied by only two servants.

Some days after their departure from Tabriz his two attendants returned to that city, where they reported that at a place about 120 miles from Tabriz, Mr. Browne had been attacked and murdered by robbers, who had permitted *them* (the two servants) to escape. They brought back with them a double-barrelled gun, and a few other effects of Mr. Browne's, but no papers. At the instance of Sir Gore Ouseley, who was then on a diplomatic mission in the country, the Persian government despatched soldiers to the spot described by the two servants, with orders to bring back Mr. Browne's remains, and hunt out the assassins. According to their own report the soldiers failed in both these measures, but fully ascertained the fact of Mr. Browne's death by finding torn fragments of his clothes, which being in the Turkish fashion and made at Constantinople were very distinguishable from Persian. They said they believed the body must have been torn to pieces and devoured by beasts of prey, and, as they are very numerous in most parts of Persia, this was probably the fact. Some time after, certain bones, supposed to be those of Mr. Browne, were brought to Tabriz, and there interred with due respect. "The spot," says Mr. Walpole, "was happily chosen near the grave of Thevenot, the celebrated French traveller, who died in this part of Persia about a century and a half before." Some doubt however must be allowed as to whether these said relics were really the bones of Mr. Browne.

As the murderers were never discovered, some awkward suspicions fell upon the Persian government, who, being then at war with the Turcomans, were supposed to be jealous of European intercourse with those hordes, or with any of the people east of the Caspian Sea. It was said at the time that men high in authority in the Shah's court had shown great anxiety about the traveller's objects and destination, and had particularly wished to know whether he was a military man or an engineer. It should be mentioned however, on the other hand, that Mr. Browne's imprudence in wearing the Turkish dress exposed him in a special manner to the fanaticism of the Persians, who hate the Turks (the schismatic Mohammedans, as they call them) even more than they hate Christians, and have seldom any objection to send a bullet through the head that wears a turban of the Constantinopolitan fashion. A Persian in the Shah's service said to the writer of this article, "Had Mr. Browne only worn an English hat he might have gone safely through Persia." The only public fruits of this last journey are a few short extracts of letters from Mr. Browne to his friend Mr. Smithson Tennant, which also are included in Mr. Walpole's work.

(*Browne, Travels in Africa, &c.; Memoirs relating to European and Asiatic Turkey*, edited by the Rev. Robert Walpole, 1820.)

* BROWNING, ROBERT, an English poet, was born at Camberwell, a suburb of London, in 1812, and educated at the University of London. In 1835, when twenty-three years of age, he published 'Paracelsus,' a poem of such peculiar originality as immediately to attract to him the attention of the best judges of poetic talent, though, both from the nature of the subject and the style of the treatment, the mass of readers could make nothing of the book. In 1837 Mr. Browning published 'Strafford, an Historical Tragedy,' which was also brought on the stage by Mr. Macready, but did not prove popular as an acting play. 'Sordello,' a long poem published in 1840, is still spoken of by Mr. Browning's greatest admirers as the least comprehensible of his works. Far more fitted to extend his reputation with the public, though still of a kind the full beauty of which only very intellectual readers could appreciate, were the poems, of various lengths and with various sub-titles, published by him in successive instalments from 1842 to 1846, under the quaint designation of 'Bells and Pomegranates.' Some of the poems in this collection—and none more than the one called 'Pippa Passes'—increased the estimate of Mr. Browning's powers even among those whose admiration he had already won. One of them, a dramatic piece entitled 'The Blot on the Scutcheon,' was produced in 1843 at Drury Lane Theatre, but with no very great success. At a later period, another drama in the collection entitled 'The Duchess of Cleves,' was produced at the Haymarket, Miss Cushman acting the part of the heroine. In 1849 a collected edition of his poems (omitting the larger ones) was published in two volumes; and about this time took place the most romantic event in his life—his marriage with Elizabeth B. Barrett, now Mrs. Browning, and then already distinguished as perhaps the first living English poetess. (BROWNING, ELIZABETH BARRETT.) Seldom, if ever, have husband and wife had such a coequal partnership in the Muses! Since their marriage Mr. Browning and

his wife have resided almost continually abroad—chiefly in Florence, but sometimes in Paris. In 1850 he added to his previous publications a poem as singular as any of them, and yet different from any of them, entitled 'Christmas-Eve and Easter-Day,' which has not received nearly so much attention as it deserves. With the exception of an 'Introduction' to some 'Letters of Shelley' published in 1852, but afterwards withdrawn from doubts as to their genuineness, Mr. Browning then published nothing new till the end of 1855, when his collection of miscellaneous poems, under the title of 'Men and Women,' gave the critics an opportunity of revising their past judgment of him, and assigning him his place and rank as an English poet. That place is, confessedly, a high one. With the exception of Tennyson, there is no living English poet that one would dare to place higher; and there are not a few who would be disposed, we believe, to claim for Browning, in some respects, more than a rivalry of Tennyson. On the whole however the two poets are so different, that they seem related to each other less as rivals than as polar opposites, supporting between them the English poetical literature of the present day. Browning's chief peculiarity is his intellectual subtlety. He is as much a thinker as a poet, and his thoughts are generally in tracks into which only educated minds can follow him. Add to this that he is a man of immense stores of acquired information on all kinds of curious topics—which information he shows in his allusions and even in his choice of subjects; and that he seems to be more at home in foreign circumstance and costume than in British. The greater part of his poems have their scenes under Italian or Spanish or oriental skies; the names of his persons are Italian or German; and he is fond of taking subjects from later mediæval history. It is this exotic character of his poetry, combined with the subtlety of the thought pervading it, that makes him peculiarly the poet of the cultured classes. He is conscious of this, and speaks of his affection for southern climes and themes as not acquired by residence in Italy, but, as it were, inborn. Let others, he says, walk in English lanes and amid English trees—

"What I love best in all the world
Is a castle, precipice-encircled,
In a gash of the wind-grieved Apennine."

Yet he has treated English subjects, and well. His style is as peculiar as his mode of imagination. It is terse, strong, and direct, but often crabbed and grotesque; while his versification is about the most extraordinary in the English language—occasionally beating for oddity of rhyme that of 'Hudibras.' Want of music in his metre is the fault most frequently alleged against him, and this is one point of contrast between him and Tennyson. Yet Mr. Browning is technically a musician, and a very learned one. "To us it seems," says a recent critic, "that his art is more perfect the nearer he keeps to blank verse and the other kinds of verse suited for narration, description, and exposition, and the less he ventures on purely lyrical measures, except for a bold or grand occasional purpose."

* BROWNING, ELIZABETH BARRETT, English poetess, already alluded to in the foregoing article as the wife of one of the first of our living English poets, is still best remembered by many under her former name of Miss Barrett. Born, we believe, in London, of a family in affluent circumstances, and educated with great care, Miss Barrett gave very early proofs of genius. At the age of ten she began to attempt writing both in prose and verse; at the age of fifteen her powers as a writer were known to her friends. Assiduous in cultivating these powers by attainments and studies in the classical languages, in philosophy, and in other departments, from which, by the want in our age of any means of university education for women equivalent to that provided for men, women are usually, but most improperly, taught to think themselves debarred, she became a frequent contributor, both in prose and verse, to various periodicals. Among her prose contributions were essays on some of the Greek poets, evincing both subtlety of intellect and accurate learning. Her first deliberate work was a translation of the 'Prometheus Bound' of Æschylus, published anonymously in 1833, but afterwards superseded by a new version from her maturer pen. In 1838 appeared 'The Seraphim and Other Poems' (the "other poems" being chiefly a collection of her fugitive pieces from periodicals). The high reputation won by this publication was won in circumstances which imparted to it something of sombre and painful interest. Before or about the time of the publication, the young authoress had, by the breaking of a bloodvessel in the lungs, been reduced to a state of debility which gave great alarm to her friends. With her eldest brother, to whom she was fondly attached, and other relatives, she removed for the benefit of a more genial air to Torquay in Devonshire. Here she was slowly regaining her health, when the death of her brother, with two companions, by the accidental upsetting of a boat, gave her a nervous shock which completely prostrated her. "It was not till the following year," says her friend Miss Mitford in her 'Literary Recollections,' "that she could be removed in an invalid carriage, and by journeys of twenty miles a day, to her afflicted family and her London home. On her return began the life which she continued for so many years: confined to one large and commodious but darkened chamber, to which only her own family and a few devoted friends were admitted; reading meanwhile almost every book worth reading in every language, studying with ever fresh delight the great classic authors in the original, and giving herself heart and soul to that poetry of which she seemed

born to be the priestess." It was from this seclusion that she sent forth in 1844 the first collected edition of her 'Poems,' in 2 vols., upon which her fame chiefly rests, and of which new editions were published in 1850 and 1858. Between the first and second editions that event took place which restored her once more to the world. Her health had been gradually improving, when, in giving her hand in marriage to one who was already the warmest of her admirers and the dearest of her friends, she ceased to be Miss Barrett, and became Mrs. Browning. A residence with her husband first at Pisa, and then at Florence, completed the favourable change; and now, sharing with her husband the honours of a rare literary celebrity, she is once more seen, during occasional visits to England, in general society. 'Casa Guidi Windows'—a poem of earnest political allusion to the present state of Italy, in which the authoress is supposed to see the signs and appearances of the Italian revolutionary movements of 1848-49 from the windows of the Casa Guidi in Florence, where she then resided—was published in 1851. There is more of direct political feeling and partisanship in this than in her husband's poems; but on the whole, her previous compositions are still liked best, though others, understood to be ready, are now waited for. In Mr. Browning's 'Men and Women,' which is dedicated to Mrs. Browning, there are poems of beautiful, though occult allusion to her influence on his life and poetry.

BRUCE, EDWARD, second son of Edward Bruce of Blairhall, in the county of Elgin, was born about the year 1549; and having passed advocate at the Scottish bar, was early appointed one of the judges of the Commissary Court of Edinburgh—a court instituted soon after the Reformation in the place of the abolished court of the Official of Lothian. On the 27th of July 1583, he was made Commendator of Kinloss, under a reservation of the life-rent of Walter the Abbot of Kinloss; and about the same time he was appointed one of the deputies of the Lord Justice General of Scotland.

In 1587 the general assembly of the Scottish Church having sent commissioners to parliament to demand the removal of the prelates from that house, as having no authority from the church, and the most of them no function or charge whatever in it, Bruce rose, and directing himself to the king who was present, made a long discourse in defence of the right they had to sit and give voice for the church in these meetings. Mr. Robert Pont, a Presbyterian minister, and one of the commissioners for the church on this occasion, was stopped in his reply by the king, who willed them to be quiet, and present their petition orderly to the lords of the articles, through whom they should be answered. When the petition came before the lords of articles, it was rejected without observation.

In 1594 Bruce was despatched on an embassy to England—an employment which at that time not infrequently devolved upon the judges of the court of session or other superior courts of justice—to complain of the secret assurance given by the Queen of England to the Earl of Bothwell, and of the harbour afforded him in her dominions; and though Elizabeth refused to deliver up Bothwell as desired, yet, in consequence of the remonstrances of the ambassadors, she commanded him to depart the realm. In 1597 Bruce was named one of the overseers of a subsidy then granted by parliament to the king for furnishing ambassadors, and other important purposes; and on the 2nd December in the same year he was made a lord of session. In 1598 he was again sent ambassador to England. He failed in securing the main object of his mission, which was to obtain the queen's recognition of James as her successor to the throne; but by his skill and address he gained over many of the English to his master's service. He was once more sent to England in 1601, in company with the Earl of Mar, to intercede for the Earl of Essex; but arriving too late for their purpose, the ambassadors readily converted their message into one of congratulation to Elizabeth on her escape from the conspiracy. On this occasion Bruce managed to settle a correspondence between the kingdoms, which contributed not a little to James's peaceable accession to the English throne. In reward for these services Bruce was knighted, and created a peer by the style of Baron Bruce of Kinloss; and having accompanied James to England, he was, on 3rd March 1603, called to the king's council board, and then made master of the rolls, when he resigned his seat on the Scottish bench. He was succeeded in the rolls, in 1608, by Sir Edward Phillips, and died on the 14th January 1611, in the sixty-second year of his age. By his wife, who was daughter of Sir Alexander Clerk of Balbirnie, some time Lord Provost of Edinburgh, he had two sons and a daughter. Through the former he was ancestor of the noble houses of Aylesbury and Elgin; and, with the daughter, King James gave 10,000*l.* as a marriage portion to William second Earl of Devonshire.

BRUCE, JAMES, was born at Kinnaird, in Stirlingshire, the 14th of December 1730. He was the eldest son of David Bruce, Esq., of Kinnaird, and of Marion Graham, of Airth. When eight years of age he was sent to London to school, and after three years he was removed to Harrow, where he remained till 1746. At Harrow he became acquainted with Daines Barrington, and their friendship lasted for life. On his return to Scotland he was entered, by his father, at the University of Edinburgh, to study the law, in which he made but little progress, and he shortly after removed into the country on account of his health. In the country he followed the sports of the field, and became a bold rider and a good marksman. In 1753 he set off for

London with a view to obtain leave to settle in India as a free-trader. In London he made the acquaintance of Mrs. Allan, the widow of a wine merchant, whose daughter he soon after married, and became a partner in the business. A few months after his marriage his wife died; Bruce however continued for some years in the partnership, and in 1757 he made a journey through Portugal, Spain, France, and the Netherlands, partly on business and partly for his own information. His father died in 1758, and Bruce returned to England to succeed to the family estate, with a moderate income, which however was considerably increased in consequence of the establishment of the Carron ironworks in its neighbourhood.

In 1761 Bruce dissolved his partnership in the wine trade. He had for some time past applied himself to the study of Arabic, and had likewise turned his attention to the Ethiopic in Ludolf's works. He also improved himself in drawing, under able teachers. By means of his friend Mr. Wood, the under Secretary of State, he became known to Mr. Pitt, who consulted him about an expedition intended against Ferrol, which however did not take place. At the beginning of 1762 Lord Halifax, at the suggestion of Mr. Wood, appointed Bruce consul-general at Algiers, with the understanding that he was to visit the interior of Barbary, and make sketches of the antiquities which, according to Shaw, existed there. In a conversation which Bruce had with Lord Halifax, something also was said about the mysterious sources of the Nile, and of the glory that would accrue to any bold traveller who should explore them.

Bruce set out for his consulate by way of Italy, in which country he spent several months improving himself in the study of drawing and of antiquities. While at Naples he went to Paestum and made sketches of the temples, which he caused to be engraved and intended to publish, but we find him afterwards complaining to his friend Mr. Strange that some one had obtained access to the engravings at Paris, had copied them, and published them in London by subscription. In March 1763, he finally left Italy for Algiers, where he remained about two years, and during his stay he learned the rudiments of surgery from the consulate surgeon. In May 1765 Bruce was superseded as consul, and on the arrival of his successor, he left Algiers for Tunis. Having obtained leave of the bey to travel through his dominions with an escort, he visited the country along the banks of the Bagradas, and the ruins of Thugga, Keff, and Hydrab, and thence went to Tipasa, in the province of Constantina, the capital of which, the ancient Cirta, he also visited, though he did not discover its remains, as is stated in his life, for Shaw and Sanson had visited them before him. He next went to Sitif, Medrashem, where, he says, is the sepulchre of Syphax, and thence to the Jebel Aouress and the ruins of Tezzoute, supposed to be the ancient Lambæsa, from whence he re-entered the Tunis territory by way of Kazareen and Sbeitlah. He then visited the south-eastern part of that state, the island of Jerbe, and proceeded to Tripoli across the desert. His description of these places in the introduction to his travels is hasty and meagre, and at the same time he speaks rather slightly of his able predecessor Shaw. Bruce made drawings of the architectural remains, part of which were purchased for the royal collection. Those who feel an interest about this matter may compare Bruce's and Shaw's accounts with that given by Sir Grenville Temple ('Excursions in the Mediterranean'), who visited the interior of Tunisia. There is a letter from Bruce to Mr. Wood ('Appendix to Bruce's Life,' No. xxiii.), which being written at this early stage of his journeys of discovery is characteristic of the writer's style when descending upon his own achievements. He says, "I have drawn eight triumphal arches, seven Corinthian temples, whose plans, parts, and decorations I have by very laborious searches and excavations made myself entirely master of; one large temple of the composite order in its best age, two large aqueducts, the ruins of the three principal cities of Africa—Jol, Cirta, and Carthage;" and then he adds, "I may safely say I have not left in the parts I have visited one stone undesigned whence any benefit could result to the arts. I have corrected and cleared up many passages of the Antonine Itinerary, Peutinger's tables, and Ptolemy, as well as of Sanson, Nollin, and Dibbler's French maps, all by actual observations," &c. He then enters into a detail of his dangers and fatigues. Travelling in the interior of Barbary is certainly not without danger, but Bruce apparently magnified the extent of his own discoveries. These journeys in Barbary were performed between September 1765 and February 1766. From Tripoli he sailed to Bengazi, whence he was driven away by famine and war, and having embarked in a crazy Greek vessel for Candia, was shipwrecked and swam on shore at Tolometa, whence he returned to Bengazi in October 1766. He there remained two months in great distress, and at last escaped from that miserable country in a French vessel for Candia, where he was seized by an intermittent fever, which returned occasionally during his subsequent travels. From Candia he went to Syria, visited Baalbec and Palmyra, and resided for some time at Aleppo with Dr. Patrick Russel, physician to the factory, from whom he received further instruction in the medical art. After spending about a year in Syria he proceeded to Alexandria in June 1768. At Cairo he was introduced to Ali Bey, the Mameluke chief, whose Coptic minister, Maalem Risk, had conceived a high opinion of Bruce, whom he fancied to be a great astrologer. Bruce had now fixed his plan of going to Abyssinia. He met at Cairo Father Christopher, a Greek whom he had known at

Algiers, and who was now Arohimaudrite under Mark, patriarch of Alexandria. He also obtained letters from the patriarch for several Greeks who were in high stations in Abyssinia, and from Ali Bey for the shereef of Mecca, the nayib of Masowa, and the king of Sennaar. Thus provided he set off for Upper Egypt, a country which was then far from being accurately known. Whatever interest Bruce's account of Egyptian antiquities which he gives in the first book of his travels might possess at the time, has now passed away. His description is not free from inaccuracies, but he corrected several common errors. From the Nile he crossed the desert to Cosseir, whence he sailed for Jidda in April 1769: but instead of going direct to Jidda he went, according to his own statements, up the gulf to Tor, and thence along the Arabian coast to Jidda. He gives his observations on the hydrography of his course, the position and bearing of the towns and harbours, &c. This voyage up to Tor, as well as the subsequent voyage to the straits of Bab-el-Mandeb, have been by some considered as fictitious, and Dr. Murray himself in his correspondence with Salt (Hall's 'Life of Salt') acknowledged that "the dates are contrary to their existence;" yet it is a fact that Bruce's observations are fully confirmed by the survey of the coasts of the Red Sea ('Notes on Bruce's Chart in the Journal of the Geographical Society,' vol. v.) made under the orders of the Bombay government.

At Jidda Bruce received every encouragement for his Abyssinian journey. The English at Jidda exerted their influence with the authorities of that place. Metical Aga, the minister of the shereef of Mecca, originally an Abyssinian slave, who was well acquainted with Ras Michael, the governor of Tigré, and at that time the most powerful chief in Abyssinia, agreed to send one of his confidential servants, Mahomet Gibberti, a native of Abyssinia, to accompany Bruce in his journey; and he wrote to Ras Michael, recommending the traveller as an English physician to his protection against the nayib of Masowa, a kind of independent chief, whose cruelty and avarice were the dread of strangers. This precaution of Metical Aga proved very useful to Bruce. He sailed with Gibberti for Masowa in September 1769. On arriving at Masowa, Gibberti went on shore first and despatched the letters to Ras Michael, after which Bruce was detained several weeks, annoyed and threatened by the nayib, and in some danger of his life. Bruce exhibited his usual firmness and courage, and was countenanced in secret by Ahmed, the nayib's nephew, and a better man than his uncle, for whom Bruce had brought a letter from Mecca. At last messengers came to Masowa from the interior, bearing letters from Ras Michael and from Janni, his deputy at Adowa, requesting the nayib immediately to forward the foreign physician. On the 15th of November Bruce left Arkeeko with the caravan, and after crossing the Taranta Mountains arrived at Dixan, the frontier town of Tigré. On the 6th of December he arrived at Adowa, the residence of Ras Michael, who was then absent on a campaign in Amhara. Bruce was kindly received by the deputy Janni, with whom he remained till the middle of January 1770. He visited Axum and other places in the neighbourhood, and continuing his journey through Siré and across the Tacaze, he passed over the Lamalmon, a part of the Samen range, and arrived at Gondar about the middle of February. The Ras and the young king were still absent with the army, but Bruce became acquainted with Ayto Aylo, a man of rank and very partial to foreigners, who introduced him to the iteghé or queen dowager, and afterwards to her daughter Ozoro Esther, Ras Michael's wife, who continued Bruce's constant friend during his residence in Abyssinia.

Bruce remained nearly two years in Abyssinia, which he spent entirely in that division of the empire called Amhara, and in that part of it which borders on the lake Dembea, without ever again visiting Tigré. Concerning the physical geography of the country his information is scanty and inaccurate. The southern provinces of Shoa, Esat, &c. he did not visit. The country was in a state of confusion, owing to a civil war between Ras Michael and other chieftains. The campaign of that year 1770, after beginning unfavourably to Michael's cause, ended by his complete triumph, which was attended by all the atrocities of revenge to which that clever but cruel chief was prone. In November of that year Bruce succeeded in reaching the sources of the Abawi, which was then considered as the main stream of the Nile; thus accomplishing what he had from the beginning fixed in his mind as the main object of his ambition.

As Bruce's narrative of his residence in Abyssinia has been the subject of much controversy, and as doubts of his veracity have been by some carried to an unreasonable extreme, it is well to state here what credible native witnesses who had known him at Gondar stated many years after to Salt concerning him. Salt, in his second journey to Abyssinia, became acquainted with Dofter Esther, a learned old man, much respected in the country, who, when a young man studying at Gondar, had been intimately acquainted with Bruce, and, after a lapse of nearly forty years, still spoke of him in terms of friendly regard. He said that when Bruce first arrived at Gondar, Ras Michael was absent with the army, but that "having questioned two Greeks, Sydee Petros and Paulos, who gave a favourable account of his religion," the Ras, on his return, was induced to treat him with great attention. Bruce's reputation was greatly increased by his having cured one of Ras Michael's children, and also Ayto Confu, Ozoro Esther's son by a former husband, of the small-pox. Ozoro Esther, the iteghé or queen dowager, and Ayto Aylo became his warm patrons.

After remaining some time at Gondar he set out, with the king's permission, to visit the sources of the Abawi, under the protection of Fasil, the governor of Damot and Gojam, who had then made his peace with Ras Michael. Bruce went with Balugani, a young Italian artist, who attended him on his travels. After failing in a first attempt, in which they were plundered, they succeeded in a second, and returned safe to Gondar. Dofter Esther described Bruce as a noble-looking man, who rode remarkably well on a black horse of his own; the king sometimes lent him a horse out of his stud. Bruce was greatly noticed by the king, and was one of the batoomals or favourites at court; Ras Michael was also attached to him, but seldom gave him anything. Bruce resided partly at Koscam and partly at a house near Kedus Raphael, which was given him by the king. Kofia Yasous, and many other persons of rank in the country, were much attached to Bruce, and when the latter quitted Abyssinia, Dofter Esther said "he left behind him a great name." After Ras Michael's defeat and disgrace, Bruce returned home by way of Sennaar. Thus far Dofter Esther's account agrees with the main part of Bruce's narrative; but there is a considerable discrepancy in several of the details. Dofter Esther said that Bruce did not speak the Tigré language, nor much of the Amharic; that when he arrived in the country he could read the written characters of their books, but did not possess any great knowledge of the Geez, though in this respect, as well as with regard to the Amharic, he considerably improved himself during his stay. He was accompanied by an interpreter of the name of Michael, through whom he generally conversed. He spoke however Arabic with some of the Mussulman inhabitants. Bruce never commanded a body of horse, as he stated; the king had no body-guard, though he had a body of black horsemen from Sennaar, who were commanded by Idris, a Mussulman. Bruce was not actually engaged in war, but he was present at one battle, probably the second battle of Serbraxos; and this is confirmed by Bruce's original journals, quoted by Dr. Murray in his edition of the 'Travels,' and which differ considerably from Bruce's text in the narrative. No shummut or district was ever given to Bruce, though he was said to have frequently asked for the government of Ras-el-Feel, which was held at one time by Ayto Confu. Dofter Esther said that Amha Yasous, prince of Shoa, never visited Gondar in Bruce's time, all connection between Shoa and Gondar having been broken off long before. It may be observed here also, that in Bruce's original memoranda (see Appendix vol. vii. of Murray's edition) there is no mention of this visit as stated in the narrative. The description of the Galla chief Guanguol, Dofter Esther said was strongly misrepresented; he remembered his visit to Gondar, when the Galla was becomingly dressed, as most Gallas are when they come to court. With regard to the story of the Worari or plundering parties on a march cutting a piece of flesh from the living animal, Dofter Esther had heard of the practice, and believed it true. This has been fully confirmed since by Pearce. ('Life and Adventures of Nathaniel Pearce,' edited by Hall.) On being told of Bruce's disgusting description of Abyssinian banquets, Dofter Esther said he had never witnessed such practices, and expressed great abhorrence at the thought. He admitted that the licentiousness of the higher orders was carried to much greater lengths in Amhara than in Tigré (see also Pearce's 'Life,' and Coffin's account of his excursion to Gondar annexed to it), but said that the scenes described by Bruce was certainly greatly exaggerated, and, as a proof of its inaccuracy, he pointed at the drinking of healths, a custom unknown in Abyssinia. (Salt's 'Abyssinia,' ch. 8.) Such was Dofter Esther's sober statement, the accuracy of which was confirmed to Salt from other quarters, among others by Sydee Paulus, already mentioned, who had lived fifty years in Abyssinia, and remembered Bruce perfectly well; and by Apostoli, another Greek, who had often conversed with Janni, Ras Michael's deputy, "who had always spoken of Bruce with great respect" (Salt, ch. 8.) Gobat, the missionary to Abyssinia, observes of the description of the feast as given by Bruce, "I admit that such a feast may have taken place among the most shameless libertines, but excesses of that kind are not customary, either as to their cruelty or their indecency."

It appears evident from all this that when Bruce composed his narrative, he did not consult or did not scrupulously adhere to his journals, but borrowed largely from his own imagination, especially with regard to details; he confounded dates, and jumbled together distinct incidents and circumstances, either through carelessness or for the sake of effect. "He was become old and indolent," says his friend Dr. Murray, "and I have reason to believe that after nearly twenty years had elapsed since his return from Abyssinia, his tale to his amanuensis resembled more that of an old veteran by his parlour fire-side in a winter evening, than the result of fresh and accurate observation. He wished to have it understood that he had omitted nothing when he travelled, but performed all—a species of ambition seldom reconcilable with fact." (Hall's 'Life of Salt.') There are however some points in Bruce's narrative which cannot be accounted for so easily. The Axum inscription, with the pretended words "King Ptolemy Evergetes," seems to be one of these. He also totally omits throughout the narrative of his journey to mention Balugani, a young Italian artist who had joined Bruce at Algiers, and had been the constant companion of all his journeys as far as Gondar and the sources of the Nile, had kept his journals, assisted him in drawing, and had

been evidently of material use to him. (Salt's 'Abyssinia,' ch. 8.) Bruce's great ambition was to be considered the first and only European who had ever visited the sources of the Nile, and he accordingly throws discredit on the accounts of the Jesuits Paex and Lobo, who had described them before him. He also omits in his narrative to mention the fact of three Franciscan friars from the Propaganda having reached Gondar only twenty years before him, where they rose for awhile into great favour, and made several proselytes to Catholicism, among others Bruce's friend Ayto Aylo and the iteghé or queen dowager; and yet in Bruce's original memoranda (Appendix, vol. vii.) we find it stated "that Ayto Aylo had been converted by Father Antonio, a Franciscan, in 1750." (Salt, ch. 10, and Appendix iii., where the journal of the Franciscans is translated from the Italian manuscript.) With regard to Bruce's translation of the 'Annals of Abyssinia,' Dr. Murray says, in a letter to Salt, 26th of February 1812, "The bulk of the facts are true, but they are often misplaced in time and local circumstance. The Portuguese and Abyssinian accounts are blended together, and the whole does not merit the title of an accurate narrative. Bruce often committed blunders in an unconscious way, particularly as to classic quotations and minute facts of ancient history, which he was not qualified by literary habits to balance and collate." (Hall's 'Life of Salt.') The latter part of this remark leads us to observe that Bruce, though he has had a character for learning among those who have none themselves, was very far from being an exact scholar or a really learned man. His dissertations on various subjects show sometimes great ignorance, and nearly always equal presumption and deficient judgment. Such are the dissertations in the second volume on the 'Indian Trade in its Earliest Ages,' on the 'Origin of Characters or Letters,' 'The Voyage to Ophir and Tarshish,' &c.

Notwithstanding these numerous defects, Bruce will always rank high among African travellers, and his journey to Abyssinia forms an epoch in the annals of discovery, for he may be said to have re-discovered a country of which no accounts had reached Europe for nearly a century, and to have renewed our intercourse with it. The Ethiopic manuscripts which he brought to Europe formed likewise a valuable addition to our literary treasures. A list of them is given in the Appendix to 'Bruce's Life,' by Dr. Murray, 4to. 1808. Bruce's courage, activity, and presence of mind are deserving of the highest praise.

The campaign of 1771 having turned against Ras Michael, and that chief being deserted by his followers, and taken prisoner, the opposite faction got possession of the king's person. Bruce was now tired of this distracted country and anxious to return home. Having obtained the king's leave, after much difficulty, he set off from Koscam in December 1771, attended by three Greeks and a few common servants. He arrived at Tcherkin in January 1772, where he found Ozoro Esther, Ayto Confu, and several of his Gondar friends. Taking leave of them, he proceeded by Ras-el-Feel, Teawa, and Beylah, to Sennaar, where he arrived in May. Here he was detained till September, and it was with much difficulty he found means to leave that barbarous country. He proceeded northwards by Herbagi, Halfay, Shendi, and across the Abara or Tacazze to Gooz, in the Barabra country, and then plunged into the desert, where he was a fortnight in crossing to Assouan, and in which he was near losing his life through thirst and fatigue. He left Assouan in December, and after resting some time at Cairo, proceeded to Alexandria, where he embarked in March 1773, for Marseille. In France he was received with marked attention by the Count de Buffon and other distinguished men. He thence went to Italy, and at last returned to England in June 1774, after an absence of twelve years.

Bruce was presented at court, and the king, George III., received him in a flattering manner; but he obtained no more substantial rewards, except a gratuity for the drawings which he had made for the king's collection. The strange stories he told in company about the Abyssinians and the Gallas interested his hearers, but at the same time excited ill-natured strictures. Some even went so far as to pretend that he had never been in Abyssinia. Bruce's haughty and disdainful manner was not calculated to soothe criticism. After some months spent in London, he went to Scotland, where his family affairs were in great disorder owing to his long absence. Upon these he bestowed much of his time, giving up meanwhile all thoughts about his Abyssinian journals. He married, in May 1776, Miss Dundas, with whom he lived in quiet retirement till 1785, when she died. After this loss, and by the advice of his friends, and especially Daines Barrington, he set about preparing his travels for publication. This work was published in 1790, in five 4to. volumes, 'Travels to Discover the Sources of the Nile, in the Years 1768-73.' The attractions of his narrative are generally acknowledged. His sketch of the character of Ras Michael has been particularly admired, and its truth is authenticated by the manuscripts of the 'Annals of Abyssinia,' vol. v., which includes the history of that chief down to the murder of the Emperor Joas in 1769 (Appendix to Murray's 'Life of Bruce,' in 4to.), as well as by the current report in the country. Bruce's work was sharply assailed in the critical journals of the day, especially in the 'Monthly Review.' It was translated into French by Casters, and into German by J. Volkman, with notes by J. F. Blumenbach.

Bruce died on the 27th of April, 1794, at Kinnaird, of a fall down stairs as he was going to hand a lady to her carriage. He was buried in the churchyard of Larbert, in the same tomb with his wife.

In 1805 his friend Dr. Alexander Murray published a second edition of Bruce's Travels, to which he added a biography of the traveller, and copious extracts from his original journals, which are of considerable importance. By consulting these journals, and the editor's notes and remarks in the life, the reader is enabled to separate the reality from the fiction or exaggeration which prevails in many parts of the author's narrative. Mr. Salt's two missions to Abyssinia, 1805 and 1810, having revived the discussion, Dr. Murray entered into a correspondence with Salt, which serves greatly to elucidate the question. A third edition of Bruce's 'Travels,' published in 1813, in seven volumes 8vo., is little more than a reprint of the previous edition. The preface by Dr. Murray, in which he adverts to Salt's correction of several of Bruce's statements, is deserving of attention.

BRUCE, MICHAEL, was born at Kinnesswood, in the parish of Portmoak and county of Kinross, on the 27th of March, 1746. His father was an operative weaver; and, in his religious sentiments, of that class of seceders called Burghers. He had eight children who, having little or nothing to inherit from their parents, were all brought up to rely on their own character and industry for support. Michael who was the fifth child, was destined for the office of a minister of the Gospel. To the great body of the people of Scotland that office has long been one of much reverence; and to furnish a member of the family for that holy calling is there to this day an object of nearly universal ambition. The strict and religious parents of Bruce partook in the common feeling; and in his devotion to reading from his earliest years, and his pious and domestic habits, they imagined they saw the elements of a character which would gratify their most ardent wishes. Accordingly, after bestowing on him such instruction as their humble roof and the village school could afford, his parents sent him to the schools in the neighbouring town of Kinross, and thence, in the year 1762, to Edinburgh, where he applied himself with equal assiduity and success, for some years to literature and philosophy, and to the learning more peculiarly necessary for the profession which he had in view.

In his native district young Bruce met with friends whose conversation and friendly suggestions contributed not a little to lead him to the love of reading and the study of the higher class of English poets. Soon after proceeding to Edinburgh he contracted an acquaintance with Logan, whose congenial spirit made him the intimate companion of Bruce in his lifetime, and his warm eulogist and editor of his works after his death. So long as Bruce remained about his father's house, his wants, which were then indeed but few, were readily supplied, but after his removal to Edinburgh his resources diminished, while his wants, both physical and mental, multiplied, and his desires increased in intensity. But poverty was not the only difficulty with which the youthful Bruce had to contend. He had also the narrow views of worthy but illiterate parents, who seem to have regarded general learning as unnecessary, if not positively mischievous. Bruce could not but feel how unnatural these prejudices were, what injustice they did to those powers and aspirations with which he was endowed and which glowed within him. He was too dutiful a son however to give his parents any cause of offence, and he accordingly took the greatest pains to conceal from them the knowledge of his studies in poetry and general literature. He had hardly reached his eighteenth year when his letters mark the beginning of that morbid melancholy which is frequently the attendant on a poetical temperament, and was in him also the forerunner of a fatal disease. He had by this time obtained a few evening scholars, but he states that the attending on them, though few, fatigued him. He spent the winters at school or college, and in the summer he endeavoured to earn a small pittance by teaching a school, first at Gairney Bridge and afterwards at Forest Mill, near Alloa.

"In the autumn of 1766," says Dr. Anderson ('British Poets,' vol. ii., p. 277), "his constitution, which was ill calculated to encounter the austerities of his native climate, the exertions of daily labour, and the rigid frugality of humble life, began visibly to decline. Towards the end of the year his ill-health, aggravated by the indigence of his situation, and the want of those comforts and conveniences which might have fostered a delicate frame to maturity and length of days, terminated in a deep consumption. During the winter he quitted his employment at Forest Mill, and with it all hopes of life, and returned to his native village to receive those attentions and consolations which his situation required from the anxiety of parental affection and the sympathy of friendship." He lingered through the winter, and in the spring he wrote the well-known 'Elegy' in which he so pathetically describes his feelings at that time, and calmly anticipates his dissolution. This elegy, from the circumstances in which it was written, the nature of the subject, and the merit of its execution, had an unusual share of popularity. It was the last composition which Bruce lived to finish. He died July 6, 1767.

The poems of Bruce are not numerous—for which his early death may well account—but they evince talents of a very high order. They are distinguished for their elegance and harmony; and, with little of the fervour of opening genius, they display sustained dignity and the polish of mature life. Soon after Bruce's death his works were subjected to the revision of his friend Logan, who published a collection of them in a small duodecimo volume; but unfortunately they were not only unaccompanied with any account of the state in which they

came into his possession, or of the process observed in preparing them for publication, but mingled with the poems of other authors, without any explanation by which they might be distinguished. This error was in some degree corrected by the labours of Dr. Anderson, who gave the poems of Bruce a place for the first time in a collection of the poets of this country, and prefixed a memoir of the author. A new edition, including several of Bruce's unpublished pieces, was brought out by subscription in 1807, under the care of Dr. Baird, for the benefit of the poet's mother, then in her ninetieth year. An edition of the poems of Bruce, with a memoir by the Rev. W. Mackelvie, D.D., of Balgedie, was published in 1837.

BRUCE, ROBERT, king of Scots, was born on the 21st of March, 1274. He was descended from Robert de Brus, who being brought up at the court of England with Earl David, afterwards King David I. of Scotland, became an intimate of that monarch, and received from his bounty a grant of the lordship of Annandale. His grandfather, Robert de Brus, the seventh lord of Annandale, had, on the death of his mother Isabel, second daughter of David, earl of Huntingdon, livery of her lands in England, and shortly afterwards was constituted sheriff of Cumberland and constable of the castle of Carlisle. He was then also appointed one of the fifteen regents of Scotland; and in 1264, with Comyn and Baliol, led the Scottish auxiliaries to the assistance of King Henry III. at the battle of Lewes. Robert de Bruce, the son of this baron, accompanied King Edward I. to Palestine in 1269, and was ever after greatly regarded by that monarch. In 1271 he married Margaret, countess of Carrick, in whose right he became Earl of Carrick, and by whom he had twelve children.

Of these Robert Bruce was the eldest son. He was in the tenth year of his age when his father and grandfather concurred with the other magnates of the realm in a solemn acknowledgment to King Alexander III. that his grand-daughter Margaret, 'the maiden of Norway,' was heir-presumptive to the Scottish throne. Two years afterwards the king died, and Margaret succeeded to the crown; but in September 1286, parties having now begun to be formed among the nobles with a view to a competition for the crown, Robert de Brus, the grandfather, met several important personages of the kingdom at Turnberry Castle, the seat of his son the Earl of Carrick, and there entered into a league or bond to support the person who should be found the true heir to the throne. The chief competitors were Robert de Brus, the grandfather, and John Baliol. [BALIOL.] King Edward I. of England having obtained the office of umpire in this contest, on the 16th of November 1292 pronounced for Baliol, "as, in all indivisible heritages, the more remote in degree of the first line of descent is preferable to the nearer in degree of the second." It was accordingly ordered "that John Baliol should have seisin of the kingdom of Scotland;" and seisin being given, Baliol did homage and fealty to Edward for his kingdom. To avoid no doubt the humiliating task of doing homage to a successful rival, the aged De Brus immediately resigned the lordship of Annandale to his son Robert, who, probably from a like motive, had about a fortnight before resigned the earldom of Carrick, which he had held in right of his wife, just deceased, to Bruce, their eldest son and heir, and shortly afterwards, retiring into England, left the administration of the family estates in the same hands.

Edward could not but see that his determination had disappointed the powerful lords of the house of Brus; but he had already experienced their friendship, as he had no doubt heard also of the attachment of the family to the English crown, and he was now anxious to foster the submission to his award which their retirement held out. Accordingly in 1295, the same year in which the aged De Brus died, Edward appointed the father of Bruce constable of the castle of Carlisle. During Baliol's revolt the Bruces remained subject to Edward; and in 1296 they attended the parliament of Berwick, where they renewed their oath of fealty and submission to him. Even the nobler stand of Wallace did not for some time rouse their patriotism; and when those to whom the peace of the western districts had been committed summoned them to Carlisle, Bruce not only obeyed the citation and swore fidelity to Edward, but to evince the sincerity of his declaration immediately after laid waste the possessions of the knight of Liddesdale, and carried off his wife and family prisoners to Annandale. Scarcely however was this act of violence committed, when he abandoned the English party and joined the national standard, expressing at the same time his hope of absolution from the oath which he said had been extorted from him. A few months afterwards the Scots were obliged to capitulate at Irvine, and Bruce with others made his peace with Edward. Wallace retired into the northern parts of the kingdom with a few adherents.

The signal victory gained by Wallace at Stirling on the 12th of September 1297 induced Bruce once more to join the national standard. He took no very active part in the struggle however, but while Wallace and his followers fought at Falkirk, shut himself up in Ayr Castle, where indeed, by preserving the communication open between Galloway and the western highlands, he did essential service to the cause. Edward, following up his victory, marched into the west with a determination to chastise Bruce, who, after burning the fortress, retreated into the fastnesses of Carrick, and Edward at length directed a willing army to return into England. In his progress he took possession of Lochmaben Castle, and wasted the estates of its lord; but among the confiscations of property which followed, the lands of Annandale and

Carrick remained unalienated—a favour probably accorded to the house of Bruce for its former services to England. The defeat of the Scots at the battle of Falkirk destroyed much of the confidence reposed in Wallace; and in 1299 the Bishop of St. Andrews, Bruce, and Comyn, were appointed guardians of Scotland in the name and place of Baliol. It was perhaps to destroy the authority of Wallace that Bruce was willing to be associated for a time with his great rival Comyn; and having attained this end, he no less willingly resumed his former inactive course of policy, and relinquished to Comyn the direction of the new-created power. The following year Edward again invaded Scotland, and laid waste the districts of Annandale and Carrick. Bruce suffered much on this occasion, but he cautiously avoided every act of retaliation; and we find that prior to the advantage gained by the Scots at Roslin he had surrendered himself to St. John, the English warden of the Western Marches. The campaign of Edward in 1304, which ended in a more complete subjugation of Scotland than he had before been able to effect, justified the prudence of Bruce; for on the death of his father he was not only allowed to inherit the extensive possessions of his ancestors, but in the settlement of Scotland as a province under the English king his opinion was much regarded.

Bruce however maintained only the semblance of loyalty to Edward and seeing that Baliol's restoration was hopeless, had formed the resolution of restoring his country to independence. Accordingly while actually engaged in assisting Edward in the settlement of the Scottish government, he entered into a secret bond of association with the bishop of St. Andrews, as head of the Scottish church, whereby the parties bound themselves mutually to assist each other against all persons whatsoever, and neither to undertake any business of importance without the other. He had also a conference with Comyn, at which he proposed that they should thenceforward entertain towards each other feelings of amity and friendship. "Support (said he) my title to the crown, and I will give you all my lands; or bestow on me your lands, and I will support your claim." Comyn accepted the former alternative; and an agreement being drawn up in form of indenture, it was sealed by both parties and confirmed by their oaths of fidelity and secrecy. Comyn however revealed the matter to Edward, who determined on revenge. But having one evening drank freely, Edward was imprudent enough to discover his purpose to some of the nobles of his court, among whom Bruce had friends. The Earl of Gloucester, a kinsman of Bruce, had notice of his danger, and anxious to save him, yet afraid in so serious a matter to compromise his own safety, sent him a piece of money and a pair of gilded spurs. Bruce understood the counsel thus symbolically communicated, and instantly set out for Scotland, accompanied by his secretary and a single attendant. He is said to have reached Lochmaben Castle on the fifth day after his departure from London, and thence repairing to Dumfries, where Comyn was, he sought a private interview with him. From some inward misgiving no doubt on the part of Comyn, the meeting took place in the convent of the Minorite friars. Here Bruce passionately reproached Comyn for his treachery, and after some altercation drew his dagger and stabbed him to the heart. Immediately hastening from the spot he called for his attendants, who seeing him pale and agitated inquired the cause. "I doubt I have slain Comyn," was the reply. "You doubt," cried Kirkpatrick fiercely; "I'ae mak sikker," and rushing towards Comyn despatched him on the spot. Almost at the same moment Sir Robert Comyn, the uncle, who came into the convent on the noise of the scuffle, shared a similar fate. The alarm soon became general; and the English judges, then holding a court in a hall of the castle, not knowing the extent of the danger, hastily barricaded the doors. Bruce, assembling his followers, surrounded the castle, and threatening to force their entrance by fire, compelled those within to surrender.

He soon afterwards proceeded to Scone, the ancient seat of Scottish inauguration, and was there crowned king of Scots on the 27th of March 1306. Edward had carried the 'regalia' to Westminster, but their place was soon supplied. The bishop of Glasgow furnished from his own stores the robes in which Bruce was arrayed; and a slight coronet of gold being got from the nearest artist, the bishop of St. Andrews set it on his head. The earls of Fife had from a remote antiquity enjoyed the privilege of crowning the kings of Scotland; but Duncan, the representative of the family, favouring at this time the English interest, his sister, the Countess of Buchan, with a boldness and enthusiasm which must have added to the popular interest felt for the young king, repaired to Scone, and asserting the privilege of her ancestors, placed the crown a second time on the head of Bruce. The eyes of all Scotland were now directed towards Bruce. Comyn was no more; and the brave Sir William Wallace had been executed by the English. Bruce was therefore without a rival: he was the heir of the throne, and his past conduct had given ample earnest of his intrepidity and prudence.

Edward heard of the murder of Comyn and of the usurpation of Bruce when residing with his court at Winchester. He immediately despatched a messenger to the pope, to pray the assistance of the holy see; he directed the garrison towns on the Marches to be strengthened; and nominating the Earl of Pembroke guardian of Scotland, he ordered an instant levy of troops for that kingdom. Proceeding to London he called together the prince his son and about 300 youths selected from the best families of England, and conferred on them the honour

of knighthood amidst a pomp and magnificence well calculated to rouse the ardour of the nation. He made also a splendid banquet in honour of the new-created knights, at which he uttered a solemn vow to execute vengeance upon Bruce and his adherents. Bruce, on the other hand, had prepared no system of offensive warfare nor even of defence; his followers were few, and when he first resolved to assert his claim to the crown, he had no fortress at his command save his two patrimonial ones of Lochmakin and Kildrummie. He had seen however the success of Wallace in less happy circumstances, and he witnessed an enthusiasm for his person which he believed the prospect of success would kindle into a wide and irresistible flame. Prompted therefore perhaps by the hope of striking an early and effectual blow, he sent a challenge to Pembroke, who had established his headquarters at Perth, defying him to battle. Pembroke returned for answer he would meet him on the morrow. Satisfied with this acceptance Bruce drew off his little band to the neighbouring wood of Methven, with a view to encamp there for the night; but the customary watches were omitted or insufficiently attended to. Pembroke having intelligence of this, called out his forces towards the close of the day, and gaining the unguarded encampment without observation, succeeded in throwing the whole body of the Scots into complete disorder.

From the defeat of Methven Bruce retired with the remains of his army to the mountains of Athol, whence however they were at length compelled by want and the rigour of the season to descend into the low country of Aberdeenshire; but on the advance of a superior body of English, they took refuge in the mountainous district of Breadalbane. Nor was the party safe from attack even here. The Lord of Lorn, who was an adherent of Edward, and closely connected by marriage with the family of the murdered Comyn, hearing of the approach of Bruce, collected his dependants to the number of about 1000, and having beset the passes, obliged the Scots to come to battle in a narrow defile where the horse of the party were an incumbrance rather than a service. The consequence was inevitable; and had not the king ordered a retreat, and himself taking post in the rear, by desperate courage, strength, and activity, succeeded in checking the fury of the pursuers, and extricating his men, they would have been utterly exterminated.

Having at last rallied his men, Bruce used every means in his power to re-animate their hope and to inspire them with fortitude and perseverance. After sending away his queen, the ladies who accompanied her, and some others of the party under an escort to his strong castle of Kildrummie, he determined with his remaining followers, amounting to about 200 only, to force a passage into Kintyre, and thence cross over into the north of Ireland, with the hope, as has been supposed, of receiving assistance from the Earl of Ulster, or of eluding for a time the hot pursuit of his enemies. On arriving at the banks of Loch Lomond there appeared no mode of conveyance across the loch; but after much search, Sir James Douglas discovered a small crazy boat, by means of which they effected a passage. The party were a night and a day in getting over, the boat being able to carry only three persons at a time; but Robert beguiled the tedious hours by reciting the story of the siege of Eglymor from the romance of Ferembras. The king soon afterwards fell in with the Earl of Lennox, ignorant till then of the fate of his sovereign, of whom he had received no intelligence since the defeat of Methven; and by his exertions the royal party were amply supplied with provisions, and enabled to reach in safety the castle of Dunaverty in Kintyre, whence, after recruiting the strength and spirits of his companions, the king and a few of his most faithful adherents passed over to the small island of Rathlin, on the north coast of Ireland, where they remained during the winter. In this remote situation Bruce was long ignorant of the unrelenting cruelty showed by Edward to his queen, family, and friends; the confiscation of all his estates; and the solemn excommunication of himself and his adherents by the pope's legate at Carlisle. Fordun indeed relates that in derision of his forlorn and unknown condition, a sort of ribald proclamation was made after him in all the towns of Scotland as lost, stolen, or strayed.

On the approach of spring, Sir James Douglas and Sir Robert Boyd left the king and passed over to Arran, where they were joined in a few days by Bruce, from Rathlin, with a fleet of thirty-three small galleys. The party made a descent upon the opposite coast of Carrick, which was in the possession of the English, and finding the troops under Percy carelessly cantoned, they rushed in among them and put nearly the whole body, consisting of about 200 men, to the sword. When the news of this enterprise became known, a detachment of above 1000 men, under the command of Roger St. John, was despatched from Ayr to the relief of Turnberry, when Bruce, unable to oppose such a force, retired into the mountainous district of Carrick. The effect of his success was still further counteracted by the fatal miscarriage of his brothers Thomas and Alexander, in their attempt to secure a landing at Loch Ryan in Galloway, where the whole party were routed, several persons of note slain, and the two brothers of Bruce taken prisoners and ordered to instant execution. When Bruce wandered among the fastnesses of Carrick, after the defeat of his auxiliaries at Loch Ryan, his army did not amount to sixty men. His own personal prowess however in an encounter with a force sent against him by the people of Galloway, in which it was related that single-handed he had for some time kept at bay a body of about 200 men, with bloodhounds

who had been sent to track the fugitives through the forests and morasses, roused the spirits of his party, and called many to his standard. Bruce indeed required all the aid he could receive; for Pembroke, the English guardian, was already advancing upon him with a great body of men, having also obtained the assistance of John of Lorn, whose followers were well acquainted with that species of irregular warfare to which Bruce was obliged to have recourse. Lorn had with him a bloodhound which it is said had belonged to the king, and was so familiar with his scent, that if once it got upon his track nothing could divert it from its purpose. This Bruce found to his experience, and well nigh fatally; for having arrived at the place where Bruce and his army lay, the bloodhound was let loose, and notwithstanding every stratagem that could be devised to elude it, the animal singled him out and led on the enemy in his pursuit, till at length Bruce and his companion (for to these two only had he successively subdivided his men) reached a rivulet, into which they plunged, and, after destroying in this way the strong scent upon which the hound had proceeded, turned into the adjoining thicket, whence he regained in safety the rendezvous of his followers. Here, having learnt the state of security into which the English had fallen, under the impression that the Scottish army was totally dispersed, Bruce collected a few men, and dashing upon a detachment of about 200 of the enemy, put the greater part of them to the sword. Pembroke shortly afterwards retired with his whole forces towards England, and after another disaster, similar to that just mentioned, retreated to Carlisle.

Bruce, encouraged by success, ventured down upon the low country, and reduced to his obedience the districts of Kyle, Carrick, and Cuninghame. Pembroke thereupon determined again to take the field; and putting himself at the head of a strong body of cavalry, he advanced into Ayrshire, and came up with the army of Bruce when encamped on Loudon Hill. Here, though his army was greatly inferior to the English, and consisted wholly of infantry, Bruce gave Pembroke battle; and so well conducted was the conflict by Bruce, that while the loss of the Scots was extremely small, Pembroke's whole forces were put to flight, a considerable number being slain and many made prisoners. Three days after this Bruce encountered another considerable body of English, whom he also defeated with great slaughter. These successes proved of the greatest consequence to Bruce's cause, which was still further strengthened by the death of Edward, who died at Burgh-on-the-Sands, in Cumberland, on the 7th of July 1307, in his progress towards Scotland. With his last breath he commanded that his body should accompany the army in its march, and remain unburied till the country was wholly subdued; but his son, disregarding the injunction, had his father's remains deposited at Westminster. The son indeed was incapable of conducting the enterprise which had devolved upon him; and after a useless and inglorious campaign he retired from the contest. For three years after this Bruce had to contend with the governors despatched by Edward, and with his other enemies in different parts of Scotland. He triumphed over all: and early in the year 1310 the clergy of Scotland assembled in a provincial council, and issued a declaration to all the faithful—that the Scottish nation, seeing the kingdom betrayed and enslaved, had assumed Robert Bruce for their king, and that the clergy willingly did homage to him in that character.

Finding at length his authority established at home, and that Edward was sufficiently employed by the dissensions which had sprung up in his own country, Bruce resolved by an invasion of England to retaliate in some measure the miseries which it had inflicted on his kingdom. He advanced accordingly as far as the bishopric of Durham, laying waste the country with fire and sword, and giving up the whole district to the unbounded licence of the soldiery. Edward at first complained to the pope, but soon afterwards made advances towards negotiating a truce with Scotland. Robert however, knowing the importance of following up the successful career which had opened on him, refused to accede to his proposals, and again invaded England. In the same year also he took various fortresses in his kingdom which hitherto remained in the possession of the enemy. The last of these fortresses was the castle of Stirling, upon which the hope of the English now depended, and Edward accordingly collected all his forces for its defence. It was on this occasion the famous battle of Bannockburn was fought, 24th of June 1314, when a complete victory was obtained by Bruce. By this event the sovereignty of Bruce was established, and the remainder of his public life was occupied in alternately invading England and defending himself from English attacks, in negotiating treaties with that kingdom, and framing laws for the ordering and consolidating the power which he had acquired. In April 1328 a parliament was held at Northampton, to conclude between the two kingdoms of England and Scotland a treaty of permanent peace, the principal articles of which were the recognition of Bruce's titles to the crown, the sovereignty of the kingdom, and the marriage of Johanna, the sister of the king of England, to David, the son and heir of the king of Scots.

Bruce did not long survive this event. The hardships and sufferings he had encountered brought upon him a disease, in those days called a leprosy, which the ardour of enterprise and a naturally strong constitution had hitherto enabled him to triumph over. The last two

years of his life were spent in comparative seclusion in a castle at Cardross, on the northern shore of the Frith of Clyde. He is said to have contemplated the approach of death with calmness and resignation, and not without deep expressions of repentance for the sins he had committed, as well as sorrow for the blood which he had spilt. He died on the 7th of June 1829, in the fifty-fifth year of his age and twenty-third year of his reign. His heart was extracted and embalmed with a view to its being carried, according to his request, to the Holy Land; and his remains were interred in the abbey church of Dunfermline.

BRUCKER, JAMES, a laborious scholar of the last century, was born at Augsburg, January 22, 1696. He was educated for the church at the university of Jena, where he took the degree of M.A. in 1718. In 1723 he was appointed parish minister of Kaufbeuren, where he gradually acquired a reputation for learning, which led to his being elected, in 1731, a member of the Academy of Sciences at Berlin, and soon after, to his being appointed senior minister of the church of St. Ulric, at Augsburg, where he spent the rest of his life, and died in 1770.

At an early age he applied himself to the study of philosophy, and his first work, 'Tentamen Introductionis in Historiam Doctrinæ de Ideis,' was published in 1719; it was afterwards enlarged and republished in 1723, under the title 'Hist. Philos. Doctr. de Id.' In 1731-36 he published a history of philosophy in seven volumes 12mo., from the creation to the birth of Christ, in the form of question and answer, which contains some details of literary history not to be found in his larger work. This, which was entitled 'A Critical History of Philosophy from the infancy of the world down to our own age,' was printed in 1741-44, in five volumes 4to., and met with considerable success; in 1767 a second edition appeared, with a sixth volume, consisting of supplement and corrections. Of his other works the chief are 'Pinacotheca Scriptorum nostra ætate literis illustrium,' 2 vols. fol. 1741-55; 'Lives of German Scholars in the 15th, 16th, and 17th centuries,' in German, 4to., 1747-49; 'Miscellanea Historiæ Philosoph. Literar. Crit. olim sparsim edita nunc uno fascio collecta,' 8vo., 1748. He undertook to superintend a new edition of Luther's translation of the Bible, but he died before completing the work, which was finished by Teller.

Brucker is now remembered by his 'Critical History of Philosophy.' The title is ill chosen, for a discriminating and correct judgment is the very point in which he is most defective. He was very laborious, and has amassed a vast quantity of materials; but he wanted the power of arranging them and sifting the important from the trivial; consequently his work is wearisome in the extreme, from minuteness of unnecessary detail, as well as dryness of style. He seems to have the same sort of notion of his subject as a fly might have of the dome of St. Paul's, after crawling over it bit by bit; he appears not to possess clear views of it as a whole, or of the connection of the several parts. His book however is remarkable and useful, if it were only as an attempt to grapple with so enormous a subject; for he gives an account of every school from the Hebrew, Chaldaic, Egyptian, Phœnician, &c., descending through those of Greece and Rome to the sects of Christian and Judaic philosophers, the schoolmen and their successors after the revival of learning, the Saracens, and the nations of modern Asia, Indians, Chinese, and Japanese; and he finishes in North America with the Hurons. As a book of reference, therefore, it is very valuable. But as the author is charged with frequent error, arising partly from inaccurate scholarship, partly from too much readiness to take his opinions at second-hand, it will be prudent for those who are careful inquirers, to corroborate Brucker's statements by at least occasional references to the original authorities.

BRUEIS, ADMIRAL, was a lieutenant in the French navy before the revolution, and afterwards became a rear-admiral in the service of the republic. He had the command of the Toulon fleet which sailed in June 1798, for Egypt, with General Bonaparte and his army on board. After landing the troops, Admiral Brueis anchored his fleet in Aboukir Roads close to the shore, thinking himself safe from attack. Nelson, with the English fleet, came in sight of the French fleet on the 1st of August, and immediately prepared for battle. Some of the English ships steered between the French and the shore, and thus the French found themselves between two fires. [NELSON.] After a dreadful fight, most of the French ships, being disabled, surrendered. Admiral Brueis, who was on board the Orient, of 120 guns, defending himself against two English ships, was killed by a cannon-shot, just before the Orient was discovered to be on fire. Soon after the Orient blew up with most of the people on board.

BRUGES, ROGER VAN, an old Flemish painter, and a pupil of John Van Eyck, is called by Vasari, Ruggieri da Bruggia, but is not the same person as Roger Van der Weyde, as some have supposed. Van Mander notices both as distinct persons; the subject of this article, he calls Rogier van Bruges, and speaks of him as an excellent draughtsman and good painter, but he does not give any personal information concerning him: the years of his birth and death are both unknown, but several works are attributed to him, bearing various dates between 1445 and 1462. He is mentioned several times by Bartholomæus Facius, 'De Viris Illustribus,' Florence, 1745; and Rathgeber, 'Annals of Painting, &c., in the Netherlands,' p. 106, enumerates twenty-nine works attributed to him. He is styled by

Facius, Rogerius Gallicus Joannis Discipulus, and he is probably the same person as Magister Rogel of Flandera, by whom there are three pictures, in one, painted in 1445, in the sacristy of the Carthusian church at Miraflores, near Burgos in Spain, the donation of Don Juan II.

Roger painted in water-colours, with white of egg or with size, and in oil, which last method he had learned of Van Eyck. He painted also on canvass, a rare practice in that early period: Van Mander speaks of Roger's paintings on canvass, of which he had seen many in churches, and in private houses, where they were adopted as substitutes for the ordinary hangings of drapery.

There are at Munich three admirable old pictures in the Pinakothek (Cabinet iii. Nos. 35, 36, 37), assigned in the catalogue to John Van Eyck, which have been attributed to Roger Van Bruges; they are three of the best and most interesting in the collection: they are included in the twenty-nine pictures enumerated by Rathgeber.

(Van Mander, *Het Leven der Schilders*, &c.; Rathgeber, *Annalen der Niederländischen Malerei, Formschneide- und Kupferstecherkunst.*)

BRUHL, HENRY, COUNT VON, was born in August 1700. His father was councillor of the prince of Saxe Weissenfels. Henry entered as page into the service of Augustus II., elector of Saxony and king of Poland, and eventually became his chamberlain. After the death of Augustus in 1733, Bruhl, who had charge of the crown jewels at Warsaw, set off with them for Dresden, where he delivered them to the new Elector Augustus III., and assisted him, by his manoeuvres, in ascending the throne of Poland. From that time he became the king's favourite, and having obtained the dismissal of his rival, Count Sulkowski, he remained sole ruler of the weak monarch, whom he kept in a state of complete tutelage. Bruhl lived in great splendour: his establishment was larger than the king's, and he kept above 200 servants. "Of all men of this age," says Frederic II. of Prussia, "he had most watches, dresses, lace, boots, shoes, and slippers." The king was indolent to excess, and Bruhl, who took good care not to disturb his apathy, and always to supply him with money, was obliged to borrow to such a degree, that the treasury became bankrupt at last. Bruhl involved Saxony in a war against Frederic II., who made the whole Saxon army prisoners in the camp of Pirna, and took Dresden, while the king and Bruhl escaped into Poland. After the peace they returned to Dresden, where Augustus soon after died. Bruhl was disliked by both Poles and Saxons, and the new elector dismissed him from his office. He died in October, 1764. He had amassed great wealth, which he left to his children; his fine library of 20,000 volumes was purchased by the elector for 50,000 crowns. His son Frederic Louis wrote several German plays, which were published at Dresden in 1785-90, in 5 vols. 8vo.

BRULLIOT, FRANZ, author of the 'Dictionary of Monograms,' &c., was born at Düsseldorf in 1760, and was the son of Joseph Brulliot, a native of Mannheim, and inspector of the celebrated Gallery of Düsseldorf, which was removed in 1805 to Munich. Joseph and his son Franz, who had adopted engraving as his profession, removed thither at the same time, and in 1808 Franz Brulliot was appointed assistant keeper of the king's prints. From this time he gave up the practice of engraving, and devoted himself entirely to the study of prints and the history of engraving, and in 1817 he published at Munich, in 4to, a dictionary of the monogram, &c., of artists ('Dictionnaire des Monogrammes, Chiffres, Lettres Initiales, &c.'). to which, in 1820, he commenced the publication, in the same form, of a supplementary work, entitled, 'Table Générale des Monogrammes, Chiffres, &c., but which was never completed. His great work did not appear till after an interval of twelve years from that date, the whole of which time was exclusively devoted to it. He visited the principal collections of France, Germany, and Holland to the same end, and his occupations as keeper of the prints of the King of Bavaria, to which post he had been appointed, gave him peculiar facilities for his labour. The complete work was published in Munich, in 3 vols. imp. 8vo, in 1832-34, under the title 'Dictionnaire des Monogrammes, Marques Figurées, Lettres Initiales, Noms Abrégés, &c., avec lesquels les Peintres, Dessinateurs, Graveurs, et Sculpteurs ont désigné leurs Noms.' It is a work of immense labour, is very accurate, and is incomparably the most complete work of its kind. In vol. i., containing the monograms, there are 3292 articles; in vol. ii., containing the initial letters, there are 2936 articles; and in vol. iii., containing the abbreviations and appendices to the three parts, there are 1818 articles; and the work contains also fac-similes, cut in wood, of all the marks, letters, &c., treated of, amounting to many thousands. Brulliot did not long survive the publication of his work; he died of cholera in 1836, at Munich. He was an honorary member of the Academies of the Arts of Munich and of Vienna.

BRUMOY, PIERRE, was born at Rouen in 1688, and entered the society of the Jesuits in 1704. He was subsequently intrusted with the education of the Prince of Talmont, and became a contributor to the 'Journal of Trevoux.' He first introduced himself to the public by 'Thoughts on the Decline of Latin Poetry,' and afterwards edited 'The History of Tamerlane,' written by Margat, a brother Jesuit, and printed at Paris in 1739, 2 vols. 12mo. Shortly after his superiors confided to him the continuation of 'The History of the Anglican Church,' of which work he had already published eleven volumes and was completing the twelfth, when he died at Paris on the 16th of April 1762, in the fifty-fourth year of his age.

Among all who have done honour to the Society of Jesus, both by their moral character and their literary talents, Father Brumoy stands pre-eminent. With the study of literature he combined that of the mathematics, which he taught from 1725 to 1730, and it is to this circumstance that we are indebted for his discourse 'Upon the Utility of Mathematics as connected with the Belles Lettres.' His works consist of—'A Life of the Empress Eleonora,' Paris, 1723, 12mo, imitated from the Latin of Father Ceva; 'An Apology for the English and French, or Remarks upon the Work (by Muralt) entitled "Letters upon the English and French,"' 1726, 12mo; 'Review of the Poem upon Grace,' Brussels, Paris, 1723, 8vo; six volumes in 12mo, containing 'Translations and Analyses of the Greek Tragedies, accompanied by Discourses and Remarks upon the Greek Theatre,' Paris, 1747, a work which, although highly and justly esteemed for the great learning which it exhibits, is deficient in simplicity and precision of style, and even occasionally betrays the want of a perfect comprehension of the original text: these errors have been rectified in the editions of 1785–89, 13 vols. in 8vo; 'A Collection of Various Pieces in Prose and Verse,' 14 vols., Paris, 1741, including discourses, epistles, tragedies, comedies, 'Isaac,' 'Jonathan,' the 'Coronation of David,' 'Pandora's Box,' 'Plutus,' &c. &c. In addition to the above works, Brumoy made a new edition of J. Morgudi's 'Traites upon French Poetry,' Paris, 1724, 12mo. He also translated two orations of Father Porée, one upon public exhibitions, and the other upon the question whether the *monarchical* or the *republican* form of government was best fitted for forming the heroic character. Brumoy completed, in conjunction with Father Rouillé, 'The Revolutions of Spain,' by Father d'Orleans, Paris, 1734, 3 vols. 4to; assisted in compiling the 'Memoirs of Trevoux,' and reviewed the 'History of Rienzi' of Father du Cerceau, Paris, 1733, 12mo.

BRUN, CHARLES LE, the son of a sculptor of Scotch extraction, was born at Paris in the year 1619. The singular merit of his juvenile sketches attracted the attention of the Chancellor Seguier, who undertook the charge of his education, and placed him, at the age of eleven, with Vouet, and afterwards with Nicholas Poussin. He remained in Italy six years, studying the antique and the works of the old masters. He assiduously cultivated a knowledge of history and costume. On his return to Paris in 1648 he was received into the Academy. From this time employment and honours poured in upon him. Having attained the highest rank in the Academy at Paris, he was appointed principal painter to the king, was invested with the order of St. Michel, and was ultimately named Prince of the Academy of St. Luke at Rome, although absent, and a foreigner. A change in the ministry, which had so long favoured Le Brun, carried political animosities into the painter's studio, and, although still honoured by the countenance of the king, he died of chagrin and vexation at the continued annoyances which he met with at court, in 1690, leaving a widow, but no children.

Le Brun was an industrious and a learned artist; his drawing is bold and correct, and his design often replete with life and magnificence; but the passion expressed in his countenances is neither refined nor elevated, and the grandeur of his pictures belongs rather to the physical than the moral development of the subject. His groups are well arranged and natural; the action of individual figures is also natural; and yet both are frequently injured by an affectation of grace in some part or other. His works are principally at Paris. The 'Battles of Alexander,' which are so well known by engravings, are very characteristic specimens of his style, and would alone entitle him to be reckoned among the more eminent painters of the secondary rank. The 'Passage of the Granicus,' and the 'Battle of Arbela,' are works of great power and feeling. His defects of colouring have been partly attributed to his neglecting to visit Venice; but his excusers have forgotten that Giorgione and Titian had no Venice to seek fine colour in. His facility in drawing was such, that having procured the delay for a moment of the car which conveyed the Marquise de Brinvilliers to execution, in "four strokes of the pencil," says his French biographer, he sketched a likeness. With the brush he was equally ready. Louis XIV., who daily spent two hours in watching his progress while painting the 'Family of Darius' at Versailles, desired him to paint at once the head of Parysatis, which he executed with so much success as to extort an expression of delight from Bernini, who was not among the number of his friends.

BRUNCK, RICHARD FRANÇOIS PHILIPPE, was born at Strasbourg on the 30th of December 1729. He was educated by the Jesuits in the college of Louis le Grand at Paris. He entered early into the engagements of active life, and was for some time employed as military commissary. He had attained his thirtieth year when, during a residence in winter-quarters at Giessen, in one of the campaigns in Hanover, he happened to lodge in the house of a professor, who revived in him a love for letters. On his return to Strasbourg he devoted himself to study, to which the possession of an easy fortune allowed his entire application; and the professor of Greek, whose lectures he attended, being a profound grammarian, Brunck quickly became well versed in that language. No sooner did he feel his own strength than he distinguished himself by his criticisms; but his emendations, which are sometimes happy, are always hazardous; and acting under a confirmed belief that the errors of the text in all cases proceeded from the fault of copyists, he corrected with a more 'slashing hook' than even Bentley

himself ventured to employ. His first work was an edition of the Greek Anthology, published under the title of 'Analecta veterum postarum Græcorum,' Strasbourg, 8 vols. 8vo, 1776; which contains, besides the epigrams usually given in an anthology, several of the minor Greek poets, Anacreon, Callimachus, &c. entire. Anacreon appeared in a separate edition in 1778. In 1779 he edited some Greek plays, which excited a great desire for the appearance of a complete edition of Sophocles which he had announced. His favourite author, Apollonius Rhodius, employed him in 1780, and was followed in 1783 by an Aristophanes, which superseded all its predecessors, and has since in turn been entirely superseded by other editions. In the year following he prepared the fragments of Theognis, Solon, Simonides, and other didactic and moral Greek poets, under the title of 'Ἡθικὴ Ποιησις,' sive 'Gnomici Poetæ Græci,' 1 vol. 8vo. In 1785 he issued an edition of Virgil, in which he was by no means sparing of the established text. His 'Sophocles' at length attracted the attention of scholars in 1786, and may be considered as the work upon which his reputation is chiefly founded. Subsequent critics however have found it necessary to restore the manuscript readings which Brunck had replaced by his conjectures. It appeared at first magnificently printed in 2 vols. 4to; a limited impression in 3 vols. 8vo, followed in 1788, and there is a third edition, under his own eye, in 4 vols. 8vo, in 1786–89. He prepared a copy of Plautus for the Bipont edition of the classics in 1788. On the breaking out of the Revolution he embraced the popular side with ardour; and notwithstanding Louis XVI, in return for a presentation copy of the quarto Sophocles superbly printed on vellum, had conferred on him a pension of 2000 francs, Brunck enrolled himself among the earliest members of a revolutionary society established at Strasbourg. During the Reign of Terror he was imprisoned at Besançon, and did not obtain his release till the fall of Robespierre. Reverses of fortune, produced by the public troubles, obliged him in 1791 to dispose of part of his library, and in 1801 of the remainder. His cultivation of Greek literature ceased with the loss of the first portion of his books; and he afterwards confined his labours to the Latin classics. In 1797 he printed an edition of Terence in quarto; and at the time of his death, which occurred on the 12th of June, 1803, he was engaged in superintending an edition of Plautus. His diligence was most remarkable. Instead of referring the printer to any former edition, he always transcribed the entire text of the author upon whom he was engaged. Thus, he twice copied Aristophanes, and Apollonius at least five times. Many of these copies, together with several other manuscript papers, are still preserved in the Bibliothèque Royale at Paris. Brunck was a member of the Academy of Inscriptions and Belles-Lettres, and also of the French Institute.

BRUNE, MARSHAL, was born at Brives, in the department of Corrèze, in 1736. His father was an advocate, and Brune studied the law at Paris. When the revolution broke out he entered the army, and served under Dumourier. He was quickly promoted, and was general of brigade in the army of the interior under Bonaparte in 1795. The following year he joined the army of Italy, and served in the division of Massena. After the peace of Campoformio he was sent by the Directory as commander-in-chief of the army which invaded Switzerland. After the fall of Bern he took the command of the army in Italy, and obliged the king of Sardinia, who was the forced ally of France, to deliver into his hands the citadel of his own capital, Turin. Brune was next sent into Holland, where in 1799 he defeated the Russians on the Helder, and obliged the Duke of York and the English army to evacuate the country. In the following year he returned to Italy, when, in conjunction with Macdonald, he forced the passage of the Mincio in December 1800, and afterwards concluded an armistice with the Austrian general Bellegarde, preparatory to the peace of Lunéville. Brune, on his return to Paris, was appointed councillor of state, and was afterwards sent by Bonaparte as ambassador to Constantinople, where he succeeded in establishing new relations between France and the shah of Persia. He returned to France in 1805, being appointed one of the marshals of the French empire. He commanded for awhile the camp at Boulogne. Being sent to Hamburg in 1807 as governor of the Hanseatic towns and commander of the reserve of the grand army, he had a long interview with Gustavus, king of Sweden, near Anklam, in Pomerania, which seems to have given rise to suspicions on the part of Napoleon. In the surrender of the island of Rugen by the Swedish general Toll, agreeably to a convention with Marshal Brune, the latter omitted in the text of the convention the titles of the Emperor Napoleon, and mentioned simply the French army and the Swedish army as parties to the agreement. Napoleon, who was highly offended, sent Brune his recalculation of his conduct "a scandal never seen since the time of Pharamond." From that time Brune lived retired and in disgrace, till Napoleon's first abdication, when he made his submission to Louis XVIII, who gave him the cross of St. Louis. During the 'Hundred Days' he joined Napoleon, who sent him to command a corps of observation on the Var. After the battle of Waterloo he proclaimed the king, and leaving his corps, was travelling from Toulon to Avignon on his way to Paris, when he found himself in the midst of the reaction that took place in the southern provinces at that time. A furious mob forced its way into the inn at Avignon where Brune was, and after insulting him, and upbraiding him with having been a terrorist, and having taken part in

the massacres of August and September 1792—to which Brune calmly replied that “he was at that time fighting on the frontiers against the enemies of his country”—they shot him in the room of the inn as he was standing with his back turned to the fire-place. His body was then dragged through the streets, and thrown into the Rhone.

BRUNEAUT, the younger daughter of Athanagildus, king of the Visigoths of Spain, married in 565 Siegbert, the Frankish king of Metz, or Austrasia. Her eldest sister Galsuinda, married Chilperic, Siegbert's brother and king of Soissons. Galsuinda was soon after murdered by Fredegonda, the mistress of Chilperic, who then married her. Bruneaut, determined to avenge her sister's death, induced Siegbert to make war upon his brother, and Chilperic only obtained peace by giving up part of his states. Other wars took place between the brothers at the instigation of their wives, and in the end Chilperic, having lost his territories, was besieged by Siegbert in the town of Tournai, when two assassins, hired by Fredegonda, murdered Siegbert in his camp, 575. Upon this Chilperic came out of Tournai, and made Bruneaut and her son Childebert prisoners. Meroveus, son of Chilperic, falling in love with Bruneaut, enabled her to escape into Austrasia, and Meroveus was in consequence murdered by Fredegonda. Chilperic himself was soon after murdered, 584. Bruneaut and her son Childebert now made war upon Fredegonda, who at last was obliged to resign her authority, 585. In 596 Childebert died, leaving his sons Thierry and Theodebert II. under the guardianship of his mother Bruneaut. From this time a long struggle began between the nobles of Austrasia and Bruneaut, who wished to reign without control, which lasted nearly twenty years. Thierry and Theodebert made war against each other, and Bruneaut sided with the former, who took his brother prisoner. Theodebert was murdered at Cologne, as some historians report, by order of Bruneaut. Clotarius, the son of Fredegonda, took advantage of these dissensions, and on the death of Thierry in 615 seized upon Austrasia and Burgundy, and thus reunited under his sceptre the whole kingdom of the Franks. Bruneaut, being taken prisoner by Clotarius, was condemned to a most horrible death. After suffering for three days all kinds of insults, she was tied to a horse's tail, and thus driven about till she was dead, when her body was burnt and the ashes scattered to the winds. Her old enemy, Fredegonda, had died many years before, in 597. The true character of Bruneaut has been the subject of much controversy. Several of her contemporaries, such as St. Gregory of Tours and Pope Gregory the Great, speak highly of her; while those who asperse her memory, such as Fredegarius, Aimoin the monk, &c., lived at least a century after her. Bossuet maintains that she was sacrificed to the ambition of Clotarius, and probably also to the rancour of the nobles of her own dominions. A monument was raised to her in the church of St. Martin of Autun. She is said to have promoted the preaching of Christianity in England.

BRUNEL, SIR MARK ISAMBARD, was born on April 25, 1769, at Hacqueville, in the department of L'Eure, a few miles from Rouen. His parents, who were respectable agriculturists, had four children, of whom he was the eldest. From his earliest boyhood he showed a decided inclination for mechanical pursuits; and on being sent to the seminary of St. Nicaise at Rouen, preferred the study of exact science, mathematics, mechanics, and navigation, to the classics; and during the vacations, which he passed at home, he was never happier than when busying himself in a joiner's workshop. He familiarised himself with the tools and some of their applications, and when but twelve years old was already a proficient in turning and in the construction of models—ships, machines, and musical instruments. All this constructiveness was little gratifying to his father, who would have preferred to see his son in the church or in a merchant's office.

On leaving the seminary at the age of fifteen, Brunel passed some time in the family of M. Carpentier, a friend of his father, at Rouen; and went through a regular course of lessons in drawing, perspective, and hydrography. He took so much interest in the astronomical part of his nautical studies, that on his visits home he set himself to observe the stars, greatly to the astonishment of the villagers. He made an octant, guided by the one belonging to his tutor, and a treatise on navigation; and finding its results unsatisfactory, he studied the instrument, and constructed another of ebony, which enabled him to take trustworthy observations.

Influenced perhaps by M. Carpentier, who had been a trading captain, Brunel enlisted as a sailor in 1786, from which date up to 1793 he made several voyages to the West Indies. He was remarked for the skill, intelligence, and good humour with which he discharged a seaman's duties; won good opinions from everybody; and astonished his companions by using instruments of his own construction, and by making a pianoforte while the ship once lay at Guadaloupe. During a visit to Paris after his last voyage in 1793, Brunel ventured to raise his voice in one of the political clubs against the ferocious doctrines there actively promulgated, and thereby endangered his personal liberty; but, obtaining permission from the minister of marine, he escaped to America, hoping to find employment for his abilities in a new country.

Brunel had not been long in New York when he joined a party of his countrymen who were about to explore the wild and unsettled regions bordering on Lake Ontario, to survey the lands of a French company. The operations were carried on for two months, during which the party, seven persons in all, Brunel being leader, encamped in the woods, finding a charm in the adventurous nature of their work.

In 1794 Brunel was appointed, conjointly with one of his fellow-explorers, to survey for the canal which now connects Lake Champlain with the river Hudson at Albany. With this task, in which his fertility of invention and readiness in overcoming difficulties were strikingly manifested, his career as engineer may be said to have begun. When designs for the houses of congress were called for he sent in one which, though acknowledged as the best, was rejected as too costly and magnificent for simple republicans. He afterwards acted professionally as an architect, and among other works built and fitted up one of the principal theatres of New York. It has since been burned down. He was employed on the forts erected for the defence of the city, and in the establishment of an arsenal and foundry, where his ingenious contrivances for boring cannon and moving large masses of metal with facility, showed how successfully he could bring new ideas to bear on the work immediately in progress.

In the family of his friend Carpentier at Rouen, Brunel had become acquainted with Miss Sophia Kingdom. This acquaintance, and a desire to work among the scientific engineers of Europe, drew him to England. He married shortly after his arrival; and to initiate his career in this country, produced an autographic machine designed to copy drawings, maps, and written documents. Soon afterwards he submitted to government a plan for making block-pulleys for ships by machinery, and was employed to carry it into execution in the dockyard at Portsmouth. The ingenuity of this contrivance is not less remarkable than the accuracy and economy with which its operations are performed. It comprises, so to speak, sixteen different machines, all driven by the same steam-power; seven of which cut and shape logs of elm or ash into the shells of blocks of any required size, while nine fashion stems of lignum-vitæ into pulleys or sheaves, and form the iron pin, which being inserted the block is complete. Four men with this machine turn out as many blocks as four-score did formerly, and at less cost. The supply has never failed, even in time of war, though 1500 blocks are required in the rigging of a single ship of the line. Results so satisfactory produced a corresponding liberality on the part of government, and the inventor was rewarded beyond his expectations. The steam saw-mill in Chatham dockyard was erected by Brunel. The success of the circular saws there introduced led him to further improvements, by which in the cutting of veneers double the usual number could be obtained. He invented a machine for making seamless shoes for the army, which after two years' trial was given up from an economical motive. Among other inventions may be enumerated a machine for making wooden boxes; for nail-making; to twist, measure, and form sewing-cotton into hanks; for ruling paper; a contrivance for cutting and shuffling cards without the aid of fingers, produced in reply to a playful request of Lady Spencer's; a hydraulic packing-press; new methods and combinations for suspension-bridges; and a process for building wide and flat arches without centerings. He was employed in the construction of the first Ramsgate steamer, and was the first to suggest the advantages of steam-tugs to the Admiralty. He constructed a machine for using carbonic acid gas as a motive power, and, assisted by his son, carried on a series of experiments for more than ten years in the endeavour to bring it to perfection. Most of the mechanical difficulties were overcome; but although an intense power was obtained, and with a very low temperature, the economical advantages as compared with the cost of the vapour of water, did not appear to be such as to compensate for the increased cost of the machinery, and the unusual difficulties in its use.

Brunel's works of engineering construction are to be found in different parts of the United Kingdom. That by which he is most popularly known is the Thames Tunnel. This great work, commenced in March 1825, was successfully accomplished notwithstanding the accidents, obstacles, and overwhelming disasters that hindered its progress. The water broke in more than once, and flooded the whole of the excavations. Brunel however proved himself equal to each emergency, and his persevering genius at length triumphed. The tunnel was opened to the public in March 1843.

Brunel was elected a Fellow of the Royal Society in 1814, and was chosen on the council, and appointed vice-president in 1832-33. He was a member also of other scientific societies and institutions. The honour of knighthood was conferred on him in 1841. With advancing years he became subject to a disease of which he had felt the first approaches while completing the tunnel, and he died in December 1849, having nearly reached the venerable age of eighty-one. His life is an example of what may be accomplished by genius seconded by industry. The high character of his inventions, their essential usefulness, give them especial claims to consideration. In the words of a French writer, these have gained for him “the celebrity that now distinguishes his name, the admiration of men of learning and of labour, and the affectionate remembrance of all those who, fortunate enough to know him personally, could appreciate his simple and noble character.”

(*Travaux de l'Acad. de Rouen; Proc. Roy. Soc.; Proc. Inst. Civ. Eng.; Quarterly Review, &c.*)

*BRUNEL, ISAMBARD KINGDOM, son of the constructor of the Thames Tunnel, was born at Portsmouth in 1806, when his father was engaged in erecting the block-machinery for the dockyard. He was taken while quite young to France, and finished his education at the College Henri IV. at Caen. He commenced practical engineering in

1826, under his father at the Thames tunnel, of which work he was resident engineer. Being the last to quit his post, he was more than once in danger from the frequent breaking-in of water, during the progress of the excavations, and only saved himself by swimming. The final irruption in 1828, when one man was drowned, surprised him 600 feet from the end of the tunnel: he was borne along by the stream, and rose to the surface near the top of the shaft.

Mechanical and railway engineering, and the construction of machinery for locomotives and steam navigation, have been the special objects of Mr. Brunel's study. For ten years he laboured in the experiments instituted by his father to employ carbonic acid gas as a motive-power. He was designer and civil engineer of the 'Great Western,' the first steamship built to cross the Atlantic; of the 'Great Britain,' of other large vessels; and of the huge iron ship now being built at Millwall for the Eastern Steam Navigation Company. He has been engaged on the docks at some of our out-ports; among which the most important are, the improvement of Bristol docks, Cardiff, and the construction of the Old North Sunderland Dock.

Mr. Brunel was appointed engineer to the Great-Western railway in 1833; and under his direction have all the tunnels, bridges, and other works been constructed on that line and its branches and connections—including the Bristol and Exeter, South Devon, West Cornwall, Birmingham and Oxford, and others. Noticeable among the bridges on these lines are, that across the Thames at Maidenhead, for the largest and flattest of brick arches—that at Chepstow for the great difficulties overcome in crossing the Wye—and the bridge of the Cornwall railway now in course of erection over the Tamar, which is as near as may be, from coincidence of natural causes, of the same span and height as the Britannia bridge, and has a central pier rising from a depth of 80 feet of water: the deepest yet encountered in railway engineering.

The Hungerford Suspension foot-bridge, across the Thames at London, was also erected by Mr. Brunel. It has the longest span in England. He took part in the floating and raising of the Conway and Britannia tubular bridges: operations not less remarkable for their novelty and magnitude, than for the friendly co-operation of eminent engineers by whom they were successfully accomplished. He set out and conducted the works of the Tuscan portion of the Sardinian railway; and had the entire charge of establishing and fitting the Renkioi hospitals on the Dardanelles, necessitated by the late war with Russia. These hospitals will accommodate 3000 patients; and as regards comfort, artificial ventilation, warming, baths, &c., and special adaptation to their purpose, they are not excelled by the best London hospitals. An abundant supply of water is laid on from the hills, and railways afford easy carriage from the landing-places on the shore into the several wards.

Mr. Brunel was elected a Fellow of the Royal Society in 1830, and was chosen on the council in 1844. He is a Vice President of the Institution of Civil Engineers, and of the Society of Arts; a Fellow of the Astronomical, Geological, and Geographical Societies, and Chevalier of the Legion of Honour.

BRUNELLESCHI, FILIPPO. Had this artist no other claims to notice than those arising from a single work, the dome of Santa Maria del Fiore, or the cathedral at Florence, is one of those memorable achievements which suffice to perpetuate a name. Brunelleschi was born at Florence, in 1377, and was descended from a family which had produced several eminent individuals. His father, who followed the profession of notary in that city, designed to educate him either for the same, or for the medical science. Filippo was accordingly initiated in the studies which would prepare him for either of those pursuits. But though not deficient in application, the natural bias of his mind diverted his faculties into another direction; and he at length prevailed upon his father to place him with a goldsmith. At that period the goldsmith's art comprised every branch of working in metals for ornamental purposes, and was intimately allied with design generally, and with sculpture in particular; in fact, to the latter art it frequently served as a kind of apprenticeship, as happened in Brunelleschi's case. Led on both by his own talent and the intimacy he had formed with the celebrated Donatello, he applied himself to sculpture, and with such success that he was admitted as one of the competitors in the designs for the bronze gates of the Baptistery at Florence.

After this he began to think of signalling himself in architecture, and as Donatello was about to proceed to Rome, resolved on accompanying him thither for the purpose of acquainting himself with the ancient buildings in that city. Here he perceived what a career was opened to him who should endeavour to revive a style of architecture altogether so different from that which had prevailed in his native place for so many centuries. In 1407 he returned to Florence, where it was proposed to complete the structure of Santa Maria, which had been commenced by Arnolfo di Lapo two or three years before his death, which happened in 1300, and which was afterwards carried on by Giotto. With this view the most eminent architects were invited from all parts to devise in what way it would be practicable to cover the spacious octangular area between the four branches of the cross. How it was originally intended to effect this, in accordance with the other parts of the edifice, does not now appear. Owing to the magnitude of the space to be covered by a single vault, very formidable difficulties presented themselves, and the possibility of doing it was

questioned; for with the exception of the only dome of Santa Sophia, the diameter of which is something less, the only example which could in any way serve as a guide were St. Mark's at Venice, and the cathedral at Pisa. While the rest were engaged in fruitless debates, Brunelleschi was assiduously employed in maturing his plans, models, and scheme of operations, and contented himself with pointing out the hazardlessness of a project which he had assured himself he should be able to accomplish. At length Brunelleschi's model, explaining the whole mechanism and construction of his intended cupola, was publicly exhibited, and convinced every one of his success. He was commissioned to commence the work, but it was soon determined to associate with him Lorenzo Ghiberti as a colleague. This arrangement he resented in every possible way, and ultimately Ghiberti was removed, and Brunelleschi constituted sole architect. He now gave all his energies to the work, and had the satisfaction of seeing this chef-d'œuvre terminated before his death.

While in size this noble cupola yields very little to that of St. Peter's (and being on an octangular plan its diameter as measured from angle to angle is somewhat more), it is infinitely more commanding, being so very much larger in comparison with the altitude and other dimensions of the mass on which it is placed. It further suggests the idea of greater amplitude of space within, and has less the appearance of being a separate and independent structure standing upon the lower one; besides which, its simplicity and expanse, if they do not perfectly accord with, are rendered not the less striking by, the fanciful and somewhat minute style of the older part of the fabric. Although this single structure was his most memorable work, it was by no means the sole one of any magnitude which he executed. Among his other productions may be mentioned the church of San Lorenzo at Florence, and the celebrated Pitti Palace in that city. The latter of these, which was afterwards continued and completed by Ammaneti, is chiefly remarkable for its severe simplicity and massiveness. Brunelleschi was also employed on several works at Mantua and in its vicinity. In his private character he is said to have been a man of a noble and generous spirit; and that as an architect he was enthusiastic in devotion to his art, there can be little doubt. He died in the year 1444 (that of Bramante's birth), and was buried with much ceremony in Santa Maria del Fiore, his remains resting within that edifice which he had consummated by his skill, and which will perpetuate his name.

BRUNI, LEONARDO, commonly designated **ARETINO**, was born at Arezzo, of humble parents, in 1369. He studied Latin and Greek at Florence, under the learned Coluccio Salutati, and afterwards went to Rome, where he obtained the post of secretary in the papal chancery [BRACCIOLINI], under Innocent VII. In a tumult, which took place at Rome against the papal government, he was assailed by the mob, and escaped with difficulty to Viterbo, where the pope took shelter. Bruni continued in his office, under Innocent's successors, and he attended John XXII. in 1414 to the Council of Constance. After the deposition of that pope, Bruni returned to Florence, where he chiefly resided for the remainder of his life. In 1427 he was appointed chancellor to the republic, an office which he retained till his death. He was also sent by the state on several missions. When the Emperor John Palæologus and the Greek patriarch came to attend the Council of Florence, Bruni harangued them in Greek, in the name of the republic. He died in 1444, and was buried, with great honours, in the church of Santa Croce, where he is represented on his monument reclining on a bier with the volume of his 'History of Florence' on his breast, and a crown of laurel round his head, that being the manner in which he was buried by order of the community. Bruni was commonly styled **L'Aretino**, from the place of his birth, which circumstance has led some travellers, and Mme. de Staël among the rest, to mistake his monument at Santa Croce for that of the obscene writer Pietro Aretino, who died and was buried at Venice. (Valéry, 'Voyages en Italie'.)

Bruni wrote a great number of works, many of which are now forgotten, and have never been printed. Méhus gives the title of sixty-three of them in his biography of Bruni, prefixed to the edition of his 'Epistolæ,' 2 vols. 8vo, Florence, 1741. Among his Latin works are a 'History of the Goths,' compiled in great measure from Procopius; a commentary on the Peloponnesian war, a book on the first Punic war, to fill up the void of the lost books of Livy, a history of his own times from the schism of Urban VI. and Clement, in 1387, till the victory of Anghiari by the Florentines, in 1440; and the 'Historia Florentina.' This last, Bruni's principal work, begins from the foundation of Florence, and is carried down to the year 1404. It was printed at Strasbourg, folio, 1610, and was also translated into Italian by Donato Acciajuoli, Venice, 1476, and Florence, 1492. The opinion of Machiavelli on the Florentine histories of his two predecessors, Bruni and Poggio, is quoted under BRACCIOLINI. Bruni translated into Latin 'Plato's Epistles;' the 'Politics, Ethic, and Economic of Aristotle,' several speeches of Demosthenes and Æschines; and made numerous other translations from the Greek. He wrote in Italian 'Vite di Dante e del Petrarca,' Florence, 1672, which are not among the best biographies of these two illustrious men; 'Vita di Cicerone,' which he first composed in Latin, and afterwards turned into Italian, printed for the first time by Bodoni, Parma, 1804; and 'Novella di Messer Lionardo d'Arezzo,' inserted among the 'Novelle di Varj Autori,' and published again separately at Verona, 1817.

BRÜNINGS, CHRISTIAN, was born in 1736 at Neckerau in the palatinate. He early applied himself to the study of hydraulics, and ultimately became one of the first hydraulic engineers of his time. The States-general of Holland having appointed him in 1769 inspector-general of the rivers and canals, he effected many useful works, drained several tracts of land, repaired the dykes of the Haarlem Meer, deepened the bed of the Oberwasser, and altered the course of the Panneerden Canal, which communicates between the Waal and the Rhine. In the course of these operations he invented an instrument to measure the rapidity of streams, and to determine the same at any depth. He explained the principles and the use of this invention, which goes by the name of the 'Bruningsche Strommesser,' in a treatise which was translated from the Dutch into German under the title of 'Abhandlung über die Geschwindigkeit des fließenden wassers, und von den mitteln dieselbe auf allen tiefen zu betimmen,' 4to, Frankfurt, 1798, with plates, and an introduction by Wiebeking, in which the great services rendered by Brünings to Holland are enlarged upon. Brünings died in 1805. Several scientific essays by Brünings are inserted in the 'Memoirs of the Haarlem Society of the Sciences.'

There is another CHRISTIAN BRÜNINGS, a native also of the palatinate and a professor, who wrote a book on the 'Antiquities of Greece,' Frankfurt, 1734, which was published again some years after with an appendix on the Roman Triumphs; and a 'Compendium of Hebrew Antiquities,' published in 1763. He was born in 1702, and died in 1763.

BRUNO, SAINT, born at Cologne in 1051, studied at Paris, and afterwards became a canon of Rheims, and director of the school or seminary of that diocese; but being disgusted with the vexations and misconduct of the Archbishop Manasses, he took the resolution of leaving the world and retiring to a solitude. He repaired first to Saise Fontaine, in the diocese of Langres, and afterwards to a mountain near Grenoble, in 1084, where being joined by several other ascetics, he built an oratory and seven cells, separate from each other, in imitation of the early hermits of Palestine and Egypt. Bruno and his monks cultivated the ground in the neighbourhood of their cells, and lived upon the produce, and upon what the charity of pious persons supplied them with. This was the origin of the order of the Carthusians, and of the splendid convent afterwards built on the spot, which is called La Grande Chartreuse. Bruno adopted the rules of St. Benedict, but afterwards Gui, the fifth general of the order, wrote distinct regulations for it. Pope Urban II., who had studied under Bruno at Rheims, insisted upon his going to Rome, where he stood in need of his advice. Bruno after a time becoming weary of the papal court, retired to a solitude in Calabria, where he founded another convent of his order, in which he died in 1101. He was canonised in 1514. Several commentaries and treatises have been attributed to him, which were written however by another St. Bruno Signy of Asti, a contemporary of the former, and abbot of the Benedictines of Monte Casino. Of St. Bruno the Carthusian there are two letters written from Calabria, one of which is addressed to his brethren of the Grande Chartreuse, near Grenoble. (Bollandi, *Acta Sanctorum*; and *Dict. Univ. Historique*.)

BRUNO, GIORDANO, was born at Nola in the kingdom of Naples, about the middle of the 16th century. He entered the order of the Dominicans, but being of an inquisitive turn of mind, he began to express doubts on some of the dogmas of the Roman Church, the consequence of which was that he was obliged to run away from his convent. Upon this he went to Geneva, where he spent two years, but soon incurring the dislike of the Calvinists, on account of his general scepticism on religious matters, he removed to Paris, where he published in 1582 a satirical comedy, 'Il Candelajo,' in ridicule of several classes and professions in society; this comedy was afterwards imitated in the French anonymous play, 'Bonifacio et le Pédant,' Paris, 1633. Bruno gave lectures on philosophy, in which he openly attacked the doctrines of the Aristotelians, which had already been combated in France by Ramus and Postel. Having made himself many enemies among the professors of the Paris university, as well as among the clergy, he went to England in 1583, where he enjoyed the protection of Castelnau the French ambassador, and gained the protection of Sir Philip Sidney, to whom he dedicated his 'Spaccio della bestia trionfante,' an allegorical work against the court of Rome, with the 'Cena delle Ceneri,' or 'Evening Conversations on Ash-Wednesday,' a dialogue between four interlocutors. He also wrote 'Della causa, principio et uno,' and 'Dell' infinito universo e mondi,' in which he developed his ideas both on natural philosophy and metaphysics. His system is a kind of pantheism: he asserted that the universe is infinite, and that each of the worlds contained in it is animated by the universal soul, &c. Spinoza borrowed some of his theories from Bruno. Buhle, in the 'History of Modern Philosophy,' gives an exposition of Bruno's system; see also 'Jacobi's Preface to the Letters on the Doctrine of Spinoza.' In his next work, 'Cabala del caval Pegaseo con l'aggiunta dell' asino Cillenico,' he contends that ignorance is the mother of happiness, and that "he who promotes science increases the sources of grief." Bruno's language is symbolic and obscure; he talks much about the constellations, and his style is harsh and inelegant.

After remaining about two years in England, during which he visited Oxford, and held disputations with some of the doctors of that

university, Bruno returned to Paris in 1585. In the following year he went to the university of Marburg in Germany, where he was matriculated, without however obtaining leave to give lectures. Having quarrelled with the rector on this account, he proceeded to Wittenburg, where he was received professor, and published in 1587, a treatise, 'De Lampade combinatoria Lulliana.' At Wittenburg Bruno was invited to become a member of the Lutheran communion, which he seems to have declined; upon which he proceeded to Brunswick, where he was well received by the Duke Julius, who placed him at Helmstadt as teacher. On the duke's death in 1589, Bruno repaired to Frankfurt, where he wrote several Latin treatises explanatory of his metaphysics. At Frankfurt on a sudden he resolved, from what motive is unknown, to return to Italy, a step which was greatly censured by his friends. He went first to Padua in 1592, where he remained two years, and then to Venice, where he was arrested by the ecclesiastical inquisition, and transferred to Rome in 1598. He remained two years in the prisons of the holy office, when the inquisitors having in vain attempted to bring him to recant his opinions, at length on the 9th February, 1600, sentence was passed upon him as a confirmed heretic, and he was burnt alive on the 17th February. Bruno's works were collected and published together by Dr. Wagner, with a life of the author: 'Opere di Giordano Bruno Nolano ora per la prima volta raccolte e publicate,' 2 vols. 8vo. Leipzig, 1830; the Latin writings of Bruno were published by M. Græfer at Paris in 1834, 'Jordani Bruni Nolani scripta quæ latine redegit omnia,' 1 vol. 8vo.

BRUNSWICK, HOUSE OF. The house of Brunswick, one of the oldest families in Germany, a branch of which is now seated on the British throne, derive their descent from Albert Azo I., margrave of Este in Italy, who died in 964. His great grandson, Albert Azo II. of Este, who held the sovereignty of Milan, Genoa, and other demesnes in Lombardy, had for his first wife Kunigunda, daughter of Guelph II., who died in 1030, and was of the blood of the Altorfs, counts of Swabia. His son by this marriage, Guelph the First (more properly the Fourth), became possessed of the dukedom of Bavaria, and founded the junior house of Guelph, to which the house of Brunswick traces its origin. This prince, who inherited the whole of the possessions of the Guelph family from his maternal uncle, died in 1101. Guelph II. (or V.), his eldest son, married in 1089 the celebrated Countess Matilda, but was divorced from her some years afterwards, and died childless in 1119. His inheritance devolved to his brother, Henry the Black, whose union with the daughter and heiress of the last duke of Saxony brought him a considerable accession of territory in Lower Saxony. This prince was succeeded in 1125 by Henry the Proud (or Magnanimous), his son, who, by intermarriage with the only daughter of Lotharius II., heiress of the vast possessions of the Billings, added to the dukedoms of Bavaria and Austria, Brunswick, and the duchy of Saxony, by which acquisitions he became the most powerful sovereign in Germany, and extended his dominion from Italy to the shores of the Baltic. He died in 1139, after the ban of the empire had been fulminated against him for laying violent hands on the imperial insignia, and endeavouring to usurp the imperial dignity. He was followed by his son, Henry the Lion, who, having seized upon Holstein and Mecklenburg, was stripped by the ban of 1179 of Bavaria, Saxony, Austria, and other possessions in the south, and allowed to retain only his domains in Lower Saxony, consisting of Lüneburg, Kalenberg, Göttingen, Grubenhagen, and the duchy of Brunswick-Wolfenbüttel. This was the death-blow to the supremacy of the Guelphs. As Henry's eldest son was become, by marriage, count palatine, and his second son, Otho, had died on the imperial throne in 1218, William, a younger son, succeeded on Henry's death to the Brunswick inheritance; and Otho, a son of this prince, became the founder of the present dynasty, by virtue of his solemn investiture with the territory of Brunswick as a fief of the empire in 1235, on which occasion he was recognised as the first Duke of Brunswick. His son Albert succeeded him; and John, another son, who died in 1277, founded the elder branch of the Lüneburg house, which became extinct in the person of William of Lüneburg in 1369. In this way, Magnus 'of the Chain,' a great grandson of Albert, who died in 1373, united the possessions of each dynasty, and became the joint ancestor of what are termed the 'intermediate lines' of Brunswick and Lüneburg. Of these two lines that of Brunswick, which in 1503 had split into the Kalenberg and Wolfenbüttel branches, became extinct with Duke Frederic Ulrich in 1634.

Ernest the Pious, or the Confessor, who died in 1546, inheriting the principalities of Brunswick and Lüneburg as surviving representative of the intermediate line, was the founder of both branches of the existing dynasty; but the inheritance was again divided at his decease, by which partition Henry, his eldest son, established the line of Brunswick-Wolfenbüttel in 1569, and William, his younger son, established the line of Brunswick-Lüneburg. A descendant of the last-mentioned prince, Duke Ernest Augustus, was raised to the dignity of ninth elector of the empire in 1692; and George Lewis, a son of Ernest Augustus, succeeded to the crown of Great Britain in 1714, by virtue of his descent on the female side from James I.

Augustus, who acquired some celebrity as a writer under the designation of Gustavus Selenus, removed his residence from Hitzacker to Wolfenbüttel, where he founded the great library in that town. At

his decease, in 1666, he left behind him three sons, the youngest of whom having had the sovereignty of Bevern assigned to him founded the line of that name; his elder brothers became joint rulers of the remaining territories of Brunswick-Wolfenbüttel, and having in 1671 put an end to the extensive privileges enjoyed by the town of Brunswick, compelled the citizens to recognise them as their masters. Upon the death of the elder of the two brothers, Anthony Ulrich, who built the town of Salzdahlen, became sole ruler. On his death in 1714, he left two sons behind him, Augustus William, who fixed his seat of government at Wolfenbüttel, and Lewis Rudolphus, who made Blankenburg his capital, but afterwards removed to Wolfenbüttel, the decease of Augustus having reunited the disjointed principalities in 1731. As Lewis had no male heirs, Ferdinand Albert, of the line of Bevern, succeeded to the dukedom of Brunswick in 1735. Lewis Ernest, the third son of this prince, held the rank of field-marshal in the service of the Dutch states from 1759 to 1766, during which period he was captain-general of the United Provinces, and acting guardian of the hereditary stadtholder; the jealousy however of the patriotic party exiled him to Bois-le-Duc, and he died there in 1788. His next brother, Ferdinand, who entered the Prussian service, distinguished himself greatly in the Seven Years' War, decided the battle of Prague, and in 1767, at the head of the Prussian army in Westphalia, gained the victories of Corfeld and Minden, and drove the French out of Westphalia, Lower Saxony, and Hesse-Cassel. The father of these two princes, Ferdinand Albert, after a reign of a few months, was succeeded in 1785 by his son Charles, who transferred the seat of government to Brunswick in 1754, and there founded the celebrated Collegium Carolinum. He was the steady and active ally of England during the Seven Years' war.

On his decease, in 1780, his son, Charles William Ferdinand, succeeded him. This prince, who had been educated as a soldier, at the head of the Brunswick auxiliaries in the Seven Years' war, was mainly instrumental in gaining the victory of Krefeld in 1758, and was acknowledged by Frederick the Great to be one of the first captains of his day. He married Augusta, princess of Wales, in 1764. At the close of the Seven Years' war, the domestic interests of his exhausted possessions afforded him a new sphere of action, in which, by the extinction of its debts and the wisdom of his general government, he showed himself as well fitted to govern a country as to command an army. Previously to his accession to the ducal crown, he had accepted a commission in the Prussian service as general of infantry: in this capacity, in 1787, he took the command of the Prussian forces, marched into Holland, and reinstated the stadtholder in his dignity. In 1792 he was called upon to lead the Austrian and Prussian armies in the campaign against revolutionary France, and, after issuing the violent manifesto of the 15th of July in that year, entered Lorraine and Champagne, where, destitute of resources and baffled by the caution of Dumouriez, his fruitless attempts to force the position of Valmy compelled him to conclude an armistice and abandon the French territory. In the campaign of the following year, which he carried on in conjunction with Wurmser, the Austrian general, on both banks of the Rhine, from Strasbourg to beyond Landau and Mayence, he was so ably opposed by Moreau, Hoche, and Pichegru, and so indifferently supported by his Austrian allies, that he determined to resign his command. He accordingly withdrew to Brunswick, and continued to employ himself with the cares of domestic government until Prussia called upon him to lead her troops against Napoleon I. in the year 1806. The duke, weighed down by years, unacquainted with the improved science of modern warfare, and at the head of an inexperienced army, physically inferior to the enemy, closed his distinguished career by the loss of the battles of Jena and Auerstedt in October, and retired, broken-hearted and mortally wounded, to Ottensen, near Hamburg, where he died on the 10th of November following. His duchy fell a prey to Napoleon, and was incorporated with the new kingdom of Westphalia. His son, William Frederick, who had distinguished himself in the campaigns of 1792 and 1793, as well as in 1806, and had succeeded to the collateral inheritance of Brunswick-Oels in Prussian Silesia, remained an exile from his native dominions until the Russian campaign shook Napoleon's power. The retreat of the French armies from the north of Germany in 1813 enabled the duke to recover possession of his Brunswick sovereignty in December of that year; but little time was afforded him to set it in order, for the renewal of hostilities with France in 1815 calling him into the field, he put himself at the head of his fellow-countrymen, joined the Prussian and other allied forces in Belgium, and bravely fell in the conflict at Ligny on the 16th of June. From that day until his son Charles came of age (October 30, 1823) George IV. of England (who had married Caroline of Brunswick, the sister of William Frederick), then prince-regent, administered the affairs of Brunswick as his appointed guardian. Charles, after a transient misrule of about seven years, was forced, in September 1830, by an insurrection in the city of Brunswick, to seek safety by a precipitate flight from his capital; and, under a resolution of the Diet of the German Confederation on the 2nd of December following, he was succeeded by his brother William, prince of Oels, who assumed the government on the 25th of April 1831.

BRUTUS, LUCIUS JUNIUS, son of Marcus Junius and of Tarquinia, sister of Tarquinius Superbus, having early lost his father

and elder brother by the cruelty of Tarquin, feigned imbecility of intellect, in order to secure personal safety. A prodigy which had occurred at Rome, the appearance of a snake in a wooden pillar of the palace, occasioned great anxiety among the Tarquini, and Titus and Aruns, sons of the tyrant, were deputed to obtain some explanation from the oracle of Delphi. The journey at that time was considered eminently hazardous, through unknown lands, and seas yet more unknown, and Brutus, a name which Lucius Junius had received out of contempt, accompanied the young princes, more as a buffoon to assist in their amusement, than as a companion to share the perils of their journey. On his entrance into the temple the offering which he made to the god was a bar of gold inclosed in a staff of cornel-wood hollowed for its reception, and intended to be emblematic of the votary's own situation. When the princes had finished their commission they inquired in the gaiety of youth which of them should reign at Rome hereafter. A voice from the adytum replied, "That one of you shall obtain sovereignty at Rome who shall first kiss his mother."

Titus and Aruns, in order to deprive their brother Sextus of participation in the chance, agreed to mutual secrecy and to the decision by lot of their own precedence. Brutus with more sagacity affixing a different interpretation to the response of the oracle, pretended to stumble, and kissed the earth, when he had fallen, as the common mother of all mankind.

After the atrocious violence offered by Sextus Tarquinius to Lucretia, Brutus was one of her kinsfolk whom the injured matron summoned to hear her complaint, and to witness her suicide. He plucked the reeking dagger from her bosom, and to the astonishment of all present, throwing aside the semblance of fatuity which he had hitherto assumed, he solemnly devoted himself to the pursuit and punishment of the whole race of Tarquin, and the abolition of the regal name and power at Rome. The populace was easily excited to insurrection. Brutus carefully avoided any personal interview with Tarquinius Superbus, who was dethroned and exiled, and on the change of government which followed, himself and Tarquinius Collatinus, widower of Lucretia, were made the chief magistrates under the title of consuls. This revolution occurred 245 years after the foundation of Rome, and B.C. 507.

Collatinus was speedily removed from his new office on the ground that he bore the name of Tarquinius, and was connected with the expelled family. The latter of these objections applied also to Brutus, who was descended from the Tarquini by the maternal side; but it does not appear that any difficulty was raised against him, and indeed it was chiefly through his agency, perhaps altogether at his suggestion, that the abdication of his colleague was procured. The place of Collatinus was supplied by P. Valerius. On the discovery of a plot for the restoration of the Tarquini, their property was confiscated; their moveables were given up to plunder; their landed estate lying between the city and the Tiber was consecrated to the god of war, and became the celebrated 'Campus Martius.' The conspiracy involved many of the noblest Roman youths, and among them Titus and Tiberius, sons of Brutus by a sister of the Vitelli, who were its principal leaders. The culprits were tried and condemned by their own father, who also witnessed their punishment. They were scourged and beheaded in his presence, not without his betraying marks of paternal emotion during the execution of public duty. Livy seems unequivocally to applaud this unnatural act, but Plutarch more justly describes it by saying that "he shut up his heart to his children with obdurate severity."

Several Etruscan cities took arms under Porsena in behalf of the Tarquini, and Brutus headed the cavalry by which they were opposed. He was recognised by Aruns, who denouncing him with the bitterest animosity as the chief instrument which had occasioned the expulsion of his family, and as now braving it under borrowed ensigns of dignity which he had transferred to the consulate, clapped spurs to his horse and selected him as an opponent in single combat. Brutus eagerly met the defiance, and so great was the fury of the encounter, that each regardless of his own safety sought only the destruction of his adversary. Their shields were mutually pierced, and each fell dead from his horse transfixed by the lance of his enemy.

Such is the story of Lucius Junius Brutus given by Livy (i. 56, &c. ii. 1-6). A public funeral was decreed to him; the matrons of Rome, in honour of the champion and avenger of Lucretia, wore mourning for him during a year; and, according to Plutarch, a brazen statue with a drawn sword in his hand was erected to his memory, and placed together with those of the kings. Niebuhr, 'Roman History,' vol. i., 'Commentary on the Story of the last Tarquini,' has pointed out the inconsistencies and chronological difficulties involved in this story, in which there can be little doubt that a large measure of fiction is mingled with what is unquestionably authentic.

BRUTUS, DECIMUS JUNIUS, is believed to be the son of a consul of the same name, who held office A.U.C. 676, B.C. 78. On his adoption by Aulus Postumius Albinus he took the name of the family into which he was received, so that he sometimes appears on medals as 'Albinus Bruti filius.' Shakspeare has called him Decius, and both that poet and Voltaire in many particulars have confounded him with Marcus Junius. Of his early history little is known, but he appears to have been entrusted by Cæsar with some important commands, and to have been highly esteemed by him. It is plain indeed from the share which he took in the murder of the Dictator how deeply he

enjoyed his confidence, and how extensive was the influence which he exercised. On the ides of March, when all things were prepared for the assassination, the plot was nearly frustrated by an announcement from Cæsar that he should not attend the meeting of the senate, being deterred by some evil dreams which had visited both himself and his wife Calpurnia, and by indisposition. D. Brutus was employed to dissuade him from this inopportune resolution, and he succeeded by ridiculing the soothsayers, by showing Cæsar that the senators assembled by his orders would think themselves insulted if they were dismissed on pretexts so frivolous, and above all by assuring him that it was intended on that day to nominate him king of all the provinces 'out of Italy,' and to decree that he might wear a crown except within the limits of Italy. (Plutarch, 'Cæsar,' lxi.)

The affection which the murdered Dictator bore to Decimus Brutus was exhibited in his will, in which he named that false friend among other persons to inherit his fortunes in case of the failure of direct heirs. Cæsar also had appointed him commander of his cavalry, consul for the succeeding year A.U.C. 711, and governor of Cisalpine Gaul, in which province Brutus attempted to maintain himself on the banishment of the conspirators. The newly-raised legions by which he hoped to support his authority were chiefly framed of gladiators, who gradually deserted; till Brutus, fearful of being left alone, after having been defeated at Mutina, endeavoured to make his way to the army in Greece. For this purpose he disguised himself in the habit of a Gaul, and attempted to pass through Aquileia to Illyricum. Although well acquainted with the language of the country which he traversed, he fell into the hands of some banditti. Having inquired of his captors to which of the Gaulish princes the district in which he had been taken belonged, and having heard that it was ruled by Camillus, a chieftain whom he had formerly obliged, he entreated to be led to his presence. Camillus received him with apparent goodwill, and rebuked the robbers for having injured so great a man; but to Antonius, whom he secretly informed of his capture, he employed far different language. Antonius, affecting compassion, refused to see the prisoner, and ordered Camillus to put him to death, and to send him his head. (Appian, 'De Bellis Civilibus,' iii. ad fin.)

BRUTUS, MARCUS JUNIUS, son of Marcus Junius Brutus by Servilia, sister of Cato of Utica, was born at Rome A.U.C. 668, B.C. 86. He was traditionally descended from Lucius Junius, the expeller of the Tarquins, a descent asserted by himself in a medal commemorating the assassination of Julius Cæsar, but which is denied by Dionysius of Halicarnassus. A passage in the first Philippic of Cicero (c. 6) corroborates this origin by stating that the expeller of kings, L. Brutus, has propagated his stock through 500 years, in order that a descendant might emulate his virtue by again freeing Rome from regal domination. But this allusion, which suited the purpose of Cicero, is only a rhetorical flourish. Plutarch, in the beginning of his life of M. J. Brutus, assumes his descent from the first Brutus, conformably to his practice in such cases, without troubling himself as to the credibility of the fact. He is sometimes called Q. Cæpio Brutus both by Cicero and Dion Cassius, and also on several of his medals, where 'Q. Cæpio Brutus Procos.' or 'Imp.' occurs. He owed this name apparently to his adoption by his maternal uncle, Q. Servilius Cæpio. On an unjust divorce from his first wife, Appia Claudia, he married Portia, the widow of Bibulus, and daughter of his maternal uncle Cato, under whose inspection he had been most carefully educated in philosophy and letters, after the loss of his father, who was put to death by Pompeius in the war between Marius and Sylla. Plutarch says that he was acquainted with all the Grecian systems of philosophy, but particularly attached to those of Plato's school. Afterwards, at least, he certainly adopted the Stoical tenets and discipline. When Cato, B.C. 59, was appointed under a law passed by the influence of Clodius to annex Cyprus to the Roman empire, Brutus accompanied his uncle, and during his residence in that island he appears to have been guilty of certain pecuniary extortions by no means consistent with integrity, but perhaps too much countenanced by the habits of the times.

When the civil war broke out between Julius Cæsar and Pompeius, Brutus sacrificed his private resentments to that which he believed to be the better cause of the two, and appeared under the banners of the latter. After the defeat of Pompeius at the battle of Pharsalia, Brutus was particularly distinguished by the clemency of the conqueror, who not only bestowed upon him personally his especial favour, but granted pardon through his interference both to Cassius, who had married his sister, and to Delotarus, king of Galatia, for the latter of whom Brutus pleaded in a set oration. Scandal attributed these acts of grace to a remembrance which Julius Cæsar entertained of a youthful intrigue with Servilia, and a false report was circulated that Brutus was a son of the dictator. But the words which Suetonius has put into the mouth of Cæsar when he perceived Brutus among his assassins, "And are you among them, my son?" may be received as indicating affection and familiarity rather than as any acknowledgment of consanguinity. Brutus was only fifteen years younger than Cæsar himself.

When Cæsar undertook his expedition into Africa against Cato, he committed to Brutus the government of Cisalpine Gaul, which was administered with wisdom and humanity, and he afterwards preferred him to Cassius in a rivalry for the post of Prætor Urbanus. Notwithstanding these distinguished favours, Brutus was one of the principal assassins on the ides of March. He retired to Athens when Marcus

Antonius had produced a reaction in the people of Rome, where he devoted himself partly to literature and partly to preparation for war. In the end, Antonius and Octavianus on one side, and Brutus and Cassius on the other, met at Philippi in Macedonia. The battle was fiercely contested, but ended in the total rout of the exiles; and Cassius, unwilling to survive his defeat, fell upon his own sword, receiving as a eulogy from Brutus, when he heard of the deed, that he was "the last of the Romans."

Brutus, in a second battle fought not long afterwards, near the same spot, obtained a partial victory; but perceiving himself surrounded by a detachment of his enemy's soldiers, and in danger of being made prisoner, he despaired of ultimate success; and after more than one of the friends about him had declined the painful duty, he delivered the hilt of his sword to Strato, and throwing himself on its point, expired in the forty-fourth year of his age.

Of his works, which were much praised by contemporaries, it is not certain that any have descended to us. His eulogy on Cato is certainly lost; some few letters in Greek, which are probably not genuine, have been printed in the collections of Aldus, Cujacius, and H. Stevens. He is also said to have made a kind of abstract or epitome of the history of Polybius, of the annals of C. Fannius, and of the history of L. Cælius Antipater. His Latin letters to Cicero have been characterized by Markland as "silly barbarous stuff," which he "cannot read without astonishment and indignation." Their authenticity, on the other hand, is strongly supported by Conyers Middleton in answer to an attack by Tunstall; but Ruhnken expressed his opinion against them, and also F. A. Wolff.

When Brutus and Cassius were about to leave Asia for their Macedonian campaign, it is said that an apparition admonished Brutus of his approaching fate. Brutus was of a spare habit, abstemious in diet and in sleep. One night, when he was overcome by watching, and was reading alone in his tent by a dim light at a late hour, while the whole army around him lay wrapped in sleep and silence, he thought he perceived something enter his tent, and saw "a horrible and monstrous spectre standing silently by his side. 'Who art thou?' said he, boldly; 'art thou God or man, and what is thy business with me?' The spectre answered, 'I am thy evil genius, Brutus: thou wilt see me at Philippi!' To which he calmly replied, 'I'll meet thee there.' When the apparition was gone he called his servants, who told him that they had neither heard any noise nor seen any vision." He communicated his adventure on the next morning to Cassius, who professed the philosophy of Epicurus, and argued on the principles of his sect against the existence of such beings as demons and spirits; or, admitting their existence, denied that it was probable they should assume a human shape or voice, or have any power to affect us; in fine, he attributed the whole incident to sleeplessness and fatigue, which, as he justly remarked, suspend and pervert the regular functions of the mind. On the night before the second battle, "they say," continues Plutarch, "that the spectre again appeared and assumed its former figure, but vanished without speaking."

Plutarch remarks that there is a diversity in the statements respecting the death of Portia; that Nicolaus the philosopher and Valerius Maximus affirm that, being prevented from suicide by the constant vigilance of friends who surrounded her couch, she snatched some burning embers from the fire, and held them in her mouth till she was suffocated. If however we admit the authenticity of a letter attributed to Brutus, this account must be a fabrication; for he laments in it the death of Portia during his own lifetime, describes her distemper, and praises her conjugal affection.

Voltaire wrote a tragedy, 'La Mort de Cæsar,' from which, contrary to the usage of the stage, he excluded all female characters. His plot is founded on an hypothesis which we have shown to be false, that Brutus was the son of Cæsar.

(Plutarch, *Brutus*; Appian, lib. 15, 16; Cicero, *Letters and Orations*; Dion Cassius.)

BRUYÈRE, JEAN LA, was born in 1644, near Dourdon in Normandy. Of his early life scarcely anything is known. After filling the office of treasurer of France at Caen he removed to Paris. He was appointed teacher of history to the Duc de Bourgogne, under the direction of Bossuet, and passed the remainder of his life in the service of his pupil, in the quality of 'homme de lettres.' In 1687 he published his work entitled 'Characters,' was admitted into the French Academy on the 15th of June 1693; and died of apoplexy at Versailles on the 10th of May 1696.

He is represented by the Abbé d'Olivet as a philosopher whose happiness consisted in passing a life of tranquillity, surrounded by his friends and his books, in the choice of both of which he showed considerable judgment. He was polished in his manners, but reserved in his conversation, and free from pretension of every kind.

Of all La Bruyère's friends, Bossuet, to whom he had attached himself from a sense of gratitude, sympathised with him the least in character. It was, no doubt, gratitude to his friend that betrayed him into the weakness of using his pen in favour of the Bishop of Meaux against Fénelon in the absurd affair of 'Quietism.' Upon this theological controversy he left some 'Dialogues;' and if we cannot wholly excuse him for having written them, we must admit that he showed his good sense by not publishing them. They were however published three years after La Bruyère's death by Louis Dupin.

Among the somewhat large sacrifices which La Bruyère thought it expedient to make to the prevailing opinions of the day, his work frequently gives indications of a bolder manner of thinking—the precursor of the philosophy of the succeeding century. It even appears to have been his wish to let posterity into the secret of his cautious dissimulation. "Satire," says he, "is shackled in him who is born a Christian and a Frenchman. Great topics are interdicted him. He enters upon them now and then, but soon turns aside to minor subjects, to which he imparts an interest and an importance by his genius and his style." Since it was this twofold relation of subject of Louis XIV. and of Christian (he ought rather to have said Papist) that imposed upon La Bruyère the trammels of which he complains, it may be inferred, that notwithstanding his cold eulogies of the absolute monarch and his gloomy theology, he by no means participated in that respect for despotism and for the abuses of Popery which so strongly characterised the age of Louis XIV. The persecutions which rewarded the generous and liberal principles advocated, in his 'Telemachus,' by Fénelon, as well as those suffered by Molière, turned La Bruyère aside to less dangerous subjects, to the details of social, and the follies of private life. Malignity however assailed him, even within the narrow limits to which he had confined himself, of criticisms on the morals and the habits of his times. Upon completing his 'Characters,' he showed the book to M. de Malézieux, who said, "this will procure you many readers and many enemies," a prediction which was fully accomplished, for while the book was read with avidity the moment it appeared, intentions were attributed to the author of which he was certainly innocent. The originals of La Bruyère's portraits were discovered, as it was pretended, and their names were published in a 'Key to the Characters,' which thus formed a kind of scandalous commentary, in which the persons designated could not complain that they were calumniated, though they were held up to public ridicule.

La Bruyère, though rarely profound, is always judicious, natural, and nicely discriminative; and if his views of human nature are not very extensive, he amply compensates for the deficiency by the closeness of his inspection. He places the most trite and common characters in a new and unexpected light which strikes the imagination, and keeps attention alive. Perhaps he too often affects strong contrasts and violent antitheses, and in wishing to avoid sameness falls into the error of attempting too much variety, in which he loses his individuality. His style is characterised by strong powers of delineation, and the talent of a great painter must undoubtedly be conceded to him, though he is not altogether free from the charge of occasional affectation.

If it be true, as has been remarked, that Theophrastus, whose work was studied and translated by our author ('Sieur de la Bruyère's posthumous Dialogues upon Quietism, continued and published by Louis Ellias Dupin,' Paris, 1699, 12mo.) may be said to have formed La Bruyère, it must be admitted that this is the highest praise that we can give to the Greek author. But nothing is less just than to draw this manner of parallel. It is impossible to judge rightly or even to understand the 'Characters' of Theophrastus, without possessing accurate notions of the political, moral, and social condition of the people whose features they represent. If we compare for a moment only the political and social position of the Athenians with the reign of Louis XIV., before whose despotism and ostentation men of all ranks in France obsequiously bowed; if we identify and familiarise ourselves with the respective circumstances under whose influence the two authors wrote,—we shall no longer entertain the idea of comparing Theophrastus with La Bruyère: the sole resemblance between them consists in the minuteness and accuracy of their observation, and in the justness and spirit of the strokes by which each has delineated his characters.

La Bruyère's work, stamped as it is with the impress of a sound judgment and a good-natured satire, is one of those advisers we always consult with pleasure and advantage. It anticipates our knowledge of the world and perfects it; and although the manners and characters therein delineated may undergo changes and modifications, its interest will be always the same, because, like all great works which take nature as their basis, it will always be true.

Numerous editions of the 'Characters' of La Bruyère have appeared since 1687; but the best is that of 1827, 2 vols. 8vo, with a life of La Bruyère, by Monsieur Sicard, a prefatory notice and original notes by Monsieur Auger, to which are annexed the 'Characters' of Theophrastus, with additions and notes by M. Schweighauser.

BRUYN, CORNELIUS, a painter and traveller of some eminence, was born at the Hague in 1652. In 1674 he quitted his native country to explore by rather a novel route Russia, Persia, the Levant, and the East Indies, and he did not return home for many years. His first work, 'Voyage to the Levant,' was published in folio at Paris in 1714. It relates chiefly to Egypt, Syria, the Holy Land, Rhodes, Cyprus, Scio, and Asia Minor, and is embellished with more than 200 engravings, representing eastern cities, ruins, natural productions, costumes, &c. All these plates were executed from drawings made by himself on the spot, and, though somewhat hard, there is a great deal of truth and nature in them. His second work, 'Travels through Muscovy, in Persia, and the East Indies,' was published at Amsterdam by the brothers Wetstein in 1718; it contains upwards of 300

engravings, and is also in folio. Many of these plates, representing eastern ceremonies, ancient edifices, animals, birds, fish, plants, and fruit, are admirably executed. Several of the engravings are devoted to the ruins of Persepolis. Another edition of the second work with corrections and notes, by the Abbé Banier, was brought out at Rouen in 4to, 1725. In this second work will be found much information concerning the coasts of Arabia, the island of Ceylon, Batavia, Bantam, and parts of Russia. At Batavia, where there were many Chinese colonists, he carefully investigated some of the manners and customs of that extraordinary people. He was residing on that island when the English buccaneer William Dampier, or, as he calls him, "the famous Captain Dampier," arrived there from Ternate, after a most extraordinary voyage and series of adventures. [DAMPIER.] The value of Bruyn's second work is further increased by an account of the route taken by M. Isbrants, the ambassador of Muscovy, through Russia and Tartary to China.

In 1714, the year in which he published his first great work, Bruyn put forth in Holland a small disputative treatise, entitled 'Remarks on the engravings of old Persepolis, formerly given by Messieurs Chardin and Kæmpfer, and the mistakes and errors in them clearly pointed out.' In this pamphlet he defends himself for the differences between the plates of his own work and those of Chardin, and shows in what portions of the engravings his own are the more correct. His 'Remarks' are in Dutch, his 'Travels' in French; but the 'Remarks' were afterwards translated into French, and published in an appendix to his second great work in 1718.

The compilers of cyclopedias and biographical dictionaries have gone on repeating one after the other, and evidently without looking into the old traveller's books, that, though curious and instructive, Bruyn is inelegant in his style, and not always exact in his facts. Now in reality his style, though exceedingly simple, and somewhat deficient in warmth and picturesque beauty, is very far from being inelegant, and his exactness, a quality he had in common with so many old travellers of his nation, is everywhere admirable. For the fidelity of his descriptions of most of the places he visited in the Levant, we can vouch from our own personal observation. He was not credulous himself, and he several times censures the credulity of explorers who had preceded him.

BRYANT, JACOB, was born at Plymouth in 1715; his father, who held a post in the custom-house of that town, was transferred in the seventh year of his son's age to Kent, in which county Jacob Bryant received his early education at Luddesdown, near Rochester, whence he was afterwards removed to Eton. Having been elected fellow of King's College, Cambridge, he graduated A.B. in 1740, and A.M. in 1744. Being early distinguished for his attainments and love of letters, he was appointed tutor to Sir Thomas Stapylton, and afterwards to the Marquis of Blandford and his brother Lord Charles Spencer, at that time at Eton. A complaint in the eyes obliged him for a short time to relinquish this occupation, but having returned to it, he was rewarded in 1756 by the appointment of secretary to the Duke of Marlborough, who, continuing his patronage when nominated master-general of the ordnance, took him as a secretary and travelling companion during his command in Germany, and gave him a lucrative situation in his own public office. His circumstances thus being rendered easy, he devoted his whole life to literature, and twice refused an office which has frequently been much coveted by others—the mastership of the Charterhouse.

The history of his life is embraced in that of his publications, all of which are distinguished by learning, research, and acuteness, but are more or less disfigured by fanciful conjectures and wild speculations. His first work was 'Observations and Inquiries relating to Various Parts of Ancient History,' Cambridge, 4to, 1767. In contradiction to Bochart, Grotius, and Bentley, he here, among other things, contends that the wind Euroclydon, mentioned in Acts xxvii. 14, ought properly to be termed Euroquilo; and in opposition to the same writers, together with Cluverius and Beza, he affirms that the island Melite, mentioned in the last chapter of the same book, is not Malta. The remaining subjects treated of in this volume are very obscure and very remote from common inquiry. He professed to throw light upon the earliest state of Egypt, upon the Shepherd Kings, and upon the history of the Assyrians, Chaldeans, Babylonians, and Edomites. Pursuing a similar course, he published in 1774 the first two volumes of the work upon which his fame chiefly depends—'A New System or Analysis of Ancient Mythology, wherein an attempt is made to divest Tradition of Fable, and to restore Truth to its Original Purity.' It appeared in quarto, and was followed by a third volume in 1776. Besides the nations whose history he had formerly investigated, he now turned to the Canaanites, Helladians, Ionians, Leleges, Dorians, Pelasgi, Scythæ, Indoscythæ, Ethiopians, and Phœnicians; pressing into his service every scattered fragment which his extensive reading enabled him to collect, and supporting his arguments by numerous forced and oftentimes false etymologies. This publication involved him in much controversy, which he undertook in part anonymously, and in part, particularly in defence of the Apamean medals, in the 'Gentleman's Magazine.' The Apamean medals were struck in honour of Septimius Seyerus, at Apameia, a town in Phrygia. The devices on them are a rainbow, a dove, a raven, and an olive-branch, and the legend NDE. This treatise was published separately in 1775, in 4to;

and Eckhel, the most learned numismatologist of his time, declared in its favour. In 1780 Bryant published with his name a tract which he had before printed and recalled, entitled 'Vindiciæ Flavianæ,' advocating the disputed testimony of Josephus to our Saviour. Priestley expressed himself as convinced by the arguments in favour of the passages; but he afterwards engaged in controversy with Bryant on the difficult subject of Necessity. Bryant was a firm believer in the authenticity of the poems attributed to Rowley, and in 1781 he published 2 vols. 12mo containing 'Observations' upon them. In 1783 the Duke of Marlborough printed for private distribution an account of the gems in his own collection, the first volume of which work was written in Latin by Bryant. In 1792 appeared a treatise 'On the Authenticity of the Scriptures and the Truth of the Christian Religion,' 8vo, executed at the request of the dowager Lady Pembroke; and two years afterwards, in 8vo, some 'Observations on the Plagues inflicted on the Egyptians.' But the work which engaged him in most dispute, and was more distinguished by his love of paradox than any other which he produced, was suggested by M. Le Chevalier's description of the plain of Troy. It appeared in 1796, 4to, and was entitled 'A Dissertation concerning the War of Troy and the expedition described by Homer, with the view of showing that no such expedition was ever undertaken, and that no such city in Phrygia ever existed.' It was scurrilously answered by Wakefield, and it provoked far more honourable replies from Mr. Morritt and Dr. Vincent. In the following year appeared a tract in 8vo, entitled 'The Sentiments of Philo-Judæus concerning the Greek ΛΟΓΟΣ.' Besides these, Bryant also wrote 'Observations on Famous Controverted Passages in Justin Martyr and Josephus,' and a pamphlet addressed to Mr. Melmoth. He closed his literary life by preparing for the press some remarks on very curious Scriptural subjects, written more than thirty years before. This quarto volume contained dissertations on the 'Prophecies of Balaam,' the 'Standing still of the Sun in the Time of Joshua,' the 'Jaw-bone of the Ass with which Samson slew the Philistines,' and the 'History of Jonah and the Whale.' In the seventh volume of the 'Archæologia' he furnished some 'Collections on the Zingara or Gipsy Language;' and numerous juvenile or fugitive pieces were found among his papers in manuscript.

His exemplary and protracted life was closed at his own residence at Cypenham, near Windsor, on the 14th of November 1804, in consequence of a hurt which he received in the leg by a chair slipping from under him while taking down a book from an upper shelf. Such a death, as has been well remarked by a French biographer, was for a literary man to expire on the field of honour. His merits are very justly eulogised in a note on the second 'Dialogue of the Pursuits of Literature.' He left his very valuable library to King's College, Cambridge, 2000*l.* to the Society for the Propagation of the Gospel, and half that sum to the superannuated collegers of Eton, at the discretion of the provost and fellows.

* BRYANT, WILLIAM CULLEN, was born at Cumington in Massachusetts, United States, November 3, 1794. Having received a careful preliminary education, he was entered at the age of sixteen at Williams College, where he greatly distinguished himself in classical studies. On leaving college he was placed with an attorney, and on the completion of his legal training, pursued for some years the practice of the law. But he had become known as a poet while yet a boy, by the publication in 1808 of a kind of political poem, entitled the 'Embargo,' and in 1816 he published in the 'North American Review' his poem of 'Thanatopsis.' In 1821 the longest of his poems, 'The Ages,' appeared, and established his reputation as one of the very best living American poets. Finding his legal pursuits incompatible with the study of literature, he in 1825 abandoned the law, and shortly after in conjunction with Robert Sands, founded the 'New York Review and Athenæum Magazine;' and a year or two later, along with the same gentleman, he began the publication of an annual called the 'Talisman.' In these publications many of his shorter poems first appeared, and their quiet gracefulness of style and genuine poetical feeling speedily made them popular in England as well as in America. But he gradually forsook the muses for the more exciting pursuit of politics. Having become the editor of the 'New York Evening Post,' he has for nearly 30 years devoted to it his chief energies, taking in it a prominent and decided part on the democratic side on all the great questions, whether of local or general politics, which have engaged the attention of the citizens of New York. Yet however influential he may have been as a politician, it is on his poetry that his chance of lasting fame depends. A handsomely illustrated edition of the poetic works of Mr. Bryant was published at Philadelphia in 1846. Several other editions of his poetic works have been issued in America and England. Mr. Bryant has travelled a good deal in his own country, and has made two or three tours in England, France, Germany and Italy: his impressions of these tours have been published in the form of letters in the 'Evening Post.' Mr. Bryant has also published several tales and sketches.

BUKER, MARTIN, was born in 1491, at Schelestadt, near Strasbourg, a town of Alsace, in the modern French department of the Lower Rhine. His real name was Kuhhorn (Cowhorn), which, according to the pedantic fashion of his time, he changed into a Greek synonym, calling himself Bucer. Having entered the order of

Saint Dominic, he received his education at Heidelberg. Some tracts by Erasmus and others, and, yet more, some by Luther which fell in his way, induced him to adopt the opinions of the latter in 1521. About eleven years afterwards, he appears to have preferred the profession of Zuinglius, but he was ever a strenuous promoter of union between the different sects of the Reformed, according to whose doctrine he taught divinity for twenty years at Strasbourg. At the diet of Augsburg, in 1548, he vehemently opposed the system of doctrine called the *Interim*, which the Emperor Charles V. had drawn up for the temporary regulation of religious faith in Germany until a free general council could be held. On the insidious nature of that proposition we need not here dwell; and it may be sufficient to state that although it was expressed for the most part in scriptural phrases, it favoured almost every disputed article of the Romish Church. It was opposed equally by the Romanists and the Reformed; but the emperor urged its acceptance so fiercely, that Bucer, after having been subjected to much difficulty and danger, accepted an invitation from Cranmer to fix his residence in England. Bucer had denounced the *Interim* as "nothing but downright Popery, only a little disguised," and about the same time he wrote a book against Gardiner, chiefly relating to the celibacy of the clergy.

On his arrival in England, he was appointed to teach theology at Cambridge, and appears to have been much admired and respected. When Hooper accepted the bishopric of Gloucester, but refused to be consecrated in the episcopal vestments, Bucer wrote a most convincing but moderate treatise against this fastidious reluctance; and on the review of the Common Prayer Book, he expressed his opinions at large; that he found all things in the service and daily prayers clearly accordant to the Scriptures. The amendments which he wished to see made have since either been adopted, or are such as a large party among the most undoubted friends of the Church of England approve. The king having heard that Bucer's health had suffered during the winter from the want of a German stove, sent him 20*l.* to procure one. In return, he wrote a book for Edward's own use, 'Concerning the Kingdom of Christ,' which he presented as a new year's gift. It referred the miseries of Germany to the want of ecclesiastical discipline, the adoption of which he strongly recommended in England; he likewise urged the reduction of non-residence and pluralities.

Bucer was thrice married, and his first wife, by whom he had thirteen children, was a nun, perhaps selected by him, not very judiciously, in imitation of Martin Luther. He died at Cambridge in the close of February 1550, and was buried in St. Mary's with great honour, his remains being attended by full 3000 persons jointly from the university and the town. A Latin speech was made over his grave by Dr. Haddon, the public orator, and an English sermon was then preached by Parker, afterwards archbishop of Canterbury, to whom, not long before his death, he had applied in a very pathetic and urgent letter for the loan of ten crowns for a month; and on the following day, Dr. Redman, master of Trinity College, preached at St. Mary's a sermon in his commendation.

During the reign of Mary, five years afterwards, when inquisitors were sent to Cambridge, the corpses of Bucer and of Fagius were dug up from their resting-places, fastened erect by a chain to stakes in the market-place, and burned to ashes; their names, at the same time, were erased from all public acts and registers as heretics and deniers of the true faith; and this violence to their memories continued till Elizabeth became queen. A very interesting collection of tracts relative to the life, death, burial, condemnation, exhumation, burning, and restoration of Martin Bucer, was published at Strasbourg, in Latin, by his friend Conrad Hubert. Bucer wrote both in Latin and in German, and so largely that it is thought his works, if collected, would amount to eight or nine folio volumes.

BUCH, LEOPOLD VON, a distinguished geologist, was born on the 25th April 1774, at Stolpe, in the Uckermark (Brandenburg). He came of an ancient and noble family, which reckons among its members not a few authors and statesmen. After the usual course of education, he became a student in the Prussian department of mines, and was marked for the earnestness of his scientific pursuits. In 1790 he entered the Mining Academy at Freiberg, where he had Humboldt for a companion, and where Werner, its eminent founder, taught the then novel science of mineralogy, in a way so interesting and genial, as thoroughly to enlist the sympathy of his pupils. Under his teachings grew up a school of young philosophers, destined to widen and confirm his reputation, and amend his errors, among whom Von Buch was one of the most conspicuous. In 1792 the publication of his 'Mineralogical Description of the Carlsbad region,' formed the first of that series of valuable papers with which he enriched his favourite science for the rest of his life—all distinguished as much by conscientious inference, as by perfection of observation. Next appeared his 'Versuch einer mineralogischen Beschreibung von Landeck,' describing a little known part of the mountains of Silesia; followed shortly afterwards by 'Versuch einer geognostischen Beschreibung von Schlesien,' with (for that time) a very advanced geognostical map of the country. These works are written in accordance with the views of his great master, in which the Neptunian theory prevailed; and it is no small proof of the accuracy of the observed facts that they are now easy to be reconciled with the present more enlightened theory.

In 1797 Von Buch and Humboldt met in Styria, and spent some time in geological excursions among the Alps, and passed the winter together in Salzburg in observation and verification of natural phenomena. In the following year Von Buch travelled alone, on foot, to Italy, and furnished to scientific periodicals descriptions of the geology of the countries he traversed, in which, besides the clearness of perception, there began to appear doubts as to whether the Wernerian doctrine were tenable in its integrity. He grew mistrustful of his former views. Writing from Rome to his friend Von Moll, he says: "Make the finest and surest observations, and then go a few miles farther on, and you will find occasion, upon grounds just as certain, to maintain the very opposite of your former conclusion."

In February 1799, Von Buch arrived at Naples, and betaking himself to the study of Vesuvius, described the phenomena in that picturesque and eloquent style which among other qualities characterised his writings. In 1802 he visited the volcanic region of Auvergne. He revisited Italy, and was present at the eruption of Vesuvius in 1805. The results of these five years of observation were published in two volumes, 'Geognostischen Beobachtungen auf Reisen durch Deutschland und Italien,' 1802-9, in which, though reluctant to throw doubt on Werner's conclusions, he abandons his view as to the action of water, and declares basalt to be a rock of volcanic origin.

For the next two years, from 1806 to 1808, Von Buch travelled into Scandinavia, and made some of his most important geological discoveries. He was the first to establish the fact of the slow and continuous upheaval of the Swedish coast above the sea-level; and he made valuable observations in climatology and the geography of plants, as may be seen in his narrative 'Reise durch Norwegen und Lappland,' two vols. 1810: of which an English translation was published with notes by Professor Jameson in 1818.

The more interest attaches to these journeys as they were performed on foot. Few who met Von Buch walking with unsteady gait, his head bent forward, wearing even in summer a great coat with numerous pockets to contain maps, specimens, his hammer and notebook, would have believed they beheld one whom Humboldt describes as "the greatest geologist of our age; the first to recognise the intimate connection of volcanic phenomena and their mutual interdependence in regard to their effects and relations in space." Possessed of sufficient means, Von Buch could gratify his inclination for travel, and for the encouragement of others, especially youthful students, less fortunate than himself.

In 1815 he sailed from England (accompanied by the Norwegian botanist Christian Smith, who afterwards met with an untimely death in Tuckey's expedition to the Congo), for a geological exploration of the Canary Islands. In 1824 appeared the first geological map of Germany in forty sheets, of which Von Buch, though anonymous, was the compiler and author. He had visited the basaltic islets of the Hebrides and the Giant's Causeway on his return from the Canaries, and in 1825 he published 'Physikalische Beschreibung der Canarischen Inseln,' with an atlas, of which the subsequent works, 'Ueber den Zusammenhang der basaltischen Inseln und Ueber Erhebung-Krater,' and 'Ueber die Natur der vulkanischen Erscheinungen auf den Canarischen Inseln und ihre Verbindung mit andern Vulkanen der Erdoberfläche' may be regarded as supplementary. These volcanic researches alone would suffice to establish his reputation. The science of volcanoes, —the fruitful source of many later advances—is therein developed and placed on a sure basis. He shows how the phenomena of upheavals are traceable to craters of elevation, and demonstrates the action of fire; and states his conviction that "the ancient seas have not rolled away over the mountain chains, but that the mountain chains have been upheaved into the atmosphere, bursting through the series of strata in long lines—fissures—and that these upheavals have taken place at different geological epochs."

Von Buch's life is strikingly manifest by his labours. His papers in the 'Abhandlungen' of the Berlin Academy of Sciences, would alone form several large volumes. They exhibit the development of his scientific views from first to last. In 1806 he had suggested certain ideas in his paper 'Ueber das Fortschreiten der Bildungen in der Natur,' as to the progress of forms in nature, and when past the age of fifty, he showed how the ideas had ripened in his mind by his papers on the *Ammonites*, *Cystidæ*, *Terebratulæ*, *Orthis*, *Productus*, and others, accomplishing for the geological branch of palæontology what Cuvier had accomplished for the physiological branch. In the words of the late Edward Forbes, it was Von Buch "who first developed the idea of the chronomorphosis of genera, the great leading principle of natural history applied to geology." He pointed the way moreover to a new field of fossil botany in the important conclusions which he shows to be deducible from the nervation of the leaves of fossil plants. And in his writings on climate, on hail, the temperature of springs, and the geography of plants—guiding principles apparent in all—he proves himself an able physicist as well as geologist.

In his many journeys Von Buch visited Sweden and Norway, and Auvergne a second time, and any excuse sufficed to draw him to Switzerland. He would leave his house in Berlin without telling any one of his intentions, remain away for weeks or months, and return as unexpectedly. He liked to find out and make the acquaintance of geologists of eminence, and for this purpose he attended the meetings of naturalists on the continent and of the British Association in England.

He was present at the Werner festival, celebrated with so much pomp at Freiberg in 1850. He never married, was somewhat eccentric in his habits, but always serious as regards science. When asked for his titles he was accustomed to reply, 'Royal Prussian Student of Mines.' He was created a baron, a knight of the Order of Merit (Berlin), and of the Red Eagle, and held the appointment of royal chamberlain in the court of Prussia. He was a member of the Academy of Sciences of Berlin, and of the chief scientific societies on the continent and elsewhere. In 1828 he was elected a foreign member of the Royal Society of London, and in 1840 was chosen one of the eight foreign associates of the French Academy of Sciences. He died at Berlin, after a few days' illness, on the 4th of March 1853.

"Von Buch was a sower," says E. Forbes, in his anniversary address to the Geological Society. "He went about the world casting the seeds of new researches and fresh ideas, wherever his prophetic spirit perceived a soil adapted for their germination. The world of science has gathered a rich harvest through his foresight. He is the only geologist who has attained an equal fame in the physical, the descriptive, and the natural history departments of his science. In all these he has been an originator and a discoverer. In every subdivision of all three he has been a suggester—a high merit in itself."

The 'Abhandlungen' of the Berlin Academy of Sciences, Leonhard's 'Taschenbuch für Mineralogie,' and other German scientific periodicals, contain most of Von Buch's papers. Among his other works are—'On the Petrifications collected by Humboldt in America'—'Die Bären Insel . . . geognostisch beschrieben,' 4to, 1847; 'Ueber Ceratiten besonders von denen die in Kreidebildungen sich finden,' 8vo; besides those above-mentioned. A French translation of his 'Canary Islands' was published at Paris in 1836.

(Hoffmann, *Geschichte der Geognosie; Monatsbericht, Acad. Berlin; Edin. New Phil. Journ.; Journ. Geol. Soc.*)

BUCHANAN, REV. CLAUDIUS, D.D., vice-provost of the College of Fort William in Bengal, and well known for his exertions in promoting an ecclesiastical establishment in India, and for his active support of missionary and philanthropic labours, was born on the 12th of March 1766 at Cumbuslang, a village near Glasgow. When a young and almost friendless man of the age of twenty-one he made his way to London, where he succeeded in attracting the attention of the Rev. John Newton, the well-known rector of St. Mary's Woolnoth. By Mr. Newton's influence he was sent to Cambridge, where he was educated at the expense of Henry Thornton, Esq., whom he afterwards repaid.

Buchanan went out to India in 1796 as one of the East India Company's chaplains, and on the institution of the college of Fort William in Bengal in 1800 he was made professor of the Greek, Latin, and English classics, and vice-provost. During his residence in India he published his 'Christian Researches in Asia,' a book which attracted considerable attention at the time, and which has gone through a number of editions. In 1804 and 1805 he gave various sums of money to the universities of England and Scotland, to be awarded as prizes for essays on the diffusion of Christianity in India. He returned to England in 1808, and during the remainder of his life continued, through the medium of the pulpit and the press, to enforce his views. His reply to the statements of Charles Buller, Esq., M.P., on the worship of the idol Juggernaut, which was addressed to the East India Company, was laid on the table of the House of Commons in 1813, and printed. He died at Broxbourne, Herts, February 9, 1815, being at the period of his death engaged in superintending an edition of the Scriptures for the use of the Syrian Christians who inhabit the coast of Malabar.

(Rev. Hugh Pearson, *Life and Writings.*)

BUCHANAN, GEORGE, was born of poor parents, in the parish of Killearn, and county of Stirling, about the beginning of February 1506. He was the third of eight children, who were early left to the care of their widowed mother. By James Heriot, his maternal uncle, Buchanan was sent at the age of fourteen to the University of Paris, where however he had not been two years, when his uncle dying, he was left in a state of such utter destitution that in order to return to his native country he was fain to join the corps then being raised as auxiliaries to the Duke of Albany in Scotland. After a twelvemonth spent at home in the recovery of his impaired health, he again joined the troop of French auxiliaries, and proceeded with them to the siege of Weik; but the hardships which he suffered on this occasion reduced his youthful frame to its former state of debility, and he was confined to his bed the remainder of the winter.

In the ensuing spring, he and Patrick, his eldest brother, were entered students in the 'pedagogium,' afterwards St. Mary's College, of the University of St. Andrews. George passed as Bachelor of Arts on the 3rd of October 1525; and in the following summer he became a student in the Scots' college at Paris, where, as he had obtained the degree of B.A. at St. Andrews, he was immediately incorporated of the same degree. This was on the 10th of October 1527. The next year he proceeded Master of Arts, and the year following he was chosen procurator of the German nation—a division of the students which comprehended those from Scotland. After a struggle of two years with "the iniquity of fortune," as he expresses it, he obtained the situation of a regent, or professor in the college of St. Barbe, where he taught grammar nearly three years. He then became tutor to Gilbert, earl of Cassilis, a young Scotch nobleman, who resided at that time in the neighbourhood of the college, his previous tutor,

William, abbot of Crossragwell, having left him to do his pilgrimage to Rome under a royal licence to that effect dated April 8th, 1530. (Pitcairn's 'Criminal Trials,' vol. i. p. 245.) With that nobleman Buchanan remained abroad about five years, and in this period committed to the press his first publication, which was a translation of Linaere's 'Rudiments of Latin Grammar.' In May 1537 he returned to Scotland in company with Lord Cassilis, who had just attained his majority; and he was appointed tutor to James Stewart, one of the natural children of James V., with a liberal allowance.

At Lord Cassilis's seat, where he seems to have continued a visitor, Buchanan composed his poem entitled 'Somnium,' in derision of the regular clergy. The king, who had a turn that way, having seen the poem, solicited him to write some more satires of a like kind. He did so accordingly, and published among others his 'Palinodia,' and 'Franciscanus.' These pieces brought upon his devoted head the vengeance of the ecclesiastics. He was seized as a heretic, and thrown into prison; and Cardinal Beaton is said to have tendered to the king a sum of money to consent to his immediate death. Buchanan however escaped from his confinement and got to England, where, after a severe struggle with want and the dread of re-imprisonment, he resolved on returning to Paris. Finding on his arrival that Cardinal Beaton was living there at that time, he gladly accepted an invitation from Andrew Govea to become a regent or professor of Latin in the college of Guienne at Bordeaux. It appears that he was at Bordeaux before the close of the year 1539, for on the 1st of December of that year he presented a poem in the name of the college to Charles V. when he made his solemn entry that day into Bordeaux. He remained here three years, during which he published his Latin tragedy, 'Baptistes,' and several other minor pieces; but being continually harassed by the clergy under letters from Cardinal Beaton, who had traced his retreat, he removed to Paris, and from the year 1544 till about 1547 taught Latin in the college of the Cardinal de la Moine, along with the learned philologists Turnebus and Muretus. In 1547 Govea was invited to become principal of the University of Coimbra in Portugal, and to bring with him learned men to fill the vacant chairs. Buchanan accompanied him on that occasion, and became a regent in the university; but having the misfortune to lose his friend Govea by death the following year, the inquisition assailed him as a heretic, and after harassing him for nearly a year and a half, shut him up in the cell of a monastery. But nothing could subdue the mind of Buchanan. It was in this solitary abode he began his well-known 'Version of the Psalms.' Being at last restored to liberty he embarked for England in a vessel then leaving the port of Lisbon; but the political state of that country bearing an unfavourable aspect, he soon quitted it again for France, which he reached about the beginning of the year 1553. The siege of Metz was raised about the same time; and at the earnest request of some of his friends he commemorated that event in a Latin poem. He was soon afterwards appointed a regent in the college of Boncourt; but in the year 1555 he gave up that charge for the place of domestic tutor to Timoleon de Cossé, son of the celebrated Maréchal de Brissac. During his connection with this family, which lasted till the year 1560, he published several poetical works, among which was his translation of the 'Alcestis' of Euripides, and the earliest specimen of his paraphrase of the Psalms. In 1560 he returned to Scotland, where we find him in the beginning of the year 1562 classical tutor to the young queen Mary. For his services in that capacity she gave him a pension of 500*l.* Scots a-year for life out of the temporalities of the abbey of Crossragwell; and in the year 1566 the Earl of Murray, her brother, to whom he had dedicated a new edition of his 'Franciscanus,' presented him with the place of principal of St. Leonard's College at St. Andrews. The following year he was chosen Moderator of the General Assembly of the Church of Scotland, which was a still more extraordinary homage to his character and various abilities, as it is the only instance on record of that office being held by a layman.

In 1570 he resigned the office of principal of St. Salvador's College, on being appointed one of the preceptors to the young King James, then in the fourth year of his age. The same year the place of Director of the Chancery was for his services conferred upon him, and soon afterwards that of Lord Privy Seal. This latter was a highly honourable and lucrative office, and entitled its holder to a seat in parliament. In the year 1578 he was joined in several parliamentary commissions, legal and ecclesiastical, and particularly in a commission issued to visit and reform the universities and colleges of the kingdom. The scheme of reformation suggested, and afterwards approved of by parliament, was drawn up by him. The same year also he brought forth his celebrated treatise 'De Jure Regni apud Sotos.'

Continued indisposition and the advance of age now warned him of his approaching dissolution. In his seventy-fourth year he wrote a brief memoir of his own life. When visited a few days before his death by some friends, he was found sitting in his chair teaching the boy that served him in his chamber the elements of the English language and grammar; and not long afterwards he expired, while his great work, 'The History of Scotland,' was passing through the press. He died at Edinburgh, on the 28th of September 1582, and was buried at the public expense, having by his many charities and benefactions left himself without means to defray the necessary charges of his burial. As a man of great and various learning, and of nearly uni-

versal talent, Buchanan was without a rival in his own day; he is one of the most elegant Latin writers that modern times have produced, and he appears to have been also a good Greek scholar.

There are two collected editions of the works of Buchanan. One is by Ruddiman, published at Edinburgh in 1715, in 2 vols. folio. The other is by Peter Burman, Lug. Bat. 1725, in 2 vols. 4to.

BUCKINGHAM. The county, and also the town of Buckingham have given a title to many individuals distinguished in our history. The first EARL OF BUCKINGHAM appears to have been Walter Giffard, created by the Conqueror, who died in 1102. The title having become extinct was revived in 1377 in the person of Thomas Plantagenet, duke of Gloucester, youngest son of Edward III., whose son Humphrey died without issue in 1400. His heir Humphrey, earl of Stafford, was created Duke of Buckingham in 1401, and his grandson, Henry Stafford, "the deep-revolving, witty Buckingham" of Shakspeare, after assisting Richard III. to mount the throne, was put to death by him in 1483. His son, Edward Stafford, offended Wolsey, fell under the suspicions of Henry VIII., and was attainted and beheaded in 1521. He was the last nobleman who enjoyed the office of Lord High Constable. The title of *Earl* of Buckingham was not revived till 1617.

GEORGE VILLIERS, DUKE OF BUCKINGHAM, third son of Sir George Villiers, knight, by his second wife Mary, a lady of the ancient family of Beaumont, was born August 20, 1592, at Brookesley in Leicestershire, a seat which had been in the possession of his ancestors for nearly four centuries. His father died when George was about thirteen years of age. In his eighteenth year he went to France, where he resided for three years, and on his return he was well skilled in all bodily exercises. As yet he was a stranger to the court, but his fine person and graceful demeanour made a strong impression on James I., who attached him to his own person as cup-bearer, and familiarly gave him the name of Steenie. Promotion followed most rapidly, and he successively became a knight and gentleman of the bed-chamber, with a pension of 1000*l.* a year out of the Court of Wards. On the following New Year's Day he was made Master of the Horse, and installed Knight of the Order of the Garter. In the next August he was created Baron of Whaddon and Viscount Villiers; and in the ensuing January he was advanced to the earldom of Buckingham, and sworn of his Majesty's privy council. Scarcely another year elapsed before his patent was made out as Marquis. He was appointed Lord Admiral of England, Chief Justice in Eyre of all the parks and forests on the south of Trent, Master of the King's Bench Office, High Steward of Westminster, and Constable of Windsor Castle—"none of them," as Sir Hugh Wotton adds, "unprofitable pieces."

A rise so unprecedented, and so entirely unmerited, could not fail to create abundant jealousy; and it is by no means easy at present to ascertain the truth of many of the contemporary imputations under which he laboured. One of these, which perhaps may be considered most doubtful (for whatever might be his faults, Buckingham never evinced deficiency in personal courage), related to his marriage, in 1620, with the only daughter of the Earl of Rutland. It was not likely that he should make dishonourable advances to the richest heiress in the kingdom, nor that he should be forced into a union with her by the menaces of her injured father. Such however was the scandal of the time. Three years afterwards, while negotiations were pending for the marriage of Charles, prince of Wales, with the Infanta of Spain, Buckingham persuaded the prince to undertake a journey to Madrid to carry on his suit in person. Many of the adventures of this expedition were of a romantic cast. The prince, in company with the marquis, set out on the 15th of February 1623, from New Hall in Essex, "with disguised beards, and with borrowed names of Thomas and John Smith." On ferrying over the river near Gravesend, they found themselves without silver; and the piece of gold, worth twenty-two shillings, with which they presented the boatman, created so much suspicion, that he, feeling a misgiving as to their quality, and thinking them gentlemen going beyond sea to settle some quarrel, laid information with the officers of the town, who sent orders to stop them at Rochester. The mayor of Canterbury having received information detained them, till the marquis "thought it best to dismask his beard, and so told them he was going covertly to take a secret view, being admiral, of the forwardness of his Majesty's fleet, which was then in preparation on the narrow seas." At Paris having escaped some similar accidents on their route, they spent a whole day, and had a close sight of the Princess Henrietta Maria, "at the practice of a masquing dance then in preparation." While in the Spanish capital Buckingham made a good answer to the Conde d'Olivarez, who told him of a report that the prince was secretly designing his departure from Madrid. To this Buckingham replied, that "though love had made his highness steal out of his own country, yet fear would never cause him to leave Spain in other manner than should become a prince of his noble and generous virtues."

During his absence Buckingham had been created a duke; and upon his landing he was nominated Lord Warden of the Cinque Ports, and Steward of the Manor of Hampton Court. The war with Spain which ensued, the marriage with Henrietta Maria of France, and the impeachment of the Earl of Bristol, are sufficient proofs of Buckingham's continued ascendancy. Charles succeeded to his father's throne in 1625, and the duke still retained the high honours which he had

enjoyed in the former reign, and the intimate confidence of the new king.

The war with Spain, although undertaken without due grounds, had been popular at first, perhaps on account of the long peace which had preceded it. But the ill success which attended an expedition against Cadiz, rendered Buckingham odious to the Commons, and even occasioned his impeachment, from which he escaped chiefly through the interference of the king.

The spirit which in the end overthrew the kingly power was already awakened, and the nation submitted with impatience to the levies necessary for the conduct of hostilities with France. The Duke of Buckingham, wholly ignorant of the art of war, rashly sailed with 100 ships and 7000 soldiers for the occupation of La Rochelle, at that time in possession of the Huguenots. So wholly without concert had this expedition been undertaken, that the Rochellois were alarmed at the appearance of this huge fleet in their harbour, and being ignorant of its intentions, and ill-prepared at the moment for a general rising, they closed their gates and rejected the proffered assistance. Buckingham then directed his armament upon the neighbouring island of Rhé, and after unskillful operations during three months, and a defeat which cost him 2000 men in attempting re-embarkation, he returned, according to the language of Hume, "totally discredited both as an admiral and a general, and bringing no praise with him but the vulgar one of valour and personal bravery."

A large force was entrusted to Buckingham for another attempt to relieve La Rochelle, and he went to Portsmouth to superintend the preparations. "There were many stories," says Clarendon, "scattered abroad at that time of several prophecies and predictions of the duke's untimely and violent death. Amongst the rest there was one which was upon a better foundation of credit than such discourses usually have," which he proceeds to relate at some length.

On August 24, 1628, the duke having dressed himself in his chamber at Portsmouth, was preparing to take a hurried breakfast, in order to communicate to the king, then holding his court at Southwick, about five miles distant, some important intelligence which he had received from La Rochelle. While conversing with Sir Thomas Fryar, one of his colonels, "he was on the sudden struck over his shoulder on the breast with a knife, on which, without using any other words but 'The villain has killed me!' and at the same moment pulling out the knife himself, he fell down dead, the weapon having pierced his heart."

A hat was picked up, into the crown of which had been sewed a paper, containing part of the declaration of the House of Commons, in which the duke was styled 'an enemy to the kingdom,' and under it were written a short ejaculation or two apparently belonging to a prayer. The hat belonged to a man who was walking before the door very composedly, and who was recognised to be John Felton, a younger brother, of mean fortune, and of Suffolk extraction. He appears to have been of a moody temperament, and to have withdrawn from the army in consequence of disappointment in promotion. He was probably not without a touch of insanity; and it appears he was awakened to the full enormity of his crime before his execution.

George Villiers was murdered in his thirty-sixth year, having had three sons and one daughter by his wife, Lady Catherine Manners. The Lady Mary was his first-born; his eldest son died at nurse; his second succeeded him in his title and estates, and his third was Lord Francis.

An instance of Buckingham's public-spirited munificence while employed in concluding a treaty at the Hague ought not to be omitted, especially as his many faults have been carefully chronicled. Hearing that a rare collection of Arabic manuscripts, which had been made by Erpenius, a scholar of great erudition, was at that moment on sale by his widow to the Jesuits at Antwerp, "liquorish chapmen," as Sir Henry Wotton adds, "of such ware," the duke anticipated them by giving the widow 500*l.*, "a sum above their weight in silver, and a mixed act both of bounty and charity, the more laudable from being out of his natural element;" for Buckingham had received but an imperfect education. It was his intention, if the design had not been prevented by his unexpected death, to present these manuscripts together with many other similar treasures, to the University of Cambridge, of which learned body he was chancellor: after his assassination they were deposited by his widowed duchess in the public library of that university, where they still remain.

GEORGE VILLIERS, DUKE OF BUCKINGHAM, second son of the George Villiers, duke of Buckingham, just noticed, was born in London, January 30th, 1627. He was educated at Cambridge, under the especial patronage of the king, and after travelling with his brother, Lord Francis Villiers, returned to England on the outbreak of the civil war, and espoused the royal cause. The Earl of Holland, under whom he served, was defeated by Fairfax, near Nonsuch, in which battle Lord Francis, after fighting bravely, was killed, and the duke himself escaped with difficulty beyond the seas. The parliament required him to return within forty days, under the penalty of confiscation of his estates; but he preferred remaining abroad, where he supported himself by the sale at Antwerp of a valuable gallery of paintings which his father had collected. He afterwards served under Charles II. at Worcester, and was again compelled to take refuge on the Continent.

Part of his estates had been assigned by the parliament to Fairfax,

who generously allowed the duchess of Buckingham, the duke's mother, a considerable annuity. The duke, not without hope that the republican general might exercise similar liberality towards himself, ventured, although outlawed, to return to England, was well received by Fairfax, and married one of his daughters in 1657. Cromwell, taking this alliance ill, arrested Buckingham, and committed him to the Tower. On the abdication of Richard Cromwell he was released from Windsor Castle, the place which had been allotted for his less rigid confinement; and on the Restoration he recovered his paternal estates. He had already received the order of the garter while in Holland, and he was now sworn of the privy council, and nominated lord lieutenant of the county of York. His political conduct however was most versatile, and the influence which he maintained over Charles by his talent for agreeable ridicule was unworthily employed in procuring the fall of Clarendon. In his habits Buckingham was utterly profligate. He appears to have regarded buffoonery as an honourable and legitimate weapon against a court rival. Not unfrequently, when the grave chancellor had retired from the council-table, Buckingham threw the king into convulsions of laughter by mimicking the gait of the venerable statesman, carrying a cushion dangling by his side as the bag and seals, and ordering an attendant to precede him with the bellows as a mace.

On the formation of the 'Cabal' ministry Buckingham's name contributed an initial to that anagram. In 1670 he proceeded on an embassy to the court of France, nominally to condole with Louis XIV. upon the death of Charles's sister, the duchess of Orleans, but in truth to urge his accession to the triple alliance. On that occasion, he condescended to pander to his master's pleasures by providing him with a French mistress; but so light of purpose and frivolous was he, that the ascendancy which he might thus have secured was lost by his total neglect of the afterwards Duchess of Portsmouth, immediately upon her embarkation. Objects yet more unworthy than that lady had been already introduced by him to the royal notice, and the actresses, Mistress Davies and Nell Gwynn, were first known at court through him. "He was a man indeed," to use the strong language of a contemporary by whom he was well known, "who had studied the whole body of vice;" and assuredly no one had ever less barrier of principle to stand in the way of his instruction. So entirely did he set at nought all moral feeling, that when Charles II. on one occasion expressed apprehensions that his injured queen might probably interfere with some intrigue by her jealousy, Buckingham offered to remove her to a West Indian plantation, where "she should be well taken care of, without creating more trouble." The king, though selfish and cold-hearted, had enough good feeling remaining to revolt from so atrocious a project.

Already, in 1666, Buckingham had manifested symptoms of his fickleness, and had forfeited all his high offices, to which however he was subsequently restored through his own submission and the king's extreme facility. The Duke of Ormond had taken a considerable part against him on this occasion, and so deeply did Buckingham cherish resentment that there is strong reason to believe he was concerned in a plot which nearly ended in the murder of that nobleman by Colonel Blood. The transaction was not inquired into, but the Earl of Ossory, eldest son of the Duke of Ormond, could not forbear from taxing Buckingham with his guilt, even in the king's presence.

Notwithstanding his public and private crimes, Buckingham still retained the king's favour, was still employed on important embassies, and like his father, and with as little title to the honour, was elected chancellor of the University of Cambridge. On the dissolution of the Cabal ministry and his dismissal from office, he gradually weaned himself from the court. In 1674 he resigned the chancellorship of Cambridge, and vehemently supported the Nonconformists by his opposition to the Test Act. He was deeply engaged in the popish plot, and the remainder of his days was spent in factious opposition, and in connection with the intrigues of Shaftesbury.

One incident in Buckingham's life but too plainly exhibits the demoralisation of the times on which he was thrown. Buckingham, having been detected by the Earl of Shrewsbury in an intrigue with his wife, killed him in a duel, while the wife of the unfortunate earl held the duke's horse during the combat, in the disguise of a page. For this murder, which occurred in February, 1667-68, the duke received a royal pardon, but it was afterwards brought before the House of Lords in a petition presented by the Earl of Westmoreland in the name of the young Earl of Shrewsbury, who desired justice against Buckingham for his father's blood and his mother's infamy. The duke insolently replied, "first, that it was very true he had had the hard fortune to kill the Earl of Shrewsbury, but that it was on the greatest provocation in the world; that he had fought him twice before, and had as often given him his life, nevertheless that the earl had threatened that if he would not again fight him he would pistol him wherever he could find him, and that for these reasons the king had been induced to pardon the fatal result of their meeting. Secondly, that as for that part of the petition which regarded Lady Shrewsbury, he knew not how far his conversation with that lady was cognisable by that House, but that if he had given offence by it she was now gone into retirement." - The parliament was soon afterwards prorogued, and although a day had been appointed for taking the petition into consideration, it does not appear that it was further noticed.

On the death of Charles II. the Duke of Buckingham, conscious that he would have a more difficult master in his successor, and finding his health ruined by a long career of vice, and his fortune diminished by unbounded extravagance, retired to his seat of Helmsley in Yorkshire, where he devoted himself to field-amusements. His death occurred on April 17th 1688, at the house of a tenant at Kirkby Moorside, after a few days' fever produced by sitting on the damp ground when heated by a fox-chase; but the picture of destitution so finely drawn by Pope in the third of his 'Moral Essays' is greatly exaggerated. The duke had not reduced himself to beggary, nor did he breathe his last in the "worst inn's worst room." The portrait which Dryden has presented, under the character of Zimri in 'Absalom and Achitophel' is by no means thus overcharged, and may be unhesitatingly received not only on account of the fitness of its execution, but also the justice of its features.

The duke was interred under a sumptuous monument in Henry VII.'s Chapel in Westminster Abbey. By his death without issue his branch of the ancient family of Villiers became extinguished. It is said that he was the first person who introduced from Venice into England the manufacture of glass and crystal. In the intervals which he snatched from dissipation and politics he employed himself in literary composition. For the stage he produced 'The Restoration, or Right will take place,' a tragi-comedy; 'The Battle of Sedgmore,' a farce; 'The Chances,' a loose and improbable comedy, altered from Beaumont and Fletcher; and 'The Rehearsal.' Besides these he published a 'Satire against Mankind,' some poems, and one of his speeches in parliament. A treatise is also attributed to him in his later years, the genuineness of which may perhaps be doubted upon a perusal of its title, 'A Discourse upon the Reasonableness of Men having a Religion or Worship of a God.' These writings were collected in an octavo volume of miscellaneous works in 1704.

The life of the Duke of Buckingham was printed and his works were pirated by the notorious Curl in 1721, on which occasion a vote passed the House of Lords, declaring it to be a breach of privilege to print any account of the life or any of the works of a deceased peer without consent of his heirs or executors.

JOHN SHEFFIELD, DUKE OF BUCKINGHAMSHIRE, was born in 1649, and succeeded his father Edmund, earl of Mulgrave, in that title in 1658. When he was but seventeen years old he served in the same ship in which Prince Rupert and the Duke of Albemarle had embarked in the first Dutch war. At the meeting of parliament in the following year he was summoned by writ to take his seat, but was excluded on account of nonage on a motion of the Earl of Northumberland. In an encounter with the noted Earl of Rochester, which occurred about this time, he conducted himself, according to his own account as given in his autobiography, with distinguished credit.

In an engagement with De Ruyter in the second Dutch war, Sheffield served with gallantry as a volunteer on board the ship of the Earl of Osory. His behaviour in the engagement procured for him the command of the best second-rate ship in the navy. In the land-service he raised a regiment of foot, and commanded it as colonel; and the old Holland regiment, in which he bore the like commission, was also placed under his orders. He was installed Knight of the Garter, and appointed a gentleman of the bedchamber. For a short time he entered the French service under Turenne, and when the unhappy Monmouth showed symptoms of rebellion, Sheffield received the lord-lieutenancy of Yorkshire with the government of Hull, from which Monmouth was dismissed.

On the accession of James II. he was sworn into the Privy Council, and appointed Lord Chamberlain. Not being very fervent in his religious opinions, and indeed holding a place in the high commission, with the illegality of which he afterwards professed himself to be unacquainted, he took no part in the revolution. Once it was designed to request him to join in the invitation to the Prince of Orange, but the Earl of Shrewsbury declared that he well knew that Mulgrave's concurrence was not to be expected. His reply to King William, who mentioned this fact to him, was singularly bold and upright:—"Sire," said he, "if the proposal had been made, I would have discovered it to the king whom I then served." To the honour of William, it should be added, that he was far from being displeased with this answer. Mulgrave however by no means courted the favour of the reigning king. He opposed him on some important questions; and it is related that this opposition neither interfered with his advancement, nor did his advancement silence his opposition. In 1694 he was created Marquis of Normanby, and afterwards was admitted into the cabinet council with a pension of 3000*l.* per annum.

On the accession of Queen Anne he was named Lord Privy Seal. It is said that an early tender attachment to that princess once nearly cost him his life; for that Charles II., in order to punish his ambition, despatched him in a leaky vessel to the relief of Tangier. In 1703 he was created Duke of Normanby and of Buckinghamshire. In consequence of the ascendancy of the Duke of Marlborough he resigned the Privy Seal, and greatly offended the queen by supporting the Tory motion for inviting the Princess Sophia to England. He refused the strong temptation of the chancellorship, which was offered to lure him back, and employed his leisure from politics in erecting Buckingham House at Piccadilly, upon land granted by the crown. In 1710 he was made Lord-Chamberlain of the household, but after

Queen Anne's death he reverted to opposition. He died February 24, 1720-1. By his first two wives he was without children; by his third, a daughter of James II. by the countess of Dorchester, and widow of the Earl of Anglesea, besides other children he had a son Edmond, by whose death in 1735 the line of Sheffield became extinct.

As a poet the Duke of Buckinghamshire is below criticism, and it is to his rank rather than to his talent that we must ascribe the praises which he received from Roscommon, from Dryden (to whom he erected a monument in Westminster Abbey), and from Pope. The few prose pieces which the Duke of Buckinghamshire has left to us are light and graceful, and although now perhaps forgotten, they deserve a higher rank than his poetry. His remains lie under a sumptuous monument erected by his widow in Westminster Abbey.

GEORGE GRENVILLE NUGENT TEMPLE, second earl of Temple, was created marquis of the town of Buckingham in 1784, and his son, Richard Grenville Brydges Chandos, was advanced to the dukedom of Buckingham and Chandos in 1822.

BUCKINGHAM, JAMES SILK, was born in 1786, in the marine village of Flushing, near Falmouth, in Cornwall. His father had been a seafaring man, but then occupied a farm, and died while Buckingham was yet a boy. His mother sent him to school at Falmouth, and was desirous of bringing him up to the church, but he preferred going to sea, and made a few voyages to Liabon, in the last of which the ship was captured by the French, and the crew made prisoners. After some delay they were set at liberty, but on their way home were impressed for the British navy. Buckingham however escaped from the press-gang, returned to Cornwall, and entered into an engagement with a bookseller at Devonport, in whose employ he remained about four years; and here he seems to have gained some knowledge of the trade of a printer. He however took to the sea again on board a king's ship, but deserted, returned home, tried the law, and abandoned that profession also. He married before he was twenty years of age. About this time his mother died, leaving him a considerable property in charge of trustees. He then commenced business as a bookseller, on borrowed money. One of his trustees robbed him of his property, his business proved a failure, and he was left destitute with a wife and female child.

Leaving his wife in the care of her friends, Buckingham then went to London, in the hope of getting an engagement as captain of some vessel, but having waited till he was almost in a state of starvation, he obtained employment in a printing-office, and was afterwards engaged at the Clarendon Press, Oxford. At length he was appointed captain of a West-Indian man, and continued four or five years in that trade. He afterwards was a captain in the Mediterranean trade, and made many friends at Malta and Smyrna. He then resolved to settle at Malta as a ship-owner and merchant, and having purchased a cargo of goods, he sailed from London in April 1813. When the vessel reached Malta, the plague had broken out there, and no persons were allowed to land; the cargo however was taken on shore, and the ship then proceeded to Smyrna. While he remained at Smyrna, many failures took place in Malta, and he among others lost all his property.

Buckingham then resolved to try his fortune in Egypt, and left Smyrna for that purpose, August 30, 1813. He was well received at the British Embassy, and was introduced to Yuseff-Boghos, an Armenian, the principal agent of the pasha, Mohammed Ali, who was then absent on an expedition in Arabia. At this time there was much speculation about renewing the commerce with India through the Red Sea, and making a navigable canal from that sea to the Mediterranean. Buckingham had a despatch forwarded to the pasha, in which he offered his services to examine the Isthmus of Suez for an eligible track, and to trace as far as possible the course of the ancient canal. His offer, after some delay, was accepted, and having in the meantime ascended the Nile as far as the cataracts, he started from Keneh on the Nile, with a single attendant, for the purpose of travelling to Kosseir on the Red Sea. His attendant deserted him on the route, he was robbed of everything he possessed, and was left entirely naked. He was befriended by a poor Arab, who supplied him with some scanty covering, and at length reached Kosseir, whence however he was obliged to return to Keneh, and thence to Cairo, without effecting anything. At Cairo he was introduced to the pasha, Mohammed Ali, with whom he had some long conversations, and again set out February 15, 1814, for the same purposes as before; he reached Suez, and traced the ancient canal as far as it had not been filled up and obliterated. After his return to Cairo the pasha had changed his mind as to the canal, but gave him a commission to purchase ships for him in India, and to encourage a trade between India and Egypt.

Mr. Buckingham then left Cairo for the purpose of proceeding to Bombay by the Red Sea, and reached Suez, October 18, 1814, and Bombay April 6, 1815, having been delayed in Arabia. He found the merchants at Bombay distrustful of the pasha of Egypt, and unwilling to trade with him; he therefore accepted an engagement from the agent of the Imaum of Muscat as commander of a ship of 1200 tons burden, which was intended to trade to China on the Imaum's account. When this was made known to the civil authorities at Bombay, and also that he had no licence from the East India Directors to reside in India, he received an order to return to England, but, after much remonstrance on his part, was allowed to return to Egypt in one of the East India Company's ships, which was about to proceed

up the Red Sea for surveying purposes. He accordingly sailed from Bombay June 27, 1815, was landed at Suez, and reached Cairo November 20, in the same year. After another interview with the Pasha he received a firman and other assistance, by the aid of which he travelled overland to India through Syria, Mesopotamia, and Persia, dressed in Turkish costume, and speaking Arabic, which, he states, is more or less understood in all those countries.

From this period his proceedings in the East are imperfectly known. In 1816 he was in Calcutta, and established a journal there, but the boldness of his censures of the mal-administration of Indian affairs led to his expulsion from the presidency of Bengal; his printing-presses were seized, and he was compelled to return to England.

After his arrival in London, Mr. Buckingham delivered many lectures against the monopoly of the East India Company, and in support of opening the trade to China. A liberal subscription was entered into to reimburse him for the losses he had sustained by the suppression of his journal. He established in London 'The Oriental Herald,' which became the precursor of several similar journals, and 'The Athenæum,' which is now the leading literary journal among those which are published weekly. In 1822 he published his 'Travels in Palestine;' in 1825 'Travels in Arabia;' in 1827 'Travels in Mesopotamia;' in 1830 'Travels in Assyria and Media.' At a later period he made several tours through various parts of Europe and of North America. He published 2 vols. on Belgium, the Rhine, and Switzerland; and 2 vols. on France, Piedmont, and Switzerland. He was nearly three years in America, and traversed the United States in all directions, from Maine to Louisiana. His 'Travels in America' comprise:—3 vols. on the Northern States; 3 vols. on the Slave States; 3 vols. on the Eastern and Western States; and 1 vol. on Canada, Nova Scotia, and New Brunswick. Much of these volumes however consists of statistics, and a great variety of other matters of compilation. Their literary or other worth is very small.

In 1832 Mr. Buckingham was elected member of parliament for Sheffield, and he retained his seat till 1837. He was a supporter of liberal policy, and especially of social reforms. For many years his chief occupation was the delivery of public lectures in various parts of the country. His choice of subjects, style, and especially his manner, were popular and pleasing, and his lectures were always fully attended. In 1843 he was the chief agent in establishing a literary club called the British and Foreign Institute, of which he was appointed secretary, but which ceased to exist in about three years. In 1849 he published 'National Evils and Practical Remedies,' 1 vol., in which he expounded his views on many subjects connected with the public welfare. He was a zealous advocate of the temperance movement, and he was President of the London Temperance League formed in 1851. In 1855 he published the first two volumes of his 'Autobiography,' and he intended to publish the next two volumes in the course of the same year, but he closed his life of extraordinary vicissitude and adventure on June 30, 1855. The court of directors of the East India Company had made amends for their former ill-treatment by granting him a pension, which he enjoyed for a few of the last years of his life, and which is continued, we believe, to his widow, who is still living, having been his wife for fifty years. He had also for a few years a pension of 200*l.* a year from the civil list. The manuscript journals of his various travels occupy, as he states in his 'Autobiography,' 28 folio volumes, closely written.

*BUCKLAND, THE VERY REV. WILLIAM, Dean of Westminster, an eminent geologist, was born at Axminster, Devon, in 1784. He was educated at St. Mary's College, Winchester, and from thence, in 1801, entered Corpus Christi College, Oxford, as scholar. In 1808 he was elected Fellow of this college. In 1813 he was appointed reader in mineralogy, and in 1818 reader in geology in Oxford University. His geological lectures were characterised by such clearness and comprehensiveness of description, and such apt illustration, that they met with brilliant success. Geology, as a science, was then in its infancy, and much of its subsequent vigorous advancement is due to Dr. Buckland's lectures.

The Geological Museum at Oxford owes its chief excellence to Dr. Buckland's industry in procuring and arranging specimens, particularly of the remains of the larger fossil *Mammalia*, and other animals from the caves in different parts of England and Germany. He spared neither pains nor expense in travelling to make the collection worthy of the university and the science it was intended to illustrate, as exemplified in his 'Descriptive Notes,' with sections of 50 miles of the Irish coast, made conjointly with the Rev. W. Conybeare, dean of Llandaff, during a tour in Ireland in 1813, and published in the third volume of the 'Transactions of the Geological Society.'

In 1818 Dr. Buckland was elected a Fellow of the Royal Society. In 1820 he delivered a lecture before the university, which was afterwards published under the title 'Vindiciae Geologicae, or the Connexion of Geology with Religion explained.' The object of the lecture was to show that the study of geology has a tendency to confirm the evidences of natural religion, and that the facts developed by it are consistent with the accounts of the Creation and Deluge as recorded in the Mosaic writings.

In 1822 he communicated to the Royal Society an "Account of an assemblage of fossil teeth and bones of elephant, rhinoceros, hippo-

potamus, bear, tiger, hyena, and sixteen other animals, discovered in a cave at Kirkdale, Yorkshire," and for which in the same year the society awarded him their highest honour, the Copley medal. This paper was made the foundation of a treatise published in 1823, 'Reliquiæ Diluvianæ, or Observations on Organic Remains attesting the Action of an Universal Deluge,' which proved of essential service in the promotion of geological science.

In 1825 Dr. Buckland was made canon of Christ Church, Oxford. He was president of the British Association at their second meeting at Oxford in 1832. Four years later he published his Bridge-water Treatise, 'Geology and Mineralogy considered with reference to Natural Theology,' 2 vols. 8vo. The discovery of new facts had materially advanced geological science; and modifying in this work the previous diluvial theory, Dr. Buckland brought the weight of his authority to support the views now generally received. One of the most able of his numerous geological writings, as subsequently testified by Murchison and Sedgwick, was a sketch of the structure of the Alps, published in the 'Annals of Philosophy,' in which he showed, for the first time, that many crystalline rocks of this chain are of no higher antiquity than our Lias, Oolitic, and Cretaceous formations.

The 'Transactions of the Geological Society' contain highly valuable suggestive evidence of Dr. Buckland's skill as a field geologist, as well as a palæontologist, and among them, his description of the south-western coal district of England (1825) may be mentioned as an example. It has stood the test of more than thirty years, and is still appealed to as a standard work.

Dr. Buckland was chosen on the council of the Royal Society in 1827, and in subsequent years up to 1849. He was one of the earliest fellows of the Geological Society, having been elected in 1813, and has twice filled the presidential chair. His anniversary addresses are printed in the society's 'Journal.' He is also a Fellow of the Linnæan Society. In 1845 he was made Dean of Westminster; and, coming to reside in London, he was appointed a Trustee of the British Museum in 1847, and took an active part in the meetings of scientific societies, and in the establishment of the Museum of Practical Geology in Jermyn-street. Since the year 1850 he has been obliged to relinquish his favourite pursuits, but hopes are entertained that he may be able once more to resume them.

BUDÉ, GUILLAUME, or, as he is better known by the Latinised name, Budæus, was born in Paris in 1467 of an ancient and honourable family. His early education appears to have been neglected, and when he went to Orléans to study the civil law he profited little, owing to his very imperfect knowledge of Latin. Indolence and a love of amusement consumed much of the remainder of his youth, till he was suddenly inspired with so ardent a love of letters that he even regretted the hours necessarily given to repose and refreshment, and applied to learning with an assiduity which threatened injury to his health. Yet although, to use his own words, he was self-taught and late-taught, he attained an eminence in learning which placed him above most of his contemporaries.

Budæus was well known by name both to Charles VIII. and to Louis XII.; yet, notwithstanding he was twice employed by the latter king in Italian embassies, and even inscribed on his list of royal secretaries, he did not appear at court till the reign of Francis I., during the interview with Henry VIII. at Ardres. The king then appointed him his librarian and *maitre-des-requêtes*, and the citizens of Paris named him provost of the merchants—offices which he complained were great interruptions to his pursuit of letters. In 1540, while accompanying the court on a summer visit to the coast of Normandy, in order to avoid the excessive heat, he contracted a fever which rapidly carried him off. He left injunctions that his interment should take place by night. This request, and an avowal of Protestantism made at Geneva soon after his decease by his widow and some part of his family (he left seven sons and four daughters), have thrown doubt on his orthodoxy, and he has been abused by the Romanists accordingly. The rumour derives strength from his intimate correspondence with Erasmus, whom he rivalled in anti-Ciceronianism, and in his hatred of monks and illiterate ecclesiastics. In one of his letters he shows a supreme contempt for the divines of the Sorbonne, and calls the members of it prating sophists, and, with the deviation of a single letter (a licence not to be denied to a pun), "divines of the Sorbonian (Serbonian) bog."

Budæus was less skilled in Latin than in Greek, and his epistolary style in the former language is tinged with harshness, and strongly contrasts with the pure and elegant tone of Erasmus. His works, of which an accurate list is given by Baillet in his 'Jugemens des Savans,' were collected at Basel in 1557 in four folio volumes, an edition which has become extremely scarce. All his writings abound in learning; but the tract best known to modern readers is entitled 'De Asse et Partibus ejus,' in the preface to which he complains that on his wedding-day he was not allowed more than six hours for study. A second story, which has been attributed to other great scholars also, rests on not quite so good authority. "An alarm of fire having been one day given while he was at work in his study, he asked the terrified servant with great calmness why she did not inform her mistress. 'You know,' he added, 'I never concern myself about household matters.'" His 'Commentaries on the Greek Tongue' are still deservedly held in high repute. They elucidate many terms employed by the orators, the

explanation of which is not so easily attainable elsewhere. His Greek letters also are written with much elegance, and show a profound knowledge of the language.

BUDGELL, EUSTACE, son of the Rev. Gilbert Budgell, was born about 1685 at St. Thomas's, near Exeter. Through his mother, Mary Gulston, daughter of a bishop of Bristol, he was connected with Addison, who used to name him "that man who calls himself my cousin," and who wrote an epilogue to Prior's 'Phædra' which was attributed to Budgell, and acquired for him a reputation which he little merited. He was educated at Christchurch, Oxford, and afterwards entered at the Temple; where, devoting himself to literature, he wrote largely in the 'Spectator,' to which he contributed all the papers marked X, and on the discontinuance of that work all those in the 'Guardian' marked with an asterisk. Through Addison's influence he held many subordinate offices under government in Ireland; and in 1717, when his patron became secretary of state in England, he procured for Budgell the lucrative appointment of accountant and comptroller-general in Ireland. A mis-understanding with the lord-lieutenant, Lord Bolton, and some lampoons which Budgell was indiscreet enough to write in consequence, occasioned his resignation.

From that time he appears to have trodden a downward course: he lost 20,000*l.* in the South Sea Bubble, and spent 5000*l.* more in unsuccessful attempts to get into parliament. In order to save himself from ruin he joined the knot of pamphleteers who scribbled against Sir Robert Walpole, and he was presented with 1000*l.* by the Duchess of Marlborough. Much of the 'Craftsman' was written by him; also a weekly pamphlet called the 'Bee,' which commenced in 1733, and extended to 100 numbers. But his necessities reduced him to dishonest methods for procuring support, and he obtained a place in the 'Dunciad,' not on account of want of wit but of want of principle, by appearing as a legatee in Tindal's will for 2000*l.*, to the exclusion of his next heir and nephew—a bequest which Budgell is thought, perhaps unjustly, to have obtained surreptitiously. In 1736, being utterly broken in character and reduced to poverty, he took a boat at Somerset Stairs, and ordering the waterman to row down the river, he threw himself into the stream as they shot London bridge. Having taken the precaution of filling his pockets with stones, he rose no more. On the morning before that on which he drowned himself he had endeavoured to persuade a natural daughter, at that time not more than eleven years of age, to accompany him. She however refused, and afterwards entered as an actress at Drury Lane Theatre. Budgell left in his secretary a slip of paper, on which was written a broken distich, intended perhaps as an apology for his act:—

"What Cato did, and Addison approved,
Cannot be wrong."

It is unnecessary to point out the fallacy of this defence of his conduct, there being as little resemblance between the cases of Budgell and Cato, as there is reason for considering Addison's 'Cato' written with the view of defending suicide.

BUFFALMACCO, an old painter of Florence of the beginning of the 14th century, and a scholar of Andrea Tafi, celebrated for his humour by Boccaccio and Sacchetti, and for his ability by Ghiberti and Vasari. The name of Buffalmacco appears to have been a nickname as given to him by Boccaccio: his real name is said to have been Buonamico di Cristofano, but some have supposed the name of Buonamico, which is used by Ghiberti, to have been a nickname also. Rumohr and others have even doubted his actual existence, supposing that Vasari himself has given him his historical existence by confounding together the real Buonamico of Ghiberti and the imaginary Buffalmacco of Boccaccio—an idea which does not seem to have occurred to either Balducci or Lanzi, or any of the Italian editors of Vasari's work. This however is certain, that Vasari has gleaned most that is interesting and all that is amusing in his 'Life of Buffalmacco' from the novels of Boccaccio and Sacchetti; and some of his narrations of the ready humour of this painter are the most amusing passages in his 'Lives': they are from the following novels of Boccaccio:—'Decamerone,' viii. 3, 6, 9; ix. 3, 5; and the following of Sacchetti:—161, 169, 191, 192.

Vasari enumerates many of Buffalmacco's works, of which however scarcely anything now remains. Of those attributed to him there are still some in the Campo Santo at Pisa, and at Arezzo. At Pisa there is a 'Creation of the Universe,' some stories from the life of Noah and his sons; and the 'Crucifixion,' the 'Resurrection,' and the 'Ascension of Christ; but though there is some meaning in them as compositions, as designs they are barbarous works: they are engraved in Lacinio's 'Campo Santo.' Vasari however speaks of other works which have perished as very superior to these, and he says that Buffalmacco, when he chose to exert himself, which was not often, was equal to any of his contemporaries. In some of his works in Pisa he was assisted by Bruno di Giovanni, who is also mentioned by Boccaccio. Buffalmacco died poor, according to Vasari, in 1340, aged 78, but according to Balducci he was still living in 1351; he was therefore probably a younger painter than Giotto, who died in 1336, aged 60, though Vasari's account makes Buffalmacco the elder.

(Vasari, *Vite de' Pittori, &c.*; Balducci, *Notizie dei Professori del Disegno, &c.*; Lacinio, *Pittura a Fresco del Campo Santo di Pisa.*)

BUFFON, GEORGE LOUIS LE CLERC, COMTE DE, son of

Benjamin Le Clerc Buffon, a councillor of parliament, was born at Montbard, in Burgundy, on the 7th September 1707, a year which was also marked by the entrance of Linné into life. We first trace the young Buffon at Dijon, where he was entered at the Jesuits' College as a student of law; but it would appear that the legal profession, which his father wished him to adopt, had no charms for him, and that astronomy and mathematics were his favourite pursuits. The parent, observing his son's disgust at the former study and his zealous application to the last-named sciences, wisely suffered him to follow the path which he had chosen, and he became so wedded to his geometry that some of his biographers assert, that while his companions were at their sports he was generally to be seen in some retired nook poring over his pocket Euclid. Such a mode of spending hours, which would otherwise have been hours of idleness, brought forth its fruits in due season, and there are stories current that he had anticipated Newton in some of his discoveries, but that he withheld his claim, observing that people were not obliged to believe the assertion. We receive these on *dis* with some grains of allowance, for, to say nothing of dates, vanity was certainly not absent as an ingredient in Buffon's character.

An acquaintance which he had made with Lord Kingeton and his tutor, at Dijon, soon ripened into friendship, and Buffon travelled through Italy with these companions, the latter of whom appears to have been a man of science, while the former was the ready partner in his pleasures: the friends afterwards visited Paris and London together. The death of his mother, whom he lost during this expedition, put him in possession of a large income, nearly 12,000*l.*, but he did not settle down on his estate till the age of twenty-five. In this retirement he resolutely pursued his studies, and as it may not be uninteresting to those who think life was not given to us to be passed in mere frivolities, to know how Buffon passed his time, we select the following account from a modern biographer, premising that the history of one day seems to have been that of all the others, generally speaking, throughout a period of fifty years. "After he was dressed he dictated letters, and regulated his domestic affairs; and at six o'clock he retired to his studies at the pavilion called the Tower of St. Louis. This pavilion was situated at the extremity of the garden, about a furlong from the house, and the only furniture which it contained was a large wooden secretary and an arm-chair. No books or pictures relieved the naked appearance of the apartment, or distracted the thoughts of the learned possessor. The entrance was by green folding doors, the walls were painted green, and the interior had the appearance of a chapel, on account of the elevation of the roof. Within this was another cabinet, where Buffon resided the greater part of the year, on account of the coldness of the other apartment, and where he composed the greater number of his works. It was a small square building, situated on the side of a terrace, and was ornamented with drawings of birds and beasts. Prince Henry of Prussia called it the cradle of natural history; and Rousseau, before he entered it, used to fall on his knees and kiss the threshold. At nine o'clock Buffon usually took an hour's rest; and his breakfast, which consisted of a piece of bread and two glasses of wine, was brought to the pavilion. When he had written two hours after breakfast, he returned to the house. At dinner he spent a considerable portion of time, and indulged in all the gaieties and trifles which occurred at table. After dinner he slept an hour in his room, took a solitary walk, and, during the rest of the evening, he either conversed with his family or guests, or sat at his desk examining the papers which were submitted to his judgment. At nine o'clock he went to bed to prepare himself for the same routine of judgment and pleasure." Among his other studies the alleged burning of the Roman fleet, under Marcellus, by Archimedes, on its approach within bowshot, by means of mirrors, attracted his attention, and he commenced a series of experiments, with the view of verifying the fact. After several experiments and considerable expense, he constructed a great mirror, composed of 168 pieces of plain silvered glass, six inches by eight. The contrivance allowed of extensive motion, the whole of the pieces being set in an iron frame, with an apparatus of screws and springs. Having made his preparations he commenced his experiments, and, on the 23rd of March, a plank of beech, which had been covered with tar, was set on fire at the distance of sixty-six feet, only forty mirrors being brought to bear on it, and without their being set in the stand. On the same day ninety-eight mirrors, under some disadvantageous circumstances, ignited a tarred and sulphured plank, at the distance of 126 feet. Other experiments were still more successful. At three o'clock, on the 5th of April, 154 mirrors fired small sulphured chips of deal, mingled with charcoal, at the distance of 250 feet, when the day was not bright; a few seconds were sufficient to produce ignition when the sun shone powerfully. An unclouded and clear sun, soon after mid-day of the 10th of April, inflamed very suddenly a tarred fir-plank, the distance being 150 feet, and the number of mirrors brought into action being 128. On the 11th of April some small combustibles were ignited by 12 mirrors, at 20 feet; a large pewter flask, 6 lbs. in weight, was melted by 45 mirrors at the same distance, and some thin pieces of silver and iron were brought to a red heat by 117. These experiments led him to others, having for their object the structure of mirrors by bending glass upon spherical moulds; but his great difficulty appears to have been encountered in

the cooling and grinding, and only three, it is said, were preserved out of twenty-four. He presented one of these, having a diameter of 46 inches, and considered as the most powerful burning-glass in Europe, to the king of France.

Hitherto we have seen Buffon devoting himself to his studies with unwearied diligence; but the more abstruse of the sciences and the formation of his style appear to have almost entirely occupied him up to a certain period.

Some few years however before he commenced the experiments above recorded, he was, at the age of thirty-two (about the year 1739), called to succeed M. Dufay, who, struck by a mortal disease (the small-pox), had recommended Buffon to the minister as the only man capable of following up his projects in the office of intendant of the Royal Garden and Museum, where he planted the two avenues of lime-trees which terminate towards the extremity of the nursery, and mark the limits of the garden at that period. The appointment seems to have at once awakened his dormant love for the study of natural history. His ardent mind took an immediate and comprehensive view of the subject, and commencing with the theory or history of the earth as his basis, he followed it out through the great work which has immortalised his name as a zoologist, calling to his assistance the talents of men who were most deeply versed in particular branches of the study:—the names of Daubenton and Lacépède stand pre-eminent among those who were thus associated with him.

His marriage with Mademoiselle de Saint Belin, in 1762, appears to have been productive of great happiness to both parties, for she is recorded as anxiously watching all his steps on the road to fame, and rejoicing with him at the honours which were showered upon him by crowned heads and learned societies. Louis XIV., in 1776, raised his estate into a comté, and invited him to Fontainebleau, with a view of inducing him to accept the office of Administrator of the Forests of France, but Buffon declined the office.

His days appear to have been passed in great tranquillity, uninterrupted till a late period of his life, when that cruel disease, the stone, came to embitter the rest of it. After seven or eight years of suffering he died on the 16th of April 1788, at the age of eighty-one. Fifty-seven stones, some of them as large as a bean, are said to have been found in his bladder. His body was embalmed, and placed in the same vault with that of his wife, at Montbard. The respect paid to his memory was great, and reflected honour on the assemblage of academicians and persons of rank and distinction who followed his remains to the tomb. It is said that above 20,000 people had congregated to see the funeral pass. Condorcet, Broussonet, Vicq d'Azyr, and Lacépède were his principal eulogists.

Buffon left an only son, whose abilities were considerable, and whose attachment to his parent was extreme, if indeed filial love can ever be extreme. He was in the army, and had risen to the rank of major in the regiment of Angoumois. We have seen the father's obsequies celebrated by the great and good, and attended by the people; but this homage to a great genius was soon to give way to the storm that darkened the political horizon of all Europe. The son of the great Comte de Buffon expiated the crime of his birth on the scaffold which had already reeked with the noblest blood of France; and even the bones of the father—the man whom the people had delighted to honour—could not escape desecration. The remains of the illustrious zoologist were torn from the grave; the lead in which he was hearsed was plundered, and his monument was razed to the ground. And when a citizen, to whom science was dear, complained to the Committee of Public Instruction of the outrage, and proposed that Buffon should have a place in the Pantheon, he was answered that the temple would be profaned by the presence of one who had been connected with the aristocracy of France.

The character of Buffon's mind seems to have been comprehensive, exhibiting an insatiable desire of knowledge joined with a persevering fondness and appetite for study rarely to be found: to these gifts nature had added a most fervid imagination, and, his biographers have superadded, no small portion of vanity. He would read to his visitors those passages in his works which were his greatest favourites, such as portions of his natural history of man, the description of the Arabian deserts in the account of the camel, and his poetical pages on the swan. The last affected Prince Henry of Prussia, to whom the author read it when he was on a visit to Montbard, so strongly, that he sent to the zoologist a service of porcelain on which swans were represented in almost every attitude.

Buffon was of a noble countenance and commanding figure, and his fondness for magnificence and dress seems to have amounted almost to a passion. It is curious to observe such an intellect as his finding time in the midst of the severest studies to submit his head to the friseur often twice and sometimes three times in the day, and to make his toilet in the extreme of the fashion. On a Sunday, after the service of the church, the peasantry of Montbard came to gaze on the count, who, clad in the richest dress, and at the head of his son and retainers, was wont to exhibit himself to their admiring eyes. This last exhibition however may have been a trait of the times.

His devotion to study early ripened into a habit, and became his solace under the excruciating torments which embittered the last years of his life. When asked how he had found time to do so much, he would reply, "Have I not spent fifty years at my desk?" Buffon's

style was brilliant and eloquent even to the verge of poetry; and it is worthy of remark, that a mind which had been trained and disciplined in the severity of the exact sciences should surrender the reins so entirely to the most luxuriant but wildest imagination. Hence he was often arraigning nature at the bar of his fancy for some supposed defect of design, when the fault was in his own want of perception of the end to which that design was directed, arising from his not being acquainted with the habits to which it ministered. His observations on the bill of the avoet, on the structure of the sloth, and on the melancholy condition of the woodpecker (*Picus*), are examples of this habit; upon the woodpecker he is quite pathetic, but, as in all such cases, he bestows his pity very needlessly. He has been charged with infidelity; but this, like some others, is a charge easy to be made and hard to be disproved; though it must be admitted that his works afford some ground for it. His moral character, we are compelled to add, was far from good, there being too much evidence in proof of his licentious habits and conversation to admit of doubt on the subject.

His works were numerous, and have obtained for him that fame which he is said to have so much desired. His translations of Hales's 'Vegetable Statics,' and of Newton's 'Fluxions,' both of which he prefaced with great ability, appear to have been undertaken with a view of improving his style as well as of advancing his knowledge. The 'Memoirs of the Royal Academy,' of which he was so distinguished a member, contain many of his papers; but without entering into these and other compositions, we proceed to the notice of his *opus magnum*, the 'Histoire Naturelle.' Of the quarto editions, the first in 36 vols., printed at the royal press, appeared in 1749, and was in a course of publication down to 1788; another was published in 1774 and the following years, in 28 vols., but this is comparatively of less value, for though it contains the supplementary matter, Daubenton's 'Anatomy' is cut out, and the plates are considered as worn and bad. Of the Supplement, 6 vols. appeared in Buffon's lifetime; the 7th was published in 1789, by Lacépède, after Buffon's death, and in it Lacépède expressed his deep regret for the loss. In the department of the Birds, Buffon was assisted by M. Gueneau de Montbeillard, Bailion, and the Abbé Bexon. There are 5 vols. on minerals; a history of vegetables was also contemplated. The magnificence of the 'Planches Enluminées' is well known to every collector.

The 'Histoire Naturelle' has been translated into Italian, Spanish, Dutch, German (twice with additions), and English. Numerous editions of the 'Histoire Naturelle' have been published in France since the death of Buffon, as well as several selections from his writings. Of the former, the most valuable are the 'Histoire Naturelle de Buffon, mise un nouvel ordre; précédée d'une notice sur les ouvrages et la vie de Buffon, par M. le Baron Curvier,' in 36 vols. 8vo, Paris, 1825-26; and that edited by M. A. Richard, in 30 vols. 8vo, 1824, &c.

BUGEAUD DE LA PICONNERIE, THOMAS ROBERT, DUC D'ISLY, Marshal of France, was born at Limoges, October 15, 1784. He came of a good family, most of the members of which were among the emigrants of the first revolution. Young Bugeaud however remained in France, and having chosen a military life, entered the army as a private in 1804. At Austerlitz he was a corporal; the following year he was made sub-lieutenant. He served in the campaign of Prussia and Poland, and was wounded at Pultusk, Nov. 26, 1806. Sent into Spain as adjutant-major he speedily caught the eye of Marshal Suchet, who in his despatches made frequent mention of Bugeaud's merits. He in consequence rose steadily in professional rank till he was made lieutenant-colonel, and appointed to the command of the 14th regiment of the line. On his return to France he was created colonel.

On the abdication of Napoleon I., Bugeaud gave in his adhesion to the restored dynasty; but, with most of the other officers, went over to the emperor on his return from Elba. During the Hundred Days he had the command of a small body of troops, and with it he succeeded in defeating a much superior Austrian force at l'Hôpital-sous-Confans, June 1815. Upon the second restoration, Bugeaud retired to his estate, where he diligently cultivated the soil, till the revolution of July 1830 called him again into public life. He was elected a member of the Chamber of Deputies, and became an earnest supporter of Louis Philippe, whose confidence he quickly gained, and who named him marshal. In January 1834 occurred a deplorable event, which caused great excitement in Paris, and rendered Bugeaud extremely unpopular: this was the death of M. Dulong, in a duel between him and General Bugeaud, arising out of some bitter remarks made in the Chamber of Deputies by Dulong in reply to Bugeaud, in a debate on the conduct of Marshal Soult. So great was the exasperation of the Parisians, that the government found it advisable on the occasion of Dulong's funeral to take precautions against an insurrection. A few months later Bugeaud's unpopularity was increased by the decisive measures he took for suppressing the various émeutes which broke out, and especially by having his name coupled with the massacre of the Rue-Transnonain.

In 1837 Bugeaud was sent to Algiers, where he concluded a treaty with Abd-el-Kader, which was much criticised at home, but which served the purpose for which Bugeaud made it—that, namely, of enabling the French commander, by securing the inactivity of the

only chief whose prowess and authority were really to be feared, to direct his whole strength against the disunited tribes, and reduce them successively to submission. Bugeaud returned to Paris to give an account of his mission. It soon appeared that Bugeaud knew better how to deal with the Arabs than the officers previously sent; and in 1840, affairs appearing very unpromising, Marshal Vallée was recalled, and Bugeaud was appointed governor-general of the French possessions in Africa. We have already given an outline of his proceedings [ALGERIE, in GEOG. DIV.; and ABD-EL-KADER, ante, col. 12], and it will be enough here to observe, that the maxim he was fond of repeating was that "to conquer the Arab you must first become an Arab," and that in accordance with this he set about organising the Zouaves and other irregular soldiers, characterised by their capacity for acting independently as well as in masses, their celerity of motion, and their daring, and who have since become so important a part of the French army; and having established a chain of fortified posts, he was enabled to maintain incessant attacks and surprises, never permitting any body of armed natives to collect without immediately dispersing them, and never allowing any hostile tribes to carry on any of their ordinary agricultural avocations. From his energy and ruthlessness, there was no escape for the uncivilised natives. Attacked in detail, resistance was useless; there was only the choice of submission or destruction. In three years Bugeaud was able to announce that there was no longer an enemy in the field. Abd-el-Kader was a fugitive, and Algiers was formally annexed to the French crown. The Emperor of Morocco had ventured to oppose the progress of the French arms; but his coast-towns were ravaged, and at Isly Bugeaud with a far inferior force had destroyed his army. For this last achievement Louis Philippe created Bugeaud Duc d'Ally; the Arabs gave him the more poetic title of Conqueror of Fortune. He returned to France in 1846; but in his absence Abd-el-Kader again collected an army, and the whole country was speedily in revolt. Bugeaud was sent back, and with an iron hand quickly and effectually crushed the Arab rising.

At the outbreak of the revolution of February 1848 Bugeaud was in Paris, and on the night of the 23rd the command of the troops was given to him. He would have adopted energetic measures, but the king shrank from shedding blood, and the military command was placed in other hands. Bugeaud was not again employed till Louis Napoleon became president, when he was named to the command in chief of the army of the Alps. He was also elected by Charente-Inférieure representative in the National Assembly. But he enjoyed neither dignity long; he died of cholera, on the 10th of June 1849. Bugeaud published memoirs on infantry manœuvres, on army organisation, on the establishment of military colonies, and on various matters connected with the governance of Algiers.

(*Galerie des Contemporains; Nouvelle Biographie Universelle; Resancenes, Biographie complete de M. le Maréchal Bugeaud; &c.*)

BULARCHUS, of Lydia, in Asia Minor, has the distinction of being the earliest painter on record. He was a distinguished painter at least as early as 720 years before Christ. Pliny ('Hist. Nat.,' xxxv. 34) tells the following story about him:—He painted a battle of the Magnetæ, for which Candaules, king of Lydia, about 716 B.C., gave him as much gold coin as would cover the picture. Pliny in another part of his work (vii. 39) speaks of this picture as representing the destruction of Magnesia; and the late K. O. Müller has, in his 'Archæology of Art,' on this account rejected the tradition, because the only known destruction of Magnesia took place, according to Archilochus, about forty years after the death of Candaules, through Ardyas, the successor of Gyges. Pliny however in the first instance mentioned, where he treats more particularly of art, calls it a Battle of the Magnetæ ("in qua erat Magnetum proelium"). This may appear a singular and incredible incident: but the early existence of painting in Asia Minor is not an isolated fact. There is much evidence in ancient writers to show that painting was comparatively an old art in Asia Minor and among the Ionian Greeks, while at the same period in Greece itself there is scarcely any evidence of its existence. Welcker ('Archiv. für Philol.,' 1830) agrees with Müller in rejecting the entire story as fictitious.

*BULGARIN, THADDEUS, a novelist and essayist of considerable note in Russian literature, is by birth a Pole, and remarkable for the irregularity of his career. "For almost a quarter of a century," he says in the preface to his 'Reminiscences' published in 1846, "I have now lived, as it were, in public, conversing with the public day by day on whatever of interest occurred; but for ten years of my previous life I was almost literally never out of the saddle: I lived in battles and the smoke of bivouacs, traversing all Europe with arms in hand from Torneo to Lisbon, passing day and night under the open sky in thirty degrees of cold or heat." Bulgarin was born in 1789 in the government of Minsk in Lithuania. His father was an officer under Kosciuszko in his last unsuccessful struggle for the independence of Poland, and one of the earliest recollections of the son was that of hearing the cannon thunder at a distance on the morning of a day in 1796, and of accompanying his mother in the evening to take refuge in the woods from the approach of the victorious Russians who had defeated the Poles in the last action of the war. A few years later his friends procured him admission into the Institution of Military Cadets at St. Petersburg as a pupil, and he was there at the time

of the death of the Emperor Paul, when he describes the astonishment of the scholars at being drummed out of their beds one morning before the usual hour to take the oath of allegiance to the new emperor Alexander, whom the governor of the institution, Count Zubov, had had a very material share in assisting to the throne the night before. Bulgarin entered the Russian army in the Uhlan regiment commanded by the Grand Duke Constantine, and was at the battles of Austerlitz and Friedland, in the latter of which he distinguished himself by his bravery, and received a serious wound. After taking part in the campaign of Finland, which tore that province from Sweden, some unpleasantness with the officers in the regiment induced him to solicit his dismissal from the Russian service, and he entered that of France, a power then in alliance with Russia, and became an officer of the Polish legion. He afterwards published 'Reminiscences of the War in Spain,' to which country the Polish legion had the misfortune to be sent, and in which Bulgarin had more than his share of wild adventure. When the war broke out between France and Russia, he marched against the country where he had received his education, and it was said in after-life by his literary opponents, when he published at St. Petersburg a popular novel on the war of 1812 and the conflagration of Moscow, that the first occasion of his entering Moscow was when he entered it with the grand army of Napoleon. This his friends denied, and asserted that up to that moment (in 1840) he had never entered Moscow at all. It was beyond dispute however that he had been an officer in the invading army, and had borne a part in the horrors of the memorable retreat. In the next year (1813) he was in command of an outpost of the French army on the night before the battle of Bautzen, when Napoleon rode up, accompanied by Ney and Berthier, and a conversation took place, of which Bulgarin has published a spirited narrative. "You Poles," said the emperor among other things, "speak almost the same language as the Russians." "Exactly so, your Majesty; we can easily understand each other as a Swede understands a Dane, or a German a Hollander." "By the bye, can you speak German?" asked Napoleon. "I can, your Majesty." "Then get on your horse, and bring me a peasant from the village in front of us; I will command the outpost while you are away." The peasant was brought, cross-questioned on the depth of a neighbouring stream, and was then so liberally rewarded that for the first time it flashed upon him that his questioner must be the emperor.

Bulgarin steadily adhered to the fortunes of Napoleon till his fall in 1814, when he returned to Poland, and was presented at Warsaw to his old commander the Grand-Duke Constantine, who not only accorded him a gracious reception, but invited him to re-enter the Russian army. Bulgarin however was then anxious to settle on his property in Poland, and devote himself to the support of his aged mother. The Polish language, which he had almost forgotten when in the Russian service, had become familiar to him in Spain when serving in the Polish legion, and he wrote various articles with some success in the Warsaw periodicals. In 1819 a family lawsuit took him to St. Petersburg, and falling into the society of some Russian literary men, among others of Greek, the author of the best Russian grammar and the best history of Russian literature, he took up the idea of writing in Russian. With this view he studied the language anew with the assistance of Greek—a very necessary labour, as the style of Karamzin had given a new direction to it so strongly marked, that it has been said that every Russian of fifty years of age now speaks a different language from that he spoke in his childhood. As an essayist Bulgarin became a favourite, and his pen was soon in incessant activity. In 1822 he became editor of a periodical called the 'Northern Archives' ('Syevernyy Arkhiv'), which was afterwards merged in 1825 in the 'Son of the Country' ('Sohn Otechestva'), edited by himself and Greek, which was for several years the leading literary periodical of Russia. He also established the leading newspaper, the 'Northern Bee' ('Syevernaya Pchela'), which the readers of English journals are in the habit of seeing quoted as the 'Abeille du Nord.' A dramatic annual, the 'Russian Thalia' ('Ruskaya Taliya'), was less successful, but had the honour of first introducing to the public the masterpiece of Russian comedy, the 'Gore of Uma,' of Bulgarin's intimate friend Griboyedov, the Russian ambassador to Persia, who was a few years after torn to pieces by the populace of Teheran. By the sharp tone of his criticism Bulgarin drew round him a host of enemies, but his novel of 'Ivan Vuishegin,' sometimes styled the 'Russian Gil Blas,' which appeared in 1829, had a brilliant success, and raised his popularity to the highest point it has ever attained. An excellent translation of this novel in English was printed at Aberdeen in 1831. Its reputation has now materially declined in Russia, where it is alleged that Bulgarin is only capable of describing well what has actually passed under his eyes, and that many of his delineations of Russian life, of which he only knows what can be seen at St. Petersburg, are altogether unfaithful. He afterwards wrote a continuation of 'Ivan Vuishegin' under the title of 'Peter Ivanovich Vuishegin,' in which he described in a style of fervent Russian patriotism the war of 1812. There are also two historical novels from his pen on the story of the 'False Demetrius' and 'Mazepa,' but they met with only partial success. In a collection of his works in seven double-columned octavo volumes, which was commenced at St. Petersburg in 1839, his novels occupy four of the volumes, and his miscellaneous works, which are chiefly essays, the remainder. A selection from these would comprise much that would

be interesting to the English reader, from the matter as well as the manner. At the time this collection was issued Bulgarin was said to be living in the enjoyment of an easy fortune gained by his writings at a villa near Dorpat. He afterwards published 'Russia in an Historical, Statistical, Geographical, and Literary point of view,' a compilation of considerable value, which has been translated into German by Von Brackel. His last, and in many respects his most interesting work, is his 'Vospominaniya,' ('Reminiscences or Fragments of what I have Seen, Heard, and Experienced in Life,') of which six volumes have appeared. He is a lively and pleasing narrator, but it is necessary to guard against his Russian prepossessions, which are now perhaps all the more strongly marked to compensate for his once having borne arms against the country. His statistical work is dedicated "To the great Russian family, the children of one father, the Russian Emperor." One of his essays, 'A Visit to Cronstadt in 1826,' contains this passage:—"The German vessels stop before the gates, and are towed into the harbour; the English and Americans come sailing straight in, and are not afraid of bumping against the corner at the sharp turn. If we are to draw conclusions as to the character of nations from this, what are we to say of the Russian peasants, who in their fishing-vessels go out on the chase to Nova Zembla and Spitzbergen, where the very English send their strongest vessels of a peculiar construction. Oh, mother Russia! if God is for us, who shall be against us?"

BULL, GEORGE, was born in the city of Wells, on the 25th of March 1634: he received the first part of his education at the grammar-school of Wells, from which he was removed to the free school of Tiverton, in Devonshire, then superintended by Mr. Samuel Butler, who is reported to have had an excellent method of teaching. At fourteen he was admitted a commoner of Exeter College, Oxford; but, in the following year, on refusal to swear to the engagement, "That he would be true and faithful to the Commonwealth of England, as it was then established without a King, or House of Lords," he retired, with his tutor, Mr. Ackland, and several others, to North Cadbury, in Somersetshire, where he prosecuted his studies until his nineteenth year. By persuasion of his friends he then went to reside with Mr. William Thomas, a Presbyterian divine, from whom he derived little or no assistance in the study of divinity. This residence however brought him into intimate acquaintance with Mr. Thomas's son, who directed his reading, and supplied him with the writings of Hooker, Hammond, Taylor, &c. Mr. Bull was irregularly ordained, at the age of twenty-one, by Dr. Skinner, ejected bishop of Oxford, at a time when it was "criminal for a bishop to confer holy orders." His professional duties commenced in the parish of St. George, near Bristol. In 1658 he obtained the living of Suddington St. Mary near Bristol, where he became privy to an unsuccessful scheme of a general insurrection in favour of the exiled family, his house being one of the points of meeting. After the Restoration he was presented by Lord Chancellor Clarendon to the vicarage of Suddington St. Peter. These preferments he retained until 1685, having distinguished himself by his zeal, judgment, and charity, on all occasions. In 1669 he published, in Latin, his 'Harmonia Apostolica.' The object of this book, which consists of two parts, or dissertations, was to explain and defend, first, the doctrine of St. James, and, in the second, to demonstrate the agreement with him of St. Paul; it being more particularly his aim, in the first dissertation, to show, "That good works, which proceed from faith, and are conjoined with faith, are a necessary condition required from us by God, to the end that by the New Evangelical Covenant, obtained by and sealed in the blood of Christ, the mediator of it, we may be justified according to his free and unmerited grace." In the second, "having in the first place established this one point for his foundation—"That St. Paul is to be interpreted by St. James, and not St. James by St. Paul," in consent with many of the ancients, (and particularly of St. Augustine himself,) who are of the opinion that the General Epistle of St. James, the first of St. John, and the second of St. Peter, with that of St. Jude, were written against those who, by misinterpreting St. Paul's Epistles, had imbibed a fond notion, as if faith 'without works' were sufficient to save them; he sheweth whence this obscurity and ambiguity in the terms of St. Paul might probably arise, which was the occasion that persons not well-grounded came to mistake or pervert the same." Bull proves, that, where St. Paul speaks of justification by faith, he intends the whole condition of the Gospel-covenant; that the faith required implies obedience; that it cannot be separated from obedience; and that obedience is made necessary to justification. The publication raised much dispute among divines. The first open antagonist was Mr. John Truman, a Non-conformist minister. Dr. Morley, bishop of Winchester, and Dr. Barker, the one from the divinity chair at Oxford, and the other, in a charge to his clergy, forbade the reading of the book, as a rash intrusion into things too high for such discussion. Though, for a while, much prejudice was excited against our author, yet, when he published his answer entitled 'Examen Censuræ,' and his 'Apologia,' his reputation increased, and the soundness of his view was generally acknowledged. In testimony of his merit in this particular instance, Lord Chancellor Finch presented him to a prebend in the church of Gloucester. In 1685 he published his 'Confessio Fidei Nicenæ,' a work directed against the Arians and Socinians, and Sabellians and Trithemists, by which he gained great celebrity both at home and abroad. In the same year in which he was preferred in Gloucester cathedral, 1678, he

received the rectory of Avening in Gloucestershire; and in the next year he was installed archdeacon of Llandaff, on the nomination of Archbishop Sancroft, and about the same time was complimented with the degree of Doctor of Divinity by the University of Oxford, for the service he had rendered the church in his 'Defensio Fidei Nicenæ.' In 1694 he published his 'Judicium Ecclesiæ Catholicæ,' in vindication of the Anathema, as in his 'Defensio' he had vindicated the faith established at the council of Nice, against Episcopius. For this publication the thanks of the whole clergy of France were transmitted to him through Bossuet, bishop of Meaux. His last work, published before his death, was his 'Primitive and Apostolical Tradition, &c.,' in which he proved, against Daniel Zuicker, that the pre-existence and divine nature of our Lord was an apostolical doctrine.

In 1704 Bull was nominated to the bishopric of St. David's, a promotion which he at first declined, alleging his years and infirmities; but at length he gave a reluctant consent, and was consecrated at Lambeth on the 29th of April 1705. His conduct as a bishop, as well in the House of Lords as in his diocese, was such as to justify a belief that, had he been earlier advanced to that dignity, he would have been of signal use. Close application to study had impaired his health, and he expired on the 17th of February 1709, and was buried at Brecknock. After his death his sermons were published by his only surviving son, in compliance with his directions. Perhaps no sermons have more of a primitive character than those of Bishop Bull; none more clearly discriminate between primitive doctrine and modern error. Several tracts, which it is said cost him much labour, were lost by his own neglect. His works, with a copious account of his life and writings, were published by Robert Nelson, Esq. His Latin works were collected, during his lifetime, into one volume folio, by Dr. Grabe.

BULLANT, JEAN, one of the few French architects of the Renaissance period, whose names have acquired historical celebrity, is supposed by Callet to have been born at Ecouen, at which place he died, October 10, 1598, at the age of seventy-eight; accordingly the year of his birth must have been about 1520. All that is known of his origin is that he was a retainer of the Montmorency family; that he visited Italy in his early youth, and returned from Rome in 1544. For an adequate opportunity of displaying his professional acquirements he had not to wait long, having been employed the following year by the celebrated Constable Anne de Montmorency, to erect, conjointly with Jean Goujon, the Château d'Ecouen, in which work he took especial pains to show how diligently he had studied classical antiquity and imbibed its spirit, by parading the 'orders' in a variety of ways. But the whole pile was a grotesque mixture of the modern Italian orders, applied to what was in all other respects decidedly French in physiognomy, with immense roofs, large and fantastically ornamented lucarnes, and other characteristics of that age and country. Even the ogive or French-Gothic style of the period was allowed to show itself externally and very conspicuously in the two windows of the chapel placed in one wing of the entrance-front, while the entrance itself formed a portal or lofty frontispiece, decorated with Doric and Ionic columns, and a third order of *termini* in half-length figures. The principal altar of the chapel (now removed to that at Chantilly) was entirely in the modern-antique style of the time, and has been considered Bullant's masterpiece; it was decorated with bassi-relievi of the Evangelists, Religion, &c.—which have been attributed to Bullant, as well as the architectural design. At the time of the Revolution (1789), and subsequently, such very great changes were made, that the present condition of this château affords little idea of its original appearance. Of the palace erected by Bullant for Catherine de Médicis (originally called L'Hôtel de la Reine, and afterwards L'Hôtel Soissons, the only relic is the astrological column which stood at one angle of the court, and is now attached to the Halle aux Blés, which occupies the site of what was Catherine's residence. For the same princess he also altered and enlarged the Château de Chenonceaux—the scene of fêtes and revelries more magnificent than decorous. Bullant was employed upon the palace of the Tuileries (begun 1564), of which P. De Lorme had made the designs and constructed the older part, but it is not exactly known what was Bullant's share in the work. After having enjoyed the favour not only of Catherine, but of Henri II. and Henri III. (under both of whom he held the office of comptroller of the royal buildings), he found another royal patron in Henri IV., for whom he built another portion of the Gallery of the Louvre at the end next the Tuileries. Bullant was the author of two works, viz. 'Règle Générale d'Architecture,' 1563; and 'Traité de Géométrie et Horlographie,' 1567; the former of which is regarded as the earliest authority in the language on the subject of the so-called *five orders*. (Callet, *Notice de quelques Architectes Français du seizième Siècle*; Regnard in *Nouv. Biog. Universelle*.)

BULLER, CHARLES, RT. HON., was born in August 1806, in the city of Calcutta. His father was in the civil service of the East India Company, and belonged to a family which possessed great parliamentary influence in the south of Cornwall, where they had for a long series of years represented West Looe as a nomination borough. Charles Buller was educated at Harrow School, Middlesex, at the University of Edinburgh, and at Trinity College, Cambridge, where he took the degree of B.A. in 1828. He was returned in 1830 as member of parliament for West Looe, and in the following year became a barrister of Lincoln's

Inn. He voted for the Parliamentary Reform Bill, which disfranchised West Looe, and in 1832 was returned for the borough of Liskeard in Cornwall, which he continued to represent till his death in 1848. Mr. Buller, throughout the whole of his parliamentary career, was distinguished for the liberality of his principles, for soundness of reasoning founded on an extensive acquaintance with the details of his subject, and for a liveliness of imagination, which rendered his speeches attractive by sallies of pleasantry and wit. He was from the first a steady opponent of the Corn-Laws, advocated triennial parliaments, was against a property-qualification for members of the House of Commons, maintained the necessity of national education, and was a supporter of the Poor-Law Amendment Act. He early distinguished himself by his speeches on colonisation, and by the ability with which he advocated improved principles and practice in colonial government. When the Earl of Durham was sent out in 1838 as governor-general of Canada, Mr. Buller accompanied him as secretary, and is known to have contributed largely to the Report which was presented to parliament by the Earl of Durham, and published in 1839. After his return from Canada, Mr. Buller commenced the practice of the law, in appeals from the colonies and from Hindustan, before the Judicial Committee of the Privy Council. In 1841 Lord Melbourne appointed him secretary of the Board of Control; and Lord John Russell, after he became premier in 1846, made him Judge-Advocate-General, with an understanding, it is said (which however was not realised), that he was to act in some way as colonial minister, though not included in the department. In November 1846 he was appointed a queen's counsel, and in July 1847 was sworn of the privy council. Upon the re-modelling of the Poor-Law Commission, with a president as head of the board, he was appointed to that office in Nov. 1847. Mr. Buller died in London, Nov. 28, 1848. Mr. Buller was a ready extemporaneous speaker, but was accustomed, on important occasions, to write out his speeches in their whole extent. He also wrote largely for the periodical press, especially the 'Morning Chronicle' and 'The Globe,' and for the 'Edinburgh Review' and 'Westminster Review.' He also wrote for the 'Colonial Gazette' a series of papers on 'Responsible Government for Colonies,' afterwards published as a small volume.

BULLEYN, ANNE. [BOLEYNS, ANNE.]

BULLIARD, PIERRE, a French botanist, was born at Aubepierre-en-Barrois, about the year 1742, and studied at the college of Langres, where he early displayed a taste for natural history. Having obtained a situation in the abbey of Clairvaux, he found time to prosecute his favourite studies; and though he afterwards removed to Paris, with a view to apply to medicine as a profession, his zeal for natural history induced him to devote himself entirely to this subject. Being previously an able draughtsman, he now learnt to engrave, and in 1774 published the 'Flora Parisiensis,' 6 vols. 8vo., the figures being drawn, engraved, and coloured by himself. In 1778 he published 'Avicéptologie Française, ou Traité général de toutes les ruses dont on peut se servir pour prendre les Oiseaux,' Paris, 1 vol. 12mo., reprinted in 1796. In 1779 he commenced his largest work, entitled 'Herbier de la France,' the first division of which, comprising 'L'Histoire des Plantes vénéneuses et suspectes de la France,' while in the course of publication in the form of numbers, was seized by the police, under the pretext that it was a dangerous work; and it was not until after the lapse of seven months that the author was able to recover a portion of his property. This volume is therefore extremely rare, and its very existence is to many unknown, owing to the second division, or 'L'Histoire des Champignons,' bearing on the title page the words 'Tome premier,' though it did not appear till 1790. The remaining six volumes contain only plates, principally of fungi, of which one livraison appeared annually, each containing 48 coloured plates.

This work was discontinued, owing to the death of the author in 1793. The letter-press in the first two volumes is not now of much value; but the plates of flowering plants are in general good, and have, in many instances, received the commendation of De Candolle; those of the fungi are frequently cited not only by the botanists of France, but by all writers on European fungi. A second part of the work appeared at Paris in 1832, entitled 'Figures des Champignons, servant de Supplément aux Planches de Bulliard, peintes d'après Nature, et lithographées par J. B. Letellier,' in small folio, six cahiers, containing the plates from 603 to 638. Bulliard published also, in 1783, 'Dictionnaire Élémentaire de Botanique,' Paris, in folio, with two plates; and it has been three or four times reprinted with additions. Bulliard was the inventor of the art of printing plates of natural history in colours, and he employed it in all his works.

*BULWER, SIR E. LYTTON. [LYTTON, SIR E. BULWER.]

*BULWER, SIR HENRY LYTTON EARLE, was born in 1804. He is the elder brother of Sir Edward Bulwer Lytton. In 1827 he was attached to the mission at Berlin, in 1829 to the embassy at Vienna. In 1830 he was at the Hague, and in the same year was sent to Brussels on a special mission of observation on the revolution which had just broken out in Belgium. He was elected M.P. for Wilton in 1830, and for Coventry in 1831; was attached to the embassy at Paris in 1832, and was M.P. for Marylebone from 1834 to 1837. In 1835 he was appointed secretary of legation at Brussels, and in 1837 secretary of embassy at Constantinople. In 1839 he was secretary of embassy

at Paris. In 1843 he was sent to Madrid as envoy extraordinary and minister plenipotentiary. His opposition to the arbitrary acts of the Spanish government led to his dismissal from Spain in 1843; but the British government having approved of his conduct, refused to appoint a successor, and the court of Spain was for two years without a British ministerial resident. In 1848 he married the youngest daughter of the first Lord Cowley, and in 1849 proceeded to Washington as minister plenipotentiary to the United States. In 1851 he was created a Knight Grand Cross of the order of the Bath, and in 1852 was appointed envoy extraordinary to Tuscany. He has published 'An Autumn in Greece,' 'France Social and Literary,' and 'The Monarchy of the Middle Classes.'

BULWER, JOHN, an English physician of the 17th century, who devoted himself to the discovery of methods for communicating knowledge to the deaf and dumb. Dr. Wallis is generally regarded as the originator in England of an art by which the benefits of instruction are bestowed on the deaf; and in the 'Memorials' of his own life he appears in unrivalled possession of this honour. But Bulwer, a contemporary of Wallis, has claims which only need to be known to entitle him to the credit which has so generally been given to another. That Wallis was disingenuous on this subject in more than one instance, is evident from a notice of Dalgarno's works, which appeared in the 'Edinburgh Review,' No. ccxv. Whether Bulwer and Wallis had received intelligence of what had been accomplished by Ponce and Bonet in Spain, cannot now be determined. It is probable that Bulwer had obtained no such information, for his mode of treating the subject is original, and rather that of an inventor than a copyist. The earlier practice of Wallis is in many respects similar to the methods pursued by Bonet, as detailed in his work published in 1620. [BOXER.] It is probable that Bulwer did not use a manual alphabet, for he mentions with a degree of admiration the employment of this medium of communication in the case of a gentleman who became deaf through disease. Sir Kenelm Digby, who was deeply impressed with Bonet's success in Spain, would probably send the first intelligence of his labours to England. Sir K. Digby had much correspondence with Dr. Wallis on philosophical subjects previous to 1658, in which year Wallis published the results of that correspondence. Wallis did not make public the inventions which he claimed for instructing the deaf till 1670, though he introduced his first pupil, Mr. Whalley, before the Royal Society in 1662, after a year's instruction.

In estimating Bulwer's performances it must not be forgotten that no English writer, as far as can be now ascertained, had previously employed himself on the subject which Bulwer attempted to elucidate. In 1644 Bulwer published 'Chironomia, or the Art of Manual Rhetoric,' and 'Chirologia, or the Natural Language of the Hand.' These are the works which obtained for him the surname of 'the Chirosother.' They formed part of that system of artificial language which he designed to employ in developing his philosophical views, and by which he proposed to lead the deaf to a knowledge of spoken language. Bulwer's chief work is entitled 'Philosophus, or the Deafe and Dumbe Man's Friend; exhibiting the philosophical verity of that subtle art which may inable one with an observant eie to heare what any man speaks by the moving of his lips. Upon the same ground, with the advantage of an historical exemplification, apparently proving that a man borne deafe and dumbe may be taught to heare sounds of words with his eie, and thence learn to speak with his tongue. By J. B. surnamed the Chirosother. London, 1648.'

Bulwer's principles of instruction may be gathered from the above works: they appear to have been imitative signs, or the language of action; the labial alphabet, or reading the movement of the lips; and articulation. There was an originality in his conceptions which no prior or contemporary author on the subject, in this or any other country, could claim. He noticed the power which the deaf possess of hearing sounds through the teeth, an experiment which may be made in various ways, especially by means of a musical box or a repeating watch. He also produced several other works, among which were the following:—'Tractatus de removendis loquelæ impedimentis;' 'Tractatus de removendis auditoris impedimentis;' but it is probable that these treatises were not published: their titles occur at the end of one of his curious works, which appeared in 4to in 1653, called 'Anthropo-metamorphosis, Man-transformed, or the Changeling,' in which he shows the great variety of shapes and dresses which men have assumed in the different ages and nations of the world. He also published 'Pathomyotomia, or a Dissection of the significative Muscles of the Affections of the Mind,' 1649, 12mo.

Bulwer must be regarded as a man of persevering research, and though not an instructor of the deaf and dumb, he was undoubtedly the first in England to point out a safe and certain path which teachers might pursue.

*BUNSEN, CHRISTIAN KARL JOSIAS, CHEVALIER DE, a philologist, theologian, and diplomatist, was born at Corbach, in the small German principality of Waldeck, on the 25th of August 1791; and was educated at the University of Göttingen, where he studied philology under the famous Heyne. He distinguished himself greatly as a classical scholar, and in 1813 published at Göttingen a prose essay, 'De jure Atheniensium hereditario.' After being employed some time as a classical teacher, his desire to perfect himself in oriental languages induced him to go to Paris, where he studied under the noted

orientalist Sylvestre de Sacy. He had it next in contemplation to go to India, in company with an Englishman, in order to acquire a farther knowledge of Sanscrit; but having in the meantime determined to visit Italy, he met at Rome his friend Brandis, then secretary to the Prussian embassy at Rome under Niebuhr. Introduced to Niebuhr, the young scholar found in him a friend capable of appreciating his merits. Abandoning his intention of going to the East, he settled in Rome as Niebuhr's private secretary—a situation afterwards exchanged for the higher one of secretary to the embassy. Enjoying the benefit of Niebuhr's society and advice, he resumed his classical studies with enthusiasm, turning to advantage the facilities afforded him by his residence in Rome. The results of his inquiries into the antiquities and topography of Rome appeared in his 'Beschreibung der Stadt Rom' ('Description of the City of Rome'). He also interested himself much at this time in the hieroglyphical researches of Champollion; and he was instrumental in inciting the savans of Berlin to betake themselves to this branch of archaeology, and more particularly in determining towards it the rising talent of the great living Ægyptologist, Dr. Lepsius. At Rome, Bunsen was one of the chief supports of the Archæological Institute, and indeed acted as its general secretary. The visit of the king of Prussia to Rome in 1822 made that sovereign acquainted with the abilities of the secretary of his legation; the present king also—then crown-prince—made his acquaintance about the same time. The personal esteem which both contracted for Bunsen accounts for his rapid advancement in the Prussian diplomatic service. On Niebuhr's retirement from the embassy at Rome, Bunsen succeeded him, first as chargé-d'affaires and afterwards as full minister. In this capacity he interested himself much in the Protestant church and Protestant worship at Rome, as well as in his classical and historical studies. A difference between the papal court and that of Prussia on a question of ecclesiastical right in the Prussian states, led to his recall in March 1838. After a visit to Munich and to England, he was again in November 1839 in diplomatic service as ambassador to the Swiss Confederacy; and in 1841 he was appointed Prussian ambassador to England. Retaining this post till 1854, when his peculiar opinions on the proper policy of Prussia in the approaching European crisis led to his resignation or recall, and having during these thirteen years resided chiefly in London, Chevalier Bunsen became almost a naturalised Englishman; and indeed two of his sons have settled in England, one as a clergyman in the English church. While discharging with peculiar discretion his duties as Prussian ambassador, he was at the same time widely known in English society as a philologist and a man of letters—a representative, in intellectual English circles, of the erudition and scholarly zeal of Germany. The following list of his works, published since 1841, will indicate the grounds of his well-earned celebrity:—'The Liturgy of the Passion-Week, with a Preface,' &c., published at Hamburg in 1841, not translated; 'The Basilics of Christian Rome in their Connexion with the Idea and History of Church-Architecture,' &c., published at Munich in 1843, and not translated; 'The Epistles of Ignatius of Antioch, with Annotations,' and 'Ignatius of Antioch and his Age, Seven Letters to Dr. A. Neander,' both published by the Academy of Hamburg in 1844, and the last we believe translated; 'Die Verfassung der Kirche der Zukunft,' published at Hamburg in 1845, and translated into English in 1847 under the title of 'The Constitution of the Church of the Future'; 'Ægyptens Stelle in der Weltgeschichte,' Hamburg, 1845, and the English translation of which, 'Egypt's Place in Universal History,' is perhaps the best known of the author's works; 'Mémorial on the Constitutional Rights of the Duchies of Schleswig and Holstein,' presented to Lord Palmerston, April 1848, and published that year (about which time other papers on German politics were published by the author); finally, since 1848, contributions to 'The Life and Letters of B. G. Niebuhr,' published by an English editor in 1852 from the German materials; and an important and elaborate work published first in 1851 in 4 vols. under the title of 'Hippolytus,' and again in a revised and extended form in 1854 as 'Christianity and Mankind: their Beginnings and Prospects,' in 7 vols.,—vols. 1 and 2 containing 'Hippolytus and his Age,' vols. 3 and 4 'Outlines of the Philosophy of Universal History applied to Language and Religion,' and vols. 5, 6, and 7 'Analecta Ante-Nicœna.' It is as an Ægyptologist and ecclesiastical historian that Chevalier Bunsen has most widely affected his time. He now lives in retirement on the Rhine, pursuing his favourite studies, and often reading or writing at a standing-desk sixteen hours a day.

BUNYAN, JOHN, was born at Elstow, near Bedford, in 1628. His father, like his ancestors for some generations, was a tinker, and John Bunyan was brought up to the family occupation. Yet, though, as he long afterwards wrote, his "father's house was of that rank that is meanest and most despised of all the families in the land," he was not left wholly uneducated, but was taught to read and write "according to the rate of other poor men's children;" though, as he confesses, he soon almost entirely lost what little he had learned. His parents appear to have likewise taken some care in his religious training; but he abandoned himself while yet a youth to evil habits, and to "all manner of youthful vanities," and became so addicted to profane swearing, that a woman of loose and ungodly life told him that "he was the ungodliest fellow for swearing that ever she heard in all her life," and that he "made her tremble to hear him." This reproof, from such a person, set him thinking about his course of life. It was

indeed long before he became thoroughly reformed, but from that time he refrained from the practice of open vice.

John Bunyan has related, in his 'Grace Abounding,' his 'Law and Works,' and his 'Jerusalem Sinner Saved,' more fully and minutely, and with more vigour and force of expression, what, in the old puritan phraseology, would be called his sinful state, his conversion, and his religious experiences, than any other person whose religious history has been read beyond the boundary of the connexion to which he belonged. His strong descriptions therefore of his "corrupt condition," and of the terrible mental struggles through which he passed before obtaining spiritual peace, have served to corroborate the opinion somewhat loosely expressed by some of his older biographers respecting his early depravity, and even by his most recent one, that devoted student of Bunyan's writings and painstaking collector of all possible information respecting him, Mr. George Offor. There is however no reason to believe that Bunyan was ever a really depraved man in the ordinary acceptation of the term. He appears to have been honest, sober, and, at his worst time, scrupulously free from licentiousness. He married early in life a young woman of a pious family, and with her he was accustomed to read religious books. Before he was nineteen, several providential escapes (as he deemed them) from a violent death had impressed his mind with anxious thoughts about a future state; and, finally, conversations with some members of the church of Mr. Gifford, a Baptist minister at Bedford, and with Gifford himself, who had been in early life a major in the royalist army, and of habits more than usually profligate even among the royalist soldiery, who had by the devotion of his wife escaped from prison the night before his intended execution for being concerned in a royalist plot, and whose religious career had especially fitted him to deal with the idiosyncracies of the marvellous tinker;—these, and the reading of Luther on the Galatians, completed (but not until he had passed through more than two years and a half of spiritual conflict) the change of heart, and Bunyan became as eminent for his fervent piety as, by his own showing, he had formerly been for his profanity.

He was received into communion with Mr. Gifford's church by baptism by immersion in 1653. After a year or two of probation he was called upon to take a share in the ministry; and his preaching, though for the most part in private houses or neighbouring villages, excited general attention, and great numbers of the townsmen flocked to hear him, many being led by it to a change of life. His preaching however gave great offence he says "to the doctors and priests of the country"—it was in the days of anti-prelatic supremacy—and in 1657 an indictment was preferred against him at the assizes for preaching at Elstow. He escaped without punishment this time however; but he was again indicted shortly after the Restoration, and convicted as a "common upholder of several unlawful meetings and conventicles, to the great disturbance and distraction of the good subjects of this kingdom." He might have had his liberty if he would have engaged not to preach any more, and during his long imprisonment the offer was several times repeated, but Bunyan was too sincere in his purpose, and too deeply impressed with the reality of his call to the work, to enter into any such engagement. He remained in consequence a prisoner, as he expressed it, for conscience sake, in Bedford jail from 1660 to 1672. Prisons were then very different places, and prisoners very differently treated to what they are now, but Bunyan seems on the whole to have met with as much consideration as was compatible with imprisonment at all. From the first he used to preach in the jail, then crowded with persons in custody for attending at a conventicle. For the maintenance of his family he was allowed to make tagged thread laces; he had the free use of his 'prison library'—the Bible and the Book of Martyrs—and of writing materials; during the later years of his imprisonment he was permitted to go into the town as often as he pleased; on one occasion he even made a journey to London, though for permitting that the jailer received a severe censure. During these years Bunyan appears to have preached and exhorted pretty nearly as freely as though he had not been a prisoner. In the last year of his imprisonment he was elected pastor of the Baptist church in which Mr. Gifford had presided, and he was able to attend regularly to his ministerial duties. At length, on the 13th of September 1672, he was set at liberty.

Preaching and making of tagged laces had not been his only employments in Bedford jail. Before he was taken there he had begun to use his pen, chiefly in controversy with the Quakers; and his pen proved an ample solace to him in his cell. Several works, including his 'Grace Abounding,' and what is next to the 'Pilgrim,' his best known work, 'The Holy War,' which were eagerly read then, and long afterwards by his co-religionists, were the result of his enforced retirement from the active pursuit of his calling. But the work which has for ever rendered his imprisonment memorable is the famous 'Pilgrim's Progress from this World to that which is to Come,' of which the first part, though not published till six years after his release, was unquestionably written in his 'den' in Bedford jail.

After his release, Bunyan set about putting his private affairs and the affairs of his church in order. The chapel in which he preached was greatly enlarged in order to accommodate the crowds who gathered to listen to him. He commenced the organisations of branch meetings, and what might be called preaching circuits; and soon acquired such extended authority and influence that he came to be

commonly known as Bi-hop Bunyan. Nor were his exertions confined to the neighbourhood of Bedford. He used to make frequent visits to London, where the announcement of a sermon by him was certain to collect an immense congregation. Thus in the regular performance of his ministerial functions, the last sixteen years of his life were passed, his pen as well as his voice being diligently employed in the way of his vocation. The close of his life is thus related by Southey. "Reading was a place where he was well known. . . . In a visit to that place he contracted the disease which brought him to the grave. A friend of his who resided there had resolved to disinherit his son; the young man requested Bunyan to interfere in his behalf; he did so with good success, and it was his last labour of love; for, returning to London on horseback through heavy rain, a fever ensued, which after ten days proved fatal. He died at the house of his friend Mr. Stradwick, a grocer, at the sign of the Star on Snow Hill, and was buried in that friend's vault in Bunhill Fields' burial-ground." His tombstone states his death to have occurred on the 12th of August, 1688, but the correct date appears to be August the 31st. Bunyan's second wife and three children survived him: a blind daughter had died some time previously.

The first collected edition of Bunyan's 'Works' was published in folio in 1692, under the superintendence of his successor in the ministry at Bedford, Ebenezer Chandler, and another Baptist minister, John Wilson: the last and most carefully collated edition of 'The Works of John Bunyan, with an Introduction, Notes, and Sketch of his Life and Contemporaries' by George Ofor, was published in 1858 in 3 vols. imp. 8vo. Of the 'Pilgrim's Progress' the first edition of the first part was printed in 1678, a tenth edition was published in 1685. It has since been reprinted innumerable times, and in every variety of style, from the cheapest and coarsest to the most sumptuous; and almost every kind of illustration has been lavished upon it. Of recent editions perhaps that by Southey, with his gracefully written Life prefixed, one issued by Mr. Bogue, with an excellent text, and a vast number of admirable illustrations by Harvey, and that edited by Mr. G. Ofor for the Hanserd Knollys Society, which is an exact reprint (with all the typographical peculiarities) of the first edition, may be singled out for special commendation. The 'Pilgrim's Progress' has been translated into every language and almost every dialect of civilised Europe, and, being regarded as a faithful exponent of the views of a large part of protestant Christianity, it has been a favourite exercise of missionaries to translate it into the languages of the people to whom they have been sent: hence the 'Pilgrim' of the Elstow tinker has been rendered into more languages than any other uninspired writing.

And it deserves all the labour that has been expended upon it. Beyond dispute it is the first in rank of its class. Written by a plain uneducated man for plain uneducated people, it has ever found its way straight home to their hearts and imaginations. But it has not less delighted and instructed the most highly educated and intellectual. Macaulay, in his 'Essay on Southey's Bunyan' (written in 1831), affirmed that he "was not afraid to say, that, though there were many clever men in England during the latter half of the 17th century, there were only two great creative minds: one of these minds produced the 'Paradise Lost,' the other the 'Pilgrim's Progress.'" This is high, it might almost seem extravagant praise; yet twenty years later the same great authority reiterates in his 'History' the eulogy which he might be thought to have carelessly thrown out in the pages of a review:—"Bunyan is as decidedly the first of allegorists as Demosthenes is the first of orators, or Shakspeare the first of dramatists. Other allegorists have shown great ingenuity, but no other allegorist has ever been able so to touch the heart, and to make abstractions objects of terror, of pity, and of love."

BUONAFÉDE, APPIANO, born in 1716 at Comacchio in the papal state, entered the order of the Celestines, in which he rose gradually to the highest dignities. He was elected general of the whole order in 1777, in which capacity he went to pay his homage to the king of Naples as feudatory of the crown for several fiefs which the Celestines possessed in that kingdom. He spent the latter years of his life at Rome, where he died in December 1793. He wrote several works, especially philosophical speculations, and the history of philosophy ancient and modern. 1. 'Della Istoria e della Indole d'ogni Filosofia,' Lucca, 7 vols. 8vo, 1781. This work treats of the philosophy of the ancients and that of the middle ages till the 15th century. 2. 'Della Restaurazione d'ogni Filosofia nei secoli xvi., xvii., e xviii.,' 3 vols. 8vo, Venezia, 1786-89. This work was translated into German by Heydenreich, with many additions, under the title 'Agatopisto Cromaziano's Kritische Geschichte der Revolutionen der Philosophie in den drey letzten Jahrhunderten,' Leipzig, 1791. Buonafede had assumed in the Society of the Arcadi the academical name of Agatopisto Cromaziano, under which most of his works were published. The style of his history of philosophy is fluent and pleasing, and well adapted to popular reading; but the matter of the work displays more historical learning than searching criticism. Buonafede's judgments are mostly impartial and independent, as much perhaps as could be expected from one of his profession, and from the times and place in which he wrote. It is a curious though by no means singular instance of the contradictory judgments passed upon writers on polemical subjects, that while Buonafede was looked upon

in high quarters at Rome as being too favourable to what was called the philosophy of the 18th century, others, and his biographer among the rest, have taxed him with monkish intolerance, and with being too subservient to the court of Rome. Buonafede wrote also—3. 'Delle conquiste celebri, esaminate col natural diritto delle genti,' 8vo, Lucca, 1763. 4. 'Storia critica e filosofica del suicidio ragionato,' 8vo, Lucca, 1780: an investigation of the circumstances which have attended many cases of suicide recorded in history. 5. 'Ritratti poetici, storici, e critici di varj moderni eomuni di lettere,' in a series of sonnets, with interesting biographical notes. The author has traced his own moral portrait among the rest. 6. 'Storia critica del moderno diritto di natura e delle genti,' Perugia, 1789. 7. 'Del Pirronismo teologico e politico.' 8. Dell'apparizione di alcune ombre.' 9. 'I filosofi faciulli,' a satirical comedy after the manner of Aristophanes. 10. 'Orazione per le belle arti.' 11. 'Della liberta poetica, epistola.' These two little works are remarkable for good taste and bold criticism. 12. 'Discorsi della malignita storica,' or strictures on Sarpi's history of the Council of Trent. 13. 'Della impudenza letteraria,' being a sharp review of the biographical memoirs of the same Sarpi written by Grisellini. Buonafede's criticisms were in general bitter and virulent, as an example of which we cite the 'Bue Pedagogo,' which he wrote against Baretti. (Ugoni, *Della Letteratura Italiana*; Mazzuohelli, *Scrittori d'Italia*; *Elogio Storico di Agatopisto Cromaziano*, Venezia, 1795.)

BUONAPATE [BONAPARTE.]

BUONAROTTI, MICHEL ANGELO, the father of epic painting, and scarcely less distinguished as a sculptor and architect, was descended from the noble family of Canossa in Tuscany. He was born in the year 1474, a period peculiarly favourable to genius, when the states of Italy emulated each other in the cultivation of the liberal arts. Michel Angelo, the bent of whose powers manifested itself in his earliest childhood, learned the elements of design in the school of Domenico Ghirlandajo, a celebrated professor in Florence. While he pursued his studies with this master, a seminary was established for the promotion of sculpture by Lorenzo de' Medici, and Michel Angelo was invited among other youths to study from the collection of antique statues arranged in the Medicean gardens. It is said that the sight of these splendid works determined him to devote himself entirely to sculpture; he began, not merely by copying, but by investigating the principles on which the Greek artists had wrought, and having found a head of a laughing faun, considerably mutilated, he imitated that part of it which was perfect, and restored what was wanting. Lorenzo, who frequently visited the garden, was struck by this demonstration of vigorous capacity; and being pleased no less with the simple manners of the youth, and his evident devotion to his art, he invited him to reside entirely in his house, where he remained three years, treated with paternal kindness, and having the advantage of associating with the first literary characters of the age. At the suggestion of Politian, who also resided with Lorenzo, he executed for this illustrious patron a basso-relievo in marble, the subject of which was the 'Battle of the Centaurs'; he resumed the pencil also during this period, and made many studies from the works of Masaccio. Lorenzo died in 1492. His brother Pietro continued to patronise Michel Angelo, but in a different spirit. Treating art as a toy, he employed him, during a severe winter, to make a statue of snow: and manifesting in all things the same frivolous spirit, he precipitated, by his bad government, the downfall of his family, which was driven from Florence in 1494. On this event, Michel Angelo retired to Bologna, where he contributed two statues to the church of the Dominicans, and after a year's residence in that city returned to Florence. During this time he made the celebrated statue of a 'Sleeping Cupid,' which was sent to Rome, where it was shown as a piece of sculpture which had been dug up from a vineyard, and was pronounced by various connoisseurs to be a genuine antique, and superior to anything which contemporary art was capable of producing. This statue having been purchased at a high price by the Cardinal S. Giorgio, the trick became known, and Michel Angelo's reputation was so much augmented by it that the cardinal, though vexed at the deception, invited him to Rome. He devoted himself during this his first residence in the imperial city to intense study, and executed several works, particularly a 'Virgin Weeping over the Dead Body of Christ,' for St. Peter's church, which excited astonishment, not only by its excellence, but by the apparent facility with which the greatest difficulties of art were surmounted.

Several great works in art having at this time been projected by the government of Florence, Michel Angelo, at the earnest advice of his friends, returned to that city, and the first undertaking on which he exercised his talents was a gigantic marble statue of David, which had been commenced some years previously by one Simon da Fiesole, who, finding that he had undertaken a task wholly beyond his capacity, had abandoned it in despair. The misshapen mass which had been thus left Michel Angelo accommodated to a new design, and produced from it the sublime statue which ornaments the great square at Florence. The gonfaloniere, Pietro Soderini, was now anxious to enrich the city with some grand production of Michel Angelo's pencil. Leonardo da Vinci had been commissioned to paint an historical picture for one end of the hall of the ducal palace, and Michel Angelo was engaged to execute another at the opposite extremity. He selected a subject from the wars of Pisa, in which a number of men, while bathing in

the Arno, are surprised by a sudden attack on the city, and start up to repulse the enemy. Trumpets are sounding; some of the warriors endeavour with gestures of furious impatience to draw their garments over their wet limbs; others rush half clad into the combat; horse and foot are intermingled, and the whole scene breathes fierceness and slaughter. This cartoon, with the exception of a few dismembered fragments, has perished, but as long as it existed it was studied by artists from all countries, and Benvenuto Cellini, a scholar and admirer of Michel Angelo, affirms that he never equalled it in any of his subsequent productions. Michel Angelo had at this time attained only his twenty-ninth year, and had not only established his reputation as the greatest artist of his day, but had created by the novelty and grandeur of his style a new era in the arts. Julius II., a pontiff who, in the energetic cast of his character, bore a strong resemblance to Michel Angelo himself, having now succeeded to the papal chair, called him immediately to Rome, and commissioned him to make his monument, a work conceived on a scale which Michel Angelo felt to be commensurate to his powers. He made a design which, had it been finished according to his original intention, would have surpassed in grandeur of design and richness of ornament every ancient and imperial sepulchre. It was to have had four fronts of marble, embellished with forty statues, besides several mezzos-relievi in bronze. To this design Rome and the world are indebted for the magnificent church of St. Peter's; for Michel Angelo having suggested to the pope that the interior of the old edifice would not allow sufficient space for the monument to be properly seen, the pontiff determined to rebuild the church on a larger scale. While the monument was in progress the pope delighted to come and inspect it; but the work was interrupted by an accident which strongly marks the character of the artist. Having occasion to make some communication to his holiness, and not having found admission on two applications, in the latter of which he felt himself somewhat superciliously treated by one of the officers in attendance, he gave directions to his servants to sell his goods to the Jews, and immediately set off for Florence. He had scarcely reached Poggiobonzi before five couriers had arrived from Julius commanding his immediate return; but Michel Angelo was inflexible, and continued his journey. On arriving at Florence he set about finishing the cartoon of Pius, but three briefs were dispatched to Soderini, the gonfaloniere, requiring that he should be sent back. Michel Angelo excused himself, alleging that he had accepted a commission from the grand sultan to go to Constantinople for the purpose of building a bridge. The pope in the meantime had gone on political affairs to Bologna, and Soderini, fearing he should himself incur the papal displeasure through Michel Angelo's contumacy, persuaded him to go to that city. Immediately on his arrival, and before he had time to adjust himself, he was conducted by the pope's officers before his holiness, who, looking at him with an angry glance, said, "What, then instead of coming to seek us, thou wast determined that we should come to seek thee?" Michel Angelo excused himself, saying, "that he had quitted Rome, being unable, after his faithful services to his holiness, to endure the indignity of being denied admission to him." A bishop in attendance, intending to say something in extenuation, observed to the pope, that such persons, however expert in their professions, were usually ignorant of everything else. "Who told thee to interfere?" exclaimed Julius, bestowing at the same time a hearty blow with his staff on the shoulders of the ecclesiastic; and commanding Michel Angelo to kneel, he gave him his benediction, and received him into full favour, giving him directions at the same time to make his statue in bronze. Michel Angelo soon completed the clay model; the statue was the personification of majesty, but the face had so terrible an expression that the pope demanded, "Am I uttering a blessing or a curse?" Michel Angelo replied, "that he had intended to represent him admonishing the people of Bologna," and inquired if his holiness would have a book placed in one of his hands. "Give me a sword," answered the warlike pontiff, "I know nothing of books."

On his return to Rome, Julius was induced, it is said, by the advice of his architect, Bramante, to suspend the execution of the monument, and he gave orders to Michel Angelo to paint the vault of the Sistine Chapel. Michel Angelo, who was absorbed in the execution of the monument, most earnestly endeavoured to decline the task of painting the chapel, and even alleged that he thought Raffaele better qualified to perform it; but Pope Julius allowed no impediment to stand in the way of his will, and Michel Angelo, finding himself without an alternative, and impressed with a sense of the vastness and grandeur of the task, commenced his cartoons. He invited from Florence several artists distinguished as painters in fresco, a mode of practice in which he was then inexperienced, and the roof of the chapel was commenced by these assistants, under his direction; their execution however fell short of his expectations, and entering the chapel one morning, he dismissed them all, threw their work from the walls, and determined on executing the whole himself. Having advanced to the third compartment, he had the mortification to find his labour frustrated by the bad quality of his materials, in which fermentation had taken place, and in utter disappointment he renounced the undertaking. The pope, being made acquainted with this misfortune, sent to him his architect, San Gallo, who investigated the cause of the failure, and taught him how to correct it. Thus reassured he proceeded, and the pontiff hearing at

length that the ceiling was half completed, could control his impatience no longer, and ordered the chapel to be opened for his inspection. Many other persons found admission, and among the rest Raffaele d'Urbino, who then first became acquainted with Michel Angelo's powers as a painter. Struck with admiration, Raffaele immediately changed his own style, and with the candour natural to a great mind, thanked God that he had been born in the same age with so great an artist. The work was now carried forward without interruption, and the whole was completed within one year and eight months from the time of its commencement; an achievement which, whether we consider the magnitude and sublimity of the performance, or the almost incredibly short time in which it was executed, is unparalleled in the history of art. The chapel was opened on All Saints' day, with a solemn mass, at which the pope assisted in person. The roof is divided into twelve compartments, in which is painted the history of the antediluvian world. In three of the first compartments Michel Angelo has personified the Supreme Being, dividing the light from the darkness—creating the sun and moon—and giving life to Adam. The attempt to portray the Deity by visible representation is repugnant to our present ideas, but it was at that time sanctioned by the church, and is, as far as may be, atoned for by those images of divine power and majesty which Michel Angelo has here embodied. The eleventh subject of the series on the roof is the Deluge, and the twelfth is from the story of Noah, showing the remnant of the human race preserved after that awful event. On the sides of the chapel is a series of designs representing the persons who compose the genealogy of Christ, and between these compartments are the colossal figures of the Prophets and Sibyls, seated in solemn meditation. The effect of the whole work is adapted with admirable accuracy to the vast height at which it is seen, and it is impossible to contemplate it without reverence and astonishment. The reign of Julius terminated in 1513, when Leo X. succeeded.

It might have been expected that Leo X., whose name is associated with the ideas of taste and munificence, and who affected fully to appreciate the powers of Michel Angelo, would have engaged him on some work worthy of his talents. There is however in his whole conduct towards this great artist a display of injustice not easily explained. He obtruded on him the task of building the façade of the church of San Lorenzo at Florence—a commission against which the artist most strenuously protested; but the pope overruled all objections, and compelled him to go to Carrara, in order to excavate marble for the purpose. He was afterwards directed to procure it from the quarries of Pietra Santa: the difficulties of conveying it hence were found almost insurmountable, and we cannot read without surprise and indignation, that during the whole pontificate of Leo, a period of eight years, this extraordinary man was employed in hewing rocks and excavating a road. The short reign of Adrian VI. which followed, although generally unfavourable to the arts, was less injurious to Michel Angelo, as it allowed him leisure to proceed with the monument of Julius II.; but on the accession of Clement VII. that work was again interrupted, and he was called on by the new pontiff to build a library and sacristy for the church of San Lorenzo. The civil wars of Florence ensued soon after, and we find Michel Angelo acting in the capacity of engineer. On the expulsion of the Medici he was appointed superintendent of the fortifications by the local government, and he evinced extraordinary skill in fortifying the important post of San Miniato. Having continued his services until he felt that they could no longer be effectual, and considering the fall of the city inevitable, he withdrew to Venice, and during his residence there, it is affirmed by some authorities, that he gave the design for the bridge of the Rialto. He returned to Florence at the earnest entreaty of his fellow-citizens, who seemed to attach more importance than himself to his services, but, as he had foreseen, the city was soon after compelled to surrender, and he judged it prudent to conceal himself, as did several of the citizens who had distinguished themselves in its defence. Michel Angelo has been reproached with ingratitude to the Medici for the part he took in those transactions, but he is, perhaps, to be praised rather than condemned for having sacrificed his private feelings to the duty he owed his country. As soon as the tumult consequent upon the sack of the city had subsided, Clement VI. ordered strict search to be made for Michel Angelo, received him kindly, consulted him on various works, and the great picture of the 'Last Judgment' was then projected. The death of Clement, in 1533, suspended these intentions, and Michel Angelo now hoped that he should be able to complete the monument of Julius II. This work had been the favourite employment of his life, and he had devoted to it all his powers, but it had proved to him, almost from its commencement, a source of inquietude. Each pontiff, since the death of Julius, had on his accession demanded the services of Michel Angelo, and compelled him, in spite of his earnest remonstrances, to discontinue his labours on the monument; in the meantime, the heirs of Julius being impatient for its completion, harassed him with threats and complaints, large sums of money having been paid to him during the progress of the work. Clement VI. insisted that Michel Angelo had a right to consider himself rather the creditor than the debtor; but Paul III., when Michel Angelo urged his obligation to the heirs of Julius, as a reason for declining the commissions he offered him, threatened to tear the contract with his

'La Fiera' is a series of five comedies, of five acts each, forming altogether a connected exhibition of characters (it cannot be called a dramatic fable, or interwoven series of events) in twenty-five acts. It was written especially for the use of the Academy of La Crusca in the composition of the first edition of their great 'Vocabulario,' or dictionary of the Italian language. The number and variety of characters exhibited in 'La Fiera' is so great as not to be easily counted; they are of all grades of society, and of all professions and trades, besides numerous allegorical characters, which give the work as much the appearance of a series of masques as of comedies. In its style of composition it is more poetical than 'La Tancia,' with many choruses and lengthened lyrical dialogues, and has altogether less of dramatic interest and animation. In the purity of the terms selected, as well as of the idiom, the work is of high repute.

'La Fiera' was first performed in the Carnival of 1618 in the theatre of the great Hall of the Offices (Sala degli Uffizi) in Florence. It was not printed till 1726, when 'La Fiera' and 'La Tancia' were published in folio, with copious explanatory and philological notes by Salvini.

Two other dramatic pieces by Michel-Agnolo the Younger, 'Il Natale d'Ercole' and 'Il Giudicio di Paride,' have been printed; they are of the class called masques. The 'Ciculate' is printed in the 'Prose Fiorentine.' He also was the first publisher of the poetry of his uncle, 'Rime di Michel-Agnolo Buonarruoti, raccolte da Michel-Agnolo suo Nipote,' Firenze, 4to, 1623. Many other works in manuscript are said to be in the possession of the descendants of his family.

(Life, annexed to Salvini's edition of 'La Fiera' and 'La Tancia.')

BUONINSEGNA. [DUCCIO DI BUONINSEGNA.]

BUPALUS, an early Greek sculptor of the island of Chios, and of a family long celebrated as statuariers, was the son of Anthermus, or Archeneus, as Sillig proposes to read the name, and the brother of Athenis, and lived about the sixtieth Olympiad, or B.C. 540. He is better known for the enmity between him and the poet Hipponax than for his works, though both Pliny and Pausanias notice several of them. The quarrel between Bupalus and Hipponax is supposed to have originated in the sculptor refusing to give his daughter in marriage to the poet, who accordingly used his well-known satirical weapons against him; upon which the sculptor retaliated by executing a ridiculous statue of Hipponax, who it seems, from some peculiarities of his person, was easily made ridiculous. This plastic satire was revenged by the poet by some satirical iambs upon Bupalus of so pungent a nature, according to a report no doubt false, as to make the sculptor hang himself. The story seems to have been common centuries after the time of Bupalus, for Horace ('Epos,' ode vi.) has the words "Acer hostis Bupalus," as a sufficient indication of Hipponax. Pliny ('Hist. Nat.,' xxxvi. 5) speaks of works by the brothers Bupalus and Athenis at Chios, Lesbos, Delos, and at Rome. Upon some of their works at Delos they wrote, "Chios is not to be celebrated for its vines only, but also for the works of the sons of Anthermus." There is a sitting naked Venus in the Vatican, with Βούπαλδος ἐπιτελεῖ on the base; but it is evidently, from its fully-developed style, of a much later period than that of the subject of this notice. ('Museo Pio Clementino,' i. tab. 10.)

(Junius, *Catalogus Artificum*; Sillig, *Catalogus Artificum*; Thiersch, *Epoche der Bildenden-Kunst*, &c.)

BURBAGE, or BURBADGE, RICHARD, the original performer of the principal tragic characters of Shakspeare, was the son of James Burbage or Burbadge, also an actor, and it is presumed a native of the same county as Shakspeare, and to whom, with four others, Queen Elizabeth granted, in 1574, the first royal patent conceded in this country to performers of plays. James Burbadge built the Blackfriars Theatre in 1576; in 1588, Richard was a member of his father's company; and in 1589 we find his name immediately following that of his father's, in a list of sixteen actors, one of whom was William Shakspeare, appended to a petition to the Privy Council, that their performances might not be interrupted. In 1596 he is again united with Shakspeare in a petition to the Lord Chamberlain. In 1603 "Richard Burbage" is one of the actors included in the licence granted by King James I. to Lawrence Fletcher, William Shakspeare, and others. In March 1615, we find him and other "stage players" summoned to appear before the privy council for disobeying a special order of the Lord Chamberlain, prohibiting the acting of plays during Lent. In 1619 his name is mentioned in the grant of a new patent by King James licensing his "well-beloved servants to act, not only at the Globe, on the Bankside, but at their private house situate in the precincts of the Blackfriars." The patent bears date the 27th March; but Richard Burbage was beyond the reach of royal favour. He died before the date of the patent, and was buried on the 16th March in the church of St. Leonard, Shoreditch, having resided in Holywell-street in that parish from the year 1600. By his wife, Winifred, he had four daughters, two of whom were christened "Juliet," his partiality for that name arising, it has been supposed, from his having been the original performer of Romeo, and he had a son born in 1616, about six months after the death of Shakspeare, who was baptized William, probably in remembrance of Burbage's illustrious friend. Richard Burbage is introduced in person in an old play called the 'Returne from Parnassus,' and instructs a Cambridge scholar how to act the part of Richard III., in which character he appears to have

been greatly admired. Bishop Corbet, in his 'Iter Boreale,' speaking of his host at Leicester, says,

"When he would have said King Richard died,
And called 'a horse, a horse,' he Burbage cried."

In the 'Gentleman's Mag.' for 1825 there is an elegy on the death of R. Burbage, long preserved in manuscript, and Mr. Payne Collier, in his 'Annals of the Stage,' quotes another copy, subsequently found with the important addition of some lines naming four of the parts in which Burbage especially excelled, namely, Hamlet, Jeronimo, Lear, and probably Othello. The constant allusions to the small stature of Jeronimo, would imply that the actor was below the heroic size.

Flecknoe, in his short discourse of the English stage, 1664, calls him "a delightful Proteus." Sir Richard Baker, in his 'Chronicle' says, "Richard Burbage and Edward Alleyn were two such actors as no age must ever look to see the like."

Burbage is said to have possessed also considerable talent as a painter; in which union of two modes of art, the great tragedian, Betterton, also excelled. The portrait of Shakspeare (commonly called the Felton), is, from the circumstance of the initials R. B. on the back of it; supposed to be his painting. It may be reasonably doubted whether his technical mastery of the art was so complete as to have produced this portrait, but that he was a painter is unquestioned. William Cartwright, an actor, bequeathed, in 1687, a portrait to Dulwich College, which he thus describes: "A woman's head on a board, done by Mr. Burbage, the actor—in an old gilt frame."

(J. P. Collier, *Annals of the Stage, New Particulars, and Memoirs of the principal Actors in the Plays of Shakspeare.*)

BURCKHARDT, JOHN LEWIS, was born at Lausanne, in Switzerland, about 1784. His father who was of an ancient family of Basel, being obliged to leave Switzerland in 1798 in consequence of the French invasion, entered a Swiss corps then serving in Germany in the pay of England. In the year 1800 young Burckhardt went to study at Leipzig, whence he afterwards removed to Göttingen. Having left Göttingen he came to England in 1806, with recommendations to Sir Joseph Banks, then an active member of the committee of the African Association. The association having lost all hopes of receiving intelligence from Mr. Hornemann, who had attempted to penetrate into Central Africa by the way of Fezzan, resolved to send another traveller in the same direction. Burckhardt made an offer of his services, and his offer was accepted in 1808. Meantime he had been preparing himself by studying Arabic and attending lectures on chemistry, astronomy, medicine, and surgery. In January 1809 he received his instructions from the committee: he was to proceed first to Syria, there to remain two years to perfect himself in the Arabic, and afterwards to proceed by Cairo to Mourzook in Fezzan, whence he was to cross the great desert to Soudan. He arrived at Malta in April 1809, and reached Aleppo in September, having first assumed the eastern dress and the name of Ibrahim. From Aleppo he made several journeys to Damascus and Palmyra, and into the Haouran, and among a tribe of Turkmans who live to the north-west of Aleppo. He also gained much information concerning the Bedouin tribes of Syria and Arabia, and concerning the Wahabees, who were then making incursions near to the gates of Damascus. After remaining two years and a half in Syria, Burckhardt proceeded towards Egypt by Palestine and the country east of the Dead Sea, and then by the great valley of Ghor or Araba, which extends from the southern shore of the Dead Sea to Akaba on the Elanitic gulf of the Red Sea. This interesting valley and the neighbouring monuments of Wadi Mousa had been unexplored by former travellers. Burckhardt did not go as far as Akaba, but struck across the desert to Suez, and thence to Cairo, where he arrived at the beginning of September 1812. As there was no favourable opportunity of proceeding to Fezzan for the present, Burckhardt set off for Upper Egypt and went into Nubia, where no European traveller had ever been beyond Derr. He left Assouan towards the end of February 1813, and passing the cataract of Wadi Halfa, went as far as Tinareh in the country of Mahass, and on his return visited the temples of Abousambul, Dandour, Gyrshe, Kalabshe, &c. He passed the rest of that year in Upper Egypt, and on the 1st of March 1814, set off from Daraou with a caravan which was proceeding to Upper Nubia across the desert east of the Nile. In this journey he followed nearly the same track as Bruce on his return from Abyssinia. After suffering much through the desert, he arrived in the country of Berber, and thence went to Shendi. At Shendi he set off with a caravan for Suakin on the Red Sea. After having forded the Atbara (the Abyssinian Tacazze) above its junction with the Mogren, a river that rises in the mountains of the Bishapeen, and which after its confluence with the Atbara gives its name to the united stream which flows into the Nile, he proceeded to Taka, a remarkably fertile and populous district in the midst of the desert. Taka was the most southern point of Burckhardt's travels. He thence proceeded north-east, and crossing the Langay Mountains, arrived at Suakin towards the end of June. From Suakin he sailed for Jidda, where he arrived in July 1814.

These two Nubian journeys of Burckhardt, the journals of which were published together in one volume, furnished much interesting and for the most part novel information. The appendix contains also many valuable notices on Borgo, Bornou, and other countries of Soudan

west of Darfur, which Burckhardt collected in Egypt and Nubia, as well as extracts from Makrizi and Ibn Batuta.

From Jidda Burckhardt proceeded to Tayf, five days' journey inland, where he found Mehemet Ali, who after having taken possession of Mecca and all the Hejaz, was preparing an expedition into the Nejd, the country of the Wahabees. The pasha, who had known Burckhardt at Cairo, received him favourably, and he was also fortunate in obtaining a supply of money from the physician of Tousoun Pasha, Mehemet Ali's son.

Burckhardt next visited the city of Mecca, which till then had been forbidden ground to Europeans, and went through the whole of the ceremonies in the character of a Mussulman pilgrim, without, as he believed, having excited any suspicion as to his real character. He spent three months at Mecca; and on the 25th of November 1814 performed the hadji or pilgrimage to Mount Arafat, in the company of more than 80,000 pilgrims from all parts of Islam. In January 1815 he visited Medina, a city of which still less was known in Europe than of Mecca. He felt ill at Medina, and after some months, having recovered sufficient strength, he went to Yembo, where he embarked for Tor, in the peninsula of Sinai, and thence returned by Suez to Cairo in June, after an absence of nearly two years and a half, of which he had spent nine months in Arabia.

The particulars of Burckhardt's Arabian journey, though from the state of his health less full and accurate, than from his ability and well-known fidelity might have been anticipated, furnished the most complete account of the Hejaz and its two holy cities Mecca and Medina, till then transmitted to Europe. There had indeed been published brief accounts of visits paid to the 'holy cities' by Lodovico Bartema, or Verteman, who, as a renegade Turkish soldier visited Mecca and Medina in 1563, and by Joseph Potts of Exeter who obtained admission into Medina about a century and a half later. Ali-Bey (the Spaniard Badia) had visited Mecca a few years before Burckhardt, who said that he had no reason to doubt his general veracity, though his description of Mecca was incorrect in some points, and his information rather superficial. Ali-Bey spoke only the Moghreb or western Arabic. Giovanni Finati who deserted from an Albanian regiment in which he was corporal, entered Mecca as a pilgrim in 1806. Seetzen, a German traveller, sent by the Duke of Saxe Gotha, and of whom Burckhardt speaks with great respect, travelled in Arabia about the same time as Ali-Bey, and died of poison at Mocha in 1811. Since Burckhardt, Mecca and Medina have been visited by several Europeans in the service of Mehemet Ali (Planat, 'Régénération de l'Egypte,' with a plan of Mecca); but it is only within the last year or two that a really full account, one indeed leaving scarcely anything to be desired, has been published of the holy cities:—'Personal Narrative of a Pilgrimage to El-Medinah and Meccah,' by Richard F. Burton, Lieutenant of the Bombay Army, 3 vols. 8vo, 1855-56.

One of Burckhardt's objects in visiting Mecca as a pilgrim was to be enabled to assume the title of Hadji, which he conceived would prove of great advantage to him in his travels in the interior of Africa. But his residence in Arabia undermined his constitution, and he never recovered from the effects of the deleterious climate and unwholesome water of that country. He spent the following nine months after his return from Arabia partly at Cairo and partly at Alexandria, endeavouring to recruit his health, impaired by repeated attacks of fever, and preparing his Nubian and Arabian journals to be sent to the Association. In April 1816, the plague having broken out at Cairo, he set off for the desert of Sinai. He visited that mountain, as well as the shores of the Euxine Gulf, and returned to Cairo about the middle of June. Here he proposed to Mr. Salt the project of removing the head of Memnon from Gournah, and having it conveyed to England as a present to the British Museum, for which purpose they engaged, at their joint expense, Belzoni, who accomplished its removal to Cairo. [BELZONI.] Burckhardt remained at Cairo, waiting for the long-expected caravan from Fezzan, with which he intended to proceed on its return to that country. In October 1816 he forwarded to the Association his 'Notes on the Bedouens and the Wahabees,' which were afterwards published in a separate volume, and contain much new information. Burckhardt felt a peculiar interest for the Bedouins of Arabia, whom he considered "as the original stock from which the Arabian population of Syria, Egypt, and Barbary is derived; and also as the only Mohammedan nation who, in the midst of the utter depravity of manners and morals, and the decline of laws and civil institutions throughout the Mohammedan world, have preserved unchanged their ancient customs and the manners of their forefathers, and still continue to be what they were 1200 years ago, when their emigrating tribes conquered part of Asia, Africa, and Europe." (Burckhardt's 'Letter from Cairo,' 15th of October 1816, inserted in his 'Life'.)

In the autumn of 1817 it became known at Cairo that among the pilgrims collected at Mecca that year was a party of Moghrebins, or Western Africans, who were to return home by way of Cairo and Fezzan, and it was believed that the caravan would take its departure from Cairo about December. Burckhardt had now transmitted to England all his journals, and was contemplating with the greatest satisfaction the moment when he was at last to set out on the main object of his mission, for which he had so long and so assiduously been preparing himself. But at the beginning of October of that year he

fell ill at Cairo of the dysentery, and, notwithstanding every medical assistance, he expired in the night of the 15th. He communicated his last intentions to Mr. Salt, in a composed and collected manner. His last words were about his mother, when he became strongly affected. "As for my body," said he, "I know the Turks will have it (as he had passed in Egypt for a Mussulman); perhaps you had better let them." Accordingly, he was buried as the Mohammedan sheik Ibrahim, and his funeral was conducted with all proper regard to the respectable rank which he had held in the eyes of the natives. He had won the universal esteem of both Christians and Mussulmans. His death, at the early age of thirty-three, when he had so well fitted himself for the purposes of African discovery, was greatly deplored in Europe. Burckhardt's personal character stood deservedly high, as any one who peruses the extracts of his correspondence with the Association, and the account of his last interview with Mr. Salt, both inserted in his 'Life,' must feel convinced. (See also Salt's Correspondence in Hall's 'Life of Salt.')

He left his collection of oriental manuscripts to the University of Cambridge. His journals were published after his death by the African Association. They consist of—1, 'Travels in Nubia,' 4to, 1819, with a 'Life of Burckhardt'; 2, 'Travels in Syria and the Holy Land,' 4to, 1822; 3, 'Travels in Arabia,' 2 vols. 8vo, 1829; 4, 'Notes on the Bedouens and the Wahabees,' collected during his travels in the east, 4to, London, 1830.

BURDER, REV. GEORGE, was born in London on the 25th of May, or, according to the New Style shortly afterwards introduced, the 5th of June 1752. As he showed an early taste for drawing, he was placed under the tuition of an artist named Isaac Taylor, but who subsequently became a minister of an Independent congregation at Ongar in Essex. About 1773 Mr. Burder became a student in the Royal Academy; but shortly afterwards he began to preach, and at length determined to relinquish his profession, and to devote himself wholly to the Christian ministry. In 1778 he became pastor of an Independent church at Lancaster; in 1788 he removed to Coventry, during his residence in which city he took an active part in the formation of the London Missionary Society; and in 1803 he accepted a unanimous call to the pastorate of the Congregational church in Fetter-lane, London—his removal to the metropolis being further urged by a request to undertake the offices of secretary to the London Missionary Society, and editor of the 'Evangelical Magazine,' then vacant by the death of the Rev. John Eyre. The duties of these offices were performed by Burder with much zeal and talent, until increasing years and infirmities compelled him to resign them; and, during a period of more than twenty years after his removal to London, he took a prominent part in the various religious movements of the body with which he was connected, and of which he was one of the most influential and respected members. Burder died at the age of eighty, on the 29th of May 1832. His publications, which were numerous, consisted chiefly of religious essays and sermons of a peculiarly simple character. Of these, the 'Village Sermons,' of which six volumes appeared at various times between 1799 and 1812, and which have been repeatedly reprinted, and translated into several European languages, are perhaps the best known. Of forty-eight 'Cottage Sermons,' 'Sea Sermons,' and 'Sermons to the Aged,' written for the Religious Tract Society, for gratuitous distribution or sale at a very cheap rate, the aggregate circulation during his life amounted to little short of a million copies. Among his other publications were, 'Evangelical Truth Defended,' 8vo, 1788; an abridgement of Dr. Owen's 'Treatise on Justification by Faith,' 8vo, 1797; 'The Welsh Indians, or a Collection of Papers respecting a people whose ancestors emigrated from Wales to America in 1170, with Prince Madoo, and who are said now to inhabit a beautiful country on the west side of the Mississippi,' 8vo, 1797; 'Missionary Anecdotes,' 12mo, 1811; besides preparing new editions of several religious publications, most of which are mentioned in the 'Memoir' published in 1833 by his eldest son, Henry Forster Burder, D.D., which is partly autobiographical.

BURDETT, SIR FRANCIS, BART., one of the most prominent actors in the politics of the metropolis, and on the popular side in the House of Commons, during the first quarter of the present century, was born on the 25th of January, 1770, and was the third son of Francis Burdett, second son of Sir Robert Burdett, Bart., of Bramcote, Warwickshire. His mother was Eleanor, daughter and co-heiress of William Jones, Esq., of Ramsbury, in Wiltshire. Before the death, in 1797, of his grandfather, Sir Robert, who had also succeeded his grandfather in the title, the subject of the present notice had lost both his father and his two elder brothers; and, his father's elder brother having previously died, he became baronet. His father had died in 1794; and Sedley, the last of his two elder brothers, had been drowned, along with Lord Montague, in 1793, in attempting to cross the falls of the Rhine at Schaffhausen in a small boat. Sir Francis was educated at Westminster School, and afterwards spent some years on the Continent. In 1793 he married Sophia, youngest daughter of the late Thomas Coutts, Esq., banker. In 1796, being still Mr. Burdett, he was, by the interest of the Duke of Newcastle, returned for Boroughbridge, in Yorkshire, his colleague being Sir John Scott, afterwards Earl of Eldon and Lord Chancellor. A few years subsequent to this, on succeeding to the estates of his mother's family, he assumed, in addition to his paternal name, that of Jones,

which however he soon afterwards resigned. From his first entry into parliament Sir Francis had followed an extreme course of popular politics, opposing the government and the war, advocating a reform in the representation, and especially distinguishing himself by an inquiry which he got set on foot into the abuses of the Cold Bath Fields and other prisons. This led to his being brought forward at the general election in 1802 as a candidate for the representation of Middlesex, in opposition to Mr. Mainwaring, who was chairman of the County Sessions, and had been the person by whom the investigation into the prison abuses had been principally resisted and impeded in the House. The public excitement which this contest occasioned was unexampled. It ended on the fifteenth day by giving Sir Francis a majority of 371 votes over his opponent; but a committee afterwards declared the election void, and the House sent the two sheriffs to Newgate. A new election took place in July 1804, the other candidate being now Mr. Mainwaring's son, the father having disqualified himself by an infringement of the Treating Act; and at the conclusion of the poll Burdett was left in a minority of five, the numbers being 2828 and 2828. But this election was also declared void by a committee, the report declaring at the same time that Sir Francis ought to have been returned. On this his return was also attacked; and eventually another committee, on the 8th of February 1806, found that Mainwaring had a majority of one, and that he ought to be the member. Three of Burdett's voters, being afterwards prosecuted, were sentenced to transportation to Botany Bay; and the proceedings altogether are said to have cost Sir Francis above a hundred thousand pounds. At the next general election, in 1806, he was again proposed for the county; but this time he only polled 1197 votes, and Mr. Mellish was returned. In May 1807, a duel took place between Sir Francis and Mr. James Paul, whom he had supported as the popular candidate for Westminster the year before: they fought at Combe Wood near Wimbledon Common, and at the second exchange of shots both were seriously wounded. While they lay ill, both were put in nomination for Westminster at the new general election; and the result was that, after a contest of fifteen days, Sir Francis was brought in at the head of the poll, having obtained 5134 votes (his colleague, Lord Cochrane only polling 3703), and that Paul was left fifth, and at the bottom, with only 269. At the preceding election Paul had had 4365 votes, being only 277 under Mr. Sheridan, the successful candidate. Sir Francis continued to sit for Westminster from this time for nearly thirty years.

The great event of his subsequent career is his committal to the Tower by the House of Commons, in March 1810, for a letter to his constituents denying the power of the House to imprison delinquents, which he published in Cobbett's 'Political Register,' and which the House voted to be libellous and scandalous. He attempted to resist the Speaker's warrant, and some lives were lost in a street contest between the military and the people; but he eventually surrendered of course, and he lay in prison from the 9th of April till the prorogation of parliament on the 21st of June. Sir Francis continued to adhere to the popular side in politics till some time after the appointment of the Melbourne ministry, in April 1835, when he went into opposition against his old friends in the government, on the ground principally of the court he charged them with paying to Mr. O'Connell and his followers in their agitation against the Irish established church. In these circumstances he declined standing for Westminster at the general election in July 1837; but he was returned for Wiltshire, and he sat for that county till his death, which took place on the 23rd of January 1844. Lady Burdett had died only a few days before.

BÜRGER, GOTTFRIED AUGUST, the son of a clergyman, was born at Walmserwernde, near Halberstadt, January the 1st, 1748. While at school he showed no aptitude for grammatical studies, but a great liking for poetry. In 1768 he went to Göttingen, where he wasted his time and money in dissipation, in consequence of which his friends withdrew their assistance from him. But having formed an intimacy with several distinguished fellow-students, Voss, Count Stolberg, Sprengel, and others, who had established a literary club for their mutual improvement, Bürger, encouraged by them, began to mend his course of life, and to apply himself earnestly to the study of the classics as well as the modern poets. Among the latter Shakspeare became his favourite. Some ballads which he wrote at that time having attracted notice, he obtained a situation at Alten Gleichen, and his grandfather agreed to pay his debts and to give him further assistance, but through the dishonesty of a friend Bürger lost the money. An imprudent marriage increased his embarrassments. He however soon after separated from his wife, and went to live at Göttingen, where he passed the remainder of his life, first as a private teacher, and afterwards as professor of philosophy, but without any fixed salary. His misfortunes imparted a tinge of melancholy to several of his poetical compositions. After lingering some years in bad health and poverty, he died June the 8th, 1794.

Bürger published two volumes of poems, which were republished after his death with additions by his friend Karl Reinhard: 'Bürger's Gedichte,' 2 vols. 8vo, Göttingen, 1796. A third volume was published by Reinhard in 1797, containing several specimens of translations from the 'Iliad,' both in iambs and hexameter verse, with dissertations by the author. Bürger's ballads and romances have long been popular in Germany. His 'Leonora' has been translated into English:

'Bürger's Leonora,' by Wm. Robt. Spencer, fol. London, 1796. An English version by Walter Scott, of his 'William and Helen,' the 'Wild Huntsman,' and some shorter pieces, was published in the same year under the title of 'Translations from the German of Bürger.' A few more translations from Bürger are contained in the 'Specimens of the German lyric poets,' Lond. 1823, with a short biographical notice of the author. Bürger's romances are grounded upon local traditions and legends, and he makes great use of the feeling of terror produced by apparitions and other supernatural agency, always directed however to the object of moral retribution. His 'Wilde Jäger,' is a good specimen of this sort. Bürger's amatory poems are soft and pleasing, and unexceptionable on the score of morality. His language is easy and clear. He is altogether one of the first German lyric poets, although Schiller has judged him rather severely. A. W. Schlegel however describes him accurately when he says that Bürger "is a poet of an imagination more original than comprehensive," and that he "is more successful in the execution than in the invention of his subjects, and more at home in romance than in the loftier regions of the lyric muse."

BÜRGMKIR, HANS, a celebrated old German painter and wood-engraver, born at Augsburg in 1472. He lived some time in Nürnberg, and was the contemporary, and by some supposed to have been the scholar, of Albrecht Dürer. They appear to have worked together, but the scholarship is a mere conjecture, which, like many other similar conjectures, has apparently arisen from a species of hero-worship, or an anxiety to shew that Albrecht Dürer was directly or indirectly the source of everything excellent in art that was produced in his own time and country.

There are still several excellent paintings in oil, for their period, by Burgkmair, preserved in the galleries of Vienna, Munich, and Schleissheim; and there are others at Nürnberg and at Berlin. He painted also in fresco and in distemper, and he illuminated manuscripts; but he is better known for his woodcuts, or those cut from his designs, which amount to nearly seven hundred, including some maps. The 'Triumph of the Emperor Maximilian I.,' in 135 large cuts, with a description by the emperor, is one of his chief works; it was executed in 1519, the year of Maximilian's death, chiefly by Burgkmair: some of the prints are marked with his name in full; others with merely H. B. He executed, likewise with assistance, another series of cuts in commemoration of the same emperor, entitled 'Der Weiss König' (The Wise King), of which there are 237 large cuts, being illustrations of the deeds of Maximilian, from the description of H. S. Sauerwein. The emperor is said to have superintended the work himself. The blocks are still preserved in the library of Vienna. There is also by Burgkmair an equestrian portrait of Maximilian, in chiaroscuro, dated 1518. He cut also an excellent portrait of Johann Baumgärtner, dated 1512, and a picture of St. George on horseback, both in chiaroscuro. On Burgkmair's prints in chiaroscuro another name occurs besides his own—Jost de Negker, to whom probably the execution of the chiaroscuro is due. Besides these and many other woodcuts, there are several etchings and two engravings attributed to Burgkmair. His paintings are carefully and solidly executed, but are gothic in taste; there are ten in the Pinakothek at Munich, of which that of the three saints, Liborius, Eustace, and Roch, is strikingly excellent in its style (Cabinet ii. No. 24). In the gallery of the Belvedere at Vienna there is a picture by Burgkmair of himself and his wife, with their ages inscribed upon it, dated May 10, 1528, his fifty-seventh year. The year of his death is not known, but it is supposed to have been 1559. Sandrart has given a portrait of Burgkmair in his 'Teutsche Academie,' &c., and there is a print by G. C. Kilian, of the Vienna portrait of Burgkmair and his wife.

BURGOYNE, JOHN, supposed to be a natural son of Lord Bingley, but concerning whose youthful history we are without information, was appointed lieutenant-colonel commandant of the 16th light dragoons in August 1759. After serving at Belle Isle in 1761, he joined the Portuguese army under the command of the Count de la Lippe in the following year, and distinguished himself by surprising and capturing the town of Alcantara. Before his return to England he was promoted to the rank of colonel. In 1761 he was returned member of parliament for the borough of Midhurst, and he successfully contested that of Preston in 1768. The contest for Preston was carried on with great virulence, and gross corruption and misconduct appear to have been committed upon both sides. For excesses of which his partisans were guilty Burgoyne was prosecuted in the Court of King's Bench, and fined 1000*l.* A presumed political connection with the Duke of Grafton exposed him to the invective of Junius, by whom he was treated with great severity. He partook largely in the debates respecting the Falkland Islands in 1771, and in the following year he directed his attention to the abuses supposed to exist in the government of the East Indies. While serving as a subaltern at Preston he had secretly married Lady Charlotte, daughter of the Earl of Derby, with whom after a time the offending couple obtained reconciliation. This connection first led him to write for the stage. His earliest dramatic piece, 'The Maid of the Oaks,' was written for a fête-champêtre given at his father-in-law's seat (the Oaks), in June

1774 by the Earl of Derby, in honour of the marriage of his eldest son, Lord Stanley, with Lady Betty, a daughter of the Duke of Hamilton. Lady Charlotte Burgoyne died at Kensington Palace without issue. June 5th 1776, during which year and that preceding it Burgoyne served in North America.

In the summer of 1777 he was appointed to the command of a large force ordered to penetrate from Albany on the Hudson River to Canada by the lakes. His numbers on paper were 8000 regulars, 2000 Canadians, and 1000 Indians; but of these there were never really assembled more than 7000 regulars, 150 Canadians, and 400 savages. After some success in the early part of his expedition, and the capture of Ticonderoga, he imprudently pushed forward without preserving his communications with Canada; and being in the midst of a hostile country, and watched by a greatly superior force, he soon became greatly straitened for provisions, and more than one of his detachments were cut off. Having crossed the Hudson he encamped at Saratoga, about 30 miles north of Albany. Here in October he was surrounded by 18,000 Americans under generals Arnold and Gates, who, perceiving the necessity to which their enemy was reduced, prudently declined battle, trusting to wear him out. Thus disastrously circumstanced, he opened a convention with General Gates, in which the American commander at first asserted that the retreat of the British was cut off, and proposed that they should ground their arms within their own encampments. He was answered with spirit to the first statement, that "Lieutenant-General Burgoyne's army, however reduced, will never admit that their retreat is cut off while they have arms in their hands;" and to the second demand—"This article is inadmissible in any extremity. Sooner than this army will consent to ground their arms in their encampment, they will rush on the enemy, determined to take no quarter." And again, in similar language—"If General Gates does not mean to recede from the sixth article, the treaty ends at once. The army will, to a man, proceed to any act of desperation rather than submit to that article." Burgoyne had displayed none of the higher qualities of a general, but he was a thoroughly brave man, and he would doubtless, as Gates felt assured, act up to his declaration, and there was no wish on the American side to drive him to extremities.

It was finally settled that the British troops should march out of the camp with all the honours of war, and should be sent to Europe on condition of not serving in America during existing hostilities. The ministry in England received the news of this convention with profound indignation, since it was chiefly owing to it that France acknowledged the independence of the United States; and it was indeed the turning point of the American struggle. On his return to England, Burgoyne was treated with marked severity. Both an audience with the king and a court-martial were refused. Burgoyne at once went over to the opposition party. He defended himself resolutely in the House of Commons, and an attempt was made by the ministry to exclude him from that assembly, under pretence that, as a prisoner of war, he had no right either to speak or to vote; but the Speaker having been appealed to, decided in his favour. On that occasion he voluntarily resigned all his appointments. At a subsequent period, when he was allowed to produce evidence before a committee which had been appointed to inquire into the conduct of Sir William Howe, the testimony advanced was highly in favour of his bravery and military knowledge.

On the change of ministry at the close of the American war Burgoyne was appointed commander-in-chief in Ireland, the last of his professional employments; and he appears, on his resignation two years afterwards, to have devoted himself entirely to lighter literature. He contributed to the 'Rolliad,' the 'Ode to Dr. Pretymann,' and the 'Westminster Guide.' A comic opera, the 'Lord of the Manor,' had already appeared in 1780, and in 1786 he attempted a higher species of composition in the comedy of 'The Heiress.' Not long afterwards he adapted to the stage Sedaine's historical romance, 'Richard Cœur de Lion.' His political career ended by his being appointed one of the managers for conducting the impeachment of Mr. Hastings. During the trial of Hastings he moved and obtained the censure of the House upon Major Scott, for an attack on the conduct of the committee. He did not live till the conclusion of the trial, but was cut off by a sudden attack of the gout on the 4th of June 1792, and was buried privately in the cloisters of Westminster Abbey.

The dramatic and poetical works of Lieutenant-General Burgoyne were collected in two small volumes in 1808. He is best described as an agreeable and clever writer. Of his light theatrical pieces it may be enough to say that after the lapse of seventy years 'The Lord of the Manor' and 'The Heiress' still keep occasional possession of the stage; and we may add that it would not be easy to find eight lines of simpler pathos than the song, 'Encompassed in an angel's frame,' introduced into the former.

(*Life*, prefixed to his works; Sparks; Mahon, &c.)

*BURGOYNE, SIR JOHN, entered the army as one of the corps of Royal Engineers, August 29, 1798. He became a lieutenant July 1, 1800, and captain March 1, 1805. He served at Malta, in Egypt, in Sicily, and in Sweden, from 1800 to 1807. He was with the army under Sir John Moore in Spain and Portugal, and in 1809 joined the army under Sir Arthur Wellesley, and continued with it, attached to the Third Division, till the termination of the Peninsular War in 1814. He was present in most of the important battles; con-

ducted in whole or in part the sieges of San Sebastian, Burgos, and others, and was twice wounded. He was raised to the rank of major February 6, 1812, and to that of lieutenant-colonel April 27, 1812. He was chief engineer of the expedition to New Orleans in 1814-15, and also of that sent to Portugal in 1826. He became colonel July 22, 1830, and in the same year was appointed Chairman of the Board of Public Works of Ireland. He was created a Knight Commander of the Bath in 1837, became major-general June 28, 1838, and in 1845 was appointed Inspector-General of Fortifications of England. In 1849 he was placed at the head of the Metropolitan Commission of Sewers. He attained the rank of lieutenant-general Nov. 11, 1851, and was created a Knight Grand Cross in 1852. He was sent to Turkey in 1854, and continued in the Crimea as chief of the engineering department of the British army, till his recall in 1855, when he was succeeded by Sir Harry Jones. The University of Oxford conferred on him the honorary degree of D.C.L. in 1854, and the Sultan bestowed on him the order of the Medjidie in 1855.

BURGUNDIANS, KINGS OF THE. The Burgundians were a people who settled in Gaul upon the downfall of the Roman empire. The origin of the name and of the people seems to be alike unknown. Plancher ('Hist. de Bourgogne') has very gravely stated and refuted the various conjectures on this head. A favourite supposition seems to have been that the Burgundians were descended from the Romans. They are mentioned by Pliny the elder, in his 'Hist. Nat.,' lib. iv. c. 25, under the name of *Burgundiones*, and he numbers them among the branches of the great stock of the Vindili or Vandals; Ptolemaeus places these Vindili upon the lower Vistula. The Roman historians and orators give us some intimation of their disputes and wars with the Goths, the Alemanni, and other barbarous nations. In the reign of the Roman Emperor Probus they came into conflict with the Romans; Probus defeated them and their allies, who were of other branches of the Vandals. In the reign of Diocletian and Maximian they invaded Gaul in conjunction with the Alemanni; but their unwieldy host was destroyed by famine, pestilence, and the sword. In the time of the Emperor Valentinian I. they were at variance with the Alemanni, who dwelt between the Upper Rhine and the Upper Danube, on account of some brine springs that were near the frontier of these two people, which shows that the Burgundians had moved from their seats on the Vistula to the country near the Rhine. Valentinian, desirous of humbling the Alemanni, formed an alliance with the Burgundians (Ammianus Marcellinus calls them *Burgundii*), who raised an army of 80,000 men, according to some writers, and advanced to the Rhine without experiencing any opposition from their terrified opponents. The emperor, having humbled his enemies, refused to perform his promises to his allies; and the Burgundians returned home highly disgusted with his breach of faith. In the reign of Honorius, about A.D. 406, or the beginning of 407, they invaded Gaul, like several other of the barbarous nations on the frontier, but it is doubted whether they acted conjointly. Shortly after this we find the Burgundians supporting Jovinus, who assumed the imperial purple in opposition to Honorius. The latter prince however made peace with them, and ceded to them part of Gaul, near the banks of the Rhine (or confirmed its previous cession by Jovinus), and from this cession arose the kingdom of Burgundy. About the same time the Burgundians embraced the Christian religion, at first under what is generally termed the orthodox form; afterwards they became Arians. Their kingdom afterwards increased so far as to comprehend that part of Gaul which was to the east of the Saône and Rhône (except the coast of Provence south of the Durance), Savoy, and a part of Switzerland.

GUNDICARIUS was king of the Burgundians at the time of their settlement in Gaul. He was engaged in wars at a subsequent period with the Romans under Ætius (A.D. 435 or 436), and sustained a great overthrow from Attila (in 450, or thereabout). Among his successors were Gundeuchus, and after Gundeuchus his four sons, Gundobald, Godegisilus, Chilperic, and Godemar, who were said to be of Gothic extraction. Clotilda, or Clotildis, who married Clovis, king of the Franks, was the daughter of Chilperic. Chilperic and Godemar dying, or being killed by Gundobald, according to Gregory of Tours (whose account is however to be received with great distrust), the remaining two brothers divided the kingdom between them, and fixed their residence, Gundobald at Lyons and Godegisilus at Geneva.

The character of Gundobald has been very unfavourably represented by Gregory of Tours; but perhaps Gregory's partiality to the Franks, or his desire to win the favour of the Frankish kings, influenced his judgment. Gundobald was in favour with the Romans. The emperor Olybrius bestowed upon him, in 472, the title of patrician; and the usurper Glycoerius rested on his support. His eloquence, his penetration, his quickness of invention, are celebrated by his panegyrists; and his tolerant spirit will be regarded in the present day as a subject of just applause. He was an Arian, perhaps the first Arian prince of his race, but he did not persecute the Catholics. Their bishops assembled without interruption, and their churches preserved their endowments. The king attended the discussions held by the advocates of the two parties on their points of difference, and kept up a correspondence with Avitus, the Catholic bishop of Vienne. He improved the laws of his kingdom, and even Gregory admits that his alterations were made with the view of rendering the condition of the

old inhabitants of the country more tolerable, and of softening the barbarism of his Burgundians.

In the year 500 Gundobald was attacked by Clovis king of the Franks, whose ambition and military talents were raising the Franks to the supremacy of Gaul. Gundobald applied to his brother for aid against an enemy whom both had cause to fear. Godegisilus consequently joined him; but this treacherous brother was in secret alliance with the Franks, and in the battle which was fought near Dijon, he went over to them. Gundobald was in consequence defeated and fled to Avignon, where he fortified himself. Clovis pursued him to that city, and besieged him there; but meeting with a stouter resistance than he expected, he concluded a peace with Gundobald, on condition of a tribute, which the latter afterwards refused to pay.

In this treaty Clovis neglected to secure the interests of Godegisilus, who had by this time overrun his brother's dominions and entered Vienne in triumph. Here Gundobald came upon him by surprise, besieged the city, and having taken it, caused Godegisilus, who had taken refuge in the church of the Arians, to be put to death. From this time Gundobald reigned over the whole kingdom of the Burgundians. In the latter part of his reign he gave the Catholics reason to believe that he had embraced their views; but it is very questionable if ever he renounced Arianism; and it may be doubted whether he designed anything more than to cajole the Catholic prelates, and to avert by their mediation the hostility of Clovis, who was a Catholic. Gundobald died A.D. 516.

Sigismund, the son and successor of Gundobald, had become a Catholic during his father's reign. Soon after his accession a council of bishops was held; and from the prelates who attended it, the extent of the Burgundian kingdom is inferred. Sigismund published, about A.D. 517, a collection of the Burgundian laws, which is still extant. These laws contain for the most part the original customs of the Germans, such as are found in the records of other German nations. Sigismund was twice married, and had children by each wife: by his first wife, who was daughter of Theodoric, king of the Ostrogoths of Italy, he had a son, Sigeric, and a daughter who was married to Theuderic, or Thierry, the Frankish king of Austrasia and son of Clovis. This son, upon an unjust suspicion instilled into him by the children of his second wife, he put to death in 522. His act was the ruin of Sigismund. He lost his peace of mind, which he tried in vain to recover by a temporary retirement to the monastery of St. Maurice on the Rhône (which he had founded or re-established), and by other observances which the religion of the times dictated. Theodoric, king of the Ostrogoths, his surest support against the power and ambition of the Franks, was enraged at the murder of his grandson; the affections of Sigismund's own subjects were alienated; and the calamities which overtook him were regarded as judgments of heaven. In 523 Chlodomer, Clotaire, and Childebert, three of the sons of Clovis now dead, instigated by their mother Clotilda, attacked the Burgundian kingdom, to which they pretended to derive a claim by their mother. Sigismund was defeated and delivered up by his own subjects into the hands of Chlodomer, by whom he was carried to Orléans. Godomar, his brother, assumed the management of affairs, and recovered those cities which the Franks had taken. Chlodomer upon this ordered Sigismund, with his wife and some other persons, to be put to death. Godomar succeeded to the crown.

Chlodomer, having perpetrated this cruel deed, set out against the Burgundians, assisted by some troops sent to him by his brother Thierry, king of Austrasia, who had married the daughter of Sigismund, as already noticed; but he fell in battle near Vienne in 524. This event retarded for a time the ruin of the Burgundian kingdom, which stood for about ten years longer. In 534 Childebert and Clotaire, sons of Clovis, and Theodebert, son and successor of Thierry king of Austrasia, made an entire conquest of it. Godomar was taken prisoner, and passed the rest of his days in captivity; and from this time the Burgundians disappear from history as an independent nation. They have indeed transmitted their name to later times, for one of the divisions of the Frankish monarchy was called from them Burgundy or Bourgogne, and the appellation has been inherited by one of the finest provinces of modern France. [BOURGOGNE, in GEOGRAPHICAL DIVISION.]

The Burgundians, like the other Germans, enjoyed a considerable share of political freedom. Their laws were enacted by the advice of the whole nation; and when those laws were promulgated by Sigismund, they retained their Germanic features: murder was however punished by death. They borrowed some things from the Roman laws, and the provincials who had been accustomed to those laws were allowed, at least in many instances, to retain them. When a Roman and a Burgundian happened to be at variance, a judge was appointed from each nation. The Burgundians are in their own laws distinguished by the designation *Barbari*.

The Burgundians retained their constitution under the dominion of the Franks; but they were obliged to pay tribute, and to serve them in their wars; and in the Frankish laws their subjection was made apparent by the inferior valuation of their lives. The death of a Burgundian might be atoned for by a payment of 160 solidi, or shillings: that of a Frank for not less than 200.

(Masou, *History of the Ancient Germans*, translated by Lediard.)

BURIGNY, JEAN LEVESQUE DE, was born at Rheims in 1692.

BIOG. DIV. VOL. L

He went to Paris in 1713, and there applied himself strenuously to philological and historical studies. After several years he went to Holland, where he engaged with De St. Hyacinthe in the compilation of a literary journal called '*L'Europe savante*,' which began to appear at La Hague in January 1718, and was continued till 1720. It is one of the best journals of that period, and contains many interesting articles on the literature and political history of the times. The collection of '*L'Europe savante*' forms 12 vols. 12mo. About one-half of the papers were written by Burigny. He published also '*Traité de l'autorité du Pape, dans lequel ses droits sont établis, et réduits à leurs justes bornes*,' 4 vols. 12mo, 1720, a work of close reasoning on an intricate subject, and one which has caused much controversy among Roman Catholics. The author professes the principles of the Gallican Church, and carries them to a very great length. The questions of the subordination of the pope to the councils—of the fallibility of the pope and of the Roman Church itself, and of the consequent right of the Catholic world, in such a contingency, to choose another pastor—of the independence of the bishops, especially in matters of discipline, &c., are all discussed at length. The '*Histoire de la Philosophie Payenne*,' 1724, was afterwards republished at Paris under the title of '*Théologie Payenne; ou, sentimens des philosophes et des peuples payens les plus célèbres, sur Dieu, sur l'âme, et sur les devoirs de l'homme*,' 2 vols. 12mo, Paris, 1754. This second edition is much superior to the first, and is considered by some as Burigny's best work. Brucker wrote some critical observations on the first edition, in his '*Otium Vindelicum*,' Augsburg, 1731. Burigny having returned to Paris, was made a member of the Academy des Belles-Lettres. His other works are—'*Histoire Générale de Sicile*,' 2 vols. 4to. 1745, a work of great research, and one of the best on the subject. '*Traité de Porphyre touchant l'abstinence des viandes*,' translated from the Greek of Porphyrius, with the life of Plotinus, 12mo, 1747. '*Histoire des Révolutions de l'Empire de Constantinople depuis la fondation de cette Ville jusqu'à l'an 1453*,' 3 vols. 8vo, 1750. The last book contains a retrospect of the various controversies, ruptures, and attempts at a reconciliation between the Greek Church and that of Rome. '*La Vie de Grotius, avec l'Histoire de ses ouvrages et des négociations auxquelles il fut employé*,' 2 vols. 12mo, 1752. '*La Vie d'Erasmus de Rotterdam*,' 2 vols. 12mo, 1757, with many interesting particulars concerning the age of Erasmus. This work was translated into German by Reiche, with additions, 2 vols. 8vo, Halle, 1782. '*Vie de Bossuet*,' 12mo, 1761. '*Vie du Cardinal du Perron*,' 1768. These two last biographies are considered much inferior to the two preceding. '*Lettre sur les Démêlés de Voltaire avec M. de St. Hyacinthe*,' 8vo, London, 1780. Burigny wrote also a number of dissertations, which are inserted in the '*Recueil des Mémoires de l'Académie des Belles-Lettres*.' His learning was very extensive, and his memory excellent, but his style is cold and rather diffuse. Burigny was amiable and unpretending; he lived entirely for study, and he was much surprised when, in his old age, he learned that Louis XVI. had bestowed on him a pension of 2000 francs. He died at Paris, October 8, 1785, in his ninety-fourth year, having preserved his mental faculties to the last. Dacier wrote his eulogy for the Academy, of which he was a member.

BURKE, EDMUND, was born in Dublin on the 1st of January 1730, o.s. according to Prior, but in 1728 (or as we should now write, January 12, 1729), according to other authorities. His father, Richard Burke, or Bourke, a Protestant, and the son of a gentleman of landed property in the county of Cork, was an attorney in large practice. His mother was a Miss Nagle, a Catholic lady. She was, it seems, great niece of Miss Ellen Nagle, who married Sylvanus Spenser, the eldest son of the poet. Edmund, whose Christian name may possibly have descended to him from the author of the '*Fairy Queen*,' was the second of three sons, who, with a daughter, were all that grew up of a family of fourteen or fifteen children.

Mr. Prior, in his '*Life of Burke*' (2nd edit. vol. i. p. 7), in refuting the common calumny that Burke entered political life almost a penniless adventurer, has stated that he "received from his family at various times a sum little short of 20,000*l.*," a fact of which he was assured from unquestionable authority, and which was frequently mentioned by the late Dr. Lawrence to Burke's friends. But this statement has been keenly controverted (see the '*Athenæum*' of 1853 and '55), and Mr. Prior has not repeated it in the last edition of the '*Life*' published in 1854. He however gives a passage from a letter written by Edmund Burke to his friend Shackleton in 1766, in which, after mentioning that his father was "for many years not only in the first rank, but the very first man of his profession in point of practice and credit," he adds that notwithstanding pretty expensive habits of living, and "laying out something on Dick's [Richard Burke's] establishment and on my education in the Temple (a thousand pounds or thereabout for me), he died very near worth six thousand pounds." We may add that the proper authority for the assertion of his having received the means of supporting his independent course from his family is a document which appears to have been overlooked by his biographers. We refer to the preface or introduction, extending to nearly seventy pages, prefixed by his executors to the celebrated '*Observations on the Conduct of the Minority in the Session of 1793*,' when that pamphlet was first published in an authentic form immediately after his death. This interesting statement, which reviews the whole of Burke's history, and is full of curious and valuable matter, is not found in any of the

collected editions of his works, having probably been withdrawn in order that it might be incorporated in the life of him long promised by his principal executor, Dr. King, the late bishop of Rochester, which however has never appeared. The passage relating to the matter now before us is as follows:—"He was daily vilified as an obscure and needy adventurer, yet he did not tell, what he had in his hands the means of substantiating, that he was sprung from a family anciently ennobled in several of its branches, and possessing an ample estate, which his grandfather had actually enjoyed; nor that he had himself sunk a handsome competency in his adherence to his party. Once, and but once, in debate, he was provoked to declare his private circumstances. . . . He said, that by the death of a brother whom he loved and lamented he had succeeded to upwards of 20,000*l.*; part of which he had spent, and the rest then remained to be spent in the independent support of his principles." It may be observed that what is here affirmed about his grandfather having actually enjoyed the ancestral estate is contrary to the common statement. Mr. Prior's account is, that the estate in question, which was in the county of Limerick, had been forfeited "some time in the troubled period between 1641 and 1653," and that Edmund's great-grandfather was the first of the family who removed to the county of Cork, where he had another property, which he left to his descendants. This last estate was of comparatively small value.

Young Burke, whose health in his childhood was very delicate, being sent to live with his grandfather in the county of Cork, was first put to school at the village of Castletown Roche, where he is supposed to have remained about five years. On his return to Dublin he was sent to a school in that city; but he was removed in May 1741, along with his two brothers, to the classical academy at Ballitore in the county of Kildare, which had been established some years before by John Barcroft and Amos Strettel, two members of the Society of Friends, and has ever since subsisted under the direction of persons of that communion. When Burke was sent there the institution enjoyed a very high reputation under the management of Abraham Shackleton, a Quaker of superior talents and learning, who had been brought over from Yorkshire to conduct it about fifteen years before. Here Burke remained for about three years, during which time he always considered that he had acquired the most valuable of his mental habits. With Richard Shackleton, the only son of his master, and afterwards his successor in the school, he preserved an intimate friendship to the end of his life.

On leaving Ballitore, Burke proceeded in April 1744 to Trinity College, Dublin, where he does not appear to have greatly distinguished himself; but on the 26th of May, 1746, he was elected a scholar of the house. He commenced A.B. the 23rd of February 1748, and proceeded A.M. in 1751. Meantime, having been intended for the English bar, he had entered at the Middle Temple on the 23rd of April 1747; and in the beginning of 1750 he left Dublin for London.

Of his legal studies nothing is known with certainty; but it is probable that the attractions of literature and politics soon withdrew him from all thoughts of the law as a profession. It is believed that he became a writer in the newspapers and periodical publications almost immediately on his arrival in London. About 1752 or 1753 he is said to have offered himself as a candidate for the professorship of logic in the University of Glasgow, and to have been unsuccessful; but the whole of this story is considered very doubtful, and the records of the university do not afford the means of settling the question, as it is not the practice in elections to register any names but those of the successful candidates. About the year 1755 he had formed the design of going to America, where some place under government had been offered him in one of the provinces. This project however, which he seems to have entertained for upwards of two years, he finally gave up in consequence of the opposition of his father, whom he had already displeased by his abandonment of the bar.

His first separate literary work, so far as is known, appeared in 1756, in the form of an octavo pamphlet of 106 pages, entitled 'A Vindication of Natural Society, or a view of the miseries and evils arising to mankind from every species of artificial society, in a letter to Lord . . . by a late noble writer.' This is—especially for a young man of twenty-six—in all respects a very remarkable production. In the first place, the imitation of the style and manner of Lord Bolingbroke, by whom the 'Vindication' affects to be written, is so skillfully managed that when it first appeared, without the preface explaining the design which now introduces it, even some persons eminent in the literary world—Lord Chesterfield and Bishop Warburton among others—are said to have taken it for a genuine production. But, without reference to its merit as an imitation, the style is throughout singularly flowing and brilliant; and indeed it would, we apprehend, be difficult to mention any piece among Lord Bolingbroke's compositions in which the same spirit and eloquence are so long sustained. The performance however is chiefly deserving of attention as indicating the peculiar direction that the mind of the author had already taken in speculating upon the subjects which he handles, and as proving how early there had been formed in it at least the germs of that philosophy of morals and of society which may be traced in all his writings and his subsequent public conduct. The following passage, containing the key to the purpose of the pamphlet, will be at once recognised by all who are familiar with his writings on the French

Revolution, as identical in spirit with the whole tenor of those his latest productions; and his various speeches on the American war are all marked and pervaded by the same cast of thought, which may be defined generally as a deep sense of the incompetency of the human mind when giving itself up to speculative ingenuity, and rejecting all light and guidance from the experience of past ages, and all regard for things actually established, to cope with the complex problem of re-arranging society; and, derived from these feelings, a vehement aversion to the introduction into the practice of statesmanship of anything appertaining to what may be called the metaphysics of social philosophy:—"The editor is satisfied that a mind which has no restraint from a sense of its own weakness, of its subordinate rank in the creation, and of the extreme danger of letting the imagination loose upon some subjects, may very plausibly attack everything the most excellent and venerable; that it would not be difficult to criticise the creation itself; and that if we were to examine the divine fabrics by our ideas of reason and fitness, and to use the same method of attack by which some men have assaulted revealed religion, we might, with as good colour and with the same success make the wisdom and power of God in the creation appear to many no better than foolishness."

A few months after this pamphlet he published his 'Philosophical Inquiry into the Origin of our Ideas of the Sublime and Beautiful,' which however he is said to have begun when he was only nineteen. The leading doctrine propounded in this essay is, that the feeling of the *sublime* means the delight we experience whenever we have an idea of pain and danger, without being actually in such circumstances; and that the feeling of the *beautiful* means the delight that is excited in us by all such qualities in things as induce in us a sense of affection and tenderness, or some other passion the most nearly resembling these, while we are yet altogether unaffected by the physical passion the object of which is the beauty of women. These views are illustrated by many ingenious and striking observations; but the spirit of the work on the whole is certainly rather critical than metaphysical. It was however very well received by the public, and immediately brought the author into much notice.

This year, Burke, having gone to Bath to re-establish his health after an attack of illness, and having there taken up his residence with his countryman and distant relation, Dr. Christopher Nugent, a physician, formed an attachment to that gentleman's daughter, and married her. Dr. Nugent was a Roman Catholic, but his daughter had been brought up a Presbyterian by her mother, who is said to have been a very rigid one.

In April 1757 Dodsley, who had been the publisher of the 'Inquiry into the Sublime and Beautiful,' brought out 'An Account of the European Settlements in America,' in 2 vols. 8vo, a performance of which, although it has not found a place in the collected editions of his works, there can be little doubt that Burke was the author. Indeed his receipt to Dodsley for the copy money, fifty guineas, was sold a few years ago by Evans at an auction of autographs. The work, although somewhat unequally written, is an animated and interesting sketch of American history up to the date of its publication; the general views are often ingenious and comprehensive, and the information is the result of considerable reading. The fondness for the study of the subject of commerce, by which Burke was afterwards so much distinguished, is strongly displayed in this early production. "My principal view," he says in his preface, "in treating of the several settlements, was to draw everything towards their trade, which is the point that concerns us the most materially;" and one of his remarks in the body of the work is, that whereas at the time when settlements in America were first formed by the Spaniards and Portuguese, "the speculative knowledge of trade made no part of the study of the elevated or thinking part of mankind, now it may be justly reckoned amongst the liberal sciences, and it makes one of the most considerable branches of political knowledge."

There is every reason to believe that Burke had already seriously determined to devote his whole strength to the attainment of political distinction. With such views he set to work vigorously to store his mind with the knowledge most necessary for an orator and statesman, making his labours as a writer for the press, as well as his private studies, subservient to this ambition. He had been for some time employed on a history of England, and this year eight sheets of the work were printed by Dodsley in quarto; but although as much more was written as brings down the narrative to the end of the reign of John, the publication was for some reason or other given up. The whole has been printed from the author's papers since his death. He soon after engaged in a work which occupied much of his attention for many years, and which indeed he is understood to have in some degree superintended to the end of his life, the 'Annual Register,' the first volume of which for the year 1758 was published by Dodsley in June of the following year. For the preparation of this work, which from the first was highly successful, Burke appears to have been paid by Dodsley at the rate of 100*l.* per volume. He at first wrote the whole work, but after a few years he is believed to have confined his pen to the historical articles, the greater part of the work being written under his general superintendence by Mr. English and Dr. afterwards Bishop King.

Burke had now become very generally known in the literary circles

of London, and also to many persons of political consequence. Among the latter was the popular Irish nobleman, Lord Charlemont, during a long life one of the most distinguished members of the Whig connection in Ireland. His lordship introduced Burke in 1759 to Mr. William Gerard Hamilton, better remembered by the name of Single-Speech Hamilton. When Lord Halifax, who was Hamilton's patron, went over to Ireland as lord-lieutenant in 1761, Hamilton accompanied him as chief secretary, and the latter offered the place of his private secretary to Burke. The offer was accepted, and Burke now returned to his native country, there to make his first entrance upon public life.

This connection however did not last long. Burke's activity and the usefulness of his services to the government soon acquired for him much consideration; and in April 1763 a pension of 300*l.* per annum on the Irish establishment was settled on him: but having been instrumental in procuring him this reward, Hamilton, whose nature was intensely selfish, appears to have conceived that he had thereby entitled himself to Burke's services and servility for life, as much as if he had paid him the money out of his own pocket. On discovering this, Burke immediately threw up the pension, after having enjoyed it only a year, and broke with his patron for ever.

When the Marquis of Rockingham was called to the head of affairs, on the breaking up of the administration of Mr. George Grenville, in July 1765, Mr. Burke was, on the recommendation of several common friends, and, especially, it is said, of Mr. Fitzherbert, member for Derby, appointed to the situation of private secretary to the new premier. He has himself, in his 'Appeal from the New to the Old Whigs' (written in July 1791), given us the date of his appointment—the 17th of July, which was just a week after the nomination of the Marquis as First Lord of the Treasury. "This July," he says, speaking of himself in the third person, "it will be twenty-six years since he became connected with a man whose memory will ever be precious to Englishmen of all parties, as long as the ideas of honour and virtue, public and private, are understood and cherished in this nation. That memory will be kept alive with particular veneration by all rational and honourable Whigs. Mr. Burke entered into a connection with that party, through that man, at an age far from raw and immature; at those years when men are all they are ever likely to become; when he was in the prime and vigour of his life; when the powers of his understanding, according to their standard, were at the best; his memory exercised, his judgment formed, and his reading much fresher in the recollection, and much readier in the application, than now it is." He was also, as soon as the houses re-assembled, brought into parliament as member for Wendover in Buckinghamshire, a borough belonging to Lord Verney. In the preface to the 'Observations on the Conduct of the Minority,' already referred to, it is said, "He declined taking any salary for his employment under Lord Rockingham, as secretary to the First Lord of the Treasury, and at his own cost he obtained a seat in parliament." As we have seen, it has been a matter of inquiry and controversy how Burke was able to support his position without any professional or official income: on the one side is the statement of his having received large sums from his family, and (as was no doubt the case) for some time after his marriage from his wife's father Dr. Nugent; on the other is the suggestion (the evidence for which may be seen in the volumes of the 'Athenæum,' already referred to, especially 1853, p. 1513, and 1855, p. 195) that he engaged with his brother and with William Burke, who was notoriously largely concerned in such matters, and perhaps with others, in stock-jobbing speculations. We do not undertake to support either of these views: indeed it seems to us that there is no sufficient evidence yet before the public to enable any one to make a decided statement respecting Burke's pecuniary affairs at this or a somewhat later period of his life, nor do we see the necessity for making such a statement.

Subordinate as was his nominal post, Burke may be said to have become immediately the animating spirit and chief moving power of the Rockingham administration. The very day he took his seat in the House of Commons, the 14th of January 1766, he is stated to have taken part in the debate on the address of thanks, and to have been complimented on his appearance in very flattering terms by Mr. Pitt. No account of his speech however, and indeed no notice of its delivery, is given in the common report of the debate; and the only details of it preserved are in the few notes taken by Lord Charlemont. Burke immediately became one of the most active and efficient combatants in the ministerial phalanx. Probably no man ever entered parliament so well trained and accomplished by previous acquirements and intellectual discipline. But the natural ascendancy of the man showed itself perhaps still more remarkably in the part he sustained in the out-of-doors consultations and movements of his party. The great question which the Rockingham administration was brought in to settle was that of the American Stamp Act; and the prudent and conciliatory measures by which the rising storm in the colonies was at this time allayed, are understood not only to have been originally suggested and planned by Burke, but to have been mainly indebted to his indefatigable activity, and zealous, persevering, and persuasive advocacy, for their final adoption by the various sections of the ministerial body.

When Lord Rockingham and his colleagues were dismissed on the 20th of July 1766, Burke's pen was called into requisition to prepare such a manifesto for the public as was thought to be called for in the

circumstances. This task he executed with much effect in a brief but pithy statement, under the title of 'A Short Account of a late Short Administration.'

"There are who remember," he informs us in his 'Appeal' already quoted, "that on the removal of the Whigs, in the year 1766, he was as free to choose another connection as any man in the kingdom. To put himself out of the way of the negotiations which were then carrying on very eagerly, and through many channels, with the Earl of Chatham, he went to Ireland very soon after the change of ministry, and did not return until the meeting of parliament. He was at that time free from anything which looked like an engagement. He was further free at the desire of his friends; for, the very day of his return, the Marquis of Rockingham wished him to accept an employment under the new system. He believes he might have had such a situation; but again he cheerfully took his fate with his party." It is understood that in the "crossly-indented and whimsically dove-tailed piece of joinery" which Lord Chatham was now endeavouring to put together, it was intimated to Burke that he might have the place of one of the Lords of Trade. It is also said that before the prorogation in July 1767, an offer of a seat at the Treasury Board was made to him by the Duke of Grafton, who, in the illness and disgust of Lord Chatham, had now become the head, or at least the nodding part of the crazy administration. But the temptation, which had allured several of the most distinguished of his former associates, was again resisted. Up to this time it is to be remembered that the Rockingham party, although they had refused as a body to ally themselves with the ministry, had not gone into opposition. They took the latter course however in the following session, which opened in November 1767. The parliament was dissolved in March 1768, when Burke was again returned for Wendover. About the same time he purchased for over 20,000*l.* the estate of Gregories near Beaconsfield, Buckinghamshire. This expensive purchase is one of the chief items in the question respecting the sources whence he derived his income. The following is his own account of the transaction as made at the time to Shackleton:—"I have made a push with all I could collect of my own and the aid of my friends to cast a little root into this country. I have purchased a house with 600 acres of land in Buckinghamshire, 24 miles from London, where I now am. It is a place exceedingly pleasant; and I propose, God willing, to become a farmer in good earnest." Mr. Prior says, "that a part of the money undoubtedly was his own, the bequest of his elder brother, and some portion [it] is believed came from William Burke. The remainder was to have been raised upon mortgage, when the Marquis of Rockingham, hearing of his intention, voluntarily offered the loan of the amount required to complete the purchase." This loan was subsequently converted into a gift: the marquis having by a codicil of his will cancelled the bonds. How he was enabled to maintain such an establishment is however still unexplained.

In 1769 appeared Burke's first political pamphlet, under the title of 'Observations on a late State of the Nation,' being a reply to a publication entitled 'The Present State of the Nation,' which was understood to have been written either by Mr. George Grenville, or, under his eye, by Mr. Knox, who had formerly been his secretary. From the temporary interest of much of the matter in Burke's pamphlet, it is now probably little read; although it seems to have continued in demand for a good many years, if we may judge from a fifth edition of it published by Doddsley in 1782, which is now before us. But it is a remarkably able and vigorous performance, although presenting comparatively little of that splendour of imagination which distinguishes many of the author's subsequent writings. Here again we find strongly expressed the same aversion to abstract politics which we have already described as the prevailing spirit both of his earliest and latest speculations on such subjects. Speaking for instance of the state of the Americans before the attempt made to impose internal taxes upon them by the British parliament, he says, "In the midst of that happy enjoyment, they never thought of actually settling the exact limits of a power [that of the mother country] which was necessary to their union, their safety, their equality, and even their liberty. Thus the two very difficult points, superiority in the presiding state, and freedom in the subordinate, were on the whole sufficiently, that is practically, reconciled; without agitating those vexatious questions, which in truth rather belong to metaphysics than politics, and which can never be moved without shaking the foundations of the best governments that have ever been constituted by human wisdom." This pamphlet has been sometimes referred to as curious, on account of a passage in which some extraordinary convulsion in France is predicted as an event to be hourly looked for, from the deranged state of the finances of that country, "the effect of which," it is added, "on France, and even on all Europe, it is difficult to conjecture." In his latest writings however Burke was accustomed to take a somewhat different view of the connection between the French revolution and the previous derangement of the finances. For instance, in his first 'Letter on a Regicide Peace' (1796), he says, "The financial difficulties were only pretexts and instruments of those who accomplished the ruin of that monarchy. They were not the causes of it." The production before us is perhaps more remarkable for the progress in advance of his age which it shows the author to have made in his views on the subject of commerce. In his 'Account of the European Settlements

in America,' he speaks of the errors of former times, "when what we call the balance of trade was far from being well understood." In the present work there is a passage respecting this same balance of trade, in which the fallacy of the common doctrine is very strongly put. He is speaking of the Newfoundland trade: "Examine," he says, "our imports from thence; it seems, upon this vulgar idea of exports and imports, to turn the balance against you. But . . . your import is your own food; as much your own as that you raise with your ploughs out of your own soil; and not your loss, but your gain; your riches, not your poverty. . . . To state the whole of the foreign imports 'as loss' is exceedingly absurd. . . . Even where they are not subservient to our exports, they still add to our internal wealth, which consists in the stock of useful commodities, as much as in gold and silver." "These considerations," he adds, "have been but too much neglected by most who have speculated on this subject." Adam Smith, when he became acquainted with Burke some years after this in London, declared that he was the only man he had met with who thought as he himself did on the chief topics of political economy, without previous communication.

The pamphlet on the state of the nation was followed in 1770 by the 'Thoughts on the Cause of the Present Discontents,' perhaps the most carefully finished and the most perfect, though not the most splendid, of all Burke's writings. In the preface to the 'Observations on the Conduct of the Minority,' it is asserted that this production was drawn up at the desire of the Rockingham party; that the materials of it were collected from various conversations with all the leading members of that connection; and that before it was sent abroad into the world the particular and distinct approbation of each was obtained. In November 1771, Burke was appointed to the situation of agent to the state of New York, the emoluments of which amounted to nearly 700*l.* a year. In parliament he continued to take a prominent part in all discussions, and now undoubtedly filled a larger space in the public eye than any other member of the opposition. In the session of 1772-73, nearly the whole of which was occupied in the discussion of the affairs of the East India Company, he particularly distinguished himself. In the next session a greater subject brought him still more conspicuously forward—the state of affairs in America, now, it might be said, almost in actual insurrection. On the 19th of April 1774 he delivered his great speech, afterwards published, on 'American Taxation,' on occasion of Mr. Rose Fuller's motion for the repeal of the Tea duty. On the dissolution of parliament a few months after, he was returned by the interest of Lord Rockingham for the borough of Malton; but while he was in the act of returning thanks to his new constituents, a deputation arrived from Bristol to intimate to him that he had been nominated for that city, and to carry him thither without delay. By travelling day and night he arrived in Bristol on the sixth day of the poll, and immediately proceeded to the hustings and addressed the electors. After a hard contest of twenty-seven days he was returned on the 3rd of November. On the 22nd of March 1775, on moving in the House of Commons a series of resolutions for conciliation with the American colonies, he delivered another speech of great eloquence and power, which he also some time afterwards sent to the press. The affairs of Ireland, and especially the repeal or mitigation of the Catholic disabilities, likewise now engaged much of his attention, and were the subject of his zealous exertions both in and out of parliament. In April 1777 he drew up an able defence of his conduct on the American question, in the form of a letter to the sheriffs of Bristol, which was immediately published. This was followed in April and May 1778 by 'Two Letters to Gentlemen in the City of Bristol, on the Bills depending in Parliament relative to the Trade of Ireland,' another subject on which the liberal course he had pursued had given great offence to many of his constituents. On the 11th of February 1780, he submitted in the House of Commons his celebrated plan for the regulation of the affairs of the household, the ordnance, the mint, the exchequer, the army, navy, and pension pay-offices, &c., in five bills. The admirable speech with which he introduced this plan was published, and is commonly known as his 'Speech on the Economical Reform.' None of his other parliamentary exertions procured him so much public applause as this. Its merits however did not outweigh, in the estimation of the majority of the electors of Bristol, certain other parts of his conduct which had excited their deepest resentment, especially his support of the acts for opening the trade of Ireland, and his strenuous advocacy of the measures for relieving the Roman Catholics, which this year excited so terrible a popular ferment. The consequence was, that, on the dissolution of the parliament which took place this summer, he found it advisable to decline again standing for Bristol. He presented himself however to his former constituents previous to the election in the beginning of September, and addressed them in a speech which has been published, and is one of the very best he ever delivered. He was now returned for Malton, for which borough he sat during the rest of his parliamentary life.

When Lord North and his colleagues were at last forced to resign in March 1782, and the Rockingham party again came into power, Mr. Burke was made a privy-councillor, and appointed to the office of paymaster-general of the forces. He received the usual treatment of the highest abilities, when unsustained by any aristocratic connection, in being excluded from the cabinet. The office of paymaster had

long been the most lucrative in the state; but Burke immediately brought in a bill for its reform, by which its enormous profits were completely swept away. The annual saving to the public which his plan effected amounted to 47,000*l.*, of which not less than 25,300*l.* were the usual perquisites which all his predecessors had received. He also now carried through his other bills of economical reform, though the various interests affected by them in both houses were sufficiently powerful to mutilate them by the excision of some of their most important parts.

On the death of the Marquis of Rockingham in July, and the appointment of Lord Shelburne to the head of the Treasury, Mr. Burke resigned, along with Mr. Fox and the other friends of Lord Rockingham. The success of the celebrated coalition with Lord North however brought him back to his former office on the formation of the Duke of Portland's ministry in March 1783. In this and the following session he took a leading part in the discussion of the affairs of India and the Company's government of that territory, a vast and intricate subject, which he had long studied, and which he was universally admitted to understand better than any other man in parliament. "Early in his opposition to Lord North," says the preface to the 'Observations on the Conduct of the Minority,' "the ruling directors of the East India Company, wishing to stop a popular cry, and to take from government the best plea for intermeddling in their affairs, proposed to send Mr. Burke, on his own terms, at the head of a commission to reform the abuses of the East. Some of the correspondence on this occasion is still extant. He resolved not to go, actually refused the appointment, and then, and not before, acquainted Lord Rockingham with his determination." Two voluminous reports, numbered the 9th and the 11th, from the select committee appointed in a previous session to inquire into the administration of justice in the provinces of Bengal, Bahar, and Orissa, were entirely prepared by him. The first, dated the 25th of June 1783, occupies 262 pages in the octavo edition of his works; the second, which was laid before the house the same year, extends to 80 pages, exclusive of a bulky appendix of documents. On the 1st of December he delivered another powerful speech, which he soon after sent to the press, on the motion for the House resolving itself into a committee on Mr. Fox's India Bill. When this famous measure determined the fate of the administration about a fortnight afterwards, Mr. Burke was dismissed from office with the rest of his party. He never was again a member of the government.

For some years after this the affairs of India engaged his whole "heart, and soul, and mind, and strength." One of the noblest of his published speeches is that which he delivered on the 23th of February 1785, in support of Mr. Fox's motion for papers relating to the debts of the nabob of Arcot. This was followed by what have been justly called his "Herculean labours" in the prosecution of Mr. Hastings. On the 4th of April 1786, he presented to the House the articles of charge against the ex-governor-general; they fill two volumes of the octavo edition of his works. On the 1st of June he opened the first charge. It was not until February 1788, that the trial began in Westminster Hall, when the impeachment was opened by Mr. Burke, in a speech which lasted four days, and was throughout a wonderful display of impassioned eloquence, and of all the resources of his rich and gifted mind. On the 21st and 25th of April, and the 5th and 7th of May 1789, he opened the sixth charge in another speech, or rather series of orations. On the 30th of April 1794, he presented to the House of Commons an elaborate report, filling 200 printed octavo pages, on the whole parliamentary law of impeachments, in the name of a committee which had been appointed to inspect the Lords' journals in relation to their proceedings on this trial. Finally, on the 25th of May, in the same year, he commenced his concluding address on the impeachment, which continued for nine days. All these speeches have been published since his death, from notes in which he spent the leisure of the last years of his life in preparing, and which he enjoined his executors to give to the world. His labours in what he was accustomed to call "the Indian Field," were to the close of his existence regarded by Burke as those by which he had deserved best of his country. Even in 1796, after all his warfare against the French Revolution, he writes (in his 'Letter to a Noble Lord on the Attacks made on his Pension'), "I did not come into parliament to con my lesson. I had earned my pension before I set my foot in St. Stephen's chapel. I was prepared and disciplined to this political warfare. The first session I sat in parliament I found it necessary to analyze the whole commercial, financial, constitutional, and foreign interests of Great Britain and its empire. . . . Then, in the vigour of my manhood, my constitution sunk under my labour. . . . But in truth these services I am called to account for are not those on which I value myself the most. If I were to call for a reward (which I have never done), it should be for those in which, for fourteen years without intermission, I showed the most industry and had the least success, I mean in the affairs of India: they are those on which I value myself the most; most for the importance, most for the labour, most for the judgment, most for constancy and perseverance in the pursuit. Others may value them most for the *intention*. In that surely they are not mistaken."

But while he was yet in the midst of his exertions in this department, another great subject suddenly called him off, which was

destined to make the closing years of his life the most memorable and interesting portion of his political course. We have already had occasion to notice how early he had begun to keep an expecting eye upon the affairs of France. In a visit which he had paid to Paris not long before the accession of Louis XVI., "he was courted and caressed," says the Preface to the 'Observations on the Conduct of the Minority,' "as a man of eminence by the literary cabal which was then preparing the way for the overthrow of altars and thrones. They daily beset him, and communicated to him enough to let a mind so observant as his into all their secrets. From that time he always dated those impressions which made him foresee, in their first rudiments, the hideous consequences of the doctrines propagated, and the measures pursued, by the pretended National Assembly of France. Not long after his return from Paris, he took occasion in the House of Commons, to testify those impressions. In a speech, of which no satisfactory report was ever given, but which was taken in short-hand, and of which a copy remains corrected by himself, he pointed out the conspiracy of atheism to the watchful jealousy of governments. . . . With a mind thus long before prepared, he could not be slow in forming his notions of the French Revolution. Nevertheless he sought information from every quarter, as if the subject had been wholly new to him. He desired all persons of his acquaintance who were going to Paris (and curiosity attracted many), to bring him whatever they could collect of the greatest circulation, both on the one side and the other. He had also many correspondents, not only among the English and Americans residing there, but also among the natives, to whom, as well as to other foreigners, he had always done the honours of this country, as far as his means would permit him, with liberal hospitality. Among others, he received letters, endeavouring to trick out the events of the Revolution in the most gaudy colouring, from Mr. Paine, Mr. Christie, and Baron Cloots, afterwards better known by the name of Anacharsis. It was in answer to a letter of this kind from a French gentleman that he wrote his celebrated 'Reflections.'

The 'Reflections on the Revolution in France' were published in the beginning of November 1790. No political work probably was ever read with such avidity on its appearance, or produced so great an effect on the public mind. We have before us the sixth edition, printed before the end of the year. It is said that above 30,000 copies were sold before the first demand was satisfied.

It is stated in the preface to the 'Observations on the Conduct of the Minority,' that, on the publication of the work, "Mr. Burke had the satisfaction of receiving explicit testimonies of concurrence and applause from the principal members of the party with whom he had begun his political career." The opinions he had expressed however eventually led, as is well known, to a complete separation between himself and Mr. Fox, the then acknowledged leader of the Whigs in the House of Commons. The fullest and most minute account of the whole affair that has been published is that given in the 'Annual Register' for 1791. To this narrative, none of the statements contained in which have ever as far as we are aware been contradicted, may be added the preface to the 'Observations on the Conduct of the Minority,' to which we have so often had occasion to refer. The final contention in the House of Commons took place on the 6th of May 1791. "The scene altogether," as the writers of the 'Preface' observe, "was of the most afflicting kind."

In the following July, Burke published an elaborate defence of the whole course of his political life, under the title of 'An Appeal from the New to the Old Whigs.' In this spirited vindication he addresses himself especially to the attacks to which he had been subjected on the ground of the alleged inconsistency of his recent doctrines with those he had formerly maintained. "This," he observes, "is the great gist of the charge against him. It is not so much that he is wrong in his book (that however is alleged also), as that he has therein belied his whole life. I believe, if he could venture to value himself upon anything, it is on the virtue of consistency that he would value himself the most. Strip him of this, and you leave him naked indeed."

We may safely venture to affirm that no person familiar with the whole series of Mr. Burke's writings can demur to the substantial soundness of the claim which he here puts forth. The soundness of his political doctrines themselves is another question; but, right or wrong, there are certainly none inculcated in his writings subsequent to the French revolution which can fairly be said to be contradictory to those which he had maintained up to that event. His principles were altogether averse to a purely democratic constitution of government from the first. He always indeed denied that he was a man of aristocratic inclinations, meaning by that one who favoured the aristocratic more than the popular element in the constitution; but he no more for all that ever professed any wish wholly to extinguish the former element than the latter. Thus in his speech on the repeal of the Marriage Act in June 1781 he said:—"I am accused, I am told, abroad of being a man of aristocratic principles. If by aristocracy they mean the peers, I have no vulgar admiration nor vulgar antipathy towards them; I hold their order in cold and decent respect. I hold them to be of an absolute necessity in the constitution, but I think they are only good when kept within their proper bounds." And the work in which he may be said to have first made the profession of his political faith, his 'Thoughts on the Cause of the present Discontents,' is certainly anything rather than a profession of democratic opinions.

In fact, as is observed in the preface to the 'Observations on the Conduct of the Minority,' "none of his writings on the French revolution were ever pursued with a more violent cry than was that pamphlet by the republicans of the day."

The only respect in which his latest writings really differ from those of earlier date is, that they evince a more excited sense of the dangers of popular delusion and passion, and urge with much greater earnestness the importance of those restraining institutions, which the author conceives, and always did conceive, to be necessary for the stability of governments and the conservation of society. But this is nothing more than the change of topic that is natural to a new occasion. It is sufficiently accounted for and justified by what he says himself in the last sentence of the 'Reflections,' where he describes his book as containing the opinions of "one who wishes to preserve consistency by varying his means to secure the unity of his end; and, when the equipoise of the vessel in which he sails may be endangered by overloading it upon one side, is desirous of carrying the small weight of his reasons to that which may preserve its equipoise."

The position in which Mr. Burke was now placed had separated him in fact, though not yet altogether in form, from the political party with which he had hitherto acted. It is known however that long after this time he still continued to urge a union between the ministers and the opposition, including Mr. Fox. In February 1793, the war with France, which he had for some years predicted as inevitable, actually broke out. About the same time the first avowed breach took place in the Whig Club, by the formal secession of Mr. Burke, Mr. Windham, and other members, to the number of forty-five in all, on the occasion of a resolution passed by the majority of the club, which was construed as a declaration on the side of Mr. Fox, in the quarrel between Mr. Burke and him.

Mr. Burke meanwhile continued his exertions both with his pen and in parliament with as much vigour as ever. The 'Appeal' had been followed in December of the same year by a paper of considerable length, entitled 'Thoughts on French Affairs,' which however was not published till after his death. A letter which he wrote about the same time to the Empress of Russia, in acknowledgment of a communication through the Comte de Woronzow of her Majesty's thanks for his book on the French Revolution, is printed among his works. But, according to the Preface to the 'Observations on the Conduct of the Minority,' it was never sent, having been suppressed by the advice of ministers, to whom it was shown, "in consequence of some doubts which they entertained"—"just doubts," it is added, "as subsequent events have shown." He also wrote, among other shorter pieces, in January 1792, the 'First Letter to Sir Hercules Langrishe on the Catholic Disabilities,' in November of the same year a paper entitled 'Hints for Consideration on the present State of Affairs,' in the beginning of 1793 a 'Letter on the subject of the Popery Laws,' addressed to his son, Mr. Richard Burke, who had lately been appointed agent for the Irish Catholics; in October 1793, his 'Remarks on the Policy of the Allies with respect to France,' and soon after, 'A Prefatory Discourse to his relation Mr. William Burke's Translation of M. Brissot's Address to his Constituents.'

He was now however anxious to retire from public life; and an arrangement having been made for his son to succeed him in the representation of Malton, he only remained in parliament to conclude the prosecution of Mr. Hastings. Accordingly, the last day on which he appeared in the House of Commons was the 20th of June 1794, when the thanks of the house were voted to the managers of the impeachment for their faithful discharge of the trust reposed in them. Mr. Richard Burke, within a few days after his election for Malton, was taken ill, and died on the 2nd of August, at the age of thirty-six. From this severe blow his father never recovered.

The division in the Whig party had been in the meantime extending itself; and Mr. Burke's friends, the Duke of Portland and Earl Fitzwilliam, who had not thought proper to take part in the first secession, now not only left their old associates, but formally joined the ministry. Immediately after the close of the session of parliament in July, these two noblemen, with Lord Spencer and Mr. Windham, took office in the government. These arrangements are understood to have been brought about principally through the interposition of Mr. Burke. In October 1795, he received a pension of 1200*l.* per annum on the civil list, and soon after another of 2500*l.* on the four-and-a-half per cent. fund. These grants are said to have originated in the express wish of the king.

An attack made upon him in the House of Lords on the ground of his pension, by the Duke of Bedford and the Earl of Lauderdale, drew from him, early in 1796, his celebrated 'Letter to a Noble Lord' (Earl Fitzwilliam), which was perhaps more generally read at the time, and has continued to be to a greater extent popularly known since, than anything else he ever wrote, with the exception of the 'Reflections on the French Revolution.'

His publisher on this occasion was I. Owen, of No. 163, Piccadilly, who appears to have been recommended to him by Mr. Windham. After some months, application being made to Owen for an account of the profits, he asserted that he had received the manuscript as a present from the author; and rather than go to law with him, Mr. Burke chose to allow him to keep what he had got. Before this however Owen had obtained the manuscript of another work from Burke,

entitled 'Two Letters addressed to a Member of the present Parliament on the Proposals for Peace with the Regicide Directory of France.' This manuscript he now refused to deliver up; and had the impudence to publish it in defiance of the author, with an Advertisement in vindication of his conduct. Meanwhile the work had been transferred by the author to Messrs. Rivington, of St. Paul's Churchyard, and was brought out by them in a correct form. In the concluding paragraph of the genuine edition, Burke speaks of the two Letters, as well as part of another which was to follow, as having been written long before. The second of these two Letters, in particular, is very remarkable for the observations it contains on the manner in which the war had till then been, and long afterwards continued to be, conducted; and for the confident tone in which it is announced that no success could be hoped for until that plan should be changed. The allies, it is observed, had adopted "a plan of war, against the success of which there was something little short of mathematical demonstration. They refused to take any step which might strike at the heart of affairs. They seemed unwilling to wound the enemy in any vital part. . . . They always kept on the circumference; and the wider and remoter the circle was, the more eagerly they chose it as their sphere of action in this centrifugal war." A third of the 'Letters on a Regicide Peace' was on its way through the press when Mr. Burke died. A fourth, addressed to Lord Fitzwilliam, which had been written before the three others, but never finished, was published after his death.

Early in 1797, Owen, the publisher, announced 'A Letter from the Right Honourable Edmund Burke to his Grace the Duke of Portland, on the Conduct of the Minority in Parliament; containing Fifty-four Articles of Impeachment against the Right Honourable C. J. Fox; from the Original Copy in the possession of the Noble Duke.' The publication immediately appeared, professing to be "printed for the Editor," and sold by Owen. There is no introductory notice, and the whole makes a pamphlet of 94 pages. This paper had in fact been sent to the press by Swift, a person whom Burke had taken into his service from motives of charity, and had confidentially employed to transcribe the only fair copy he ever had taken of it. It had been prepared in the early part of the year 1793, and communicated only to the Duke of Portland and to Earl Fitzwilliam, before they had seceded from the Whig Club. In a Letter, dated September 29th, 1793, which was sent along with it to the former, the writer says, "I now make it my humble request to your Grace that you will not give any sort of answer to the paper I send, or to this letter, except barely to let me know that you have received them. I even wish that at present you may not read the paper which I transmit; lock it up in the drawer of your library table; and when a day of compulsory reflection comes, then be pleased to turn to it." Swift however had surreptitiously taken a copy for his own use. As soon as the publication appeared an injunction was obtained to stop its sale; but it was notwithstanding reprinted immediately both in Scotland and Ireland, and about 3000 copies of it are supposed to have thus got into circulation. Burke was at the time at Bath, and was considered to be on his death-bed. The appearance of the paper, especially under such a title, annoyed him greatly, though he expressly guarded himself in communicating with his friends from retracting "any one of the sentiments contained in that memorial, which was, and is," he told Dr. Lawrence "my justification, addressed to the friends for whose use alone I intended it."

In the end of May Mr. Burke quitted Bath for his house at Beaconsfield, where he died on the 9th of July 1797. A correct edition of the paper which Owen had printed was now published by his executors, under the title of 'Two Letters on the Conduct of Our Domestic Parties with regard to French Politics, including Observations on the Conduct of the Minority in the Session of 1793.' The Letters were introduced by the important Preface to which we have so frequently referred. The 'Observations' are what had previously been published under the title of the 'Fifty-four Articles of Impeachment,' &c. The other paper is a 'Letter to William Elliott, Esq., occasioned by an account given in a Newspaper of the Speech made in the House of Lords by the Duke of Norfolk, in the Debate concerning Lord Fitzwilliam in 1795.' The concluding portion of the Letter, which rises above personalities, is in a very high strain of eloquence.

We have mentioned in the course of this rapid sketch all the most important of Mr. Burke's writings. A collected edition of his works in 4to was begun in 1792, and three volumes had been published before his death. Five more have been added, under the superintendence of his principal executor, the late Dr. Walter King, bishop of Rochester. The last appeared in 1827. A ninth volume was to contain the Life of the Author, by Dr. King; but whether or not the Life in question was ever written we are not aware. Three or four editions of his works have been published within the last few years. An 8vo volume of Letters between Burke and his friend and executor Dr. Lawrence, was published in 1827. A collected edition of his 'Works and Correspondence' was published in 1852, in 8 vols. 8vo. 'A Memoir of the Political Life of the Right Hon. Edmund Burke,' by the Rev. George Croly, LL.D., appeared in 2 vols. 8vo. in 1840; and two or three other memoirs have been published. Burke's speeches in the House of Commons, and in Westminster Hall, were published in 4 vols. 8vo. in 1816. There is a 'Life of Burke' by Mr. Macormick, which we have not seen, but which we suppose to be the work described by

Mr. Prior as "a quarto volume of slander, dictated by the most venomous party spirit, and probably meant at the moment to answer some party purpose." Another, in two volumes 8vo, was published a short time after Burke's death, by Dr. Robert Bisset, the author of a 'History of the Reign of George III.' The most complete 'Life of Burke' however is that by James Prior, Esq., the fifth edition of which appeared in 1854.

BURLAMACCHI, FRANCESCO, a citizen of the republic of Lucca, about the year 1546 attempted a revolution in Tuscany against the Grand Duke Cosmo I., for the purpose of re-establishing the republican government. Like several of his countrymen, and other Italians of Siena, Ferrara, and other towns, Burlamacchi was secretly inclined towards the Protestant doctrines, which appeared favourable to political liberty, as their antagonist, the papal power, supported the absolutism of Charles V. Burlamacchi held correspondence with the Protestants of Germany, who were then in arms against the emperor; and his plan seems to have been that of a general insurrection against the papal and the imperial powers throughout Italy. With this view he had secret intelligence with the disaffected at Bologna, Perugia, and other towns of the Papal state, as well as with the Strozzi, and other Florentine refugees. Being elected gonfaloniere, or chief magistrate, of the republic of Lucca, he had at his disposal nearly 2000 militia of the mountaineers of the Apennines, the captains of which were devoted to him. With this force he intended to surprise Pisa, and thus give the signal for insurrection. The plot was nearly ripe, when the indiscretion of one of the conspirators revealed the whole to Cosmo. The magistrates of Lucca, being informed of it, arrested Burlamacchi and put him to the torture, when he confessed the plot; but they refused to deliver him up to Cosmo. Ferrante Gonzago, the imperial lieutenant at Milan, soon after demanding the prisoner, the magistrates were obliged to send him to Milan, where he was again examined under the torture, and afterwards executed for high treason. (Botta, *Storia d'Italia, continuata da quella del Guicciardini*.)

BURLAMAQUI, JEAN JACQUES, was born at Geneva, July 24 1694, of a family originally from Lucca, named Burlamacchi, the termination of the name having been altered according to the French orthography. Burlamaqui became professor of law in the academy or university of Geneva; and he was for a time tutor to the Prince Frederick of Hesse Cassel, with whom he resided some years in Germany. On his return to Geneva, he was made Councillor of State. He is chiefly known by his works, 'Principes du droit Naturel,' Geneva, 4to, 1747; and 'Principes du Droit Politique,' which was published at Geneva three years after his death. The two formed separate sections of a single work, and they have since been published together several times as one work. It obtained considerable reputation, and was adapted for the use of schools. The work is written in a clear style, and is well arranged, the author having condensed what was most essential and valuable in the works of his predecessors, Grotius, Puffendorf, and Barbeyrae. Burlamaqui died at Geneva, April 3, 1748.

BURLEIGH, LORD. [CROLY.]

BURLINGTON, EARL OF, RICHARD BOYLE, third Earl of Burlington and fourth Earl of Cork, was born on the 25th of April 1695. He travelled much in Italy, where he acquired a strong love for architecture, which he afterwards practised as well as studied. In 1721 he married the Lady Dorothy Savile, eldest of the two daughters and co-heiresses of William Savile, marquis of Halifax. Charlotte, the youngest of three daughters by this lady, married the Duke of Devonshire. The life of the Earl of Burlington presents very few incidents. In 1730 he was installed Knight of the Garter, and in the following year he was appointed Captain of the band of Gentlemen Pensioners, a post which he resigned in 1733. The title of Burlington became extinct at his death in 1753, but has since been revived.

Among his architectural works, he repaired Inigo Jones's church of St. Paul, Covent Garden, and erected at Chiswick a gateway by the same architect, which once stood at Beaufort-garden, in Chelsea. His knowledge of his favourite art was always at the command of others. He assisted Kent (whom he also maintained in his house) in publishing Inigo Jones's designs for Whitehall, and at his own expense he printed an edition of 'Fabriche Antiche designate da Andrea Palladio, 1730,' a work on ancient baths, from the drawings of that great architect. A country house, built by Palladio, near Vicenza, called the Villa Capra or Rotonda, furnished the idea of a house at Chiswick, which has since received large additions; in its original state it gave rise to the well-known sarcasm, "that it was too little to live in, and too big to hang to a watch-chain." Among his other works are some on his own estate at Lanesborough, in Yorkshire; the front of Burlington House in Piccadilly, and the colonnade within its court; the Dormitory at Westminster School; a house at Petersham for Lord Harrington, which afterwards belonged to Lord Carysfort; the Duke of Richmond's house in Whitehall, and another for General Wade, in Cork-street. The house of General Wade was admired for its handsome elevation, but was so ill distributed, that Lord Chesterfield said, "Since the General could not live in it at his ease, he had better take a house over against it, and look at it." The Assembly-room at York is however esteemed to be the earl's best work. Lord Burlington was undoubtedly a very respectable amateur architect, but the encomiums

lavished on him by his contemporaries are simply absurd. The eulogy of Pope in his fourth 'Moral Essay,' on the use of riches is well known.

BURMAN, the name of a family much distinguished for learning. **FRANCIS BURMAN**, son of a Protestant minister, was born in 1632 at Leyden, where he received his education. Having officiated to a Dutch congregation at Hanau in Hessen, he returned to his native city, and was nominated regent of the college in which he had before studied. Not long afterwards he was elevated to the professorship of divinity at Utrecht, where he died November 10th 1679, having established considerable reputation as a linguist, a preacher, and a philosopher. His works, for the most part, are commentaries on some of the books of the Old Testament, or exercises on academical subjects.

FRANCIS BURMAN, one of his sons, born in 1671, was also divinity professor at Utrecht, where he died in 1719. He prepared a 'Concordance of the Evangelists,' and other theological works.

PETER BURMAN, another son, obtained greater reputation than either his father or his brother. He was born at Utrecht June 26th, 1668, and after his education there under Grævius and James Gronovius he studied the law at Leyden, and travelled into Switzerland and Germany. On his return to Utrecht he practised as an advocate, and afterwards engaged in a public office requiring considerable attention, and married a wife of good family, by whom he had ten children. His love of classical literature however was so predominant that, in spite of brilliant success at the bar, he accepted the professorship of eloquence and history at the university of Utrecht, and soon afterwards the professorships of the Greek language and of politics. On the death of Perizonius, he was translated in 1715 to similar professorships at Leyden; and finally he was promoted to the professorship of history of the United Provinces, and the chief librarianship in the same university. He died in the seventy-third year of his age, March 31, 1741. His chief works were editions of Phædrus, Horace, Petronius, Quintilian, Valerius Flaccus, Poetæ Latini Minores, Velleius Paternus, Virgil, Suetonius, Lucan, Ovid, and, among the moderns, of Buchanan. To these he added a collection of the epistles of learned men, and some original orations and poems, a treatise ('De Vectigalibus Pop. Rom.') on the revenues of the Roman people, and a dissertation on the Jupiter Fulgurator. A life of him, written by Dr. Johnson, first appeared in the 'Gentleman's Magazine' in 1742.

GABRIEL BURMAN, nephew of Peter Burman, was a senator of his native city Utrecht, and acquired some distinction as an historian. He published 'Hadrianus VI,' 4to, Utrecht, 1727; 'Trajectum Eruditum,' 4to, 1738; and 'Utrechtsche Jahrböcker,' 3 vols., 1750-51. He died in August 1755.

PETER BURMAN, another nephew of the above Peter Burman, and son of his brother Francis, was born at Amsterdam in 1713. He was professor of history and eloquence at Franeker, and died at Amsterdam June 24th, 1778. He edited Aristophanes, Claudian, an 'Anthologia' of the Latin poets, and Propertius; and he also published four books of original Latin poetry.

JOHN BURMAN, son of the second-named Francis, was professor of botany at Amsterdam. He was born in 1707, and died in 1780, leaving behind him many works on that science of celebrity in their time. He is principally remembered however as being one of the early patrons of Linnæus.

NICHOLAS LAURENT BURMAN, born at Amsterdam in 1734, son of John Burman, also distinguished himself as a botanist, on which science he wrote several works which attracted attention in their day, but have long become obsolete. The only one at all remembered now is the 'Flora Indica,' Leyden, 1768, which contains 76 plates, and notices of above 1500 plants. He died in 1793.

BURN, RICHARD, was born about 1720 at the village of Winton in Westmorland. He was educated at Queen's College, Oxford, and in 1762 the university conferred upon him the honorary degree of Doctor of Laws. He was instituted to the living of Orton in Westmorland in 1736, which he continued to hold until his death in November 1785. He was in the commission of the peace for the counties of Westmorland and Cumberland, and was made chancellor of the diocese of Carlisle by Bishop Lyttleton. Dr. Burn is best known as the compiler of the 'Justice of the Peace' and the 'Ecclesiastical Law.' The first of these is an alphabetical digest of the common law and statutes relating to the duties of magistrates and parish-officers, comprehending a detailed exposition of the poor-laws; and the second is an abridgement of the English system of ecclesiastical law, also disposed in alphabetical order. The materials for these works were collected by Dr. Burn with great care and accuracy, and arranged in a clear and judicious manner. Their practical utility to magistrates, country gentlemen, and clergymen, obtained for them an extensive sale and a high reputation; and numerous editions of both of them have been published. Dr. Burn also compiled, in conjunction with Joseph Nicholson, a nephew of the Bishop of Carlisle, a work on the antiquities of Cumberland and Westmorland, which was published in 2 vols. 4to in 1777. He likewise published a history of the poor-laws, and an edition of 'Blackstone's Commentaries,' besides several sermons and works of a religious character.

BURNES, SIR ALEXANDER, was born May 16, 1805, at Montrose in Scotland. His father was an active magistrate of Forfarshire, and held successively the chief official situations in the borough of Montrose.

His grandfather was the brother of William Burnes, father of the poet Burns, who was the first to omit the letter *e* from the family name. Alexander Burnes was educated at the Montrose Academy, in which he greatly distinguished himself. Having obtained a cadetship in the Bombay army, he left school at the age of sixteen, and arrived at Bombay October 31, 1821. On the 25th of December 1822 he was appointed interpreter in Hindustanee to the first extra battalion at Surat, and on account of his proficiency in the Persian language the judges of the Sudder Adaulut appointed him, without solicitation, to the office of translator of the Persian documents of that court.

In consequence of disturbances in Cutch, the regiment to which Ensign Burnes was attached, the 21st Bombay Native Infantry, having been ordered to Bhoj, he joined it there in April 1825. He was soon afterwards made quartermaster of brigade, and in November 1825, when he was only twenty, was appointed Persian interpreter to a force of 8000 men assembled for the invasion of Scinde. In August 1826 he was confirmed on the general staff as deputy-assistant-quartermaster-general.

At this period he drew up an elaborate paper on the statistics of Wagar, for which in 1827 Lieutenant Burnes received the thanks of the Bombay government and the special commendation of the Hon. Mount Stuart Elphinstone, the governor; and he obtained similar testimonies of approbation in 1828 for a memoir on the eastern mouth of the Indus. Lieutenant Burnes was appointed assistant-quartermaster-general to the army March 18, 1828; and in September 1829 he was appointed assistant to the political agent in Cutch in prosecution of the survey of the north-west frontier, of which he has given an account in the 'Transactions of the Royal Geographical Society' for 1834. He soon afterwards made a journey into Rajpootana, from which however he was recalled; and in 1830 was appointed by the Indian government to proceed to Lahore with some remarkably large horses as a present from the king of England to Runjeet Singh, the ruler of the Punjab. The details of this expedition are given in the third volume of his 'Travels into Bokhara.' The mission was directed to proceed by the devious route of Scinde; the secret object being to obtain information concerning the Indus, the envoy was provided with letters to the Ameers, and, the better to obviate suspicion, he took with him a guard of wild Beloochees. The mission sailed from Mandavia in Cutch on January 21st, 1831, and on the 28th reached the western mouth of the Indus. After a long and tedious negotiation with the rulers of Scinde, Burnes received their full sanction to proceed by water from the mouth of the Indus. The delay however had been turned to account. Burnes had made a complete survey of the mouths of the river, and a map of the lower part of its course. After spending a week at Tatta they set sail up the river, April 12th, and reached Hyderabad on the 18th, where he was received with great cordiality by the Ameers. The mission remained at Hyderabad till the 23rd of April, when they re-embarked on the Indus, and after visiting all the places of importance along the banks, on the 18th of July they arrived at Lahore, where their reception was magnificent—a deputation of nobles conducting the envoy and his suite to the door of the palace of Runjeet Singh amid salutes of musketry and artillery. "While stooping," says Burnes, "to remove my shoes at the threshold, I suddenly found myself in the arms and tight embrace of a diminutive old-looking man, the great Maharaja Runjeet Singh, who conducted me by the hand to the interior of the court, and had advanced that distance to do us honour."

After remaining till the middle of August with Runjeet Singh, who treated Burnes with the familiarity of a friend, the mission left Lahore, crossed the Sutlej, and proceeded to Loodiana, a frontier station of the Indian government, where Burnes became acquainted with the ex-kings of Cabul, Shah Zeman and Shah Shoojah, who were living there under the protection of the British government. From Loodiana the mission proceeded to Simla, where Burnes met the governor-general, Lord William Bentinck, who without delay entered into negotiations for laying open the navigation of the Indus to the commerce of Great Britain.

After his return from his mission, Lieutenant Burnes proposed to Lord William Bentinck an expedition into Central Asia, which received from his lordship the most liberal encouragement. The sanction of the Indian government having been obtained, the journey was commenced. Lieutenant Burnes was well provided with instruments, and made his journey serve as a kind of flying survey. Burnes left Delhi, accompanied by Mr. James Gerard, surgeon of the Bengal army, December 23, 1831, and proceeded by express to Loodiana. Previous to entering on his journey, it was deemed necessary to obtain the sanction of Runjeet Singh to pass through Scinde. He descended the Sutlej, and reached Lahore January 17, 1832, and was received by the maharaja with all his former affability. Their departure was delayed till the 11th of February, when, having crossed the Ravee, they put up for the night in one of the houses which surround the once splendid monument of Jehangier. Here they divested themselves of every article of European costume and comfort, and adopted not only the costume of the Afghans, but their usages. The close dress, beds, boxes, tables, and chairs, were all discarded for a flowing robe, a coarse carpet, and a blanket; and their now diminished wardrobe, with the necessary books and instruments, were deposited in their saddle-bags, and thrown across their horses' quarters.

The troops of Runjeet Singh escorted them across the Chenab and the Jelum to their frontier, about three miles beyond Attock, where they met the Afghans, and proceeded with them to Aora. Thence they proceeded to Peshawar, which they left April 19, under the protection of one of Mohammed Khan's officers; and passing through Jellalabad, reached Cabul by the Latabund Pass, April 31. They departed from Cabul May 18, and leaving Ghuznee on the south, advanced by the Pass of Oonna, about 11,000 feet high, continued their journey along the base of the Kohi-Baba through the country of the Huzaras, and ascended the Pass of Hageeguk, 12,400 feet high, May 23. The snow bore their horses, and the thermometer fell to 4° Fahrenheit. They attempted to ascend the Pass of Kaloo, 1000 feet higher than that of Hageeguk, but were hindered by the snow, and passed round its shoulder, but were unable to continue their route on horseback, and reached Bamecan. After stopping a day to examine the wonderful excavations and enormous idols of the so-called city of Ghoolgoola, they crossed the Pass of Acrobat, which separates the dominions of modern Cabul from Turkistan, or Tartary. After crossing the Dundan Shikun, or Toothbreaker, and the Kara-Koottul, or Black Pass, on the 30th of May they made their last march among the mountains of the Indian Caucasus, and descended into the plains of Tartary at Khooloom, the frontier town of Morad-Beg, the chief of Khooodooz, and were delayed by receiving a summons to his presence, at the village of Kaumabad, above fifty miles distant. Burnes assumed the character of a poor Armenian watchmaker journeying from Lucknow to Bokhara, and in his torn and threadbare garments happily escaped detection, receiving a pass of safe conduct for himself and his party (nine or ten tea-merchants who accompanied him), and on the 7th of June rejoined his friend Mr. Gerard, who had been left at Khooloom.

On the 8th of June they again set forward, and reached Balkh on the 9th, and after stopping three days to examine the ruins of that ancient and once magnificent city, on the 12th they set forward at midnight on camels bearing panniers which held one person on each side. On the 14th they entered the desert, and on the 16th reached the bank of the Oxus, here 800 yards wide and 20 feet deep, which they crossed in boats, each drawn by two horses, which swam across the stream. On the 27th of June the party reached the great eastern capital of Bokhara, where they remained till the 21st of July. They then waited in the neighbourhood of Karakool till the 16th of August, when they accompanied a caravan, consisting of about 80 camels and 150 persons, some in panniers on camels, some on horses, and some on asses. In this manner they passed the great desert by Merve, and reached Meshed on the 14th of September. On the 17th they reached Koochan, a strong fortress, and here the two travellers separated, Mr. Gerard having resolved to proceed to Herat and Candahar, and then retrace his steps to Cabul.

On the 29th of September, Lieutenant Burnes proceeded with a party of about 300 persons, Khoords, Persians, and Turcomans, and having passed by Shirwan and Bojnood, left his companions, and travelled alone about eighty miles to the town of Astrabad. Thence, crossing an arm of the Caspian, he journeyed to Teheran, which he reached on the 21st of October, and having had the honour of being presented to the Shah of Persia, quitted the city on the 1st of November. Having passed through Ispahan and Shiraz, he embarked in a cruiser at Bushire, on the Persian Gulf, and reached Bombay on the 18th of January 1833, the journey having thus occupied just a year.

Soon after his return, he set off for Calcutta, to lay the result of his travels before the governor-general, whose special thanks he received, and his memoirs were ordered to be transmitted to the Court of Directors. In June Lieutenant Burnes received orders to proceed to England as the bearer of his own dispatches. He left Calcutta June 10, and reached London early in October. His reception at the India House and by the Board of Control was in the highest degree flattering. On the 30th of December he was presented at Court, and received the special acknowledgments of the king for the unpublished map and memoir which he had presented to his majesty. His manuscripts were prepared for publication without delay, and Mr. Murray gave the author 800*l.* for the copyright of the first edition. The sale of the work was very large, nearly 900 copies having been sold the first day, and it was immediately translated into the French and German languages. Literary honours flowed fast upon him. He was elected a member of the Royal Asiatic Society, and on his admission, an emblazoned diploma was presented to him by Lord Munster. He was made a member of the Royal Geographical Society, and received the gold medal, and the royal premium of fifty guineas "for the navigation of the Indus and a journey by Balkh and Bokhara across Central Asia." The silver medal of the French Geographical Society was awarded to him, and on making a transient visit to Paris, his reception was enthusiastic.

After a stay of eighteen months in England, he departed for India, April 5, 1835, and proceeding by the south of France, Egypt, and the Red Sea, reached Bombay on the 1st of June, and was soon afterwards directed to resume his duties as assistant to the resident in Cutch, Colonel Pottinger. In October 1835 he was deputed on a mission to Hyderabad, in order to prevent the necessity of a war with Scinde. His mission was successful. The Amcers consented to a

survey of the Indus, and to the abolition of the practice of robbing stranded vessels.

But a more important mission was prepared for him before he had completed his duties in Scinde. This was a mission to Dost Mohammed, at Cabul, primarily of a commercial nature. He was to proceed from Scinde through the Punjab, and by Peshawar to Cabul, and enter into commercial relations with Dost Mohammed; from Cabul to Candahar, to negotiate similar co-operation with the western chiefs; to institute inquiries as to the state of trade, and means of carrying it on; and to return by the Bolan Pass and through Scinde to India. The mission left Bombay November 26, 1836, reached Hyderabad January 18, 1837; Attock, August 4; and Cabul, September 20.

Meantime, Mahommed Shah had besieged Herat with an army of 60,000 men, and the Indian government had become alarmed at the prospect of Persia and Russia uniting their forces with those of Afghanistan, and making a conjoint attack on our Indian Empire. This altered the object of Burnes's mission, and he made it his especial business to investigate the intentions of Dost Mohammed. The Persians indeed were compelled to retreat from Herat, but the presence of the Russian agent, Vicovitch, at Cabul, perplexed and alarmed Burnes, who pressed upon the Dost the propriety of dismissing Vicovitch, which the Dost however refused to do, and Burnes himself received his dismissal, April 24, 1838.

Burnes was directed to repair to the governor-general at Simla, and he was there in August 1838. Here it was resolved to replace Shah Shoojah on his throne at Cabul. Burnes preceded the army to make arrangements for the commissariat, and whilst at Shikarpoor, received a copy of the 'London Gazette,' which announced his having been knighted and advanced to the rank of lieutenant-colonel.

Sir Alexander Burnes proceeded from Scinde on a political mission into Beloochistan, in which however he failed; and in April 1839, he joined the army at Quetta. On the restoration of Shah Shoojah, in September 1839, he was appointed political resident at Cabul, in which office he continued till he was murdered, November 2, 1841, with his brother Lieutenant Charles Burnes and others, on the breaking out of the insurrection in that city; for the details of which, the disastrous retreat of the British army, and subsequent events, see *AFGHANISTAN*, in the *GEOG. DIV.* of this work.

Sir Alexander Burnes was never married. His father and mother survived him, and he left three surviving brothers.

Besides his 'Travels into Bokhara,' of which we have given a sketch, after his death was published 'Cabool; being a Narrative of a Journey to and Residence in that City, in the years 1836, 7, and 8. By the late Lieut.-Col. Sir Alexander Burnes,' London, 8vo. He was also the author of some papers in the *Journal of the Royal Geographical Society of London*.

(*Asiatic Journal*, March, 1842; *Journal of the Royal Geographical Society*, 1834, Part 2.)

BURNET, GILBERT, Bishop of Salisbury, was born at Edinburgh, 18th September 1643. His father, Robert Burnet, Esq., of Cremont, in Aberdeenshire, was a practitioner of law, and at the Restoration was made one of the judges of the Court of Session. The family was a younger branch of the ancient house of Burnet of Leys, on which a baronetcy was conferred in 1626.

At the age of ten Gilbert was sent to college at Aberdeen, where, after having taken his degree of M.A., he proceeded to prepare himself, by the study of the civil law, for following his father's profession. He soon however gave up this study for that of divinity, and was licensed to preach, according to the forms of the Scotch church, in 1661. Although offered a living by his relative, Sir Alexander Burnet, he considered himself yet too young to undertake such a charge. In 1663 he visited Cambridge, Oxford, and London, and afterwards made a tour through Holland, the Netherlands, and part of France. On his return to England he was made a Fellow of the Royal Society.

In his own country he soon acquired much reputation as a preacher. He had from the first adopted the practice of preaching extempore, or without writing out his discourses. In 1665 he was, on the presentation of his friend Sir Robert Fletcher, appointed minister of the parish of Saltoun, in East Lothian, on which occasion he received ordination from the bishop of Edinburgh. Here he spent nearly five years, during which he gained the warm attachment of his parishioners. While here also he began his interference in affairs of church and state, by drawing up, in 1666, a strong representation against certain abuses of their authority, which he imputed to the Scottish bishops, and circulating it in manuscript. For this step it is said that Archbishop Sharpe proposed his deprivation and excommunication; but the other bishops did not second the zeal of the metropolitan, and nothing was done.

From 1668, when the administration of Scotland was put into the hands of Sir Robert Murray, and moderate counsels for a short time prevailed, Burnet, young as he was, began to be much consulted by those at the head of affairs. In 1669 he was chosen Professor of Divinity at Glasgow, and from this time he became more than ever mixed up with affairs of state. Keeping to the line of moderation upon which he had set out, he applied his efforts to reconcile the dukes of Lauderdale and Hamilton, the heads of the two parties which then strove for the ascendancy; but in this attempt he had no success. About this time he is said to have refused one of the Scottish

bishoprics, alleging as his excuse that he was too young. In 1669 he published his first work, entitled 'A modest and free Conference between a Conformist and a Non-conformist.' In 1670 or 1671 he strengthened his connection with the moderate party by his marriage with Lady Margaret Kennedy, the daughter of John the sixth earl of Cassilis, a lady considerably older than Burnet.

In 1672 he published a work in spirit very like a defence of the doctrine of passive obedience, under the title of 'A Vindication of the Authority, Constitution, and Laws of the Church and State of Scotland,' but he resisted all the attempts that were made to engage him in support of the oppressive measures of the court. In consequence he drew upon himself the resentment of the Duke of Lauderdale, and in 1674 he deemed it prudent to resign his professorship, and to remove to London. Here, in the same year, after having declined the living of St. Giles, Cripplegate, he was made preacher at the Rolls Chapel, by Sir Harbottle Grimstone, then Master of the Rolls; and soon after he was elected lecturer at St. Clement's. He was at the same time deprived of his honorary office of one of the chaplains royal, to which he had been appointed some years before. In 1676 he published his 'Memoirs of the Dukes of Hamilton,' which he had drawn up from the archives of the family while he resided at Glasgow. In 1679 appeared the first folio volume of his great work, 'The History of the Reformation in England,' which was received with much favour by the public, then in a very excited state on the subject of popery, and which had besides the extraordinary honour of procuring for its author the thanks of both houses of parliament. In 1680 appeared the most carefully prepared of all his writings, his tract entitled 'Some passages in the Life and Death of the Earl of Rochester,' being an account of his conversation with that nobleman in his last illness, the result of which was the conversion of the repentant profligate to a belief in Christianity. In 1681 he gave to the world the second volume of his 'History of the Reformation.' In 1682 he published his 'Life of Sir Matthew Hale.' Overtures were now again made to him by the court, and he was offered the bishopric of Chichester by the king, "if he would entirely come into his interests." He still however remained steady to his principles. About this time also he wrote a celebrated letter to Charles, reproving him in the severest style both for his public misconduct and his private vices. His majesty read it twice over, and then threw it into the fire. At the execution of Lord Russell in 1683, Burnet attended him on the scaffold, immediately after which he was dismissed both from his preachingship at the Rolls and his lecture at St. Clement's by order of the king. In 1685 he published his 'Life of Dr. William Bedell, Bishop of Kilmore in Ireland.'

On the accession of James II, Burnet retired to the Continent, and after visiting Paris, continued his travels throughout the South of France, Italy, Switzerland, and the North of Germany, to Utrecht. He afterwards published an account of this journey. Soon after his arrival in Holland he was introduced at the court of the prince of Orange, with whom he became a great favourite. His active exertions in preparing the way for the accession of the prince to the English throne are matters of history. When William came over to this country, Burnet accompanied him in the capacity of chaplain, and immediately after the revolution he was made bishop of Salisbury.

In 1698 he was appointed preceptor to the Duke of Gloucester, the son of the Princess Anne. While in Holland he had made a second marriage with Mrs. Mary Scott, a lady of Scottish descent, but of large fortune and high connection in that country. Upon the death of this lady by small-pox, he soon made a third marriage with Mrs. Berkeley, a widow lady also of good fortune and great piety, the authoress of a work once popular, entitled a 'Method of Devotion.' The remainder of his life Bishop Burnet spent in his episcopal duties, his discharge of which was in every respect most meritorious and honourable; in attendance in parliament, in the business of which he took a considerable share, and where he continued through all changes a zealous partizan of the Whig interest; and in addressing the public with his indefatigable pen. In 1699 appeared another of his most celebrated works, his 'Exposition of the Thirty-nine Articles of the Church of England.' It excited great controversy on its first appearance, and was even condemned as heterodox by the Lower House of Convocation. In 1712 Burnet published separately his 'Introduction to the third volume of his History of the Reformation,' in which, having indulged himself in some very strong observations on what he considered the then alarming state of public affairs, he drew upon himself the ridicule and abuse of Swift, who retaliated for the government in one of the sharpest satires ever written, under the form of 'A Preface' to the bishop's 'Introduction.' In 1714 the third volume of the 'History' itself appeared. It is supplementary to the two former. Having now lived to see the accession of the House of Hanover, an event he had always looked forward to with anxious expectation, as the consummation of the system of national policy which he had constantly supported, the bishop died at his house in St. John's-court, Clerkenwell, London, on the 17th of March 1715.

The most remarkable of all his works appeared soon after his death, in 2 vols. folio, under the title of 'Bishop Burnet's History of his Own Time, from the restoration of King Charles II. to the Conclusion of the Treaty of Peace at Utrecht in the Reign of Queen Anne.' It was published by his son Thomas (afterwards one of the judges of

the Common Pleas), who prefixed to it an account of his father's life. "Those facts," says the writer, "for which no vouchers are alleged, are taken from the bishop's manuscript notes of his own life, and can be supported further by other testimonies if occasion should require." At the end of subsequent editions there is given 'A Chronological and Particular Account of the Works of the Right Reverend and Learned Dr. Gilbert Burnet, late Lord Bishop of Salisbury, corrected and disposed under proper heads, interspersed with some critical and historical observations, by R. F.' (that is, the Rev. Roger Flexman). This list contains the titles of 58 published sermons, 13 discourses and tracts in divinity, 18 tracts against popery, 26 tracts polemical, political, and miscellaneous, and 25 historical works and tracts.

Bishop Burnet's 'History of his own Time' was received with a cry of derision by the Tory wits. Swift wrote 'Short Remarks' on the book; Arbuthnot parodied it in 'Notes and Memorandums of the Six Days preceding the Death of the late Right Rev.—'; and Pope in his 'Memoirs of P. P., Clerk of this Parish,' turned the garrulous and self-important manner of the writer still more successfully into ridicule. In the remarkable one-sidedness of his party zeal, his credulousness and general want of judgment, the looseness of his style, and, as it has been observed, the still greater looseness of his facts, as well as in the too great transparency throughout the whole of "the importance of a man to himself," the bishop undoubtedly gave considerable provocation to these strictures; but still, after all deductions that can fairly be made, the 'History' is a highly-interesting and valuable performance, and has preserved accounts of many curious transactions which otherwise would have remained concealed from posterity. Like everything else also that is known of the author, although it shows him to have been possessed of a considerable share of vanity and bustling officiousness, and not to have been a person of the most capacious judgment, its testimony is very favourable to the excellence of his heart and moral nature, to his disinterestedness, his courage, his public spirit, and even to his ability and talent within the proper range of his powers. Even many of his prejudices in some degree did him honour. He certainly was not in general a good writer; but besides his want of taste, he rarely allowed himself sufficient time either for the collection and examination of his materials, or for their effective arrangement and exposition. Yet, with rarely anything like elegance, there is a fluency and sometimes a rude strength in his style which make his works upon the whole readable enough.

Dryden has introduced Burnet in the third part of his 'Hind and Panther,' in the character of King Buzzard, and sketched him personally, morally, and intellectually in some strong lines. The delineation however is that of a personal as well as a political enemy; for the bishop, who had little respect for poets, and who for his contemptuous mention of 'one Prior' has not unjustly been pilloried in a well-known epigram as 'one Burnet,' after the fashion of his own phraseology—had chosen in one of his pamphlets, with great recklessness of assertion, to speak of Dryden as a monster of profligacy.

The best editions of Bishop Burnet's great work, his 'History of the Reformation,' are those published at Oxford, in 7 vols. 8vo (the index forming the last) in 1829, with a valuable preface by Dr. E. Nares, and again with additional matter under the editorial care of Dr. Routh in 1852.

*BURNET, JOHN, engraver and writer on art, was born at Fisherrow, near Edinburgh, in March 1784. He studied engraving under Robert Scott of Edinburgh, and was a student in the Trustees' Academy in that city, along with Wilkie, by engravings from whose pictures he subsequently became known to the public. When he first came to London to pursue his art, Mr. Burnet was for some time employed on book-plates; but Wilkie having given him his 'Jew's Harp' to engrave, he produced a print which was so much admired that the more important picture of the 'Blind Fiddler' was at once entrusted to him. This engraving of the 'Blind Fiddler' increased the good opinion his first print had won. He afterwards engraved from Wilkie's pictures, the 'Rent Day,' which had a remarkable success; the 'Rabbit on the Wall'; the 'Chelsea Pensioners reading the Gazette of the Battle of Waterloo,' his largest and most elaborate production; the 'Letter of Introduction'; the 'Village School'; and two or three others. Mr. Burnet, though best known by his engravings from Wilkie, has engraved several plates from other recent painters, for Forster's 'British Gallery,' four or five after the pictures by Rembrandt in the National Gallery, for the work published by the Associated Engravers, &c. He has also produced engravings from several of his own paintings, the most important being 'Greenwich Pensioners receiving News of the Battle of Trafalgar,' intended as a companion to Wilkie's 'Chelsea Pensioners,' and engraved on the same scale. Some years back Mr. Burnet devoted considerable attention to the application of mechanical appliances to engraving, and produced some copies from the cartoons of Raffaele in a kind of mezzotint, as the results of his experiment; but though they were produced at a comparatively low price, they were too deficient in brilliancy to attract popular attention. Mr. Burnet has moreover been a diligent writer on the theory of art. His chief work is his 'Practical Treatise on Painting,' 4to, 1822-27, published first in separate divisions, entitled 'Hints on Composition,' 'On Light and Shade,' and 'On Colour.' Although wanting in a due recognition of the higher

principles of art, the work forms a useful introduction to its conventional rules. His other works are—'An Essay on the Education of the Eye with Reference to Painting,' 4to, 1837; 'Practical Essays on Various Branches of the Fine Arts,' 12mo, 1848; 'Landscape Painting in Oil Colours,' 4to, 1849; 'Rembrandt and his Works,' 4to, 1849; 'Practical Hints on Portrait Painting,' 4to, 1850; 'Life and Works of J. M. W. Turner,' 4to, 1852, written in conjunction with Mr. P. Cunningham; and 'The Progress of a Painter,' 8vo, 1854. All these works are illustrated by numerous engravings drawn and executed by himself.

BURNET, THOMAS, was born at Croft, in Yorkshire, about the year 1635. After having been instructed at the free school of Northallerton he was entered at Clare Hall, Cambridge, under the tuition of Dr. Tillotson. On the promotion of Dr. Cudworth in 1654 from the mastership of Clare Hall to that of Christ's College, Burnet removed thither with him. He was elected fellow of Christ's College in 1657, and four years afterwards filled the office of senior proctor. On leaving the university he became travelling tutor to the Earl of Wiltshire, eldest son of the Marquis of Winchester (soon after the revolution created Duke of Bolton), and gave so much satisfaction that he was afterwards invited to accompany the Earl of Ossory, grandson of the first Duke of Ormond, in a similar capacity.

Burnet's first publication after his return, and the work on which his fame almost exclusively rests, was in Latin, 'Telluris Theoria Sacra,' 1650. Five years after its appearance he was elected master of the Charterhouse. The first opposition to the dispensing power which James II. thought fit to assume was made by Dr. Burnet about eighteen months after his election to the mastership of the Charterhouse. The king addressed a letter to the governors, ordering them to admit one Andrew Popham as pensioner whenever such a place should become vacant in their hospital, without tendering to him any oath, or requiring of him any subscription or recognition, in conformity with the doctrine and the discipline of the Church of England; and this was to be done notwithstanding any statute, order, or constitution of the said hospital to the contrary, with which the king was graciously pleased to dispense. Lord Chancellor Jeffries was present, and moved that they should proceed to vote without any debate; but Burnet, who as junior governor was called upon to vote first, delivered his opinion that by express Act of Parliament, 3 Car. I., no officer could be admitted into that hospital without taking the oaths of allegiance and supremacy. An attempt was made, but without effect, to overrule this opinion. The Duke of Ormond supported Burnet, and on the vote being put Popham was rejected; and notwithstanding the threats of the king and of the Romanist party, no member of that communion was ever admitted into the Charterhouse.

Thus barred from the hope of court preferment during the remainder of the reign of James II., Burnet employed himself in writing in Latin the second part of his theory 'De Conflagratione Mundi,' which appeared in quarto in 1659. He had already in 1634 translated the first part into English, and he added the second part in the course of the year in which it appeared in Latin; if indeed those may be called translations which he himself terms "new compositions upon the same ground, there being several additional chapters, and several new moulded."

On the promotion of Archbishop Tillotson, and by special recommendation of that prelate, Burnet succeeded him as clerk of the closet to King William III., and was considered to be on the sure road to preferment. These prospects however were marred by a work which he put forth in 1692, under the title of 'Archæologia Philosophicæ, sive Doctrina Antiqua de Rerum Originibus.' The work was replete with learning, but the Mosaic account of the Fall was treated as an allegory, with an appearance of levity which gave offence to serious men, and of which Burnet afterwards repented. It contains an imaginary dialogue between Eve and the serpent. The cry raised against him was much increased by the unseasonable praise bestowed by Charles Blount, a professed infidel, and it was thought expedient that Burnet should retire from the clerkship of the king's closet. The remainder of his days was passed in retirement at the Charterhouse, where he died September 7th, 1715, and was buried in the chapel of that institution, over which he had presided during thirty years.

Few works have called forth higher contemporary eulogy than 'The Sacred Theory of the Earth.' It will not indeed stand the test of being confronted with the known facts of the history of the earth; and Flansted observed of it that he "could overthrow its doctrine on one sheet of paper, and that there went more to the making of the world than a fine-turned period." Its mistakes arise from too close adherence to the philosophy of Des Cartes, and an ignorance of those facts without a knowledge of which such an attempt, however ingenious, can only be considered as a visionary system of cosmogony; but whatever may be its failure as a work of science, it has rarely been exceeded in splendour of imagination, or in high poetical conception. Burnet printed during his lifetime a few copies of a tract in Latin, 'De Statu Mortuorum et Resurgentium,' one of which having fallen into the hands of Dr. Mead was handsomely reprinted by that great patron of letters, who did not know the name of its author, as a present to some few select friends. Only twenty-five copies were printed in quarto; Maittaire revised the text, and made many blunders by inserting at improper places manuscript notes and additions from the author's own interleaved copy. Upon this the executor of Burnet lent Mead a

corrected copy, from which fifty were printed. It was afterwards surreptitiously published, as well as another in Latin, 'De Fide et Officiis Christianorum,' in consequence of which Mr. Wilkinson, a friend of the deceased author to whom his papers had come, republished them in 1727 from Burnet's own corrected copies. To a second edition of the first tract, in 1733, is added an appendix 'De Futurâ Judæorum Restoratione,' which it appeared that Burnet had designed so to place.

BURNETT, GILBERT THOMAS, was born in Marylebone, on the 15th of April, 1800. He was educated for the medical profession, and paid particular attention to botany. He commenced lecturing on botany at the Hunterian theatre in Windmill-street, and afterwards lectured at the St. George's School of Medicine. On the foundation of King's College he was appointed to the Chair of Botany, and in 1833 he became lecturer to the Society of Apothecaries, and delivered two courses at their gardens at Chelsea. In the same year he published his 'Outlines of Botany,' in 2 vols. 8vo. This work contained an outline of the author's lectures on botany in King's College. It displays great research; is a valuable depository relating to the history and uses of plants; and it contains a very extended introduction to the study of cryptogamic plants. The author however was too fond of mere verbal classification, and has overlaid the whole work with divisions and subdivisions that rather confuse the student than enable him to discover the valuable matter which the work otherwise contains. Mr. Burnett was latterly too much occupied with the bringing out this great work to devote himself to original research. That he was capable of this is however proved by his papers, published from time to time in the 'Journal of Science and Art,' on various branches of natural history, comparative anatomy, and zoology, as well as botany. The most important are those devoted to physiological botany. He also contributed several papers on medical subjects to the 'Lancet' and 'Medical Gazette,' and was an active member of the Westminster Medical and the Medico-botanical Societies.

As a lecturer, Professor Burnett was remarkable for his fluent and graceful style, and his amiable manners won for him the respect and esteem of his pupils. He died in the summer of 1835, of pulmonary consumption. He continued his lectures till within a few days of his death. A bust, subscribed for by his pupils, and executed by Behnes, was erected to his memory at King's College.

BURNETT, JAMES. [MONBODDO.]

BURNETT, JOHN, was admitted advocate at the Scots bar on the 10th of December, 1735, in the twenty-first year of his age. In 1792 he was made one of the deputies to the lord advocate of Scotland, and so continued till October 1803, when, on the resignation of Law of Elvingstone, he was appointed sheriff of the shire of Haddington. In this place he remained till April 1810, when he was promoted to be judge admiral of Scotland. He was also some time standing counsel to the city of Aberdeen. Mr. Burnett is known as the author of a valuable treatise on various branches of the criminal law of Scotland, which was passing through the press at the time of his death, the 8th of December 1810.

BURNEY, CHARLES, Mus. D., was born at Shrewsbury in 1736. He received his earliest education at the free-school of Shrewsbury, but soon removed to the public school at Chester; in which city he commenced his musical studies, under Mr. Baker, organist of the cathedral, and a disciple of the famous Dr. Blow. When he had attained his fifteenth year he returned to his native place, and received further instructions in the art of music, from an elder half-brother, the organist of St. Mary's, Shrewsbury. He then went to London, and was placed for a term of three years under Dr. Arne, but owing to the irregular habits of that distinguished composer, Burney learnt much less from him than from the many opportunities afforded in the metropolis of hearing the best music, especially that of Handel performed under the direction of the great master himself.

In 1749 Mr. Burney was elected organist of a church in the city; and about the same period he engaged to take the harpsichord at a subscription concert, held at the King's Arms, Cornhill. He was now introduced to the great actress, the idol of the theatre, Mrs. Cibber, sister of Dr. Arne, at whose house in Scotland-yard he became acquainted with most of the wits, poets, and men of letters of the day; and by his courteous manners, lively conversation, and powers of pleasing, laid the foundation of that intimacy with persons eminent for talent or elevated by birth and fortune, which proved of the utmost importance to him in after-life. This also led to his composing the music of three pieces for Drury-Lane theatre—Mallet's tragedy of 'Alfred,' Mendoz's burletta, 'Robin Hood,' and Woodward's pantomime, 'Queen Mab.' The success of the latter was remarkable; "it was taught to all young ladies, set to all barrel-organs, and played at all familiar music-parties." Nevertheless the young composer preserved a strict incognito, which his daughter, Madame D'Arbly, accounts for by supposing that as he was still under articles to Dr. Arne, he "was disfranchised from the liberty of publishing in his own name." But from this thralldom he was emancipated by one into whose favour he had ingratiated himself, the accomplished Fulke Greville, Esq., then considered "the finest gentleman about town," who proposed terms to Dr. Arne for the release of his pupil, which were accepted, and Mr. Burney became an inmate in the house of his patron. His residence at Mr. Greville's seat, Wilbury House, near

Andover, was the means of much extending his intercourse with the literati and persons of rank.

Mr. Burney was soon afterwards united to Miss Esther Sleepe, a young lady to whom he was ardently attached, and whose mental and personal qualities have been frequently eulogised. He now settled in London, and may be said to have seriously entered for the first time on his professional career. Scarcely however had a year elapsed, when he was attacked by a dangerous fever, from which he recovered through the assistance of Dr. Armstrong, now only known as a poet. But the disease was followed by symptoms which were thought to indicate consumption, and he was earnestly advised by his physician to quit London: he therefore accepted the situation of organist at Lynn, with a salary of 100*l.*, and resided in that town nine years. There he designed his great work, the 'General History of Music;' and there too he commenced that correspondence with Dr. Johnson, which subsequently ripened into intimacy and friendship.

In 1760, his health being completely restored, Mr. Burney returned to the metropolis, and soon had his time fully occupied by his professional pursuits. Six years afterwards he produced at Drury-lane theatre the 'Cunning Man,' founded on, and adapted to, the music of Rousseau's 'Devin du Village.' In 1769 the university of Oxford conferred on him the degree of Doctor in Music, on which occasion he produced, as an exercise, an anthem, which was afterwards performed in Germany under the direction of the celebrated Emanuel Bach. His primary object however was his 'History;' and in order to collect materials for it he made a personal examination of the great libraries of Europe, and visited many of the more distinguished professors on the Continent. Of this tour he gave an account in his 'Present State of Music in France and Italy,' a work, the arrangement of which was avowedly imitated by Dr. Johnson, in his 'Tour to the Hebrides.'

In 1772 Dr. Burney proceeded again to the continent. In order to complete his inquiries, he found it expedient to visit the Netherlands and Germany. At Vienna he formed an intimacy with Metastasio, and became acquainted with Hasse and Glück. From the capital of the Austrian dominions he went by Prague, Dresden, and Berlin, to Hamburg. In the latter city he passed a great deal of time with C. P. E. Bach, from whom he gained much interesting information concerning the numerous and celebrated family of harmonists, and relative to other objects of his inquiry. In 1778 Dr. Burney was elected a Fellow of the Royal Society.

The first volume of the 'History of Music' appeared in 1776; the second in 1782; and the third and fourth in 1789. The Commemoration of Handel in 1784, an event of too much importance to remain imperfectly recorded, likewise employed Dr. Burney's pen. In 1789 he was appointed by his friend Edmund Burke organist of Chelsea College, an office which he accepted rather for the sake of airy and desirable apartments, which he was in consequence enabled to obtain, than with a view to the trifling emolument arising out of it. In 1796 he produced a 'Life of Metastasio,' in 3 vols. 8vo, a work written in an admirable style, displaying great candour and taste, and highly interesting to the lovers of the lyric drama and music; though many of the poet's letters to his friend Farinelli, the once far-famed soprano, might have been spared. His last literary effort was his contribution to the 'Cyclopædia' of Rees, for which he supplied all the musical articles, except those of a mathematical character.

During the whole of his life, Dr. Burney's high Tory principles were openly avowed, though the party never exerted their influence in his favour; but when the Whigs came into power, in 1806, Mr. Wyndham, backed by Mr. Fox, obtained for him a pension of 300*l.* This solid proof of his country's esteem was followed, four years after, by a testimony to his merits of the most honourable kind—his election as a member of the National Institute of France. From that period Dr. Burney relinquished every pursuit which called for much intellectual effort; he passed the whole of his time in the society of his family and friends, by all of whom he was beloved and admired. But by almost imperceptible degrees his bodily strength diminished, though his mental vigour continued unimpaired, as the writer of this article had many opportunities of witnessing. The severe winter of 1814 produced a visible effect on his enfeebled frame, and on the 15th of April he tranquilly expired, at his apartments in Chelsea College.

Several compositions by Dr. Burney were published at different periods; but posterity will only view him in his literary and critical character, in which, it is by all agreed, he attained a very high rank. "In all the relations of private life," says one who knew him well, "as a husband, a father, a friend, his character was exemplary."

Dr. Burney left two sons and four daughters by his first wife; and by a second wife—Mrs. Stephen Allen of Lynn, a widow—one daughter. JAMES BURNEY, his eldest son, entered early in life into the naval service, and accompanied Captain Cook in his second and third voyages round the world. After an active and honourable career he attained the rank of rear-admiral, and died in 1821, in his seventy-first year. He is perhaps best known as the author of an able and laborious 'History of Voyages of Discovery in the Southern Ocean,' in 5 vols. 4to. Dr. Burney's second son, the REV. CHARLES BURNEY, D.D., rector of St. Paul's, Deptford, who survived his father only three years, was known as one of the most learned and accomplished scholars and able critics, more especially in Grecian literature, of his day. His library was, at his death, purchased by the nation at the

expense of 14,000*l.*, and placed in the British Museum. His second daughter, Frances, so well known by her novel 'Evelina,' and by her 'Diary,' is noticed elsewhere. [D'ARBLAY, MADAME.] A still younger daughter followed the track of Madame D'Arblay as a novelist, with considerable though not equal success.

BURNEY, FRANCES. [D'ARBLAY, MADAME.]

BURNS, ROBERT, was born on the 25th of January 1759, in a small cottage about two miles S.W. from the town of Ayr. His father, William Burness, was the son of a farmer in Kincardineshire, but, in consequence of the reduced circumstances of his family, he had left that part of Scotland in his youth to seek employment in the south as a gardener. After serving different masters for a number of years, he had on his marriage, in December 1757, taken a perpetual lease, or feu, as it is there called, of seven acres of land, with the view of setting up for himself as a nurseryman. Here he built with his own hands the humble dwelling in which Robert, his eldest son, was born.

The history of the poet's early life has been very fully related both by himself and by his brother Gilbert. The narrative of the latter, in particular, is one of the most beautiful and touching ever written. The life of William Burness was one continued struggle, which he carried on with the honourable pride common among his countrymen to better his circumstances, and to give his children a good education. Robert was first sent to a school about a mile distant, in his sixth year. Afterwards a young man was engaged by William Burness and four of his neighbours to teach their children in common, his employers boarding him in turns. When they had removed to another situation, which precluded them from this advantage, the good man, after the hard work of the day, endeavoured to instruct his children himself. "In this way," says Gilbert, "my two eldest sisters got all the education they received." Robert obtained a little more school instruction by snatches, but the amount altogether was very inconsiderable. His chief acquisition was some acquaintance with French, and for this he was almost entirely indebted to himself. What other knowledge he obtained he gathered from the few books, mostly odd volumes, which his father could contrive to borrow. At last, in the beginning of the year 1784, William Burness died, worn out with toil and sorrow, after living just long enough to learn that a law-suit in which he was engaged with his landlord had been terminated by a decision which involved his family in ruin. He left five children younger than Robert and Gilbert.

In these circumstances the youth and early manhood of the future poet were dark enough. "The cheerless gloom of a hermit," he says himself, "with the unceasing moil of a galley-slave, brought me to my sixteenth year." His brother Gilbert writes, "To the buffetings of misfortune we could only oppose hard labour and the most rigid economy. We lived very sparing. For several years butchers' meat was a stranger in the house, while all the members of the family exerted themselves to the utmost of their strength, and rather beyond it, in the labours of the farm. My brother, at the age of thirteen, assisted in threshing the crop of corn, and at fifteen was the principal labourer on the farm, for we had no hired servant, male or female. The anguish of mind we felt, at our tender years, under these straits and difficulties was very great. . . . I doubt not but the hard labour and sorrow of this period of his life was in a great measure the cause of that depression of spirits with which Robert was so often afflicted through his whole life afterwards." Some time before their father's death, and when his affairs were drawing to a crisis, the two brothers had taken another farm, which they stocked in the best way they could with the savings of the whole family. "It was," says Gilbert, "a joint concern among us. Every member of the family was allowed ordinary wages for the labour he performed on the farm. My brother's allowance and mine was 7*l.* per annum each; and during the whole time this family concern lasted, which was four years, as well as during the preceding period at Lochlea, his expenses never in any year exceeded his slender income. . . . His temperance and frugality were everything that could be wished."

A little before his sixteenth year, as he tells us himself, he had "first committed the sin of rhyme." His verses soon acquired him considerable village fame, to which, as he made acquaintances in Ayr and other neighbouring towns with young men of his own age, he greatly added by the remarkable fluency of his expression and the vigour of his conversational powers. The charm of those social meetings, at which he shone with so much distinction, gradually introduced him to new habits. Yet his brother affirms that he does "not recollect till towards the end of his commencing author (when his growing celebrity occasioned his being often in company) to have ever seen him intoxicated." His attachment to female society also, which had from his youth been very strong, was now no longer confined within those "bounds of rigid virtue," says his brother, "which had hitherto restrained him. Towards the end of the period under review (in his twenty-fourth year), and soon after his father's death, he was furnished with the subject of his 'Epistle to John Rankin.'"

Another affair of this description soon after determined the whole subsequent course of his life. This was his connection with Jean Armour, afterwards Mrs. Burns, the fruit of which was the birth of twins. In the difficulties and distress to which both parties were reduced by the consequences of their imprudence, it was agreed between

them that they should make a legal acknowledgment of an irregular and private marriage, and that he should then set out for Jamaica to push his fortune. "But before leaving my native country for ever," he says, "I resolved to publish my poems. I weighed my productions as impartially as was in my power; I thought they had merit; and it was a delicious idea that I should be called a clever fellow, even though it should never reach my ears." An impression of 600 copies of the work accordingly was printed at Kilmarnock. This was in the autumn of 1786. The poems were well received by the public, and after paying all expenses the author cleared nearly 20*l*. "This sum," he says, "came very seasonably, as I was thinking of indenting myself, for want of money to procure my passage. As soon as I was master of nine guineas, the price of wafting me to the torrid zone, I took a steerage passage in the first ship that was to sail from the Clyde, for 'hungry ruin had me in the wind.' I had been for some days skulking from covert to covert under all the terrors of a jail, as some ill-advised people had uncoupled the merciless pack of the law at my heels." This was to oblige him to find security for the maintenance of his children; for the parents of the mother were so indignant that, notwithstanding what had happened, they would not allow the marriage to take place, and the children to be legitimatised. He proceeds: "I had taken farewell of my few friends; my chest was on the road to Greenock; I had composed the last song I should ever measure in Caledonia, 'The gloomy night is gathering fast,' when a letter from Dr. Blacklock to a friend of mine overthrew all my schemes by opening new prospects to my poetic ambition. The doctor belonged to a set of critics for whose applause I had not dared to hope. His opinion that I would meet with encouragement in Edinburgh for a second edition fired me so much, that away I posted for that city, without a single acquaintance or a single letter of introduction."

The result was the introduction of the poet to all who were eminent in literature, in rank, or in fashion, in the Scottish metropolis. The brilliant conversational powers of the unlettered ploughman seem to have struck all with whom he came in contact with as much wonder as his poetry. Under the patronage of the Earl of Glencairn, Dr. Robertson, Professor Dugald Stewart, Mr. Henry Mackenzie, and other persons of note, a new edition of his poems was published, from the profits of which he received nearly 500*l*. In the spring of 1788 he returned to Ayrshire, where his brother Gilbert, who had taken upon him the support of their aged mother, was struggling with many difficulties in the farm they had conjointly taken. Robert advanced 200*l*., and with the remainder of his money he prepared to stock another farm—that of Ellisland in Dumfriesshire—for himself. Here he took up his abode in June 1788, having previously legalised his union with Miss Armour by joining with her in a public declaration of their marriage.

Soon after this, by the interest of Mr. Graham of Fintry, he was appointed, on his own application, an officer of excise for the district in which he lived. The salary which he received in this capacity was originally 50*l*. a year, but was eventually increased to 70*l*. His duties however interfered so much with the attention due to his farm, that he found himself obliged to resign the farm to his landlord, after having occupied it for about three years and a half. About the end of the year 1791 he retired with his family to a small house in the town of Dumfries, placing his dependence for the future exclusively on his chances of promotion in the excise.

In Dumfries Burns spent the short remainder of his life. The habits which he had acquired during the sudden and short-lived intoxication of his first introduction to public notice now gained entire ascendancy over him, as misfortune and disappointment broke or at least embittered his spirit, and enfeebled his powers of resistance. The strong excitements of admiration and applause by which he had been surrounded at Edinburgh were sought for at any cost, and among companions of any order who would join him in drowning reflection. Even the prospects upon which he had placed his reliance of advancement in the excise were suddenly overcast in consequence of some imprudent expressions which he had dropped on the subject of the French revolution, to which some despicable informer had called the notice of the board. It was only through the exertions of his friend Mr. Graham, on this occasion, that he was saved from being dismissed. Ill-health and great dejection of spirits at last came upon him, along with the pressure of accumulating pecuniary difficulties. He had produced many of his happiest pieces, and especially the best and the greatest number of his songs, since the appearance of the first Edinburgh edition of his poems. The songs were principally contributed to an Edinburgh publication called Johnson's 'Museum,' and afterwards to a work of much greater pretension, the well-known 'Collection of Original Scottish Airs,' edited and published by Mr. George Thomson. Burns's correspondence with Thomson on the subject of his contributions to this work has been printed, and forms a highly interesting series of letters, as well as an affecting chapter in the poet's history.

He died on the 21st of July. His remains were consigned to the earth with the solemnities of a public funeral, which was rendered remarkably imposing by the voluntary attendance of a vast multitude of persons of all ranks from every part of the surrounding country. Burns left four sons (besides a boy who died in his infancy), two of whom entered the East India Company's army: one of these has risen to the rank of colonel.

The first collected edition of the poems and letters of Burns was published by Dr. Currie at Liverpool, in 4 vols. 8vo, in 1800, for the benefit of the poet's wife and family. Of the accounts of his life that have appeared since that by Dr. Currie, the most important are that by Mr. Lockhart, first published in 1823, that by Mr. Allan Cunningham, prefixed to his edition of the works of Burns, in 8 vols. 12mo, London, 1834, and that by Mr. R. Chambers comprised with the Works of Burns in 4 volumes.

The history of literature scarcely affords another instance of a popularity either so sudden or so complete as that obtained by the poetry of Burns. Even in his own lifetime, and indeed almost immediately after his genius first burst into public notice, his name and his poems were familiar to all ranks of his countrymen. Nor did the enthusiasm for his poetry die away with the generation among whom it was first kindled. His works are still everywhere a cottage-book in his own land, and they are read wherever the English language is understood.

No poetry was ever better fitted to obtain extensive popularity than that of Burns. It has little of either grandeur or richness of imagination, qualities that demand much cultivation of mind as well as a somewhat rare endowment of the poetic temperament for their appreciation and enjoyment. It is all heart and passion, and every human bosom capable of feeling strongly must be stirred by its fire and tenderness. The themes which Burns has chosen are all of the kind which come home to the natural feelings of men, and his mode of treating them is the most simple and direct. In what he has written, in his native dialect at least, there is nowhere anything of mere rhetorical ornament or display. The expression is throughout, as truly as that of any poetry ever was, the spontaneous utterance of the thought or sentiment, which falls into measured words as if it and they were struck out together by the same creative act. In his lyrical pieces especially, the passion, and the language, and the melody which is 'married' to the 'immortal verse,' seem to come all in one gush from the full fountain of the heart. In this exquisite truth of style no writer in any language has surpassed Burns. But, with all his nature, he is, like every great writer, also a great artist, nature being the inspiration of his art. Nothing can be more masterly—more demonstrative both of high skill and of general elevation of mind—than the manner in which he triumphs over the disadvantages of a dialect so much vulgarised as that of Scotland had come to be at the time when he wrote. Of mere licence and indecorum there is certainly no want in some of his productions; but notwithstanding the familiar character of his subjects and the freedom of his diction, even in his broadest humour, in his most unpardonable violations of moral propriety, in the rudest riot of his merriment and satire, there is never anything that is mean or grovelling, anything that offends our sense of what is noble and elevated. Some of the most immoral of his pieces are distinguished by a studied propriety of expression springing from the finest taste and most delicate sensibility to the beautiful.

* BURRITT, ELIHU, was born in New Britain, Connecticut, United States, on the 8th of December 1811, and was the youngest of ten children. His father was a shoemaker. Elihu had only about three months tuition at the district school, till after the term of his apprenticeship to the village blacksmith had expired, when, having in the meantime laboured hard at self-instruction, he became a student for six months under his brother Elijah, who was a schoolmaster. At this period he made considerable progress in mathematics, and in the Latin and French languages. On returning to his employment as a blacksmith, in which he was engaged from ten to twelve hours daily, he diligently prosecuted the study of languages, and managed, he says, to acquire a knowledge of Greek, Hebrew, Syriac, Spanish, Danish, Bohemian, and Polish. Mr. Everett, the governor of Massachusetts, having heard some extraordinary accounts of the attainments of a young blacksmith at Worcester, invited him to Boston, where he received much attention and kindness. Returning to his labours, he continued his studies, and in 1842 translated some of the Icelandic Sagas. He also supplied to the 'American Eclectic Review' a series of translations from the Samaritan, Arabic, and Hebrew, and was in the habit of delivering lectures on literary and scientific subjects. In 1843 he began to study the Ethiopic, Persian, and Turkish languages. In 1844 he commenced the publication of a newspaper entitled 'The Christian Citizen.'

Mr. Burritt has taken a leading part in advocating the principles of the society calling itself the 'League of Universal Brotherhood.' He has also lectured and spoken for the temperance and anti-slavery societies. He first visited England in June 1845, and from that time till the present he has been occupied in promoting the extension of what are called 'peace and brotherhood' principles, and in urging the adoption of an ocean penny postage. In pursuit of these objects he has had a principal share in convening congresses of representatives of peace societies, at London, Paris, Brussels, and Frankfurt; and has likewise revisited his native country. The 'Bond of Brotherhood,' a small periodical issued by the 'League,' is chiefly the production of Mr. Burritt. His other literary productions include, 'Sparks from the Anvil,' 'A Voice from the Forge,' and 'Peace Papers for the People.'

* BURTON, JOHN HILL, son of Lieutenant Burton of the 94th regiment of foot, was educated for the Scottish law, and passed advo-

cate in 1831. He was a contributor to the later volumes and to the Supplement of the 'Penny Cyclopædia,' chiefly on subjects connected with Scottish law. In 1842 Mr. Burton assisted Sir John Bowring in preparing for the press the edition of the collected works of Jeremy Bentham, which was published at Edinburgh in parts. After the completion of that publication, Mr. Burton in 1843 wrote an 'Introduction to the Study of the Works of Jeremy Bentham,' and also 'Benthamiana, or Select Extracts from the Works of Jeremy Bentham.' In the 'Introduction' Mr. Burton enters into an explanation of the views of Bentham, and classifies his works according to their nature, extent, and success, and also defends him for certain peculiarities of nomenclature, and against those who have charged him with obscurity of style. The 'Benthamiana' is subsidiary to the 'Introduction,' exhibiting Bentham's principles and opinions in his own words. In 1846 he published 'The Life and Correspondence of David Hume,' 2 vols. 8vo, Edinburgh; in 1847 'Lives of Lord Lovat and Duncan Forbes of Culloden,' 8vo, London; in 1849 he edited 'Letters of Eminent Persons addressed to David Hume: from the Papers bequeathed by his Nephew to the Royal Society of Edinburgh,' 8vo, Edinburgh, 1849, and wrote 'Political and Social Economy,' 16mo, Edinburgh, one of a series of 'books for the people' issued by the Messrs. Chambers. In 1851 he published 'Emigration in its Practical Application to Individuals and Communities,' 12mo, Edinburgh, 1851; and in 1852, 'Narratives from Criminal Trials in Scotland,' 2 vols. 8vo, London. The most important narrative of this series is that of the trial of Captain Green for piracy. Green was captain of an English merchant vessel, and the piracy was committed on the crew and cargo of a vessel fitted out by the Scotch Darien Company. Captain Green was found guilty, and was executed April 9, 1705. Mr. Burton's account is mainly drawn from materials which he found in an old chest in a cellar belonging to the Advocates' Library. The chest contained a mass of papers connected with the concerns of the Darien Company, which was established in 1695. In 1853 Mr. Burton published 'The History of Scotland, from the Revolution to the Extinction of the Jacobite Insurrection,' 2 vols. 8vo, London. This work embraces a period of about sixty years, from 1689 to 1748, and includes an account of the re-establishment of Presbyterianism in Scotland after the Revolution, the Union with England, the insurrection of 1715, and the insurrection of 1745. Mr. Burton has also published a 'Manual of the Law of Scotland,' and a 'Treatise on the Law of Bankruptcy,' in that country. In 1854 he was appointed Secretary to the Prison Board of Scotland.

BURTON, ROBERT, author of the 'Anatomy of Melancholy,' was born at Lindley, in the county of Leicester, on the 8th of February, 1576, and was descended of a reputable and ancient family. He received part of his education at the grammar-school of Sutton Coldfield, in the county of Warwick; and was admitted a commoner of Brasenose College, Oxford, in 1593, where he made considerable progress in logic and philosophy. In 1599 he was elected student of Christchurch. In 1616 he was presented to the vicarage of St. Thomas, in the gift of that college; and at a later period, after the year 1628, he was presented by Lord Berkeley to the rectory of Segrave in Leicestershire. It is said that he composed the 'Anatomy of Melancholy,' published in 1621, with the intent of diverting his own thoughts from that feeling. These are all the facts and dates recorded by Anthony Wood concerning Burton's life. He died at Christchurch on the 25th of January, 1639-40, at or very near the time which he had before foretold, from the calculation of his own nativity. This coincidence gave rise to a rumour which probably was jocular rather than serious, at least there is not a particle of evidence to support it, that he hastened his own death that his astrological skill might not be put to shame. He bequeathed two sums of 100*l.* each to the Bodleian and the Christchurch library, the annual proceeds to be employed in purchasing books; and he also ordered that those two establishments should select from his own collection any books which they did not possess. Those acquired by the Bodleian are said by Bliss, in his edition of Wood's 'Athene Oxon.,' to form one of the most curious additions ever made to that collection. "They consist of all the historical, political, and poetical tracts of his own time; with a large collection of miscellaneous accounts of murders, monsters, and accidents. In short, he seems to have purchased indiscriminately everything that was published."

Wood gives the following character of Burton:—"He was an exact mathematician, a curious calculator of nativities, a general-reading scholar, a thorough-paced philologist, and one that understood the surveying of lands well. As he was by many accounted a severe student, a devourer of authors, a melancholy and humourous person, so by others who knew him well, a person of great honesty, plain dealing, and charity. I have heard some of the ancients of Christchurch often say that his company was very merry, facetie, and juvenile; and no man in his time did surpass him for his ready and dexterous interlarding his common discourses among them with verses from the poets, or sentences from classical authors; which, being then all the fashion in the university, made his company more acceptable."

We give the title at length, as it contains also an analysis, of his famous work:—"The Anatomy of Melancholy: what it is, with all the kinds, causes, symptoms, prognosticks, and severall cures of it. In three maine partitions, with their severall sections, members, and

subsections. Philosophically, medicinally, historically opened and cut up. By Democritus Junior. With a satyricall Preface, conducing to the following Discourse. Macrob. Omne meum; nihil meum.' In defence of this title, he says:—"It is a kind of policy in these days to prefix a fantastical title to a book which is to be sold; for as larks come down to a day-net, many vain readers will tarry and stand gazing." The name of Democritus Junior is introduced in the inscription on his monument in Christchurch cathedral; on which the calculation of his nativity was also engraved. A plate of it is given in Nichols's 'History of Leicester,' vol. iii. p. 418, from which, together with the 'Athene Oxoniensis,' this article is compiled. The 'Anatomy,' &c., at first was very popular, and went through five editions before the author's death. Towards the close of the 17th century it fell into oblivion, and was seldom seen except on book-stalls, until brought into notice by Johnson (who said that it was the only book that ever took him out of bed two hours sooner than he wished to rise), Warton, and others. Mr. Steevens in his own copy noted a rise in price, within a few years, from eighteen pence to a guinea and a half. Since that time one edition at least has been published. Sterne was largely indebted to Burton's peculiar humour, though he never acknowledged it: many even of his stories are copied word for word from the 'Anatomy of Melancholy': this Dr. Ferriar has fully shown in his 'Illustrations of Sterne,' 1798. The 'Anatomy of Melancholy' displays that extent and variety of out-of-the-way reading to which Sterne was a pretender; it is termed a 'cento' by its author, and consists chiefly of an immense mass of quotations, bearing on a great variety of subjects, some very little connected with the main topic of the work. It is a book which will always be relished by men of scholarly habits, for its abundant learning and dry, quaint, and often splenetic humour. And we may add that Sterne is not the only writer who has resorted to the 'Anatomy of Melancholy' as to a common place-book, for learned garnishings of his literary wares.

Not to be confounded with the above is the author of a number of cheap books published about the beginning of the 18th century, with the name of Robert Burton in the title-page.

BUSBEQUIUS, A. G., a celebrated traveller and ambassador of the 16th century. His real name was Auger Gislen de Busbec, which, according to the practice of his age and country, was Latinised into Augerius Gislenius Busbequius. He was born at Commines, a town in Flanders, on the river Lys, and was the illegitimate son of the lord of Busbec, a nobleman of ancient family, who brought him up in his own house, and spared no care or expense in his education. The boy made such rapid progress in his studies, and his disposition, person, and abilities, were so promising, that his father became very fond of him, and was induced to obtain from his sovereign, the emperor Charles V., a rescript of legitimacy in his favour. When he grew up, Busbequius was sent to study in the best schools and universities on the continent—to Louvain, Paris, Venice, Bologna, and Padua; at which several places he associated with the most learned professors and distinguished men of his times. Having finished his academical studies and returned from Italy, he visited London, where he passed some time with Don Pedro Lasso, ambassador at the English court from Ferdinand, then titular king of the Romans, but shortly afterwards Ferdinand I., emperor of Germany. During his stay in England he was present as one of the ambassador's suite at the solemnisation of the marriage between Philip II. of Spain and Queen Mary of England, in 1554. Shortly after this he returned to Flanders. His reputation for ability, knowledge, and experience in public affairs stood so high, and his friends at the court of Vienna were so influential, that on the 3rd of November of the same year he received a letter from Ferdinand, advising him that he was destined for the important post of ambassador to Constantinople, and that he must begin his journey immediately. Busbequius accordingly mounted on horseback (for there was then no other mode of making the journey), and rode from Brussels to Vienna through very bad weather and detestable roads. Having received his despatches and instructions from King Ferdinand, he set out with boldness and alacrity for Constantinople, although the circumstances of the case would have been sufficient to deter most persons. The Turks were then at the height of their power, intolerance, and insolence; they had conquered Transylvania, and nearly all Hungary; they were within a few days' march of Vienna, where their mere name spread terror; and the reigning Sultan, Solyman the Great, or Magnificent, was fierce and unrelenting, and accustomed to treat the envoys of Christian powers who did not please him in a very summary manner. On arriving at Constantinople, Busbequius found that the sultan was with his army at Amasia, in the interior of Asia Minor. As his commissions did not permit delay, he crossed over into Asia, and rode on to Amasia, where he staid a considerable time, and had several audiences of Solyman, with whom he succeeded in concluding a further truce of six months. He rode back to Vienna, where he arrived in August, 1555.

In November of the same year he was again sent as ambassador to Constantinople. This time Solyman was at his capital, where Busbequius took up his residence for nearly seven years. At first he had many difficulties to encounter from the pride and obstinacy of the Turks: "For you must know," he says in one of his epistles, "that a long series of happy success hath so elevated the minds of this people

that they make their own wills, forsooth, the sole rule of all reason, right or wrong." But Busbequius showed admirable tact and temper, and at the end of his long mission concluded an advantageous treaty with Solyman.

In 1582 he returned to Vienna, and was soon after appointed governor and tutor to the sons of Maximilian, then king of the Romans. Though attached to the pleasures of private life and literary ease, he became more and more involved with courts and princes. When Maximilian's daughter, the Princess Elizabeth, was married to Charles IX. king of France, he was commissioned by the court to accompany her to Paris. The young queen appointed him intendant of her household and of all her affairs, and when, on the premature death of her husband, she quitted France, she left Busbequius at Paris as her agent and representative. The Emperor Rodolph on ascending the throne of the Caesars, appointed Busbequius his ambassador to the French court, where he remained until 1592. Having then obtained permission to visit Flanders, his native country, in order to put his estates and private affairs in order, he left the French court and took his way through Normandy. Unfortunately it was a time of trouble and civil war. The faction of the League were in arms against the government, and occupied or over-ran a good portion of the kingdom. Busbequius had very properly furnished himself with passports from both parties, from the Leaguers as well as from the court, but his passes did not save him from being robbed and ill-treated by a party of Leaguers at Cailli, a village in Normandy, about three leagues from Rouen. On representing to them the inviolable and sacred rights attached to his character as ambassador, the brigands set him at liberty, and even restored the bulk of his baggage. But Busbequius, now an old man, had received a shock from which he did not recover. Instead of continuing his journey into Flanders, he ordered his attendants to convey him to the house of Madame de Maillot, at Saint Germain, close to Rouen, where he died in a few days, on the 28th of October, 1592. Philip Camerarius, Joseph Scaliger, and other writers, assert that he was murdered by the robbers, but the well-authenticated facts regarding his death are what we have stated.

The body of Busbequius was honourably interred in the church of the place where he died, and his heart was carried to Flanders to be placed in the tomb of his ancestors.

As a literary character and a man of refined taste, this distinguished diplomatist occupies a very honourable place. The letters in which he describes his two journeys into Turkey, his residence at the court of Solyman, &c., which are in Latin, and were published under the title of 'Augerii Gialenii Busbequii Legationis Turcicae Epistolae Quatuor,' are admirably written, and abound in information which will always be interesting, and which was of great political utility at the time he wrote, when the cabinets of Europe knew not what to make of the Ottoman Porte. He thoroughly understood the state of the Ottoman empire, which was then the terror of Europe, and he laid down a judicious system for resisting and attacking it, in a treatise entitled, 'De Re Militari contra Turcam instituendâ consilium.' The orations which he delivered in France to the different French kings have been very much praised, but we cannot speak of these of our own knowledge. Besides contributing to various scientific and literary works, Busbequius was the author of some interesting letters on the state of France under the reign of Henri III., and on the expedition of the Duke d'Alençon to the Low Countries. These letters, addressed to the Emperor Rodolph, were first published in 1632.

Notwithstanding the constant labours of correspondence and diplomacy, he found time, while in Turkey, to collect inscriptions, coins, manuscripts, rare plants, and other specimens of natural history. On his second embassy he engaged and took with him an artist to make drawings of curious botanical and zoological specimens at that time little known in the west of Europe. The fruits of his taste, judgment, and liberality frequently appear in the works of Gruterus, Mathioli, and other contemporary writers.

Busbequius spoke seven languages—Latin, Italian, French, Spanish, German, Flemish, and Slavonian in perfection. He always wrote in Latin; and the Latinity of his Turkish travels has been much admired by scholars. This book, which has appeared in all the modern languages of civilised Europe, was translated into English, and went through several editions in the course of the last century. A very good edition, with index, was published at Glasgow by Robert Urie in 1761. The title is 'Travels into Turkey. Translated from the original Latin of the learned A. G. Busbequius.'

(Busbequius's works, as named above; Bayle, *Dictionnaire Historique et Critique*; Guicciardini, *Italian Hist.*)

BUSBY, RICHARD, second son of Richard Busby, of the city of Westminster, was born at Luton in Northamptonshire, September 22, 1606. Having passed through Westminster School he was elected student of Christchurch, Oxford. So low were his finances that his fees for the degree of bachelor and master of arts were defrayed by donation from the parish of St. Margaret, Westminster, 5*l.* having been given him for the former, and 8*l.* 13*s.* 4*d.* for the latter. This favour he gratefully acknowledged in his will by leaving 50*l.* to the poor housekeepers in that parish, having already bequeathed to the parish for charitable purposes an estate of 325*l.* per annum, and very nearly 5000*l.* in personal property. In 1639 he was admitted to

the prebend and rectory of Cudworth in the church of Wells, and on the 13th of December in the following year he was appointed head master of Westminster School, in which occupation he laboured during more than half a century, and by his diligence, learning, and assiduity has become the proverbial representative of his class. In July 1660, he was installed as prebendary of Westminster, and in the following August he became canon residentiary and treasurer of Wells. At the coronation of Charles II. in 1661 he had the honour of carrying the ampulla. His benefactions were numerous and most liberal. He died April 6th 1695, full of years and reputation, and was buried in Westminster Abbey. His works were principally for the use of his school, and consist for the most part either of expurgated editions of certain classics which he wished his boys to read in a harmless form, or grammatical treatises, chiefly in a metrical form. The severity of his discipline is traditional, but it does not appear to rest upon any sound authority; and strange as it may appear, no records are preserved of him in the school over which he so long presided.

BÜSCHING, ANTON FRIEDRICH, was born at Stadthagen, in Westphalia, September 27, 1724. He studied at Halle, and afterwards went to St. Petersburg as tutor to the children of Count Lynar, the Danish ambassador to the court of Russia. He was early struck with the want of good geographical works in his time, and he applied himself to supply the deficiency. Having gone to Copenhagen, he published in 1752 a description of the duchies of Holstein and Sleswick, which was much approved of. In 1754 he was appointed professor of philosophy at Göttingen, and would have obtained the chair of theology in that university but for a treatise in which he expressed opinions which were considered as swerving from Lutheran orthodoxy. About 1760 he was elected pastor of the German Protestant church at St. Petersburg, where he remained four years, and founded a lyceum, which soon became one of the best institutions for education in the Russian capital. In 1766 he was appointed director of the gymnasium of Grauen Kloster at Berlin. He composed for that institution a number of elementary works, which became very popular in North Germany. Büsching however is more generally known for his 'Neue Erdbeschreibung,' or 'Universal Geography,' the first part of which appeared in 1751. In 1759 he had completed the description of Europe in eight volumes, which became a standard work. He was one of the first modern writers who introduced in a work of descriptive geography statistical information on the wealth, industry, commerce, and institutions of the various countries. His statements were made after careful inquiry, and were generally accurate. Büsching's description of Europe was translated into English, 'A New System of Geography,' 6 vols. 4to, London, 1762. His account of the northern countries, Denmark, Norway, Sweden, the Netherlands, and Germany, is the most full and elaborate part of the work. Germany in particular is treated very minutely, and occupies about one-half of the whole. It was translated into French under the title 'Atlas Historique et Géographique de l'Empire d'Allemagne,' 4 vols. 4to. Büsching's whole work went through eight editions in his lifetime, and was translated into the principal European languages. In 1768 he published the first volume of 'Asia,' which treated of Asiatic Turkey and Arabia, but went no further with it. He published also 'Magazin für die neue Historie und Geographie,' 23 th. 4to, Hamburg and Halle, 1767-93; 'Nachrichten von dem Zustande der Wissenschaften und Künste in dem Dänischen Reichen und Ländern,' 3 vols. 8vo, Copenhagen, 1754-65; besides numerous other works of geography, biography, education, and likewise on religious subjects. His 'History of the Lutheran Churches in Russia, Poland, and Lithuania,' has been mentioned with praise. Of his biographies, that of the great Frederic has been translated into French by D'Arnex, 'Caractère de Frederic II.,' 8vo, Berne, 1788. Büsching was a most indefatigable writer, honest and independent; and he laboured earnestly for the advancement of education and general information. The Prussian government afforded him encouragement and support; and in his latter years his correspondence, which was very extensive, was made free of postage charges. He died at Berlin May 28, 1793.

His son, JEAN GUSTAVUS THEOPHILUS BÜSCHING, born at Berlin in 1788, was a diligent and useful writer chiefly on the literature and arts of Germany in the middle ages. He was for some time keeper of the records at Breslau, and in 1823 he was appointed professor of archaeology in that city. He died in May, 1829.

BUSSY D'AMBOISE, LOUIS DE CLERMONT DE, one of the favourites of the Duc d'Anjou, brother of Henri III., king of France. Little is known of this minion but the history of his desperate bravery and his crimes. During the massacre of St. Bartholomew, having joined the assassins, he murdered with his own hand his relation, Antoine de Clermont, with whom he had a law-suit for the marquise of Réné; but the edict which soon afterwards passed in favour of the Huguenots deprived him of any profit from this bloody deed. He afterwards commanded at Angers, where his exactions rendered him most unpopular; and having long interrupted the tranquillity of Paris by private brawls and combats, in which he set at naught the terrors of the Bastille and the authority of the king, he became so odious to Henri III. by frequent acts of presumption, that he gave information to Charles de Chabres, count of Montsoreau, of an intrigue which Bussy carried on with his wife. Montsoreau compelled the wretched adulteress to write a letter with her own hand,

making an assignation in the Château de Constanciers, where the injured husband awaited Bussy with a numerous ambuscade of armed men, and, in spite of a most courageous resistance, put him to death on August 19th, 1579. (De Thou, lxxviii. 9.) With the strange taste for loathsome subjects which characterises so many of the present race of popular French writers, Dumas has chosen the fate of Bussy for the subject of a romance—"La Dame de Montoreau."

BUTE, JOHN STUART, third EARL OF, was the eldest son of John, earl of Bute, in the Scottish peerage, and of Lady Anne Campbell, daughter of the first duke of Argyll. He was born in 1713, and received his education at Eton. He appears to have been introduced to public life in February 1737, by being elected one of the sixteen Scottish representative peers. From that period he seems to have proceeded in a steady course of court favour. In 1737 he was appointed one of the Lords Commissioners of Police in Scotland, a board which was suppressed in 1782. It was probably about this time that he was introduced to the notice of Frederick, prince of Wales. Of the circumstances of this introduction, 'The Contrast' gives the following curious account:—"The Duchess of Queensberry having entertained her friends with the play of the 'Fair Penitent,' the part of Lothario fell to the lot of his lordship, in which he succeeded so much better than in his late performances in the character of a statesman, that he was greatly admired, and particularly by his late Royal Highness Frederick, prince of Wales, who took great notice of this occasional Roscius, and invited him to Leicester House." Lord Waldegrave ('Memoirs,' p. 36) also states the prince used frequently to say of him, "Bute is a fine showy man, and would make an excellent ambassador in any court where there was no business." In August 1738 Lord Bute was made a Knight of the Thistle, and a few days after one of the lords of the bedchamber to the prince. On the death of Frederick, in March 1751, Lord Bute retired for some time to the country; but it soon became apparent that he was not only consulted by the princess in regard to all points connected with the education of her son, afterwards George III., but that he was in all political matters her chief adviser. He was eventually appointed Groom of the Stole to the young prince; and Junius scarcely appears to have exaggerated when he said that from "that moment Lord Bute never suffered the Prince of Wales to be an instant out of his sight."

On the accession of George III. (October 1760), Lord Bute, who had obtained a great ascendancy over the mind of his pupil, was sworn a member of the privy council, and made Groom of the Stole. In March 1761 he resigned that office, and was appointed one of the principal secretaries of state. This elevation of the favourite to a place in the government was effected by the dismissal of Mr. Legge, the able chancellor of the exchequer, and by the concerted resignation of the Earl of Holderness, who resigned his place in consideration of a handsome pension, and the reversion of the wardenship of the Cinque Ports. Mr. Pitt however still continued for some time longer nominally at the head of the administration. On the 5th of October Mr. Pitt retired from the cabinet before the growing influence of the new secretary. Of the heads of the old Whig connexion, the Duke of Newcastle, who was First Lord of the Treasury, still clung to office; but at length, on the 29th of May 1762, he resigned, and Lord Bute was appointed his successor. On the 22nd of September following he was admitted a Knight of the Garter. On the 4th of April 1761 his countess had been created a British peeress, by the title of Baroness Mountstuart, with remainder to her issue male by his lordship.

The history of the administration of Lord Bute belongs to the history of the country, and it is one which it is impossible to read without feelings of something like humiliation. His career was shaped apparently, from first to last, with a view to his own elevation, and the removal of every one from office who was likely to stand in his way was effected in a more open and unscrupulous manner than had been seen for some years. His sudden rise, unsupported by any description of ability, soon called forth its natural accompaniments in bitter personal attacks and unscrupulous libels. To say nothing of the well-known 'History of the Minority,' the object of which is a defence of the politics of Lord Chatham and Earl Temple, Wilkes's weekly paper, the 'North Briton,' which began and ended with Lord Bute's administration, is throughout occupied in the abuse of his lordship and everything connected with him. The 'North Briton' was set up in opposition to the 'Briton,' a paper established in the interest of the minister.

Lord Bute was certainly the most unpopular English minister of modern times. While he madly attempted to govern the country by the king's name alone, he had opposed to him not only all the old factions of the state, which he aimed at putting down and destroying, but the whole nation; and professing to hold the doctrine that the ministers were not really the executive government, but literally only the servants or clerks of the crown, he surrounded himself while in power with individuals in general utterly incapable of adding strength to his ministry by their abilities or personal importance. The late Lord Liverpool indeed (then Mr. Jenkinson) was his private secretary; but his chancellor of the exchequer, for instance, was Sir Francis Dashwood, afterwards Lord Despensers, a person wholly incompetent.

The most important event in Lord Bute's administration was the termination of the war with France, by the peace of Paris, concluded

February 10th 1763. It was long a strong popular belief that the English minister was bribed by France to consent to this treaty; but no evidence worthy of credit was ever brought forward to confirm this rumour. But it may be mentioned as a proof how far the belief extended, that Wilberforce records in his 'Diary' under July 16, 1789, that Lord Camden told him, "he was sure Lord Bute got money by the peace of Paris." As we said, there is no good ground for any such belief, but Lord Bute's undignified eagerness for the peace, and the readiness he was known to have expressed to have accepted far less honourable terms than those ultimately obtained—unworthy as they were generally esteemed—were quite sufficient to give countenance to the rumour. The peace was violently denounced in the House of Commons by Pitt, who went so far in his invective as to refer to Bute as "not the foreign enemy but another enemy." Bute however had large majorities in both houses, and he carried himself with his usual haughtiness, dismissing from their employments every one who had ventured to protest against his measures. The dukes of Newcastle and Grafton, and the Marquis of Rockingham, had their lord-lieutenancies taken from them, and it is affirmed that Bute carried his enmity so far as to dismiss inoffensive clerks from their employments in the public offices, "merely because they had been, in the first instance, recommended to them by some statesmen adverse to the peace" (Mahon, v. 23, chap. xli.) But the storm of unpopularity was too fierce for Bute to make head against it. On the 8th of April 1763 Lord Bute suddenly resigned. His friends generally gave out at the time that he had taken office only with the purpose of bringing the war to an end, and that in now retiring he only followed a determination which he had from the first openly avowed. His own account however is somewhat different, as it is given in a letter to a friend, which has been published by Mr. Adolphus.—"Single," he there says, "in a cabinet of my own forming, no soul in the house of lords to support me except two peers (Lords Denbigh and Pomfret), both the secretaries of state silent, and the lord chief justice, whom I brought myself into office, voting for me, yet speaking against me—the ground I tread upon is so hollow, that I am afraid not only of falling myself, but of involving my royal master in my ruin: it is time for me to retire." His lordship's own powers of oratory were not such as to make up for the silence of his colleagues. He expressed himself with a deliberate pomposity of utterance, his words slowly dropping out at regular intervals, which the witty Charles Townshend used to call the minister's minute guns.

Though Lord Bute retired from office he still retained the confidence of the king; and he undoubtedly nominated his immediate successors. In the following August, also, when the sudden death of the Earl of Egrémont, one of the secretaries of state, again shook the new cabinet, he engaged in a negotiation, which came to nothing, with the view of bringing Lord Chatham into office. Lord Bute's continued influence, as supposed to be exerted behind the throne, was long a favourite topic of popular declamation; but no proof of the fact was ever brought forward, and all the recent evidence which has appeared tends to show that from the time Bute ceased to be a minister, the king began gradually to rely more and more on his own judgment. Bute himself authorised his son to state "upon his solemn word and honour," that he never offered an advice or opinion concerning the disposition of offices or the conduct of measures, either directly or indirectly, by himself or any other, from the time the late Duke of Cumberland was consulted in the arrangement of a ministry in 1765." As Lord Mahon observes ('Hist. of Eng.' c. xlv.), "this statement is as to the main fact—the cessation of all intercourse between the king and the earl—quite sufficient and satisfactory." (See also Lord John Russell's 'Introduction to Bedford Papers,' vol. iii.)

According to Sir Egerton Brydges, in his edition of Collins's 'Peerage,' Lord Bute passed the last six or seven years of his life in the most deep and unbroken retirement, principally at a marine villa, which he built on the edge of the cliff at Christchurch, in Hampshire, overlooking the Needles and the Isle of Wight. Here his principal delight was to listen to the melancholy roar of the sea." "He was more fond of the sciences," it is added, "than of works of imagination; but his favourite study was botany, on which he printed at his own expense a work in nine volumes quarto, of plates appertaining only to England." Only twelve copies were printed, of which the expense amounted to 10,000*l.* Lord Bute died at his house in South Audley-street, London, on the 10th of March 1792. He had married in 1736, Mary, the only daughter of Edward Wortley Montagu, of Wortley, in Yorkshire; and by that lady, who eventually inherited a large fortune by the death of her brother, Edward W. Montagu, the traveller, he had seven sons and six daughters. His eldest son was in 1796, created Marquess of Bute, in the British peerage. A daughter, Lady Louisa Stuart, who contributed some interesting 'Introductory Anecdotes' to Lord Wharfedale's edition of Lady Mary Wortley Montagu's works, died in August 1851, when within a few days of completing her 94th year.

BUTLER, CHARLES, was born in London of a Roman Catholic family in 1750. He was the son of Mr. James Butler, who was the youngest son of Simon Butler of Appletree, Northamptonshire: his mother's name was Grano. After receiving the rudiments of education at a Roman Catholic school at Hammersmith, he was sent to the English college at Douay; and on quitting that removed to Lincoln's

Inn, where he entered on the study of the law, and ultimately practised as a conveyancer. The remainder of his life may be comprised in the history of his numerous publications. He first appeared before the public anonymously in an essay published in 1773, 'On Houses of Industry,' which chiefly related to the county of Norfolk, and beyond that county, as its author very modestly says of it, it obtained very little circulation. Five years afterwards he wrote a more important pamphlet, 'On the Legality of Impressing Seamen,' which procured for him the acquaintance of Lord Sandwich, at that time first lord of the Admiralty, who wrote a few pages in the second edition, and of Wedderburne, then solicitor-general, and afterwards Lord Loughborough. The chief arguments and authorities were taken from the speech of Sir Michael Forster, in the case of Alexander Broadfoot, who was indicted for the murder of a sailor, being one of a party that endeavoured to impress him. So little original matter is added in the pamphlet to the arguments of Sir M. Forster, that Mr. Butler afterwards refused to admit it into the general collection of his works. In the following year Mr. Butler prepared a speech, which Lord Sandwich delivered in the House of Lords, in defence of his government of Greenwich Hospital; and about the same time, in conjunction with Mr. Wilkes, he appeared as an inquirer into the authorship of Junius. A letter, including the results of their conversations, was printed without Mr. Butler's knowledge in the 'Anti-Jacobin Review,' and it is reprinted in his 'Reminiscences.' In the additional remarks made on the reprint in the 'Reminiscences,' Mr. Butler seems inclined to believe that Junius himself has never been detected; that he was of too high a rank to be bought, and that Sir Philip Francis was his amanuensis. Mr. Butler next engaged himself in the professional task of continuing and completing Mr. Hargrave's edition of 'Coke upon Littleton.' Numerous editions of 'Coke upon Littleton' followed at intervals during the life of Mr. Butler. To this work succeeded 'Horæ Juridicæ subsecivæ; being a connected series of Notes respecting the Geography, Chronology, and Literary History of the Principal Codes and Original Documents of the Grecian, Roman, Feudal, and Canon Law,' an outline of great use to the historian as well as to the lawyer. Mr. Butler also superintended a new edition of Fearn's 'Essay on Contingent Remainders,' and he contributed to Mr. Seaward's 'Anecdotes' an 'Essay on the Character of Lord Mansfield's Forensic Eloquence.' The 'Horæ Biblicæ' comes next, and is perhaps the most popular of all Mr. Butler's works: it speedily ran through five editions. The first part professes to contain an historical and literary account of the original text, early versions, and printed editions of the Old and New Testaments; the second to embrace a similar account of the Koran, the Zend-Avasta, the Kings, and the Edda. In 1806 the great change in the constitution of the Austrian dominions induced Mr. Butler to draw up, chiefly from Anderson and Koch, a succinct history of the geographical and political revolutions of the German empire. His pen for the remainder of his life was largely employed on subjects regarding his own church, which are collected in his general works. Among them are—lives of Bossuet, of Fenelon, of Abbé de Rancé, abbot of La Trappe; of St. Vincent de Paul, of Erasmus, of Grotius, of Henrie Marie de Boudon, of Thomas à Kempis, of the Chancellor L'Hôpital, &c., and of his own uncle, the Rev. Alban Butler, author of 'Lives of the Saints,' a work which Mr. Butler himself continued. The relief proposed to be given to the Roman Catholics in 1795 occasioned three books, written in conjunction with Joseph Wilkes, a Benedictine, and named from the colour of their covering the 'Blue Books.' It is needless to say that Mr. Butler was a strenuous advocate of Roman Catholic emancipation, and that much of the successful progress of that measure is to be attributed to the 'Historical Memoirs of the English, Irish, and Scottish Catholics,' 1819. Hitherto he had abstained from controversy, but the appearance of Dr. Southey's 'Book of the Church' engaged him in a series of letters to that writer, and afterwards in two replies to the present Bishop of London, and to the Rev. George Townsend. They were written in a spirit of gentleness very seldom found in similar publications. The first volume of his 'Reminiscences,' chiefly containing the history of his literary life, was published in 1822, the second in 1827. They contain some interesting details, but are expressed in the cramped style of most autobiographies. As a conveyancer Mr. Butler had full practice, and he was the first of his communion who was called to the bar after the Relief Act in 1791. He was afterwards made king's counsel. Mr. Butler died at his own house in Great Ormond-street, London, leaving behind him an unblemished character and a considerable literary reputation, June 2, 1832. (*Gentleman's Magazine*, 1832; *Reminiscences*.)

BUTLER, JAMES. [ORMOND, DUKE OF.]

BUTLER, JOSEPH, born at Wantage in Berkshire in 1692, was the son of Thomas Butler, a respectable shopkeeper, and a dissenter of the Presbyterian denomination. He received the rudiments of his education in the free grammar-school at Wantage, whence he was removed to the Dissenting Academy of Towkesbury in Gloucestershire, then superintended by Mr. Jones, who had the singular fortune of having for pupils, with the view of being ordained to the Presbyterian ministry, three young men, afterwards prelates of the Established Church—Chandler, Butler, and Secker; the two latter were contemporaries. It was here that Butler gave the first proofs of the peculiar bent of his mind to abstract speculation. Being dissatisfied with the argument 'a priori' of Dr. Samuel Clarke in his 'Demonstration of the

Being and Attributes of God,' he ventured, being then only in his twenty-second year, to express by a letter his doubts, and to offer his objections, to that acute writer. Dr. Clarke was for a time unacquainted with the name of his correspondent. The manner in which he replied to Butler's objections, and the fact of his publishing the letters in which they were conveyed, with his own answers, in subsequent editions of his work, sufficiently show that he felt the remarks of his youthful correspondent to be not without their weight.

About this time Butler was led to a more particular examination of the tenets of the religious body to which he belonged, the result of which, after some natural opposition from his father, accompanied with remonstrances from several respectable Presbyterian divines, was a secession from Presbyterianism, and a conformity to the Church of England. His views being thus changed, he entered Oriol College, Oxford, in March, 1714, and soon after was admitted into holy orders. While at Oriol he formed a friendship with Mr. Edward Talbot, the second son of Dr. Talbot, bishop of Durham, a circumstance to which he appears to have owed his subsequent promotion. In 1718 he was recommended by Mr. Talbot and Dr. Clarke to Sir Joseph Jekyll, Master of the Rolls, by whom he was appointed preacher at the Rolls. In 1721, on being presented by Bishop Talbot to the rectory of Haughton, near Darlington, he divided his residence between the Rolls and his parochial benefice. In 1725 he received Stanhope, one of the wealthiest but most retired rectories in England, from the same patron, in exchange for Haughton. In 1726 he resigned the Rolls preachership, and went to reside upon his rectory of Stanhope. In the same year he published a volume of fifteen sermons preached at the Rolls. These sermons are, upon his own acknowledgment, of a somewhat abstract character, which arises as much from the method as from the scope of his argument, which is to demonstrate vice to be "a violation or breaking in upon our nature." He wished to show that man was formed for virtue, and that vice is a departure from his intended condition; to prove that religion and virtue were primarily natural to man; that they constitute order, whereas their opposite is disorder. Although his object might have been effected by the more direct proof that "vice is contrary to the nature and reason of things," he chose the other method, as "in a peculiar manner adapted to satisfy a fair mind, and as more easily applicable to the several particular relations and circumstances in life." The first three sermons are entitled 'Upon Human Nature; or, Man considered as a Moral Agent.' That man is made for society, is evident from all we know of him; the very parts of his body show dependence one on another; and it is no wresting of words or of argument to carry the comparison further, and to show that mankind in general is a body made up of a number and variety of members, like the natural body. As it is the office of his own several component parts, or members, each to assist and benefit the others, so it is the duty of each member of society to promote the general welfare; and any deviations from this rule, which is in fact a rule of nature, have been the deviations of ignorance and sin. The author establishes his point by three proofs. First, there is in man a natural principle of benevolence, which is, in its degree, to society what self-love is to the individual; and that there is such a principle, appears from the existence and operation of those feelings which are called affections. Are we not inclined to love, to friendship, to compassion? That we are thus inclined in any degree is enough for the purpose. It matters not how narrow and obscure these feelings are. If they exist at all, they "prove the assertion, and point out what we were designed for." Secondly, there are several affections or passions distinct both from benevolence and self-love, which in general contribute and lead us to public good as really as to private. Thirdly, there is a principle of reflection by which men approve or disapprove of their own actions; this is conscience, which faculty tends to restrain men from doing mischief to one another, and leads them to do good. That man has evil dispositions is no objection to this mode of argument, for his ungoverned passions incline him to act against his own interests as well as against the interests of others. The pure nature of man then would lead him to right conduct in society, or what we denominate virtue. To understand the purpose of a being, we must ascertain the bent of his true nature; and where the true nature is known, there can be no difficulty. The illustration used is that of the eye. The eye is designed for vision; and, as we are not to judge of first design from any state of defect into which it may have casually fallen, neither are we to judge of the true nature of man from any present perversion of inclination; and the objection to his argument, "that nature is that to which any man is most inclined, and that the following of nature is but a following of inclination, which may be different in different individuals," is answered by an explanation of the term. "By nature," he says, "is often meant no more than some principle in man, without regard either to the kind or degree of it." This however is manifestly wrong; for the same person may have contrary principles, driving or urging him contrary ways. Again, "Nature is frequently spoken of as consisting in those passions which are strongest, and most influence the actions." This is wrong too. Men are certainly now vicious, as it were, by nature; but they are so because their nature is deteriorated, and the argument refers to the original and pure nature. In neither of these senses is man's primary nature to be received, because, to follow nature in either of them, would be a wandering from the original design, and a following of

what had become faulty. The text of the second sermon shows the meaning in which the word nature ought to be used. "For when the Gentiles which have not the law, do by nature the things contained in the law, these having not the law are a law unto themselves. Which show the works of the law written in their hearts, their consciences also bearing witness, and their thoughts the meanwhile accusing or else excusing one another." Conscience makes man a moral agent. It justifies and it condemns. It cannot justify what is wrong; it cannot condemn what is right; right therefore is natural to man, and determined by the testimony of conscience alone. After establishing the supremacy of conscience, he forms his notion of human nature, in the following of which virtue is said to consist, and the deviation from which is vice. "As the idea of a civil constitution implies in it united strength, various subordinations, under one direction, that of the supreme authority, the different strength of each particular member of the society not coming into the idea; whereas, if you leave out the subordination, the union, and the one direction, you destroy and lose it: so reason, several appetites, passions, and affections prevailing in different degrees of strength, is not that idea or notion of human nature; but that nature consists in these several principles considered as having a natural respect to each other, in the several passions being naturally subordinate to the one superior principle of reflection or conscience. Every bias, instinct, propension within, is a real part of our nature, but not the whole. Add to these the superior faculty, whose office it is to adjust, manage, and preside over them, and take in this its natural superiority, and you complete the idea of human nature." A deviation from it, or its violation, he thus defines: "And as in civil government the constitution is broken in upon and violated by power and strength prevailing over authority, so the constitution of man is broken in upon and violated by the lower faculties or principles within prevailing over that which is in its nature supreme over them all." Man indeed cannot be considered as left to himself, to act as present inclination may lead him: the very ability of putting the questions, "Is this I am going about right, or is it wrong? Is it good, or is it evil?" implies an obligation to act rightly, for it shows that he has a natural conception of right. The objection, "Why should we be concerned about anything out of and beyond ourselves?" is thus removed. Are we, or can we be, indifferent to disgrace, neglect, or contempt? Man is by nature disposed to action; and "upon comparing some actions with this nature, they appear suitable and correspondent to it: from comparison of other actions with the same nature, there arises to our view some unsuitableness or disproportion." Those which are most suitable to it are the law or design of nature; and that which promotes real happiness, or the true purpose of nature, is virtue.

These sermons contain the germ of those principles of analogy which were afterwards developed by the author in a separate work; when viewed in all their parts and bearings, they must be considered as one of the most successful attempts to explain the true nature of man as a moral agent, and to discover the springs of human action. It has been observed by a recent writer (Austin, 'The Province of Jurisprudence determined,' p. 109), "In so far as I can gather his opinion from his admirable sermons, it would seem that the compound hypothesis (that is, the hypothesis compounded of the hypothesis of utility, and the hypothesis of the moral sense) was embraced by Bishop Butler. But of this I am not certain: for, from many passages in those sermons, we may infer that he thought the moral sense our only index and guide." In this remark we concur: in several passages Butler seems to consider the moral sense as that by which we judge of the character of actions, and yet there are other passages which appear to prevent us from adopting this conclusion.

It is unnecessary to analyse the other admirable discourses: that on the government of the tongue is a masterpiece of its kind; and the sermons on resentment and forgiveness of injuries are equally remarkable for the profound insight into the principles by which human society is held together, and for their practical utility.

To this volume, in a later edition, he appended six other sermons, preached on certain public occasions. One of these sermons (the fourth) is well calculated to meet certain objections that have been made to the education of the poor.

His residence at Stanhope continued until 1733, when he was drawn from his retirement by being appointed chaplain to Lord Chancellor Talbot. About the same time he was presented by his patron to a prebend in the church of Rochester. This was done through the interposition of his friend and fellow-pupil Secker, who was anxious for his re-appearance in the world, and wished to see him in some more conspicuous station than the rectory of Stanhope. Secker, having taken occasion to mention him to Queen Caroline, her Majesty remarked that she thought he was dead; and, not satisfied with his assurance to the contrary, she inquired of Archbishop Blackburne, who replied, "No, madam, but he is buried." In 1736 Butler was appointed clerk of the closet to the queen, upon whom he was in constant attendance until her death in the following year. He had lately produced his great work, 'The Analogy of Religion, Natural and Revealed, to the Constitution and Course of Nature,' which he had presented to her Majesty before publication, and which he dedicated to the Lord Chancellor Talbot, "in acknowledgment of the highest obligations to the late Lord Bishop of Durham and to himself." In this

work it was his aim to demonstrate the connection between the present and a future state, and to show that there could be but one author of both, and consequently one general system of moral government by which they must be regulated. Of this admirable work it has been justly observed—"Upon the whole, as our author was the first who handled the argument in proof of religion from analogy in a set treatise, he has undeniably merited the character of a first discoverer; others indeed had occasionally dropped some hints and remarks of the argument, but Dr. Butler first brought it to a state of perfection. The treatise contains the finishing and completion of that way of reasoning, the foundation whereof was laid in his sermons."

The year after the death of Queen Caroline, Butler was made bishop of Bristol; and in 1740 he was presented to the deanery of St. Paul's, on which occasion he resigned the rectory of Stanhope. One of his first acts of patronage was to bestow on his old master, Mr. Barton, master of the school at Wantage, the rectory of Hutton in Essex. Butler was always liberal in the expenditure of his money; he laid out on the episcopal palace of Bristol 4000*l.*, and he was a munificent benefactor to charitable institutions. In 1746 he was appointed clerk of the closet to the king; and in 1750 was translated to the see of Durham, vacant by the death of Dr. Edward Chandler, who had also been a pupil, as already mentioned, at the academy at Tewkesbury. The short time that he held this see allowed him to make only one visitation of his diocese. The charge which he delivered to his clergy on that occasion subjected him to much animadversion. He had begun by lamenting the general decay of religion, and noticed it "as a complaint by all serious persons." As an aid in remedying this evil he recommended his clergy to "keep as well as they were able the form and face of religion with decency and reverence, and in such a degree as to bring the thoughts of religion often to the minds of the people; and to endeavour to make this form more and more subservient to promote the power and reality of it." He insisted that although the form might and often did exist without the substance, yet that the substance could not be preserved among mankind without the form. He instanced the examples of heathen, Mohammedan, and Roman Catholic countries, where the form had been very influential in causing the superstition to sink deeply into the mind; and he inferred that true religion would, by the same rule, sink the more deeply with such aid into the minds of all who should be serious and well disposed. These observations, which, like all the remarks of this profound thinker, show an intimate acquaintance with human nature, were strongly censured as savouring of popery, and he was particularly attacked in a pamphlet entitled 'A Serious Inquiry into the use and importance of External Religion, occasioned by some passages in the Right Reverend the Lord Bishop of Durham's Charge to the Clergy of that Diocese.' The very sentence in which he says that the form is to be made "subservient to promote the reality and the power," ought to have been sufficient to protect him. Bishop Butler did not long enjoy his last preferment. His health rapidly declined, and he died at Bath on the 16th of June 1752, and was buried in Bristol cathedral. His writings, though not numerous, are sufficient to show the extent of his knowledge, the solidity of his judgment, and the great powers of his mind. His statement of a question is fair and candid, his reasoning is close and sincere, and his conclusions nearly always just and convincing. His piety was unostentatious but fervent, with something from natural disposition and the grave direction of his studies approaching to gloom. A man whose thoughts were so seriously employed, whose inquiries were of so abstruse a character, could hardly be otherwise. Still "no man ever more thoroughly possessed that meekness of wisdom which the apostle enjoins; he had noticed the expression for its beauty; his heart and disposition were conformed to it, and in high as in humble life it was uniformly manifested in his conversation. Neither the consciousness of intellectual strength, nor the just reputation which he had thereby attained, nor the elevated station to which he had been raised, in the slightest degree injured the natural modesty of his character, or the mildness and sweetness of his temper." His intercourse with clergy and laity was open and free; his income he considered to belong to his station, and not to himself; and so thoroughly was this feeling of his understood that his relatives never indulged the expectation of pecuniary benefit from his death. It was his remark, on his promotion to Durham, "It would be a melancholy thing in the close of life to have no reflections to entertain oneself with, save that one had spent the revenues of the bishopric of Durham in a sumptuous course of living, and enriched one's friends with the promotions of it, instead of really having set oneself to do good, and to promote worthy men." It has already been stated that he was accused of a disposition to popery, in consequence of some expressions in his charge to the clergy of Durham. This charge was repeated by an anonymous writer fifteen years after his death, and was made to rest chiefly on the circumstance of his having put up a cross in the episcopal chapel of Bristol. It was also asserted that he had died in communion with the Church of Rome. His friend Secker, at that time archbishop of Canterbury, satisfactorily disproved the charge. He did not deny that the bishop had erected the cross, but this, he contended, was no manifestation of popery; it was merely as an emblem and a memorial of the Christian faith. With respect to his having died in communion with the Church of Rome, the circumstance was not even hinted at until fifteen years

after his death; and it is clearly shown, by the testimony of those who attended him in his last illness, that there is no truth in the statement. Bishop Butler was never married. His works are collected in two volumes, 8vo, which have been several times reprinted.

BUTLER, SAMUEL, was born at Strensham, in Worcestershire, about 1612, and educated in the Free School at Worcester. The finances of his father, who was a small farmer, would not allow him to be matriculated at Cambridge, to which university he desired, and his proficiency in learning entitled him to proceed. Accordingly, he engaged as clerk to Mr. Jeffereys, an eminent justice of the peace, of Carlsebrook, in his native county. Here in his leisure hours he employed himself in studying history, poetry, music, and painting; some specimens of his skill in the last-named art existed not long since, and it is said were not worth preserving. We know not how he afterwards obtained an introduction to Elizabeth countess of Kent, but under her patronage he had access to a well-stocked library, and enjoyed the conversation of the learned Selden. He entered afterwards into the service of Sir Samuel Luke, a knight of ancient family in Bedfordshire, who had been one of Cromwell's commanders, and is supposed to have been the prototype of the character of Hudibras. After the Restoration he became secretary to Richard, earl of Carbury, Lord President of the Principality of Wales, who, on the revival of the court of the Marches, made him steward of Ludlow Castle; soon after which he married Mrs. Herbert, a gentlewoman of good family, whose fortune was lost to him by being invested in bad securities. It is also said that he was secretary to the second George Villiers, Duke of Buckingham, when he was chancellor of Cambridge. With that nobleman, with the Earl of Dorset, and with many other wits of the time, he certainly lived on terms of familiar intercourse; yet he died, according to the common report—for which however there does not appear to be any real foundation—in great poverty in 1680, and was buried in the churchyard of St. Paul's, Covent Garden, at the expense of his friend Mr. William Longueville, a bencher of the Inner Temple, who became possessed of his papers.

The first part of Hudibras, containing three cantos, was published in 1663, and soon became eminently popular, and was much quoted even at court. In the next year appeared the second part. The third part, which does not bring the poem to a conclusion, was not published till 1678. Three small volumes of posthumous works were published, as Johnson says, "I know not by whom collected or by what authority ascertained." Two more, undoubtedly genuine, were afterwards printed by Mr. Thyer of Manchester. Some of his posthumous poems are very obscene.

Such is the scanty record of perhaps the most witty writer in our language. "The events of his life," says his biographer, whom we have already cited, "are variously stated, and all that can be told with certainty is that he was poor." On a work so well known as Butler's 'Hudibras' it is scarcely necessary to make a single remark. Voltaire well said of it that it unites the wit of Don Quixote with that of the Satyre Menippée. Hudibras, the hero, is a Presbyterian justice, who, fired with the same species of madness as the Don Quixote of Cervantes, undertakes the reform of abuses, in company with his Squire Ralph, an Independent clerk, with whom he is almost always engaged in controversy. This union of the knight errant and the Presbyterian is faulty in the outset, and in the conduct of the poem there is little to satisfy the reader. The adventures are tiresome and tedious, but the dialogues are carried on with a strain of wit which appears to be exhaustless. The characters which were before the eyes of our forefathers have passed away, but so great was Butler's knowledge of human nature, that many of his distichs have become proverbial. However easy may appear the style of burlesque which he has adopted, and however frequently a similar course has been followed after him, it is not among the least proofs of Butler's extraordinary excellence that he is still without a rival among his imitators. The standard edition was published in 1744 in two vols. 8vo, with laboriously illustrative notes by Dr. Gray. In 1721 John Barber, citizen and one time Lord Mayor of London, erected a cenotaph in Westminster Abbey to Butler's memory, which provoked a just epigram from Samuel Wesley, and a sarcasm, which appears to have been little merited, from Pope.

BUTLER, SAMUEL, D.D., Bishop of Lichfield, was born at Kenilworth, Warwickshire, 30th of January, 1774. His father was Mr. William Butler, a respectable inhabitant of the village. He was educated at Rugby School, and in 1792 was entered at St. John's College, Cambridge. His university career was very successful: besides obtaining three of Sir William Browne's medals, two for the Latin ode and one for the Greek ode, he was elected in 1793 to the Craven University scholarship, and, after taking his bachelor's degree, he gained the first of the Chancellor's two gold medals that are annually given for classical scholarship; and both in 1797 and 1798 he carried off the Members' prize for the best Latin Essay by Bachelors of Arts. In 1797 he had been elected a Fellow of his College, and in 1798 he accepted the appointment of head master of Shrewsbury School. In 1802 he was presented by the Karl of Clarendon to the vicarage of Kenilworth; in 1807, by Bishop Cornwallis, to a prebendal stall in Lichfield Cathedral; and in 1822 he was made archdeacon of Derby. He had taken his degree of D.D. in 1811. Under Dr. Butler Shrewsbury School, the reputation of which had fallen very low,

gradually rose to eminence, and he continued to preside over it till he was promoted, in 1836, to the see of Lichfield and Coventry, or, as it is now entitled, of Lichfield, the archdeaconry of Coventry having been annexed the same year to the diocese of Worcester. But from that time his health rapidly gave way, and his death took place at Ecclehall Castle, Staffordshire, the episcopal residence, on the 4th of December 1839. He had married, in 1798, Harriet, fifth daughter of the Rev. Dr. Apthorp, vicar of Cropton and rector of St. Mary-le-Bow; and he left a son and two daughters.

Dr. Butler is stated to have been much beloved in private life; his public distinction was derived from his able conduct of his school and his steady profession of liberal or Whig politics. Of his literary works the most considerable is his edition of Æschylus, which he was selected to superintend by the Syndics of the Cambridge University Press about the time when he removed to Shrewsbury, and the first of the four 4to volumes of which appeared in 1809, the last in 1816. It is also printed in 8 vols. 8vo. This edition, in which the text is that of Stanley, has not much reputation. The first volume soon after its appearance was made the subject of an article in the 'Edinburgh Review,' No. 29 (October, 1809), which immediately drew from Butler 'A Letter to C. J. Blomfield, containing Remarks on the Edinburgh Review of the Cambridge Æschylus,' 8vo, 1810. A more elaborate criticism on the second volume appeared in the same work, No. 38 (for February, 1812). Dr. Butler's best known work is his 'Sketch of Modern and Ancient Geography, for the use of Schools,' 8vo, which originally appeared at Shrewsbury in 1813, a work of little value when first published, and wholly obsolete now; and the two Atlases which the author afterwards published to be used along with it may be described in the same terms. Dr. Butler published in 1797 an 8vo volume, entitled 'M. Musuri Carmen in Platonem, Ia. Casauboni in Jos. Scaligerum Ode; acedunt Poemata et Exercitationes utriusque Lingue;' and 'A Praxis on the Latin Prepositions,' 8vo, 1823 (afterwards three times reprinted). He also translated Lucien Bonaparte's poem of 'Charlemagne,' in conjunction with the Rev. F. Hodgson; and he published sundry single sermons at divers times. Dr. Butler left a valuable collection of Aldine editions, and also of Greek and Latin manuscripts.

BUTTMANN, PHILIP KARL, an eminent scholar and mythologist, was born on the 5th of December 1764, at Frankfurt-on-the-Main. In the latter part of his life he dropped his second Christian name, but they both appear on the title-pages of his earlier works. He was descended from the French Protestants who took refuge in Germany from the persecutions of Louis XIV. His father, Jacob Buttmann, a respectable stationer, placed him, at an early age, under the care of Purman, the learned rector of the gymnasium of his native place. In 1782 he went to Göttingen to follow up his classical investigations under the superintendance of Heyne. In 1786, after a short stay at Frankfurt, he visited his brother-in-law, Dr. Ehrmann of Strasbourg. There he became acquainted with Schweighäuser, who was then engaged on his edition of 'Polybius,' and Buttmann made his first appearance as a philologist in some notes which he furnished to that laborious work. Shortly after this he was appointed geographical teacher to the young prince of Anhalt Dessau, in which situation he remained for about eight months. In 1788 he went to Berlin, and in the course of a year or two, became assistant librarian to the king, adding to his rather inadequate salary by taking private pupils, and writing for the booksellers. In 1792, he published a short Greek grammar, which at once established itself in all the schools of Germany. Buttmann was appointed, in 1796, secretary to the royal library, and four years afterwards he was made a professor in the Joachimthalsche gymnasium, the high school of Berlin; he held this appointment till 1808, when he was appointed one of the original professors in the new university. He was elected a member of the royal academy of sciences in 1806; but so great was his reputation, that his 'Essay on Apollo and Artemis' was inserted in the transactions of that society three years before he entered it. Shortly after his appointment as professor in the university he was selected from his colleagues as classical tutor to the prince royal. After Spalding's death, in June, 1811, Buttmann was elected his successor as secretary to the historical philological class of the royal academy of sciences; but he felt this office so irksome, that nothing but his regard for the interests of the academy could have induced him to retain it. The peculiar constitution of the society however induced him to accept this appointment, and his pangyriat adds that in conducting its business, he introduced many convenient abridgments of formalities without departing from essentials. In 1821 he was appointed head librarian to the king, and in 1824 was made a knight of the Prussian Red Eagle of the third class. From this year till his death he was afflicted with repeated attacks of apoplexy: he died on the 21st June 1829. Buttmann was married, in 1800, to the eldest daughter of Dr. Selle, the king's physician, by whom he left a family; his son Augustus republished, in 1833, his father's well-known edition of 'Demosthenes' Oration against Midias.' Buttmann wrote his own life, up to the time of his becoming a member of the Berlin academy, in the third part of Löwe's collection ('Bildnisse jetzlebender Berliner Gelehrter mit Selbstbiographien').

The best known of Buttmann's writings are:—I. His three celebrated Grammars: (1), the School Grammar; (2), the intermediate Greek Grammar, of which a translation by Boileau was published in

London in 1833, and another in America by Professor Robinson; (3), his complete Greek Grammar, which however only contains the Accidence. II. His 'Lexilogus,' which has been well translated by Mr. Fishlake. III. His 'Mythologus,' a collection of his mythological and historical essays.

A memorable feature in Buttman's literary character was his willingness to give assistance to other writers. He began with assisting Schweighäuser; and Heindorf, Biester, Wolf, Spalding, and Niebuhr, successively received and acknowledged his valuable aid. In all his literary labours Buttman was distinguished for an honest and discriminating scepticism; he never doubted however but with a wish to find out the truth, and in contriving methods of fathoming a difficulty he never was exceeded in ingenuity. His private character was very amiable, and doubtless Schleiermacher was justified in saying that "there was hardly one in the circle of his literary acquaintances so well known, so unanimously appreciated, and so entirely beloved as he was."

BUTTON, SIR THOMAS, one of the early Arctic navigators, was an able seaman in the reign of James I., whose son (the Prince Henry) seems to have been his first patron. In 1612, about three years after the unhappy death of the navigator Hudson, the merchants of London engaged Button to follow up Hudson's discoveries with two ships, the 'Resolution' and the 'Discovery.' Crossing the Atlantic, Button entered Hudson's Straits to the south of Resolution Islands, and then keeping without deviation a western course, he reached Southampton Island. Sailing still to the west, he fell in with the American continent, in 60° 40' N. lat. From this point of the mainland, which he named 'Hope Checked,' he made away to the south, and on the 15th of August 1612, he discovered the mouth of Nelson's River, in 57° 10' N. lat. At this point he determined to winter; and to secure his ships against the icebergs, he caused strong piles to be driven into the sea. Button, like several recent commanders of Arctic expeditions, showed great ability in amusing his men, in order to keep up their spirits against the depressing effects of inactivity: he proposed to them questions connected with navigation and mathematics, and thus mingled instruction with amusement. During their detention here several of the sailors died. On the return of spring he employed his ships' companies in killing game, which was so abundant that 1800 dozen of white partridges were brought in during their stay.

The river thawed on the 16th of February, and in two months, the sea being clear of ice, he explored the bay in the neighbourhood of Nelson's River, and named it Button's Bay. He then went north as far as lat. 65°, and fell in with a cluster of islands, which he called Mancel's Islands (now Mansfield's). Proceeding to Cape Chidley, he discovered the passage between that cape and Labrador, and thence reached England in sixteen days, in the autumn of 1613. He was the first navigator that reached the eastern coast of America through Hudson's Straits. Button never published an account of his voyage; all that we have from his journal is an extract in Purchas. The government of the day made him a knight.

(Purchas, *His Pilgrims*; Cooley, *Hist. Maritime Discoveries*.)

BUXTON, JEDEDIAH, was born at Elmlton, near Chesterfield, about the year 1705. His grandfather had been clergyman of the parish, and his father was schoolmaster of the same place; but Jedediah was so illiterate that he could not even write, and his mental faculties, with one exception, were of a low order. He possessed however remarkable facility in performing arithmetical calculations, and when he fairly understood a problem, which it was not easy for him to do if it was a little complicated, he solved it with wonderful rapidity. He was altogether incapable of looking into the relation of things, except with respect to the number of parts of which they were composed. After hearing a sermon he knew nothing more of it than that it contained a certain number of words, which he had counted during its delivery. If a period of time were mentioned he began calculating the number of minutes which it included; and if the size of any object were described, he would at once compute how many hair's-breadths it contained. His ideas were comparatively childish; and his mind was only stored with a few constants which facilitated his calculations, such as the number of minutes in a year, and of hair's-breadths in a mile. His system of mental arithmetic was not founded upon any sound principles; in fact he could scarcely be said to have a system. He would, for instance, in order to ascertain the product of 478 multiplied by 100, proceed first to multiply it by 5, and then by 20, instead of at once adding a couple of ciphers.

His condition in life appears to have been either that of a small land-owner or a day-labourer; but probably the former. Having a strong desire to see the king, he walked up to London to gratify this wish, but from some circumstance or other he did not see him. During his stay in the metropolis, Jedediah was examined in calculation by several members of the Royal Society. He was taken to see Garrick in Richard III., and during the performance occupied himself in counting the number of words which each of the actors made use of, and the quantity of steps in a dance; but he acknowledged that the instrumental music, with its complication and variety of sounds, baffled his skill. In June 1754 a portrait of Buxton appeared in the 'Gentleman's Magazine,' with a short account of his life. He is represented in the print as being in his forty-ninth year. His death occurred between 1770 and 1780. He was married, and had a family.

BUXTON, SIR THOMAS FOWELL, BART., was born on the 1st of April 1786, at Castle Hedingham in Essex. For his early education he was sent to the school of Dr. Charles Burney, of Greenwich; he was afterwards intrusted to the private tuition of a clergyman at Donnybrook in Ireland, and subsequently became an undergraduate at Trinity College, Dublin, where he highly distinguished himself. On the 13th of May 1807 he married Hannah, the fifth daughter of John Gurney, of Earham Hall, near Norwich, by whom he had several children. Of these, the present Sir Edward North Buxton was born in 1812.

In 1808 Mr. Buxton entered the brewing establishment of Truman, Hanbury, & Co., in which his uncles, Sampson and Osgood Hanbury, were partners. In 1811 Buxton himself became a partner, and soon after obtained the principal management of the brewery, to the duties of which he closely and successfully applied himself for several years.

Mr. Buxton's first appearance in public affairs was at a meeting of the Norfolk and Norwich Auxiliary Bible Society, in September 1812. In 1816 he took a prominent part at a large meeting held at the Mansion House, London, to inquire into the best means of relieving the extreme distress of the population of Spitalfields. As the result of this meeting, a sum of about 44,000*l.* was collected for the Spitalfields weavers. His attention was also directed to the state of prison discipline; he inspected many prisons, and published an 'Inquiry' into the subject, illustrated by descriptions of several jails, and an account of the proceedings of the Ladies' Committee in Newgate, the most active of whom was Mrs. Elizabeth Fry, his sister-in-law.

In 1818 Mr. Buxton was elected member of parliament for the borough of Weymouth, after a severe contest; and in 1819 he took a prominent part in the debates of the House of Commons on prison discipline, the amelioration of the criminal law, the suppression of lotteries, and the abolition of the practice of burning widows in India. He continued to represent the borough of Weymouth for nearly twenty years, during which period he was assiduous in the performance of his parliamentary duties (few members so frequently addressed the House), nor did he ever slacken or deviate in the assertion and working out of those benevolent principles with which he started in public life.

But it is with the Anti-Slavery cause that Fowell Buxton's name is most closely and honourably associated. An earnest coadjutor of Mr. Wilberforce in his efforts on behalf of the oppressed negroes, Mr. Buxton succeeded to that philanthropist's place in the House of Commons as the acknowledged leader of the emancipationists. On the 15th of May 1823, Mr. Buxton brought forward a resolution to the effect "that the state of slavery is repugnant to the principles of the British constitution and of the Christian religion, and that it ought to be gradually abolished throughout the British colonies, with as much expedition as may be found consistent with a due regard to the well-being of the parties concerned." In opposition to this motion, Mr. Canning, on the part of the government, moved and carried certain amendments, one of which asserted the anxiety of the House for the emancipation of the slaves "at the earliest period that shall be compatible with the well-being of the slaves themselves, with the safety of the colonies, and with a fair and equitable consideration of the rights of private property." During the struggles and agitations, both at home and in the colonies, for the ensuing ten or twelve years, Mr. Buxton was steadily engaged in the prosecution of the cause of freedom, encouraged and supported by the moral feeling of the country, and in parliament by Brougham, Lushington, Macaulay, and a few other earnest opponents of slavery. At length, when in 1833 the secretary for the colonies, Mr. Stanley (now Earl of Derby), brought forward his plan for the abolition of slavery, Mr. Buxton, although dissatisfied with the apprenticeship and compensation clauses, gladly accepted the measure, and he had very soon the additional satisfaction of finding the apprenticeship abandoned by the slaveholders themselves.

In 1837 he lost his election for Weymouth, and from that time refused to be again put in nomination for that or any other borough. In 1838 he was chiefly occupied with the preparation of a work on the best means of extirpating the African slave-trade. In 1839-40 the state of his health caused him to seek relaxation in a continental tour. At Rome he visited the prisons, and suggested improvements. On his return in 1840 the crown conferred on him the dignity of a baronet. On the 1st of June a public meeting in behalf of African civilisation was held in Exeter Hall, at which Prince Albert presided, and the first resolution was moved by Sir T. F. Buxton. The result of this movement was the well-meant but disastrous expedition to the Niger in 1841. During 1843 and 1844 Sir Thomas Fowell Buxton found his health declining, and his death took place on the 19th of February, 1845, at his residence, North-Repps Hall, near Aylsham in Norfolk, at the age of 59.

Sir Thomas Fowell Buxton was a man of singularly commanding person; he was more than six feet four inches in height, and of a fine expression of countenance. As a speaker he was somewhat heavy both in style and delivery, but the influence arising from his high character always secured him a respectful attention. He had no great reach of intellect or imagination, and except when roused on exciting occasions, he had little of the fervour of an orator; but in collecting facts his industry was untiring, and in exhibiting and commenting upon them

he was zealous and persevering, reiterating his attacks till his object was attained or found to be unattainable. He gave a liberal support to many benevolent and philanthropic institutions, particularly to those in the vicinity of his residence, and in Spitalfields, the locality of his brewery.

(*Memoirs of Sir Thomas Powell Buxton, Bart.*, edited by his son, Charles Buxton, Esq., 1848.)

BUXTORF, a family celebrated for its attainments in Hebrew literature.

JOHN BUXTORF was born on Christmas-day 1564 at Camen in Westphalia, of which place his father was Calvinist minister. He was educated at Marburg and Herborn under Piscator, and afterwards received instructions at Basel and Geneva from Gryneus and Theodore Beza. He occupied the Hebrew chair at Basel for thirty-eight years of his life, and so attached was he to that university that he declined many advantageous offers of a similar occupation both at Saumur and at Leyden. Besides maintaining a large correspondence with all who were skilled in the leading object of his research, he lodged and supported in his house many learned Jews, with whom he familiarly conversed during his leisure hours respecting their language. He died September 13th, 1629, after having published, besides many separate tracts, more than one grammar and lexicon of the Hebrew and Chaldee tongues, a 'Concordance,' and a 'Hebrew Bible' with the notes of the Rabbins.

JOHN BUXTORF, the younger, son of the preceding, was born at Basel, August 13th, 1599, and exhibited precocity so remarkable that in his fourth year it is said that he understood German, Latin, and Hebrew, a statement doubtless greatly exaggerated. After cultivating Hebrew in France, Germany, and Italy, he succeeded his father at Basel in 1630, where he died, August 16th, 1664. Besides collecting, augmenting, and editing many of his father's works, he was the author of several original treatises on Hebrew literature.

JOHN JAMES, son of the preceding, like his father and grandfather, was professor of Hebrew at Basel, where he was born September 4th 1645, and died April 1st 1704. He travelled in Holland, France, and England, and was received everywhere with honour, especially at Cambridge. He printed nothing in his lifetime but a preface to his grandfather's work entitled 'Tiberias,' which is an historical and critical vindication of the Masoreth points, the origin of which he assigns to Eedras; but he left behind him many manuscripts connected with Rabbinical literature. Another JOHN, nephew to the above, was also professor of the Oriental languages at Basel, and died in 1732, leaving a son to distinguish himself by similar learning.

The works of the Buxtorfs greatly advanced the progress of Hebrew literature, and the depth of their learning has never been disputed. By the Romanists in general they have been regarded as too much addicted to Rabbinical fancies, and in the controversy respecting the Hebrew points, their espousal of them has been a frequent object of attack.

BYNG, GEORGE, VISCOUNT TORRINGTON, was the eldest son of John Byng, Esq., of Wrotham in Kent, and was born in 1663. He entered as a volunteer in the navy at fifteen years of age. From 1681 to 1684 he was engaged as a cadet in the land service with the garrison of Tangiers, where he received promotion first as ensign, afterwards as lieutenant. In the following year, while acting as lieutenant on board the 'Phoenix' in the East Indies, he was desperately wounded in an action with a Zinganeze pirate. In 1688 he was particularly active in attacking the fleet to the interests of the Prince of Orange, and he afterwards served with distinction under Sir G. Rooke and Admiral Russell. In 1706 he was commissioned vice-admiral of the red, and returned member of parliament for Plymouth, which borough he represented till he was created a peer in 1721. His services obtained for him the dignity of baronet in 1715. In 1718 he totally defeated a Spanish fleet off Messina, and he was finally rewarded with some of the highest professional honours, as Rear-Admiral of England and treasurer of the navy; he was also made a member of the Privy Council, Baron Byng of Southhill in the county of Bedford, Viscount Torrington in Devonshire, knight of the Bath, and first lord of the Admiralty, in which exalted station he died on January 17, 1732-33.

BYNG, JOHN, fourth son of the preceding, by Mary, daughter of James Master, Esq., of East Langdon in the county of Kent, was born in 1704, and entered early into his father's profession, in which he made the usual progress through subordinate stations. In 1756 he was appointed to command a squadron of ten ships of the line in the Mediterranean, destined for the relief of Minorca, at that time menaced by the French, and hoisted his flag accordingly on board the *Ramilies*. His equipments were inadequate to the service required, and on touching at Gibraltar to take in provisions and to refit, he learned that not less than twelve sail of the line, numerous frigates, and a large flotilla of transports from Toulon, had already landed 19,000 men in Minorca, and that the whole of the island, excepting Fort St. Philippe, was reduced. A council of war declared, on the unanimous authority of officers well acquainted with the island, that relief under these circumstances was impossible. Nevertheless Byng proceeded, and made an unsuccessful attempt to establish a communication with the garrison by his frigates. An engagement with the French squadron under the Marquis de la Galissonière ensued, and the fleets separated after an

indecisive action in which Byng took little part. The clamour raised at home was directed as much against the ministry, who had neglected to fit out the fleet properly, as against the admiral, who had fought languidly; but the cabinet resolved to sacrifice Byng in the hope of securing their own reputation. Such an object was assisted by Byng's professional unpopularity; his habits were austere; he was a rigid disciplinarian; and he had no brilliant former service to urge in his favour. He was accordingly superseded, and brought to a court-martial. It appeared from the evidence that he had not been anxious to engage, but ample testimony was borne to his courage. In his defence he inveighed against the policy of the enterprise, showed the little chance of victory which the crippled state of his ships permitted him to entertain, and the calamitous results which must have followed defeat. After a long trial he was found guilty of not having done his utmost, sentenced to be shot, but unanimously recommended as a proper object of mercy. Yet despite the recommendation of his judges, and the many representations in his favour, the sentence was executed at Portsmouth on March 17, 1757. Byng met his fate with calmness and fortitude; and posterity has done justice to his memory.

BYNKERSHOEK, CORNELIUS VAN, was born at Middelburg, in Zealand, on the 29th of May, 1673. His father, who was a merchant, paid great attention to his education. He was sent when about seventeen years of age to the university of Franeker, at that time a seat of learning of considerable reputation, where after two years' study he began to apply himself sedulously to jurisprudence, and in the course of the two following years wrote three disputations, which gained him great credit by the erudition and judgment displayed in them. After taking the degree of Doctor in the year 1694, he went to practise as an advocate at the Hague, where was held the supreme court of justice for the provinces of Holland, Zealand, and West Friesland.

In 1703 he was elected by the states-general a member of the Supreme Court. As such he was called upon to administer the common law of his own country, which, as he describes it, besides being grossly defective, was vague, uncertain, and obscure. Bynkershoek saw and pointed out the necessity of having some fixed standard to appeal to. He had always admired the Roman law for its manly simplicity, and valued it highly as furnishing the soundest principles of legal decision. Having now a practical object in view, he pursued his studies with greater ardour. About 1710 he published his first work of any great importance, the 'Observationes Juris Romani,' consisting, as its title imports, of a collection of detached dissertations and criticisms. In 1719 appeared under the title of 'Opuscula varii Argumenti,' a collection of treatises, which he had written at different times. One of these, which he had before published in 1695, soon after his coming to the Hague, contained the substance of his three academical disputations. On the 26th of May 1724 he was appointed by the states-general president of the supreme court: but the activity of his intellect was not slackened by promotion, nor confined to the practical duties of his office. He published in 1730 another collection of treatises, under the title of 'Opera Minora,' all of which had previously appeared separately at various times between 1697 and 1721.

In 1733 appeared four more books of 'Observationes Juris Romani,' written in continuation of the former work of the same name, which he had published more than twenty-two years before. About the same time he retired from the bench, of which he had been forty years a member. His retirement however was not a period of idleness. "Having now more leisure than formerly, I will do my utmost," he says, "to render a good account of it to the world." His labours were however henceforth turned into a different channel. He gave up the study of the Roman law, and applied himself for the last years of his life to the task of laying before the world the learning which in the course of his study and his practice he had acquired on two very important subjects—international law, and the law of his own country. On the former of these he had already written two treatises, which are printed among his 'Opera Minora.' The one, 'De Dominio Maris,' which originally appeared in 1702, as an appendix to another dissertation, has always been appealed to with respect on a difficult and still disputed question. The other, 'De foro Legatorum Competenti,' was first published in 1721, and was soon after translated into French, by Barheyras. In 1737 he produced a more important work, 'Questiones Juris Publici,' in two books; the first of which treats of war and peace, and the second is on miscellaneous subjects. The 'Questiones Juris Publici,' as well as the treatise 'De foro Legatorum,' though founded too exclusively on Dutch authorities, and written with too exclusive a reference to Dutch institutions, so that they appear to treat rather of the public law of Holland than of international law in general, have nevertheless been regarded by the publicists of all nations as works of the highest authority and most universal application.

The next and last labour undertaken by Bynkershoek was on the laws of his own country,—'Questiones Juris Privati.' He did not live to complete the work, but as much of it as was prepared for publication at the time of his death appeared soon afterwards.

Besides his published works, Bynkershoek had employed himself during the whole of his professional life in the execution of two very laborious undertakings. One of these, which he called 'Observationes Tunultuarie,' consisted of notes which he had taken of the decisions and proceedings of the supreme court. The other, a work

of still greater interest and importance, was a collection of all the scattered laws of his own country, whether existing in the enactments of the several legislative powers which had successively prevailed there;—in the decisions of the courts, the practice of the bar, or the customs and statutes of particular cities and districts. This immense mass he had digested, so as to form a complete 'Corpus Juris Hollandici et Zelandici.' These two collections were intended solely for his own use; and in his will he left directions that they should never be published.

Bynkershoek had long suffered from asthma; to this, at last, was added dropsy on the chest, of which he died on the 16th of April, 1743. He was twice married; and by his first wife left six daughters. A complete edition of his works was published at Geneva, in 1761, in folio, by Vicat, professor of law at Lausanne; and another in two volumes folio, at Leyden, in 1766.

BYRGIUS, JUSTUS, or JUST BYRGE, a mathematician and artist, chiefly distinguished by the reputation of having been the first person who invented, or, at least, gave indications of numbers corresponding to logarithms. He was born in Switzerland, in the year 1552, and was long attached to the observatory which had been built at Hesse-Cassel by the Landgrave William IV.; at this place he made celestial observations, which were afterwards published by Snell, and he was occasionally employed in making mathematical and astronomical instruments. He is said to have invented an instrument similar to that which is now called proportional compasses; and to have constructed a pendulum clock in the year 1600, which is above fifty years before the application of a pendulum to an instrument for measuring time was made by Huyghens. He executed for the landgrave a celestial globe or orrery, which was afterwards purchased by the emperor Rudolph II., who appointed him his instrument-maker. On the death of the landgrave he went to reside at Prague; but in 1632 he returned to Cassel, where he died in the following year. Dithmarsus, who designates himself a pupil of Byrgius, observes that Byrgius had studied neither Latin nor Greek; and Kepler describes him as an indolent and reserved man, who withheld his discoveries from the public.

Dithmarsus ascribes to his tutor the discovery of two rules for resolving spherical triangles; one, when the three sides, and the other, when two sides and the angle contained between them are given; and he considers them as much more simple than any which had been used before that time. He states also that Byrgius had discovered a method of dividing any given angle into equal parts, or into parts having given relations to one another; and he adds, that by such means he could compute with great facility a table of sines, either in natural or in *logistic* numbers. These last are supposed to be a species of logarithms, and as the work of Dithmarsus was published in 1588, or twenty-six years before the 'Canon' of Napier [NAPIER], it is possible that Byrgius may have preceded the latter in the time of the discovery. This is directly asserted by Kepler, in the preface to the 'Rudolphine Tables,' where it is also observed that the *Logistic indices* (the accents by which minutes, seconds, thirds, &c., of a degree are designated in sexagesimal arithmetic) led Byrgius to the discovery of logarithms similar to those of Napier. If this assertion be correct, it may be presumed that Byrgius formed, by the means obscurely indicated in the work of Dithmarsus, two series of numbers, one series in an increasing arithmetical progression, and the other in a decreasing geometrical progression; like the denominations above alluded to, and as in the original table of logarithms computed by Napier.

From Montucla (*Histoire des Mathématiques*, tom. 2) we learn that there is a passage in a work on Perspective by Bramer, in which it is stated that Byrgius (his brother-in-law) had published at Prague, in 1620, a table containing two series, one in arithmetical and the other in geometrical progression; it is added, that he entertained the idea of publishing several of his works, among which was a table of sines to every two seconds of the quadrant, and that the distress occasioned by the Thirty Years' War prevented the design from being put in execution. An imperfect copy of the tables first mentioned was in the possession of M. Küstner, and from this it was found that the logarithmic numbers began with zero, and increased constantly by 10, while the natural numbers began with 1, and formed an increasing geometrical progression. Bramer infers from the publication of this table, that his brother-in-law was in possession of logarithms long before Napier had made the discovery; but, as the 'Canon Mirificus' was published six years earlier than that table, this inference is unfounded. It may be admitted however from the circumstances mentioned by Dithmarsus, that twenty-six years before the publication of Napier's book, Byrgius had a knowledge of the properties of the numbers called logarithmic in facilitating arithmetical computations; but it does not appear that he was the first to form a table of them for the purpose.

It is remarkable that Kepler, who himself computed a table of logarithmic numbers, does not mention Byrgius till the year 1627, when he states that the latter had discovered logarithms similar to those of Napier. Previously to that time he always spoke of Napier as the inventor, and of his discovery as the most useful that had been made since numbers were known. If therefore Kepler, in Germany, had no knowledge of the discoveries of Byrgius from the work of Dithmarsus, it cannot be supposed that the latter had found its way

to Scotland, or that its obscure indications guided Napier to the discovery which has immortalised his name.

BYRON, GEORGE GORDON, LORD, was born on the 22nd of January, 1788, in Holles-street, Cavendish-square, London. His descent dates from the time of the Norman conquest of this island. The Byrons, or Birones, who had been knights and baronets long before, were first made lords during the reign of Charles I., whose cause they espoused in opposition to that of the Commons of England. Notwithstanding his ancient lineage, of which he was always proud, Byron, owing to the imprudence and vices of his father (Captain Byron, nephew to the then lord), was born and brought up in what, considering the notions of his class, must be called poverty. Owing to an accident attending his birth, one of his feet was distorted, a defect which was a source of pain and mortification to him during the whole of his life.

In 1790, when he was only two years old, his mother, who had separated from her husband, retired with her child to Scotland, her native country, and established herself in humble lodgings in the town of Aberdeen. Proud, impetuous, and of a most inflammable temper, this unfortunate woman was not at all fitted to correct those hereditary vices which Byron in after years was accustomed to say were strong within him. The most important of all the parts of education is that for which the child stands indebted to its mother, and nothing could well be worse than the poet's maternal tuition and example. As for his father he took no charge of him, but withdrawing to the continent in order to escape his creditors, he died at Valenciennes in 1791. When about five years old, Byron was sent to a day-school at Aberdeen, kept by one Bowers, who received from the poet's mother five shillings a quarter for such instruction as he could give. After staying rather more than a year at this school, he was placed under the tuition of a poor but well-informed Scotch clergyman, called Ross, who taught him to read. From the care of Mr. Ross his mother removed him to that of Mr. Paterson, the son of his shoemaker, who taught him a little Latin, and attended to him with much kindness until Mrs. Byron sent him to the free grammar-school of Aberdeen, where he was studying when the death of the lord, his grand-uncle, recalled him to England, and to the enjoyment of such a provision as suited a peer of the realm in his minority. This uncle, to whom he succeeded, was a man of turbulent passions, and a melancholy occurrence had thrown a gloom over the last thirty years of his life. In a duel, or as some said, rather a chance scuffle arising out of the heat and intoxication of the moment, he killed his neighbour and relative Mr. Chaworth. The House of Peers, before whom he stood his trial in 1765, acquitted him, but his own conscience and his country neighbours never did. He shut himself up in his patrimonial mansion, the old and then melancholy Abbey of Newstead in Nottinghamshire, and thenceforward led an unsocial and eccentric course of life. He took no interest in his heir, who was destined to illustrate the proud name of Byron: he never seems to have exercised any pecuniary generosity towards him, and it is said that on the rare occasions when he mentioned him, it was always as "the little boy who lives at Aberdeen." In 1798, when the poet succeeded to his uncle's titles and estates, he was little more than ten years old. His mother, whose weak head was turned by the sudden change in her fortunes, immediately removed to Newstead Abbey, and took great pains to keep always before his eyes the fact that, though only a boy, he was now a lord. To attend both to body and mind, she employed one Lavender to straighten his unfortunate foot, and a Mr. Rogers to instruct him in Latin. The former, who was an impudent quack, did him no good; but the latter, a respectable schoolmaster of Nottingham, improved him considerably by reading passages from Virgil and Cicero with him. In less than a year Byron's mother carried him to London, whence, after consulting more able surgeons, who could no more cure a deformity than the empiric had been able to do, she had him conveyed to Dulwich and placed in a quiet boarding-school, under the direction of Dr. Glennie. But for the indiscretions and constant interference of Mrs. Byron, Dr. Glennie might not only have made him a better scholar than he ever became, but have checked in the germ at least some of those infirmities of temper and those vices which embittered his after-years. He had not been two years under the charge of this excellent man, when his mother removed him to Harrow, where, with the exception of the usual long vacations, he remained till 1805, when he was sent to Cambridge. During his stay at Harrow he was irregular and somewhat turbulent in his habits; but he frequently gave signs of a frank, noble, and generous spirit, which endeared him to his school-fellows: he had no aptitude for merely verbal scholarship; and his patience seems to have failed him in the study of Greek. He however read a great deal, and by occasional fits of application laid in some store of miscellaneous knowledge. During his vacations his mother continued to spoil him by alternate fits of harshness and indulgence. She introduced him to masquerades and other scenes of excitement and fashionable fooleries before he was fifteen years old. It was at about this period of his life that he became acquainted with Miss Chaworth, the heiress of Annesley, and descendant of the Mr. Chaworth whom his lordship's great uncle had killed. We have no doubt that this very circumstance had a great effect on his excitable and romantic imagination. In one of his memorandum-books he wrote—"Our union would have healed feuds in which blood had been

shed by our fathers; it would have joined lands broad and rich; it would have joined at least one heart, and two persons not ill matched in years—she was two years my elder." His lordship had fancied himself in love two or three times before, but this more than half-imaginary passion for Mary Chaworth seems to have haunted him almost to the last hours of his existence, and he always persisted in saying that had he been united to her he should have proved a better and a happier man. The young lady treated him as a clever, warm-hearted, but capricious school-boy, a friend and nothing more, and a year or two after her first acquaintance with the poet she gave her hand to Mr. John Musters, a gentleman of Nottinghamshire. But all Byron's Harrow vacations were not spent in making love; he passed one of them in the house of the Abbé Rouffigny, in Took's-court, for the purpose of studying the French language; but he spent most of his time in boxing and fencing, to the no small disturbance of the old Abbé's establishment.

In October 1805 he went to Trinity College, Cambridge, where he spent two years in the way that is not uncommon with young men of rank and fashion; but still, by fits and starts, he devoted himself to pretty hard study, and continued to cultivate that taste for poetry which first showed itself when he was about ten years old, and which he had never since permitted to lie wholly dormant. At the same time he indulged in many eccentricities, and caused great annoyance by keeping a bear, and several bull-dogs. But at Cambridge, as at Harrow, he frequently evinced the most generous and noble feelings, and chose his associates, with one or two exceptions, from among the young men of the greatest ability, wit, and character, to a few of whom he seems to have continued much attached in after-life. In 1806, while yet at college, he printed a very thin quarto volume of poems for private circulation. Of this edition Mr. Moore says there are but two or at the most three copies in existence. In 1807 he brought out, in 1 vol. 8vo, his 'Hours of Idleness,' which were very severely, but we cannot say altogether unjustly, handled in the 'Edinburgh Review.' It was just such a collection of fugitive pieces as any tolerably read young man of nineteen might write: it was not less, and it certainly was not more, than this. In this volume we can scarcely discover any indication of the superior genius which he afterwards displayed; and there was in it an assumption of aristocratic airs that rendered the author peculiarly obnoxious to writers who advocated liberal principles. The severity of the reviewers seems to have produced a good effect on his lordship's muse, which was always too readily animated and inspired by feelings of spite and revenge. He collected his powers, he brought them to bear on one point, he took more pains with his style, and in 1809 appeared his well-known satire, 'English Bards and Scotch Reviewers,' which, however faulty in parts as a composition, and blameable in moral feeling, was a wonderful improvement on his preceding productions. A few days before its publication he took his seat in the House of Lords.

At one time Byron thought seriously of devoting himself to politics, and wrote to his mother that he "must do something in the House soon." He delivered two set speeches in the Lords, with indifferent success and a tolerable ignorance of the subjects on which he spoke, and then his senatorial ardour ceased altogether. This was after his return from his travels, in 1812.

On the 2nd of July 1809 Lord Byron, in company with his friend Mr. John Cam Hobhouse (now Lord Broughton), left England to travel in Portugal, Spain, Greece, Turkey, &c. He was absent two years on this classical tour, which enriched his mind with incidents and poetical imagery, and filled it with reflections of some of the finest and most melancholy scenery in the world. His travels, in fact, finished his poetical education, and nearly everything he wrote afterwards is redolent of the glowing atmosphere of the East, and bears more or less directly on the adventurous, impassioned narratives which he heard in 'the clime of the East,' in 'the land of the sun.'

In March 1812 Byron published the first two cantos of his splendid poem 'Childe Harold,' which at once gained him the very highest name among the poets of the day. The popularity of this production was as immediate as it was great, and he used to say, he went to bed one night, and, on waking the next morning, found himself famous. He was now sought after by the rich and great, who formerly knew him not, or avoided him; and he threw himself into the vortex of fashionable dissipation without much taste for its pleasure, and with little respect for the mass of those with whom he associated.

To pass over some minor productions, it was in the month of May 1813, that his wild oriental tale, or rather fragment of a tale, 'The Giaour,' first appeared; this was followed, in December of the same year, by the 'Bride of Abydos,' another passionate Eastern poem, more consecutive as a narrative than the 'Giaour,' and equally rich in scenic descriptions. In January 1814 he published his 'Corsair,' one of the most applauded, though far from one of the best of his productions. He however showed in it an admirable mastery of the ten-syllable English verse and what he called "the good old and now neglected heroic couplet." His descriptions of the Greek islands and the scenery of the coast of Greece are exquisitely beautiful: they are moreover correct pictures, as must be felt by all who have travelled in those climes. The story, like all his stories, is badly constructed: the characters are not very dramatically sustained, and have little in them to lay hold of the heart when the fervour and passions of youth

are passed. It is stated on the best authority that 14,000 copies of the 'Corsair' were sold in one day. In May 1814 he published his splendid ode on the first fall of Bonaparte. In August of the same year appeared his 'Lara,' an irregular sort of sequel and wind-up to the 'Corsair,' written in much the same style, but with less power.

During the blaze of his poetical fame, and his intoxicating success in society, Byron was hardly ever happy, and he occasionally withdrew for considerable periods to the solitude of the old abbey at Newstead. In October 1814 he was married to Miss Milbanke, a great heiress in prospect, but at the time possessed of little money, while the poet stood in need of a great deal. He was in fact so involved in his pecuniary affairs, that he tells us he had nine executions in his house during the first twelve months of his marriage, besides having his door continually beset by duns. These were not circumstances likely to soothe the irritable temperament of Lord Byron: he sought a refuge from them in pleasures from home; and an utter incompatibility of character between him and his lady becoming every day more and more conspicuous, augured ill for this hastily-formed alliance. On the 10th of December 1815 Lady Byron bore him a daughter, the Ada of his poems (the late Countess of Lovelace). In the latter end of January Lady Byron left his house with her infant, and retired to her father's residence in Leicestershire: the poet never saw his wife or child again.

At the end of February 1815 Byron published his two poems, the 'Siege of Corinth' and 'Parisina.' On the 25th of April following he set sail for Ostend, with a fixed determination never more to return to a country which had given him honours, titles, competent wealth, and fame.

On starting on his continental travels he went through Belgium, up the Rhine, and then through part of Switzerland to Geneva, where he fixed himself for some time, his favourite companions there being the late Mr. Shelley, the poet, and Mrs. Shelley. He often crossed the lake to visit Madame de Staël at Coppet. His frequent voyages on the Lake of Geneva, and excursions among the Alps, revived all his passionate adoration of sublime scenery. During his stay at the villa Diodati, near Geneva, he wrote the third canto of 'Childe Harold,' the 'Prisoner of Chillon,' 'The Dream,' and several of his fugitive pieces. In October 1816 he left Switzerland for Italy, and by the middle of the following November we find him at Venice, where he remained for more than three years, which were mainly spent in an alternation of literary labour and debauchery. We must however deduct from this long sojourn some three weeks, which he employed in visiting Rome in company with his friend Hobhouse, and a few excursions he made to Bologna and other places. In January 1820 he took up his residence at Ravenna, where he involved himself with secret societies and Italian plots to overthrow the government of the pope. The brother and other near connections of the Countess Guiccioli, a married woman to whom he had attached himself, were so seriously committed, that the papal government exiled them from the States of the Church. Upon this the lady and her relatives took refuge in Tuscany, and ultimately fixed themselves at Pisa, whither Byron followed them in November 1821.

Soon after his arrival at Pisa he was joined by Mr. and Mrs. Shelley, and his party was subsequently increased by Mr. Leigh Hunt and family. Byron, Shelley, and Hunt started a work called 'The Liberal,' which was to appear periodically, and to be written and edited by the three conjointly. It was altogether a badly-devised scheme, and after the irregular appearance of two or three numbers the work stopped. He was much affected by the death of his friend Shelley in July 1822, and in October he went to Genoa. Early in 1823 he received flattering overtures from the committee of friends to the Greeks established in London for the purpose of aiding that people in their struggle for independence. His knowledge of the country, the beauty and energy of the many verses in which he had described her sad condition under the Turks, naturally directed attention to his lordship, who, after a short correspondence with the committee, determined not only to assist in purse, but in person and with arms in his hands. With his usual haste and impetuosity he prepared forthwith to leave Italy. During his stay in that beautiful country he had written the fourth canto of 'Childe Harold,' 'Beppo, a Venetian Story,' 'Masseppe,' 'Manfred,' the 'Lament of Tasso,' 'Ode to Venice,' the 'Prophecy of Dante' (wherein he imitated, not very successfully, the *terza rima* of the Italians); 'Cain, a Mystery,' 'Marino Faliero,' the 'Two Foscari,' 'Sardanapalus,' and 'Werner,' tragedies; the cantos of 'Don Juan' (the most astonishing of all his productions); the 'Vision of Judgment,' and many fugitive pieces.

With his head full of warlike notions, Byron sailed from Genoa on the 14th of July; on the 19th he put into Leghorn to purchase gunpowder and other commodities for the Greeks, and sailing again on the 24th, he reached the island of Cephalonia in about ten days. He had scarcely arrived there and looked a little into the affairs of the Greeks, when he repented of his expedition. "I was a fool," he wrote to a friend, "to come here; but being here, I must see what is to be done." He however showed a talent for public business that surprised most people, and a degree of good common sense that contrasted very advantageously with the wild theoretic dreamings of many of the Philhellenes who had repaired to Greece.

At the end of December 1823 his lordship sailed from Cephalonia,

and after a narrow escape from a Turkish frigate landed at Dragomestri, a wretched seaport of the Greeks on the coast of Acarnania. In sailing from this point to Missolonghi he was near suffering shipwreck, and by an act of imprudence sowed the seeds of the malady that soon terminated his existence. On the 3rd of January, during a rough and cold night, he leaped into the sea, and swam a long way: two or three days after he complained of a severe pain in all his bones, which continued more or less to the time of his death. He reached Missolonghi on the 10th of January 1824, where he found everything in a most perplexing and almost hopeless state of anarchy and confusion. He set to work with spirit and application, and again showed a great aptitude for the despatch of public business. The weather was detestable and the place unhealthy. At the beginning of February he got wet through; on the evening of the 15th he was seized with a dreadful convulsive fit, and was for some time speechless and senseless. Soon after this paroxysm, while stretched on his bed faint with over-bleeding, a crowd of mutinous Suliotas whom he had engaged to fight for their country burst into his apartment brandishing their arms, and furiously demanding their pay. Sick and nerve-shaken as he was, Byron is said to have displayed great calmness and courage on this occasion, and his manner soon inspired the mutineers with respect and awe. At the end of January he had received a regular commission from the Greek government, and was appointed to the command of an expedition that was to besiege Lepanto, then in the hands of the Turks. The difficulties and obstructions encountered by his lordship in preparing and providing for this siege were perplexing and irritating in the extreme, and altogether too much for a man whose health was evidently undermined. Still however he would not listen to those who advised him to retire. "I will stick by the cause," said he, "as long as a cause exists."

On the 9th of April he again got wet through, and returned to Missolonghi in a state of violent perspiration. Fever and violent rheumatic pains ensued. On the following day he took a ride among the olive woods, but complained of shuddering, and had no appetite. On the evening of the 11th he was much worse, and by the 14th he was evidently in danger. For several days he obstinately refused to let his medical attendants bleed him, and when he gave his consent the bleeding was too late. Inflammation fell upon his brain, and he expired at six o'clock on the afternoon of the 19th of April 1824, being only thirty-six years and three months old. The bitter grief of his followers and attendants of all nations was a proof of his frequent kindness of heart, and his goodness as a master.

As a poet of description and passion Lord Byron will always occupy a high place among English poets, though the absolute supremacy which so many of his contemporaries gave him as his right has already passed away. The least successful of Byron's productions, notwithstanding the admirable passages in which they abound, are his tragedies: the work which gives us the highest notion of his genius, power, and versatility is his 'Don Juan.' The Don is at times free and almost obscene, and the whole tendency of the poem may be considered immoral; but there are, scattered throughout it, the most exquisite pieces of writing and feeling,—inimitable blendings of wit, humour, raillery, and pathos, and by far the finest verses Byron ever wrote. He may be said to have created this manner; for the Bernese style of the Italians, to which it has been compared, is not like it.

(Thomas Moore, *Letters and Journal of Lord Byron, with Notices of his Life*; Galt, *Life of Lord Byron*; Dallas, *Memoir*; Lady Blessington, *Conversations with Lord Byron*; &c.)

BYRON, JOHN, second son of William Lord Byron, by his third wife Frances, second daughter of William Lord Berkeley of Stretton, was born Nov. 8, 1723. He was engaged as midshipman on board the *Wager*, the store-ship which accompanied Lord Anson's squadron in its voyage round the world, commenced in September 1740. On the 15th of May the *Wager*, having before parted company with the remainder of the squadron in consequence of her bad sailing, struck on a sunken rock about 47° S. lat. on the western coast of America. She soon afterwards bilged, and grounded between two small islands about a musket-shot from the shore. Her captain, who had succeeded to the command during the voyage in consequence of the death of his superior officer, appears to have rendered himself hateful to the ship's company by imperious and tyrannical conduct; and the crew, on the other hand, were mutinous and insubordinate. The mariners landed upon a wild shore, which afterwards proved to be part of an uninhabited island, and the wretchedness of which may be inferred from the name which the sailors gave it, 'Mount Misery.'

After several months' residence, part of the crew embarked in the cutter and long-boat to attempt the passage of the Straits of Magellan, and a homeward return by Brazil. The cutter was lost, but the long-boat, after undergoing incredible hardships and sailing more than 1000 leagues, arrived at the Portuguese settlements in Brazil. Byron and his companions, after enduring the utmost extremity of famine, bad weather, cold, fatigue, hunger, sickness, and general destitution, were relieved by a Chonos Indian cacique, who conveyed them to the island of Chiloe, after thirteen months had expired since the loss of the *Wager*. The narrative which Byron published on his return to England in 1745 is among the most interesting accounts of nautical adventures with which we are acquainted. Byron afterwards served with distinction in 1758 during the war against France; in 1760

he performed a brilliant service in destroying a French squadron in Chaleur Bay, and on the return of peace in 1764 he was despatched on a voyage of discovery to the South Sea, in command of the ships *Dolphin* and *Tamar*. He may be considered as one of the ablest precursors of Captain Cook, in the preliminary volume to whose voyages, collected by Hawkesworth, Byron's journal occupies the first place.

He was afterwards, in 1769, appointed governor of Newfoundland. In 1778 he commanded the fleet destined to observe the movements of M. d'Estaing in the West Indies, but the French admiral profiting by his great superiority in numbers (27 ships of the line to 21), eluded every attempt to bring him to close engagement. During this expedition Byron received the highest promotion which he attained, that of Vice-Admiral of the White. In 1748 he married Sarah, daughter of John Trevanion, Esq., of Cartrays, in the county of Cornwall, by whom he had two sons and seven daughters. Commodore Byron, as he is usually styled, died in London on April 10, 1786, in the enjoyment of a high and merited reputation for courage and professional skill.

BYZANTINE HISTORIANS is the name given to a series of Greek historians and writers who lived under the Eastern or Byzantine empire between the 6th and the 15th centuries. They may be divided into two classes:—1. The historians properly so called, whose collected works constitute a complete history of the Byzantine empire from the time of Constantine the Great to the taking of Constantinople by the Turks; 2. The general chroniclers who have attempted to give a chronography of the world from the oldest times. The *historians* are:—1. Joannes Zonaras of Constantinople, first an officer of the imperial court, and afterwards a monk of Mount Athos, who died about 1118, and wrote the 'Annals of the World,' in 18 books. In the first part of his work he belongs to the class of general chroniclers or compilers, but from the time of Constantine he treats more particularly of the history of the Eastern empire, which he brings down to the death of Alexius I. Comnenus in 1118. 2. Nicetas Acominatus of Chonæ or Colosse, in Phrygia, who filled several high offices in the court of Isaac Angelus, and who died at Nicæa in 1216. His 'History of the Byzantine Emperors,' in 21 books, begins with 1118 and ends with 1206. 3. Nicephorus Gregoras of Heraclea enjoyed the favour of Andronicus Palæologus the elder of the Palamites; but owing to the controversy, he was confined in a convent by the patriarch in 1361, where he died. He wrote a Byzantine, or, as he styles it, a 'Roman History,' in 83 books, of which the first 24 only have been printed, containing the history of the Byzantine empire from 1204 to 1381. The 14 remaining in manuscripts bring the history down to 1359. 4. Laonicus (Nicolas) Chalcondylas of Athens wrote a 'History of the Turks and of the Downfall of the Greek Empire,' in 10 books, to the year 1462. An anonymous writer has continued the history of the Turks down to 1565. These four writers form by themselves an entire history of the Byzantine empire from the time of Constantine to the Turkish conquest. The following writers have treated of detached periods of the same history, or have written the lives of particular emperors. 5. Procopius of Cæsarea in Palestine, the most celebrated of the Byzantine writers, wrote the 'History of his own Time,' in 8 books, to the year 545. He also wrote a 'Secret History' (Anecdota) of the reign of Justinian down to the year 553, which, as to the manner in which he speaks of that emperor and of his court, contrasts singularly with the panegyric tone of his former work. 6. Agathias of Myrina in Æolis, a poet as well as historian of the 6th century, is well known for his *Anthology* and his *Daphniaca*, or amatory verse. He studied first at Alexandria, whence he removed to Constantinople in 554, being then about eighteen years of age, and applied to the study of the law, in which he became eminent. He was surnamed *Scholasticus*, a word which then meant an advocate. He wrote a history in 5 books of the years 553–59 of Justinian's reign, which forms a sequel to Procopius. He died about 582. Agathias is one of the most trustworthy Byzantine historians—inferior to Procopius in talent and information, but superior to him in honesty. 7. Menander of Constantinople, surnamed *Protector*, continued the history of Agathias to the year 582. Menander's history is lost, but fragments of it are found in the works of Constantine Porphyrogenetus, which relate to the history of the Huns, the Avari, and other northern and eastern races, and also to the negotiations and missions between Justinian and Chosroes. All that remains of Menander has been published by Bekker and Niebuhr, Bonn, 1829. 8. Joannes of Epiphania wrote a history of the Persian war under the emperor Maurice, of which the only manuscript known is in the Heidelberg collection. 9. Theophylactus Simocatta lived in the first part of the 7th century, and wrote a history in 8 books, from 582 till the death of Maurice in 602. 10. Joannes, a monk of Jerusalem, in the 8th century, wrote a brief history of the Iconoclasts, which was published by Combéffis for the 'Corpus Historiæ Byzantiæ,' together with an anonymous work against Constantine IV., probably written by the same monk. 11. Theodosius, a monk of Syracuse, in the 9th century, has left a narrative of the taking of Syracuse by the Spanish Arabs. It was published for the first time by Hase, with the 'History of Leo Diaconus,' Paris, 1819. 12. Constantinus VI. Pophyrogenetus wrote the life of his grandfather, Basilus the Macedonian, from 867 to 886. He also wrote several other works which

may serve as illustrations of the Byzantine history, such as 'De Administrando Imperio,' on the Administration of the State, addressed to his son Romanus; 'De Ceremoniis Aulae Byzantinae;' 'De Thematibus,' or military divisions of the empire. He also caused several learned men to compile a kind of historical library out of the works of all previous historians. This great compilation was divided into 53 books, of which the titles of 26 only are known. One was on the succession of kings, another on the art of generalship, &c. Under each of these heads, passages from the various historians bearing upon the subject were collected. Three books alone, more or less mutilated, have come down to us. One, entitled 'De Legationibus,' is an account of the various embassies between the Romans and other nations; another 'De Sententiis,' and the third 'De Virtute et Vitiis.' 13. Genesis of Byzantium wrote a history of Leo the Armenian, Michael II., Theophilus, and Michael III., embracing the period from 813 to 867. 14. Leontius of Byzantium, called the younger, wrote also a history of the same period, to serve as an introduction to Constantine's life of Basilus. 15. An anonymous writer has left a continuation of Constantine's life of Basilus, embracing the lives of Leo VI. and his brother Alexander, of Constantine VI. himself, and his son Romanus. 16. Joannes Cameniata of Thessalonica wrote an account of the taking of that city by the Saracens in 904, of which he was an eye-witness. 17. Leo Diaconus of Kaloe, born about 950, accompanied Basilus II. in his wars against the Bulgarians, and wrote the lives of Romanus, Nicephorus Phocas, and Tzimisceas, from 959 to 975. 18. Michael Constantine Paellus wrote a history from the death of Tzimisceas in 975 till the accession of Constantine Ducas in 1059. 19. Nicephorus Bryennius, the husband of Anna Comnena, wrote 'Historical Materials,' being a kind of memoirs of the Comneni family to the accession of Alexius I. 20. ANNA COMNENA has written the history of her father Alexius. 21. Joannes Cinnamus, who lived towards the end of the 12th century, was imperial notary at Constantinople. He wrote the lives of John Comnenus and of Manuel his son from 1118, when Anna Comnena ends, till 1176. 22. Georgius Acropolita, born in 1220 at Constantinople, filled several important offices under Michael Palaeologus, and died in 1282. There are two works under his name, one styled a 'Chronography,' and the other a 'Short Chronicle of the late Events,' both referring to the period from 1204, when the Franks took Constantinople, to 1261, when they were finally expelled. Acropolita has also written a 'General Chronicle from the Creation to the taking of Constantinople by the Franks,' which is not yet printed. 23. Georgius Pachymeres, born at Nicæa in 1242. After the recovery of Constantinople by the Greeks, he was raised to high offices in the state. He wrote a 'Byzantine History,' which forms a continuation to Acropolita's work, and comes down to 1308. Pachymeres is a faithful but dull writer. He wrote also several philosophical works and a history of his own life. 24. Joannes Cantacuzenus, after his abdication of the empire in 1355, retired to a convent where he wrote a Byzantine history from 1320 to 1357. Cantacuzenus is in general a good authority for the history of that period in which he acted an important part, though he is of course somewhat partial in his own cause. 25. Joannes Ducas, of the imperial family of that name, fled from Constantinople at the time of the Turkish invasion, and took refuge at Lesbos under the Genoese adventurer Prince Castelluzzi. He wrote a Byzantine history, which begins from Adam, after the fashion of the chroniclers, and is but a brief general chronicle as far as the year 1341, after which his account becomes more circumstantial, being more especially occupied with the history of the latter period of the eastern empire: it ends with the taking of Lesbos by the Turks in 1462. This latter part therefore forms a continuation to Cantacuzenus. 26. Joannes Anagnostes of Thessalonica has left an account of the taking of that city by the Turks in 1430. 27. Joannes Cananus has written a history of the war against Sultan Murad II. in 1420. 28. Georgius Phranza, born in 1401, of a family related to the Palaeologi, filled some of the highest offices in the state under the last emperors. He was made prisoner by the Turks at the taking of Constantinople, was sold as a slave, recovered his liberty, and took shelter for a time with Thomas Palaeologus, prince of Peloponnesus. When the Turks invaded that part of Greece Phranza escaped to Italy, and at last became monk at Corfu in 1468. There he wrote his 'Chronicle' in four books, which begins with 1260 and ends with 1477, embracing the whole history of the Palaeologi. The work of Phranza is most valuable, though it is full of digressions upon religious controversies, the origin of comets, &c.

The following are the general 'chroniclers' properly so called, who are also included under the general appellation of Byzantine historians:—1. Georgius Synoellus lived in the 8th century. He wrote a 'Chronography' from the beginning of the world to the time of Diocletian, in which he has availed himself of Eusebius and Africanus. 2. Theophanes Isaacius of Constantinople, who died about 817, continued the chronicle of Syncellus from 280 till 813. 3. Joannes of Antioch, called Malalas, a Syrian word meaning a rhetor or sophist, lived in the 9th century, and wrote a chronicle from Adam till 566. 4. Joannes Scylitzes, who lived in the 11th century, wrote a 'Short History' or chronicle from 811 till 1057, which he afterwards recast and continued till 1081. 5. Leo Grammaticus wrote a chronography, which is a continuation of Theophanes, from 813 to 949. 6. Georgius Monachus has also left a chronicle embracing the same period as Leo's. 7. The 'Chronicon Paschale,' called also 'Alexandrian Chronicle,' is attributed

by some to Georgius the Bishop of Alexandria, who lived in the 7th century. It is also called 'Fasti Siculi,' because the manuscript was discovered in Sicily. It extends from the beginning of the world to 1042. 8. Georgius Hamartolus, an Archimandrite, wrote a chronicle to the year 842, which is yet unedited. 9. Joannes of Sicily wrote in the 9th century a chronicle from the creation of the world till 866, which is not yet printed. An anonymous continuation of it till 1222 exists in the imperial library at Vienna. 10. Nicephorus, patriarch of Constantinople in the first part of the 9th century, has left a 'Breviarium Chronographicum,' or short chronicle, from the creation to the author's death in 828, giving series of the kings, emperors, patriarchs, and bishops, &c. He wrote also a 'Breviarium Historicum,' or general history of events from 602 to 770. 11. Julius Pollux, not the author of the 'Onomasticon,' wrote a chronicle with the title of 'Historia Physica,' from the creation to the reign of Valens. A manuscript in the national library at Paris brings it down to the death of Romanus the younger in 963. This chronicle is chiefly engrossed with church matters. 12. Georgius Cedrenus, a monk of the 11th century, wrote a chronicle compiled chiefly from the former chronicles of Scylitzes and others. It is mixed up with fictions, and is one of the least valuable in the Byzantine collection. 13. Simeon Metaphrastes filled some high stations at the imperial court in the first part of the 10th century. His chronicle comes to 963, and has the merit of being compiled from the works of ten lost writers who lived between Leo Grammaticus and Michael Psellus. 14. Hippolytus of Thebes lived towards the end of the 10th and the beginning of the 11th centuries. He wrote a chronicle from the birth of Jesus Christ to his own time. 15. Michael Glykas, whose country and age are not ascertained, wrote a chronicle from the creation to the year 1118. It is valuable both for its historical and its biblical references. 16. Constantine Manasses, who lived in the 12th century, has left a chronicle in verse down to 1081. 17. Ephraemius, believed to be the son of John XII., patriarch of Constantinople, wrote a chronicle in iambics of the emperors, from Julius Cæsar to the restoration of the Byzantine empire after the Frankish invasion. It is followed by a chronology of the patriarchs of Constantinople till 1313. The whole poem contains 10,410 lines. Angelo Mai published it first in his Vatican collection of inedited manuscripts. 18. Joel wrote a short general chronicle of the world to the Frankish invasion of Constantinople in 1204. 19. Theodosius of Melite has left a chronicle which is not yet printed. Professor Tafel of Tübingen has published a notice of this writer: 'De Theodosio Melitano inedito historiam Byzantinam Scriptore,' 4to, Tübingen, 1828, from the manuscript of his chronicle which is at Tübingen, and which was brought from Constantinople by St. Gerlach in 1578. 20. Hesychius of Miletus, who lived under Justinus and Justinian, wrote a history of the world, which is lost, except a valuable fragment on the origin of Constantinople, which has been extracted and preserved by Codinus.

Besides the above historians and chroniclers there are other Byzantine authors who have written on the statistics, politics, antiquities, &c., of the Roman empire, whose history properly so called they serve to illustrate, and who are generally included in the collection of Byzantine historical writers. Among these Procopius stands foremost by his curious work, 'De Edificiis Domini Justiniani,' lib. vi., which contains a brief notice of the towns, temples, convents, bridges, roads, walls, and fortifications built or repaired under the reign of Justinian. 2. Joannes Laurentius, called Lydus from his being a native of Philadelphia in Lydia, lived under Justinian, and was both a poet and prose writer. He has left a work 'on the Roman Magistrates,' which affords valuable assistance for the knowledge of Roman civil history. The manuscript was first discovered by Choiseul Gouffier and Vilvoisin in the library of Prince Morousi at Constantinople in 1781, and is now in the public library at Paris. It was published by Hase at Paris, 1812. In the same manuscript was found another work of Lydus, 'De Ostentis,' or on divination or "augurs' science," which has been also published by Hase with notes in 1823. 3. Hierocles, called the grammarian, to distinguish him from the philosopher of the same name, wrote a Synecdemus, or traveller's guide, in which he describes the 64 provinces of the eastern empire, and the 935 cities or towns contained in it. It has been published in several collections, among others in Banduri's 'Imperium Orientale,' Paris, 1711. Some suppose that Hierocles lived under Justinian, others later, but certainly previous to the 10th century. 4. Theophylactus, archbishop of Aechria in Bulgaria in the latter part of the 11th century, wrote a work 'On the Education of Princes,' intended for the young Constantine, the son of Michael VII., Parapinaces. It is published in Banduri's 'Imperium Orientale.' 5. Alexius I. Comnenus wrote 'Novam Rationarium,' or Inventory of the Revenues of the State, in imitation of Augustus. It has been published in the collection of the Benedictines, Paris, 1688. 6. A monk, of unknown name, who lived under Alexius I., wrote a book on the antiquities of Constantinople, which gives a description of its buildings, monuments, &c. It is inserted in Banduri's 'Imperium.' 7. Mattheus Blastares, a monk, wrote, about 1305, an account of the numerous household charges and offices in the imperial palace of Constantinople, which is inserted in the eighteenth volume of the Venetian edition of the 'Corpus Hist. Byzant. Scriptorum.' 8. Georgius Codinus, surnamed Curopalates, lived in the latter age of the empire, and wrote 'On the Dignities and Offices of

the Church and Court of Constantinople.' He has also left 'Extracts from the Chronicle of Hesychius on the Origin and History of Constantinople.' 9. The Emperor Manuel Palæologus wrote a book 'On the Education of Princes.' He also wrote 'A Dialogue with a Turk held at Ancyra in Galatia,' where Manuel was once stationed in winter-quarters with his auxiliary corps serving under Sultan Bajazet. This work, which is yet unpublished, is said to give an interesting view of the tottering condition of the once mighty empire towards the beginning of the 15th century. There are also 66 unpublished letters of Manuel in the public library at Paris, which contain interesting allusions to the history of that period. (See Hase, 'Notices et Extraits des Manuscrits de la Bibliothèque du Roi,' vol. ix.)

Most of the above Byzantine historians, chroniclers, and other writers were collected and published in the great edition made by order and at the expense of Louis XIV., in 36 vols. folio, Paris, 1645-1711. The jesuits Labbe and Maltrait, Petau and Poussines, the Dominicans Goar and Combéfis, Professor Fabrot, Charles du Fresne, Seigneur du Cange; Allacci, the librarian of the Vatican; Banduri, librarian at Florence; Boivin, the king's librarian at Paris; and Bouilliaud, a mathematician, were each entrusted with parts of this splendid work. The Greek text is accompanied with a Latin transla-

tion, and notes. The last volume contains the Arabian chronicle of Abu-Ben-Raheb, which serves to illustrate Byzantine history.

Another edition was published at Venice in 23 vols. folio, 1729, and the following years, which contains several works omitted in the Paris edition, such as Phranza, Genesius, and Malalas. Others were published separately afterwards as a supplement to the Venice edition:—'Opera Georgii Pisidæ, Theodosii Diaconi et Corippi Africani,' Rome, 1777, folio; 'Julii Pollucis Historia Sacra,' Bononiæ, 1779, folio; 'Constantini Porphyrogeneti, libri ii. de Ceremoniis Aulæ Byzantinæ,' 2 vols. folio, Leipzig, 1751; 'Leonis Diaconi Calcoensis Historia,' by Hase, folio, Paris, 1819. Several of the Byzantine historians however still remain inedited, as we have above observed.

A new edition of the Byzantine historians was projected by the late B. G. Niebuhr: 'Corpus Scriptorum Historiæ Byzantinæ. Editio emendatior et copiosior,' &c., 8vo, Bonn, 1828, and following. It has been proceeding, since Niebuhr's death, under the care of Bekker, Dindorf, and other philologists. About fifty volumes have appeared.

(For a full account of the Byzantine writers see Schoell's *History of Greek Literature*, and Fabricius, *Bibliotheca Græca*, editio nova, vols. vii. and viii.)

END OF VOLUME I.

THE following is a list of the names of persons who have died since the publication of the 'Penny Cyclopædia,' and of "those living names" which, in accordance with the announcement in the Prospectus, are included in the first volume of the Biographical Division of the 'English Cyclopædia.' The asterisk is prefixed to living names:—
